He made an exhibition of himself not long ago when he flew into a passion of the very largest size on the calling up of the bill to incorporate the New York Zoological Society and to establish a Zoological Garden. With only the newspaper reports to guide us, it is not easy to rake out from among the coals of Mr. Foley's burning eloquence his real objections to the bill, but in a general way it seems that he opposes the establishment of a Zoological Garden for two distinct reasons; the first of these is that certain wealthy property owners on Fifth avenue desire the removal of the present menagerie from the Central Park; while the second is, that if the collection of animals should be removed, it will not be so cheaply and easily accessible to his constituents as it is now. Thus it would seem that Mr. Foley wishes evil to the rich and good to the poor. In this he will have the sympathy of many persons.

The question of the removal of the existing menagerie from its present situation has been often and thoroughly discussed. It has been demonstrated time and time again that the limits set aside for this purpose in the Central Parkk are so contracted that it is impossible to have a satisfactory collection of animals there. A zoological garden must have room, and plenty of it; this is an absolute prerequisite to its success. It has been just as clearly established that so long as the menagerie is cared for by the city, it will be badly and unintelligently cared for.

Now, if Mr. Foley will for a little while put aside passion and—remembering that this bill has absolutely no politics in it—will temporarily forget that he is the leader of his party, he will see that the removal of these animals to one of our more northern parks will not render the collection any less accessible to the poor of the east side. In this matter of the accessibility of any zoological garden established, there is no class in the community whose convenience is entitled to so much consideration as that made up of those whose circumstances limit their pleasures. But there is no antagonism between what is best for them and what is best for any other citizen.

Any good map of New York will show Mr. Foley that on Manhattan Island there are two recently established parks—High Bridge and Fort Washington—either of which is easily accessible to the down town east side resident at a cost of five cents, and either of which is by nature admirably adapted for a zoological garden. As the formation of this city makes it a necessity that the transportation lines shall run north and south, it is possible at the present time to ride nearly to Kingsbridge on the west side and to Tremont on the east side for a single fare.

If more space is desired, or if it is thought better to reserve all the area of those nearby parks as strolling or lounging grounds for the people, there are other and larger parks beyond the Harlem River, which, though not as yet easy of access, will certainly be so before long.

We have no doubt that Mr. Foley desires just what all good citizens want, a zoological garden which shall be a credit to the city, a free place of recreation for all the people, rich and poor. It is natural for him to defend what he thinks to be in the interests of his constituents, but when he takes a position hostile to this bill he is really working against the real advantage of the very class whose rights he intends to champion.

"FOR POLITICAL REASONS."

That may be an excellent justification for action or it may be a flimsy excuse. We are at a loss to comprehend why "political reasons" should be accepted as sufficient consideration for setting aside an official of proved service to the State, when the post has of right no connection with politics. In naming another to the place of Fish and Game Commissioner, W. P. Andrus, of Minnesota, whose time expired by limitation in January, Gov. Nelson is said to have acted for "political reasons." Mr. Andrus was the organizer of the Minnesota system, and as executive agent of the board, he revolutionized fish and game protection in the Northwest. Political considerations may have required the giving of the place to another, but considerations of fish and game protection should have demanded his retention; and under any system which puts game protection above politics, he would have kept the place. For what Mr. Andrus accomplished in his term, Minnesota will always owe him a debt of gratitude. It is extremely improbable that a successor will be found to take up the work where he has left it.

If the New York Fish and Game Commission shall be reorganized, and the appointments of game protectors be given to the new commission, it would be quite in keeping with the rules of procedure, "for political reasons," to supplant Chief Protector Pond, a Democrat, by some one else who is a Republican. That is about the way such things go. We are glad to learn that influences are working among good citizens of both political parties to urge the retention of Major Pond. During his occupancy of the office, the Chief Protector has won the respect of the people of the State. He is possessed of peculiar qualifications for the work, is the right man in the right place, and should be kept there.

SNAP SHOTS.

Charles Lanman, artist, author, traveler, angler, died at his home in Washington on Wednesday, March 4, aged eighty-one years. His place among the sportsman writers of this country was well defined in these pages, in a notice by Mr. Charles Hallock, who wrote: "Charles Lanman is an embodiment of what is expressed in the simple words, "fishing tourist." As an angler he is better known to the generation of fishermen who are rapidly following Thad. Norris over the border, than to those who are just now stepping in. He has fished almost all waters of the United States at a time when the venture required more pluck and hardihood than it now does to go around the world; when stage coaches were, indeed, almost the only conveyances, and steamboats not fairly introduced. The material which he then fished out from the running brooks, lakes and rivers of our country, from the Saguenay to Lake Superior, writing as he went, had a freshness about it which is not apparent now when the book is no longer sealed, and the things then hidden have become familiar objects. Much information has Lanman contributed to the geography and natural history of the country, and it is very creditable to the carefulness of his observations and the accuracy of his statements that many of his observations then made and recounted are now substantiated and adopted by our best scientific authorities."

Why does one game and fish protection organization fail of its purpose and another achieve tangible and important results? Might it not be worth while to investigate the methods of work adopted by different societies of this character, to learn from them what are efficient for good, and what are failures? For an example of a protective association, which protects, that of the Onandaga Anglers, with headquarters at Syracuse, N. Y., is deserving of careful study. We report elsewhere the Syracuse work of the year; it is creditable and instructive. Perhaps the secret here is that there are members of the association who are willing to devote time, money and actual personal hard work to the cause; and that they are sustained by the sufficient financial support of others who are willing to give money only. If that the actual workers have the sinews of war, results will be shown. In every organization of this character, doing something is relegated to a few; that is the rule. For the few to have the substantial money backing of the many is the exception. Without the combination the association is protective in name only.

Some months ago we chronicled the deportation of a colony of bob-whites from this country to the game fields of China. They have been followed by a consignment of Minnesota prairie chickens for the Sandwich Islands; and not to be behind the age, the Mikado of Japan has just bought from an Illinois breeder a prize-winning mastiff puppy. Thus are the agencies of the refining influences of American civilization crossing the seas.

Ten quail compared to 1,000 are insignificant as to count, but many a shooter in regions of dearth would get as much fun out of the pursuit that scored ten all told as did the Florida visiting sportsman who this season bagged his even thousand and then quit. We were told the other day of a one-armed shooter, who, with his five and a half-pound gun, has brought to bag in the season passed eleven ruffed grouse. There are figures to express the weight of the gun and the number of birds, but in what terms shall we figure up the pluck and grit and enthusiasm required of a single-handed gunner to achieve that score!

A favorite form of questioning addressed to a sportsman's journal, runs "Which is the best gun?" The question cannot be answered, for the point has never been determined. Experience and observation teach that there are from twelve to twenty guns, all the best, each in the estimation of its champion. To every possessor of a good gun, his own arm is the best in the world, and he will stand up for it as such, though it may be the only one of all the fire-arms made that he has ever tried. This is human nature, and it speaks volumes for the high merit of firearms in general. Our advertising columns contain advertisements of almost every gun made in America, and of a number made in Europe. If among all these a shooter cannot find one so good that a better is not to be desired, he must be finicky, indeed.

A bill has been drawn for introduction in the New Hampshire legislature which makes it an offense against the statute to buy, as well as to sell liquor. The usual law forbidding the sale of game in close season forbids also having in possession; yet no one ever thinks of prosecuting the purchasers. Would not a few cases of this sort have an exemplary influence?

Commenting on night-fishing for trout, a correspondent wrote the other day speculatively: "It seems to me that this would not be the highest form of sport, and that it would not afford very much enjoyment. All the beautiful accessories of sky and shore are blotted out, the skill, the delicate touch are wanting, and the whole operation is much like grappling for mussels in the mud." On the other hand, we have heard night fishermen descant with enthusiasm upon the allurements and fascinations of trout fishing in the dark.

Maryland sportsmen are organizing a State association with an avowed purpose to simplify the very badly complicated laws, to provide for the care of game in winter, and in general to advance the interests of the craft. There is an extensive field for such an association, and we wish the promoters abundant success. Maryland game legislation is a shining example of non-resident discrimination run mad; these laws are not only against residents of other States, but in one county against a Marylander of any other county. The beauty of the scheme is that it does not protect game, but does promote sectional jealousies and stirs county neighors up to wrath.

The Adirondack Guides' Association is a very important institution. Its membership is so large as to give it an assured influence.

The Sportsman Tourist.

GLIMPSES OF CAMP LIFE.

Come with me, and we will board a train on that great trans-Continental line, the Union Pacific, and westward fly toward the setting sun. We will whirl over the great plains, toil slowly up the backbone of the Continent, dash down the mountains steep, and cross the roaring rivers, until we reach that land, so rightly named by the redman, E-dah-hoe or literally the Gem of the Mountains. A roughly set "Gem," but still a gem that brightly gleams and sparkles in "Columbia's crown."

That portion of Idaho traversed by the short-line division of the Union Pacific, as viewed from the car windows, gives one a poor idea of the real beauties of the scenery and the charming country, that lies away from the line of travel. Not that there are not many interesting sights and charming valleys, clothed in beautiful garments of green, but the railroad runs through many sections of arid plain and lava country that are very uninviting. Sage brush plains, vast stretches of lava rock, with here and there a bunch of grass growing in the crevices and alkali bottoms, looking bare and ghost-like, with an unnatural whiteness in the glare of the sun, or beneath the mellow rays of the full moon, are all novel sights to the eastern tourist, but one soon tires of the monotony, and it is not until you get into the mountains that you are impressed with the charms of this wonderful land.

Pen pictures of scenes or places are all right so far as they go, and if a facile pen makes the picture we can appreciate, though far away, some of the beauties of the charming nooks described, but how much more do we understand and grasp a description when it is helped by a picture of the place, be it either drawing, painting or photograph. There is no doubt, however, that to-day photography is the "ne plus ultra" of methods for illustration, and if it were possible to reproduce colors, there would be nothing left to wish for.

Of the many, many charming camps I have made, some have been selected for picturing; and it is hoped that the glimpses here seen will so interest some brother lover of nature, that he will seek and find for himself some spot in the far West, where he, too, may enjoy the pleasures of out-of-door life.

Nestling high up among granite peaks and fir-clad mountains fifty or sixty miles north of the Union Pacific's short-line branch, lie the Trinity Lakes, some sixteen in number, and ranging in size from a mere crystal pool to a glistening sheet of water some acres in extent. High and rugged peaks, some with thickly timbered sides, encompass them about on all sides. The trail to all but one lake is rough and little used, in fact, few parties have ever visited all the lakes, and there are no trails. Round about the lakes is a country well stocked with game. Mule deer, a few elk, bear and white goats, with the blue or mountain grouse, make it quite a hunter's paradise. and when we add trout galore, what more can mortal wish?

After a two days' journey, one small party of four reached the lakes, one bright September day. We had (very foolishly) left the ranch, without any fresh meat and with very little else, excepting flour, coffee and some dried fruit. When one of us ventured to express his opinion, "that it would be better to take a little of the deer, hanging up in the meat house for supper, anyway;" he was promptly "sat on" by old Joe, with: "Wall, if we uns can't kill a deer to-night afore sundown, we ought to go hungry." And so we did, so far as meat went; for though "Long Cox," "bored one with his needle gun," as he expressed it, it got into a thicket, and he could not find it. On our return journey we discovered the poor thing dead, but of no use to us.

We only traveled a short distance each day, and went into camp about noon. The second day we camped very early, and all started out for meat. Again bread and coffee failed to fill the aching void; so when we reached the lakes the next noon, the packs were quickly taken from the horses, and it was not long before we were all pulling out the little speckled mountain trout as fast as we could throw a fly. In a very short time more than eighty had been taken out, and only a short time after we had two frying-pans hard at work.

Were they good? Well, go to the mountains, my friend, live two days on bread and coffee, and then seat yourself before a pan of mountain trout, cooked to a turn, and served hot and crisp a la hunter style, and you will answer that question but one way—Yes (with a capital).

While we were lying under the shade of the pine near the tent, Henry, or Hank, as he was usually called. "Lowed trout might be fillin', but he was no fisher, and nothing but a good fat buck would satisfy him, and he was going to have him afore dark that night." Joe seconded the motion, while the others voted unanimously that "Hank's head was level."

The sun was still high in the west when Hank was heard coming over the rocks singing:

"In the days of old,
In the days of gold,
In the days of '49."

"That's buck, sure," said Cox, and when Hank got to the tent sure enough his hands were red.

"Where is the buck, Hank?" said Joe.

"Down the canon a bit, you fellers better put the sawbuck on old Dick and pack him in. He's a dandy and fat, I let his mate go. No use being a hog, because you've got a chance."

The shades of night have not fallen ere the buck hangs on the pine by the tent, and near by a couple of grouse shot by Joe while after the deer, dangle from a bough.

Plenty reigns and peace and contentment hover over our little camp. Some one remarks, as the cool evening air solidifies the deer fat which was used to cook the bountiful pan of venison in, that deer fat was not bad, but that it stuck to one's teeth. "Hump," snorted Long Cox. "yer needn't kick. I notice it sticks to one's ribs, too. Beats frying-pan, bread and coffee straight, you bet your life."

FRANK F. FRISBIE.

DETROIT, Mich.

AN ADIRONDACK DOG STORY.

During the season of 1886 while touring in the grand old Adirondack wilderness with my trusty guide, Andrew Lyndecker, we were sojourning for a short time at mine host Coville's neat and cosy log stopping-place for sportsmen, located at the Sweeny Carry, near the lower end of the Upper Saranac Lake, and exploring the region in that vicinity as well as doing a bit of trolling for lake trout. Coville was the owner of a fine black spaniel; and also of a little white and red fellow named "March," who quickly made friends of us, and was permitted to accompany us in our daily rows and rambles, until I became so much attached to him that I finally bought him, and took him with me to my headquarters at Smith's Lake (now Lake Lila of Dr. Webb's preserve), one of the beautiful and picturesque gems of that region.

On arriving at my wigwam on Rock Point, I found a message from some brother sportsmen then in camp on Bog Lake (a misnomer), inviting me to visit them before they broke camp, which they were to do presently. The next day found us on the way via Harrington and Clear Ponds, and across Bog Lake to the camp site at the beginning of the trail to Mud Lake, where a royal welcome was extended. After dinner a little rifle practice was in order. I then noticed that March was afraid of a gun, and finally slunk away in the cover, and would not respond to my call, nor could I find any traces of him on the trail either way from the camp. The boys assured me that they would take good care of him, if he returned, and I was to come again in two days for him, and Andrew and I returned that evening to Smith's Lake.

The next day at about noon, a boat was observed coming down the lake, and headed for Rocky Point after passing the islands; and when in hailing distance the guide stated that Mrs. Pliny Robbins wanted him to tell me that my little dog March had come to the hotel on Little Tupper Lake early that evening, and she would take care of him until I could come over for him. We started shortly after, and as we neared the Robbins Hotel saw March on the bank watching us, and ere we were an hundred feet from the shore his keen eyes recognized, and he had jumped into the water and swam out and met us, and as I lifted him into the boat he barked with delight, and in the exuberance of joy climbed all over me. Robbins said that he had come in that morning over the Bear Pond trail, and was very tired, and went to the room, and under the bed that I had occupied when I was there over night a few days before, and that Mrs. Robbins had finally coaxed him out and fed him, she having also fed him when he was first there; and he would have nothing to do with any one else. We remained over night, and next day returned to Smith's Lake, picking up a nice mess of trout at Charley's Pond, which we disposed of for dinner.

The next day we went over to La Mont's little hotel (now no more), and finding a few genial sportsmen there, we got up a rifle match, and I embraced the opportunity to endeavor to break March of being gun shy. I put a collar about his neck, and attached a strap, and when the others were shooting I took him to a place at one side, nearly mid-way between the target and the rifle experts, and talked to him as I would to a boy, to soothe and allay his fears, and to make him understand what was being done, and occasionally I would go to the target and show him the result of the shots. At first he was very nervous, and trembled like a quivering leaf, but gradually his fear passed away. When I would shoot I would leave him in charge of Andrew, and when I went to the target I would call him, and Andrew would accompany him, still keeping him in leash.

The next day another shoot was arranged for, and I observed the same method, except that I finally took off the strap and let him loose. He went into the hotel, and remained there until the close of the shooting, when I called him and petted him, and told him we would go home and get some dinner, which he evidently understood, for he bounded and barked and ran to the boat ahead of us. For a few days thereafter I daily would take my gun from its rack, and take a card and show it, and tell him I was going to shoot it; then tack it up on a tree, and fire one shot; and then go and take it down and show him the bullet-hole. But he was still more or less afraid.

Finally the time arrived when it was lawful to hunt ruffled grouse. March was a splendid trailer, and would bark when he had raised a bird. Near camp was a place where a covey would be found almost any day, and I was now ready and anxious to give the little spaniel his final lesson and note the result. I had trained him to follow at heel, first by strapping to my leg, and afterward by short lessons when free, and he would seem to understand what I wanted, and when I told him to "go seek," he would start instanter with nose to the ground. He would also retrieve a stick very nicely. One favorable morning I took down my Winchester, .38cal., and told March we would "go out and get a bird for dinner," and we started for the thicket near a brook where the grouse were in the habit of rising. On arriving at the locality I told him to "go seek," and away he went, and in less than ten minutes I heard his whimper of satisfaction, announcing that he had struck a fresh trail, and I hurried quietly in the vicinity and saw the birds flush, with March after them giving full tongue, as they alighted in part in a thick spruce. I carefully noted the particular bird that he had in view, and drawing the ivory bead of my Lyman sight just above its head, I pulled the trigger and was gratified to see the grouse come fluttering down. March did not seem to notice the report, but sprang forward and caught the bird. I said "careful, old boy, now fetch," and he brought it to me and gave it into my hand, and I petted him and said, "good dog," and he seemed as proud as could be. Another bird was perched just above where the one secured had been, and in plain view. I pointed with my gun and said, "March, there is another one, look out for him," and he seemed to understand it, and began to bark, looking up at it; in the meantime I took careful aim as before, and brought down the second one, which he retrieved as nicely as could be. One head had been entirely dissevered, and the other hung by shreds of skin. I took both, and with my hunting knife split the skulls, and gave the brains to March, which he devoured eagerly. Having birds enough for dinner, and well satisfied that one or two repetitions of the lesson would eradicate entirely all fear of the gun, I returned to camp and enjoyed the breakfast of trout, etc., which Andrew had prepared. At dinner we feasted on the first grouse of the season, broiled over the coals on forked sticks, and March disposed of the remains with gusto.

The next morning when I took my gun from its rack, March seemed to know what was up, and when I said, "Do you want to go and find some more birds?" he barked and bounded up in a manner that expressed as well as words that that was just exactly what would suit him. Suffice it to say that we succeeded, and March and his master were both happy over the result. From that time he was never afraid of the crack of rifle, and was never so pleased as when I took down my rifle and told him he could go. If I went out on a stillhunt for deer and cautioned him to "heel in close," he would step as cautiously as a cat watching a mouse, and seemed to realize what I was doing.

One morning I took him for a jaunt around a bay where I had noticed a few fine large black ducks occasionally drop in, and as I approached a favorable spot for observation, I saw four fine ones 30 rods from the nearest point of shore. Telling March to "heel in," I cautiously crept around to the most favorable spot and took careful aim at the head of the largest one in the group, and upon firing had the satisfaction of seeing the duck striking his wings and gyrating about in the water. I pointed in the direction, and told March to "go fetch," and the little fellow swam out and seized the still alive and gyrating duck by a wing and started for shore. It was some seconds ere death prevented the bird from beating the water

with its free wing, and it caused March quite an effort to keep a direct course, but he hung on and was a tired ltitle dog but supremely happy, as he brought it ashore and gave it into my hand. I was surprised at its weight, and at once weighed it on spring scales that I had in my pocket, and found it pulled down an even 3 3-4 pounds. The top of the skull only had been struck by the bullet, which accounted for its living so long after the shot. I shot quite a number of ducks that fall, and the two succeeding falis that I spent in the Adirondacks, always aiming at the head only. If I missed it was all right, but if I was successful I had the satisfaction of a bird unmutilated, and March was always a sure retriever, and never

GLIMPSES OF CAMP LIFE.

so happy as when doing something that he knew pleased his master.

The trail of a wounded deer was the only thing that seemed to set him perfectly beside himself, as the saying is, and I would have to reprimand him sharply to keep him from running away and then always had to attach a strap to his collar to hold him until sufficient time had elapsed for the deer to have sickened. I would then let him follow the trail while I held him in check, and followed with eyes keenly alert ready to give the coup-de-grace in case the deer was not already dead, and sprang from cover, and so seldom lost my game. I well recollect an incident that occured in the fall of the third season that I spent in the Adirondacks. I had been making quite an extended tour, and on my way back to camp from Fulton Chain Lake via Big Moose Lake, had stopped for a few days at Dunbar's Hotel, on the Stillwater of Beaver River, and visited the lakes and ponds and points of observation in that vicinity. On the morning of the day of our departure up the Beaver River, we met a couple of boats with a party who had been at Woods Lake, and had stopped the previous night at Harris's cabin, on the south branch, near this junction with the Beaver. After scraping an acquaintance and learning where they had been and where going, I asked them if old man Harris had any venison in camp; they said he had not. That he said his sight was so poor he was not so successful a hunter as he used to be. I said "all right, Andy, we will try and drop a deer for him on our way up."

We parted company, and Andrew and I continued on our way up the river, he at the bow pulling the oars, and myself in the stern paddling and steering the boat in its course up the devious river. Our pack basket was resting against the yoke (wherewith the boat was taken over carries) in the center, and March was nestled on a bed of wild grass at my feet, while my rifle rested on wooden hooks on one side and my rod case on the other. In this way we had proceeded about seven miles up the river, when on turning a bend of the stream I saw a fine buck feeding near the edge of the water, about twenty-five rods above the bend. I uttered a low cautionary sound, and Andrew stopped rowing and let the boat drift back out of sight of the deer, when we pulled ashore and quietly put up the oars and changed positions so that Andrew was in the stern with the paddle, and I was in the bow with rifle in readiness, March having been strapped to the yoke to prevent him from bounding out. Silently Andrew propelled the boat up to the bend, and as soon as the buck was again in view, held it steadily as possible in position, while I took deliberate but quick aim and pulled the trigger. The deer sprang at once into the brush, and was out of sight ere the smoke gave me a view. Andrew said, "Mr. W., you must have missed him, for his tail was up when he jumped into cover." I replied that I guessed that was not always a sure sign, for I was certain that my nerve was steady and my aim good, and that we would find the ball had struck just back of the fore-shoulder, although it might be an inch or so lower than I had intended. I was absolutely sure that he was hit. We went up and landed near the spot where the deer had been, and Andrew went ashore and made examination, and reported that on the second jump blood was to be seen on each side, showing that the bullet had passed entirely through the game. In accordance with our usual custom, we decided not to follow the trail, but to row the boat up stream a few rods to an old snag to which we could lash the boat, and from which position we could command a view of the shore for some distance, being confident that if living, the deer would very soon seek the water.

While awaiting developments, we ate our lunch of bread and butter with slices of jerked venison and some jerked trout, with cold coffee; and having finished, I was about to light a cigar when I saw a movement in the brush some twelve or fifteen rods above, and calling Andrew's attention thereto, awaited the appearance. Soon our deer emerged, weak from loss of blood and slowly walked out into the river until the water covered the wound. March saw him and was eager to go. Believing that the deer was so nearly done for, that should he attempt to leave the water I could easily stop him, I unbuckled the strap and told March to go. He sprang into the water and swam for the deer, who did not notice him until March had nearly reached him, when, instead of turning and going toward shore, he started to swim across the river, but March soon overtook him and actually climbed upon his back, and then forward and seized an ear in his mouth and commenced to shake it as best he could, and this and the dog's weight soon ended the life of the deer, but the little fellow hung on and commenced towing the body to the shore, working like the hero that he was, until he had succeeded, and got into water too shallow for the buck to float in, and then for the first time let go his hold, when the ear dropped down under water, and March at once put his head down into the water and again seized the ear and held on until Andrew and I, who had been amused and interested spectators of the performance, came to his relief and drew the deer out of water, hung it up and cut its throat, and then dressing it, gave March his well-merited portion of warm liver. As we praised him for his good work he seemed to understand it, and evidently thought he had done a grand act, and that was surely his deer. Would that I had had a camera to have made some snap shots of the scene during the varied phases. We loaded our game into the boat and proceeded on our way to the South branch, seeing two more deer en route, but as we had no need of more we let them go without any attempt to shoot them.

On arriving at the landing on the South branch, perhaps a quarter of a mile from Harris's cabin, March had hardly been out of the boat more than two or three minutes ere he had put up a couple of ruffed grouse and was giving us notice of the fact, and while Andrew unloaded the boat and placed it and our baggage under the trees, I went and bagged the birds, and then we went up the trail to the cabin, taking along the pack basket, but leaving the game. Old man Harris had been a hunter and trapper in Pennsylvania and Michigan in earlier days, but had lived alone in the Adirondacks for many years. He was a tidy housekeeper and a good cook, besides which he was a great collector of curious specimens, not only of peculiar growths of wood and fungi, but also of stone formations, and his cabin was literally acovered with bones and claws, heads and antlers, some of the latter wonderfully interlocked, taken from the heads of fighting bucks that he had killed. He was a great reader, and as I had sent him a number of packages of the Forest and Stream after I had perused them, I was always heartily welcomed at his camp.

Upon meeting him I was cordially greeted and asked to remain over night and as long as I chose. I asked him if he had any venison on hand, telling him I was fearfully hungry, etc. The old man threw up his hands and expressed himself so sorry he hadn't a bit of meat, but would get up the best supper he could from what stores he had. I said to him I had heard that he was out, and as I had been at Dunbars, I had brought a few steaks along, and he could go with Andy down to the landing and get them. This pleased him much, but Andrew told me of his expressions of gratitude when he showed him the nice plump buck that I had killed expressly for him, and the alacrity with which he assisted in bringing it up. and after they had skinned it and I told him he could have the hide also, worth $2 to him, he swore in his peculiar way that I was one of the best fellows he knew.

We had a royal feast, and sat about the fire and smoked and chatted, and I was for a long time an interested listener of his tales of adventure. The next morning we proceeded on our trip up the Beaver and through Albany Lake and the carries to my headquarters on Smith's Lake.

March accompanied me through all my three years' journeyings in the Adirondacks. He was born at Saranac village, and his life ended at the edge of the wilderness. Winters, when I went South, I would leave him with Andrew, and on my return in the spring he was joyous to meet me. I finally gave him to Andrew, whose little boy had become attached to him. In April last I received the following quaint letter: "Friend Whitaker: I have been going to write to you a long time. The woods have changed so much, and everything since you and I were up there. It is full of railroads and parks now. I would like to hear from you how you are getting along. Poor March is dead. Yours truly, Andrew Lyndecker, New Bremen, N. Y."

E. J. WHITAKER.

SOME MOOSE STORIES.

HALIFAX, Nova Scotia.—We were busily discussing one day the merits of Indians and white men as moose callers. "Oh!" said Amos, "an Injun can't call along side of me. Why, I recollect one time I went out to the calling stone in a certain barren (this same stone I know well, it is about six feet high, with a flat top, well suited to call from) and gave a low call, and in a little while I heard him coming about a mile away. Bill says to me, 'Amos, how near can you bring him?' So I coaxed him nearer and nearer till he was about 100 yards away. I thought surely he would see me, but moose haven't got no eyes they can't see a little bit; so we kept perfectly still and never made a sound. After a while I just made a low tu-tu with my mouth. I was afraid to move my hands so as to make a trumpet. Then he come up and up just a step at a time, till, by jinks, sir, he was right up to the stone; we could have jumped down on his back. Then we let him have it, and he dropped like a log and never moved. Now, show me the Injun that could do that!" He is a firm believer in the idea, popular here, that there is a spot in the forehead of the moose which will turn a rifle ball. He tells a story about meeting a very large cow-moose face to face, at a distance of some thirty feet, on a logging ground one day. "There she stood looking

GLIMPSES OF CAMP LIFE.

"Humph! yer' needn't kick." Photo by F. F. Frisbie.

at me like some tame critter, and I wanted some meat; I put up my gun and let her have it right between the eyes. Down she went, like as if she had been knocked, and just as I got up to her up she jumped and went off like murder, so I gave her my other barrel and dropped her, and all the damage done by the first ball was to knock a little skin off the front of the head, a little above and between the eyes."

I tried to tell him many a time that it was his gun that was at fault, but he won't give in; he swears by his trusty old gun, or I should say his new one, for this event occurred some fifteen years ago, shortly after he lost from his canoe a muzzle loader, which he laments to this day. His favorite way of hunting was the still-hunt, and often he has explained how a moose, when feeding, always travels in such a course that when he lies down with his tail to the wind he can scent anyone coming down on him from behind; if anyone is following his tracks he can see them out of one eye, if anyone comes up in front he can see with both eyes, so he has as many guards out as he can very well put.

Amos was a born hunter, as much, and perhaps more so, than anyone who reads this article. What a marked contrast between him and another old timer I know, whose chief delight is to tell how they would go out and locate the places in the deep snow where the moose were yarding, and then all the village would turn out and kill from twenty to thirty at a time, and then only take away the best part of the meat. It was this that so quickly and surely reduced the numbers of the noble animal in our province. The one was a hunter, the other a butcher.

There is one more story about old Amos, however, which is too good to keep. He was out one winter during the first snow with a city gentleman who was very anxious to get his moose, and who had made Amos promise faithfully that he would give him the first shot if they sighted a moose that day. Presently they came on the fresh trail of an animal and located him in a small clump of spruce. It was getting well on to sunset, and the woods were becoming gloomy, and objects at a little distance were indistinct. However, they worked round towards where they supposed the moose to be, and Amos, suddenly stopping, pointed towards the woods and signalled to shoot. The gentleman looked anxiously, you may well suppose, but could see nothing to shoot at. Finally Amos, getting disgusted at him for not shooting, put up his gun and fired, when, with a crash, up jumped the animal some distance to the right and made off over the hill. But nothing stirred in the direciton where the shot proved to have been sent. On investigation, the object aimed at proved to be not a moose but two old roots, which from a certain position looked for all the world like a moose lying down. Report has it that it is dangerous to mention this shot to old Amos even at the present time. He redeemed his reputation, though, by running round the base of the hill and getting a long and effectual shot at the actual moose as it was going across a small meadow on the other side.

A peculiar feature about this moose was that, although well on in November, the horns were still in the velvet.

I know of but one other case of this kind; the head is now preserved in the provincial museum here. If any reader knows of a similar case and can explain the reason, I would like very much to hear from him. But laugh as we may over the old man's mistake in shooting at an upturned root, how many of us are there I would like to know who would not have done the same thing. Many and many a time when waiting for an answer to our call I have imagined I saw a moose stealing along in the shadows of the side of the woods, and I am confident that had I not known that certain black objects were old blackened stumps and bushes, which I had previously located, I would surely have shot at them, believing them to be the game we were waiting for. This was near dusk, of course.

So much for moose as they once were in Nova Scotia. Perhaps at some future time, if this finds favor, I will send you a few notes on moose as they are at present.

TIAM.

Natural History.

SKUNK FARMING.

In response to a correspondent's request for information about skunk farming, we have endeavored to collect some data, but it must be confessed without brilliant success. Several skunk breeding enterprises have been discovered, but we have been unable to ascertain that any one of them has as yet progressed beyond the going to do something stage. The correspondence is given. We would be glad to receive any added information on the subject. The accompanying illustration of the skunk, copied from the Trapper's Guide, is given to show the markings, one expressed intention of all breeders being to eliminate the white, and produce a pure black strain

PHILADELPHIA, Editor Forest and Stream:—I have your note about the Shawnee skunk farm. As near as I can remember, from a sign posted on the farm house, the address should be Monroe Farming Co., Limited, Shawnee, Monroe County, Pa. S. W. R.

SHAWNEE, Pa., Editor Forest and Stream:—In reply to your favor, I beg leave to say that I am associated with some other gentlemen in rearing skunks; that our enterprise has been made as near successful as possible; that from experience we have learned a great many things about rearing skunks, which have cost much time and money, and the public has no right to expect us to sell our knowledge in this enterprise for nothing. I would be glad at some future time to write an article for publication in your paper upon this subject if requested in the proper manner. Until that time there is nothing further to be learned from this source.

M. LUHTHER MICHAEL, Supt.

WASHINGTON, Editor Forest and Stream:—Referring to the query about skunk farm, I would say that about two years ago there were three skunks on exhibition in the Zoological Park in this city, which came from A. E. Kibbe, Mayville, N. Y. I believe that Mr. Kibbe was at that time engaged in raising these animals. A. B.

MAYVILLE, N. Y., Editor Forest and Stream:—As I did not breed the skunks more than two seasons, perhaps I am not competent to give the necessary information; but as I made it a deep study while I did keep them, I know something of their nature. I began in the spring of 1891 with five females, they all had young in the first part of May, ranging from five to seven; one in 1892 had nine young. When they were two weeks old I removed the scent sack, for I lived in the corporation and knew that I could not keep them unless I could remove the scent. I lost some of them, but succeeded in making a few of them live. In 1892 I raised a few more and performed the same operation; but as I had to be away from home a share of the time they did not do as well, although I raised a few. In the spring of 1893 I was called away to be gone for several weeks, and so concluded to give it up, for I was fully satisfied that it could be performed successfully only if one's time were not taken up some other way. I am perfectly satisfied that they can be bred with the best of success, and I think that by careful breeding one could breed black skunks in five years. In the summer I kept them in a yard with a twelve-inch plank imbedded in the earth, and the fence was eight feet high, with a six-inch board on top projecting in the yard with an artificial burrow for each skunk.

An old fur buyer here said the fur would not get prime; but with the last skunk I had I thought I would test this. I had had it in captivity two and one-half years, killed it in March, and sold it to a town fur buyer and told him to call the old veteran's attention to it, but not let him know that it was a domesticated skunk. The old veteran got fooled, for he said it was A 1.

Skunks are easy to handle, but are nervous animals, and one wants to use care with them. I wintered eleven in a small building 10x16, ten females and one male. These did not have the scent sac removed, and I was in and out two or three times a day, and did not have any trouble with them. When I say that they are easy to handle, I do not mean to pick them up; if you do, shut your eyes and mouth, and be careful and not let them bite, although I never had one even offer to when I would take the young out of the nest for the operation.

A. E. KIBBE.

ITHACA, N. Y., Editor Forest and Stream:—The Ithaca Fur Co. has a farm located a few miles south of this city devoted to the breeding of skunks. The farm is surrounded by a deep ditch filled with stones, over which is built a high board fence. This insures a secure confinement of the malodorous little fur bearers. The company expects to populate the premises with at least 5,000 skunks within twelve months, and is breeding and buying with a view of obtaining a strain as nearly all black as may be. The skunks are fed largely on milk, water, and bits of meat more or less aged.

When "killing time" arrives, the gentle but impudent little beast is put in a tight box and chloroformed. The value of the skunk is not entirely in its fur. An adult animal in fine condition will yield almost a pint of oil. The oil finds a ready sale in New York markets at a good figure.

The skunk makes a pretty reliable pet if taken in hand before the habits of a mature age become ingrafted into his conscienceless being. Mrs. Bush, of Lansing, this county, recently made pets of a whole litter of young skunks that were born in the immediate neighborhood of the farm house. Mrs. Bush could handle the little rascals with impunity, and her success would seem to suggest a new field of experiment along the lines of the skunk industry. A school of performing skunks would prove a novelty in almost any direction of the wind.

If you will write to Mr. J. B. Todd, of this city, I think you may obtain a lot of practical information concering skunk farming. M. CHILL.

ITHACA, N. Y., Editor Forest and Stream:—Yours of the 9th inst. is at hand. I am not in the skunk-breeding business.

There are two gentlemen in this city who some months ago started what they term a fur farm about eight miles from here, for the breeding of skunks for fur and oil. They have now about five acres devoted to that purpose, and contemplate adding seven more next spring. So far, they have derived little or no money therefrom.

As regards the financial returns of such an undertaking, I can only say that while such a scheme looks very feasible, one of the persons interested told me that the idea of this farm originated from his positive knowledge that acquaintances of his in the West had become very wealthy at it. To this I might add that although skunk furs are nice and fashionable, they are going up higher in price each year, and I read only a few days ago that they had avdanced 15 per cent. in the London market. After careful investigation, this locality was found to be the most conducive of the breeding of skunks. The company has now since the killing of thirty or forty males, about 115, from which they hope to get by breeding mostly, about 5,000 by another year. Then they will begin to receive returns from their outlay. They are now breeding for size and color (black), and I'm told they have one male that weighs 20 pounds. Each one, if in good condition, will yield nearly one pint of oil. They use only the leaf fat when trying for oil, and since ithe animals are fed on clean meat, are well-cared for, and are killed by chloroform, neither the fur nor the oil can be other than first-class. JUDSON B. TODD.

The American Agriculturalist of May, 1894, had an illustrated account of the skunk breeding establishment of the Michigan Fur Co., at Buchanan, Mich, which was said to have invested several thousand dollars in the enterprise, with resultant profits not definitely stated. The Buchanan company also proposed an attempt to breed silver gray foxes; and cites a curious instance of mother fox presence of mind and promptness of action. "A few years ago," says the Agriculturist writer, "so the manager told me, a female silver-gray fox was caught in the vicinity of Buchanan, and kept in captivity. She gave birth to a litter of young soon after she was caught. They all became quite tame, and their owner congratulated himself upon his good fortune until one day a dog was allowed to approach too near, when, in a twinkling, the mother fox caught each little one by the back, and, with one quick snap and jerk, broke its back. Evidently she reasoned that if they must die it would be better if she did the killing rather than have them fall in the jaws of the enemy to be worried to death."

While many reports have obtained circulation concerning the breeding in confinement of various fur bearing animals, most of them have no doubt had their origin in the brains of the ingenious writers, and have no foundation in fact. An Ontario inquirer sends the request for information about fox-breeding: "Mr. I. L. Borrowman, a well known fur dealer of Western Ontario, has entered into a somewhat novel enterprise to breed black and white foxes in a domestic state. He has purchasd five young foxes—one black, two cross and two red—which he has confined in an inclosure about 12x25 ft., surrounded by a woven wire fence, underneath which is a trench filled with stones to prevent them from burrowing. In the centre of the pan he has placed a box about ten feet long and two feet wide containing straw for their beds. He, as well as others of your readers here, would be glad to learn through the columns of Forest and Stream whether any of your subscribers have ever known of any case where those valuable fur-bearing animals have ever been successfully bred and raised in the domestic state, and if so, what would be the proper method of treatment in order to secure the best results. E. C. R.

Jack Rabbits in Confinement.

Shut up in the city as I am and unable to wander in the forest and by the stream, thanks to Forest and Stream, I can enjoy hunting in imagination. But I long for something more real. One day I noticed an advertisement, by Chas. Payne, of live jack-rabbits for sale. The thought struck me—why not have some of those wild animals in my empty stable and unused yard? Capital! I sent for some, and the result was I received four pair for a modest sum. They came in excellent condition, and I don't know what $16 I ever spent previously in my life afforded me greater pleasure.

To watch them from a third story window coming out of the stable just as though they were on springs into the yard and back again. They will easily spring over a fence eight feet high, but I keep them in by wire netting, reaching up twelve feet.

The other day an amusing incident occurred, the joke being on me. We had a heavy fall of snow here, which caused the snow in my yard to be banked up four feet high. I came home late that night and fed my jacks hay and oats without looking at them. The next morning I was surprised to find not a living sign of jacks in the yard or stable. I hunted behind every barrel and box, but still no sound. Loud mutterings and still louder exclamations revealed nothing but a lot of boys and passers-by looking through the cracks of the fence. Who could have played this trick on me? I inquired of the whole neighborhood—nobody could give me the least clue. Two days afterward, I noticed some rabbit tracks in the snow. I then went into the stable and turned everything over for the hundredth time but no result. The thought occurred to me that they must have burrowed into the snow. I soon found out, with the aid of a snow-shovel, to my great surprise and joy, that each one had burrowed three feet straight down while it was snowing heavily for the second time and formed a cosy little place for itself. G. H. C.

THE SKUNK.

A Moose Head.

There is now on exhibition at the art rooms of Knoedler & Co., Fifth avenue and Twenty-second street, this city, an oil painting of a moose head which ought to be seen by every big game hunter. It is the work of a young artist, Mr. Karl Rungius, and is wonderfully lifelike. It is moreover as unconventional as possible. The ordinary picture of a moose head is either full face or in profile, and the most is made of the spreading antlers. This painting, however, shows the moose head not quite in profile and only part of the antlers. The animal appears to be making his way through the snow covered forest, and the back ground of white throws out in a wonderful way the dark color of the head and the lighter brown of the horns. The rime of the frost clings to hair and antlers, and in one or two places are patches of snow knocked down from the overhanging branches in the animals passage. The modelling of the face of the moose especially, about the muzzle, a subject of such great difficulty to taxidermists, and one on which almost all

fail, has been given close attention and is thought to be absolutely life-like.

We understand Mr. Rungius is at work on two other pictures of entire moose, which will soon be finished, and the exhibition of which will be looked for with interest by hunters.

Animal Sense.

That astute old woodsman, J, G. Rich, of Bethel, Me., says in Forest and Stream, March 2—"Whenever wild animals are suddenly startled by coming upon them unexpectedly, they rush away at fearful speed for a short distance, say one-fourth of a mile or less, then stop short, raise their heads high in air, and take a good look to see what frightened them; then they immediately continue their flight. Whether or not it is the trait of curiosity same as we mortals possess, or to ascertain if they are pursued, or to make sure of their sense of smell, we cannot tell; but it is, nevertheless, a universal trait in all wild animals."

Just so! Likewise when a man stubs his toe as he walks he invariably turns round to notice the spot; not so much from curiosity to discover what tripped him, for he often knows without looking, but possibly to assure himself that he is in full possession of all his senses and faculties, else how would he have blundered? The trait seems common to men as well as animals. C. HALLOCK.

A White Coon.

POINT PLEASANT, La.—I don't recollect a white coon killed or reported to you, and I never saw one before a few days since, although I have been a hunter for a good many years. I now have the skin of a white coon that was killed in Texas Parish, and if you wish it to add to your trophies I will send it to you. I wish I could send you a white bear skin of the black bear; but so far I have not been fortunate enough to find one. I think that a man who has killed as many as Mr. Bobo will certainly get a white one after a while, unless the bear become extinct, which I think they will soon be at the rate that Mr. Bobo kills them. They are getting scarce with us.

D. MUIR.

An Albino Robin.

CARROLLTON, O., March 4.—A few days ago I shot an albino robin. It was alone in our yard one of those cold days. The upper part of its body is pure white, the breast a very light brown. It was not damaged in the shooting, and I sent it to the taxidermist and had it mounted. It is an extremely fine specimen and greatly admired by all who see it. Large flocks of robins wintered here in spite of the cold. It is feared that a large per cent. of the quail have been frozen.

CHAS. C. CAMERON.

Tame Bohemian Waxwing.

Mr. J. W. Schultz, writing in January from Kipp, Mont., on the flanks of the Rocky Mountains, says: "A Bohemian waxwing makes the porch of his store his head quarters and is very tame."

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18. Madison Square Garden, New York.—First annual Sportsmen's Exposition.

DOWN IN THE MARSH.

AN OTTER STORY.

There are many exciting experiences written about the shooting and capturing of large game, which are all more or less interesting, but it is seldom we read an account of the shooting of an otter in this country, for I doubt if there is any animal in its native haunts wilder and shyer, and as they are seldom seen in the daytime, it is rarely that they are ever taken except by trapping, and even that is a difficult matter at times, even by an expert. Owing to the favorable situation of land and water in this vicinity, there have been quite a large number of otter taken in years back, but they are now nearly extinct in these parts, and I blush to relate that I helped to exterminate the last of them so far as known, and I doubt if ever there was a similar chain of circumstance connected with the capturing of a family of otter, but that was some time ago, and "Sorrow for past ills doth restore frail man to his first innocence."

The older I grow, the more repugnant does the taking the life of an animal seem to be, but underneath all this is an irresistible desire and love for the sports of field and forest, lake and stream, which will follow to the end. It was bred in the bone.

It was about three years ago, while on a trout-fishing trip, I passed the night with some farmer friends whom I had known for years, and with whom I had stayed many times on my hunting and fishing excursions.

Through the meadow in front of their place ran a small stream, which a few miles below became lost in a large slough, which wound its way through the bottom land or marsh, which has been one of my stamping grounds for years. At the head of this stream, about one-half mile above the house, was a large spring, nearly surrounded by a high bank covered with brush, and here, the farmer's boys told me, with a great deal of secrecy, that they discovered four otters, three of which were young ones born there that spring, and here dwelt the family. The boys saw them while haying during the summer, and not being molested they became comparatively tame; but I learned later that as fall came on, they were seldom seen, and finally disappeared, much to the sorrow of my friends who made the discovery, as they intended to capture them after the fur became prime when cold weather came on.

It was about the first of November, following the event just narrated, that I was camped on the slough near the mouth of the stream spoken of, having as a companion my friend Van, who has camped with me for many years, and who was one of the best men in camp or in the woods that I ever saw.

It was getting rather late for duck shooting, as there had been considerable ice, but it had melted, and the sloughs were all open, and the mallards had come back in considerable numbers. I had just returned from a morning hunt, and was hanging up a big bunch of greenheads on a tree, when happening to glance up, I saw Van coming on a run through the woods. He had been up the slough fishing, and had taken no gun. As soon as I saw him I knew something was up, for it is an actual fact that he will see more game when he has no gun than any man I ever saw.

The first thing I heard was: "Harry get your gun and come quick." I did not need a second call. Grabbing my little Scott Premier ejector, I started after him. On the way he explained that, while fishing, he had seen four otter cross a sand bar and go under a high bank where there was a small pool of water nearly surrounded by land, and his idea was to drive them out. When we arrived at the spot, I must say that I had not much faith in trying to dislodge them, but Van had, and he proved to be right.

He took a long pole and commenced ramming up under the bank while I stood ready with the gun. Directly I heard a commotion, and a long, dark object glided out under the water beneath me. He came to the surface in a drift of bark, which covered the water close to the bank about ten feet below, and I gave him a load of sixes in the nose, killing him instantly. Then stepping down to the water and noticing that his struggles had ceased, I reached out and, taking him by the tail, it was about all I could do with one hand to throw him up on the bank. The load had torn off the front of his skull and nose, not hurting the fur a particle. I could not help admiring his glossy coat, and was gloating over my prize when Van sung out, "Look out! there are more here."

Hardly had he spoken when another one broke water and made an attempt to cross the sand bar below. I gave him two loads and knocked him over on the sand. I had hardly done this when another made the attempt to cross the bar much farther down, and, although I hit him with both loads and knocked him over, he managed to recover and get away among the logs and we lost him. The fourth one either escaped unseen, or did not come out from the bank at all, as we did not get sight of him.

The fur was nearly prime, and we felt pretty well as we lugged our game to camp. That night, two farmer boys, who lived near by, came to camp to visit us and brought us a quantity of honey. They were viewing the otter and speculating as to the value of the fur, etc., when I asked them if it had been a good year for honey, and the older one who stuttered a little said, "W-w-well! dad's pretty sharp. He's been t-t-t-trappin for them there a week or t-t-two, but he couldn't make it go, b-b-but when it comes to honey h-h-he's all right, for he c-c-c-crossed his bees with lightning bugs so they c-c-c-could see to work nights."

Just then one of my owls gave a war whoop, a dead tree out in the woods fell with a crash, and the boys went cooning over a log across the slough towards home.

A few weeks later I was talking with an old trapper, who had a camp near where the above events occurred, and he informed me that he had caught two otter, one of which had several 6-shot in its side, just under the skin. Thus perished the last of the otter family from the farm. That they were the same there is no reasonable doubt.

WABASHA, Minn. WAPAHASA.

THE SUNNY SOUTH.—V.

STILL AFTER BEAR.

CHICAGO, Ill., Feb. 5.—The bear hunting business at the Bobo timber camp might now be said to be looking up. Our dogs were getting in better shape every day, and we were learning where the bear were using. It was with extreme regret that I felt obliged to tell Mr. Bobo that I thought it my duty to spend only one more day with him, taking the train south that night. In this he acquiesced under protest, and it was decided we should make a morning hunt and then ride back home to Mr. Bobo's plantation, about 19 or 20 miles, taking the 9.20 train south at the Bobo station. We therefore made our hunt up toward the ford of the Sunflower in order to lose no distance.

We kept in a little closer to the river than before between the river and what was called the "old river," a deep, dry channel. Skirting the edge of a little pool among the cypress knees in the heart of a heavy swamp of cane through which a faint path had been cut, we almost at once came upon the tracks of a bear, sunk deep into the mud, and plain, though not so very fresh. By this time I had learned that the place to hunt bear was in the beaviest cane and densest swamps that could be found. All about us was a very large and very rank brake of big cane, through which no progress could be made except by use of the cane knife—though Mr. Bobo could ride along and cut cane ahead of his horse, reaching over in front of the horse's head as fast as the horse would want to walk. A tenderfoot in the brake country could not do this. One must know the angle for the knife blade. At the right slant the heavy blade of the knife falls through the cane and the severed stalk drops straight down and does not cross the "hock." The Northern woodsman is at sea in this country.

As we paused by the water hole the dogs cast around, and all at once broke into cry and made off, though split into two packs. Mr. Bobo declared that it was bear and that he knew where it would cross. So back we went and took stands and spread out in an open glade along the edge of the heavy cane.

And now ensued another one of the puzzling waits which are a part of this business. The ignorant might suppose that the dogs would find a trail, line out at once, run straight on it, bag the bear and get it killed, all in one, two, three order. But this is not the way a bear chase goes. Some of the dogs take the back track in their ignorance. Some of the puppies switch off after coons, deer, cat, no one knows what all. Some of the best ones lose the trail, over-run or lose it in the dry, moving leaves. Then they circle back after it, complaining. Meantime plenty of the pack are just hollering for luck, whether they smell anything or not, and they, too, are swinging and circling and barking at each other. There seem to be a dozen hunts up, and the inexperienced hunter looks for a dozen bear to come bursting out ahead of the dogs. Not so with the old bear hunter. He sits calmly on his horse, knowing all the time what dogs are wrong and what are right, and what the right dogs are doing, whether they are running or puzzling. Some dogs cease running and begin to bay not far away. "It's only a coon," he says, "the bear has gone the other way." Then some one goes and thrashes the dogs away from the coon tree. (Once I shot a coon out of the tree, not knowing what it was. Both Mr. Payne and I thought it looked too black for a coon, and so I violated the first fixed law of the hunt, which is not to shoot anything but bear when the dogs are out.) Thus the hunt goes on, sometimes, by waiting or listening, and the riding does not begin till the chase is lined out and leading away hot.

We had a long wait at the glade, but the dogs turned back again. "I'll just go over and see which way they turn," said Mr. Bobo. So he disappeared in the cane. Here was where I made another mistake. Thinking Mr. Bobo was coming back, I stayed with Mr. Payne, violating my original instructions to stick as close as I could to Mr. Bobo. The day before Mr. Payne would have been the one to stick to, but to-day he he wasn't. We thought we heard Mr. Bobo calling to us, and thought he said, "Ride over to the Old River!" though what he really said was, "I think they're gone over to the old river." Acting on what we took to be instructions, Mr. Payne headed back for the Old River, hot haste, and there he and I had a wait of an hour, only a few times hearing the faint note of a dog in the distance. We waited in confidence that the chase had not passed that point and gone back of us, and Horace and Frank, who rode further over in that direction, came back and reported nothing. Once more silence set in, and the presence of the chase was a matter of conjecture. We were afraid to go back to the glade where we first took stands, lest the bear might cross where we were. At last we all rounded up except Mr. Bobo, and the two lucky nigger bear hunters, Tom and Pete, who were somewhere in the dense cane over toward the Sunflower. It was past noon, and as that was the time we had agreed upon to start for the plantation, Mr. Payne and I at length reluctantly decided that we would have to pull out for home and leave Mr. Bobo. This I disliked to do, and certainly hated the thought of leaving the bear country without getting a shot at a bear, though I had come to think less and less of the killing of the bear, and more and more of the consummate skill of the chase which is the main feature of this sort of sport. "The killing is the least part of the whole business," Mr. Bobo said to me time and again. Sighing, therefore, and overcoming my desire to pot a bear over the dogs, I turned my face toward the railroad, not altogether happy, as who can be who is traveling toward a railroad and not away from it?

Mr. Payne led the way along one of the many mysterious winding "hacks" cut through the cane, and I followed, hoping he wouldn't get lost, but willing to bet he would, for never was there on earth an easier or more desperate country to get lost in. But Mr. Payne is something of a bear hunter himself, and didn't get lost. In half an hour we were at the ford of the Sunflower.

"This is our post-office," said he, "and many a note have Mr. Bobo and I left here for each other." So he cut a cane and stuck it up near the ford, putting in its split top a note naming all who were in our party, saying that had 19 dogs with us, and that we had gone on home at 1.30 p. m. Then we forded the Sunflower and plodded along on our long ride home, getting to the Bobo plantation about a hour or so before sundown. So I had to say good bye to Mr. Payne, as pleasant and courteous a hunting companion as one ever met in any country.

Safe up at the Bobo plantation house, after dinner and after dark, we were sitting about the fire when we heard Mr. Bobo's horn, about half a mile away down the road, at which all the tired dogs jumped up and began to sing a welcome home. Soon Mr. Bobo came in.

BEAR NUMBER THREE.

"You missed it by not staying with me to-day, young man," said he, the first thing after he saw me. And I suppose I had, though I explained to him that I found it pretty hard to tell where was the best place to stay in a bear hunt.

"I went back in the thick cane, and had riding harder by a good deal than you had yesterday. At last the dogs broke back and headed for the open glade where I left you all stationed. I rode hard along that little narrow hack through the thick cane there, and at last heard the bear breaking cane about 200 yards ahead of the dogs. He came up near the hock, and heard or smelled me, for he turned back and stopped. He wasn't thirty yards from me then, and I dropped off the horse and crept into the cane. He was half standing up when I saw him, about 10 or 12 yards from me, and I killed him—shot him just back of the ear."

So this was bear No. 3, and once more I had been in the wrong place. "If you and Mr. Payne had stayed right there in that open place, where I had left you, you'd have got that bear. I killed it not 100 yards from where you were." I explained how we had misunderstood his call to us. And then I asked him where was his bear skin and how big was his bear.

"Skin," said Mr. Bobo, contemptuously, "I didn't bring his skin. It was too heavy, and I just threw it over the limb of a tree, leaving it for Tom or Pete to take into camp. Then I rode on over to the trail, and went to the ford. When I got your note it was about 3 o'clock"

I have been mourning over that fine bear skin that I didn't get—which Mr. Bobo said was bigger than either of the other—ever since that. It seems a shame that it should be left to waste out in the woods nailed up on a shanty wall, when I could have made such a good rug out of it for my office floor! I only had two bear skins already.

But maybe by this time readers of Forest and Stream will begin to believe that this was in a bear country and where there were really bear. Mr. Bobo grieved over stopping the hunt when we did. "We found a little lake back in that thick cane," said, he, "after we left you, and the bears are using in it like hogs. They've got mud splashed clear up the bank to the trees, ten yards from the water. We've just got the bear located now, and have done the hard part of the hunt. We could kill a bear or two now every day very easy,

especially since the dogs are getting worked into shape. But if you must go, you must, I suppose, and the only thing is for you to come down again next year and get that bear you've lost. We'll get him sure."

BEAR COUNTRY, BUT NOT WIDE OPEN.

I have no doubt that I was in the best bear country in America, and with the best bear hunter in America. Whenever I write of a good game country, such as this, I get many letters from those who wish to go hunting there themselves. It is always a pleasure to direct the Forest and Stream friends to any such pleasure. Thus I have sent a great many persons to Texas, and my once famous "game pocket" in Minnesota is a game pocket no more. But in a case like this, the best kindness is the plain truth, and I owe it to the inquirers to state the rather peculiar conditions in the case. Of course, I could not send any one to Mr. Bobo, and no one could for any money hire him to take a party on a hunt. Moreover, in that counry of Mississippi, there is a law forbidding non-residents to hunt there except on the invitation of a landowner. While I was there Mr. Bobo sent one party out of the country because they came in without any such invitation. Still another fact to be considered is that good trained hounds are a necessity for hunting in that cane country. Mr. Bobo's pack is the only one in that region. Yet another serious thing to be considered is the nature of the country, where one absolutely must have a guide, and a good one. One can go into the mountains or into the pine country, and go out hunting and find his way back to camp. In the Delta he cannot do this. Unless the trails and hooks are known, he can get nowhere, and if he gets lost he is lost indeed, for he cannot travel a mile in a day on foot. We saw deer and turkey on our trip, and there are quantities of panther, cats, coons and all sorts of fur in there, but the stranger in that country could do little at sport if he were alone.

"I will take a stranger into the woods," said Mr. Bobo, "and give him my horse and all my dogs, and I will bet him he can't kill a bear in a month." And this I should consider a safe proposition.

THE SOUTHERN IDEA OF SPORT AND GAME.

There is a curious difference between the North and the South in one respect, and I am disposed to think that there lies some of the reasons for the difference of the game supply in the North and in the South. In the North you can hire a man to do almost anything or go anywhere. You can get guides for any part of the Rockies, for the Wisconsin pine woods, for Maine, New Brunswick, the Adirondacks. But for the Delta of the Mississippi, I am almost glad to stato, you cannot get guide, and I hope, with all courtesy to gentlemen who love to travel, you never may. The time is not for killing off new covers. It is time now to wish that some few may always remain closed. In the south the commercial way of looking at sport has not yet had any growth. Therefore I say that the South is the seat of the truest sportsmanship of America to-day, because there neither game nor sport is held generally as matter for barter or sale. Both are held as the privileges of gentlemen, and this is the right way to look at it, too.

The wild animal should belong of right to the man who is enough master of the chase to reduce it to possession, and it should belong to no one else. Women, children and sick persons might have game given to them, but men who cannot hunt are not the men to have game in possession. I would not change the old, conservative ways of the South if I could and hope they never will change, and I know all readers of this journal will be glad to rest their future acquaintance with the South upon its unasked and unpurchaseable hospitality.

By this it should not be understood that there is a stone wall about the shooting of the South for Northern men who wish to sport like gentlemen. We shall presently see that many delightful localities are open to the tourist sportsman. Not long ago Mr. A. H. Hanson, the general passenger agent of the Illinois Central Railway, located at Chicago, undertook to compile a mass of data as to good hunting localities, guides, etc., along the line of that road which passes through the best of the shooting country. He sent out letters to the station agents asking them to make inquiries, and while he heard of plenty of game, he heard of very few guides.

"Those people have no idea of business," he said to me, in a perplexity almost amusing to anyone who know much of the South. "Here's one letter after another, all saying about the same thing. 'Mr. So. and So is quite a hunter in this place, and he say he will be glad to take out any visiting sportsmen. He has dogs, horses and everything needed. But he would not take any pay for this, and he would not like to agree to go out at just any time he might be asked. That's it; that's the same story! They don't know anything about business!"

OPEN COUNTRY.

Mr. Hanson will, on deliberation, I think agree with me that the fact that these men don't know anything about business is the best thing in the world for his business. Dakota is shot out. Wiscosnin is fished out. The Adirondacks were tramped out long ago. The tide of sporting travel is settling back on itself. There will be plenty of it turn and go to the South. The longer the South has attractions, the longer it will go. Meantime let us hope for a more sensible day in sportsmanship than that which has ruined the fields of the North, and the growth of better principles than those of the past. Perhaps the leaven thereto may be found in the ideas of these men who "don't know anything about business."

Mr. Hanson may be sure, however, that he has bear and deer country to which he can send inquiries in the practical certainty that they can get sport under practical conditions. I have spoken of the long strip of wilderness in the Delta country lying between Memphis and Vicksburg. This wilderness is penetrated by the Sunflower, the Tullohatchee, Tallobusha and other streams. At the head of this long stretch of wild country the Illinois Central divides, one leg keeping along the Mississippi and the other going out further east toward the hill country. We made our hunt down the Western leg of the road and found the conditions there as I have frankly stated them. Now, if the stranger will take the Eastern leg of the road and go on down toward Vicksburg, down the Tullohatchee country, he can tap the same game country to much better advantage. The best place to head for is the country between Minter City and Dodd's Ferry. The railway point is Parsons. Mr. Clay, at Tutweiler station, has a pack of dogs. Captain James Dinkins, passenger agent of the Yazoo and Mississippi Valley road at Memphis, can give full advice about this pack and the bear and deer country above referred to.

Captain Dinkins, by the way, was godfather for a large party of Northern hunters who were down in the Delta country last November, about the time we were. This party had Mr. Clay's dogs, and Mr. Gibson, a good bear hunter, was out with them. They got one bear and some deer in two days, and then went on down to Vicksburg. This was a party mostly made up of celebrities from Iowa, and was very large, being composed of the following, mostly from Dubuque, Iowa: Hon. D. B. Henderson, Gen. Jackson, Col. D. C. Glasser, Messrs. Geo. Perry. Jas. Morgan, Saml. Rider, D. E. Lyon, J. M. Glover, S. A. Atherton, Henry Mehlkop, E. W. Albee, Saml. Rice, Deacon Couch. Messrs. Frank Lindberg and John Olson were from Chicago. Messrs. W. H. Morris, John Cruise and Tim Noble were from Manchester, Iowa, and Mr. N. F. Lawrence from Cherokee, Iowa, Captain Dinkins went on down from Memphis with these gentlemen on their car and they had a very pleasant trip and saw plenty of cane. At Panther Burn some one fired a shot or two at the car, which caused Col. Henderson, who lost an arm in the war, to say it reminded him of old times. So large a party as this is, of course, very unwieldy in the field and not desirable for an actual hunting trip, but even for so large a party I imagine there are deer and bear enough to go round if the latter are approached delicately on the subject. There are deer and bear enough for any decent Northern hunters. Once there were deer and bear in the Adirondacks, but when hotels and guides made their killing easy, they disappeared. I beg Mr. Hanson to believe that he has cause for congratulation in the fact that hotels and guides are so scarce in this big game country. That is the reason he has some game still left. I hope he will make it harder, not easier, to get at the game. In spite of all his efforts, hunters will get at it and kill it all too soon. He need not worry about their not going down there. They will go all too soon.

Later on I shall describe the duck country below New Orleans, something new for the Northern men, but we are not so far along as that to-day. E. HOUGH.

THE SPORTSMEN'S EXPOSITION.

The demand throughout the country for information concerning the exposition to be given by the Sportsmen's Exposition Association (Incorporated) at the Madison Square Garden, New York, on May 13 to 18, 1895, has forced upon the management the necessity of issuing a regular weekly bulletin containing the information necessary to keep the public advised of the exhibition, and to guide the manufacturers, artists and private individuals who desire to make exhibits, either for business purposes in the manufacturing department, or for educational exhibition of private collections of objects of historical interest in the Loan and Trophy Department. The haste of some of the manufacturers to be identified with the exposition is quite marked. When the exposition was first planned, a number of the manufacturers who were quite indifferent to the affair, are now hurrying in earnest and showing increased confidence in the advantages to be derived from being conspicuously represented, and are now among the most enthusiastic promoters.

A brief glance at the prospectus issued a short time ago will outline the extensive character of the exposition. Fourteen distinct classes are provided for which will cover in every essential detail the general interests of the Sportsman. Every article used by the sportsman will be included. There are up to this hour of going to press thirty-four leading firms who have taken spaces. Some of the exhibits will cover 50 square feet of floor space, in which will be introduced many new and interesting features. For months past some of the manufacturers have been busy preparing their elaborate exhibits, and have made importations from foreign countries in order to enable them to prepare entirely new material for the occasion. The marvellous beauty of the fire arms and weapons to be shown will be imposing and a revelation to the profession as well as to the novice. Both barrel and blade will show the skill of the designer and engraver. Art in fine arms will here be demonstrated. The beauty and quality of ancient Damascus steel has been wrought and wrought until the production of the fire arms manufacturer of to-day outrivals all efforts of the gun makers of the ages. The mechanism and devices invented for rapid firing and safe control of the modern fire-arms will be an exposition alone.

The exhiits of the ammunition makers will show the master hand of the chemist and subtle power and strength of the explosive agents of the hour, which seem to be unlimited. Exhibits showing the power of the powders and the skill of the marksman will be illustrated by targets and diagrams. These displays will be gotten up by the most important manufacturers of this country. Gun implements showing inventions of unique and practical character will attract the visitor, and not only interest the dealer, but the consumer.

Those who attend the exposition will not be able to move very far among the mass of exhibits before finding near at hand the sailing craft of the primitive hunter, as well as that of the modern Nimrod. The dug-out of old, the bark canoe of the Indian, the sober toiling launch, the shining sails of the phantoms of the sea, those shafts of the silent waters which almost defy Father Time, all will be here, side by side, a record of the crafty savage and of intelligent man.

The comprehensiveness of the other classes of the exposition is quite as complete, and includes fishing tackle, athletic goods, camping outfits, kennel supplies, cameras, horse equipments, taxidermists' art and literature, trophies of the chase, ancient fire arms, valuable oil paintings, old prints, books, etc.

The following lists will show the number and character of the exhibitors who have engaged space:—Winchester Repeating Arms Co., E. I. Dupont de Nemours & Co., Union Metallic Cartridge Co., Forehand Arms Co., Hardware Publishing Co., Union Hardware Co., Colt's Fire Arms Co., Herman Boker & Co., Iver Johnson's Arms & Cycle Co,. Weibusch & Hilger, Limited; Forest and Stream, Von Lengerke & Detmold, American Field, Maine Central Railroad, William Lyman, Lefever Arms Co., Geo. O. Shields, (Recreation); Tatham Brothers, Hunter Arms Co.. A. G Spaulding & Brothers, Shooting and Fishing, Bridgeport Gun Implement Co., Cushman & Denison, Remington Arms Co., Spratt's Patent (American) Limited, Schoverling, Daly & Gales, Cleveland Target Co., United States Cartridge Co, Gas Engine and Power Co., Parker Brothers, Sporting Goods Dealer, T. W. Fraine, Hazard Powder Co, The Webster Studio.

Every week now adds to the number of exhibitors. The choice spaces are being rapidly allotted and now unmber upwards of seventy-five, leaving but a limited number at the command of the association. A day's delay may find some very important exhibitor without space. It is unfortunate that there are not a greater number of spaces, for it will be impossible to provide for all those who may wish to be identified with the exposition.

The Association will arrange for reduced travelling rates from all points in the United States. The rates will be low, and will offer every inducement to attend the exposition at a season of the year when travelling is deligtfhul.

The importance of this exposition as a means of extending the public interest of the manufacturer and the dealer cannot be over-estimated. Every step towards the education of the public tends to broaden the knowledge of the novice and quietly enlist new disciples into the ever increasing and changing ranks of the sportsman. The old followers drop off and the new step in, and whenever this fact is realized in any profession, the live man of business grasps the opportunity offered to keep up with the advancing host, and finds himself and his interests keeping pace with the evolution of business and of the conditions. If to fancy that old successes can accomplish much that is vital in that of the present, that man's confidence in himself is misplaced. If a narrow conception of the advantages of the Sportsmen's Exposition is fostered, and an indifference to the efforts of the managers be indulged in, nothing can demonstrate more conclusively, (to change the old adage so as to read) "That none are so blind as those who will not hear."

The Sportsmen's Exposition will not be a common-place affair. The strong list of exhibitors certainly is a guarantee that success is sure to crown the efforts of the promoters of the enterprise.

New York, March 9, 1895. F. S. WEBSTER, Sec'y.

NORTHWEST COAST NOTES.

COON LORE.

My old friend, Billy Newman, writes me that he is enjoying himself "hugely" over in Washington. He is located somewhere in back of Skamokawa, the Capitol of Wahkiakum county, but his post office is Castle Rock, on the Cowlitz River. A few extracts from his last letter may be of interest to readers of Forest and Stream. Here is one: "And now I will give you one that I can vouch for; Daddy Scantogrease, who is about 68 years old, and who claims to be a veteran of the war of 1812 (?) but whose word I cannot well doubt, as he has been an elder in the church for over forty years, tells me the following coon story: 'Yer see, Bill, one time nigh onto forty years ago, when I was livin' back in old Injianni, I sighted er coon up in er oak tree a-eatin' acorns. I jist dropped the old Winchester onter him and blazed away. Well, by Boston, he jist sot thar a-eatin' them acorns jist the same. I emptied the old Winchester, but still thar he sot a-eatin' them acorns jist the same. Then I emptied my Colt's revolver inter him, but, by Boston he still sot thar a-eatin' acorns. Then I got mad and clim the tree and killed 'im with a club. When I looked him over I found that he was jist plumb full of holes, but, by Boston, the tarnal critter had jist sot thar, and whenever a bullit ud hit 'im he'd jist plug up the hole with a acorn and jist go on a-eatin' acorns.'"

BEAR GALORE.

And here is another that will interest "O. O. S.": "John Cooley and George Milton, two boys about fifteen years old, started out coon hunting. Young Milton had a 22-calibre rifle, while young Cooley had a skookum-wood club. They found an old hollow cedar which they thought might be a coon tree, and commenced pounding on it, when, to their surprise, down came a good-sized bear. Cooley struck him on the nose and kept him from coming out, while Milton would load and shoot him with the 22-calibre short. They kept this up until they killed him. When they pulled him out his head was smashed to a jelly. Now, if "O. O. S." or any other reader of old Forest and Stream has any doubt in regard to this story, they can drop a line to Mr. Cooley, Justice of the Peace, Jackson District, Cowlitz County, Washington, father of one of the boys, and get his affidavit to it. I will also lay a wager with "O. O. S." that I can get the affidavits of at least twenty-five men in this county that they have dogs that will go out on the riffles and watch for and catch salmon and pack them ashore."

GAME PROTECTOR.

Our Legislative Assembly has adjourned. That is about the only decent thing it did during its forty days session, and after the usual sigh of relief, our citizens have breath enough left to express in plain terms their opinions of legislative assemblies in general, and Oregon legislative assemblies in particular. For years the game laws of the State of Oregon have been only inconsistent and confused epitaphs to the stupidity and idiocy of defunct Oregon legislative bodies, as can be attested by Editor Reynolds of "Game Laws In Brief." Even when a good bill is prepared and submitted to the Assembly, it seems to be the bounden duty of that august body to doctor and devil it until its own father would not know it, before it can be passed. No one can tell you yet what changes have been made, not even the members themselves.

Some of the members seem to have a faint recollection of some bill or other that was presented by the Hon. Mr. So and So, but, if their memory serves them right, certain amendments were tacked on by the committee or suggested by the Hon. Mr. Jones, or Smith, or Clark, or some member of the third house, the purport of which they have entirely forgotten. It will be remembered that

the last preceding Legislature left us with a very choice lot of inconsistent, irreconcilable game laws that seriously embarassed our game protector, and drove Editor Reynolds nearly daft. Doubtless we've got another invoice of the same kind of stuff, at least that is the general impression among the sportsmen.

Among the many brilliant things that the Legislature did not do was its failure to elect a game protector. They didn't elect a U. S. senator until the clock was striking the hour of adjournment, and the matter of electing a game protector was entirely overlooked.

PROTECTOR MEAD.

Somebody has been perpetrating a joke on my good friend, J. Roberts Mead. Recently, a prominent Chicago sporting paper contained a lengthy and laudatory article regarding his candidacy for the office of Fish and Game Protector for the State of Oregon. If half that was therein stated about him is true (and I guess it is) he is a "dandy." Yes, the article referred to stated that he was a candidate for the high office of protector and went on to say: "than whom there is not a more enthusiastic sportsman in the State, at all times having the interest of game and fish at heart, a good shot himself and an angler par excellence, and a man of great executive ability, and a gentleman always, etc." until the catalogue of superlatives was nearly or quite exhausted. No one who knows Mead, would for a moment doubt the truth of everything said about him in that article, except the one fact that he was a candidate. He is not, never has been nor never will be a candidate for that or anyother office, and evidently the man who wrote that article intended it for a joke, for his apparent knowledge of Mead's characteristics and fitness for almost any position requiring a high sense of honor and executive ability, warrants the belief that he is aware that Mead's private interests require all his time and energy. But the published statement works a hardship, not only on Mead, but many of his friends. Wherever Mead goes, whether on business or socially, too much of his time must necessarily be taken up with explanations, while those friends who might have influence with him are constantly appealed to by those willing to do a whole lot of hard work in protecting fish and game for a reasonable consideration.

Mr. McGuire, the present incumbent, will doubtless hold the fort against all comers, as the Legislative Assembly failed to elect. Mead will do as much or more than any other man in aid of the good cause of fish and game protection if called upon, but his political aspirations, if he has any, are not in the direction suggested by the publication referred to.

PORTLAND, Ore., March 1. S. H. GREENE.

TEXAS AND THE SOUTHWEST.

I had the good fortune last week to make one of a party of gentlemen who spent a delightful day among the bluebills on Nueces Bay. As to the game, I will simply say that it was one of those duck cyclones that comes but a very few times during the mortal life of man. All day long, from the early gray of dawn until the closing shades of evening, there was a pouring in of ducks such as is seldom seen. It was one of those rare days which sorely tempt one to forget that he is a sportsman. I could easily have fired my 200 shells before 10 o'clock, but by dint of fraternizing with a gay and convivial companion—one of those men whose presence cleaves ones miseries like a ray of warm sunshine penetrates a dark corner—I managed to hold an active shooting existence until noon.

It simply rained ducks, and I played a cool game; I killed rather regularly for a green hand. Presently Mr. Claimer came along and took his stand close by and at a point where he had a slight advantage by reason of his being able to shoot before my trigger could be pressed.

A flock came in. I picked out an incomer and nudged ahead as I pulled trigger. The bird was stone dead in the air, and as I opened my gun for a fresh shell, my neighbor sang out: "Aha! I killed my bird; did you shoot?" As I had only seen one bird fall, I looked at him and said, pointing where the bird fell, and asked: "This bird?" "Yes," he answered, "didn't I make a good shot?" "Yes," I replied, between my teeth, "an excellent shot."

This happened three times more in less than ten minutes. Not only were my birds gathered in, but those of my companion were as promptly claimed by the Claimer.

I passed the word to my companions to yield in every instance, and it was perfectly wonderful to perceive the great and growing gall of the Claimer. He shot right and left at everything that came over him or anybody else, and as sure as a bird fell out of the flock the same refrain could be heard smashing the fragrant ozone: "I killed my bird; did you get yours?"

When a pair or more fell out it would vary thus: "I got my pair. Did you all shoot?"

Sometimes someone would kill a bird, and his fire would palpably be behind and after the bird was killed, but the phenomenal gall was in it that day, and it flourished in the bay breeze like a shamrock on Celtic soil.

THAT GRASS SUIT.

A gentleman who lives in San Antonio, and generally buys everything new in the sporting goods line, had a novel and exciting experience the other day.

He is an inveterate duck-hunter, and spends most of his time putting up jobs on the ducks that feed on the bottom of Geo. Fulton's ponds. When he is not very busy, he sells Seth Thomas clocks and repairs a few uncut diamonds. One day he saw an advertisement of the new grass suit, and immediately took the bait, sinker, float and all and ordered one to come by special delivery postage. It came. So did an invitation from Geo. Fulton, the Prince of the Southwest, to spend a few months in search of geese on Mud Flats, and he went.

He took his stand where the geese were thickest, and awaited the onslaught of the enemy, feeling secure in the full envelopment of counterfeit prairie hay. Pretty soon the faithful canine began to show signs of distress, and upon looking backward, his horrified gaze fell athwart several tall and muscular full grown steers—Geo. Fulton's fattest—that were uttering lugubrious sounds and pawing dirt with their fore feet.

Roar after roar filled the air, and the steers pawed up more dirt as they advanced on our hitherto gay but now discomfited hunter. He stood the pressure for a few moments only, but finally broke for heavy cover, and then and there divested himself of his verdant habiliment. He can't tell to this day whether it was a desire to eat him that prompted Fulton's cattle to act in such inhospitable manner or whether it was his grotesque appearance. I suggested to the Prince that his cattle keep off the grass.

A TURKEY JOKE ON HUNTER.

I struck a garrulous conductor of the Aransas Pass Railway who is responsible for the story I am about to relate. On St. Joseph's Island, owner and monarch of all he surveys, lives Sam Allen, regarded as one of the aristocracy of the Southwest.

In an unguarded moment, and with the recklessness of a Don Quixote, Mayor Allen issued an invitation to a few friends to come down to his castle and hunt and fish on his broad domain. The lucky gentlemen were the Hon. Bryan Callaghan, ex-Mayor of San Antonio, Tim. H. Michelnjohn, the terror of black bass, and Jimmy Newcomb and Chas. Miller, all of San Antonio.

The jolly Mayor took them over to his castle in his yacht, and the whole business went in search of the game of the island, which was very plentiful. Mick was in the lead, and the time of day about dark, when he suddenly stopped and waved his hand to the rest, telling them in mute hunters' parlance not to advance—that he had seen something of importance. He crept back to where the rotund Mayor and Miller were crouching, and softly breathed to them that he had seen a large flock of fat turkeys.

They immediately concluded to wait until old Sol had descended away down before attacking the birds. When the time came, the little army crept up, and at a command given by Mick, all fired into the birds, loading and firing as they fled in all directions. They found that they had killed 47 birds. The trio, intoxicated at the sight, swaggered arm in arm to the house, where Mick grandiloquently informed their host that they wanted him to hitch up a wagon to carry in the product of their bows and spears.

"What did you get?" inquired the Mayor.

"Forty-seven big fat turkeys," replied Mick, as he fondly tapped his gun. "You bet, when our Irish blood is aroused, we can kill 'em, eh, Bryan!"

His Honor merely nodded and smote himself on the chest as he remarked: "I killed a few myself."

"But where could you kill 47 turkeys," anxiously inquired the Mayor.

"About a half mile from here," replied Mick, "just around that little freshwater pond on the other side of the beef yard."

"Great Scott!" cried the Mayor, "you scoundrels have killed my tame turkeys!" TEXAS FIELD.

Sea and River Fishing.

ADIRONDACK GUIDES' CONVENTION

SARANAC LAKE, N. Y., March 4.—Without doubt the most representative Adirondack gathering that ever occurred was the Guides' Convention which met at the Opera House, Saranac Lake, on February 27 last, pursuant to the call of Secretary John H. Miller, of the Adirondack Guides' Association.

As Forest and Stream has so often said with all truth, each year at Albany there appears a number of tinkerers who propose to make changes in the game laws, but whose knowledge of facts and what is best for the State in general and the Adirondack region in particular, is very limited. Heretofore there has been no expressed Adirondack sentiment in any one direction, and only desultory views have been received by the Legislature. This, however, is all changed by the action of the recent convention, whose resolutions are strong and to the point, and well calculated to make themselves felt by the State's law-makers.

Two hundred guides filled the seats allotted to them in the Opera House on the evening of the 27th, when Vice-President Duley called the convention to order. An additional number of guides, not members of the Association, and sportsmen in sympathy with the proposed action, swelled the entire number to about 500.

Hon. Wm. F. Rathbone, of Albany, made an exceedingly pleasing and forcible address upon the question of deer hounding. Mr. Rathbone was in favor of the hounding of deer. It was without question the most sportsmanlike method of hunting. But he was against jack-hunting, believing, as he said, that more deer were wantonly slaughtered in that way than in all others combined. He made a vigorous attack upon the Wilks' bill now pending in the Assembly, allowing the sale of game in New York State at all seasons of the year, providing it was proven that such game was killed outside the State. He characterized this measure as "damnable, and the most iniquitous ever introduced in the State Legislature." The speaker went on: "There are many reasons why this section should not be made a part of the law, but two are so urgent that they should impel every guide, every sportsman and every association to speak in no uncertain tones against its passage. The first is that the bill means an open game market the year around, or in other words, the sale all the year around of game killed in New York State, and the second is that it means also the sale all the year of game killed in other States."

Secretary Miller read letters received from Hon. Verplanck Colvin, Hon. Warner Miller, Col. Wm. F. Fox, Superintendent of State Forests; J. Warren Pond, Chief Game and Fish Protector; A. G. Mills, President of the Adirondack League Club; G. O. Shields, R. C. Alexander, of the Mail and Express; Hon. A. B. Parmelee, D. W. Riddle, S. R. Stoddard, A. R. Fuller and others.

A. N. Cheney, of Glens Falls, the principal speaker of the evening, thanking the Association for their kindness, took for his subject, "The Origin and Growth of Fish Culture," and for nearly an hour discussed it in an admirable way. He told the guides many things concerning the fin tribe that they had never dreamt of, and his many historical facts were highly entertaining. The address was frequently applauded, and upon the close a vote of thanks was tendered Mr. Cheney by the convention.

In a second address later in the evening, Mr. Cheney devoted his time to a review of the Guides' Association, dwelling at considerable length upon the good to be obtained by thorough organization and unity.

Secretary Miller followed with the introduction of a series of resolutions, inviting open discussion of the same by the convention. Guides from every section of the mountains spoke heartily in favor of them, and when the resolutions were put to a vote, a unanimous "aye" filled the convention hall. Here they are:

"Whereas, There have been numerous measures introduced in the Legislature to amend the present fish and game laws of the State of New York, and intended for the protection of fish and game in the Adirondacks and other sections of the State, and the Senate Committee on Fish and Game Laws, which was duly authorized and empowered by the Senate, did meet during the year 1894 at various places in the State for the purpose of taking testimony and making inquiry as to the needed changes or modifications of the existing fish and game law, and said committee did duly report its recommendations and conclusions thereon, now therefore be it

Resolved, That this association heartily endorses and recommends the compromise measure as recommended by said commission in its said report, wherein it recommends that still-hunting of deer shall be continued to be allowed from August 15 to October 20, and the open hounding season from September 1 to October 20, inclusive, at which date the hounding or killing of deer by any method shall be prohibited. We also believe as recommended by said commission that no material changes are needed as to the open season for trout fishing. It is further

"Resolved, That it is the sense of this association and we do hereby petition the Legislature to enact such measures as will give the Forest Commission authority to grant leases of State lands for a period of at least twenty years at moderate rentals, for camping purposes of plots of not over five acres to any one person, with proper restrictions. Large tracts of land belonging to the State which surround some of our most beautiful lakes would thus be opened for the enjoyment of citizens. Substantial camps and summer cottages would be erected thereon, giving occupation and employment to a large number of guides and other persons, a revenue to the State, besides each camper would make an excellent fire warden over a large tract of forest adjacent to his camp. Thus the forest would be preserved for which it was created. It is further

Resolved, "That copies of these resolutions be forwarded to our Senator and representative in the Legislature and that they berequested to use their utmost endeavors to push forward measures in sympathy with these resolutions."

John Harding, proprietor of the Algonquin, and Rev. R. G McCarthy, associate members, then made brief addresses. Mr. McCarthy, in his usually eloquent manner, roused the convention to high enthusiasm, and his telling words fell upon soil that was not barren. He urged that it was the duty of every guide of the wilderness to become a live working member of the association; to take hold of the questions involving the welfare of the region and to oppose tooth and nail those who were levelling blows at the head of our prosperity—or in other words, attempting the destruction of our fish and game.

John H. Miller followed Mr. McCarthy. He spoke of the forests, fish and game as the Adirondack guide's stock in trade. "We gain our livelihood," said Mr. Miller, "from the hundreds of sportsmen who annually visit our region. They come to shoot and to fish. We must have the game and the fish for them. If we do not they will go to Canada or elsewhere. Therefore, it is the duty of every guide especially, and every citizen of this region to guard zealously the deer of our forests and the fish of our streams. Every guide should appoint himself a game constable and see also that he does his duty."

Mr. Miller's remarks were greeted with applause. H. A. Benham then introduced the following resolution:

"Resolved, That it is the sense of the Adirondack Guides' Association that it is to the benefit of this region and the people of the State in general, that each member of this Association be appointed by the Chief Game Protector a special game constable, without pay.

The resolution was unanimously carried.

The convention then endorsed A. N. Cheney, of Glens Falls, for Chief Fish Culturist, and J. Warren Pond, of Malone, to succeed himself as Chief Fish and Game Protector.

Forest and Stream and the Saranac Lake Herald were given a vote of thanks for their unremitting efforts toward the better protection of the forests, fish and game.

Next followed one of the most important resolutions of the convention, as follows:

"Resolved, That it is the sense of this Association that no brook or lake trout, or venison, be sold or offered for sale in any of the counties comprising the forest preserve at any season of the year, and resolved that the legislature be and is hereby petitioned to enact a measure in conformity with the above."

The constitution of the association was then read by the Secretary, and with slight variations, was adopted. It says, among other things, that the object of the associaton "shall be to promote and facilitate travel in the Adirondacks; to secure to the public competent and reliable guides, thus assuring the welfare of tourists and sportsmen; to aid in the enforcement of the forest and game laws of the State; to secure wise and practical legislation on all subjects affecting the interests of the Adirondack region; to maintain a uniform rate of wages of guides; and to render financial assistance to its members in case of sickness or other disability or to their families in case of the death of such members."

Qualifications for membership are stated in sec. 1 as follows:

"Sec. Any person to become a member of this association must be (First) a citizen of the United States of America and have a permanent residence within the State of New York; (Second) be at least 21 years of age and have been known as a resident of the Adirondacks for fifteen years; (Third) an Adirondack guide having at least three years' experience as such; (Fourth) be a well-equipped, competent and in every way reliable guide."

Following the reading and adopting of the constitution, the convention took a recess, and the delegates retired to the camp-fire and banquet-room below, where covers for 200 were laid. A splendid collation was served, and around the camp-fire stories and songs of woodland life were told and sung.

Returning to the convention hall, unfinished business was taken up, and officers for the coming year elected: Honorary President, Hon. Verplanck Colvin; Active President, O. A. Covill; Vice-Presidents, Peter Solomon,

Saranac Lake; Thos. Redwood, Paul Smiths, Miles Kennedy, Lake Placid; Isaac Gabattis, Long Lake; Wesley Wood, Ssranac Inn; Ernest H. Johnson, Tupper Lake; Secretary, John H. Miller; Treasurer, Warren J. Slater Executive Committee, E. E. Sumner, Geo. E. Johnson, Thos. Healy, A. B. Moody, Douglas E. Martin, Rawson Hayes, Fred. Rorke, Albert Billings, Marshall Lamoy, Chas, C. Robinson, Carlos D. Gilson, "E. J. F. Denmark," James Bean, Chas. McCaffery, and Daniel Hinkson. WM. F. MAXIM.

ANGLING OLD AND NEW.

The followers of Izaak Walton, at both sides of the Atlantic, look to the Forest and Stream for guidance in the "gentle art," nor do they look in vain. Skilled writers, with facile pens, lead us pleasantly through its columns to pastures new and vistas fair—so pleasantly that the busy man, whatever his profession, whatever his daily task, or the man of leisure, whatever his hobby, is brought, in imagination, to happy fishing grounds. The filling in of details in the picture, the choice of rod and fly, the mode of bringing to land this fish or that, the whole picturesqueness of the scene in forest and stream is written indelibly on his mind.

My present object is in another direction, viz., by giving an account of results of experience in old days in the old country to show that, while we, in modern times, in new lands may have to go far afield for sport we can get it abundantly and on reasonable terms.

One has to go back to early boyhood, to the "bent pin" stage "for sticklebacks," or to the more advanced period of angling with float and line with worm or other bait and rough, unbending rod, for perch or chub to show how deep-rooted, how intense is our love of fishing. Or may we not refer to the less creditable plan of campaign, in summer days, when these means of capture failed—the "tickling" trout as they lay on the gravel bottom of some secluded brook; or "snaring" pike as, asleep in their moss bed in some dreamy lake, the wire noose was gently placed over their heads.

How I remember a monster pike, when I imagined I had him firmly noosed behind the fins, with a wag of his tail and a dash from his place of rest, shattering my fondest hopes as he swam forth to freedom in the broad waters of the lake.

More creditable and more effective was the trout fishing in mountain stream and clearing water after rain, with rod and "bramble," worm or caddis bait. What monsters, in our young eyes, we took! Far advanced, we considered we were in the gentle art, when, on the well-earned holiday, we waked from dawn till dark in search of a heard-of, distant stream in Southern Ireland, its deep pools, the "summer resort" of trout; its banks, the home of the otter, the secluded haunt of the water ousel and the sedge warbler. How eagerly we climbed each hill, expecting as we reached its top, to see the long-sought stream! How frequently were we disappointed! The sun was sinking fast, when on inquiry, a "hedge school-master" informed us that "there was a 'pearly rill' in yonder valley."

Those were the days when the "itinerant pedagogue" taught his apt scholars the "three R's" under the village hedge, hence the name.

This to us, however, was no time to use the poetic words, "pearly rill." Our well-earned holiday had almost ended before we could "wet the line." One small trout was our total "take." As the weary schoolboy counted the Irish miles—every mile being "a mile and a bit"—on our return journey.

Bacon says that "travel in the younger sort is a part of education; in the elder, a part of experience." May we not hope that, in this day of "travel" and "travail," our education was not neglected.

Our mentor and guide, in those fishing days, was the village tailor—tailor by trade and Tailor by name. He tied the "killing fly," spliced the broken rod; he advised as to the time and place of our venture, whether to use the "natural" fly (by "dropping—a local term), or the artificial; whether up stream or down—and he was strong on the subject of giving the pool a "rest" after the capture of each "monster"—a monster in those days was a half pound trout. The object of this rest was to enable our Tailor guide to drink our health and his own in the "wine of the country," "potheen." He was also an advocate for evening fishing with the white moth fly. This afforded him opportunity by daylight to repair the breaks in our nether garments resulting from the previous night's fishing.

One such occasion will long be remembered. An elder brother and myself had sought the bank of the picturesque river magne for evening fishing. We could sing:

When day, declining, sheds a milder gleam,
What time the May-fly haunts the pool or stream,
When the still owl skims round the grassy mead,
What time the timorous hare limps forth to feed,
Then be the time to steal adown the vale.

The tailor stuck close to the elder brother for, I suppose, the good reason that he, the elder brother, carried the flask, I, instead, having the only landing net of the party Night had well set in when the loud and frequent call of "landing net" aroused me from my reverie, and I set forth at a quicker pace than "the double" to the spot whence emanated the call. Losing the path in the dark, I fell headlong into a quarry, and nearly lost my place in the family circle. My feeble cries for help, happily, came to the ear of my companions, and the much-despised flask was needed to restore consciousness.

Another fishery guide in those days was the well-known "Pat," a Curragh of Kildare celebrity. After the daily camp military parade, Pat was sure to turn up to find out the "gintlemen" who were desirous of "goin' a fishing" in the River Liffee, that bright, crystal river that flows so gracefully through dear, dirty Dublin.

Of course, Pat used every argument in order to prevail upon his eager listeners to accompany him to the river bank. "This is a murdering day," he would say —"Blood will be spilt this day!" And perhaps the total net result—"blood spilt"—of the flogging the waters of the river Liffee by many on that particular day would be an average of one small trout per rod. Having enthused his listeners and convinced them that this was the day for the slaughter of trout, the question arose as to the fly.

A dozen flybooks were produced, but, of course, a fly that Pat possessed—not to be found in the books—was the fly of the day. The hairy worm (palmer), the orange grouse, or the hare's ear, each had its turn. I must admit that I had one good day, or rather night, under Pat's guidance. It was after heavy rain, in midsummer. The flood was clearing. Pat and I sallied forth for evening fishing. Light fish were selected. We drove to a remote part of the river, if such it could be called. For about two hours we were kept busy, in mid river, without wading boots, or wading trousers. It was before such things were considered necessary. I, with rod and line; he, with landing net; and I had filled my basket with nice herring-sized trout, when the trout suddenly ceased to rise, and we returned to camp.

At another time and place I had equally good sport salmon trout fishing. A keen sportsman, a good all-round fellow and myself proceeded by Biancony's celebrated car, to the river Feal (pronounced Fail), in the kingdom of Kerry. After a tedious night's journey and a good breakfast of bacon and eggs (a dish that never fails to satisfy), we commenced fishing at early morn, he with a salmon trout rod and special large flies; I with light trout rod and small trout flies. A fishing warden appeared on the scene, and my friend, owing to his superior equipment, had to pay for a year's license for a day's fishing, while I, with my less conspicuous rod and flies, only fishing for common brook trout, was not called upon to pay for a license. It proved, however, the old story over again, fine tackle was more successful than coarse.

The warden, supposing that my friend was a bloated aristocrat, with lots of coin, accompanied him up stream and, no doubt expecting a tip, pointed out all the good casts I, in my humility, followed slowly, keeping at a respectful distance from the representtive of law and justice. I soon found that my friend, in his casts, had but "wetted the appetite" of the salmon trout, the fish rising short. When I cast, on the contrary, the hungry fish eagerly took my small flies. I had as good a forenoon's sport as man could desire, and, when, the warden left, on comparing notes as to size and weight of fish, the comparison was odious to my friend.

On referring to fine tackle versus coarse, I must, for a moment, quit the soil of old Ireland and take the gentle reader across the channel, from Waterford to Pembrookshire, South Wales, a land abounding in small trout streams. On these I soon learnt, in its minuest detail, the art of fishing with the lightest rod, with the finest possible tackle and in the most careful possible manner.

On the last named point Charles Kingsley well says: "You will agree that there is more cunning, more science and therefore more pleasant excitement in "foxing" a great fish out of the stop hole than in whipping far and wide over in open stream where a half pounder is a wonder and a triumph." As for physical exertion, you are able to compute for yourself how much your back, knees and forearm will ache after some ten hours of this scrambling, splashing, leaping and kneeling, upon a hot June day."

It was when on a hurried visit to St. David's Cathedral, a church of intense interest historically and architecturally, situated far from the railway and from the route of the tourist and globe trotter, I observed several large trout, in the smallest of brooks flowing through the cathedral grounds. I asked the berger's permission to fish. He replied that there was no necessity for a permit, he had not known fish to be caught there. In company with this dignitary of the church, I was soon ready for my first cast, with a good supply of South Wales flies, smoky duns, cock-a-bouddhes, screamers. Scarcely had my flies touched the water when I was "in him." I had hooked a good-sized trout, and it was only by holding the now excited berger by the collar that I could prevent his jumping headlong into the stream to secure for me the well-hooked trout. When I had hooked and landed a dozen such trout, however, his excitement had abated, and before many hours he found that carrying my well-filled basket of trout was no easy task. I doubt, however, whether the bishop of St. David's would recognize the usually dignified and grave berger in the cheery little man carrying the well-filled basket.

I had varied sport in these Welsh streams. As a rule, the trout were small and hard to get.

It is a matter of history, the killing of a two-pound trout in a stream near a certain station, Whitland, on the South Wales Railway, and I believe that the size and shape of this monster trout remains to this day cut on a bench at this wayside station—a prudent precaution, it may be said, as otherwise, after the manner of men telling fishy after dinner stories, the taker of this "monster" might have added considerably to the size and weight of this fish, and there would be an undoubted exception to the rule of "history repeating itself."

I must add a word regarding fishing in modern times in this new land, North America, as a striking contrast to the foregoing, and give the following extract from my note book, as to a day on the well-known trout stream in New Brunswick, the Tabusintack. Meeting a guide on his rounds, with a day to spare for any emergency, and he being as good a companion as he is a sportsman, we talked of sport in general and fishing in particular. Neither had heretofore experience of excess in quantity of fish. We had heard of the fish "jostling each other" like snipe in an Irish bog, in the stream in question, and we resolved to try our hand there. It was not until we reached the river bank that we discovered that our guide (a woodland farmer, living close by) had a novel sort of dugout canoe, with shafts attached, drawn by a horse over sand bars, up and down stream. But why this barrel on board? And why this bag of salt? It was soon explained that the barrel had, during the day, to be packed full of two pound and three pound trout (the anticipated result of our day's fishing), the salt being required to preserve the fish. In our downstream course (the point of embarkation being about twenty-five miles from the river's mouth), we pulled up at each turn, or where cooling streams joined the main river, and more than once were our light rods put to the test, as two pound or three pound trout, fresh from the sea, tried every device, by twist and turn, rock and stone, or by rush down rapid or under the overhanging alder brushes, to free himself from the hook. It was not, however, until we arrived at the mouth of the Big Eckedellac, a favored spot, where was a deep pool, that we hooked and landed trout after trout in rapid succession—no delay, save the time necessary to replace the fly (but one fly can be used on the casting line with safety to rod and line), on its being worn to a shadow of its former self. A large grilse fly, with dark ginger body and wings of the mottled grey of the mallard, was the taking one on the occasion, and eagerly though fish took this fly they would scarcely look at any other, an unusual thing in my Canadian experience. Suffice it to say that, on the welcome dinner call being sounded by the boss cook, the two weary fishermen, laying out on the bank the result of a few hours' fishing, a real and important fishery question arose, as to who had taken the largest and finest trout. As to quantity of fish, we had both to say "enough." After the well-earned meal and having filled the barrel with trout, we climbed a tree overhanging the pool, and there a fishery exhibition met the eye such as would delight the heart and eye of any disciple of Izaak Walton. There was no perceptible diminution in quantity after our busy morning's work, and we soon returned to the settlement, having had sport in the way of trout fishing such as is almost unheard of in modern times. MICMAC.

ANGLING NOTES.

THE FISHERS' CLUB.

Since the subject of organizing a Fly-Fishers' Club in this country, to embrace the fly fishermen of the United States and Canada, was first agitated in the columns of Forest and Stream, the benefits to be derived from such a club have been touched upon only briefly. Such a club will doubtless be modeled upon the London Fly-Fisher's Club in great part, and Mr. Marston and Mr. Senior have been quoted as to the social features of their organization, and the library has come in for mention, but the London club has recently been expanding in channels that have not hitherto been referred to. It is probably understood by this time that the London club has no club house or restaurant privileges of its own. It has rooms adjoining a hotel, and this hotel makes special rates for food, drink and lodging for club members.

The rooms of the club, under lease, are similar to the rooms of other clubs, and constitute its permanent home.

Very lately this club has taken up the matter of gathering together in albums or cabinets, the material used in making artificial flies. The honorary treasurer, Mr. Marston, suggested this in his speech at the annual dinner of the club, and the suggestion has now taken form. Two committees have been appointed, one to gather all the materials used in making trout flies, and another to gather the materials used in making salmon flies, and to arrange all for display in the rooms of the club. As soon as this was known, one of the best known firms engaged in hook-making at Redditch tendered the club samples of all the hooks used in fly fishing, and a complete set of standard salmon flies framed, and any fly material for the cabinets that it could furnish.

With all the fly material properly labelled, sample hooks numbered and named, and completed flies also displayed, the club rooms will present a complete history of all flies used in fly fishing, with everything that enters into their composition. In this country we would have to enlarge the list of flies to include those used for black bass, onananiche, etc., but just imagine what an educational feature it would be in an American Fly Fisher's Club to have displayed all the flies used and endorsed by expert fly-fishers all over the United States and Canada. When I say flies endorsed by expert fly-fishers, I mean just that, for there are countless flies made in this country that I imagine no one will endorse. I think the tendency of our fly makers is more and more to imitate the flies of nature and to discard the flies of a fevered imagination.

Another thing proposed by the London Fly-Fisher's Club is to have stuffed specimens of all the species of salmonidae at different stages of their growth, mounted and displayed. Each fish to have its scientific and usual common name and also the name by which it is known in certain districts. In this particular line, the fly-fishers of North America could make a display such as could be made no where else on this earth, as we have a greater number of species of salmonidae to draw upon. To these could be added all other species of fish in our waters which are taken by fishing with the fly. Now that I think of the possibilities in this direction, there is one objection to the scheme, and that is that the American fly-fishers would require a great number of rooms to make the display of all our fisheswhich take the artificial fly at various stages of their growth.

FORM OR MOVEMENT.

In the last sentence of a note last week, I referred to the experience of English anglers with the natural and artificial May-fly, and said that the refusal of the trout to take the artificial fly when the natural fly was rising was a matter of movement in the fly presented rather than a question of color in the imitation. I have just read an angler's experience, from which I quote, as it bears upon this subject, in my opinion. The angler, with a friend, was fishing in a lake in August: "We found it smooth as a mirror, just a catspaw of wind playing here and there on the glistening surface. We set to work, employing the finest tackle with small flies, and in spite of the calm which prevailed, killed several nice trout, the fish rising with some freedom so long as there was no great quantity of natural fly on the water. Towards the middle of the day, a light but steady breeze springing up, we noticed that the trout rose more frequently to themselves, but were no longer attracted by the imitation. In vain we changed the flies; not a trout would look at them while they continued to flap and splash all around the boat in the most provoking fashion. At last I discovered the fly they were taking; the lake was simply covered with tiny red ants, their fragile, gauze-like wings cocked up in the air, giving them the appearance of far greater size than was their due.

I had several patterns of the fly in my book, and quickly attaching to the cast three which appeared most accurately to resemble the original, I cast over the rising fish.

"But disappointment was in store for us. The sharp-

eyed fish displayed an unaccountable preference for the succulent little ants which floated on the lake. For an hour or more we contiuned to cast with much perseverance, but neither of us succeeded in hooking one."

My idea is when such conditions exist that fish are rising to a certain fly and refuse the imitation of the fly, however closely it may be counterfeited, it is best to offer them something entirely different. To the human eye the artificial may be the counterpart in color and form of the natural, but the fly of feather and silk may lack the movement on the water of the natural fly, and with hundreds of the latter rising, the fish may easily detect the comparison. the single one which is a fraud. I say it may, and also it may be that the eye of the fish will detect what the human eye fails to see in color or form.

Last season, fishing for onananiche in the Grand Discharge, I found the water covered with a species of fly that has been closely imitated, and drawing the fraud through the foam where the onananiche were rolling and turning their dorsals and caudals out of water, they simply ignored it, and the few fish I killed that day I killed on flies unlike anything on the water, even if they were not unlike anything on the face of the earth.

The natural fly was rising in swarms, and became draggled and forlorn when caught in the foam patches or "brew," and as they struggled to clear themselves, the onananiches would very quietly rise and pick them out of the foam. I never had seen the fly before, but recognized it at once as the original of an artificial, about which Mr. Chambers, of Quebec, had written me, and fortunately he had sent me a few samples; I say, fortunately, for I bought some of the flies by name in Quebec, and they turned out to be something else. Mr. Chambers' samples were excellent imitations of the natural, and when both were wet in the foam they looked very much alike, but the fish knew the difference.

A May-fly, one of the smaller drakes, were also rising one day, and they were rising in clouds, although it was the very last of August, but not a fish could I get on an imitation. I find by referring to my journal that my first onananiche was caught on a "Bee," a counterfeit of the bumble bee, and there was nothing remotely resembling it on the water. A companion, who was unfortunate in landing the onananiche that he hooked, turned back in disgust to Roberval to fish for trout in the Ouiatchouaniche had fine sport, but caught nearly every fish on the Montreal fly, and I mean the Montreal with gray-duck wings. Since I have been writing, I had a call from a gentleman who tells me that he has had an experience with the red ants exactly as I have quoted in this note.

MAY FLY "LARVÆ."

Dr. Sanden, in thanking me for my note on the May fly, writes: "In thinking the matter over since my original query was made, I have an idea which I wish to submit to you, to know whether or not it has been tried, and if it has not, I think it will be a great deal easier to make the trial than as you suggested.

"My idea is this: I know a stream near Plattsburgh, N. Y., which is full of the May fly, and they usually rise about the 10th of June. Would you think it practicable to gather a few thousand of these flies while in their shell, say the latter part of May, pack them as loosely as possible in a damp moss and send them to the streams in Maine, to which I referred? They would probably be in the moss from thirty-six to forty-eight hours. It seems to me that quite a per cent. of them would go through all right, and if so, it ought to be an easy matter to get them started, if it is possible to do so in this stream."

In the very article to which Dr. Sanden refers, I quoted Major Turle, who planted the larvæ of the May fly in the spring, as Dr. Sanden proposes, and got rise of the fly the same year. There is no doubt in my mind that the plan proposed by Dr. Sanden can be carried out successfully on the lines he suggests, but there is a suspicion in my mind that the fly he mentions as found in the Plattsburgh stream may not be the May fly. This suspicion arises from the use of the expression, "Would you think it practicable to gather a few thousand of these flies while in their shells?"

The larvæ of the May fly has no shell, while the caddis fly has. The drakes (May flies) in the larvæ state have a skin, which can scarcely be called a shell, unless the word is used in the sense that the covering is a shell because it envelopes the larvæ. The larvæ bursts this pupa skin as it rises from the water, and is seemingly a perfect fly. The pupa skin of the May fly may be seen floating on the water in the proper season, and as I have previously mentioned, they will be driven ashore by the wind and form windrows at the margin of the water. They are so gauzy as to be almost transparent.

The caddis fly has double wings like the May fly, but they are not upright like the latter. The edges of the wings fuzzy or fringe-like, and the fly has no antennæ like the May fly.

The larvæ of the caddis as soon as they are hatched, construct a covering of sticks, small stones, shells, decayed wood, etc., the particles constituting the cases being held together by a sticky substance given out by the larvæ itself.

The caddis is an excellent fish food, perhaps just as good as the May fly, and I have no doubt they can be transplanted as easily as the May fly.

Of course, we get a rise of either much quicker (the same season) if the larvæ is planted instead of the fly itself. They should be planted in weeds or mud, or even in the sand. If Dr. Sanden should try the experiment, it is to be hoped that he will make known the result in Forest and Stream.

A. N. CHENEY.

New York Hatchery Superintendents.

At a meeting of the New York Fish Commission last Tuesday this action was taken:

Whereas, In the opinion of the Commissioners of Fisheries the office of Superintendent at the several State hatching stations or hatcheries, except that at Caledonia, which has under its control several different stations, has been rendered unnecessary by the creation of the office of General Superintendent of fish hatcheries, therefore be it

Resolved, That on and after March 15, 1895, such office of Superintendent of hatching stations or hatcheries, except as before stated, be and hereby is abolished and the services of the several superintendents thereof dispensed with and the Commissioners in charge of such stations are hereby authorized to employ a competent person as foreman of each of the several stations at a salary not to exceed $1,080 per year.

SALMON CHATS—IV.

We will now take for granted that our angler is on his first excursion to capture the salmon. His boat is good, not crankish; his guides should have experience to know where the fish should lie, if not, better be without them. Above all, keep quiet. Rods, reel and lines should be of the best; as to flies, every angler has his fancy, and so has the salmon. The standard flies are the Jock Scott, Silver Dr. Duranger. As to sizes, large ones first; smaller as water falls, and smaller still at low stage. The fishing ground should be of the best as well; no pool on the river is equally good at all stages of water, and if he has a pool of each, he is a very fortunate individual; and unless he buys a seat in the famed Restigouche Salmon Club, it is not procurable. We take for granted he has killed bass, trout, perhaps tarpon, and that he can cast 30 or 40 feet (not very much) fairly well. If he cannot do this he must practice casting, always remembering it is the rod that does it; strength is not wanted. The more of that element he uses the more he will look like the old fashioned flail on a barn floor.

When learning to cast, never let out more line than you can make fall easily, lightly and gracefully on the water. In fact you must try to make the fly light on the water before any other portion of your line. When by chance, or rather mischance, you make a nice cast, try to think how you made it; follow up the motion if you can; do it again. A good salmon rod of say fifteen feet, is made purposely to cast a good long line, and it will do so with more ease than a short one. You must remember when casting, time must be given to extend your line on the back cast to straighten it out perfectly; if not, one of two things will happen, you whip your fly off, or the line comes down on the water half-way out in a bunch. If the novice can get out in tolerable shape 30 or 40 feet, he can go ahead. I think I have caught more fish at that distance than at 60 or 70, and the closer the fish will rise to the angler, he is surer to hold.

We presume you are fishing in a current strong enough to give your fly a good motion downwards. Some throw directly across at right angles. It may be necessary in some places. Better at a less angle, gradually following the motion of the fly with the point of the rod, as the current carries it around parallel. As it is coming round you give it a slight motion, with the point of the rod alternately rising and falling, thus opening and shutting the wing and hackle of the fly. Should a fish have been following it round, now is the time he is apt to strike it. He may just show, or you may see the swirl on the water; he may show the whole body, perhaps his mouth open; he may rise a few feet below your fly and make a savage dash, or again may quietly take it, sinking to the bottom, and you may imagine you have struck a rock. At this critical moment, beware of salmon fever, it is equally as bad as the buck fever. If you strike, its a very bad case, indeed; it means good-bye fish-hook and leader. There is not the slightest necessity in striking a ten-pound fish in this river, even when casting with a long line; never make it until you are sure nothing is on your hook. I have seen many a good tip broken by a half-pound trout; a Restigouche salmon from 16 to 35 lbs. is sure to do his own striking. Probably the fish came short, or perhaps jumped on your fly. Now, sir, it was not feeding time with this fellow; beware of the fever; don't jerk your fly away, draw it quietly towards you little by little, with a slight tremulous motion. "Ah, there he is again." Another plunge and dash; again the hook fails to get a hold. Now, don't let that fever strike you; quietly keep on, another slight draw or two, another plunge, and whiz goes the line and reel, and music sweetest ever the angler heard charms the ear. Now, sit down sir, collect your thoughts, while your men are whipping up the anchor; hands off reel and line and rods well up. We have him hooked, with the hope of landing him. Well, we may try, but the salmon has a voice in the matter, particularly as the hook may be in and most likely is somewhere in the body or shoulders; we know this, because if he wished to take it in his mouth there would have been no miss about it.

JNO. MOWAT.

FLY-FISHING BY NIGHT.

Editor Forest and Stream:

The recent inquiry of a correspondent as to the possibility of taking trout with a fly at night suggests an experience of my own last May. I had been invited by a friend who is a member of a club controlling one of the finest preserved streams in Michigan, to join him in a few days fishing, and on our arrival at the club headquarters, found a number of the wonted devotees with the usual assortment of stories as to the "luck," etc.

Our first day's fishing in a still air under a bright sun was not especially productive of results, although the stream itself, almost as clear as the air, was swarming with large trout of the fontinalis and rainbow varieties. The stream, moreover, was full of food, and the fish were apparently graduates in a school which had left them little to learn of the wiles of the angler. Finding at supper time that we were not likely to deplete the supply of trout during our stay, he proposed that we try fishing in the evening, and accordingly, after we had finished our pipes, my friend put on each leader a single large fly (queen of the waters, if I remember correctly) and we took our way again to the stream. The night was cloudy and without a moon, and to an unaccustomed eye, it was difficult to do much more than distinguish between land and water. But my friend, as soon as he had reached the bank, began whipping in the middle of the stream, knowring from his long familiarity with it, just where he would find a clear surface for his fly, and passing a short distance below him, I followed his example. In a very few casts he hooked a fair fish, and almost immediately after I was fast to another, both of which we landed. For the next hour we had varying success, a rise coming every few minutes, but I soon discovered that even with my friend, who is an expert of the first rank, more fish were lost than were brought to creel. But such fish as were actually secured were of good size, running from half a pound upward, and were of both brook and rainbow varieties. No attempt whatever was made at concealment; we simply got as close to the water as we could and cast out into the centre, guaging the length of line as best we might, and calculating the force and delicacy of the cast in the same manner. It occurred to me afterward that it was slightly inconsistent in us to expect the trout to see the fly on the surface of the water under these conditions, and yet to be unable to discover our ungainly bulk upon the shore.

It should be noted here that this fly-fishing by night was by no means an original idea with us. On the contrary, it is a common practice on the stream in question at certain seasons, and especially when the day-time fishing for any reason is poor. Only a night or two before our arrival some enormous catches had been made by one or two of the members, in one case up to the twelve-pound limit. But the average fisherman who attempts it is very apt to come to grief, and get himself and his tackle into hopeless confusion. Yet there are two or three members of this club who are adepts at evening fishing, and who hardly ever fail to take a full basket in the hours between eight p. m. and midnight.

Is it possible that these fish hear or feel the impact of the fly as it strikes the water, and that they do not see it at all, or only vaguely? The fact that so many of them that strike are only lightly hooked would seem to support this conclusion; and yet if that were true, why should a red and white fly prove, under such circumstances, more killing than any other?

GRAND RAPIDS, Mich. HUGH HOWARD.

BOSTON AND MAINE.

With appropriate ceremonies the emblematic codfish was removed from the old Representative Hall on Thursday, March 7, to its new position over the speaker's desk in the new hall. The emblem will be fastened by brass rods to the wall in a small panel directly under the name of "Webster" in the border, after it has gone through the hands of the retoucher. The exercises of removal were unique, if not burlesque. A history of the fish had been prepared by a committee, and it was read by them. The history shows the ancient fish to commemorate a diplomatic victory of John Adams, wherein Great Britain in 1782 agreed that the fisheries of the Atlantic coast should be equally shared with the mother country. This occurred on the 19th of November, 1782, and less than sixteen months later John Rowe, a member from Boston, asked permission to hang the historic codfish in the Representatives' Chamber. It was designed, he said, to commemorate a diplomatic victory, as well as a material interest, of which Massachusetts is justly proud.

In Maine, a bill to prohibit all fishing, except with artificial flies, in B. Pond and Quimby Pond, has got through both branches of the Legislature and was in the hands of the Governor for his signature when a member asked that it be recalled the other day. He declared that the measure had been smuggled through, or words to that effect; that no bill should be suffered to pass that prohibited the citizens of Maine from fishing in any pond or lake in the State with either minnow or worm; that the fly was the "æsthetic lure of the dandy sport," and that not one common citizen in 500 was skilled in its use. The measure is to be recalled. It will be remembered that B. Pond is the celebrated fishing resort of Ex-Governor Russell, of Massachusetts, with his friend John E. Thayer and others, and that this is the second or third time that the owners of the camps at that pond have asked the Maine Legislature to prevent all bait fishing there.

SPECIAL.

Boston Notes.

BOSTON, March 9.—A welcome visitor to Boston this week was Mr. William Soule, (familiarly known as Billy Soule) of Pleasant Island camps, Indian Rock, Maine. The few days of his visit was well taken up in renewing old acquaintances, all of whom were glad to talk over the prospects of the coming season with this well-informed gentleman. He reports the ice in the Rangeley Lakes fully three feet thick; one half of this is solid blue ice and the rest snow ice. The weather during the past winter throughout the Rangeley region has been steadily cold, no thaw occurring, and no rain since the early part of December last. Mr. Soule thinks the water in the lakes as low as he has seen it in fifteen years. The absence of rain during the winter, together with the great amount of water drawn out of the lakes by the Union Water Power Company, both have contributed to this effect. If the water continues low until the season opens, fishing ought to be excellent.

During the past week I have talked with quite a number of Boston sportsmen who have recently returned from the South. All agree in saying harsh things about the weather, those from Florida being particularly severe about the cold they experienced in that usually palmy State. The effect of this cold weather on the tarpon-fishing was disastrous, causing the fish to go further South, seeking warmer water. While a few who left home for this fishing were successful in getting one or two fish, the majority came back much disappointed. The other fishing, such as squteange and weakfish and channel bass has probably been up to the average of other years. A gentleman very devoted to this kind of fishing is Mr. Rabbeth (one of our finest rifle-shots at the Walnut Hill range) who is now in Florida enjoying the sport. Messrs. J. K. Souther and S. A. Carleton, of Boston, are also in that State black-bass fishing near Altamonte Springs. Mr. Souther is a great lover of this fishing in Florida waters, and has gone South each season for many years to enjoy it. Another gentleman devoted more to the gun than the rod has just returned from a shooting trip on the Gulf coast, about 100 miles from Tampa. He reports the weather abominally cold, but had excellent quail shooting; saw a number of deer, and had fair fishing. While the cold was very disagreeable, it, no doubt, contributed largely to his success in quail shooting, as it kept the dogs tuned up to their best all the time. Another party of nine just returned from a shooting trip to North Carolina report very poor luck indeed, and were quite disappointed with their trip.

The Megantic Fish and Game Club held its annual election for officers at the Copley Square Hotel, Boston, last Thursday evening. The following named gentlemen, all of Boston, were elected for the coming year: President, A. W. Rooinson; First Vice-President, W. C. Prescott; Second Vice-President, N. F. Tufts; Secretary and Treasurer, L. D. Chapman. Measures for the good of the club were discussed at the meeting, new boats ordered purchased, and the rate of board fixed the same as that of last year.

HACKLE.

Those "Red Trout."

Editor Forest and Stream:

AUBURN, Cal., Feb. 14.—El Comancho comes at us again with his red trout question.

That's right, El Comancho! When you have anything on your mind that is troubling you, just keep speaking about it until you are relieved!

I supposed, when I read the first article on this subject that some of the sharps would jump right in and explain things. As they have not done so, I will try my hand at it.

Brother El Comancho, those trout that are troubling you are nothing more or less than "spent" or "spawned out" fish!

Those same trout, when they left deep water to ascend the streams, were plump and healthy specimens of Salmo irideus. But after a long journey up the streams, contending against rapids and other obstructions; after long and hard battles with each other over their proprietary rights to the spawning beds; after many amatory broils and skirmishes, and finally, after the exhausting effort of spawning, the trout degenerates into the unhappy and disreputable looking specimens you describe.

After discharging their duties upon the spawning beds, they sowly drift down stream again, tails foremost, making but slight efforts to escape the blows and friction of the rocks, and many die upon the way. Finally, when they have drifted back to deep water, they get a return of appetite; they feed greedily, and very soon recover from their wounds, and become plump and sightly again.

I have seen hundreds of these trout hanging around the shores of Lake Tahoe and other Sierra lakes, just after the spawning season, in all stages, from death to complete restoration to health. Professional fishermen in these localities call them "spent" fish, and say that they are all males. As to this latter statement, I am not prepared to answer for, but think it is probable.

There was one old fisherman who used to call them by the derogatory name of "wind-splitters," because they were so poor and scrawny looking. I have no doubt at all about these being the kind of trout that El Comancho means, as he has given a perfect pen-and-ink description of the "wind-splitter." AREFAR.

No Seines in Lake Champlain.

ST. JOHNSBURY, Vt., March 5.—The Canadian Fisherman on the shores of Missisquoi Bay, Lake Champlain, have received notice from the Canadian Marine and Fisheries Department that no licenses to fish will be issued this season. As seining is prohibited in the New York waters of Lake Champlain and in Vermont, except when licenses are issued in Canada, this beautiful lake will have another season in which its supply of fish can recuperate from the devastations of past years. It is reported that the wall-eyed pike are increasing rapidly under the new protective laws. WHEELOCK.

Game and Fish Protection.

Chatauqua Lake Muskallonge.

Editor Forest and Stream:

Chautauqua Lake, situated in the extreme west end of this State, has long been noted as one of the best muskallonge lakes in the United States, and the only waters in the world where this game fish has been successfully propagated. It is so far away from the home of any game and fish protector, that for the past few years fish pirates have had about their own way. They have netted and speared until the people living in Jamestown and around the lake, becoming alarmed lest they should deplete the waters, organized the Chautauqua Game and Fish Protective Association. The object is to enforce the laws and bring the violaters to justice. The organization has nearly one hundred members. Wm. S. F. Nixon, our Member of Assembly, is President, and we have a Vice-President from each township in the county. Mr. Niner, our Secretary, and Treasurer, is in business in Jamestown. Members are joining every day, and we are in hopes of getting a membership of three hundred. The membership fee is one dollar a year, and our object is to get as many to join as possible.

Shortly after we organized seventy-five fish houses were moved out on to the lake and as many men went to spearing fish through the ice in direct violation of the law. A game protector was sent for and Chas. Ripson came here. I went up the lake with him, and in less than ten minutes after our arrival we bagged a man with two muskallonge. We brought him to Jamestown; he was convicted and sent to jail the next morning. The rest took the hint, and the way they moved the houses off the lake would put one in mind of the breaking up of a camp meeting.

Last spring a clause was inserted in the law allowing the spearing of bull heads in Chautauqua Lake, and under this pretext a lot of fishermen having been spearing muskallonge and bass. I do not know who got the bill through, but whoever did ought to have a chromo. Quite a lot of farmers living around the lake want to spear a month in the winter, and because they cannot get a bill passed to that effect, sympathize with and shield fish pirates. They are so narrow minded, it is hard work to convince them that the spear is no protection. Here we have a lake that the whole State depends upon for fry, to stock other waters, and if any lake needs protection this does. If the hatchery is conducted as it ought to be, and a protector is here to look after the violators of the law, the commission can rest assured that they can get all the fry they want, and still keep the fishing up to the standard. On the other hand, if the hatchery is conducted as it was last spring, and no more attention is paid to protecting the lake, it would be better to discontinue the hatchery and give the pot-fisher full sway.

The new organization is bound to protect the fish if possible. At present there is no illegal fishing, but as soon as the ice goes out in the spring, they will no doubt try it again. They will be met half way. F. W. CHENEY.

CHAUTAUQUA, N. Y.

Rather Gloomy Views.

Manchester, N. H., Feb. 28, 1895. Like the avaricious man, greedy for gain, a sportsman was never known to have had enough of his favorite pastime to prevent him for any very great length of time from wishing for another chance to "get at 'em." The winter season in this section has given sportsmen plenty of opportunity to complain of the conditions that have prevailed, as lovers of fox and rabbit hunting have had few good days for their sport, since snow came, on acount of crusts and exceedingly cold weather. Whenever there has been good running, full advantage has been taken of it, the results being average strings for the rabbit hunters, while those whose preference is for foxes, have, as a rule, fared less fortunately, not because of the scarcity of the game, as there has been no difficulty in "getting them a going," but the usual straight away courses they took, without any known return trips, has saved many of their pelts to themselves and reduced the count of some of our hunters accordingly. Considering the poor brook trout season of last year, and the certainty of its being followed by a worse one this summer, on account of the protracted drought, the lines of our sportsmen seem to be cast in unproductive places. The brook trout season would be much improved if shortened. As the average seasons run, most of the streams are dry or so nearly so, soon after August 1, that trout are obliged to seek a few deep pools from which they fall easy victims to thoughtless and unsportsmanlike persons, thus working incalculable injury to future and legitimate sport, and practical extinction of the fish in the streams thus abused. A month taken off from each end of our present open season on brook trout, would perpetuate and tend to enhance that fascinating sport. Your long-time and talented correspondent, "Von W." has about the right ideas on the propagation and distribution of fish and game, and has done much for New Hampshire sportsmen, both in a practical way as Commissioner, and privately, and by his excellent and sensible advice. If all the thoughts he has advanced and advocated had been heeded by our law-makers, we should have had less stupid enactments to regret. Where can we find any reasonable excuse for extending the open season on pickerel until April 1, when they spawn in March? What is gained by the open season in trout beginning April 15, when a majority of the waters are frozen for three weeks later in the average seasons? What reason can be named why any respectable person should want to pass a law allowing the butchery of song and insectiverous birds at the dictation or permission of pedagogues? Surely the desires of their pupils for cabinets of specimens ought not to be encouraged at so great and inhuman cost, for if they want to acquaint themselves with the habits of small birds, and are not smart enough to obtain such information from living subjects, they should be obliged to omit that study. I can imagine nothing more reprehensible than the sight of teacher and pupils in search of birds and their nests, that they may kill one, and pilfer from the other; and the man who will sanction the making of such depredations legal, deserves being sent to a reformatory rather than to the general court. Our open season on rabbits ends April 1, although weeks before that time the females are carrying their young, and no true sportsman will molest them.

I have named a few of the most glaring defects, such as have come to my notice without any search or effort. The Legislature is now in session, but I do not look for any improvements in adaptability or abatement of the weaknesses of our present laws, though the attention of members has been called to the various needs. With the numerous clubs of sportsmen and hundreds of individuals directly in sympathy with the acquirement of fair fish and game laws, and their proper observance, the looseness of such things in this State is amazing.

PAYSON.

Maine Legislative Game Notes.

The Maine Legislature continue to do valuable service in legislation on matters relating to the protection of game in the State. Thus far the important laws passed have been as follows:

1. To reduce the amount of fish taken at any one time from fifty to twenty-five pounds.

2. To prohibit the hunting of moose, deer and caribou with jack lights, so called.

3. To make fine and imprisonment for violating the laws regarding the illegal killing of deer, moose or caribou.

4. To make the guide equally responsible, with the one he assists in killing game illegally.

5. The passage of a general law, which puts the control of the fish and game under the commissioners so far as to when and under what circumstances they may be taken, and also to prohibit the taking fish from ponds, brooks or streams when they deem public interests require it. This is done after public notice and hearing, and notices have to be published, and an order filed in the town clerk's office, and notices posted on the brooks and other waters. It also vacates all commissions of the present wardens, so that the commissioners can start by appointing new men. It compels that bonds be given for $2,000 by all wardens. Only two bills are on their way which have not yet been passed, one that of prohibiting the killing of cow and calf moose, which will probably pass and become a law.

Another bill fixing the close time on partridges October 1, instead of September 1, is now before the Legislature, with prospect of becoming a law.

The only important measure yet to be presented is the resolve for appropriation for fish and game purposes. This has been held back in order to see if the general law was adopted. The Fish and Game Association of Maine ask for $30,000, and it looks as though they would get a favorable report from the committee. There will be on the part of some of the economists an effort made to reduce the amount, but there is a remarkably strong sentiment back of it, and a strenuous effort made to carry it through. If this is done, then we may look for a rigid enforcement of the laws, and an increase in the propagation of fish. Maine has awakened to the importance of its interests in this direction and all lovers of sports can be assured that the State is not only to keep up her present supply, but will rapidly increase it. The work done by the Maine Sportsmen's Fish and Game Association has been effective, and the management this winter in securing this advancement in legislation, shows that they are to be a potent factor in moulding the legislation in the future. CHANDLER.

Concerning Adirondack Deer.

A New York man of considerable means has visited this region for the past three years and last fall his party killed eleven deer. If there is no prohibitive law against hounding passed during this winter, he will in the spring order a camp to be built for him in the Moose River country somewhere, but if such a law is passed he will not have the camp built. It probably wouldn't "pay," to kill a respectable three or four, two, or one deer, the meat of which could easily be saved from rot, which is impossible to do when more are killed. Even the dogs cannot make away with so many. That man cannot properly be classed with sportsmen, for as leader of his party he should restrain his company, even though they keep within the lawful limit of two deer for each individual, and if he will not restrain himself he should be restrained by law and his exploiting of such slaughter made dangerous.

We cannot hope ever to muzzle the dogs for long. Too many influential clubs and hotel keepers must give their members and guest means of enjoyment, but a long step to that end would be the enactment of such a law as this:

"There shall be no hounding of deer in New York State during the year of 1895, but in 1896 the use of hounds in the pursuit of deer shall be allowed from September 10 to October 31, inclusive."

Then the next year again prohibit the use of dogs and the next allow them to be used, and so on indefinitely. I think that that would in a large measure tend to the lessening of the now rapid decrease of deer in the Adirondacks. The man that says that deer are on the increase in the Adirondack region and believes what he says after personal observation, must be pitied. He is worse off than a blind man, for he sees crooked. From general observation I firmly believe that the deer during the past four years in Herkimer county, have decreased one-half, in the past five years two-thirds. Five years ago last fall a party from this place shot seventeen deer on runways adjacent to and on Canachagala Stillwater. This year that same party shot three deer and not one had horns an inch long, yet the hunters were of the best woodsmen that this region has and had excellent dogs for the purpose.

We woodsmen here cannot believe the gentlemen forming the Adirondack League Club when they say they wish to preserve the game and preserve the forests. Our own eyes tell us a different tale. Between Canachagala Lake and Moose River on the old Bisby trail are two great lumber camps "culling the spruces," and leaving great piles of tops ready to brown, then burst up in flames and sweep the mountains bare, driving all game in wild flight before it and perhaps even burning to death some unfortunate member of the League. Every fall we see from fifteen to thirty hounds, handsome fellows with long ears, chained at Barber's hotel, on Jock's Lake, now know as Honnedago. Those dogs are pretty ornaments, but all the fall, from the opening of the dogging season to its close those dogs follow the trail of bounding, scared deer, till at last the deer springs into the lake, and is there shot down by Leaguesman rifles.

We woodsmen dog deer ourselves, and hire out as guides to these "city" sportsmen. Our dogs drive the deer to water. But there is not a mother's son of us but feels a thrill of compassion for a deer racing for life, head thrown back and white foam dripping on the dogged trail, even as we shoot it down for a taste of fresh meat. When we kill deer the meat is used up, jerked, eaten, given to our neighbors, while, too often, we have seen a deer shot down that a paltry skeleton head might ornament a city dining-room. And now we say to one another: "They think that they are alone to be considered, and hereafter we shall kill without mercy and waste without qualm or conscience." They order us from their lands, they make laws to suit themselves and woe to the man that violates them. The man who kills for fresh meat must be considered as well as the better man, who kills for killing's sake."

One and all we say, "Keep the deer hounds tied up, shoot them if necessary, all the year round," and then we will all of us sportsmen, woodsmen, men, meet and may the best man win the glorious prize of the honorable still-hunter. Crusters, floaters, hounders will sit and gnash their teeth to think that at last deer are holding their own, even gaining.

NORTHWOOD, N. Y. RAYMOND S. SPEARS.

New York Game Protectors.

Chief Protector.—J. Warren Pond, Albany.

First District.—Robert Brown, Jr., Port Richmond—Richmond, Kings, Queens and Suffolk counties.

Second District.—Willett Kidd, Newburgh—Orange, Rockland, Westchester and New York counties.

Third District.—Matthew Kennedy, Hudson—Rensselaer, Dutchess, Columbia and Putnam counties.

Fourth District.—Isaac Kenwell, Indian Lake—Hamilton and all of Essex lying south on a line drawn from the southeast corner of Franklin county, east to Port Henry, on Lake Champlain.

Sixth District.—John Hunkins, Hermon—St. Lawrence, except the town of Hammond.

Seventh District.—Frank Joy, Boyd—Lewis and all of Herkimer lying north of the towns of Russia and Ohio.

Eighth District.—John Fields, Middleville—Fulton, Montgomery, Schenectady, and all of Herkimer lying south of the north line of the towns of Russia and Ohio.

Ninth District.—William H. Wilson, Masonville—Delaware, Sullivan, Broome and Tioga counties.

Tenth District.—Harrison Hawn, Cicero—Onondaga, Madison, Cortland and Oswego, except the towns bordering on Lake Ontario.

Eleventh District.—Joseph Northup, Alexandria Bay—Jefferson, the town of Hammond in St. Lawrence county, and the towns in Oswego county bordering on Lake Ontario.

Twelfth District.—Henry C. Carr, Union Springs—Cayuga, Seneca, Wayne and Tompkins counties.

Thirteenth District.—Tunis D. Nares, Watkins—Canadice, Ontario, Yates, Schuyler and Livingston counties.

Fourteenth District.—George M. Schwartz, Rochester—Monroe, Orleans, Genesee and Wyoming counties.

Fifteenth District.—Charles Ripson, Youngstown—Niagara, Erie and Chautauqua counties.

Sixteenth District.—James McMillin, Brodhead—Ulster, Greene, Albany, and Schoharie counties.

Seventeenth District.—Charles H. Barber, Greenwich—Washington, Warren and Saratoga counties.

Eighteenth District.—Ephraim Burnside, Cooperstown—Otsego, Chenango and Oneida counties.

Nineteenth District.—Cameron Cotton, Bath—Chemung, Steuben, Cattaraugus and Allegany counties.

Onondaga Anglers.

The annual meeting of the Anglers' Association of Onondaga County was called last evening by President Dwight H. Bruce with Thomas Woods in the secretary's chair.

John E. Bierhardt, as chairman, presented the report of the executive committee as follows:

To the Anglers' Association of Onondaga:

Gentlemen: The executive committee of the Anglers' Association of Onondaga, in submitting its report for the year ending March 4, 1895, ventures to express the belief that, considering the difficulties under which it has labored—difficulties with which all associations or individuals who labor gratuitously as this association has for the protection of fish and game have to contend—the amount of work done will not be discernible to the association. And although more might have been accomplished, it is hoped the fact will be borne in mind that the members of the committee have had other duties and other business to attend to and have not been able at all times to devote the time they could wish to give to the cause for which this association was organized.

Your committee employed during the month of April, 1894, two protectors, Henry Jackson of this city, and Arthur Cottet, of Cicero, N. Y. At the expiration of the first month the services of Mr. Cottet were discontinued and Mr. Jackson was retained as protector during May, June and July of last year. In August no protector was employed. In September, Charles S. Potter was engaged and has been protector for the association until the present time. Mr. Potter, while practically inexperienced when engaged, has worked faithfully and conscientiously in the discharge of his duties, and your committee desires to commend him to the association.

Your committee has been mindful of the fact that the resources of the association are limited and that it was necessary to exercise economy in the expenditure of its funds. The amount paid to all protectors during the year has been $465.

The waters upon which your protectors have worked are the following: Oneida Lake, Onondaga Lake, Skaneateles Lake, Cross Lake and Seneca Lake, Seneca River, Oneida River, Nine Mile Creek, Limestone Creek, Butternut Creek, Onondaga Creek, Chittenango Creek, Geddes Brook, Furnace Brook, Harbor Brook, and Alvord's Brook.

The nets captured are classified as follows: Thirteen flat nets, 28 gill, four fyke, 20 trap and four seines.

There have been during the year 17 violators arrested, nine of whom were convicted or pleaded guilty to the charge against them. J. E. Bierhardt, Chairman of Committee, Amos Padgham, R. A. Molyneux, M. Weidman.

Treasurer Charles H. Mowry's report showed the association to be in excellent condition and improving each day. There is no denying the interest taken and the ensuing year will see active arrangements to secure as many new members as is possible.

The membership was quoted at 309 of which 270 members are in good standing. On motion by Mr. Bierhardt, aided by sug-

gestions from Gen. Bruce, it was voted to have printed copies of the reports of the executive committee and treasurer mailed to each member that they might learn just what situation the association was in.

These officers were proposed and elected unanimously: President, Gen. D. H. Bruce; Vice-President, Amos Padgham; Secretary, William Everson; Treasurer, Charles H. Mowry. The Executive Committee will comprise J Will Page, John Buss, William Everson, elected for two years, and J. E. Bierhardt, Myron Weidman and R. Molyneux, old members of the committee, elected for one year. There is every reason to believe the work of this association will be more thorough the coming year than any season since its existence. The members are imbued with the importance of preserving the game fish and comepetent protctors will see that the law is lived up to.—Syracuse Journal.

Minnesota Fish Commission.

St. Paul, Minn., March 2.—Editor Forest and Stream: The appointment of Samuel J. Fullerton, of Duluth, by Gov. Clough on Tuesday, to succeed W. P. Andrus on the State Board of Game and Fish Commissioners, is a hard blow to the game interests of Minnesota, and a poor recognition of Mr. Andrus' services to the State on these lines. It is regretted by the great majority of sportsmen and all persons interested in game protection and preservation throughout the State. Not that we can say anything against Mr. Fullerton personally, for he has the reputation of being a thorough gentleman; but the valuable services that Mr. Andrus has, and can render, in enforcing and building up a proper respect for the game laws declares him the most suitable man in the State to act as executive agent of the State Board. The Duluth people have complained for some time because they were not represented on the Commission, yet in no instance have their interests been allowed to suffer in securing to them proper protection with any other section of the State.

There is no certainty of Mr. Fullerton's being made executive agent, for this matter rests with the Board. So just at present who will be the new executive is not known. Though it is a matter of regret that this change must be made, the sportsmen of the State will still tender their support to the Commission, for game protection in Minnesota must not be allowed to take a backward turn.

Too much cannot be said in praise of Mr. Andrus while in office; and if he must go, the sportsmen at least will give to him the recognition that the State's executive has denied. He made an open and manly effort to be re-appointed, and the petitions and letters in his behalt will best attest his popularity.

W. L. TUCKER.

Hunting Licenses vs. God-Sends.

In an editorial of Forest and Stream of Jan. 26, under the heading of "Non-Resident Discriminations." The author claims, that hunting licenses, taxes on guns and various other expedients fail to accomplish what is needed. Wherever a non-resident license law is enforced, it is claimed to be for the better protection of game. Theoretically it may appear so. Practically, I cannot see that it does.

New Foundland has the reputoation of furnishing the best of caribou hunting. A certain association, whose headquarters are in St. Johns, have had influence enough with the Provincial Government, to cause a law to be passed, putting a license of $100 on each non-resident sportsman. In several letters from a former resident (who is a keen and very successful sportsman), I was given a very full description of his caribou hunting; and in speaking of the hunting license he said it was for the benefit of comparatively few resident sportsmen, the main object being to keep outsiders off the hunting grounds. Previously to the passing of this license law, an Englishman was reported to have gone to the caribou grounds, and killed some eighty caribou on one trip, and it was claimed that such a law was necessary to prevent such slaughter. In most instances, where game is reported to have been killed in such a manner, it is by men to whom money is no object, and the payment of a hunting license would not deter them in the least. From all accounts, financial affairs in New Foundland are in a muddle. Our daily papers publish appeals for the destitute inhabitants of the Island. Yet, should a party of sportsmen (who are willing to spend a good deal of money, and to spend it where it is badly needed), go there on a hunting trip, they are obliged each to take out a hunting license, of $100, and also to pay an export duty on any heads they may bring out. Some time ago Mr. Holberton, of New York, wrote for Forest and Stream an account of his caribou hunting in New Foundland, and speaking of the inhabitants on the West coast said: "Our visit was a God send to the men we hired."

Nova Scotia also imposes a hunting license on the non-resident, and the results are the same to a certain extent as in New Foundland. It keeps sportsman away who would otherwise leave a good deal of money in the Province and protect the game for the benefit of the native and Indian hunters, who pay as much attention to the game law as the inhabitants of Maine do to the prohibition laws.

On one of my hunting trips to Nova Scotia, we started in on the second day of the open season. Within a few miles of where we made our main camp, we met a party of native hunters who had been hunting for a week or more before the season opened. They had not killed anything and were on their way out to get a supply of provisions. While camping one night not far from the stage road, they heard a cow moose, and creeping up the next morning killed the cow, a calf and a bull. Getting an ox team, they hauled out the moose, sold the meat, were back and killed the second cow and calf in less than a week. As near as we could find out, one man killed the five moose. They claimed as there were three in their party, that they were allowed six moose. Our guides said they would keep it up all season, and would always have some one in their party who had not killed the two moose allowed by law. Few non-resident sportsmen would care to kill moose in such a manner and fewer still would ever get a chance.

Hunting licenses, gun taxes and such expedients, what are they worth for practical protection of game? From whom does the game most need protection? The non-resident sportsman who spends a few days or weeks each season on the hunting grounds, or the native hunter and the market shooter who are there all the time. Could the tons of game in the Boston market, the barrels of it in cold storage, the schooner loads of venison from the State of Maine, have anything to say, would it be for hunting license, gun taxes, more game laws which cannot be enforced? Or would it be for the Platform Plank of the Forest and Stream. Stopping the sale of game at all times and in all places.

C. M. STARK.

DUNBARTON, N.H., Feb. 26.

Meadville, Pa., Feb. 17.—Editor Forest and Stream: I notice quite a discussion going on in your paper on the policy of a State's putting a tax on non-residents for hunting and fishing within their borders. Without making any extended remarks on the breed of hog which tolerates such legislation or suggests it, and without professing to be a judge of the fine points of the law, I would respectfully ask how such legislation can stand against the following provision of Sec. 2, Art, 4, of the Constitution of the United States: "The citizens of each State shall be entitled to all privileges and immunities of citizens of the several States."

This indicates that there is room for an opinion that the game laws aganist non-residents cannot be enforced. How is this?

CHOKE BORE.

(See editorial note in our issue of Jan. 26.)

A New Maryland Association.

An organization for the protection of game and fish in Maryland was formed at an enthusiastic meeting of representative sportsmen held in the Carrollton Hotel last night.

When the late heavy snows covered the State, the Sun called attention to the necessity of feeding the game, particularly the partridges. The articles published attracted attention throughout Maryland and the question was taken up in the press of the State, and last night's meeting, as stated by Dr. Massamore, was the outgrowth of the discussion of feeding the birds.

When the meeting was called to order Judge D. Giraud Wright was elected chairman, and Dr. Samuel J. Fort, of Ellicott City, secretary, and L. M. Levering, treasurer.

Dr. Geo. W. Massamore stated the objects of the meeting. He said: "The time has come for us to form an organization that will permeate every county in the State. Unless we do organize the recreation enjoyed by hundreds of sportsmen will soon be a thing of the past. I believe that if our game laws are rigidly enforced and if we feed our birds in times of deep snows we can have as fine shooting as ever in Maryland. The feeding must be systematic and general, either by scattering food where birds use or by trapping and housing them while the snow lasts. Frequently five or six years pass in which the winters are so mild and free from snow that birds do not require any feeding. Partridges are hardy and can endure the most severe weather we have, provided their feeding grounds are free from snow. The funds of our association can accumulate so that when a hard winter comes along we will be prepared to care for the birds in every part of the State. I have seen such magnificent results that my faith is unshaken in the belief that more good can be accomplished by feeding birds than in any other way. The partridge affords the sportsmen in our State more exhilarating exercise than all other species of game combined, and they are the only game that requires assistance in time of deep snow. Pheasants can care for themselves. Ducks migrate to open waters further South. Rabbits can find shelter and are, besides, so prolific that it is almost impossible to exterminate them. More birds froze and starved from the 8th to the 15th of February last than were killed by all the gunners in the State during the shooting season. Gunning never has made birds scarce when restricted to proper limits.

"The market gunners, who shoot birds in season and out of season, are the ones who do the damage. It is of the utmost imporance that our organization put an end to this abominable practice. I am in favor of a law that will make the close season the same for partridges, pheasants, woodcock and rabbits. Our present State law, as well as most of county laws, allowing woodcock to be shot during the summer, is only a license for the pot hunter to prowl around in August, September and October to kill the half-grown partridges before the regular season.

"Other great nuisances are the worthless curs and beagle hounds that run rabbits day and night all through the summer. They not only kill the young rabbits, but eat young birds.

"The duckers, who are well represented to-night, can tell you all about big guns and night-shooting. The fishermen here can tell you of seine-hauling during the spawning season in our rivers, and how bushels of small fish are hauled on the shores, to remain and die. This is a common and destructive practice that ought to be legislated against. Another dastardly habit is that of throwing dynamite cartridges into the shoals along the bay shore where rock and perch feed. These devices kill all the fish, great and small, within a hundred yards of the place of explosion.

"There is a law against this, as also against selling fish under six inches in length, but the law is a dead letter. Yet, if our laws were enforced great good could be accomplished.

"We want the men from the counties to see that the laws are enforced at home, and we in Baltimore will see that the market for pot hunters is broken up during the closed season. My idea is to get up an organization that will be popular and embrace a very large membership, and to do this I think it would be well to make the annual dues only two dollars."

Congressman C. E. Coffin, of Prince George's county, spoke of the necessity of a general State law and of the abolition of the numerous and varying county laws. Mr. John Henry Keene, Jr., followed on the same line.

Col. Parry Lee Downs said a game warden should be appointed by the State and he should have assistants to aid in enforcing the laws.

Mr. Howard Disney's view was that every man who shoots or fishes should pay a tax.

W. F. M. McCarty, of Washington county, said he took from 500 to 1,000 birds annually to his section, but he could not protect them, though there was a game protective association in his locality. He also stocked the streams with trout, but could not have them protected. He said the members of the Woodmount Club, which has 3,500 acres of land in Washington county, would join the association and aid in the work.

All the others who spoke agreed as to the necessity for an association.

Judge Wright said much good could be done if every member would pledge himself to inform on any hotel or restaurant-keeper who is found serving partridges or woodcock out of season, or the steward of any club who is found doing the same.

It was decided to appoint a committee which is to outline the work to be done and to prepare a constitution and by-laws. The committee is to report at the next meeting of the association, which is to be held in the hall of the Maryland Academy of Sciences on April 16.

The committee was instructed to make the annual dues not over $2. Much discussion arose over the question of dues. It was the general desire to induce as many farmers as possible to join the association, and for this reason the dues were set at $2 or less, as the committee may see fit.

It was proposed that an executive committee of three members from each county and nine from Baltimore City be appointed. The personnel of this committee and the number of members it is to contain will be a subject of much consideration to the by-laws committee, which includes the following:

Congressman C. E. Coffin, Prince George's county; Isaac Scaggs, Howard county; R. G. Henry, Dorchester county; George D. Penniman, Dr. G. W. Massamore and J. Olney Norris' Baltimore City; Harry Brogden, Anne Arundel county; J. G. Rouse, Harford county; Col. L. Victor Baughman, Frederick county; W F. M. McCarty, Washington county, and R. B. Davy, Somerset county.

Letters from sportsmen who desire to identify themselves with the formation of the organization and letters of suggestion on the subject will be received by Dr. G. W. Massamore, 334 North Charles street, Baltimore.

Hotel Advertising That Pays.

Hotel Chattawka, New-Berne, N. C., March 7.

Editor Forest and Stream: In the course of conversation with Mr. Hughes, the owner, and Major Smith, the manager, of this hotel, I learned from them that the ad. in Forest and Stream had brought more business than all their other advertising put together. This fact I thought you might like to know. The ducking is about over, but quail are being killed in fair numbers, and fishing is beginning to be good.

J. L. KEARNEY.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 9 to 12.—Pittsburgh—Duquesne K. C. W. E. Littel, Sec'y.

April 16 to 19—Boston.—New England Kennel Club. D. E. Loveland, Sec'y.

April 17 to 20. Los Angeles—Southern Cal. Kennel Club. Dr. R. J. Withers, Sec.

May 1 to 4.—Oakland, Cal.—Alameda County Sportsman's Association. F. Boell, Sec'y., Oakland, Cal.

May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at —— P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10—Morris, Man.—Manitoba F. T. C., John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells Sec'y.

Nov. 4.—Trials A. U. S. F. T. Club at Carlisle, Ind. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

The Detroit Dog Show.

(Concluded from page 191.)

POINTERS (John Davidson, Judge).—Many of the New York show winners were on the benches, but they found in some of the western dogs competitors worthy of their metal. In challenge heavy dogs, the good headed Moulton Banner proved the winner over Ch. Count Graphic who is getting throaty and heavy in shoulder. Count had cut his hind foot and his consequent stiffness may have influenced the judge. The well-known Josie Bracket, put down in elegant form, was alone in challenge bitches. Woolton Game was absent. There were no challenge light weight dogs, but the well-known Miss Rumor had a bloodless victory in the next class, Wild Lily being absent. In open dogs, 55 pounds and over, Hempstead Prince, whose head would be improved with more stop, and whose elbows should be freer and pasterns stronger, is with these exceptions a well made dog. Bingo, second, is beaten in quarters and set-on of stern and fore legs and feet. Ridgeview Regent, third, has a very fair head, but is plain behind and should be clearer in neck. In heavy weight bitches Fanny Graphic, the winner, was shown rather above herself. She should be stronger in muzzle and pastern and has the same droop of quarters that runs through this strain. Dido II., should be cleaner in shoulders, toes closer, a little more arched in loin, but has a very fair head and good ribs. The well-known Phantom came third, getting coarse in front, head good if a little more stop. In lightweight open dogs, Ridgeview Comet, who is improving right along, won handsomely from the dish-faced Hal Pointer. Chancellor, a well-made dog, in all but muzzle and carriage of ear, came third, while reserve was given to Jock, who is too long in muzzle, and stands with his feet together. Yet Swift, vhc., finds his good points in legs and body, but his head is very poor. In lightweight bitches, the first went to Count Graphic's Baby, a good headed bitch nice loin and barrel, good straight front but down in quarters. Belle of Lancaster, second, turns her feet out a bit, her muzzle is not correct, and she also droops in stern. Marguerite Kent, third, stands rather wide in front and is coarse in shoulders; muzzle should be squarer but in other respects she is good and was well shown. Lady Reveller, vhc., should not stand with her feet so close together, good ribs, and a body that would stand more flesh. Bingo won in local dog class, followed by Flying Jib, who is but a fair sort. Moulton Banner took the special for the best in the show, and Mr. Gould the kennel prize.

ENGLISH SETTERS (John Davidson, Judge).—The class of dogs shown was very even and several of the New York winners were well placed. In challenge dogs Cactus repeated his New York victory over the black-headed Glendon, beating him in body and hind parts and a trifle in quality. The well-known Victress Llewellyn was first in challenge bitches, Albert's Nellie not keeping her engagement. Open dogs brought out nine and first went, after some consideration, to Albert's Ranger, a handsomely-coated blue belton, who was shown in faultless form; a typical dog although a little on the heavy side. A contrast in condition was Dash Antonio, a well formed dog from shoulders back but almost entirely devoid of coat, having just come in from the field; a dog with very stylish action. Monk of Furness King stands a bit wide in front and takes a good deal after his sire in body and head. Washtenaw Grouse was reserve, a dog of the heavy type, with a long, well-shaped head. Cincinnatus' Pride, vhc., would be better if shorter in back and with more rib; still he is a nice-headed dog, showing lots of quality. Gamester has a plain head. In open bitches, the well-known Toledo Queen took premier position; a nice-bodied bitch, especially in spring of ribs, but her head would be good if more defined in stop. Furness Maid, second, is quite her equal in many respects and in fact is better in head, shows more quality, but is shy and slouchy in gait. Third to Babette, whose body is her best point, for she has a rather mean head. Rosebud, reserve, is another plain headed one. The local winner proved to be Clairveiw Belle, a trifle long cast, and muzzle too small for skull, otherwise deserving of her position, but for all her merit, Dash Antonio, second, in spite of his lack of coat, could have taken the place. Most of the specials were for local dogs.

IRISH SETTERS (John Davidson, Judge).—There was a very fair lot of "Irishmen," though outside of the winning challenge dogs, the type ran to coarseness and there was a lack of true Irish quality. In challenge dogs, Ch. Kildare took the money, beating his kennel mate Kildare Glenmore in head and hind parts. Queen Vic succeeded in defeating once more her old rival, Ch. Norna, the well-known Bessie Finmore coming between them; a well-formed bitch with rather a plain head. Bob, Jr., that was at New York, a rather plain dog all around, took first over Fingaln, whose head, while well-shaped, should be cleaner cut. Toronto Blarney, third, is weak in muzzle, light in quarters and falls away at set-on of stern; good color. Killane is getting rather coarse, but must have pushed Blarney for third. In open bitches, Lady May Swiveller, whose muzzle might be a trifle squarer, and narrower in skull, is so strong in loin and in quarters and so good in front that the decision which placed Nona second, good typical-headed bitch though she is, must be considered correct. Noreen C., third, has a fairly good head if muzzle were not so plain and weak; behind that she is well-made all round. Toronto Biddy is weak before the eyes and plain in muzzle. Forest Sunset was described at Toronto; Noreen C. won the local class prize.

GORDON SETTERS (John Davidson, Judge).—Outside of a few of the entries there was nothing more than an average lot. Heather Lad, so much better in markings, again defeated Leo B. in challenge class, while Highland Yola, beating Princess Louise in head and clearness of tan, took first in challenge bitches. Dwight Don, the winner in open dogs, is a rather blocky shaped headed dog, down faced and throaty; he won over Guy, whose stop should be better defined and whose tan markings on legs are unrelieved by black pencilings and thumb marks. Highland Kent, third, has been a frequent winner, he loses in rib, but I like him better in front than either of the other two. Rex, Jr., reserve, is a coarse-headed dog. Dwight Pearl, a nice-headed, good-tanned bitch, proved to be the leading lady in the next class, followed by the well-known Maid of Waverly and Sante Marie. Mount Royal Wanna, reserve, is clearer in tan and has a better stop. Dwight Effie, vhc., is a pretty-headed one, rather hardly treated. Dr. Dixon took the kennel prize.

SPANIELS (James Mortimer, Judge).—The quality on the whole was fairly good, but it could scarcely be compared to that of last year, though a number of the same dogs were winners again. The field spaniels were poor, outside of the challenge winner, Daisy Dean, who was, as usual, well shown. In open dogs, three were shown, the first going to Konn, a very fair-headed dog with fair length of body, would do with more rib and is a bit on the leg. Nonpareil, second, should be deeper in muzzle, and flatter in coat, while Westminster Rye, is altogether a leggy sort, but of good formation. Dark Despair was absent. The well-known Spracklin's Belle met with no competition in the next class, she is a bit down-faced, but was well shown. As usual, interest centered in the cocker classes, and the upset of Pickpania for special for best in the show, quite upset the preconceived plans of those who had arranged such a charming list of local specials. In challenge dogs, Pickpania, who did not look quite as well as I have seen him, beat Ch. Bendigo in general cobbiness, a trifle in head, but not in quality or coat, in which latter respect he loses considerably. Old Ch. Mike was for exhibition only, and the familiar name caused me to look at the marks of his fangs, which the Forest and Stream man will carry to his grave. The well-known Commodore won in open black dogs. Willie Silk, second, has a nice, fairly well-shaped head of good quality; his feet turn out; skull is too full yet, and he is slightly undershot; a pretty little chap that loses in head and body to Pickpania, whom he afterwards defeated for all the local specials, but excels him in

quality, flatness of coat and is a very promising ten-months old youngster. Adam is plain in muzzle and was not well-shown. Old Boy is too coarse in head, but excellent in body, ribs and front. Cora II., won in black bitches, a little long in face but nice body; second going to Miss Mae, a little pinched in muzzle, but head is well-shaped otherwise. Nelly S., reserve, stands rather wide in front and her muzzle should be squarer, in other parts she will do. St. Lawrence Novel, vhc., is rather long-bodied and was not very well shown; Violet also vhc., is a puppy I could not find, she had gone home. In any other color, open dogs, first went to Lorraine, a trifle long, good in front, with a very square muzzle, Red Justice, second, is too full in brow and badly undershot. Brantford Snap was absent. In the corresponding bitch class, the New York winner was again at the head of the class, beating the well-known Tonita, though I like the latter's head better, especially in skull and expression, and she is truer in front. Reserve to Mrs. Bow Wow, a very pretty-headed one, that shows a good deal of quality; Red Rose was absent. In the local class, first went to Willie Silk, second to Miss Mae, and third to Nellie S., previously mentioned. Andrew Laidlaw took the kennel prize, and Willie Silk ten of the local Pickpania specials, which included matter for material comfort in the way of ginger ale, Banner cigars, Pickpania cigars, traveling clocks, and a bottle of perfume to ease the troubled nerves. It was too bad! Irish Water spaniels provided us with the same old faces; absence of curl being, as usual, conspicuous.

COLLIES (James Mortimer, Judge).—While the quality was not up to the mark of last year, nor the entry so large, the presence of the Woodlawn Kennels served to show the good people of Detroit what collies should be like. No challenge entries In the open class, dogs, the grandly-coated Woodmansterne Trefoil won well; he never looked in better shape and probably at present carries the best coat of any dog on the bench, it being true in texture, of great length and very dense. Here is where his kennel mate, Woodlawn Trefoil, loses to him and also in carriage of ears and head and ribs. Canadian Monarch, reserve, has a rather plain face but carries his ears well and is well off for coat. Finsbury Hero, a wide-fronted dog with a dense coat, was given three letters and so was Hempstead Chief, who is rather coarse-headed and shows too much stop. The others deserved their letters. The New York winner, Woodlawn Sunset, repeated her victory here, followed by her kennel mate Flora May II., and the only advantage the atter has over the winner is in shape and carriage of ear, but her head is plain in comparison. Ormskirk Susie, reserve, should be flatter in skull, is nicely-coated with plenty of undercoat, in fact has the best coat of either of the two bitches. The quality behind these was some distance away, Nora getting reserve, but her stop is too prominent and her ears are not small enough.

POODLES.—None were shown, a sad falling off from last year.

BULLDOGS (James Mortimer, Judge).—There were seven entries, and as the Woodlawn Kennels filled the classes, there s no need for extended description, all of them having occupied winning positions at the New York show. They do not show the effects of travel under Mr. Robinson's careful manipulation. King Orry took the special for the best in the show.

BULL TERRIERS (James Mortimer, Judge).—Though the entry in each class was small the quality of the dogs was what we like to see. Cordona and Ch. Attraction supplied the challenge entries, and looked none the worse for their New York experience. In open dogs, Prince Gully, an attractive looking terrier with capital eye, easily disposed of Billy Plimmer, whose eyes are too prominent, is weak in muzzle, and more on the English terrier type; Bassett, vhc., is a rather plain-headed sort; skull too round. Greenhill Nunthrope was absent. Edgewood Matchless and Trilby were brought together here and the lightweight marked bitch scored; longer and cleaner in head and has a most correct eye in size and placement, with beautifully cropped ears. Frank F. Dole won the kennel prize.

DACHSHUNDS (John Davidson, Judge).—Quite an interesting lot of these dogs, but type was very diversified. In open dogs, a new importation from Germany, Reinecke's Pick, took first; a rather plain-headed dog of terrier type, with a short body, judging on the other style; his kennel mate, Dreadnaught, came next, and he scores over the other in head and length, but stands out at elbow and therefore is not so good in front. Plethyosaurus, is the longest-bodied dog in the lot, but is of different type, and has gone coarse in head. Prince, another coarse-headed one, was given three letters. Puck was not shown. In bitches, first went to a rather faulty-headed one in Hexe Von Venlo, but behind that she is excellent, and especially so in body and arch of loin; Kutschka II. Reinecke, second, has plenty of loose skin, is on the terrier type, with short head and ear, but throws her elbows out too much; Demuth Reinecke, reserve, is a little dish-faced, good length of body, but skin should be more pliable. Hexe Von Venlo took the special.

BEAGLES (John Davidson, Judge).—Quite a nice lot of the little hounds and the bulk of entries were from home kennels. In challenge dogs, Doctor P., rather long-faced, was followed by Adam, who is also faulty in muzzle and loses in body to the winner. Joe and Paderewski were left out of it, though the latter should have stood a good chance for second. Old June M., supplied the winner unopposed in challenge bitches, and ooked very well. Open dogs had four entries, and there was nothing to touch Ringleader, who was well shown; second going to his coarser-headed kennel mate, Raffler, and reserve to Dan J., a coarse-coated dog, full in eye and light in muzzle, but with a good body. The bitch class of nine proved to be a good one, first going to Kitty Clover, a well-built bitch if she were shorter in body; Fancy M., second, is well known, too long in head. Belle of Westchester, reserve, I have often written about; should be deeper in body. Jenny Lind, vhc., carries a good body and coat, a nice skull, but is a trifle pinched in muzzle; she might have done better. Music is correct in type—a sweet-headed bitch of the old sort. Flight deserved more than hc., as she is quite a typical bitch if stronger in muzzle.

FOX TERRIERS (James Mortimer, Judge).—Few comparatively, but choice in quality. Warren Safeguard and Warren Captious supplied the challenge winners. Warren Tip Top, a frequent winner, added one more to his score in open dogs; followed by his younger kennel mate, Warren Salesman, a rather coarse-fronted sort. Black Rock, reserve, I thought decidedly lucky, and must, I suppose, credit his position to the size and legginess of the much better-headed and fronted terriers, Ruby Rival, vhc., and Raby Truefit, hc. In bitches a capital lot came forward and Richmond Victory, rather flat faced, beat her kennel mate Cowthorpe Gem in carriage of ears but not in head, and was herself beaten in cleanness of shoulder; Richmond Pearl, reserve, though a trifle long cast, has as good a head as any, good punishing muzzle, and terrier eye and expression. The local class winner was my Lady Starden; a poor, short-faced, thick-skulled terrier, but good in forelegs and body; Eskdale Punch, a coarse-headed wire, was second, and Yondotega, third, can merely boast of good, straight forelegs. In open wire dogs Endcliffe Brisk, the New York puppy, scored in head from Mister Great Snap, well known; reserve going to the latter's rival, Brittle Beaut; Compton Vindex, coarse in head, taking three letters. In the corresponding bitch class, Roath Rennie, the Toronto winner, was alone. Messrs. Rutherford won the kennel prize easily and over Safeguard's Kennel, Donald placed the handsome silver cup won outright for the best kennel of fox terriers, they having won last year.

IRISH TERRIERS (James Mortimer, Judge)—Not very many entries but the quality was very even. The open dog class contained such dogs as Jack Briggs, Merle Grady and Briggs' Best, placed as named, Merle Grady, though he loses in texture of coat to Jack, is better in head and eye; the pup well deserved his reserve card. Canadian Ambassador is a little full in eye and coat is open and not wiry enough; Galtees, hc., was outclassed here. In bitches old Ch. Dunmurry felt quite young again in the open division, and held her own in great shape; second going to the broken-coated Denmore Biddy, whose nice head and ear entitled her to the position, Nora, a clean, long-headed youngster, with a big ear, well deserved her reserve card, and so did Briggs' Breeze, unfurnished yet.

Only one Dandy Dinmont, Lothian Judge, showed up, and that described at New York.

SKYE TERRIERS (James Mortimer, Judy).—The old familiar winners, Endcliffe Maggie, Elphinstone and Barnaby Rudge, were placed as named.

BLACK AND TAN TERRIERS (James Mortimer, Judge.)—Several of the best were at New York, Gypsey Girl in Queen III's present condition somewhat easily defeated what was once one of the best bitches on the bench. Open dogs saw a rather down-faced, leggy, big dog with good markings, especially on legs, win from the shelly, leggy Chicago Spider, who besides is dark-faced. In the ladies' division, Gypsey Queen, a nice-headed bitch, with faulty leg markings, won from Profecta Rose, not clean enough in front and with badly carried ears. Chicago Maiden, vhc., I described at New York.

YORKSHIRE TERRIERS (James Mortimer, Judge).—The New York winner, Bradford Rejected, scored again without any difficulty, but this time downed the well-known Minnie York, who, while quite as good in coat is not as correctly colored; Prince Harry, hc., I shall have a chance to describe at Chicago. Toy terriers require no particular mention; of the usual apple-headed sort, though Lotta, disqualified for being over weight, was immeasurably superior in head, having quite a good, long one, a rare feature in these dainty little creatures.

SCOTCH TERRIERS (James Mortimer, Judge).—Were decidedly poor. The well-known Colored Preacher being the only one with more than ordinary quality; Glenshea in bitches, the class being divided, scored over Gypsey Yet, who is far too big, but Glenshea is not improving, being too wide in skull and short in muzzle, but good in coat.

PUGS (James Mortimer, Judge).—Quality was supreme here, and probably the entry contained the best dogs of the breed that we can show. In challenge class, Haughty Madge, a little above herself and in season, won over Drummer, who, good little dog that he is, finds his bent leg a detriment when it comes to a pinch, and besides he is too dark and not so close in color as the bitch. Young Penrice, whom I never saw looking better, simply romped away with the blue ribbon in open dogs from Al Von, his kennel mate, beating him decidedly in muzzle and skull, but gaining little in other parts; Finsbury Dude, reserve, loses in head and wrinkle. Old Medler can scarcely keep up with this company. Hooker won in bitches without competition. The "locals" were not of any account, and a good look at the other dogs would show the owners the wherefore of this remark.

TOY SPANIELS.—None put in an appearance.

ITALIAN GREYHOUNDS (John Davidson, Judge).—Spring and Sprite again in challenge class. Prince, from the same kennel, ran second to Adonis in open dogs, though very shelly in body and too defined in stop; is of nice size; Adonis, small and dainty, has a better head and body; Tinnie II., was alone in the female division.

MISCELLANEOUS (John Davidson, Judge).—This was indeed a mixed lot. In the heavyweights first went to the good-coated Boxer III., and second to a very fair Newfoundland, called Sir Edwin Landseer—an appropriate name—for no artist or lover of animal ever succeeded in doing greater justice to this noble breed. The Clumbers and Bassetts entered in this class were absent. In dogs, 30 pounds and under, we were introduced to a rough-coated dachshund, probably the first ever benched in this country. He looks like a cross between a Welsh terrier and a dachshund; Ben Lewis's miscellaneous terrier, Frank, and the Bedlington Endcliffe Wasp, divided the money with him, and thus brought the regular classes of a good show to a close.

H. W. LACY.

CHICAGO DOG SHOW.

March 5 to 8. Entries, 896. Dogs Benched, 787

The sixth annual dog show held by the Mascoutah Kennel Club is now a matter of kennel history. Once more the club has scored a distinct success both in the quality of the dogs they succeeded in bringing totgether, and the crowds of people who literally swarmed through the aisles, making locomotion a difficult matter, especially in the evenings. The result, in a financial sense, must have been very gratifying to the management. Last week the clerk of the weather was in a most genial mood, with the exception of Thursday, which was a dull sort of day, he favored us with bright, sunshiny weather.

Although the Mascoutah Kennel Club has an imposing array of officers the whole conduct of the show seemed to fall on the shoulders of two men—Mr. W. J. Bryson, the President, who does not look upon his office as an ornamental sinecure, but one that entails considerable mental and physical labor in attention to the many details of the show's conduct and he worked early and late in the club's interests. The other was Mr. Walter C. Gunn, who seeemed to assume the duties of a secretary, treasurer and general information bureau. Mr. Payson, the treasurer, was, we regret to hear, owing to sickness, compelled to forego his usual work in behalf of the show. Geo. H. Hill, the superintendent, was a busy man throughout the week and attended to his duties well. Another year we would suggest that more attention be paid to the cleanliness of the rings, the sawdust should be removed daily, for in a low-roofed building like Battery D, where the facilities for ventilation are not all that could be desired, it is more necessary to be careful in regard to the disinfecting and the general cleanliness of the show. This is, however, no fault of the club's. The arrangement of benching, as usual, under Spratts Co.'s supervision, was an improvement on that of last year; the bulk of the classes were benched in the Second Regiment building, while Battery D contained the judging rings and most of the larger dogs. There were six judging rings, but as several of these were unoccupied at times during the judging hours, the same space might well have been devoted to four rings, and this arrangement would have given the judges more room to move the dogs in, some of the classes being very crowded.

Judging was not concluded until Wednesday evening, though the greater part of the regular awards were made on the first day. The attendance in the evenings was simply astonishing—people standing outside in lines that reached well down the next block, while carriages blocked the streets for some distance.

Spratts Co. attended to the commissariat with "Capt." Murphy as head cook; the benching and other interests relating, were in charge of Mr. E. M. Oldham who seems to have grasped the new situation with the experience of a veteran; and Mr. Adonis Ehrmann, as usual, drove a good business at the old stand. The catalogue was very well arranged, and tastefully gotten up. A marked catalogue was issued on Thursday morning which was very accurate.

MASTIFFS (A. Trickett, Judge).—There is always a strong class of this grand old breed at Chicago shows, and if there could be said to be an exception this year it was on the side of even a more meritorious exhibit. For this we are indebted to the efforts of Mr. Bunn, the Peoria breeder, who, by careful mating and a great love for the breed, has succeeded in getting together a kennel that is second to none in America, and which if taken to England and shown in the condition in which he placed his dogs on the bench last week, would surely bring him further honors. In challenge dogs, Elkson, looking remarkably well, scored alone, while Sinaloa has by her win in the corresponding class qualified for a champion. A grand class came forward in open dogs and that good, all round dog, Prince Cola, had to lower his colors to Marquis, who excels in expression, markings and depth of chest, both are good in head but of different types; Ealdermann, a very plain-headed dog, in comparison, took third, he should be better in stop, muzzle and ears and further examination of the latter prompts us in no way to retract what we have already said on the question either as to size or placing; Leamington, fourth, I prefer as a mastiff, both in make and shape of head, coloring and ears, although his are too large and clumsily set on, a little more rib would improve him; Beaufort's Boy, is some distance behind these, though fairly good in head, he lacks substance; Alarm, vhc., is a rather plain-bodied dog, but with a head that denotes good breeding. In bitches, the grandly improved Rowena met a worthy competitor in Minnie Beaufort, the Detroit winner, who loses only in size, body and carriage of ears and I like Rowena's lovely expression, now so rarely seen in these ultra short-faced mastiffs, though her eyes should be darker. Cerene made a fair third—a good skulled bitch, not in the best of form; Minnie Minting, an old winner from the same kennel, I like better in shape of head, but she is not so good behind; Ripplette, took the reserve card, she was at Detroit; Morse's Juno, vhc., is pinched in muzzle. There were no dog puppies, but a fair result of the union between the two open class winners, Hegira, won in bitches, and she will now go to Japan to gladden the heart of the Mikado. In novices Leamington and Rossington took the money, the latter a short-faced dog not level enough in mouth, something on the Ilford Caution order the medal for third went to Beaufort's Boy. C. E. Bunn had a fast hold on the kennel prize, and most of the specials not confined to Cook county. The classes were well judged.

ST. BERNARDS (R. J. Sawyer, Judge).—Taking the quality all through there was little if any improvement on last year. There were many entries, but the good ones were easily separated. Sir Bevidere, who is putting on flesh all the time, and looking particularly well just at present, and as lively as a two year old, shared with his beautiful kennel mate, Rustic Beauty, challenge honors in separate classes. A class of twenty-nine came forward in open rough dogs, but the judge soon made room by bowing out all but four or five. Le Prince turned the tables on his Detroit victor, American Caesar, but in the former's present condition I see no reason to alter my opinion expressed last week; third to Safford, a handsomely marked dog, whose quality and general all round makeup are difficult to get away from; he deserved his place; not so Major F., a plain, long black-faced dog, with red, marble like lumps sticking out of the tear corner of each eye; his face is flat but deep, good body, but coat should be flatter, and he is straight behind. There were others more typical. Reserve went to Gen. U. S. Grant, an excellently fronted dog, with a fair head that should be deeper in stop; a little short-bodied sort is Victor Roloson, with a fair head. Prince Wyatt is another with a very fair head, turns his feet out and body should be longer; Prince Nedep's well-shaped head in spite of the absence of white, entitled him to his letters. The rest of the mentioned ones will never demand more attention. Another large class of twenty-three, that filled the ring, came out in bitches, and La Princess was easily slated for first—she is improving all the time; the well-known Alta Berna took second, losing in size, depth of head, rib and length; third to Baroness Streatham, a long flat-faced, short-bodied bitch, that droops in quarters, too; Jessie W., fourth, is another too long-headed and narrow, lacking in quality, but good in bone and legs; coat not flat enough; Aristocratine, reserve, loses to a good one in head, a nice colored bitch; a light colored one is Arline, was vhc., she should be deeper in stop and carry her ears closer; Artilla in the same division, good-bodied bitch that she is, and superior in head to some of those placed over her, especially in depth, was hardly treated, as she is a good mover; third should have been her position. A capital young dog is Duke Wadsworth, the winning dog pup, who shows lots of quality; another big one is Marko II., an unformed, rangy dog, that should make up well. The bitches were not up to promising form; heads being poor. Victoria II. is a very nice fronted bitch, with the best head, though too straight in stop. In novice roughs, though Major F won, followed by Victor Roloson, both mentioned above, I liked Mascot Imperial's good head, or Artilla or Patrick quite as well; Artilla must have been forgotten to get only c. in such company. In challenge smooth dogs the three brothers, Melrose, Alton II. and Lawrence Garza, were placed as named, Melrose's head is superior to Alton's, but he is not so good behind that, but gains more again in forelegs; Garza is a pocket edition of the other two. The big, lengthy, good-headed smooth, Pratt's Belle, was alone in the corresponding class. Lord Milton had his revenge this time in seeing his Detroit victor, St. Augustine, turned down to hc., while he went to the top of the class; Patrician deserved his red ribbon for his excellent front and fair head; he should be better in ribs, and more quality would improve him; Clovis, third, beats him in quality, head and only loses in size, color and carriage of stern and hind legs; Lord Keeper, fourth, is a fair bodied dog, but not a worthy son of a worthy sire; Illinois Pontiff is a short, light-bodied sort of dog, but deserved his reserve; St. Augustine met with unkindness in getting hc. A polite request to withdraw from the competition on the score of poor flesh or a proper recognition of his merits as the best St. Bernard in the class should have been his lot. In smooth bitches, Judith's Rachel, won. She shows too much coat for a smooth, is rather plain in head, though well-shaped enough, stands on good legs; Marie Stuart, second, has a rather long, narrow head and is rather shelly in body; third to Princess Rosa, a light boned bitch, straight behind, and rather houndy-headed; Lady Keeper II., I did not see; Sabah, reserve, shows some quality, but her head is too flat and body color white. The long, narrow headed Sir Nero W., was first in dog pups, and Moleskin, that was at Detroit, was the winning bitch. In novice smooths, Judith's Rachel rightly won, but Clovis' good head and quality should serve to beat the plain-headed Marie Stuart for second place. The Argyle Kennels had a field day among the specials devoted to open competition. While Mr. Sawyer judged well on the whole, he was scarcely consistent enough in his type.

BLOODHOUNDS (John Davidson, Judge).—Marjorie was absent, and thus the Detroit winners, Buccaneer and Vigilant were the only entries in their respective classes.

GREAT DANES (G. Muss-Arnolt, Judge).—While there were lots of dogs entered, their type was very mixed and it was not difficult to separate the wheat from the chaff, which the judge succeeded in doing with dispatch. Major McKinley, looking still very lusty and moving poorly behind, having been cut on both feet, took the challenge dog ribbon. There was no corresponding bitch entry. A mixed lot of twenty came out in open dogs, but Osceola Voltaire was quickly slated for first, rather shelly in body, still a light brindle of correct type, head long and clean cut, one foot turns in slightly and he should be stronger behind the withers and a little more bent in hocks; second to Beau Brummell, a rather coarse headed dog, with great bone, but a bit clumsy; Leo Waldemar, third, is a dark brindle, faulty in hind action and coarse in stern; King William, fourth, is of a type nearer to the winner, and is good in body, and especially so in hind parts; his head is a little short, and muzzle should be stronger; Fritz, reserve, is a coarse-headed blue dog, with little character; Anderson's Saudor, well-known, deserved his letters. In bitches a round dozen came out and the blue went to Osceola Neverzell, a bitch of excel-

lent type, shown a little thin; long, clean head and true expression; second to Victoria Spot, a rather coarse-coated bitch—a good harlequin with well-shaped head, and plenty of substance, should make a rare brood bitch; Ella, third, is a neat sort, should be stronger in muzzle and cleaner in shoulders; nice style and action; Lady Spot, nice, clean head if a trifle stronger before the eye was fourth, reserve going to Madge, who boasts a very fair head. The others were plain. With twenty-one pups in the small ring, the judge must have had a bad quarter of an hour. They should have been divided. Osceola Dey was eventually picked out as the winner, and he is a very pretty dog of good clean cut, "terrier" type; Lady Floyd and Osceola Bey getting equal second, though I prefer the latter as being very like her dam, Neverzell. There were few in the novice class and Lady Spot was the best.

NEWFOUNDLANDS (John Davidson, Judge)—The sexes competed together. Sir Edwin Landseer, noticed last week, won nicely from Fuldo; Flora, a daughter of his, getting reserve, though she beats her "daddy" in type.

RUSSIAN WOLFHOUNDS (John Davidson, Judge).—The same lot of "Russians" came forward as at Detroit. Argoss and Princess Irma in challenge classes and Ataman IV. correctly first in open dogs; Trojan won this time over Czar, who is beaten in front and coat by the other. In bitches Olga IV. again beat the short coated black and white bitch Riga.

DEERHOUNDS (John Davidson, Judge).—A larger entry than seen on the circuit so far, though only six here. In open dogs Strebor, a short-bodied dog in fair coat, drooping at quarters, but with a fair head, won over Rob, who loses in coat, bone and body. In bitches Ghost and Pertha won first and second, the latter excelling in head, coat and body, but neither are really good, and Madge, third, has not carried out her early promise.

GREYHOUNDS (John Davidson, Judge).—The local element met hot company in the visitors. Ch. Gem of the Season had matters to himself in challenge dogs, while in bitches Ch. Southern Beauty, Bestwood Daisy and Wild Rose occupied their Detroit positions. In open dogs Southern Rhymes and Spring O' the Valley were again first and second for reasons stated. Robert the Devil is faulty behind, stands back on his pasterns and should be better ribbed up; Fear Naught, reserve, who won the Kenmore Derby last year, is a well built dog, ribs nicely sprung, good bone and front and might well have been third, and I like Dallas for the place in preference to Robert. In bitches, Southern Gay Girl, that was at Detroit, took first this time, second going to Idlewild, who should be more sprung in barrel and deeper; third to Pansy, a rather plain sort, flat in rib, faulty in tail; the well-known Chips took the reserve ribbon, faulty at both ends.

FOXHOUNDS (John Davidson, Judge).—There was not such a good entry as at last year's show, when Mr. Williams made so pretty a showing, still there were a few good ones. In challenge dogs the old winner Bowsprit was alone. In open American dogs the order of winning was Big Strive and Buckshot, the Kentucky hound winning in rib, body, coat, head, shoulders and brush. Pearl Strive, another Kentucky hound, won over Glenwood Belle in bitches, in bone, and quarters, losing in head, body and front. In English hounds the winner, Songster, is a rare sort, one of the best of the type on the bench, Villager, second, is just about the most American type of hound shown, long in body and light comparatively throughout.

POINTERS (B. F. Seitner, Judge).—It reminded one of old times to see this well-known pointer breeder once more taking an active part in the ring, and he seemed to acquit himself of his work in good form. In challenge heavyweight dogs, Moulton-Banner scored; and with Woolton Game absent in the corresponding class Josie Brackett's win was also a bloodless victory. In lightweight challenge dogs which were judged next, Ridgeview Tenny, well put down, while losing a little in muzzle, scored over Arthur in rib and bone and style; Wild Lily failed to keep her engagement, so Miss Rumor, losing flesh a little, won without effort. In open heavy dogs the well-known Lord Bracken, a fairly well made dog all round, a bit throaty and heavy in shoulders, good bone, legs and feet, scored first over Hempstead Prince, the Detroit winner, but only in head; Dick, third, I would like better if cleaner in front and better shaped in head, and his ears are not correctly carried; Ridgeview Regent, fourth, was at Detroit and in style and quality and head can beat Dick; Lad of Beaufort, reserve, is throaty, wide in skull, and too much cut out before the eye; Brush of Hessen, vhc., is rather short in body; King Bang is a good headed sort but leggy and shelly in body. Beppo's Girl was the only bitch to fulfill her engagement a capital headed one, but feet and pasterns could be improved. The well-known Chancellor won in lightweight open dogs, followed by the equally familiar Ridgeview Comet, thus reversing their Detroit positions but Comet gets it really in head, front and hind parts; Kent's Priam, third, is rather plain in muzzle—a smart, merry little mover that deserved his position; Col. Kent is rather flat sided, faulty in ears and stop too abrupt. In bitches, Marguerite Kent, described in Detroit report, scored first over Trinket's Nell, a plain-headed bitch that droops in quarters; Lady Reveller, third, I much preferred, on account of her superior type of head, better body and hind parts, though she may lose slightly in front; May Bang, fourth, is heavy in shoulders and has a mean, short muzzle. Rene, reserve, has a stary eye, and is light in loin; Fannie Kirk is heavy in shoulders; Daisy Kent has a plain short muzzle. Mr. Gould took the kennel prize.

ENGLISH SETTERS (W. B. Wells, Judge).—Mr. Wells, while sticking to type, thought more of make and shape for the field, and he missed one or two good ones. Challenge dogs saw the old rivals, Glendon and Cactus reverse their positions; it is always a near thing between them. In bitches Ch. Albert's Nellie was absent so Victress Llewellin, looking better than ever, won as she pleased. Open dogs (16) had Dan O' Light for a winner, though fortunate I thought, as he is plain in muzzle, not square enough, and droops slightly in quarters, otherwise well put up; Dash Antonio, second, occupied the same position at Detroit and was looking well, barring a lack of coat; Washtenaw Grouse, the long, rather coarse-headed dog was third, and fourth fell to Cincinnatus' Pride, who is short of coat, should be better sprung in ribs, good in other respects; Count Beaufort, reserve, is a well put up dog, a little coarse in skull, but a good mover; Wordsley Dude, a well-known winner, though shown on the heavy side, should have had something good. In bitches (11) two absent, first went to Bly, a trifle fine in muzzle and short in body, well turned barrel, good legs and feet; second to Countess Antonio, a nice sized bitch, showing lots of quality, a little stronger in muzzle and she will do; Sue II., third, is a nice-headed one, should be truer in forelegs, and be better sprung in ribs; Miss Shattuc a rather coarse-skulled bitch, was fourth; reserve to Katie Wells, faulty in head but good on her pins. Furness Maid was not even mentioned, though better than most of those described and Maid Marion seems to have been overlooked entirely; one of the best in the lot The kennel prize did not fill.

IRISH SETTERS (John Davidson, Judge).—The same old faces were among the principal winners. Ch. Kildare beat Finglas in challenge dogs—two dogs very different in type and Kildare Glenmore might well have taken reserve; Pride of Patsey and Blarney, Jr., are either of them more typical Irish setters. In bitches the sweet-headed Queen Vic won rightly with Bessie Finmore, reserve, same placing as before. Norna and Bessie Glenmore were also in the class. In open dogs the Detroit winner, Bob, Jr., won again, second going to Lord Elcho, Jr., a dog with a very typical head and good color, but not so good in body as the winner; Chief Red Cloud, third, is a rather nice-headed dog if stop were more defined, is of good color, but ribs should be better sprung; Winnebago Jap, fourth, is a rather coarse-headed dog, but well-shaped; Patsey's Pride, reserve, is rather broad in skull, and has a plain, weak muzzle. Lady May Swiveller again proved the winner in bitches; the good-headed Nona was second and third went to Pride's Heather, a bitch of nice type who well deserved her position; Bonnie Belle, fourth, is an excellently well-ribbed bitch, rather plain in head, being pinched and weak in muzzle, and was shown too fat; Pride's Beauty, reserve, has a nice long, clean-cut head, though a little too prominent over the eye; Lady Florida is a down-faced sort with little type or quality. This one was the only pup shown. Oak Grove Kennels took the kennel prize.

GORDON SETTERS (John Davidson, Judge).—Not a very good lot outside of several well-known winners. Heather Lad and Leo B. occupied their accustomed positions in challenge dogs, while in bitches Highland Yola and Princess were placed as at Detroit. In open dogs (8) a new face in Louis S. came to the front; a well-marked one, with a fairly good head, well shown, and good in legs and body; second to Dwight Don, who was the Detroit winner and was again followed by Highland Kent. Guy, fourth, a rather straight-faced dog was rightly placed this time; Sandy, reserve, is not square or deep enough in muzzle. Highland Louis would have a good head if skull was narrower. Dwight Pearl won nicely in the bitch class, followed by Maid of Waverly and Sante Marie, both faulty in heads; Ben Lak M., fourth, is more on the Irish setter type of head but was well put down. Some very fair puppies were shown. Dr. Dixon took the kennel prize.

There was only one English retriever shown, and that a poor one, that might have been a Chesapeake in color.

CHESAPEAKE BAY DOGS (John Davidson, Judge).—Only two entered, the winner was October, who excels the other, Don Pedro, only in coat.

SPANIELS (Andrew Laidlaw, Judge).—There was not the quality here this year, but the Canadians managed to get a good grip on the prize list as usual. In challenge class for all breeds over 28 pounds, the Irish water spaniel Marguerite scored, in solitude. In open black field spaniel dogs, first went to a good-headed long dog in Endcliffe Ebony, a trifle high on the leg, but a good sort. Raven and Dark Despair were absent. In bitches the well-known Spracklin's Belle won nicely, followed by Dorothy, pinched in muzzle; third to Nelly Ray, faulty in front, head and coat. Nonpareil was alone in the any other color dogs. There was nothing in the cocker division that commanded particular attention this year. In challenge dogs Black Duke was content to run for specials only, so Pickpania had a walkover. There were no entries in the corresponding class for bitches but in challenge class for any other color Red Roland was alone; he is showing age somewhat. In open black dogs four came forward and the winner proved to be Governor, a new one; he has a good cocker head, nice front and bone, cobby body—a good little stamp all round; Woodland Clipper, well-known, is a little long in body in comparison; Adam, third, is plain in muzzle. Woodland Princess won again in bitches followed by Woodland Topsy, from the same kennel, a trifle long in head, but well-shaped, nice coat and body and to my taste a proper height from the ground; St. Lawrence Princess, third, was better thought of this week than last; reserve to Rosalind, a wavy coated bitch, with a rather coarse skull, good body; St. Lawrence Novel, vhc., is coarse in head; Violet, in the same order, should be flatter over the eyes. In red or liver dogs Red Jocko II., the winner, is a rather nice-headed dog; better in body than Red Robin II., his kennel mate and shorter in head; the well-known Red Justice was third. The Brant cocker spaniels were to the front again in the next class winning with Red Beauty, faulty in eye; Mrs. Bow Wow, commented on before, was second, and third fell to Queen Bess, a good cobby sort, with a pretty little head, though a little too high and round in skull. In any other color, the well-known Tonita looking very fit, won nicely from Woodland Bessie, a black and tan with a fair head; St. Lawrence Beauty, third, is rather snipy but nicely fronted. The winning puppy, Miss Mae, is pinched in muzzle. Queen Bess took second.

Clumbers were nothing to speak of, second being withheld and first going to Major G., a fair-headed dog not deep enough in muzzle; his eyes are well clothed, and he boasts a fair curl, good top knot and ears; Musha, third, is a good coated dog, with a very fair head; Willy Reilly, reserve, is plain in head, with little top knot. Bridget O'Donohue won nicely from Nora O'Donohue, the winner is a long-coated bitch with nice ears, good strong head, should be more whippy in stern; Nora seemed to be blind in one eye, fair coat; the well-known Kitty of Cork looked plain in this company.

COLLIES (J. A. Long, Judge).—The judge was scarcely so happy as in former years in some of his decisions. His classes were large and the ring small and this probably accounted for his missing one or two good ones. In challenge dogs, Sefton Hero, in fine shape easily disposed of Roslyn Wilkes, who is ageing up, and in bitches Charlton Phyllis with one ear up, was evidently careless, having no competition. It is funny no one else sees this otherwise grand bitch's faulty hocks and hind action. A big class of twenty dogs then came forward and Rufford Ormonde, who was crated in the ring, was taken out and the bandages removed. We were inclined to forgive his first appearance at New York in a crippled state, but grand dog as he undoubtedly is, it is not fair to his competitors that he should still be shown and win on three legs; neither is it a kindness to the dog to cart him around the country in such condition. It is assuming a risk that such a dog should not be exposed to. While we concede his merit, the judge should have asked for his withdrawal. He won. Next came Gold Dust, who, while improving in head, was not in good coat, and this exposed certain weaknesses in hind parts, therefore he must be considered lucky to walk away with the red ribbon; Cragston Douglass was another lucky one, his prick ear and round high skull are not offset by his good coat; fourth to Woodmansterne Trefoil, who, in his present condition, should have been first with Rufford Ormonde counted out, as he is a good all round collie in beautiful coat of correct texture; Christopher Columbus, reserve, is a dog showing much quality though heavy in ears, deserved his position; Woodlawn Trefoil should have been placed higher up; Chesterford Hero, hc., shows lots of quality and deserved his letters though too small-sized; Corrielaw is faulty in ear carriage; Hempstead Chief certainly deserved something but was unnoticed, while Curzon, in poor shape, was also out in the cold and how Toronto Wonder, an old winner under Mr. Long, should have been passed over altogether is unaccountable. Another big class came out in bitches and the sweet-headed Lady Gay by Wellesbourne Charlie out of Chesterford Hattie, won as she pleased; she is on the small side but carried a capital coat and is very catchy at present; second to the pretty blue merle Cragston Blue River, this, however, considering her faulty ears and not very good head, must be called a lucky win; Woodlawn Sunset, was entitled to the place, if not to first; Blossom, fourth, is short of coat, too full in brow, but ears beautifully carried. Minuet, reserve, has a full round skull, and ears are not correctly carried; the sweet-headed Lady Figdet, vhc., perhaps deserved her letters though short of coat and her ears are inclined to prick. Ormonde Susie was harshly treated, with not even a letter, and Flora May should have had more than two letters. The winning dog pup Cragston Donald is a good coated dog with a very fair head.

Chat from Chicago.

The Mascoutah Kennel Club gave several specials for the dogs owned by members of the Fire Department, a very praiseworthy move, as there is no class of men who as a body, love dogs more than the members of the Fire Department.

Lady Gladys, the St. Bernard, ruptured a blood vessel just before the M. K. C. and is now under the vet's careful attention.

Geo. S. Thomas sold the noted fox terrier Richmond Victory for Mr. Geo. Raper, to Mr. T. J. Sullivan, McGregor, Ia. She won firsts at Detroit and Chicago. He also sold the winning field spaniel Endcliffe Ebony, to Mr. J. A. Spracklin, of Woodstock, Ont.

Mr. Geo. Douglas sold his winning cocker spaniel Woodland Prince to a Chicago fancier, also the bitch Rosalind, reserve, in the open class.

Mr. C. E Bunn sold the winning mastiff pup Hegira to S. Schaida, the Royal Commissioner from Japan to the midwinter fair, at San Francisco, Cal. Hegira starts for Japan next week as a present to the Mikado. The one Mr. Bunn sold last year has since died.

Dr. Sauveur sold his crack collie Gold Dust during the show to Mr. J. P. Morgan for the sum of $3,000.

The Gordon bitch Dwight Effie died under peculiar circumstances, on arriving at Chicago from Detroit; other dogs were sick and a postmortem examination was made of Effie, but the result is not known yet.

Dr. Sauveur is importing Southport Sequa from Mr. Mason's kennel and the dog will be known as Seminole Perfection. This is the dog that Mr. Stretch disqualified on account of his ears, but it has since been proved that he is all right. He is said to be a good one.

The crack bull dog Fancy Romford is now the property of the Woodlawn Park Kennels. The bitch Bubbles that is expected over with him is in whelp to Outsider.

Mr. Andrew Laidlaw, of Galt, Ont., has sold the well-known cockers Rideau Reine, Commodore and Baby Ruth to the Mepal Kennels, Marlboro, Mass. This almost makes a winning kennel to start with.

The brindle bull dog Wal Hampton is now the property of Mr. Suydam, of New York, Col. Hilton, proprietor of the Woodlawn Kennels having presented him with the dog.

Mr. Jos. Lewis, as our readers are aware, lost the good beagle bitch Robino that he purchased at the Providence show, but not to be defeated in his purpose he has now very pluckily bought Robino's former kennel mate, Ringleader, from Mr. Joachim, through Mr. Mortimer. This dog is a good beagle and should be used on some of our weak-headed, light-boned stock.

No dog, born after March 31, 1895, can be shown with its ears cropped. English Kennel Club rules. America should now follow suit in this humane resolve.

A new dog society has just been formed in Paris by a number of titled sportsmen, in the interests of beagles, and several thousand francs will be put up as prizes for beagles at the coming Paris show in May.

H. W. LACY.

The U. S. Field Trial Club Meeting.

Louisville, Ky., March 5.—Editor Forest and Stream: The Board of Governors of the U. S. Field Trial Club met in Columbian Building. A majority of the Board of Governors was present.

The secretary stated that he had the resignation of H. Hulman, Jr., dated Feb. 14, and asked that action be taken on the same, whereupon Mr. Avent laid the following letter on the table, which he had just received, and asked that it might be read:

"Terre-Haute, Ind., March 1.

'J. W. Avent, Esq.

"Dear Sir: While it is my intention to withdraw from the dog world for the present at least, I, however, do not care to feel that my resignation from the U. S. Field Trial Club would in any way cause any person to think I was leaving it with any intention of hurting the future prosperity of the club. I will therefore withdraw my resignation for the present, and if I find that later on I cannot spare the time devoted to its interest, I will then resign. Yours very truly, (Signed) H. HULMAN, JR."

The resignation of C. G. Stoddard was then read by the secretary also a letter from Mr. Stoddard, received since the resignation was forwarded. Action on the same deferred till the next meeting of the Board of Governors.

The secretary stated that the only other resignations tendered to date were those of Messrs. Osthaus and Buckle.

Moved by Mr. Avent and seconded, by Mr. Rowland, that action on said resignations be deferred till the next meeting of the Board of Governors, as it is believed that said resignations were tendered under a misapprehension regarding the condition of the club at that time. Carried.

Mr. W. F. Grimstead, of Cairo, Ill., and Mr. Theo. Goodman, of Terre Haute, Ind., were elected to membership in the club.

The Committee on Grounds for Trials A reported that they had selected Carlisle, Ind., and the date Nov. 4, 1895.

Voted, that the prairie chicken trials that were to be held in the Northwest in September be abandoned, and that this club, with the sanction and consent of the Eastern Field Trial Club, hold a field trial on the grounds of the latter club in the vicinity of Newton, N. C., commencing Wednesday, Nov. 28, 1895. The former committee on the Northwest grounds to be a committee on grounds for this trial.

Voted that the stakes and purses be the same as those of the A and B Trials.

Voted, that the date of closing the entries for the North Carolina trials be made fifteen days later than the time set for the closing of the entries to the Eastern trials.

Voted, that the Committee on Judges, viz., Messrs. Harris, Hulman and Seale, be requested to select judges for the several trials, as soon as possible, and report same to the secretary for publication.

Voted, that the Committee on Judges be requested to select a fourth judge for each trial, as an alternate judge.

The secretary's recommendation that an amendment to the constitution be made, so as to have two financial officers for the club a secretary and a treasurer, was referred to a club meeting for action. Adjourned.

W. B. STAFFORD, Sec.-Treas.

The Continental Field Trial Club.

A new field trial club was organized in Chicago at the Mascoutah Club's show, mention of which was made in our last issue. That it was a popular movement, the list of names subjoined herewith will attest.

The meeting was called to order by Mr. P. T. Madison on the evening of March 6. He said that there was room for a new club conducted on different lines from those of the past. Mr. Madison then nomi ated Mr. F. H. Perry as chairman. Mr. Madison was elected secretary pro tem. The applicants for membership were, on motion, made charter members of the club. On motion, a committee (Messrs. Pratt, Bryson and Bock) was appointed to select officers, and their list was accepted and elected as follows: President, Dr. N. Rowe; 1st Vice-President, George J. Gould; 2d Vice-President, Captain E. S. Gray; 3d Vice-President, C. G. Stoddard; Secretary-Treasurer, P. T. Madison. No board of governors was elected, but instead the members present at a field trial will act as a board, and the officers are a permanent Advisory Board.

The club arranged for two trials, one on chickens in the Northwest on the first Monday in September, and one to be held somewhere in the quail country, the time and place of the latter to be left to the Advisory Board. At this juncture, Mr. Perry was called away on business, and Mr. J. L. Adams took the chair. The purses of each stake were fixed at $1,000, divided into $500 for setters and pointers, five prizes. The salary of the secretary was fixed at $250 for each trial. Following is a list of the members: Messrs. H Hulman, Jr., C. G. Stoddard, J. M. Freeman, H. K. Devereux, Prof. E. H. Osthaus, Louis McGrew, Dr. N. Rowe, Thos. G. Davey

B. Waters, Richard V. Fox, Chas. Heath, Harry Dutton, P. T. Madison, Capt. E. S. Gay, Major J. M. Taylor, Major J. B. Downing, W. W. Peabody, Jr., John S. Clark, J. C. Freeman, R. L. Shannon, George J. Gould, George T. Baker, Chas. D. O'Connell, J. S. Anderson, George H. Hill, A. G. Spalding & Bros., Edward A. Burdette, John L. Barker, J. J. Case, Jr., H. R. Edwards, Dr. J. R. Daniels, W. H. Ehrman, F. H. Perry, A. M. Young, Chas. I. Engel, Dr. George Gladden, J. Shelley Hudson, Davis Bryson, Dr. L. C. Sauveur, J. L. Adams, Jos. H. Hunter, C. A. Pratt, Gus Pabst, P. Lorillard, Jr., E. Huidekoper, George H. Ewing, W. H. Beazell, James Mortimer, G. Muss Arnolt, W. H. Colcord, J. E. Isgrigg, Montgomery Ward & Co., A. Cramer, Frank F. Bock, Henry F. Bechman, J. B. Turner, J. Tredwell Richards, J. L. Balmor, E. O. Damon, Dr. F. S. Danatelle, W. B. Wells, Daniel E. Stern, J. R. Oughton, L. Rausch, R. F. Merrill and others, making a total of 68 who are charter members, and there are more who have announced their intention of joining. This is the largest and most influential membership ever seen in one field trial club in America, and the holding of successful trials is assured at the outset

The Metropolitan Kennel Club.

New York.—Pursuant to a resolution carried at an informal meeting of exhibitors, held at Madison Square Garden, Feb. 22, I, as chairman pro tem., was instructed to appoint a committee of five to select names to be notified of a meeting to be called at an early date, for the purpose of organizing a Metropolitan Kennel Club, wherein the dog owners in and about New York may find a common interest. I have selected to aid me upon this committee Messrs. Thos. H. Terry, A. P. Vredenburgh, H. G. Trevor and Jas. Mortimer. H. T. FOOTE.

DOG CHAT

The Duquesne Kennel Club's premium list is now ready for distribution. Mastiffs and St. Bernard's have $12 and $6, first and second in challenge classes; in open classes, $10, $5 and $3; puppies and novice respectively $5 and $3. Pointers, English setters, Irish setters, Gordon setters and collies have $12 to first in challenge classes; open classes, $10, $5 and $; puppies, $5 and $3. Other breeds have $10 to first, or $10 and $5, first and second in challenge classes, and, in open classes, $10 and $5, or $10, $5 and $3. The club offers $40 to the handler showing the largest number of prize winning dogs, and $25 to the handler showing the next largest number the kennel specials vary from $5 to $15. There is quite a long list of special prizes. Entries close April 1. Entry fee, $3. The show will be benched and fed by Spratt's patent. Address W. E. Littell, Secretary, Pittsburgh.

The result of the bull terrier cropping trial in London, alluded to in our issue of Feb. 2, was that Carling and his wife should be committed to prison for one month in default of paying a fine. The case has served the purpose of drawing greater attention to the cropping question and the collapse of the Bull Terrier Club's defense of cropping has impelled that body, at a meeting of the club at Liverpool show, to petition the English Kennel Club to enact rules forbidding the cropping of bull terriers after a certain date. In this age of cocaine, it is amusing to read "Our Dogs'" column article on the heinousness, on the score of cruelty, of the hitherto winked-at practice of cropping. That cropping is a useless cruelty and a mere fad is a fact borne out in the case of Irish terriers. Since the edict went forth that they must not be shown cropped at Kennel Club Shows after a certain date, breeders set out at once to breed a good drop ear on their terriers, and while some old-timers may sigh for the old style, it cannot be gainsaid but that a nice button ear on an Irish terrier is an added attraction, and one already by no means rare. The same change may be carried out with bull terriers, black and tans, etc. Considering the trouble and difficulty in getting a good crop, breeders should hail with delight an edict that will put every one on the same basis and do away with cropping altogether. As long as the fashion of cropping bull terriers was an accepted one by the majority of judges, exhibitors and the Kennel Club, it seems rather rough on Carling and his wife that they should be made to suffer imprisonment for the want of a few pounds to pay the fine. Some one higher up in the scale should have been selected to make the test case upon.

As soon as Messrs. James Taylor and S. and E. S. Woodiwiss who composed the English contingent at the late New York show, arrived in New York they set out for Niagara Falls, being absent most of the week previous to the show. During the show there was very little opportunity to get their views on dogdom in general over here and the W. K. C. show in particular. Both Mr. Taylor, the judge, and Mr. E. S. Woodiwiss expressed themselves as delighted with the way the show was managed, and the completeness of the whole affair, and their reception by exhibitors and the managers of the show. They were also surprised at the uniform good quality in many of the breeds, though Mr. Taylor had a bad quarter of an hour with the Great Danes. Messrs. Woodiwiss were unfortunate in having their dogs arrive too late for regular judging, and much sympathy was expressed for them in the unsatisfactory outcome of such enterprise and sportsmanlike courage as we should like to see become an annual occurrence. The W. K. C. will, we believe, do all in their power to encourage these International exhibits at future shows.

The daily New York papers devoted themselves without stint to exploiting the W. K. C. show, the Herald being conspicuous in this regard. This influential paper advocated a Ladies' Kennel Club during the show and has devoted a column every day to interviews with leading society women who all seem to be delighted with the idea. It is proposed to form an association on the lines of the new English club, which has enrolled so many of the nobility in its membership. The main object of the club, if it is formed, will be to advance the interests of dogs as pets and also to hold shows, the proceeds to be devoted to charitable purposes. The ladies interviewed express themselves as tired of Church fairs, Dorcas meetings and so forth and think that more money can be raised by giving bench shows under their immediate auspices, throwing around the affairs that flavor of social patronage that, in a city like New York, generally brings financial success in its train. The idea is a good one and should be pushed.

A new kennel journal made its appearance during the New York show. It is the kennel News, published in Chicago by Mr. Frank S. Anderson, who owned the St. Bernard, Aristocrat, Collie Toronto Wonder, and other good dogs and is also active in the Great Dane fancy. Mr. E. Bardoe Elliott has assumed the editor's duties and is working hard for eventual success.

Southern Travel.

(Correspondence of the Richmond Dispatch, Sunday, Feb. 24, 1895.)

Palm Beach, Fla., Feb. 20.—Florida is of peculiar interest as the modern Mecca of the capitalist, the tourist, the pleasure and the health-seeker. Notwithstanding the many arrticles which have been and are still being daily written upon its charms, it can never be fully understood or appreciated until visited. And now that it has been rendered so easily accessible from all points North, East, South and West by the completion of "The New Short Line" via the Southern and the Florida Central and Peninsular Railways, it will soon become the one great winter resort of America. The approach now, no matter from what direction, is one not only of convenience, but of positive luxury.

The Southern Railway, that superb and colossal company whose tracks grid-iron the region south of Washington, has brought the southernmost coast of the Peninsula within a short distance of New York and other Eastern cities. The traveler may leave the metropolis after the day is nearly done and be transported by the magnificent "Florida Limited" to Jacksonville—the gateway by which the throngs that visit Florida every winter enter the State—in time for dinner the following evening.—Adv.

Yachting.

FIXTURES.

APRIL.

19. Mosquito Fleet Open regatta, Boston Harbor.

MAY.

0. South Boston Open, Boston Harbor.

JUNE.

8. Knickerbocker annual, L. I. Sound.
11. Atlantic Annual, N. Y. Bay.
15. Larchmont spring regatta, L. I. Sound.
15. Philadelphia annual, Delaware River.
17. Massachusetts open, Nahant
22. Douglaston annual L. I. Sound.
25-26. Seawanhaka Cor., annual race, to New London.
29. New Rochelle annual, L. Sound.

JULY.

1. Indian Harbor special, L. I. Sound.
2. Seawanhaka Cor., annual L. I. Sound.
3. Seawanhaka Cor., race to Larchmont.
6. Larchmont annual, L. I. Sound.
6. American special, L. I. Sound.
4. Riverside annual, L. I. Sound.
8. Seawanhaka Cor. special, L. I. Sound.
9. Horseshoe Harbor special, L I. Sound.
10. Huguenot special, L. I. Sound.
12. Larchmont 34 and 21-foot classes, L. I. Sound.
13-21. Larchmont cruise, L. I. Sound.
13. Hempstead Harbor annual, L. I Sound.
15. Savin Hill open, Boston Harbor.
20. Sea Cliff annual, L. I. Sound.
27. Indian Harbor annual, L. I. Sound.
27. Quincy, Boston Harbor.

AUGUST.

3. Monatiquoit open, Boston Harbor.
3. Shelter Island annual.
3. Larchmont 34 and 21 foot classes, L. I. Sound.
10. American annual, L. I. Sound.
10. Winthrop open, Boston Harbor.
13. American open, Newburyp't.
15. Sea Cliff, L. I. Sound.
17. Huguenot annual, L. I. Sound.
17 Corinthian open, Marblehead.
19. Manchester open, Manchester, Mass.
24. Squantum open, Squantum, Mass.
24. Horseshoe Harbor annual, L. I. Sound.
24. Norwalk, L. I. Sound.
31. Larchmont 34 and 21-foot classes, L. I. Sound.
31. Huntington annual, L. I. Sound.

SEPTEMBER.

2. Lynn open, Nahant.
2. New York Y. R. A. annual, York Bay.
2. Larchmont Fall Regatta, L. I. Sound.
5. Larchmont 34 and 21-foot classes, L. I. Sound.
7. America's Cup, first race New York.
7. Revere, open.
7. Larchmont, cabin cats, L. I. Sound.
12. Sea Cliff, L. I. Sound.
14. Larchmont schooner race, L. I. Sound.

From the following, it would seem that the Field is under the impression that two Cup defenders are now building, which is a mistake. Only one boat is under way or likely to be built, the keel craft designed by N. G. Herreshoff and building at Bristol for Messrs. W. K. Vanderbilt, C. O. Iselin and E. D. Morgan. The Cup committee is interested in no other boat. "The experience of Mr. Herreshoff and Mr. Iselin last season in yacht racing in British waters appears to have led them to the conclusion that a keel boat of 17ft. or 18ft. draught of water is, taken all round, a more effective craft for racing than any kind of centerboard craft. At any rate, it is announced that the Cup defender which the Cup committee are about building is to be a fixed keel craft over 17ft. draught of water; it is also said that this keel is to weigh close upon 70 tons, which is much the same weight as the lead keel of the Herreshoff craft building for the Iselin syndicate. This yacht is also credited with 17ft. draught of water. This is a come round the whole sweep of the circle to British ideas. The latest announcement in connection with the America Cup is that the number of crew or persons on board is to be limited to three for every 5ft. of corrected racing length. This appears to be an absurdly liberal allowance, as it is estimated it will allow the new Valkyrie to have sixty-two persons on board."

The America Cup Committee is now in communication with Lord Dunraven over the matter of a limit of crew, his Lordship preferring only such a number as is necessary to work the boat properly, or about 40 in all. No final decision has been reached.

Our remarks of last week are emphasized by the present condition of affairs, the advent of a new and dangerous adversary and the delay on the Cup defender. It is more than ever imperative, for the successful defense of the Cup next September, that there should be plenty of boats, and especially plenty of keen, well-contested races during June, July and August. All of the boats now available should be fitted out in the best possible shape, if necessary altered to 90ft. l. w. l., making a strong racing class. While all, Vigilant, Jubilee and Colonia, are capable of improvement, it is hardly probable that either of them will defeat a newer boat of 90ft. l. w. l., if the latter is well worked up; but such work ing up can only come through persistent racing with other dangerously good boats. Through Mr. Gould's liberality, Vigilant will be raced, and possibly altered; there is a chance that Jubilee may be rebuilt and raced by some Boston yachtsmen, and there should be men in New York who would take and race Colonia.

Within the past week a movement has been started in Boston to purchase Jubilee from Gen. Paine by popular subscription, to lengthen her and race her in the 90ft. class this season. Messrs. Augustus Hemenway, C. H. W. Foster and Samuel Warner are at the head of the scheme, and Mr. George H. Richards, Gen. Paine's business partner, and sailing companion on Puritan, Mayflower, Volunteer and Jubilee, has consented to undertake the management of the boat; while Capt. Henry Newcomb, for many years skipper of Fortuna, will sail her. We hope that the attempt may be successful, and that Jubilee may have a new trial under more favorable conditions than in 1893.

At the same time there is a report that Vigilant will be lengthened 90ft., either by the Herreshoffs or by other builders. Colonia is capable of improvement by deepening, if not by lengthening as well, and there is yet time to have these three boats in racing trim by the middle of June. It is a serious question whether the 90ft. class this year is to be represented by Navahoe, Vigilant and the new boat in a few races in August, or whether there is to be a fleet of five or six vessels, Navahoe, Vigilant, Colonia, Jubilee, Volunteer and the new boat, all ready in good season and sailing frequently together until each is at its best.

The victory of Ailsa over Britannia in their first race; of a new and untried craft fresh from the ways, just off a hard ocean voyage, and with sails and gear unstretched, and with skipper and crew new to her, over one in perfect racing form after two successful seasons, has created much comment on this side of the Atlantic. While we cannot find out that the New York Y. C. is in any way committed to the acceptance of Ailsa in place of Valkyrie III., should the former prove the faster, the impression is generally prevalent here that the faster of the two may and will be selected to represent the Royal Yacht Squadron next fall in the Cup races.

Whether or no the New York Y. C. may finally agree to this, the very promising debut of Ailsa must be most encouraging to British yachtsmen. It shows that the deductions of one of the two great Clyde designers have not been astray, and at the very least it insures a second good trial boat, in addition to Britannia, with working up of Valkyrie III. in her home races. In every way the chances of the challengers are improved by the very creditable showing of the big Fife cutter.

The latest news from Bristol is encouraging so far as the safety of Mr. Hereshoff is concerned and there is no reason to believe that he is in any serious danger. At the same time there is every prospect that he will be able to do no more work in Cup defense for a very long time. He is still so ill that all advice and consultation over the new boat is utterly out of the question, and the main factor in the recovery of his health is a complete rest from the thought and worry which are inseparable from yacht designing. It is quite unlikely that he will be able to resume work for some weeks, and he may even be compelled to go away entirely for an indefinite time. Just how far the work had advanced when he was forced to abandon it is yet unknown outside the works. It is probable that the lines and specifications were entirely completed, and the bills of material ready; but even if this much were done, there still remained innumerable details to be worked out by him alone. From the latest reports it would seem that just now the work is going very slowly; though this is not unusual in metal construction at this particular stage. It is to be hoped that as soon as sheets and angles are on hand and the frames bent, the hull will go together with the regular rapidity of all-metal construction.

Yampa's Voyage.

The following particulars of the voyage of the schooner Yampa, Mr. R. S. Palmer, from New York to Gibraltar, are from a letter written by one of the yachtsmen who made the passage in her. About 9 A. M. on Thursday, Jan. 17, we were taken in tow by the tug Atwood off the foot of Twenty-sixth street, East River, New York, and started down the river for our long cruise. Good-bye was said only by the policeman on the pier and a solitary figure on the U. S. S. New Hampshire. It was a long pull against the tide, down the Bay, around the Southwest Spit and to the Scotland, where the tug dropped us, and coming alongside took off Mr. Palmer and the two or three who had spent the night aboard. The wind was N. W., and we hoisted our new sails for the first time, first the foresail, then the forestaysail, then the mainsail; and, when all were well sweated up, we up helm and let her go about S. E. by S., wind about W. N. W., fired our gun and put out the log. The Atwood waited until we were some miles away, and then turned back toward the dinners and dances.

About 3 P. M. the wind shifted to N. W., we took in the foresail and set squaresail, a big sail mostly bonnet. Strong breeze and plenty of sea.

Jan. 18. During the night we entered the Gulf Stream, and it warmed up considerably; water in the morning, 70 degrees. During the evening the wind, which had shifted to W., came out strong, and we two-reefed the mainsail and single-reefed the foresail and took the bonnet out of the forestaysail. One hundred and ninety-nine miles.

Jan. 19. The same, only worse, but at all events the wind was fair, and although putting us too far to the south'ard, was bringing us at the same time into warmer weather. In the afternoon a sea boarded us and stove our nice new lifeboat, but not very badly. At 6 P. M. we had run 500 from the Scotland. Stowed mainsail and set main trysail during the night. Two hundred and forty-six miles.

Jan. 20. A full gale and still scudding before it. The mate wanted to heave to, but the skipper said, "No; let her go on and we will soon run into fine weather." At 11:30 put out oil-bag on the weather (port) cathead, boat being much more free of water afterward. About noon, sighted a bark bound west under low topsails and forestaysail only. Two hundred and sixty-one miles.

Jan. 21.—Weather somewhat more moderate, able to show a little more sail during the day, but reefed down again as night came on. About noon showed our ensign to a tramp who hoisted answering pennant and red ensign in reply. At 7:20 P. M. had run off 1,000 miles. Two hundred and seventeen miles.

Jan. 22. Weather decidedly better, but sea so bad that we did not dare set mainsail, so shook reef out of foresail and set topsail over it. Later on, we lowered trysail and set a reefed mainsail again. Had run so far south that the course was north of east, and with the wind N. W. could not set squaresail. In afternoon wind backed to W.; down foresail and set squaresail again without bonnet. Two hundred and seventeen miles.

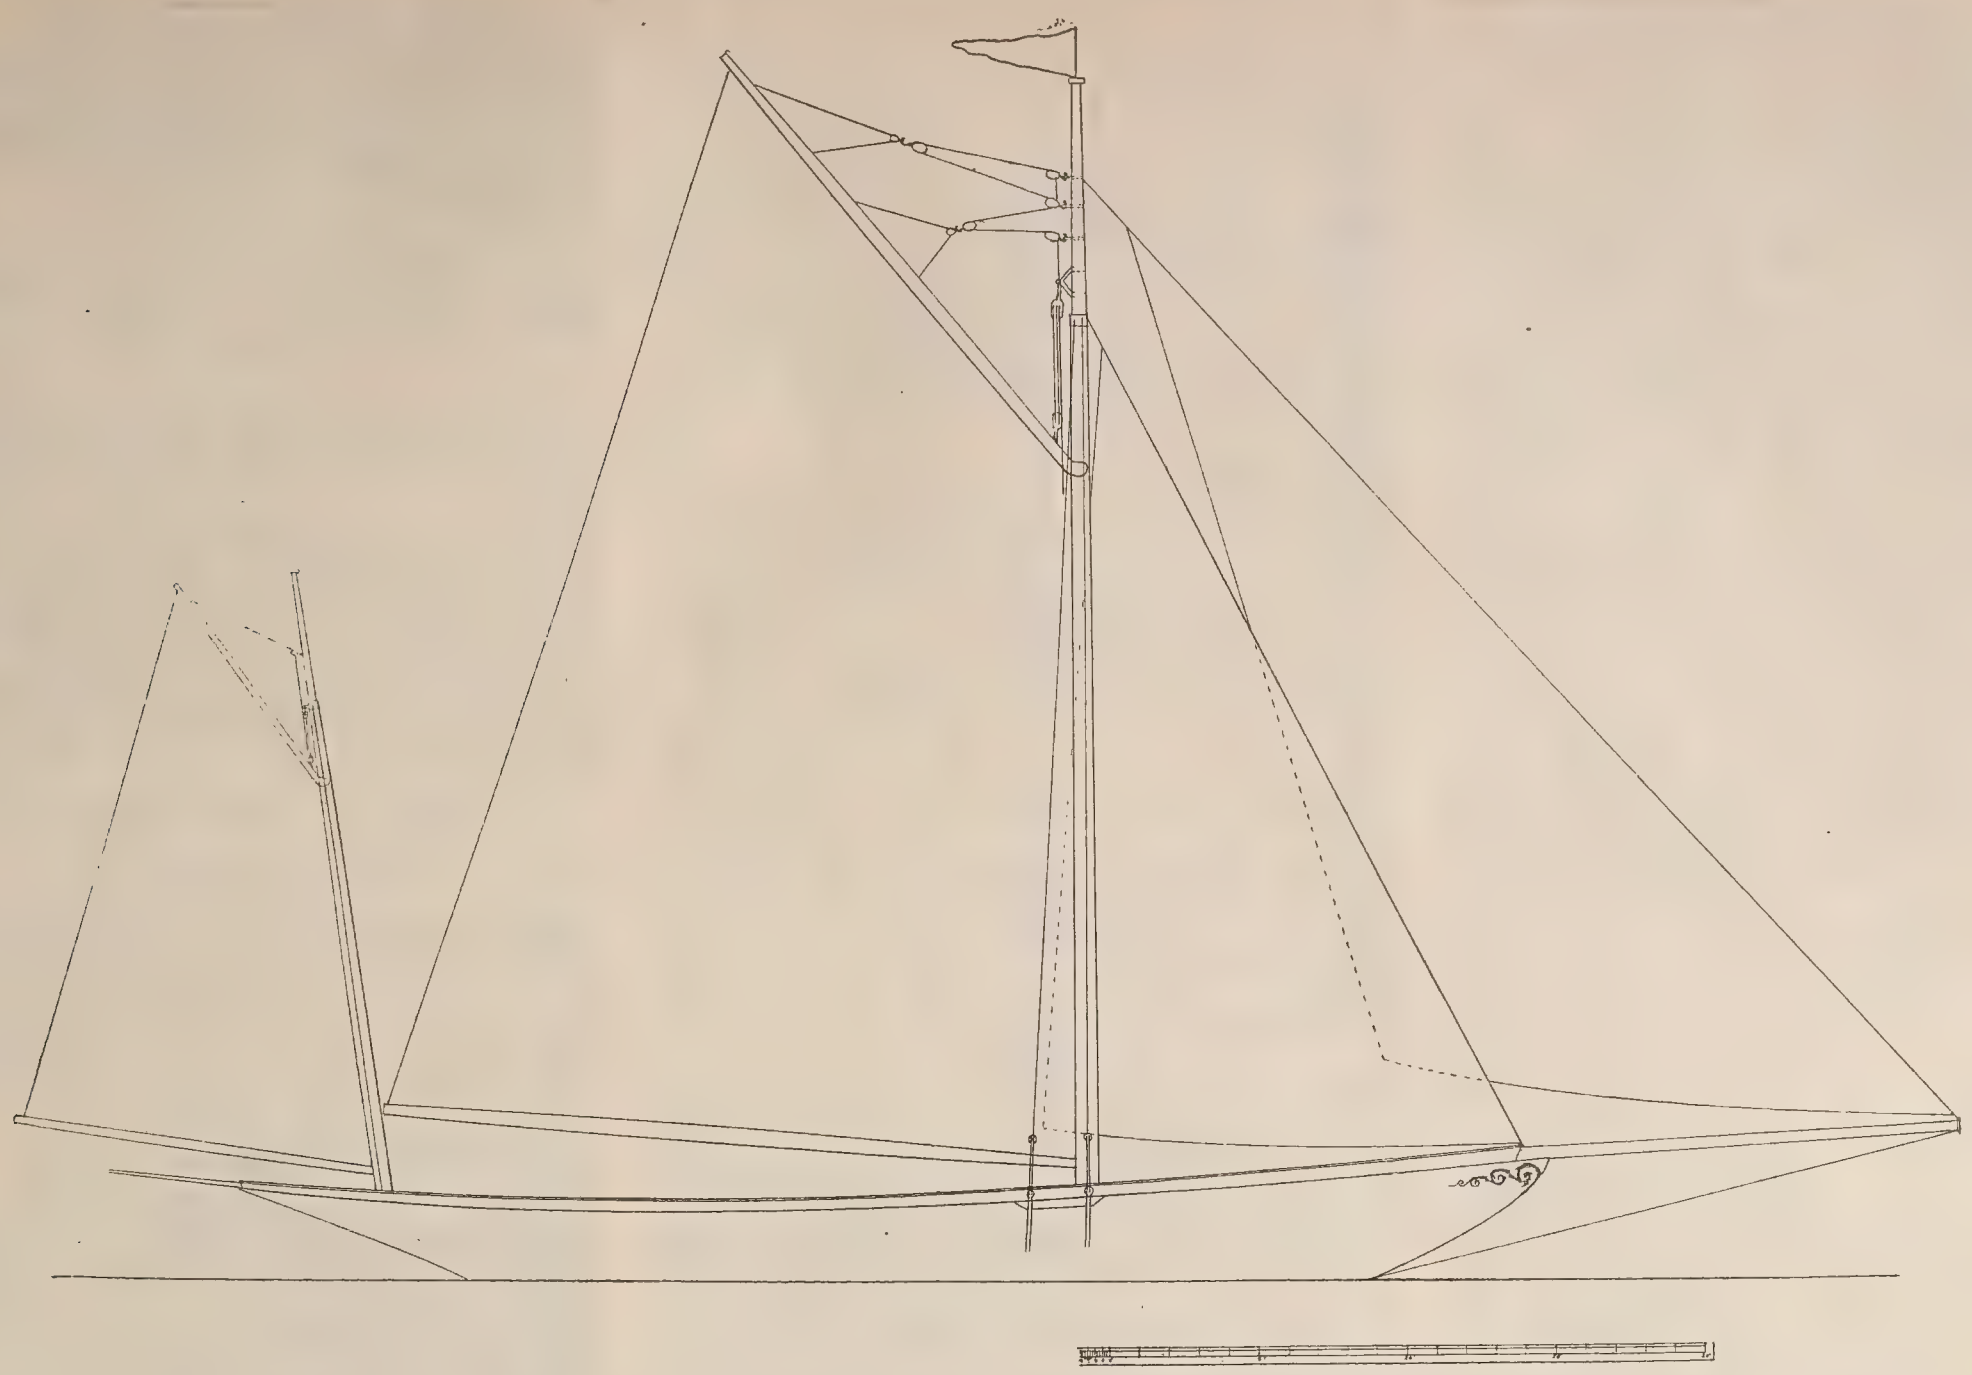
Jan. 23. Wind still W. and under double-reefed mainsail and squaresail only. Squaresail chafed a hole by grinding against the forestay, so lowered and patched it; set trysail instead of two-reefed mainsail for the night. One hundred and ninety-six miles.

Jan. 24. Again lowered squaresail to mend it, another hole having chafed through during the night. Lost rotator of patent log, bitten off. During the evening wind went to N.N.W. took in squaresail and set foresail, staysail and jib. Beautiful weather. One hundred and seventy-nine miles.

Jan. 25. Whole sail this morning, mainsail, foresail, staysail, jib and both topsails; wind N., a nice breeze. Boat making from 12 1-2 to 13 knots quite easily. Saw a whale at noon, quite close aboard. From noon to 8 P. M. ran 100 1-2 knots. Clewed up fore and main topsails at sundown. At midnight took in mainsail, which was only slatting in a calm, and set trysail. Wind shifting around to N., then to N. E., and falling very light. One hundred and sixty-one miles.

Jan. 26. Wind N. E. and light, but heavy swell from east'd. Little or no progress. Two vessels in sight, square-riggers bound E. One hundred and forty-nine miles.

Jan 29. Wind still from east'd, no progress. Wind freshened, stowed trysail and set two-reefed mainsail, shaking out the reefs after a while and setting topsails. Wind working around to S. E., so we are on starboard tack. Stowed topsails, as usual, at sundown. Slow progress all night. Fifty-nine miles.



Jan. 28 Heavy sea this morning, yacht under lower sails. Mainsail slatted, so turned in double reef at 9:30. The course has brought yacht further north than she should be, and going further all the time; but not enough to pay for tacking. Squally and raining all night. One hundred and fifty-miles.

Jan. 39. Shook out reefs this morning, and are now under plain sail except that we have not used our flying jib yet, it is still in the locker. Early in the afternoon the wind shifted to S. W. light, but we are now on our course. Stowed mainsail at sundown and set maintrysail; at 10 P. M. lowered and stowed foresail. Heavy sea and no wind. Yacht tumbles about a good deal, and her sails, trysail and two headsails, do not steady her much. One hundred and twenty-three miles.

Jan. 30. Wind around to N. W., light. All sail set again, including topsails, but making only two to three knots; 2 P. M., wind backed to S. W. and came in a good breeze; sea smoothing down some. Ten knots now. Wind increasing, between 7 and 9 P. M. reeled off 26 1-2 knots. At 10 P. M. clewed up and furled topsails; wind increasing all the time and sea getting up astern. At midnight double-reefed mainsail. Fifty-nine miles.

Jan. 31. Wind still S. W., but a little more moderate. Under two-reefed mainsail, foresail, foretopsail, fore staysail and jib, and making fine time. Maintopsail got loose during the night and slammed around some, but was finally lashed down outside the lee rigging. Repaired clewline, which had parted, in the morning, and furled sail down in its proper place. Abreast of Pico. At 2:30 wind shifted from S. W. to W. Furled jib to keep it from slatting to pieces. 5 P. M.: clewed up foretopsail and took bonnet off forestaysail. Azimuth for compass this afternoon, for first time; compass correct. Rigged out starboard chain and anchor. At sundown shifted mainsail for trysail, as we must heave to soon or overrun our port. Hove to at 10:30 on starboard tack under forestaysail (no bonnet), double-reefed foresail and no trysail. Wind shifted during the night to N. N. W., coming in hard with plenty of sea. Barometer sliding down like a toboggan. This weather, N. N. W., is bad, for the islands; and is generally accompanied by heavy rain squalls, as in our case. Two hundred and forty-six miles.

Feb. 1. 4 A. M. Wore around and headed for our port, which bore N. by E., so we are on port tack, within 5 points of the wind, and doing some tall jumping. About 8:30 stghted the high lands of the islands, and after a time made out St. Michaels right over

SAIL PLAN OF JANE.

the end of the bowsprit; a good hit in this bad weather, as we can see only between the heavy rain squalls. As we approach the land, she seems to be falling to leeward of her course, and we must have some sail, although we are over-canvassed now; so down trysail and hoist mainsail, already double-reefed, and now we get it; lee rail under at times, which means much for a boat like Yampa.

As we come in close to the land, the sea lets up a little, and when in close to the breakwater we almost lose the wind, although we can see it tearing along the water close astern of us. Pilot comes out, but does not board us, and we tow him alongside; barely steerage way now, and we shake out reefs and set foresail, hoist jib, and then whole mainsail, a good deal of work to sail but 100 yards, but with so much sea, the small amount of wind that comes down from the hills is hardly felt. We make a couple of tacks and fetch in around the end of the breakwater, and anchor in 11 fathoms, with 30 fathoms out at 11:30. One hundred and sixty-five miles.

We go through the usual doctor nonsense, and are visited by the American Consul, who is most accommodating. A large part of the breakwater here has been destroyed, and the light extinguished, so this is a poor place to come into at night. The night before we arrived, a small steamer, in attempting to leave port, ran ashore and then, after getting off, filled and sank at her anchorage, right in the middle of the harbor; which, by the way, is about the size of the Erie Basiu.

Our gulls, we have three, who have followed the yacht and lived on us for days, followed us right into the harbor, but the ground had been pre-empted by other shore gulls, and there was a terrible fight. Our gulls must have won, as they are here yet; they are pretty white birds with black-tipped wings; all the harbor gulls are a dull gray.

Feb. 2. We are glad to be in port, as the barometer, which has gone steadily down to 29, stays there; and it is blowing a strong gale, with stronger gusts outside, still N. W. Washed down outside this morning, and tried to repair the damage to sail and gear. Carpenters came off to repair the damaged boat, skylight covers and stern grating. They work slowly and well, but with the oddest and most old-fashioned tools; an adze with a grip to it, but no handle, worked with a wrist motion. No sign of bit or brace. They made their own burrs for rivetting with a punch and sheet copper. Try to scrape bright work, but with no great success, as it rains every few minutes and knocks the men off.

Feb. 6. Weather much improved, and we drive around to see the sights. Everything in full spring bloom, camelias in such profusion that any of our crew who go ashore with "Yampa" branded on them are immediately presented with a bunch by some citizen. Square up accounts and get out bill of health on Feb. 8., and are ready early on following day, wind N. W. to W., as usual, and fair.

Unmoored, set headsails, dipped our flag and were again at sea. Set mainsail, then squaresail, and lowered headsails. At 8 P. M. wind hauled a little to southard, set jib. Wind at 5 P. M., N. N. W., lowered squaresail, and set foresail and forestaysail. Doing 10 knots easily.

Feb. 10. Wind quite strong and plenty of sea, boat under same sail and going 11 at least. Set foretopsail during the day, but furled it again at 5 P. M. At 8 P. M. had run 300 miles from anchorage, in 33 hours.

Feb. 11. Weather much better, took in trysail and set all sail. Go about in shirt sleeves, and when reading on deck always seek the lee of the mainsail for shelter from the sun.

Feb 12. Another beautiful day, but wind very light, W.; foretopsail clewed up to keep it from chafing when she rolls; sea smooth except for an old roll. Mainboom off to port. At 10 o'clock set weather part of squaresail and later bent on the bonnet and set it all, lowering foresail and headsails. Bark in trouble on our lee a long way ahead; as we neared her she displayed a signal which we read, "What is your longitude?" Jibed over and sailed within hailing distance of her, across her stern, and then alongside. She was the Columba, of Christiansand, and had carried away the head of her foremast. Had jury headstay rigged, and jury halyards for her fore yards. Said that she needed no assistance, but wished to be reported at Gibraltar, where she was going for a refit. Came along after us with reefed forecourse, maincourse, lower and upper main topsail and topgallantsail; will not be in port soon if the wind comes ahead. Wind very light at sundown, lowered away mainsail and set maintrysail for the night. Passed close to another bark in the afternoon, the Chieftain, hailing from Abo, in Finland, and showing Russian flag, bound for Pensacola for lumber.

Feb. 13. Another beautiful day, but wind around from W. to S.; all sail again, including flying jib, which is set for the first time. Hope to make a good run to-day, so as to get into Gibraltar by Friday. All sail carried all night, as it is so very quiet.

Feb. 14. Another beautiful day, just like Long Island Sound, wind S. W. to S. S. W., and everything on her, even "fisherman's staysails" We make a great run, and anchor in Gibraltar, behind the naval mole, at 9 P. M. The skipper picked his berth very cleverly, although it was pitch dark; and we are in perfect shelter.

Captain Edward Sherlock, of Gitana, Marguerite and Pilgrim, is in command of Yampa. Mr. Palmer and two friends joined the yacht by steamer at Gibraltar, and the party are now cruising in the Mediterranean.

Work at Bristol.

We are indebted to the Boston Globe for the following news from the Herreshoff works, which we believe to be accurate and reliable:

The Cup defender is a keel boat, with aluminum bronze plating on steel frames. Her keel plate is of ordinary bronze, and it is possible that the lower portion of her frames may be of bronze to avoid any possible chance of galvanic action and the corrosion of the steel.

Her lead keel is 34ft. 9 in. long on top and 5ft. 6 in. in depth. Its greatest width on top is 23 in., and it is bulbed perhaps three inches on each side toward the bottom. It rounds up forward and aft, and has a flat place for about three feet at the after end which looks as though made for the rudder to drop down upon, its rake being the same as that of the stern post. Calculations show that this keel contains about 65 tons of lead.

The keel plate was cast in three pieces, which are now being rivetted together. It is one inch thick, but is so crossed by webs as to make its resisting strength four inches. It is properly flanged for frames, floors and plating and is a strong form of construction.

The boat's rudder will be hung on the stern post, and will not be balanced.

Dimensions of the boat are not at hand, all publications to the contrary notwithstanding. A close estimate is alone possible. This gives about 24ft. beam, possibly a little under, with a draft of 18ft., if not something over. It outlines a boat with a big sail plan, the biggest yet carried on a sailing yacht, and a main boom over 100ft. long. It gives finer lines, a shallower body and a more pronounced fin than on any of the big Herreshoff boats. It promises speed, power to carry sail and to hang on to windward.

On March 6, 13 pieces of aluminum bronze plating arrived at Bristol from the Pittsburg Reduction Company in a box car of the Philadelphia and Reading Railroad, and not in a flat car, as Tobin bronze did in 1893 for the Vigilant. The plating has been taken to the shops, and another carload is expected to arrive Monday.

The decrease in thickness of the aluminum bronze from that of the Tobin bronze, used in the plating of the Vigilant, will save many tons in the weight of the new boat.

With the bronze came the middle section of the keel plate, which is of bronze, cast at the Providence Brass Foundry. The patterns for the keel plate also arrived back, and showed a length altogether of 34ft. 9 in., which must also be the length of the top of the lead keel.

Several cases of steel bolts arrived during the week from New York. A quantity of oak planking of various thicknesses also came by rail. With the oak planking came a lot of knees. It is the custom of the company to buy a quantity of lumber when the opportunity is offered, and this will be kept at the shops for future use.

J. C. Maguire, representing the Ansonia Brass and Copper Company, was in town on March 8. He arrived at 8:15 A. M., and went to the Herreshoff works, where he stayed until 12:30 P. M., in consultation with the president of the company.

The work on the Cup defender is progressing slowly as regards that part of it which is to be seen. Workmen have finished up the smoothing of the big lead keel, and have been boring holes in it for the bolts.

The big lump has changed its position during the week. When the mould was set up for the lead to be run in, it was set up level, so that it would not run out at the end which would be low if it was in its right position, and which end must be the stern. This week the lead has been placed in the position from which the boat will be built, and it rises higher at the bow end than at the stern.

This shows that the new boat will have its greater weight of lead at the heel, and that its lines at the keel will follow closely those of the keel boats on the other side of the big pond.

At the bottom of the lead keel from about the place where the keel rounds upward fore and aft, have been placed Tobin bronze plates. These are put on so that in case the boat should strike any object, or get aground, the lead keel would not be injured, and it is thought that it will be a great protection for her.

Up in the boiler shop the men are at work on the frames for the new boat. In a few days the keel plate will be put on, and it will be but a matter of a short time after that is done before the frames will be set up.

N. G. Herreshoff's valuable assistance in the preparatory work is greatly missed at this time. The master mind is needed to push the Cup defender along. The welcome and good news that he is on the road to recovery gives renewed confidence to those upon whom the superintending of building the new boat devolves.

There has been a steady although slight improvement in his condition every day this week. It is proposed to take him to a change of air and scene as soon as he is able to be taken, and it is thought this will be very beneficial to him.

Howard Gould, who arrived in New York to attend the wedding of his sister a few days ago, is expected here for the purpose of looking over his new 20-rater that is being built for him at the Herreshoffs.

She is nearly planked, with her outside mahogany skin, and the workmen are busy on her. Her fin has been finished, and during the week the lead bulb for the fin has been run.

It was said to-day that Mr. Gould, while in Bristol, would try to make arrangements with the Herreshoffs for lengthening out Vigilant when she arrives from the other side. This work could be done in the north shop, as the Hostetter 130ft. steam yacht can be put overboard any time and the room obtained in the north shop for the work.

The work on the centerboard for Vigilant is progressing, and during the week a bronze rim arrived from the Providence Brass Foundry for it.

The work on the Hostetter steamer is well along, and the finishing up work on the interior is progressing rapidly. She was given her second coat of white paint this week, and looks very handsome. The engine for the steamer has been put on board, and the boilers are nearly ready.

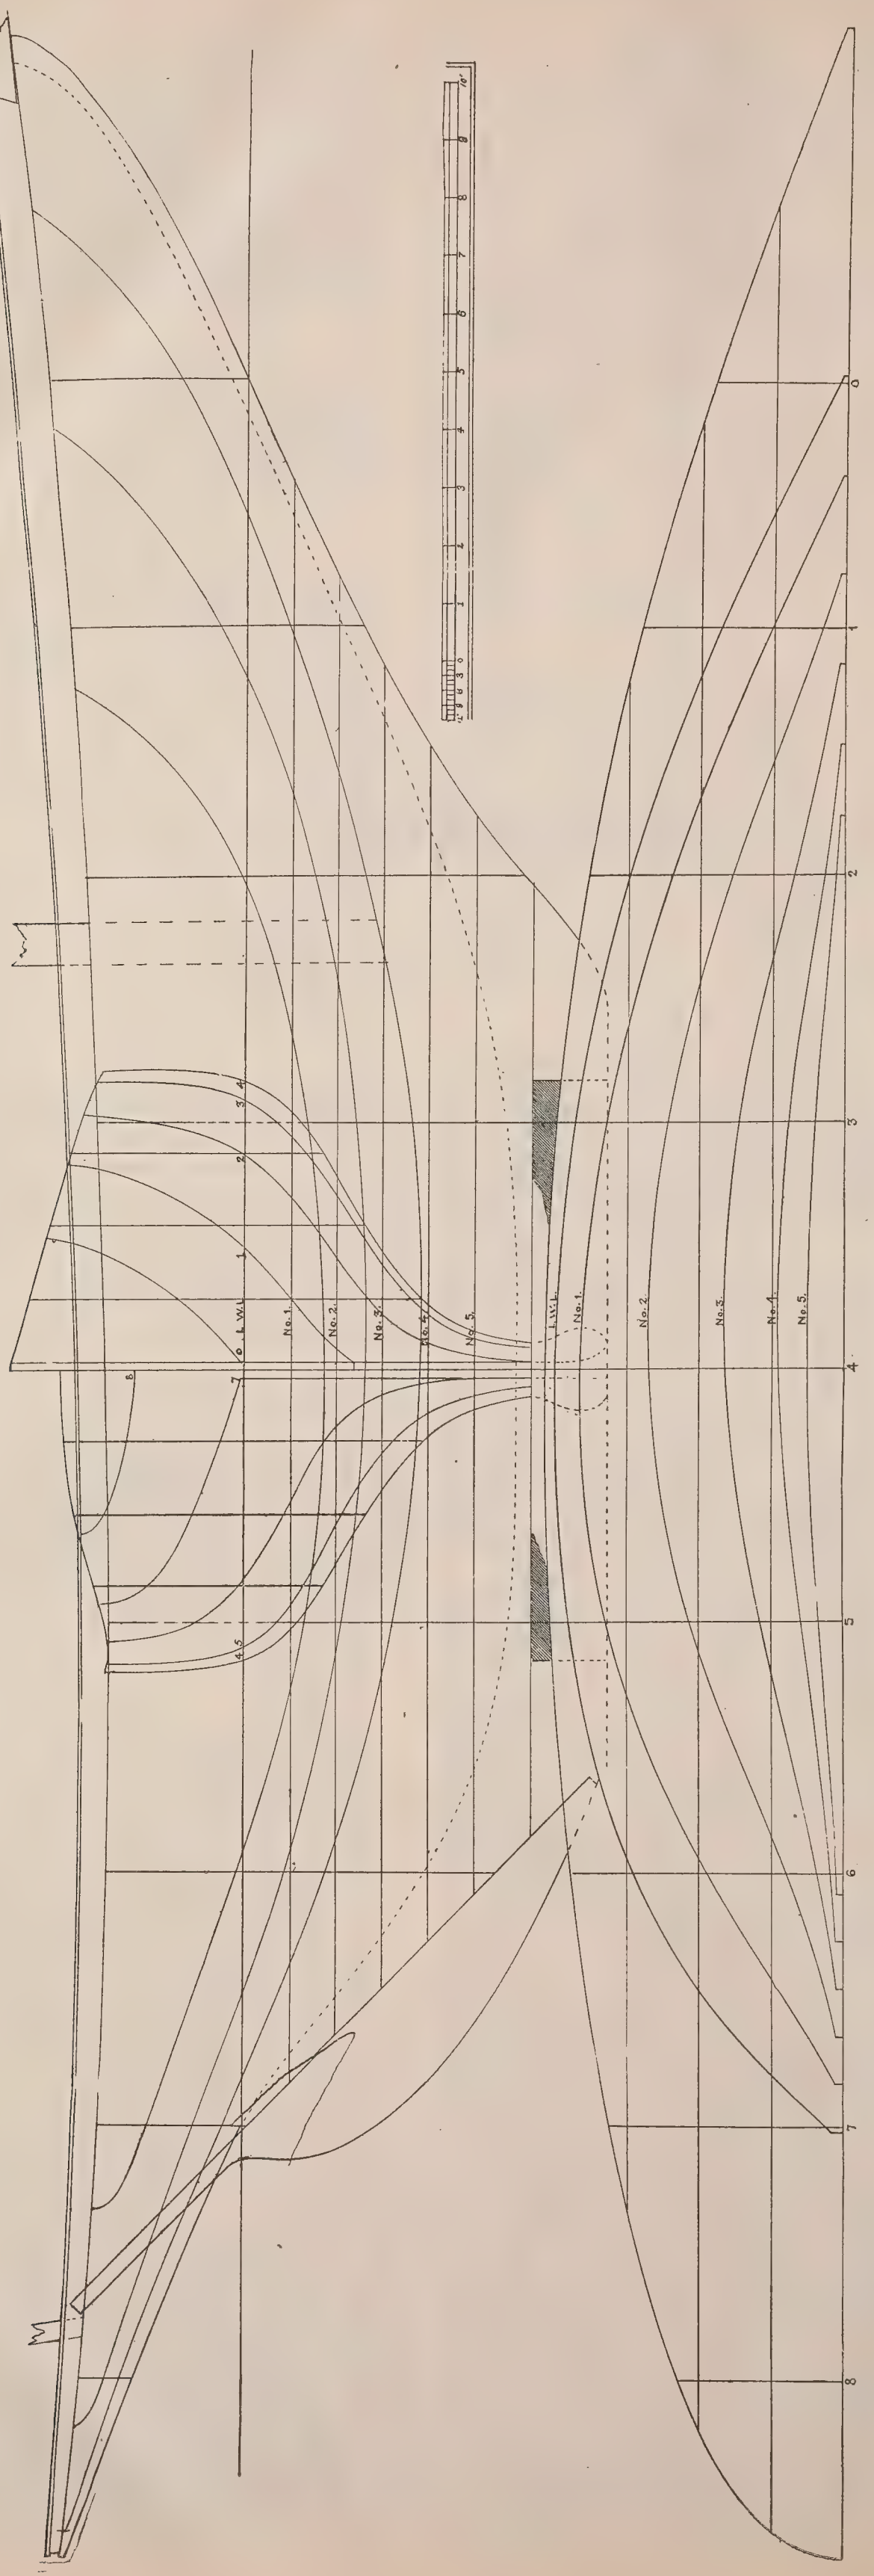
The 20-rater for the German baron, which is hoisted up in the south shop, has had her fin finished this week. The lead bulb for this boat has been moulded this week with that of the one for the Gould rater.

Sailmaker Hathaway and his force of men are hard at work in the sail lofts on the canvas for the new boats now in the shops.

Several extra workmen have arrived within a few days. They are platers and riveters, and will go to work on the new boat. It is understood that several more, who worked on Vigilant, will be here in a short time.

A Cruising 30-Footer.

The yawl Jane, for whose lines we are indebted to the present owner, Mr. J. G. Kish, of Sand Beach, Mich., was built last year, from the design of her original owner, Lieut. J. C. Moore, U. S. Revenue Marine, being launched in August. While availing himself of all the latest ideas in designing the full waterline, long over hangs, straight keel line, hollow section and bulbed keel, the designer has shown commendable moderation in this era of freaks in carrying none of them to an extreme; the result, as we are informed, being a very successful cruising craft—fast, quick in stays and a good sea boat. Her dimensions are:



Length over all	43ft. 9in	
l.w.l.	30ft. 3in.	
Fore overhang	6ft.	
After overhang	7ft. 6in.	
Beam, extreme	10ft. 4in.	
l.w.l.	10ft.	
Draft	6ft. 4in.	
Least Freeboard	2ft. 4½in.	
Sheer, bow	1ft. 10in.	
stern	10in.	
Displacement, long tons, fresh water		11.80
Ballast, keel, cast iron		3.70
inside, cast iron		1.80
Total		5.50
Ratio of ballast to displacment		.46
Area, midship section	25.20	
lateral plane	150.00	
mainsail	570.00	
mizen	138.00	
jib	268.00	
staysail	213.00	
Total lower sail	1189.00	
C. E. from fore end, l.w.l.	14ft.	

The boat is very strongly built, the frames being steamed oak, 2x2 in., spaced 10 in., while the planking is double, of 1-2 and 3-4 in. white pine, with painted canvas between. The cabin, below a flush deck, is 14ft. long, with 5ft. headroom, and the cockpit is 7ft. long. Mr. Kish prpooses to change this season to a cutter rig.

Tarpon Springs Y. C.

Tarpon Springs, Fla.—The first outside regatta of the Tarpon Springs Y. C. was sailed on Wed., Feb. 27, out on the Gulf of Mexico, with a very light breeze. It was quite an exciting race from Tarpon Springs down the Anclote River to the Gulf. At one time nearly all the yachts were bunched together at the Devil's Elbow. The cruising yacht Batwing was making a good fight with the clippers. Capt. Norris has built a high grub-locker on his fore deck, which acts as a spinnaker when before the wind. Some say he wears a big hat for the same purpose.

All arrived at the club pier-head in good humor and sat down to lunch before starting the race. Some say the best work of the day was done at the lunch table, which ended only when they had devoured everything except the baskets. Sails were again hoisted and the skippers began to maneuver for the best start. The course was from the club's pier-head around the tripod that marks the northern mouth of the channel, around the government buoy and back to pier-head. Florida was the first to cross the starting line, quickly followed by Lucie B. The second-class boats held back a long time waiting for Silver King to start first. It was a dead heat to the tripod. Topsy and Pompano had quite a close fight. Silver King started last, but turned the tripod first. It was a close haul to the black buoy, Silver King overhauling the first-class boats very fast. When near the black buoy a new and novel sight was witnessed. A spinnaker was set on Florida when she was close hauled, and, strange to say, it did not do any good except as an object lesson. Judge Fuller was standing on the northeast corner of the club's pier, watch in hand, one eye on a

pine-tree and the other on his watch—and every one knows his time is sure to be taken correctly.

It was a very pretty sight to see the boats come flying home with enough wind to fill the sail. We wished that our Northern friends could have been with us to enjoy the race and have their cheeks kised by the balmy air, full of salt, from the Gulf of Mexico, even the ladies tried to see which would collect the most tan, even if they do freckle.

The times were:

First Class.

	Start.	Finish.	Elapsed Time.
Florida	11 42 10	1 04 45	1 17 35
Lucie B	11 48 20	1 06 50	1 18 30

Second Class.

	Start.	Finish.	Elapsed Time.
Topsey	11 52 00	1 13 05	1 21 05
Pompano	11 53 30	1 08 00	1 14 30
Silver King	11 55 10	1 07 20	1 12 20
Baby	11 58 00	1 58 00	2 00 00
Micanopy	11 58 20	1 25 00	1 26 40

It will be seen by the summary that the much abused "Boston Bean Pot" (Silver King) sailed the course 5 minutes and 25 seconds quicker than the first-class boats. How many such object lessons will it take to show some people that what they don't know about yachts and yachting would fill a book ten feet thick. The season is all too quickly drawing to a close, and we shall be packing up for our flight to South Boston; so we hope and pray for good weather that we may have our two regattas each week, a race on the Bayou every Saturday and on the Gulf of Mexico every Wednesday. All of us sail for the Silver Cup at Sea Side this week.

PAYSON.

The Long Island Sound Clubs.

The following circular has been sent to the chairman of each of the club committees on uniform dates:

154 Nassau street, New York, March 7.

Dear Sir: The special committee appointed at the meeting of Chairmen of Regatta Committees of Yacht Clubs on Long Island Sound held in New York, Jan. 28, request that on or before April 10 you will communicate with them with reference to selection of dates for any races of your club during the coming season in addition to the events arranged for at the meeting, a list of which is given below.

Thurs., May 30 (Decoration Day), Harlem Y. C. An.
Sat., June 8, Knickerbocker Y. C. An.
Sat., June 15, Larchmont Y. C. Spring.
Sat., June 22, Douglaston Y. C. An.
Mon., June 24, Seawanhaka Cor. Y. C. An.
Tues., June 25, Seawanhaka Cor. Y. C. Race to New London.

Racing Circuit.

Sat., June 29, New Rochelle Y. C. An.
Mon., July 1, Indian Harbor Y. C. Special.
Wed., July 3, Seawanhaka Cor. Y. C. Race to Larchmont.
Thurs., July 4 (Independence Day), Larchmont Y. C. An.
Fri., July 5, American Y. C. An.
Sat., July 6, Riverside Y. C. An.
Mon., July 8, Seawanhaka Cor. Y. C. Special.
Tues., July 9, Horseshoe Harbor Club Special.
Wed., July 10, Huguenot Y. C. Special.
Thurs., July 11, N. Y. A. C. Special.
Fri., July 12, Larchmont Y. C. Special
Sat., July 13, Hempstead Harbor Club An.

End of Circuit.

Sat., July 20, Sea Cliff Y. C. An.
Sat., July 27, Indian Harbor Y. C. An.
Sat., Aug. 3, Larchmont Y. C. Special.
Sat., Aug 3, Shelter Island Y. C. An.
Sat., Aug. 10, American Y. C. Special.
Thurs., Aug. 15, Sea Cliff Y. C. Special.
Sat., Aug. 17, Huguenot Y. C. An.
Sat., Aug. 17, Roton Point Impt. Co. An.
Sat., Aug. 24, Horseshoe Harbor Club An.
Fri., Aug. 30, American Y. C. Special.
Sat., Aug. 31, Larchmont Y. C. Special.
Sat., Aug. 31, Huntington Y. C. An.
Mon., Sept. 2 (Labor Day), Larchmont Y. C. Fall.
Thurs., Sept. 5, Larchmont Y. C. Special.
Sat., Sept. 7, Larchmont Y. C. Special.
Thurs., Sept. 12, Sea Cliff Y. C. Special.
Sat., Sept. 14, Larchmont Y. C. Special.

On May 1, the committee intend to issue a printed schedule of all races of the different clubs for the season, and it is desired to make this schedule complete.

You attention is called to the following resolution, adopted at the meeting:

"Resolved, That it is the sense of this meeting that the various yacht clubs situated on Long Island Sound should co-operate to promote the interests of yacht racing, and to that end that the question be submitted to the various clubs at their next meetings of considering what measures shall be adopted to further this purpose."

At the next meeting, to be held at the Seawanhaka Cor. Y. C. house, 7 East Thirty-second street, on Monday evening, April 15, it will be necessary to have reports from the different chairmen of what action has been taken by their clubs upon the matter.

CHARLES W. WETMORE.
FRANK BOWNE JONES.
Special Committee.

Biscayne Bay Y. C. Ninth Annual Regatta.

Biscayne Bay, Fla., Friday, Feb. 22.

In one direction at least our little club of the far South is achieving a distinction that has heretofore been granted almost exclusively to its great contemporary organization of New York City. The Biscayne Bay Y. C. has become an important factor in influencing the weather of this section, and can command a cessation of all breezes by simply appointing a regatta day. Also, as soon as its boats have ended their fruitless drifting matches, a most elegant sailing breeze will set in from the most desirable quarter and continue to blow without interruption for many days. According to this inevitable rule, our ninth annual regatta, held on Washington's Birthday, was attempted on placid waters rippled by occasional cat's-paws of wind, beneath a cloudless sky and in the full glory of tropic sunshine. A six hour limit was set for an 18 mile course, but only three boats out of ten starters succeeded in drifting past the home mark within the stipulated time, and cups were only awarded in two classes.

With a breeze we would have had some exciting contests, as among the entries were the new sloop Monomoy, designed and owned by those well-known racing men, John and Samuel Small, of Boston; Fred Hughes' speedy sloop Jupiter, formerly of Yonkers and champion in her class of the Hudson River; Commodore Munroe's new Utilis, which in a breeze can eat the very eyes out of the wind; two famous home boats, Mary Macdonald and Widow, both thus far unbeaten in their respective classes, and the Great South Bay cat, Daphne, brought down here two years ago to uphold the championship pennant of her class—a feat that she has thus far easily accomplished. But the wind gods were unpropitious, and what might have been races degenerated into drifting matches, of which the tabulated record is as follows:

Class C - Cabin Sloops.

	Start.	Finish.	Elapsed.	Corrected.
Jupiter, F Hughes	12 25 20	5 42 15	5 16 55	5 16 55
Monomoy, Small Bros	12 23 40	withdrew.		
Mary Macdonald, G Macdonald	12 27 30	5 33 10	5 05 40	5 02 45
Class C—Open Sloops.				
Widow, Alfred Peacock	12 26 55	withdrew.		
Struggle, Alfred Kemp	12 23 20	withdrew.		
Class E - Cats.				
Daphne, Wm Buckell, Jr.	12 24 25	6 00 30	5 36 05	5 36 05
Florence W., R Carney	12 45 35	withdrew.		
Class C—Schooners.				
Utilis, R M Munroe	12 26 20	withdrew.		
Allapatta, Kirk Munroe	12 23 45	withdrew.		
Mischief, Geo Roberts	13 24 00	withdrew.		

As a partial compensation for this disappointment, we were treated, two days later, to a rattling match race over the club course, 5 miles to windward and return, between Widow, open sloop champion of Biscayne Bay, and Aura, open sloop champion of Key West. A fleet of club boats accompanied the racers over the course, and their crews were not only treated to a sight of the prettiest and most hotly contested race of the season, but were hugely gratified to have the home boat finish a winner by 3 m. 22 s.

Another Key West boat, Novice by name, recently imported from Long Island Sound, was on hand. Her crew claim to have beaten Aura on a previous occasion, and were loud in their boasts of how they intended to humiliate Biscayne Bay; but their racing ardor was so cooled by Aura's defeat that upon receipt of a challenge from the victorious Widow they incontinently fled, squaring away for home; nor have we heard from them since..

The steam yacht Dungeness, Mrs. Lucy Carnegie, N. Y. Y. C., came into the bay on Feb. 25, and now lies at anchor about a mile off the club house. On board are Mrs. Carnegie, Miss Sherlock, Messrs. Andrew and Morris Carnegie, Blandy and Hayes. Although Dungeness draws 8ft. 6in., and was repeatedly assured that she could not come inside of Cape Florida, she did so without the slightest difficulty, and is anchored beside the buoy that marks the beginning of the Biscayne Bay Y. C. racing course. From here Dungeness will visit Key West, the west coast, Havana and Nassau.

Monomoy, the Boston yacht, drawing 3ft 6in. and lying just off the club house, is entitled to fly the colors of seven clubs, including the Hull, Dorchester, Corinthian, of Marblehead, Savin Hill, etc. She left Boston on September 27 of last year, and arrived here on Feb. 20, after a leisurely and thoroughly enjoyable cruise down the coast. From here she will proceed to Key West, Havana and Nassau.

Lounger, B. B. Y. C., is still at Lake Worth, which is the most southerly point she has yet reached in this season's cruising.

Wautauga, recently designed by Wintringham for Mr. Billings, of New York, on Lounger's lines, has not yet reached the bay, but is reported as on the Indian River. She had a recent narrow escape from total wreck in the breakers of Mosquito Inlet, where she was helplessly aground and pounding heavily when rescued by a passing steamer.

Of the entrances on the east coast of Florida south of Augustine, Mosquito Inlet is very dangerous; St. Lucie is good for anything drawing four feet or less; Jupiter is nearly closed; Lake Worth is only safe for boats drawing less than 18 inches: the bars at New River and Bear's Cut have both shifted well to the southward, and the Cape Florida channel is open for anything of 9ft. draft or less.

O. K. CHOBEE.

New Yachting Terms.

Chatham, N. B.—Editor Forest and Stream: You are not definite enough in your explanation of the term "narrowing wind," when you say it "is a wind which draws ahead at a very small angle with the vessel's keel" That would be a narrow, but not necessarily a narrowing, wind. A narrowing wind is one that keeps drawing more and more ahead, thus forcing the yacht to keep flattening her sails more and more, in order that she may hold her course. Amateur can surely see this without marine glasses even though experience may not have taught him to recognize a "sweet" curve at sight. J. L. STEWART.

The Mediterranean Races.

The first important event of the Mediterranean races was the meeting of Britannia and the new Fife cutter Ailsa, on March 7, at Cannes. The new boat was just in from a hard passage across the Bay, from Glasgow, on which she sustained some damage to her copper. She was docked at Gibraltar, and thirty-eight sheets were replaced.

The course was a 10-mile triangle, from off the club's station around a mark-boat off St. Honorat Island, another mark-boat off Point L'Aquille, and home, sailed three times. The day was clear, with a light wind. The starters were Britannia, Ailsa and Corsair, the former over the line to windward. The first leg was a drift to windward, Britannia gaining; the second was a reach, sailed with a stronger breeze from the southward, on the beam, Ailsa overhauling Britannia and being but 1 min. astern at the end of the first round.

Going out to St. Honorat, the two sailed very evenly; the second round was sailed in a stronger breeze and the two were within a minute all over the course. The third round began with rather less wind; Ailsa passed Britannia 2 min. up to the second mark. She finished 2 m. 50 sec. ahead of Britannia, her allowance, as estimated, being about 1 m. 12 sec. Britannia was sailed by Capt. Carter, and Ailsa by Capt. Jay; Mr. Will Fife, Jr., being on board. Dacotah won the race in her class, but next day was defeated by the French yacht Sainte Martial. On March 9 Ailsa, Britannia, Corsair, Valkyrie I. and Ovetta (Deerhound) were entered, but Ailsa broke a halyard block at the start and withdrew, Britannia winning easily. Dacotah won in her class.

On Monday Ailsa was still unable to start, as she could not replace the broken block. Britannia again defeated Corsair and Valkyrie I., and Dacotah, in a strong wind and sea, defeated Bebelle and the new French fin-keel Rolla III. Britannia lost her topmast in a squall after the race.

YACHT NEWS NOTES.

We take great pleasure in announcing that the American Model Yacht Club, of Brooklyn, N. Y., has donated a handsome and appropriate trophy, open to challenge from any recognized model yacht club in the United States, Canada and Europe. A cut of the trophy and the terms governing the competitions will appear in the next issue of the Forest and Stream.

The annual meeting of the Columbia Y. C., of Chicago, was held on March 2, the election resulting as follows: Com., W. D. Boyce, Yacht Rambler; Vice-Com., W. H. Thomson, Allie T.; Rear Com., E. J. Baker, Hattie B.; Sec., W. Hindshaw, Jr., Skate; Treas., Thos. Bradwell, Hattie Bradwell; Fleet Captain, M. J. Kimman, Loma. House Committee: M. D. Wilber, Chairman; H. E. O. Heineman, Harry Finney, Wm. Knight, Wm. Neindorf. Regatta Committee: G. W. Rogers, Chairman; W. J. McConnell, J. F. Nicholson, F. J. Daggett, Andie Bowles; Meas., Richard Summers. New Members: W. S. Granger, yacht Marion; Willis J. Abbott

Canoeing.

A. C. A. Membership.

The following English canoeists proposed by Mr. W. W. Howard, have been elected to membership in the A. C. A., Central Division: Percy Nisbet, G. U. Laws, W. V. Brewer, J. Arthur Brand, London; Ernest Kipling, C. McPherson, Newcastle-on-Tyne; A. C. Alderman, Worcester; Dr. John D. Hayward, Liverpool. The following names are proposed: Northern Division, Henry C. Macaulay; Central Division, L. C. Allyn.

Atlantic Division Executive Committee.

The executive committee of the Atlantic Division of the A. C. A. held a meeting at the Algonquin C. club-house in Trenton, N. J., on March 2, at which the full committee, composed as follows, were present, and some twenty members of the association: Messrs. H. Lansing Quick, Vice-Com.; Joseph E. Murray, Rear Com.; Thomas Hale, Jr., Purser, and Irving V. Dorland, H. H. Smythe and James K. Hand. The first matter taken up, and the most important, was the question of doing away with the Atlantic Division meet for the year 1895. After a long and exhaustive discussion on the subject, it was decided finally that no Atlantic Division meet should be held this year; and the Transportation Committee of the division, when appointed, were authorized to expend an amount not to exceed $100, for the purpose of properly taking care of boats, duffle, etc., on their arrival at the spot selected for the 1895 meet. Other minor matters were brought up in their order, and the meeting broke up to enjoy the hospitality of the members of the Algonquin C. C., in the shape of refreshments, which were thoroughly appreciated by all.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

March 20-21.—YARDVILLE, N. J.—Two days' tournament at live birds; second day, handicap sweep at 25 birds, $10 entrance, birds extra. Chas. Zwirlein, proprietor.

March 26-27.—ROCKFORD, Ill.—Live bird tournament of the Rockford Gun Club.

March 27.—SPRINGFIELD, N. J.—Tournament of the New Jersey Trap-Shooters' League, under the auspices of the Union Gun Club, of Springfield. N. J. E. D. Miller, Sec.

March 28.—NEWARK, N. J.—Live bird handicap at Erb's grounds, under the auspices of the Newark Gun Club; 25 birds, $10 entrance, birds extra, handicaps from 33 to 26 yards, class shooting, four moneys. W. H. Green, Sec.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 8-10.—HOT SPRINGS, Ark.—Fifth annual tournament of the Arkansas State Sportsmen's Association; targets. Programmes ready March 1. John J. Sumpter, Jr., Sec.

April 9-11.—BURLINGTON, Ia.—Tournament of the Big Four Gun Club.

April 9-11.—WELLINGTON, Mass. Three days tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth. Sec.

April 15.—PHILADELPHIA, Pa.—All day shoot of the Forest Gun Club at its grounds, 27th and Lehigh avenue; targets. William Morison, Sec., 1913 Ridge avenue, Philadelphia, Pa.

April 15.—BALTIMORE, Md.—All day shoot of the Standard Gun Club at Point Breeze. W. F. Clements, Sec'y.

April 15-18.—ATCHISON, Kas.—Twelfth annual tournament of the Atchison Gun Club. Lou Erhardt Sec. and Manager.

April 16-18.—PITTSBURG, Pa.—Tournament of the Interstate Association, at Pittsburg, Pa., under the auspices of the Pittsburg Gun Club, $200 added money.

April 17-19.—CANTON, Ill.—Annual spring tournament of the Canton Shooting Club.

April 22-27.—KANSAS CITY, Mo.—Eighteenth annual tournament of the Missouri State Game and Fish Protective Association. W. V. Rieger, Sec.

April 23-24.—ELIZABETH, N. J.—Third bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds; events open to all. Robt. E. Chetwood, Pres.

April 23-26.—GALESBURG, Ill.—Tournament of the Galesburg Shooting Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club: first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O.; $200 added money. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament under the auspices of the Interstate Association; targets; added money announced later. C. F. Rood, Sec.

June 3-8 —CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-14.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N.D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith Sec'y.

June 13-15—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee Sec.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

Control of Trap-Shooting.

The publication in Forest and Stream of March 2, of the proposed constitution for a national body of trap-shooters marked the second step in the direction of a sound basis for trap-shooting. The need of such an organization as a regulating body has been very generally acknowledged, and the provisions in the proposed constitution, if agreed to, will vest sufficient power in the hands of the governing body to enable it to carry out the plans made for furthering the best interests of the sport.

The agitation in favor of cleaner tournaments has not been fruitless. Scarcely a day passes but Forest and Stream receives some token that the good work is going on. From the East, West and South have come programmes within the past few days, programmes that are pregnant with meaning: "Dropping for place will not be tolerated at this shoot." Pleasant as the words and sentiment are, it is rather degrading to the sport that it has seemed necessary to insert such a sentence in the programme of any tournament; yet, as was very pertinently pointed out by Mr. Hebbard, in Forest and Stream of Jan. 5, there is nothing in the present rules governing trap-shooting which forbids or deters a man from breaking any number of targets or dropping any number when he sees a chance to make money by doing so. Moreover no penalty is attached to crooked work by shooters. In some few isolated cases clubs have been brave enough to stand up and notify certain parties that their presence at tournaments given by those clubs is undesirable, and they will not be permitted to compete in the events at such tournaments. But those instances are rare, and managements are unfortunately chary of acting in this manner. The matter properly belongs to some governing and regulating body, and that body is the one sought to be formed at the meeting of April 3 at the Astor House, in this city.

DRIVERS AND TWISTERS.

The prospects for a large entry list in the Grand American Handicap are very flattering. Manager Shaner writes that he will probably have the Interstate Association's new tent ready by April 1; in that case he will place it in position behind the score for the accommodation of shooters. The tent will be fitted with gun-racks and with hooks, etc., on which to hang coats and hats. It will eventually take the place of the smaller ones which were always in evidence at the Interstate shoots last year.

John L. Brewer and T. W. Morfey put up $150 a side in the hands of Justus Von Lengerke, of the firm of Von Lengerke & Detmold, 8 Murray street, this city, on Monday last, March 11. The ultimate ownership of the money will be settled on Saturday, March 23, on which date the two men shoot a race at Willard Park, Paterson, N. J., for $300, 50 live birds per man, Long Island rules.

"Uncle Billy" Hughes won the Pfaender diamond badge at the Coney Island Rod and Gun club's monthly shoot at Dexter Park L. I., on March 6. Mr. Hughes, who is 73 years of age, killed 10 straight from the 27 yards mark; his total for the afternoon was 18 out of 21.

The two days' tournament of the Rockford, Ill., Gun Club will be held March 26-27. The committee of management is composed of the following: J. Monteith, Al. Henry, C. Helm, F. Haines and John T. Buker; this committee has made all arrangements necessary for the comfort of the shooters.

New dates claimed are: April 15, Standard Gun Club, Baltimore Md.; April 23-24, Elizabeth, N. J., Gun Club's bi-monthly tournament; May 30, Mountville, Pa.; June 13-14, North Dakota State Sportsmen's Association's first annual tournament at Fargo, N. D.

Mr. H. O. Price, secretary of the Southern Club, Hot Springs, Ark., under date of March 2, writes as follows: "Owing to unavoidable complications, the management has decided to postpone the live bird shoot announced for March 13 and 14, with $500 guaranteed, until March, 1896, when a Grand National live bird shoot, with $2,500 cash guaranteed, will be held."

T. W. Morfey and Frank Class shot the third match of their series on March 7, at Charlie Zwirlein's grounds, Yardville, Pa., Morfey winning by one bird with the score of 91 to 90.

The New Utrecht Gun Club, of Woodlawn, L. I., and the Riverton, N. J., Gun Club, will shoot three matches, ten men a side, 25 live birds per man, in the near future; each club has a match on the home grounds, the choice of grounds for the third match to be decided by a toss. At a meeting of the New Utrecht Club, held on Saturday, March 9, President W. F. Sykes was authorized to accept the challenge of the Riverton Club and to arrange all details of the contests.

The New York County Gun Club, with grounds at Rockaway Park, L. I., has elected the following officers for 1895: President, T. H. Keller; Vice-President, J. H. Richmond; Treasurer, Gus Greiff; Secretary, L. H. Schortemeier; Captain, Edward Banks.

The Rockaway Park Rod and Gun Club had capital weather for its March club shoot; the scores are unavoidably withheld until the next issue. The boys are always full of jokes, and are always on the lookout for something of the kind. It may interest Major Spott, a veteran of the German army, and a member of the Elite Schutzen Corps, of Brooklyn, N. Y., to learn how that duck which "Joe Bourke shot this morning," and which the Major carried home carefully wrapped in paper, came to be filled with a half-brick and some newspaper. "John" Tiernan is the best man for him to get the particulars from.

Charlie Zwirlein advertises a two days' shoot at live birds a Yardville, N. J., on March 20, 21. First day, sweepstake shooting; second day, a 25 bird handicap, $10 entrance, birds extra at 25 cents each; $25 added to high gun.

Col. A. G. Courtney, of the Lefever Arms Co., Syracuse, N. Y., was in New York a few days ago. He arrived on March 8, fresh from the Worcester, Mass., tournament, which he said was a nice affair, adding, however, that Mascroft, the "Mayor of Sutton," was much put out at the absence of T. H. Keller, the "Mayor" having fully expected to take $12.50 out of Keller's pocket in a 25 target race. Courtney will leave Syracuse in a few days and go through to California on a business trip, returning in time, he hopes, for the Drayton, O., and Knoxville, Tenn., shoots.

A delegation of New Jersey trap-shooters will put in an appearance at the Wellington, Mass., tournament on April 9, 10, if present plans do not fall through. The Jerseymen will probably be F. Van Dyke, T. H. Keller, Neaf Apgar, "Dutchy" Smith and Noel E. Money.

Mention is made in the account of the Boiling Springs tournament, at Rutherford, N. J., of a new live-bird trap which W. G. Clark, of Altoona, Pa., was talking about. At the shoot Clark had a model along with him which was freely inspected and favorably criticized. Morfey won one of these traps when he shot Clark his first race at Altoona last December; this trap was used as No. 3 in the live-bird events at Rutherford thus giving an object lesson as to the value of the trap in a far superior manner to what any model could do. The trap is built on a solid base of hard wood, and requires merely the driving of a pin through a hole in the front of the base to place it in position. The balance of the trap is in three pieces, all of solid hard wood, two sides, curved so as to meet and make a tunnel, and an end piece which is placed in position after the bird has been put in the tunnel. The other end of the "tunnel," the end away from the traps, is covered with wire bars, so that the bird can look out and get fresh air. The catch that holds the trap is very simple and easily adjusted. When the trap is pulled, a "flipper" with a red rag attached pops up behind the bird and drives it off the trap at once. The working of the flipper is also simple, and there is apparently nothing to get out of order in the whole trap. Messrs. Clark and House, both of Altoona, have patented the invention and are preparing to place the traps on the market. Viewed by the work the trap did at Rutherford, it is all that its inventors claim for it.

At the meeting of the Rhode Island Trap Shooting Association, of Providence, R. I., on Feb. 28, the following officers were elected: President, A. L. Andrews; Vice-President, Phillip Randall; Secretary, J. F. Russell; Treasurer, W. W. Mosher; Captain, Samuel F. Wilson; Directors, L. C. Whitaker and William Plaisted.

A new gun club was organized on March 2, at Athens, Pa. The officers are: President, J. S. Hamaker; Vice-President, Wm. Heavner; Secretary, J. H. Murelle; Treasurer, R. S. Hickey; Captain, A. H. Nevins.

With April 1 now in sight the tournament season of 1895 may be said to be opened; from that date right along until late in the fall the smashing of targets will continue without intermission. It is calculated by the target companies that whereas it took less than 20,000,000 to satisfy all requirements last year, it will take quite tha number to keep pace with the demand this season.

Rolla Herkes, writing from Dayton, O., under date of March 4 says: "In your next issue of Forest and Stream I would like to have you insert in your Fixture column, in connection with the notice alerady given there, that the Buckeye Gun Club adds $200 in the league events. Also state that the Ohio State Transporters' League programme will be ready for distribution April 1, W. H. Stark Sec. From present indications we will have the largest attendance ever registered at an Ohio League tournament; one set of traps will be run exclusively for the open events, which, with a good entrance, will make it an object for all the experts to come and get in line before leaving for the greatest shoot on earth at targets—Knoxville, Tenn." After expressing a hope that I may be able to be present at the tournament, and also saying a few disparaging words as to my execution with a cue, Rolla adds: "I may take a foolish notion and come down and win the Grand American Handicap, and also take in the Boston and Pittsburg shoots and meet the old friends." That Dayton shoot should be a dandy.

Boyle Bros., proprietors of Willard Park, Paterson, N. J., promise to have on hand a first-class lot of selected birds for the Grand American Handicap; the price of pigeons throughout the entire tournament will be 25 cents each. The retrieving will all be done by dogs. Elmer Shaner also wishes me to state that "after the close of the three days' tournament any private matches that may be arranged can be shot off on the same grounds."

The annual meeting of the Standard Gun Club, of Baltimore Md., was held on March 6, and the following officers elected for the ensuing year: President, C. E. Bonday; Vice-President, G. H Ghent; Secretary-Treasurer, W. T. Clements; Captain, John Devall.

The Baltimore, Md., American, of March 5, contains the following: "The annual meeting of the Baltimore G. C. was held yesterday afternoon at the Carrollton Hotel. In view of the growing interest in trap shooting in this city, it was decided to enlarge the scope of the organization so as to take in members of other clubs, and all who take an interest in the sport. With this object in view the name of the organization was changed to the Baltimore Trap Shooting Association. A committee of three members—H. A. Penrose, Dr. S. J. Fort and Dr. J. W. Linthicum, was appointed to draft a new constitution and by-laws for the government of the association. The following officers to serve the ensuing year were elected: President, H. A. Penrose; Vice-President, J. A Willard; Secretary, Dr. S. J. Fort; Treasurer, James R. Malone Field Captain, William Field. Five directors will be appointed by the president at the next meeting."

The John F. Weiler Gun Club, of Allentown, Pa., held its regular monthly shoot at Rittersville on March 5. Brey won the gold

medal for the second time, Mohr getting the silver medal. Scores at 25 targets were as follows: Brey 22, Mohr 20, Benning 18, S. Weiler 16, Ulmer 15, Miller 14, J. Weiler 13, Acker 13, Hohe, 12, Mertz 12, Smith 11. During the next six months the club will compete for an L. C. Smith gun which will be given to the competitor making the best average score at the next six medal shoots.

Louis T. Duryea is still shooting pigeons well. On Wednesday, March 5, he won for the second tim the President's Cup presented to the Carteret Club by George Work, its president. Although rather paradoxical, the "cup" is a Purdey gun. Duryea won with 19 out of 20; among his opponents were Work, Knapp, etc. The birds were evry good types. EDWARD BANKS.

Weir City Scores.

Weir City, Kansas, March 1.—Enclosed herewith find scores made by members of the Business Men's Gun Club at their last regular badge contests. "Sandy" Hamilton, who is a beginner at the traps, carried away the club's medal very easily on a score of 26, allowance included, out of a possible 25, which of course was very good under the circumstances. McIlhany was allowed to win the President's medal on the low score of 19.

A rather unique live-bird contest has been arranged between O. H. Calhoun and Josh Wilkinson, both of the Business Men's Club. The match will be at 25 birds, American Association rules, except that the use of only one barrel will be allowed. The match is for $150 a side, and as each seems unusually confident of winning, the outcome will no doubt be close. They will probably shoot on March 23.

Club Medal, 25 Targets.

MAMALUKE.

Trap-Shooting at Port Dover.

Port Dover, Ont., March 6.—Owing to the heavy snowstorm which fell on the 4th, blocking many of the country roads, a number of shooters were prevented from attending the first annual tournament of the Phoenix Gun Club of this place, not withstanding that the day was a perfect one. Outside of a little delay in starting, and some slight trouble caused by one of the traps, everything went off very smoothly, making our first tournament a decided success in more ways than one. Another year we hope to present a more attractive programme, with good purses, which we trust will induce some of the professionals to visit our little lakeport town. All events were shot from three traps, four moneys, high guns, known angles, unless otherwise stated. Scores:

Events	1	2	3	4	5	6	7	8	9	10
No. of Target	12	15	15	15	20	12	15	20	15	20
J. Fick	6	8	2	10	12	9	10	14	6	15

Nos. 1, 2, 4, 6, 7 and 9 were 50 cents entrance; No. 5, $1 entrance, and $5 added to the purse; No. 3 was a merchandise shoot; prizes: 1st, "Gun and its Development," by W. W. Greener; 2d, Canvas hunting coat; 3d, 100 Nitro club shells; 4th, 1 B. G. I. Co.'s high grade shell closers; entrance, 80 cents; No. 6 was a race at 6 pairs, while No. 7 was a team race between the following pairs: Marlott and Price, Fick and McQueen, Thorold and Renton; No. 9 was at unknown angles, and No. 10 was $1 entrance, $5 added to the purse. A. W. LAWRIE, Sec.

California Trap Notes.

Pasadena, Cal., Feb. 22.—The scores given below were made this afternoon. The boys had made every preparation for a good time, but unfortunately the birds were a very poor lot, having been cooped up too long. The scores are very low, considering the quality of the birds. Scores:

No. 1, 9 Blue Rocks—Confer 8, Childs 7, Stewart 3, Schurmeir 2, Conger 6, Rose 8, Woodburry 6, Penser 6.

No. 2, 10 targets—Confer 7, Childs 2, Stewart 3, Rose 8 Schurmeir 0, Conger 6, Woodburry 4.

No. 3, 7 targets—Confer 6, Childs 6, Stewart 3, Rose 7, Conger 5, Woodbury 4.

No. 4, 7 targets—Confer 5, Childs 3, Rose 7, Woodbury 5.

No. 5, 32 live birds—Woodbury 19, Childs 21, Schurmeir 19, Rose 18, Penser 12, Stewart 25, Conger 9, Johnson 11, Confer 15.

CORVIE

Syracuse Gun Club.

Syracuse, N. Y., March 7.—The Syracuse Gun Club held its regular medal shoot this afternoon. Twenty-one members were in attendance and some good shooting was witnessed. The medals in both class A and class B were closely contested. D. M. Lefever and Geo. Mann tied in class A, Lefever winning on the shoot off at 10 targets by breaking 10 to Mann's 7. F. Lefever and J. Dey won in their respective classes. Scores:

Class A.

D. M. Lefever, 50.....11111111111111111011111110

A. R. K.

Freehold—New Brunswick—Dayton.

Dayton, N. J., March 9.—Freehold this afternoon won another victory over her opponents, New Brunswick and Dayton, in the second match of the season between these three clubs. The day was unfavorable for target shooting, a strong wind blowing during the shoot, snow on the ground also gave off a glare that was very trying to the eyes. Freehold won by 14 breaks but the race for second place was very close, the Brunswicks heading their rivals by only one target. The third shoot takes place March 30 at New Brunswick, on the grounds of the Brunswick Gun Club. The conditions of to-day's shoot were 30 targets, unknown angle; at New Brunswick, each team will shoot under expert rules. Scores:

Freehold.

D. S. WADSWORTH.

The Grand American Handicap.

Pittsburg, Pa., March 9.—The Interstate Association, since its origin, has worked for, and been wonderfully successful in, the elevation of trapshooting. Its introduction of so important an event as the Grand American Handicap has resulted in placing live bird shooting on an eminence as distinguished as that which lifts Monte Carlo events into such prominence. There is little doubt but that at the conclusion of this event in 1895 it will rank with the main events of Monaco. When the expense and excellence of arrangements of the Grand American Handicap of 1895 are considered, it cannot but place the Interstate Association in the foremost rank of such organizations in the world. Aside from the completeness of the mechanical adjuncts of the affair, care has been taken to make it, and the minor events surrounding it, the most attractive programme ever conceived in that line. The management need have no dread of the successful termination of all the events scheduled. In one of them, and especially in the Grand American Handicap, have the interests of every shooter, high and low, expert and amateur, been neglected. Shooters can enter any of the contests without confronting the fear that favorites only will be played, and the new and undistinguished shooter be forgotten. It is the aim of the management to conclude the Grand American Handicap and its kindred events with the encomium, that while the great might have won, the humble will not have it to say that he was unfairly treated in the race. There is little doubt but the experience gained through taking part in these contests, and contact with the most renowned shooters of this country, will result in untold good to those already wise and those but beginning to understand the arts and ways of this noble sport.

Sportsmen who contemplate making entry for the Grand American Handicap should not forget that regular entries close March 30, and must be sent to J. A. H. Dressel, Secretary-Treasurer, 313 Broadway, New York city, on or before that date. ELMER E. SHANER, Manager.

Onondaga County Sportsmen.

Syracuse, N. Y., Feb. 28.—The Onondaga County Sportsmen's Association held its regular medal shoot this afternoon. D. Lefever and his son Frank, both scored 46 out of 50 in Class A, the senior winning the medal; Class B medal went to Dan Walters with 37, J. Boyd winning in Class C with a similar score:

Class A. D. Lefever, 46; F. Lefever, 46; Forsythe, 44; Arno, 43; A. G. Courtney, 42; A. C. Ginty, 40; H. Jones, 40; George Mosher, 35.

Class B. Dan Walters, 37; R. Hunter, 36; W. Morris, 35; Livingston (not a member), 38.

Class C. J. Boyd, 37; Geo. Sanford, 35; J. Glenn, 34.

A. R. K.

Riverton Club's Tournament.

Riverton, N. J., March 9.—The Riverton Gun Club's handicap, 100 live birds, $100 entrance, has proved the biggest thing of its kind gotten up by any club in many a long year. Fifteen entries in a sweep of that size is something for the club to be proud of, and the fact that the result was arrived at in one day (March 8) is another matter for congratulation. The day, it is true, was not all that could have been desired, and the weather had its effect on the scores; still the records made are remarkable, no less than nine killing over 90, while three others had a similar chance had they shot their scores out. The closeness of the race shows that the handicappers were about right in their estimate of each man's capabilities. George Work and Captain Money tieing for first and second money on 94, they agreed last night to divide the two moneys, $750 and $375, shooting off, miss and out, this morning for the $200 trophy. In this shoot off Work missed his first bird; Capt. Money lost his chance to win by letting his bird get over the boundary, where it fell dead. Work then killed his next nine birds and won the cup when the captain dropped his 10th bird. The ninety-threes divided third and fourth moneys without a shoot off. The balance of to-day's proceedings were sweeps of various kinds, Work and Knapp both showing up well.

The scores in the main event are given below. In order to facilitate the shooting of the 1,500 birds in a single day, the club's old grounds were brought into service as well as the river grounds; the shooters were divided into two squads, one squad shooting at the old grounds, while the other squad shot at the new grounds. As soon as each squad had shot 50 pigeons, they changed grounds. Scores:

* The other scores (unfinished) were: J. S. Page (27), 87 out of 95; Mott (30), 87 out of 95; J. P. Knapp (30), 81 out of 90; E. J. Edwards (26), 70 out of 82; Jas. A. Wolstencroft (27), 63 out of 75; E. Eckert (30), 63 out of 75.

Wants Harder Shooting.

Grand Rapids, Mich., Feb. 16.—Editor Forest and Stream: There has been much said lately in the different papers about the evils that are to be found in trap shooting. One of the worst of these is dropping for place, and it has brought forth a big kick from those that are not concerned in it. Now shooters are but human, and when temptation is thrown in their way it is very hard to resist it. By temptation I mean the easy way of shooting, the blackboard system of scoring, and the bad condition of things generally. First, make the shooting harder, drop the old known trap known angle system, or the known trap unknown angle, which is no improvement over the other, and adopt the system of shooting from five unknown traps, one man up, or five men up. This will make shooters pay more attention to how they are shooting than to what the others are doing. Do away with the blackboard; this will be found a great preventive to unfair work.

A good system to take the place of this thing was explained to me the other day by Ben O. Bush, of Kalamazoo, Mich., but I am not at liberty to give it away, as he intends to be present at Willard Park during the Grand American Handicap week, at which time and place he will make his ideas public. In regard to the meeting at the Astor House on the evening of April 3, I am sure that whatever the convention decides to do will meet with hearty praise from the large number of clubs and individuals who are interested in the movement, but who cannot be present at the meeting. We all hope that they will decide upon something that will bring both the expert and amateur together on an equal footing, so that they may have the best of feeling the one for the other. AMATEUR.

Is Not This What We Want?

A week or so ago a gentleman in New England wrote to Forest and Stream suggesting a division of the purses by a system that had "popped into" his head "while reading Forest and Stream last evening." Upon the face of it the scheme suggested seemed so equitable and, above all, appeared to contain the one essential point that we have all been looking for, viz.: Something to put an end to dropping for place, that we took the trouble to try and find weak points in it. As shown later, the only one we could find is really of no consequence, requiring a combination of circumstances that very rarely occurs. It is, of course, quite probable that there are some other points which have been overlooked, where the scheme may not be all that is claimed for it. Such cases, if any, will no doubt be speedily brought to the surface just as soon as cashiers, etc., of clubs begin to figure on the division of purses as given below.

An actual test of the system was made at a shoot of the New York County Gun Club a few days ago. The result was entirely satisfactory, every member present expressing himself as decidedly in favor of the system. From the fact that under this system it pays a man better to break as many targets, or kill as many live birds, as possible, there being no longer any advantage in "second money alone," the system has been named, "Straight out" for want of a better title. With the above introduction we will now try and explain the working of the system, first giving the formula and example sent us by the New Englander, who adds: "For local reasons please keep my name to yourselves, and let me be known only by the name 'Green Amateur,' signed to this communication." The formula, etc., runs as follows:

"Establish the relative value of prizes in points. Multiply the number of winners of each prize by the relative number of points of each prize; add these products; divide the prize money by this total, and you have the value of each point of prizes to be awarded. Take for illustration this example: 10 entries, $1 each, 10 live birds each; value of prizes, 4, 3, 2 and 1 points; result of shoot: 3 men kill 10 birds each, 2 kill 9 each, 2 kill 8 each, 3 kill 7 each. Now figure:

3 firsts	x 4	points each	— 12	points
2 seconds	x 3	" "	— 6	"
2 thirds	x 2	" "	— 4	"
3 fourths	x 1	" "	— 3	"
			Total, 25	points.

Divide prize money of $10 by these 25 points, and you have 40 cents as the value of one point. The division of money will be:

3 firsts,	4	points x 40	cents	— $1.60 each	— $4.80
2 seconds,	3	" x 40	"	— 1.20 "	— 2.40
2 thirds,	2	" x 40	"	— .80 "	— 1.60
3 fourths,	1	" x 40	"	— .40 "	— 1.20
					$10.00

There should be no difficulty in understanding and applying this formula to any case."

The formula, and the working of it, is extremely easy to get at. The only point that apparently needs any further explanation is how to arrive at the relative number of points for each prize. This is just as simple as the rest of it and is as follows: Where there are two moneys under the present system, the proportions are 60 and 40 per cent; under the "straight out" system the points are 6 to each man in first money and 4 to each man in second money. Three moneys: Present system, 50, 30 and 20 per cent; "Straight out" system, relative number of points are 5 to each man in first money, 3 to each man in second, and 2 to each man in third. The same principle applies to four moneys, or any number of moneys you choose to divide the purse into.

The following examples will show where the "straight out" system comes in, and where it is so powerful an agent in keeping shooters from dropping: 1. First sweep at Elizabeth, N. J., tournament, Feb. 28, 1895; 7 birds, $5, birds included, 50, 30 and 20 per cent., 5 entries: three men kill 7, one kills 6 and one kills 4. Under the present system, the three first men divide $7.75—$2.58, 1-3 each; second man scoops in $4.65 because he was the only one who missed one bird, while third money, $3.10, i. e., 51 2-3 cents more than each of the first men received, goes to a man who couldn't kill 60 per cent.!

Under the suggested system, the shooters would receive as follows: Straight scores pay $3.85 each; second men get $2.34; third men, $1.56. 2. Second event, same day; 10 birds, $5, birds included, 11 entries, 3 moneys in same proportion. The result shows four straights, one 9 and four eights. Under present system the straights received $3.15 each; the 9 got $7.55, while the four men in the third money split up $5.05, about $1.26 each. "Straight out" system: Straights paid $4.05 each; 9 was worth $2.43, while the men with 8 each received $1.62. Suppose (as was actually the case) that the last man to shoot had nine straight when he went to the score for his last bird, and that the score showed three straights and only one nine! Quite a temptation to miss the last bird under the present system? Had he missed that bird his proportion of the purse would have been nearly 20 per cent. greater than if he had killed outright. A drop of the 10th bird under the "Straight out" system would have resulted in a 35 per cent. decrease in his share of the pot! Is any further argument or any further example needed? Take copies of Forest and Stream and work out similiar cases. In the above two cases the purses were unusually small; the difference in the two systems will be found much more marked of course in target races with a large number of entries, and in live bird races where birds are extra and entrance moneys are proportionate.

There is, so far as we can judge, not a shadow of a doubt as to the efficiency of the "straight out" system to put an end to dropping. It is said that there are exceptions to every rule; but the opportunity occurs so seldom that it can be brushed on one side. The only case which we can find at present is the following suppositious case: A 15 target race is being shot and there are two men straight up to the end of the 14th round; the nearest man to them cannot make better than 13 if he breaks his last target. Under the "straight out" system there is a solid money consideration for each man in favor of breaking 15, unless these two are "pooling" or combining. This combination of circumstances would be of so rare an occurrence that it really needs no attention. It must be remembered that both poolers would have to "keep tab" while the event was actually being shot, with themselves as members of the squad perhaps; in order to reap the benefit that would accrue from his dropping his last target.

This system, "Straight out" or whatever you choose to call it, is therefore suggested as one well worth looking into. It may have been propounded before, but if so we have no recollection of it, and can find no record of it Will not some gun club try the system at its club shoots, and let Forest and Stream readers know what they think of the system from actual experience? There is one point which should be touched upon before quitting the subject: It has been objected to by one shooter that the "Straight out" system does away with all chance of a man making a scoop by happening to hit first, second or third place alone. The very fact that it does do away with this chance is, in our opinion, its strongest point, as it thereby does away with all inducements for "dropping for place."

Trap-Shooting in Iowa.

Davenport, Iowa, Feb. 22.—The fourteenth annual tournament of the Forester Gun Club closed to-day. The attendance was not as large as usual, but those who were on hand had a very pleasant time, the weather being warm. Among those in attendance were: C. M. Grimm, Clear Lake; H. J. Wilson, Emmettsburg; S. A. Tucker, Davenport; Tom Marshall, John Read, Omaha; Huckins, of Kewanee; W. "Tramp" Irwin and Gus Walpert, of Peoria.

On Wedneesday, W. T. Irwin and R. B. Cook shot a match at 100 targets from five unknown traps for a purse of $50 a side, Cook winning by 4 targets, scoring 80 to Irwin's 76. On Friday Dr. Carver and C. A. Budd shot the third match of their series, Dr. Carver winning quite easily. The score was 89-77 in favor of Carver. Budd was in poor form and out of luck in drawing birds. On Wednesday evening Mr. Cook entertained a number of the visiting sportsmen at his home, the evening being much enjoyed by all present. The programme stated that dropping for place would not be tolerated, and during the three days this rule was not broken; not a target or bird was dropped intentionally. The targets were shot from five traps, walk around, known traps and unknown angles. All ties were divided, with one or two exceptions. The following tables give the results of the programme events during the three days of the tournament:

No. Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

Events 1-5 were shot on the first day; 6-8 on the second day, and No. 9 on the third day. Entrance moneys as follows: Nos. 1 and 9, $5 No. 2, $7; No. 3, $4; No. 4, miss and out, $2, 13 entries; No. 5 and 7, $5; No. 6, $6; No. 8, $3. C. W. BUDD.

New York County Gun Club.

The first March shoot of the New York County Gun Club was held at Rockaway Park, L. I., on March 4. Only a few members were present, the weather in the early part of the day being decidedly uninviting. Altogether 1,055 targets were thrown from the three traps, the scores being given in the table below. The percentages are surprizingly low, but then the New York County men throw targets at very acute angles, and as far as possible, making the shooting extremely difficult, and straights something unusual. Schorty led with 76 per cent.; Wash, 73; Scott, 69; Place, 67, and Edwards, 55. The varied nature of the programme may be judged from the note which follows the table of scores.

No. of events:	1	2	3	4	5	6	7	8	9	10	11
No. of targets:	10	15	15	20	15	25	30	20	25	10	10
Schorty	7	13	13	12	13	18	21	18	22	4	7
Scott	7	12	12	13	13	17	19	14	17	3	..

F. D. KINNEY, Sec'y.

Nebraska Trap Notes.

Omaha, Neb., March 2.—There was an interesting live bird team shoot on the Bemis Park Club grounds this afternoon between Parmelee Blake and Smead on one side, and Read, Loomis and Peters on the other, 15 birds to the man, 30 yards rise, 50 boundary, for the price of the birds. The weather was beautiful, but the shooting was poor. Score:

Blake	21222112*222*1*2201121011—20
Smead	01*1*0111001221110222200—15

SANDY GRISWOLD.

Lynchburg Gun Club.

Lynchburg, Va., March 7.—Some time ago, Uncle Watt (W. L. Moorman), one of the heavy weights of the gun club, conceived the idea of determining which of the club's No. 1 team was the best man. His idea was brought to a focus to-day. The old man furnished the ammunition and umpired the shoot to his and everybody's entire satisfaction. The shells were all loaded exactly alike, he having taken a notion that it was altogether the shells and the loading that did the work, the man and gun being a secondary consideration. From the way the boys shot out the experiment leads one to believe Uncle Watt's idea was not far out of the way in this particular event, the six men making an average of 82 per cent. Paul North was in town and joined the boys in the shoot. Below find scores:

No. 1, 25 targets, unknown angles:

Emerald Gun Club.

The Emerald Gun Club, of New York, held its annual meeting at 9 Madison street, this city, on the evening of March 7. The reports of the various officers and committees were very satisfactory, the club being found to be in excellent standing. The membership list, limited to 50, is full, there being no vacancies. The following are the officers for the ensuing year: President, T. F. Russell; Vice-President, Gus Nowak; second Vice-President, N. Maesel; Secretary, John Woelfel; Recording Secretary, H. P Fessenden; Treasurer, J. H. Moore. Col. J. H. Voss and Dr. G. V. Hudson were appointed members of the Executive Committee.

The doings of the club during the past year were mentioned in the reports of the officers The committee which had charge of the big tournament last year made a report, showing that $275 had been netted by that tournament; 9,000 targets were thrown during the two days on which target events were shot. It will be remembered that the Empire City Handicap, 25 live birds per man, was one of the largest events of its kind held during the year, there being no less than 51 entries. In the 11 club contests, shot between March '94 and March '95, 2,930 live birds were trapped; 2,161 were killed, showing a club average of nearly 74 per cent., an increase of about 5 per cent. over the previous year. The club's grounds are at Dexter Park, L. I., where the first shoot of the '95 season will be held on March 19. The following table, compiled from the records of two or more shoots shows the standing of the members:

Name and Class.	Handicap. Points.	Birds. in yds.	Birds. shot at.	Birds. killed.	Per- cent.	Total Points.

Dr J P Adams	10010111111111100111111110—19

* C. White won class A. medal; Jas. Duane, class B medal, and Bertram Cruzer the medal in class C.

JOHN T. MURPHY, Sec'y.

Boiling Springs Club's Tournament.

The Boiling Springs Gun Club, of Rutherford, N. J., held its three days' tournament on Tuesday, Wednesday and Thursday of last week, March 5, 6 and 7. On the first day the wind blew strongly and the air was quite cold; the second day, the weather was really that target breakers could wish for; the third day, live bird day, however, was just the opposite of its immediate predecessor, a cold Easterly wind, full of dampness, blowing gently during the morning, dying away about 3 P M.; at that hour a heavy and most persistent rain set in, wetting shooters and assistants most effectually and having a disastrous effect upon what would otherwise have been good flyers.

The club is not exactly a young one, but its career of late years has been such that many an older organization might envy its record. The following extract from the programme gives a brief review of the club's history.

The spring tournament of the Boiling Springs Fishing and Gun club opened on Tuesday of last week, March 5, and extended over three days. The following extract from the programme gives a short history of the club, its management and doings, since its inception more than six years ago:

"The Boiling Springs Fishing and Gun Club was organized October 31, 1878, its purpose being to enforce the State Game Laws, stocking the county with game and its waters with fish, and the improvement in the use of the gun, besides the fostering of a genuine social and sportsmanlike spirit among its members. Of the original ten charter members, six are still active members of the club. The growth of the club was slow until the year 1889, when several energetic gentlemen were elected members, who put new life in the club; as a result of their efforts, ably seconded by some of the older members, the club was organized into a stock company; several acres of land were purchased on the borders of the salt meadows, a new and substantial club house was erected, new traps and other shooting implements were purchased, and the club took its stand among the best equipped and organized clubs in New Jersey.

"The club has won twice, in 1893 and 1894, the Championship Cup, emblematic of the championship of New Jersey, presented by Shooting and Fishing; and it generally holds its own in any contest with other clubs. Its membership to-day is over 100, and among its active members are the following well-known trap shooters: Thos. H. Keller, Neaf Apgar, J. H. Richmond, Fred Van Dyke, Gus E. Greiff, W. J. Simpson, Enoch Miller, Charles (Dutchy) Smith, T. W. Morfey, Wm. Hughes, Eddie Collins, and others. Among its honorary members we quote: Jacob Pentz, of Shooting and Fishing; M. F. Lindsley and Mrs. Lindsley, W. R. Hobart, of Newark; and Oswald Von Lengerke, of Chicago.

"Monthly shoots for prizes are held on the first Saturday of every month, and live bird contests on the second Wednesday of October, November, December, January, February and March. Sweepstakes and practice shoots are held on the afternoon of every Saturday through the year; these shoots are open to all, and all sportsmen are sure of a hearty welcome. As the location of the shooting grounds is handy, being only twenty-seven minutes ride from New York by the Erie R. R. to Rutherford, or the New Jersey and New York R. R. to Carlstadt, and as the grounds are only nine minutes walk from either depot, they are especially suited for any shooters sojourning in New York for a time, who may wish to spend a few hours practicing at their favorite pastime; such will always find the grounds open and the traps in position any day in the week, except Sunday. The officers of the club are: President, Edw. A. Jeanneret; Vice-President, C. H. Coe; Secretary, W. H. Huck; Treasurer, Frank Krebs; Field Captain, P. A. Jeanneret. The board of directors consists of the above named officers with Messrs. Gus E. Greiff and Cornelius Collins added.

Taken altogether the tournament was a success, although a larger attendance of target shooters might very reasonably have been looked for, particularly upon the

FIRST DAY.

Thirteen shooters were all that put in an appearance this day. Chief among those from out-of-town clubs were: Harry Thurman ("Father Time") of the Keystone Shooting League, Philadelphia, Pa., and Secretary of the Pennsylvania State Sportsmen's Association; Irvin, of the Forester Gun Club, of Philadelphia; and "Bill" Clark, Altoona, Pa., the latter talking a good deal about the live bird trap which he and "Tom" House, of that city, are putting on the market; Bill also had something to say about the "Wopsy" tournament next July. A glance at the names of those who shot among the home contingent will show that the company was pretty warm. The first 10 events on the table given below were regular programme events, the other five being extras. All events were at unknown angles, the entrance moneys being in the proportion of 10 cents per target in events Nos. 1, 2, 8 and 9; other entrance moneys were: No. 3, $1.50; No 4, $3; No. 5, $2; No. 6, $1.50; No. 7, $3; No. 10, $2. Twelve entries or under, 3 moneys; over 12 entries, 4 moneys. Targets cost 2 1-2 cents each, the half cent going to form a fund for the three best averages in all programme events. The catering, as is usual at all similiar gatherings of the Boiling Springs Club, was exactly what the contestants wanted; this is no small item in the successful running of a shoot, yet it is a point that is often overlooked. The following table tells the rest of the story:

No. of event:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
No. of targets:	10	15	10	25	15	10	25	10	20	10	10	10	10	10	10

SECOND DAY.

March 6.—A perfect day in every respect for target shooting. As a natural consequence the scores were high, remarkably high when the difficult nature of the Boiling Springs' grounds is taken into account. Apgar, with 94 per cent. in the programme events was high man; next in order came: Van Dyke, 92; Keller, 91; Collins, 88; Hoffman and Melott, 85; "Dutchy" Smith, Taylor and "Jones," 82. Apgar, beside shooting very well was lucky enough to get 20 straight and 25 straight in events 4 and 7, without anybody to bother him for a division. Among the newcomers to-day were: Dr. Mitchell, — Brownell; Chas. ("Dutchy") Smith, of Plainfield, N. J.; J. S. Taylor and Capt. G. H. Taggert, of Newburgh, N. Y.; Melott, a Berks County, Pa., shot; Lemuel Thomas, of the South Side Gun Club, Newark, N. J.; T. W. Morfey, Paterson, N. J.; Noel "E. C." Money, Capt. Cramer, of New York City, who often disguises himself under the title of Capt. "Jones"; C. Hebbard (on hand to see how the blue rock traps threw his empire targets); E Hollister, etc., etc. As an instance of how the "straight out" system (given elsewhere) would have worked at this shoot, No. 9 gives a very good example. The score shows four with 19, one with 18, two with 17, three with 16; 15 entries at $2; targets 2 1-2 cents each; gross purse is $30, net, $22.50, four moneys. Under the present system the purse was divided as follows: $9, $6.75, $4.50, $2.50. The four men who broke nineteen drew out $2.25 a piece; the 18 received $6.75; each man with 17 got just as much as those who broke 19, viz.: $2.25; the sixteens got 83 1-3 cents each. Now take the division under the "straight out" system: Four firsts, one second, two thirds, three fourths; total number of points therefore is 26. Dividing $22.50 by the 26 points, the value of each point is 86 1-2 cents. The four men with 19 will thus receive $3.44 each, while the 18 only gets his proper proportion, $2.59 1-2; the seventeens are worth $1.73 each, and the man with 16 will draw 86 1-2 cents. Which is the fairest? And which is most likely to put an end to dropping for place? Scores in the programme events are as follows:

No. of targets:	10	15	10	20	15	10	25	10	20	10	Broke.	Shot at.	Per cent.
F Van Dyke	10	14	9	19	14	9	24	10	17	8	134	145	92

Totals												1482	1840	

March 7.—This day was devoted entirely to live bird shooting, the main event being a 20 bird race, $10 entrance, birds extra, 5 moneys. This event had 19 entries, a number that would undoubtedly have been increased had the weather forecast been more favorable. Dr. Hudson was present, wearing the gold badge of the New York German Gun Club, a very handsome emblem; the doctor, however, did not shoot in the sweep, as he found the light and background too deceiving for him, while shooting a few practice birds. Mrs. Lindsley was also present but not shooting; she is now shooting targets really well and enjoys that kind of shooting apparently; she has improved so much in her shooting of inanimates that some of the top sawyers will have to look out for "Wanda." Another shooter who was present was Mr. Hughes, a member of the Coney Island Rod and Gun Club, L. I.; Mr. Hughes is just about the father of them all—he is 73 years old, yet he makes quite light of 15 straight at live birds in the club shoots! Among the new faces at the score were: J. Fisher, Blauveltville, N. J.; F. L. Train, P. F. McKeon and G. L. Piercy, of the Cobweb Gun Club, West Farms, N. Y.; J. S. Duston, Newark, N. J. (well-known in Pennsylvania shooting circles); H. D. Swartz and Simeon Davis, Green Ridge Gun Club, Scranton, Pa., and "Uncle Billy" Sigler, Mount Claire, N. J. The other shooters took part in the two previous days' sport. Clark and Simpson, a member of the home club, killed straight; nineteens and eighteens were so common that more than half the shooters got into these holes. As a matter of fact 17 out of the 19 shooters got money out of the race, and Noel Money, who withdrew at the end of the 19th round, under the impression that he could not get any part of it, would have divided $19 if he had stayed in and shot his 20th bird; dead, that bird would have been worth $9.50 to him, practically a bet of $9.50 to 30 cents (price of the bird) thrown away. The anomalous part of class shooting as at present practiced is well brought forward in this case when Train got $19 for killing 15 birds whereas the straight men only got $28.50 each, while the nineteens were actually out $7 a piece!

Clark's shooting on these grounds was very clean; he did not drop a bird the whole time. As a finisher to the target shooting on March 6, two miss and outs were shot at live birds: Morfey and Melott divided the first on 10 straight; Clark went into the second miss and out and divided with Morfey, who again killed 10 straight, making a total of 20 without a miss. The showing made by Clark's patent trap pleased everybody, loiterers and duffers leaving it very quickly. As is always the case on these grounds birds with an incoming tendency prevailed; the reason undoubtedly is the houses and trees in rear of the score with nothing but the bleak and bare meadows ahead of the traps. The birds themselves were really a good lot and had been well looked after by the club's able superintendent.

During the entire tournament Secretary Huck, with the Messrs. Jeanneret and Gus Greiff looked after everything in connection with the cashier's department. As no kick was heard it may be taken for granted that everything was satisfactory. J. H. Richmond, a prominennt member of the club, and a representative of the Walsrode Company, was a conspicuous absentee; the reason of his absence, I understand, was an illness that confined him to his house. The following are the scores:

No. 1, 20 live birds, $10, birds extra, handicap rise, 5 moneys:

W G Clark, 30	12221221121222211211—20
W J Simpson, 28	22222222222222222222—20

Adams	..	..	..	..	..	..	7	12	..

Nos. 2, 5 and 7 were at unknown angles; the balance were all known traps and angle events.

Meadville, Pa., Feb. 27.—Very few members of our club have had the courage to do anything in the trap shooting line this month. "Ground hog day" has lived up to its reputation in these parts as a forecaster of weather; on that day the ground hog saw his shadow and we have had wintry weather ever since. To-day was a pleasant change, so we opened up with 12 guns to the score, only a small turn out for our club. We had the first of our badge shoots on Feb. 6, the first Wednesday of the month, but the day was so bad and the attendance so small, that those who won the badges felt hardly justified in wearing them. Scores in to-day's events were as follows:

No. 1, 25 targets, known angles:

Fowler	00010001011110011011111111—15
H A Johnson	11100011111111101100111011—18

No. 3, 10 targets, known angles: Johnson, 9; Adams and Affantranger, 8; Reisinger and Fowler, 7; Kelso, 6; Gundaker, 5; Hays, 4.

No. 4, 20 targets, known angles: Adams, 18; Johnson, 17; Reisinger, 11; Hays, 10. CHOKE BORE.

March 6.—The monthly contest for club badges was held to-day. The weather was unfavorable, a snowstorm being on hand; the attendance was consequently light. The badges are awarded on the best aggregate scores in events 1 and 2. H. A. Johnson won Class A, badge with 40 out of 50; J. W. H. Reisinger the Class B badge with 39 out of 50, and Charles Stein the Class C badge with a score of 36. These badges are the property of the club, being held for one month by the winners. Scores:

No. 1, 25 targets, known traps and angles:

H A Johnson	11111101111111111111110111—23
Fowler	11111010000100101001101111—14

No. 3, 10 targets, unknown angles: Fowler, Clark and Johnson, 8; E. L. Affantranger and Stein, 6; Hayes, 4.

CHOKE BORE.

Rifle Range and Gallery.

New York Rifle Club.

Feb. 27.—This club held its regular shoot to-day at Zettler's. The following scores were made by the members present. Offhand, German ring target; distance, 75 feet; any rifle, sights and trigger-pull; two best scores counted:

A H Isbell, 70	247	249	C C King, 68	239	241
M Herrington, 67	245	248	D Crocker, 59	238	241
R J Young, 70	244	246	G Shorkley, 65	239	239

R. J. YOUNG, Sec'y N. Y. R. C.

March 6.—This club held its regular shoot to-day at Zettler's. The following scores were made by the members present: Offhand, German ring target. Distance 75ft. Any rifle, sights and trigger-pull. Two best scores counted: A. H. Isbell 70, 248, 249; C. E. Gensch 73, 247; D. Crocker 61, 242, 245; M. Herrington 0, 235, 241; R. J. Young 64, 240, 240; E. B. Banker 70, 237, 239.

R. J. YOUNG.

Massachusetts Rifle Association.

Mr. Henry S. Harris, 72 Equitable Building, Boston, Mass., Secretary of the Massachusetts Rifle Association, has issued a circular giving full details of all current matches which close on the last day of this year.

The list is a formidable one, and contains no less than 48 medals and badges. Fifteen medals and badges, including a gold Victory medal for 10 scores of 86 or better, are given as premiums in the off-hand competitions. Another similar set of medals, etc., is offered for competition in the best shoots, while three badges, gold, silver and bronze, are scheduled in military rifle shoots. Eight medals go to the pistol department, and 5 to the military medal match. The directors' medal match is shot on the last Saturday in December, the prize being the Director's Gold Medal, which becomes the property of the winner, no director being allowed to win a duplicate. The conditions are: 200 yards, off-hand, 10 rounds, standard American target, any rifle that comes within the rules, entrance free. Anybody desirous of obtaining further information cannot do better than write to Mr. Harris at the address given above.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MARCH 23, 1895.

VOL. XLIV.—No. 12. No. 318 BROADWAY, NEW YORK.

For Subscription and Advertising Rates see Page ix.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting).
Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

ADVERSE TO PARK SEGREGATION.

We spoke last month of the adverse report prepared by the Public Lands Committee of the House of Representatives on House Bill No. 7, which is commonly known as the Segregation bill. This measure, while ostensibly one to fix the boundaries of the Yellowstone National Park, was really intended to cut off from that reservation considerable areas on the northeast, west and south, and if passed would have reduced the Yellowstone Park by 400,000 acres, or 622 square miles, which would have been restored to the public domain. This report, though made Feb. 5, has only just been printed, owing to the delay involved in preparing a map to accompany it. It will, however, serve as a valuable reference document for legislators in future sessions of Congress, and is of permanent value.

The committee refute by unquestioned facts the arguments of those who desire to move further south the northern boundary line of the Park. They show that to cut off the Montana strip and to make the northern boundary coincide with the northern boundary of the State of Wyoming, would only have the effect of establishing a little town closer to the Mammoth Hot Springs, thereby greatly increasing the difficulties in the administration and policing of the Park, while to make the northern line coincide with the Yellowstone, Lamar and Soda Butte Rivers would throw out of protection a large tract, heavily timbered, which forms the water shed of some of the main branches of the Yellowstone River. It would make the protection of the Yellowstone River very difficult, would abandon the main part of the only good winter grazing land in the Park, and would entail the destruction of a large proportion of the deer, elk, antelope and mountain sheep now found in the Park. The report calls special attention to the natural boundaries now existing on the northeast corner of the Park and contrasts their effectiveness with that of a river easily fordable like the Yellowstone, in the following language:

"The northeast corner of the Park is walled in on the north by a range of impassable mountains. No settlers can inhabit there, and law-breakers cannot pass over this barrier to destroy the game in winter. If the Segregation bill should be passed, there will be substituted for this natural barrier—now a silent, effective and inexpensive protection on the northeast—only a narrow river which can be easily crossed. To prevent incursions from the north bank of the Yellowstone River, large bodies of troops would be required to constantly patrol the south bank. The difficulties of administration would thus be vastly increased. The danger to all that renders the Park desirable would be made more imminent. Whether it was mere chance or the wisdom of those who framed the original bill setting aside the National Park, the fact certainly is that this most important corner of the park is protected by nature far better than it could have been protected by the efforts of man, if vast sums had been expended for the purpose of keeping out the law-breakers."

If the committee are adverse to cutting off considerable area on the northeast corner of the Park, not less firmly are they opposed to the attempt to segregate the large area on the southwest corner. The only reasons advanced for this action is that some day some railroad may need the tract here proposed to be taken from the Park, but as has often been shown, if we are to cut off a corner, or a slice of the Park at the demand of every corporation that asks it, there will soon be no park left for us to cut from. Public interests and the public sentiment call upon Congress not to recede from the wise policy by which this Park was dedicated for the benefit and the enjoyment of the people of the entire country.

The advocates of the Segregation bill with a great show of fairness say that this bill proposes to add to the Yellowstone Park the adjacent forest reserve. They do not say, however, that as a matter of fact this reserve is already a portion of the park, although not formally added to it, and they do not say either that this bill proposes to reduce the area of this forest reserve by 1,239 square miles. The fact is, however, that the passage of this bill would have reduced the area of these two adjacent reservations, 1861 square miles or 1,181,040 acres, and in making this reduction would have ruined a vast tract of mountain forest, exterminated a great quantity of game, and most seriously have threatened the flow of the Yellowstone River.

The report, with its accompanying map, ought to be in the hands of every individual who takes an interest in the Yellowstone Park. No more concise and convincing document has ever been published in support of the integrity of the reservation.

In the face of this report we cannot help wondering whether at the next session of Congress the familiar Segregation bill will dare to show its head again.

FIELD TRIAL PROGRESS.

It would be impossible to estimate, with any precision, the value of field-trial competitions in America in respect to their beneficial influence on sports afield with dog and gun. To them may be attributed the improved methods and products of breeders, trainers and manufacturers, all still more important in their collateral relations and influences. To them may be attributed the efforts of breeders to produce dogs of high capabilities and pure blood. They have been important factors in teaching methods of training and handling, in promoting good-fellowship among sportsmen, and in enlisting a universal interest in the charms and healthfulness of sport with dog and gun.

Comparing the methods of the past with those of the present, great changes have taken place in the theory and practice of conducting field trials. In respect to the methods of determining the competition, the evolution from the old five-point system, and the heat system, to the spotting system now adopted by all clubs, was slow and laborious.

In respect to ideas of club membership and management, the evolution from the crude beginnings has been slow but sure. In the tentative beginnings everyone took a general interest in the club and the competition. But as in all pursuits which are earnestly followed, whether for gain or pleasure, the different branches of field-trial, management and competition become specialized. Greater knowledge produced greater refinement in all the theory and practice of the competition. As dogs and handlers improved, a higher standard was correspondingly evolved.

At the present day a field trial is so specialized in its management, judging and handling, that in theory there is little room for improvement The old assumption that a gentleman who was a good shot afield was therefore a good field-trial-judge has been abandoned. To have the confidence of the competitors, the judge must have had practical experience at the field-trial, and must furthermore be intelligent and of a judicial turn of mind. The managers of all clubs are showing a decided tendency to make the interests and duties of the management sharply distinct from the interests of the competitors.

There is no doubt that field-trials are a permanent institution in the realm of sport in this country. They all bear testimony to the passionate fondness for sport afield with dog and gun of the American people—a passion so common that it is universal, and so natural that it is constant. And the mission of field-trials is for good, for they foster a sport which brings health and manhood to its followers, which induces relaxation from the wear and worry of business cares, and which brings men into touch with the beauty and sublimity of Nature. The prospect of the success and permanency of field-trials was never better than it is at present.

ANTLERED GAME.

The objection is sometimes urged against a law forbidding the killing of female deer and moose, that one cannot always certainly distinguish whether the game is buck or bull, or doe or cow. Two instances illustrating the fallibility of the most experienced hunters are afforded in the moose stories of a Nova Scotia guide told in our columns last week, and in the experience of Jack Darling as related to-day. The Nova Scotia man urged his man to shoot at a moose, and the man not making out the game, he himself shot, only to perceive that the supposed moose was a tree-stump. In the Maine incident, Mr. Cushing, who is one of the most experienced and skilled hunters of this country, tells us that having discovered a moose which was partially concealed by the brush, he believed that he very distinctly saw its antlers, but after the shot had brought the game into view, it proved to be a cow. Now, if old and experienced moose hunters, who may be presumed to be comparatively cool and collected in the presence of game, make such stupid blunders, what are we to expect from the amateur, unused to the sight of game, flustered and possibly quaking with buck fever? Even with the best intentions in the world, such an one might kill a cow for a bull or a doe for a buck, or delaying to determine beyond peradventure the horned masculinity of the game, might behold many a "rocking-chair" make off through the woods, which with quicker work, would have been his own.

Nevertheless, the rule that only males should be killed is a most excellent and highly desirable restriction in all regions where the game supply is already scant or may be made so by unrestrained killing. It is a rule which, quite irrespective of what the statute may be, should be accepted and observed by all who hunt game for other purposes, besides or in addition to a mere food supply. In the mountains or the remote wilderness where one kills for subsistence, chewing on tough bull elk is not to be thought of when the cow is to be had, nor the venison of a buck when that of a barren doe may fill its place. But in the Adirondacks, in Pennsylvania, as is Maine, Michigan, Minnesota, and wherever the horns for a trophy are not less sought than the meat for food, and where the man who hunts to-day must have heed for him who will hunt to-morrow, the rule that males only should be taken is reasonable and sportsmanlike, and he is the better sportsman who regards it.

THAT PLATFORM PLANK.

Sentiment is steadily growing in support of the Forest and Stream's Platform Plank—the sale of game should be forbidden at all seasons. The consuming traffic in game is recognized as the agency that is doing more than all others combined to make the earth barren of birds and the larger game. Not a week goes by that fresh evidence is not brought to public attention to illustrate anew the relation of market hunting to the game supply, and in one legislature after another measures are introduced for the purpose of providing the remedy.

Wilkesbarre, Pa., sportsmen have been investigating the game traffic and its effect upon the ruffed grouse supply. They have found that there are in the vicinity of that city fifteen professional hunters, who hunt game all through the season, and send the birds to the local market and to New York and Philadelphia. Five commission firms handled last season 3,100 ruffed grouse. The only remedy considered effective is the operation of a law to forbid traffic in birds, and an effort is now making to secure legislation to that end.

A bill in the Minnesota Legislature, which a St. Paul correspondent tells us is on the road to passage, makes it "unlawful for any person to consign by common carrier to any commission merchant, or sale market, at any time, any elk, moose, caribou or deer, or any part thereof, except the skin or head. This provision shall also apply to any agent of any common carrier in carrying or handling such game." It is further required that when fish or game shall be shipped enclosed in any covering, it must be marked in plain letters, setting forth the kind of game, the owner, the consignee and the destination. With such a law, fearlessly enforced by an honest and capable executive agent, the marketing of Minnesota game will be effectually controlled. A comprehension of the importance of honest game protection is becoming more general every day.

The Sportsman Tourist.

GLIMPSES OF CAMP LIFE.

IN THREE PARTS—PART II.

One of the most charming camps I ever made, everything considered, was on the headwaters of the right hand fork of Willow Creek, a tributary of the South Boise River, in Elmore county, Idaho. The location is well up in a spur of the Saw Tooth range of mountains and in a country only visited by hunters and prospectors. Our camp was pitched in an ideal spot, and the accompanying illustration fails to give more than a poor idea of what a charming place it was.

The little valley, or more properly speaking, the open depression between the high mountains, through which flowed the dashing, tumbling little streams opened out around us, not into a level plain, but into a series of grass and tree-covered terraces, which led with gentle slopes up to the base of the higher hills. The stream which came racing down from the springs above was filled with salmon trout, and its clear waters were ice cold.

All about us were mountain grouse, and a goodly number were hanging up in camp. A fine fat buck was suspended from the great fir alongside the tent, while every pail and pan in the outfit was full of trout.

The days were warm and bright; nights were cold, and under our warm blankets we slept the sleep of the healthy, tired mountaineer. Up above our camp, a good four hours' climb, was the summit of the range, and here in an open park-like country summered the big mule deer bucks. It was not strictly above timber line, but the few trees that grew in small clumps, or clusters, were gnarled and stunted. In under these trees were the beds of the bucks, and we would rout them out in pairs and trios, and off they would go, head and tail up, a grand sight. Their velvet-covered antlers looked like small trees as they tossed their heads, in evident disdain of the poor mortal toiling so slowly where they leaped so freely.

Our outfit was prospecting more than hunting, and therefore the bucks did not suffer much. It was a little too early for the "fall kill," so we only secured the mea we wanted for present use.

As I have said, we were in the country where the bi bucks summered. To the initiated, this does not need a explanation, but many who have not visited the West d not know the usual movements of wild game. It may not be out of place to give a short account of how the deer move from location to location. We will start with them in the early spring when they migrate from the lowlands, sage brush plains, or some low warm valley where but little snow falls. Here they have spent the winter and the bucks have their antlers. As the warm sun and Chinook winds melt off the deep snow from the high peaks, the deer travel back into the mountains and the does linger in the higher valleys and canons, where the dense thickets afford them a safe and secluded retreat to bring forth their little families. The bucks contiuue to climb up, up, until they reach the highest peaks, where it is cool and where they are comparatively free from the torments of flies. Here they spend the summer, their new antlers growing solid as the warm season wanes, and becoming ready for the love tournaments in the fall. When the antlers are hard and ready for use the velvet covering which protected the spongy mass of growing horn is rubbed off against the trees and brush. The buck is now in fine condition, fat and strong. September passes, and the cold, frosty nights start the ducks down to seek their future mates. As autumn grows apace, the bucks "round up" the does, and one often sees small bands under the leadership of some stately stag, who is monarch of all he surveys. As winter approaches, the deer wander lower, but linger in the border of the snowy land until some extra heavy fall of snow sends them in a rush to the lowlands.

September is the month to shoot bucks if one wants fine meat; later the flesh becomes strong, though the antlers are then in good condition. The fine buck on which we feasted and which hangs on the great fire shown in the illustration, fell the first day we spent in our camp, and Long Tom Reiley told us how it happened as we lay on our blankets that night before the gleaming camp-fire, which cracked and sputtered, throwing great flames high in the air, as some particularly rich piece of pitch pine caught fire and cast great shadows out over the grassy knoll as it smouldered away. The splashing and gurgling sound of the rushing rivulet, and the sighing of the evening breeze in the branches of the great fir above, were the only sounds breaking the stillness of the quiet evening air, excepting ever and anon from away up the canon, came the tinkling of the bell on Kitty, our riding mare as she moved lazily, cropping here and there a juicy mouthful of bunch grass. We all lay looking dreamily into the sparkling fire, or watching the dense smoke of the pitch logs shoot upward toward the blue dome of the unclouded sky, ablaze with myriads of stars. One who has not seen the splendor of a cloudless night in a high altitude, cannot imagine the glory of the star-lighted heavens. The bright heavenly bodies blaze and scintillate with a gorgeousness and magnificence unknown to the dweller in the cloudy and smoky atmosphere of the East.

Rolling over to get into an easy position, Long Tom took his pipe from his mouth, and using his finger for a stopper, pushed the tobacco down into the bowl, blowing at the same time a huge volume of smoke over the finely stained meerschaum pipe. "Wall, boys," said he, "I did not get left this time." Tom had shot at several deer the day before, and very much to his own disgust and ours, for we wanted meat, had missed. "I made up my mind," he continued, between puffs, "that if I ran on to a deer to-day, he was my meat, or the 44 would not shoot straight. After I left you fellows, I climbed down the mountain a smart piece without seeing anything but a pine squirrel and a grouse. Didn't dare shoot the grouse, for fear I'd scare something else. I was feeling pretty tired an sat down on a rock to rest a bit. I hadn't set there long, when I chanced to look off to the right where there was an opening in the timber, and I saw a gray-looking object in some brush. It looked kind of blue-gray, you know, and I saw in a minute that it was a buck in the blue. The deer was slowly wending his way down the mountain in the cool shade, and I could see that he was bound for the valley below, where he could get a nice drink and fill up on juicy meadow grass. Poor chap, he didn't think he was going to be someone else's supper, as he slowly came toward me, stopping here and there to nibble the bunch grass, or to raise his head suspiciously as he breathed the cool evening air under the pines. He was only a hundred yards away, and I began to finger the trigger nervously, wondering where I had better take him, when up went his head, and with a snort, he stood and gazed about. I sat like a stone man, crouched behind the big rock. Silence reigned, broken only by the rustle of the pine needles, stirred by the wind which blew up the canon, and the quick chatter of a pine squirrel, as he scampered over the rocks and grass after his evening meal. Nothing in these noises to worry the buck, he knew them all; but something else seemed to be in the air. Would he bolt, and should I shoot? No; down goes his head again, and slowly he picked his way toward me. He was in no hurry, and I was afraid that he would linger under the dark shades of the pines so long that I could not see the sights. It seemed a long time, but I don't suppose it was, before that buck got close enough to suit me. I didn't propose to miss him, and waited until he was within seventy-five yards. I knew that if the old gun would shoot at all I could down him then. Mighty carefully I poked the rifle over the rock, drew a fine bead on the neck and let her flicker. The echo of the shot came booming back from across the valley, and as the smoke cleared away, I saw the buck in the dry pine needles. If I'd missed that buck I'd given up shooting, that's all."

FRANK F. FRISBIE.

GLIMPSES OF CAMP LIFE

Camp on Willow Creek. Photo by F. F. Frisbie.

FLORIDA FUN.—IV.

While H. still lingered at Pensacola, there came Mr. P. Jones, of Paris, Ky., a civil engineer by profession, and a sportsman by nature. A number of years ago he was employed in surveying the wild lands of Florida, and it is interesting to hear him discourse concerning the insect life that makes existence a burden in those regions. He can give complete accountts of much of the fauna and flora, too; so that H. found him a most agreeable companion. Jones was wanting to shoot some quail, and H. is always wanting to shoot them; the Forbes boys said there were any quantity ot quail at Greenwood, twelve miles north of Marianna, and gave Jones and H. a letter to one of the farmers up there, and the L. & N. R. R. sold them round trip sportsman's tickets for $1 (the regular rate is $10.60, so they went.

Reaching Marianna at midnight, they slept soundly till six, swallowed part of an indifferent breakfast, got a good team and a very small negro boy for driver and started, with high hopes of good sport. At the end of two hours' drive, over fairly good smooth roads, they found their man, or rather his house, the man himself being somewhere on the plantation, so they got out the guns and started to hunt him. As they walked out through the fields H. saw they would not be disappointed this time, for it was too good a place for quail, not to have lots of them. On every hand there stretched away long reaches of level land; cotton fields, corn fields, sedge fields, and squares of grassy pine woods, an ideal country for quail to live in and an ideal place to hunt and shoot them in.

They soon found Mr. K., to whom the letter was addressed, and gave it to him. He tried for a while to read it upside down, but made no progress. Presently H. remarked that it was very difficult to read Mr. Forbes' writing unless one was familiar with it, and suggested that as he was used to it he might be able to make it out, and taking it from Mr. K's hand, read it to him, thus ending a situation that was embarassing to both parties. When Mr. K. understood that he was requested to take care of H. and Jones, and do what he could to show them birds, he gave them a welcome, and hoped they would enjoy themselves.

For several minutes old Jack, a setter that Mr. Forbes had left with Mr. K. had been on a point within four rods of the party, but as the cover seemed hardly thick enough to hide a mouse, they paid little attention to him, but Mr. K. presently called their attention to fifteen quail sitting in a compact bunch, and asked the hunters to "kill the last one of 'em at one shot," but they told Mr. K. they did not do it in that way, and then flushed them, killing one, as they went away for some pine woods at the other side of the field. By the time the singles were hunted up, and a few killed, Mr. K. said it was dinner time, and took the boys to the house, but dinner was not ready for two hours, just because Mrs. K. thought a big lot of extras must be got for the strangers. Such a dinner as she prepared was worth waiting for. The table was loaded with substantials. Except that there was no milk nor butter, it lacked nothing, but H. and Jones confined themselves mostly to country sausage, and for desert ate a large block of pear cobbler.

After dinner they went after quail for a couple of hours, but it was too cold for comfort, so they came to the house. The host built a fire in their room. It consisted of four or five small sticks of wood in an old-fashioned fire-place; the doors were all left open, and the dogs got their places next to the fire. H. stood this for just fifteen minutes. Then he went to the wood pile, picked up the axe, and cutting three "fat" pine logs as big as he could carry, put them on that little fire, and filled in beneath, among and on top with the splinters split from another length of the same log. In five minutes there was a conflagration that would have astonished a New England fire-place of ye olden time. The dogs retreated; the circle of humanity widened, and gran'ther K. got his knee burned before he knew it, while Mr. K. said it was the best fire he'd ever seen, and his two little boys ran out to see if it was "blazin' out of the chimbly top."

A hearty supper, an elegant bed, and a good hot breakfast put the hunters in good trim for another shoot, but the weather was bitterly cold, the ground was frozen and the wind blowing a gale. The negro farm hands were shivering round a fire in the barn yard, and two negro boys were bundled in old shawls and leaning against the lee side of the barn. The cattle looked pinched and drawn up, while the chickens were so chilled they were stupid. It was not likely that quail would be stirring, but Jones must go back that evening, so it was resolved to pay no attention to the cold, and they put in five hours. It is too long a story to be told in detail. They hunted ten hours in all and bagged forty-eight quail. There were just lots of quail there, and two good shots could have bagged 100 birds in a hard day's work in good weather. There are a hundred thousand acres of probably just as good ground all around the spot. For a day's shooting or for a whole season's shooting, H. has never seen a more promising region. How long will they last? About two more seasons. Last year two parties came here to shoot; this year, probably two dozen, and next year fifty. Then birds will get scarce, and "no hunting" signs go up all over the plantations.

In the afternoon Mr. K. drove them back to the station, where they arrived thoroughly chilled, and did not get warm until they got into the thoroughly heated cars. Jones went to Pensacola, but H. stopped at De Funiak Springs to have some more shooting with Lee Cawthon, and was pained to hear that Lee's dog had been poisoned the day before. It will be well for owners of good dogs to remember that wherever there are sheep in this part of Florida there is likely to be poisoned meat lying around, put there to poison dogs and wild cats. Not wanting to lose Joe, H. concluded to take no chances, and went on to Pensacola the next day. Jones was surprised to see him back so soon, but said "Its all right, I haven't told any lies about our trip yet."

It way seem strange that so little reference has been made in these articles to that greatest of Southern curiosities, the negro. They are not so numerous in this part of the South as in most places, but a few incidents came under the writer's observation that are worth relating. H. was standing on a wharf watching a boat full of negroes fishing. The stern of the boat was tied to the wharf, and in the end sat a boy nine or ten years old. He hooked a good-sized shark, which at once rushed for deep water, dragging the boy the length of the boat, upsetting negroes, bait cans, and pretty much everything that was loose. An old white-wooled patriarch in the bow of the boat said, "Tak' car', niggah! tak' car', niggah! yo' done

gwine to let dat fish get away from yo'. What fo' yo hooken' a fish bigg'n yo' is anyhow?"

A coal black negress and a mulatto were quarreling. The mulatto called the other an "ol' brack nigger." "Yes," said the negress, "I is brack, an' I'se proud of it. I'se just like de Lawd made brack folks, an' He made white folks, but He never made no yallow folks. Whar yo spect yo' go when yo' die? De Lawd say, yo' can' cum in heah; you's none ob my chillen; de debbil say, clar out now, I'se got mo' 'spectable folks dan I got room foh now." Talking to themselves is universal among the Southern negroes. A little tot of three or four years looking at Joe, said to herself, "He sho dun growed big."

While the train was waiting on a side track, the Pullman porter stood outside to get a little fresh air, and H. standing just behind him, heard him say to himself, "I reckon some folks mus' travel when they only got enough money to pay their fare. Now, there's that man and his wife an fo' chillen got off at Nashville, I shine all their shoes an' carry them chillen water half the night; he gimme ten cents." As the train neared Cincinnati, this porter busied himself as usual brushing off the passengers and receiving the usual tips. After finishing this work he approached a man sitting near the middle of the car and holding out a two-cent piece said, "excuse me, judge, but I reckon you must have made a mistake an' give me one of your luck pieces. You gave me this, an' I didn't 'spose you'd want to part with it." He got a quarter.

O. H. HAMPTON.

IN MINNESOTA WILDS.—III.

(Concluded from page 142.)

" Ay, this is freedom! these pure skies
Were never stained with village smoke;
The fragrant wind, that through them flies,
Is breathed from wastes by plough unbroke.
Here with my rifle and my steed,
And her who left the world for me,
I plant me where the red-deer feed
In the green desert—and am free.

"Alone the fire, when frost winds sere
The heavy herbage of the ground,
Gathers his annual harvest here.
With roaring like the battle's sound,
And hurrying flames that sweep the plains
And smoke-streams gushing up the sky.
I meet the flames with flames again,
And at my door they cower and die!"

We were located in the "Old Saw Mill" country, where game of all kinds abounded. The heavy timber, spruce, tamarac and white cedar afforded excellent cover for the big game. This same timber had also attracted some sharp thieves, as not less than five saw mills have been in operation here and much valuable timber stolen. Huge piles of slabs still remain, and the natives from far and near go there and haul them away to help build their houses and stables. It is an easy matter to rob Uncle Sam in that country.

We found the country cut up with big game tracks like a cow-yard. They had evidently been here in droves. One mile southeast from this camp was an immense muskeag, with a small lake in the centre of it. Moose, elk and deer watered here. Ducks were plentiful enough to supply our table. One day while tramping around the lake I found an excellent pair of moose horns, they were well preserved with the exception of a slight gnawing done to one side I gathered up my find and slung them over my shoulders and started for camp, and I came within an ace of getting shot, for as Doc was preparing tea, he heard me blundering through the thick tamarac, and could see only the horns, thought of course he had moose in sight, and reached for his rifle. Fortunately I saw him in time and yelled.

Fifteen miles northeast from this camp, and on a well-travelled trail, lives my old friend Mimi and his interesting family, with whom I spent several pleasant days. So much did they interest me that I rode back to the ranch, a distance of seventy miles, for my camera, in order that I might carry away with me the photographs of them all. Mimi is a descendent from the old Hudson Bay trader, his father being of Scotch descent and his mother Indian. He is a most charming old fellow, and he has always lived in Manitoba, Minnesota and North Dakota. He would sit around the camp-fire at night and tell stories of how in the days before the iron horse had traversed this country, he, with others, used to pack their supplies in from St. Paul to Winnepeg. Smoking seemed to loosen his tongue, and he would talk for hours. He is a past master in the art of hunting. I never really saw still-hunting done so perfectly as he does it, and after hunting with him a few days I ceased to say that I was a still-hunter. I have actually seen him divest himself of all clothing except his mocassins in order to get within shooting distance of an old bull moose. They never take any chances at one hundred to two hundred yards, therefore rarely ever fail to secure their game. I have known him to follow a wounded animal patiently for many hours and camp over night on his trail. This old man is a genius. He plays over one hundred tunes from memory on the violin, and plays them remarkably well. Two of his daughters are being educated in the Convent at Devil's Lake. One day I asked him how many children he had. Counting on his fingers he replied: "Un, der, trois, quatre, cinq, six, maybe seven, I dunno, maybe more, I dunno, I cant tell, maybe some I dunno."

He and his family are noted everywhere in the country for their honesty and truthfulness. I found that when he promised you anything you could rest assured you would get it.

He had promised me that if I will come there next September he will take me into a section of the country not many miles from the Lake of the Woods that has never been hunted by white men, and by very few Indians. I hope to go, for man never had better guide or companion. His first thoughts are always for your welfare and comfort.

There is a section not far from the old mills that I am convinced contains oil, and should I go there again shall be prepared to find out positively. I should strongly advise my New Jersey friends who cultivate cranberries to go to that country, as that berry grows there in wild profusion in every bog and swamp, and is never disturbed by man.

At one place we stopped and photographed two moose and one elk which a native had in captivity. He also had several deer which came running from the swamp when called and ate from his hand. Just one week before I started for home we had our first snowfall, and fortunately for me I was with Mimi. I learned more in one day's hunting than I ever knew before. We could have slaughtered game had we wanted to, but I was out for schooling, and I got it. Each hour spent with this old man I laid away in nature's store-house, knowledge that is priceless. Perhaps you wonder why I talk so much of him. Let me say in conclusion that I, like others I know, have been humbugged so by men calling and advertising themselves as guides at fabulous prices, that I am gratified when I do find one so honest and conscientious as Mimi and I am sure there are many if you could only find them. They deserve all the credit due them. The man I first started with promised so much, and fulfilled nothing he had promised. He was one of those sharks we have all met, and if we had a good time on this trip it was not due to any exertion on his part, for I think he was the laziest man I have ever hunted with. This has not only been my experience, but the experience of several other sportsmen with whom I have come in contact.

I want to go into that country next season if I can spare the time, and I shall certainly pitch my tent with Mimi.

I have been asked many questions regarding the game to be had there, and to one and all I say that I shall be pleased to answer them and give any information I may possess, provided they come with Forest and Stream's endorsement.

WABASH.

Natural History.

A Glass Snake.

Who is it that has not heard of the wonderful feats performed by the so-called jointed snake? We have been told that the strike of one of these curious reptiles meant immediate dissolution, the body would unjoint and pieces or joints would go wiggling and squirming off in every direction, and unless the head part was captured and smashed, after all danger was over, the joints would come together and the snake be whole again.

With the exception of a few old negroes, we have never met a person who actually claimed to have witnessed such performance. Last fall, a young friend where I was stopping at Tapeto, Miss., remarked that he had killed a jointed snake out in the front of the hotel. We rushed out at once to see. We found about twelve inches of the head part and about the same length of the tail, but the middle was no where to be found, yet my friend declared that the snake was at least three feet long; and an old negro woman insisted that it was much over a yard long, and that "lots of it had done gone and runned off and hided." I picked up the tail part, and to my astonishment, it would break squarely in pieces just from its own weight. The breaks look like a broken stick, or the pith of a dead, dry corn stalk, leaving no skin or leaders hanging, nor blood showing, everything just come square in two. The snake was about three-quarters of an inch in diameter and three feet long (I found only about two feet of it) of a dark greenish color, and the shape that of the common black snake, except that it had a very blunt tail.

Will some one who knows be kind enough to tell me what kind of snake it was, and is there such a thing as a jointed snake?

SNAKE.

[It was probably a "glass snake," or "joint snake," which is not a snake at all, but a legless lizard. The vertebrae of the tail of this lizard (Ophlosaurus ventralis) are exceedingly brittle and break off at the slightest blow. The belief that the two parts come together and reunite is to be explained by the fact that after the tail is broken off, a new one grows out. There was probably a mistake about the original length of the one you saw. The two pieces examined were probably all there was of it. There is another legless lizard found in India, which is also known as "glass snake."]

The Birds of Eastern North America.

We mentioned a short time ago the "Handbook of the Birds of Eastern North America," on which Mr. Frank M. Chapman, of the American Museum of Natural History, has been engaged, and which is now in the printer's hands. It will be published at an early day by Messrs. D. Appleton & Co. The volume will be fully illustrated, and is designed to render the identification of birds, either in the field or study as simple a matter as possible.

Mr. Wm. Dutcher, who has given special attention to Long Island birds has gone over all the species which are found in that locality.

Camp-Fire Flickerings.

"That reminds me."

When a fair-sized boy I was compelled to live for a while with a family who lived at some distance from any neighbors. The wife was very set in her ways, and was a regular attendant at a church about two miles from the house. She was also the head of the home establishment, and both of these people were almost as cross as bears.

The church being at such a distance, they went in their carriage. Since they did not care to leave the house without some one being there, he would generally accompany her, and I would stay home, but once in a while I would reluctantly have to go in his place.

The services then, as at other churches at that time, were of the long kind, commencing at ten o'clock in the morning and closing at three in the afternoon, with an hour's intermission at noon. Consequently those living at a distance from the church like ourselves who attended both services were away from their homes some six hours or more.

I had traded for a short old-fashioned rifle, bored out for a shot gun, and when the couple were away to meeting, since they stayed through both services, I had a splendid opportuntiy to spend a good long time in the woods with that gun. Right jolly times I had with it, too, but managed to be at the house with the gun and game, if any, disposed of before their return, so that it was quite awhile before they "caught on" to the racket. But one Sunday when I unluckily happened to be a trifle later than usual, one not realizing how fast time flies when one is enjoying himself, they saw me as I came to the house with gun in one hand and a big partridge in the other. Then didn't I catch it, though! They both scolded until their talking organs were exhausted, and finally wound up the affair by the old duffers giving me an unmerciful whaling. But, what was the most unkindest cut of all, I was told that from then, instead of his going, I was to accompany the lady to church every Sunday.

After that for several Sundays in succession I accompanied her like a dutiful boy. But on one pleasant Sunday, for some reason, she concluded to return home at noon instead of staying through the afternoon service, and when we were near home, bang went a gun off in the woods a short distance from the house. Shortly after we arrived, who shall come around the corner of the barn but the old chap with my own little rifle and a couple of wild pigeons. As he knew nothing of our return, it was a complete exposure for him. How he ever managed to shoot those pigeons I never could guess, as he knew no more about handling a gun than a wild Hottentot would. Wasn't he surprised to find us at home, and didn't he look sheepish when caught, and didn't the old lady give him a lovely scolding, though! She fairly boiled over. "The idea," said she, "of your whipping that boy for breaking the Sabbath by shooting one bird, and here you, a man, or supposed to be one, come sneaking home with two birds that you killed with his gun this very day. You deserve twice as much of a whipping as you gave him, and I would like to give you a good one if I was able." But she wasn't. So after berating him to her heart's content, it was decided that after that he should accompany her to church instead of me. So I was left at home under injunction that I would not go shooting again when they were away on Sundays; but we all know how much a boy having a gun and several hours to himself, and who loves roving through the woods after game as I did could observe the rules under such circumstances. It will suffice to say that they never caught me that way again.

A. L. L.

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18, Madison Square Garden, New York.—First annua Sportsmen's Exposition.

THE SUNNY SOUTH.—VI.

COSTUMES AND CONVENTIONS

CHICAGO, Ills,, February 12,—When I was out in the cane brakes hunting bear with Mr. Bobo, I didn't think very much about my clothes, and in fact didn't stop to think much about anything, even my baggage which had gone South somewhere with Tom Divine, It was only after I had said good-bye to Mr. Bobo, and gone aboard the southeast bound express that I realized that perhaps my costume was not what it should be. I had on corduroys and leggings and hob-nailed shoes and a very wide white hat which lopped down and had to be tied up. Item, one spur. My entire baggage consisted of a bundle made of one bear's skull, done up in salt and a rag, surrounded by a sweater and a buck-skin shirt, buckled into a belt bearing a knife scabbard. Not even a paper collar of my belongings was attainable, and what was more, I didn't know where I was ever going to find any of them, certainly not until I reached New Orleans I was unshaven and sunburned, and I presume I did look pretty tough. Anyhow the porter on the Pullman told me I did. On board the sleeper I was so much observed that I put on my sweater and that not seeming to help matters, and having no other raiment I went to bed in self-defense.

At New Orleans it was worse yet, and wherever I went people turned around and looked. Several very nice looking girls that I wouldn't have minded bracing up to if I had had on my store clothes, and who wouldn't ever have looked at me then, turned around and looked at me and laughed merrily. That made me feel bad. I wasn't saying a word, not even when a barber asked me what part of Texas I came from. When I told him "Chicago," he fell into a deep silence, at length remarking, as if to himself, "That thar Chicago must be a mighty strange place," which remark he left unexplained and detached.

At the Cosmopolitan Hotel I was followed with suspicion by the porter. I asked the clerk for my mail, and he said there wasn't any. Then I saw behind the counter my own hand-bag and I went around the counter and fell on it with joy, and the clerk ordered me out, and I didn't go, but was fishing out anything I could find in the way of help to my costume. I never knew before how mighty are the artificial conventions of life. In the woods I was happy; on board the train running through these woods I was miserable. At the city I was still more miserable. All I could find in the valise was a soft hat. This I put on, and thereat the clerk concluded he did have some mail for me. I found instructions from Mr. Divine, who said the party had gone on down the river and were going to camp out somewhere, probably below the Quarantine, about 100 miles from New Orleans. Mr. Divine informed me that my friend Mr. R. B. Organ, of Chicago, (who had previously been a stranger to Mr. Divine) had gone on down to Memphis and thence to New Orleans with Mr. Divine, and was now with the party down the river. Mr. Organ heard I was going South, and allowed he would like to go too. I told him he couldn't, for I had never yet met my hosts, but he said that didn't make any difference, and that as he had to go he supposed I would have to fix it up somehow. So I had done this, the Southern hunters' hospitality being equal to everything. And all through the trip we twitted Roll Organ about pushing himself in where he wasn't wanted,

and told him he wouldn't go again—none of which disturbed him in the least. He had a dozen new friends by the time I caught up with him.

But to catch up, that was the question. Dr. Powell, of the U. S. barracks, at New Orleans, called on me at the hotel and said the entire party had started down the river on a tramp steamboat, and that the boat had been disabled by the breaking of some machinery off Point LaHache, five miles down stream He had left the boat there and gone ashore and thence returned to the city by rail. He didn't know where the others were. Possibly sunk and drowned. If I could get to Quarantine and find Dr. Fred C. Mayer there, I could learn where the party had gone.

This was Saturday. No boat down the river. Quarantine about thirty miles below the end of the longest railroad running down the river; party beyond Quarantine somewhere. Meantime, a ray of hope in the way of a telegram from Mr. Divine at Quarantine, telling me to take the New Orleans Southern train that evening at 5 o'clock.

The New Orleans Southern train runs down the east bank of the river about forty miles, and stops at La Hache. The Grand Isle road runs down the west side of the river about sixty-five miles, and stops. The trains start at about the same time on the opposite side of the river. Mr. Divine should have told me to take the Grand Isle, but he would have spoiled a pretty comedy of errors if he had, so I was glad he didn't. I followed copy, and bought a ticket for La Hache, on the east, or "sugar side" of the river.

THE NEW ORLEANS HUNTERS' SPECIAL.

That Saturday night train out of New Orleans is a subject for a magazine article There is nothing odder in all the world. The passengers are all hunters, and such hunters! The guns have barrels five feet long. There are no canvas hunting coats, but great net game bags, of a pattern of a hundred years ago. These game bags bulge out with loaves of bread, bottles of wine, powder flasks, all the necessities of the chasse. Everybody speaks French; everybody blows a duck call. The train goes down through the sugar plantations slowly, pausing long at villas of French names to let in or off some laborers or perhaps one or two planters; therefore, in due course, say by 9 o'clock, everybody gets very drunk and disorderly, but in a friendly, good-natured way, at which no one could take offense. It is all very odd—odder than anything I have ever seen connected with American hunting. But, thank fortune! everybody was very dirty and disreputable, so I felt quite comfortable again in my costume and peacefully scraped away cleaning my bear's skull in the dirtiest railroad car I ever saw any where on earth.

It is a great country, this America, and here we were only in another part of it, though so strange that to the Northern man it would seem like another land and in another age into which he has fallen.

At Point La Hache, this singular railroad train at length came to a final stop at midnight. The Sunday duck-hunters all lumbered off in the dark, drunk and merry. I found there was a sort of inn, and at length started for it in company with its landlord, who was having a few hours' chat with a friend at the station. No boat down that night. Quarantine! Ah, unfortunate, sad! Monsieur has taken the wrong side of the river. It is the Grand Isle road, not the Shell Beach, that one needs. No train south on the Grand Isle to-night; unfortunate, sad. But in the morning the train goes south, and one can ferry over the river by the skiff of Manuel, its boatman; and one can, of course, have bed and breakfast.

THE INN AT POINTE LA HACHE.

Yes, very good bed and a very good breakfast I had, too, the latter of a creole sort of cookery new to a Northern man. I crossed the road to the family house for breakfast, and the young landlord's mother was feeding a tramp when I got there. The walk led through a bed of roses. The air of the morning was soft and warm. It was all as a different world to the barbarian from the north But this good old Southern lady can do wondrous things with chickens and rice and peppers; and there was such coffee! And were there not odd colored prints, pictures of the Saints upon the wall and two nice demoiselles to bring more chicken, rice and peppers, and to be informed of the North, where ice grows upon the rivers and there are no roses in November! And still there are those who think it all of hunting to hunt!

Manuel, the boatman, for 20 cents in hand to him paid, rowed me across the Mississippi, the same stream across which one can kill a duck in Minnesota, but which here is a steady rolling sea, tainted with the salt of the gulf below. The mathematical green blocks of the sugar cane country gave place to the mathematical green rows of the Orange country. Here I got my Grand Isle train about noon on Sunday, but after many stops at orange plantations I found that twenty-five miles was all I could get out of it. But I landed at another country inn, and in time for a good mid-day meal, so I felt that all was still well. I was within twenty-five or thirty miles of Quarantine, and my friends couldn't be more than that much beyond it.

DOWN THE RIVER.

This inn I found to be an adjunct of a country store, where they sold such goods as the 'Cajuns use—cotton goods, whiskey, powder and shot, steel-traps and flannel. The room was full of 'Cajuns, some very pleasantly drunk. Among these the landlord sought diligently to get me a man to sail me down the river to Quarantine, I having announced that I could not wait, which seemed a very strange and indigestible fact to him, who probably hadn't seen anybody in a hurry for a long time before. One man could go in the morning; another suggested that a willow boat would be going down to the jetties that evening or in the morning; another would go if he had a boat; another thought it quite far, yes. And it was coming on cold, very cold (about Fourth of July weather for Chicago).

At length the obliging landlord told me that about three miles down the river lived one Albert Barroner, a river fisherman and hunter, who would perhaps take me down to Quarantine. If I liked to try, I could have his horse and wagon to go down and see Barroner. This was good. I resolved to face toward Quarantine and not come back, no matter what Albert Barroner or "Albare Bow-wow," the nigger driver I had accumulated, called him, might happen to say about it.

My nigger talked French, and it seemed to me a very strange, weird, unnatural thing for a coal black nigger to talk French, so that every time he began I felt like getting down out of the wagon. The horse talked nothing but French also, and didn't understand that very well. The nigger told me that he was in a awful big hurry, as he wanted to get back and attend a funeral. I explained to him that I didn't want to deprive him of a pleasure, and didn't care how fast he drove if the horse didn't. So we went on toward Quarantine. Went on until the wagon broke down, with Albare Bow-bow's house not yet attained. I shouldered my bag and started ahead on foot, leaving the French-American-African, to get back to his funeral.

VIA M. BOW-WOW.

Albare Bow-wow I found to be an old, gray, weather-beaten man, who spoke weather-beaten French and no English. He would take me down to Quarantine, twenty-five miles down the river, for three silver dollars, but alas! his boat was across the river. His son needed a pair of shoes, and had gone across to get them. Would Monsieur come in and have a cup of coffee while the matter was brought into consideration? So I accepted the simple hospitality, and evolved the deep proposition that maybe Mr. Bow-wow could borrow a boat of his neighbor and sail over the river and exchange boats with the young man who was in need of the pair of shoes. To this Albare could find no serious objection. In less than an hour and a half he had borrowed a boat; in less than two hours he had said good-bye to his wrinkled old wife and his Evangeline of a daughter, had girded up his thin jacket, taken in hand a piece of bread and plenteous tobacco, and were off! In mid-stream we met the other boat coming back. Making the exchange, Albare headed down stream, we spread our ragged brown lateen sail, and went foaming down the mid-current of the Mississippi in the last of the many sorts of locomotion that had proved needful in the quest for Quarantine, It was 4 o'clock in the afternoon when we started. Albare said if the wind held we should make Quarantine in three hours, But the wind didn't hold, It never does when you want to go anywhere by sailing boat. It shifted and lulled and died away at sundown. The air became very cold, and I was fain put on my hunting clothes again Albare took to the oars, and he being an old man seventy-five at least, I should say, I was ashamed to see him row, an so I did most of it myself. Seven o'clock came and eight o'clock, and it was black on the river, and every red steamer light we saw we thought was the light at Quarantine. But at length we did make Quarantine, after thirty hours of as wierd travel as I ever did.

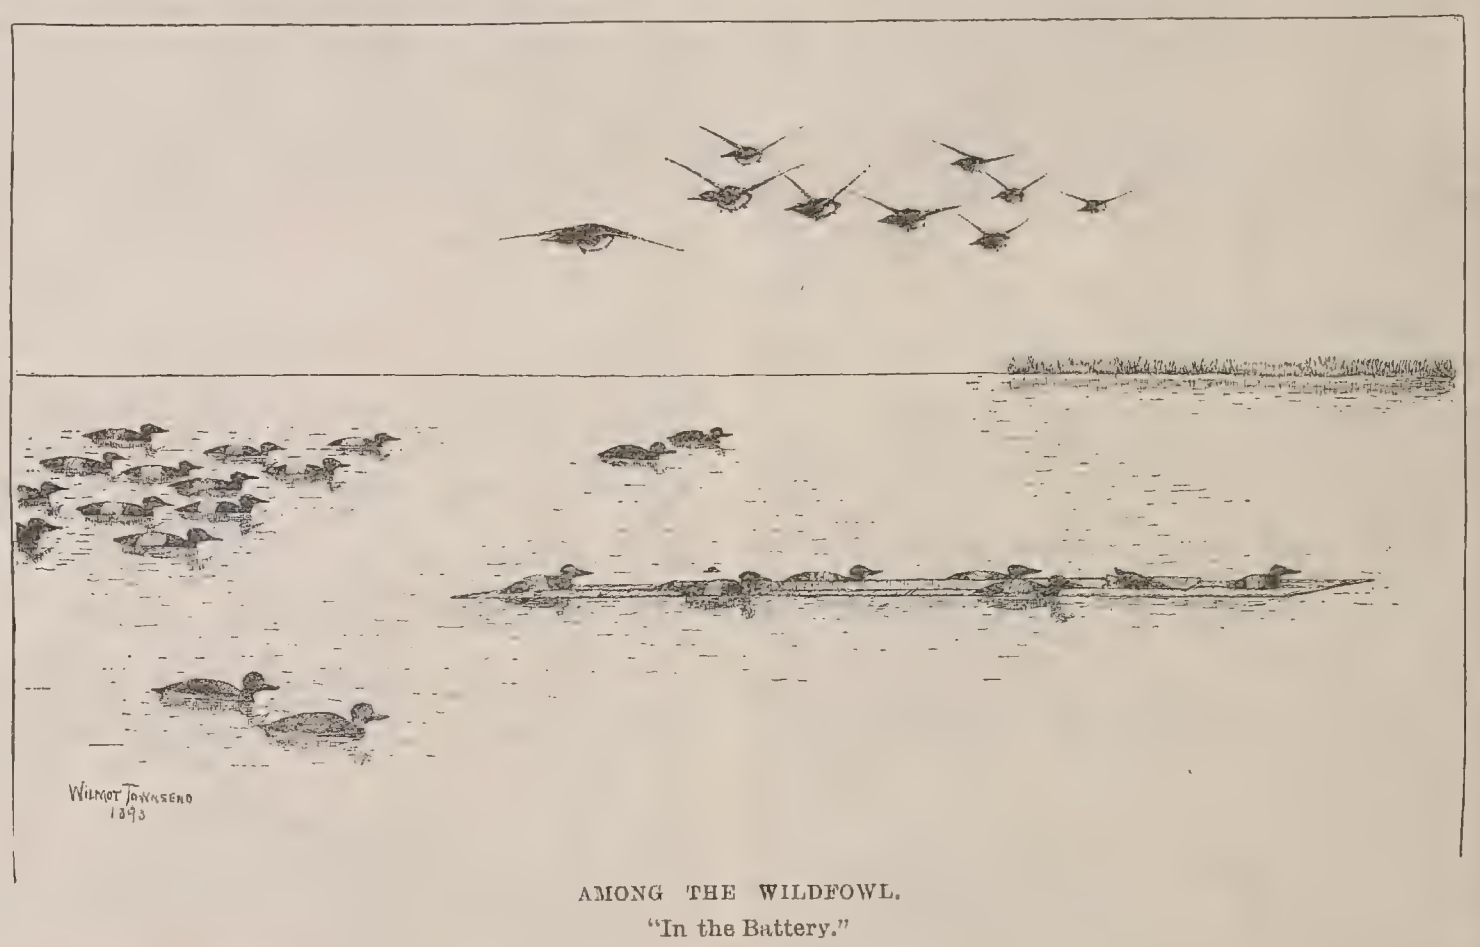
QUARANTINE AT LAST.

There was a light at Dr. Mayer's house, and toward this I made, hearing as I approached, a sound of revelry by night, with a sinking of the heart as I thought again of my corduroys, buckskin shirt and paralyzed hat. I knocked, and a flood of light burst forth. There, just finishing an elegant dinner and all dressed in the best clothes they had, sat Tom Divine, Roll Organ, Mr. Foster. No one recognized me till I stepped in, when, seeing they were not ordered to throw up their hands, the diners looked more closely at the stranger. Then there was a big yell and I was much mixed up with a lot of them, and they wanted to know where I came from and all that. Then they introduced me to Mr. Mayer, the health officer at Quarantine, who, with the tact of a true host, convinced me that my clothes didn't matter, and that the best thing I could do was to sit down and eat something. There were also present Mr. Parmalee and Mr. Johnson, of New York City, and Mr. Jewell, of New Orleans, who were on a hunting trip down in that country.

It was well in the evening when Dr. Mayer's insistence as host allowed departure. At that time I had persuaded the party that we really had killed three bears up in the Mississippi, offering in proof the skull of the one that I had with me, now much improved by the cleaning on the Shell Beach railway car. We now embarked in a schooner or lugger, which it seemed was part of our camp outfit, and hoisting the big boomless lateen which all the luggers of that region have, we calmly swam away to our camp on Dead Man's bayou, one of the thousand cut-offs which cross the marsh of the mouth of the Mississippi. And here I found the oddest and the most comfortable camp I ever lived in in my life.

IN CAMP ON DEAD MAN'S BAYOU.

There were two great wall-tents, each about 20x25 feet pitched on the bank at the edge of the bayou. The highest land was only about two feet or so out of water at high tide. In every direction the marsh stretched, even, uniform, perfectly level, cut up by myriads of pond holes and passes and channels. There were no trees, no wood and no water—for the water here was all salt. All the cooking here was done on a charcoal furnace, and the drinking water came out of a barrel.



All the vast luggage of this camp had been brought on from New Orleans, where it is the property of a little club of gentlemen, of which our hosts, Mr. Divine and Mr. Foster, are members. There were to have been several other gentlemen with us, but they failed, so only we four had the whole camp, which evidently wasn't planned on the small and lonesome style. There were barrels of vegetables and tinned goods, sacks of charcoal, cots, trunks, nails in the tent poles, and all that sort of thing. We had two colored servants—and better ones no man ever had—Jim the cook, and George the table servant and butler in chief. We had a schooner of thirty odd feet length, a captain and four men who were to serve as paddlers. And at the bank lay four pirogues, or native boats. Certainly we had all the requirements for absolute happiness, from a camper's standpoint of luxury. And as we lay on the cots in the big house tent, which was filled knee-deep with a fragrant grass which grows along these shores, we figured it all out that we were the four happiest men in all the whole wide world.

NITRO COFFEE.

In the morning we tried a casting net from the stern of the lugger and caught some fresh mullet, that multitudinous and obliging sea fish, whose object in life seems to be caught and devoured by all things. We had birds and shellfish and mullet and omelets, and I know not what all. And such coffee as that nigger man Jim did make! It was the genuine French drip. Alas! we found it to be nitro coffee, and that you didn't want so much of it to do as of the common sort. Jim served it in big cups, and nearly ruined our digestion, albeit we felt very good at first.

ACADIE BY THE SEA.

But there will be many who will be wanting to know all about the shooting, how much game there is and how to get at it the quickest way. For these, some words descriptive of the conditions of the country will not be out of place.

AMONG THE WILDFOWL.
"In the Battery."

There is a vast strip of country lying on each side and back from the mouths of the Mississippi; indeed, one might say, covering the whole coast of Louisiana, which is natural wintering ground for the wild fowl. This has long been shot over by the Acadian market shooters, who know small law themselves, and have come to look on that region as their natural heritage. Born on the marsh, with the tide almost washing their doorsteps as it rustles through the endless sea of rushes, sometimes in the great storms losing all they have—houses, cattle flocks, indeed, even families at times—they seem a natural complement and outgrowth of a desolate, monotonous and little known land. It is the exception for one of them ever to leave the region where he is born. Hardly one out of dozens of them can sign his own name. Nowhere in America is there a class of population more densely ignorant or more ignorantly conservative. The ways of the fathers are the ways of the sons. The daughters wear the costumes of their mothers' mothers. As a people, the 'Cajuns are very simple, for they live in communities so simple that straight conduct is a necessity. The men are fairly honest, but hot-blooded and often quarrelsome, the favorite weapon of the coast 'Cajuns being the knife. One of our paddlers had a fine deep scar across the face, where his own brother had stabbed him with a knife; and Tom, one of our men, said proudly of his brother-in-law Emilien, the best paddler we had, that he was "a very bad man. If you dared him to cut off your hand, he would cut it off." So they seem to have some sort of a code among them.

By market shooting or trapping these men make a dollar or a dollar and a half a day. To do this they have to work hard, getting bodily out into the greasy sea mud, waist deep, and pushing their pirogues into the remote pockets of the marsh where the mallards go. All the land about the mouth of the river belongs or did belong to the

Government over it, till very lately the silent pirogue of the 'Cajun hunter plied unmolested. At the time of the building of the jetties, however, the Government made such call for willows or fascines in the jetty work, M. Octave Barroner, who no doubt is a distant relative of Albare Bow-wow, my boatman, saw in the willow industry a great opportunity. Besides working among the willow flats of the upper Jumps of the Mississippi (a "jump" is a channel where the river breaks through its old bank and goes wandering off cross-country in search of the gulf) Monsieur Octave, as he soon came to be called, used to such purpose his boat that before long he owned a lugger. Moreover, he amassed the fortune of $600, or perhaps even more. With this he bought of the government some 6,000 acres of this marsh land, on which a 'Cajun pig could dig grass bulbs (until the tide caught him) and on which there existed great store of raccoons and muskrats, all of which are good to eat. In this way Monsieur Octave became the king of the 'Cajuns. His son Tom, our worst pusher, and the most obnoxious fellow that ever was about a camp, recounted how at his wed ling he had had sixty-five gallons of wine, two kegs of whiskey and over 300 pounds of the flesh of ox, and swine, everybody being drunk and not going to bed for three days. Only the son of a king may do these things so royally. (Tom married a deaf mute, which shows that he had wisdom after all.)

Well, when Monsieur Octave Barroner became king of the 'Cajuns, he issued a ruling for all 'Cajundom that no man should shoot more than half a day, and that all guns should knock off work at 12 o'clock, noon. At any rate, this was the ruling he gave our party, to whom he chartered his lugger, his two sons. Tom and George, his son-in-law Emilien (or "Mary Ann," as we called him for short) and his fleet of pirogues.

The above will give a notion of the conditions to be met at Dead Man's bayou. There is much country entirely open in different parts of the gulf marsh thereabouts, but a reader will see that to get at it he must take a schooner from Quarantine, or somewhere up river, and sail to his shooting point, there either going into camp as we did, with charcoal and a barrel of drinking water, or living aboard the schooner. I imagine that he would need to poke up his guides a bit now and then, or they would be perfectly willing to take his money and not work hard to get him to the shooting. These 'Cajuns are fine duck hunters, and know their country as no stranger can, and do things among the mud and reeds that no stranger dare attempt; but they make their living at this trade, and are not eager, I should say, to see outside folks get much shooting.

A GREAT WILD FOWL COUNTRY.

As to the quantity of the wild fowl there can be no question. This coast country is the natural wintering ground of the fowl, and from Mobile to Corpus Christi, along almost all of the gulf front, they winter in numbers dependent upon the weather to the north of them. Every duck hunter knows that there is no country where ducks can be killed in numbers every day. The shooting even in the best locality depends upon many different and varying conditions of weather and feed. A duck does not go and light in the Gulf of Mexico and stay there till spring. It will work up and down, going as far north into Louisiana, Mississippi and Arkansas as the weather leads it to believe it should. A cold spell through the north and upper south will bring the birds in hurrying thousands down to the coast, and there is where the shooting is to be had.

On the morning of our first day in camp we managed by diligent effort to get through breakfast by about 9 o'clock. Then we went aboard the lugger and sailed down through the passes and bayous till we could see the roll of the gulf. On either side of us we could see great bodies of fowl rising and working, vast black clouds, thousands and thousands of them, such as we never see on Northern marshes now and probably never will again. The sun was pleasant, the sky was blue, the deck of the boat was comfortable. We were of fair appetite, continually in the salt air. By vote, we concluded it was much wiser and more fit to sail back to camp and have some more crabs, mullet and French coffee than to be bothering the poor birds. So back we sailed through the endless, colorless flats of 'Cajundom, and after lunch, wisely went to sleep, Mr. Foster being easily leader at this. I consider Mr. Foster to be the politest man I ever knew, and the best reciter of poetry. He knows every poem of James Whitcomb Riley, and can deliver them better than Riley himself. But you have to watch him. He will smile brightly and say "Yes, sir," to your remark, and then fall over and be fast asleep. We used to have to wake him up to get him to give us Hamlet's soliloquy, or Riley's "Little Town o' Tail-holt," which he would do with unvarying excellence and good humor, and then fall asleep again. This I say in no spirit of reproach of Mr. Foster, who is irreproachable, but as only a showing that he has wisdom, and knows a vacation trip to be a time of rest. To what end shall we destroy these ducks? he figured. And with his wisdom we agreed, and so fell asleep beside him in the knee-deep fragrant grasses of the tent, and the flowing tide came in.

ADVENTURES WITH WILD BEASTS.

Dead Man's bayou is 40 yds. wide and 10 to 20 ft. deep, and the porpoises come through sometimes. The first night in camp, when the two New Orleans servants, Jim and George were left alone in camp together, was a time of terror for them. A large number of raccoons, attracted by the smell of fish and game about the camp, came prowling around the cook tent. To Jim and George these seemed no less than bears, and they fled in terror to the big house tent. Here they found a gun, but it being a breech-loading gun, they did not know how to load it. As they were experimenting with this, they heard a great lunging splash and a loud blowing noise in the channel, just outside the house tent.

"Fo' God! Mistah Fostah, sah," said Jim, "they wuz a whale shoh'ly come froo this place, an' he done splash watah all over de bofe tents." This, it seems, was the crowning incident of the reign of terror of the 'coons and porpoises. George told how they defended themselves.

"I know'd that gun wasn't loaded," said he, "but I know'd the whale didn't know it wuzn't, so I pointed it at him anyhow. It wuz on'y a bluff but we don workd it, an' the whale, he went on 'way when he seed the gun."

"I'll bet if he saw that gun, he saw it beyond over into the far corner of the tent," said Mr. Divine; "go on and get some supper. Don't you suppose these gentlemen ever get hungry."

Mr. M. M. Daily, of Duncan, Miss., writes as follows in regard to the bear country mentioned in the "Sunny South" articles: "As you know, I managed Capt. Bobo's plantation last year. This year I am farming on my own account, planting some potatoes and cotton and raising some bear dogs. During the Christmas holidays we killed two large bear. Had forty-four dogs in the race, and they fought for about an hour before the bear was killed. I wished you were here, for they run him over every man in the crowd, and finally Capt. Bobo had to kill him. The bear weighed 550 lbs. There are more deer here this winter than I have almost ever seen for ten years."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

DUCKS ON NEUCES BAY.

I want to refer the sportsmen of America to what Dick Merrill, (celebrated dog man) of Milwaukee, and H. R. Laning, of Chicago, will say about our last Sunday and Monday's shoot on Neuces Bay. We have just returned from there, where we have had three mornings of as fine and hard duck-shooting as it is possible to produce anywhere. We fired nearly 400 shells per man in three mornings and two evenings, and there were six men in our party. Mr. Laning received a lesson in duck shooting, and he says that he will take back to Chicago something which he did not possess before—the ability to kill a swift incoming blue-bill.

A GAY PARTY.

The prince of the Southwest, George Fulton, had another opportunity to dispense his rare hospitality to a party from the north. Messrs. Boyce, Knight and Sheriff Pease, of Chicago, accompanied by their ladies, spent a few pleasant days on the Fulton ranch, and while the ladies were being entertained at the ranch, the gentlemen had a rare day's sport on Neuces Bay and brought back with them a fine lot of ducks.

The birds that were killed by this party were dealt out to all who wanted them for consumption, but the Chicago gentlemen were imposed upon by an old charlatan who hunts for market, and poaches on the Fulton preserves. As the ducks were being given out by a small lad of the party, the pot-hunter approached the young man and told him that he had a large family and that he could use what remained (about two dozen) so he took the whole lot and didn't do a thing but put the whole business in a sack and send them in for market.

Last week, in company with a few boon companions, Max Luther left the city on the reefs for Mustang Island, where ducks are said to be thicker than hair on a dog's back. All went well until a landing was effected. From the deck of the sloop thousands of pintails, mallards and teal could be seen hovering over the little fresh water ponds that abound on the islands on the Texas coast, and which have all been filled by the late generous rains. The excitement was at fever heat on the little sloop. Everyone was anxious to have a go at the birds, and accordingly, each man constituted himself a committee of one to look after his gun and shells.

Max, who was at the helm, giving out commands, cast a glance of commiseration at his comrades, and thought, "Go ahead, you lubbers. Get excited as much as you can. But wait till the old 'vet' gets out old 'Betsy,' and then you'll hear some music." Then, after each man had received his fowling piece and shells, and not until then did our veteran institute a search for his gun and ammunition.

The deck was ransacked, the contents of the cabin were overturned, and the darkest corners of the hold eagerly sought in a vain endeavor to find that ten guage. The shells were not to be found either, and in a fit of rage the veteran duck-hunter turned to his "nigger" and howled: "Where's my gun, Sam?" "Max, de las' time I seed ol' Betsy she war a lyin' on de counter at Gaawg Robets, sah, an' dem two hunderd shells dat you tole me to buy was a-layin' along side."

Straight as an arrow and plunk amidships the thought struck Max that he had put his gun and shells on Geo. Robert's counter, and that in his hurry to be off to the boat he had forgotten them. He didn't mind the absence of the gun and shells half as much as the talk that he knew must follow. "If that San Antonio dude that writes 'Texas and the Southwest' ever gets hold of that," he thought, "its all up with me. My reputation as a sportsman will languish a perishing thing in the quagmire of neglect, and even the Corpus Christi Caller man will not place credence in my duck stories. Alas! I am undone! And he had to sail back to Corpus, where he found the gun and shells just where the "nigger" had stated they were.

COLONEL BILL FERGUSON.

For probably the same reason that the Hon. Dan Voorhees is called the "Tall Sycamore of the Wabash," the subject of these lines is called the "tall Pecan of the Southwest." Col. Bill Ferguson is one of the most noted sportsmen of the Southwest, having hunted all the four-footed game in America, and is considered on excellent authority on field shooting in general. In his tour of inspection of the different custom houses that float "old glory" to the breeze, Col. Ferguson often takes trips to Galveston, and from there by Gulf to Brownsville, and from the latter named place up the Rio Bravo, to Eagle Pass, when he reaches his headquarters. Describing the beautiful country which he traversed from Brownsville to Eagle Pass, Mr. Fergusos said that the country is in a primitive condition. Thousands of birds of all kinds are there. The Chackalanca he met on all sides. Mr. Ferguson killed some, and he says the flesh is as white as a turkeys, and of a good flavor. The marshes and lagoons are alive withwaterfowl of all kinds, while deer and turkey are often met with on the main trail.

A TERRIBLE ACCIDENT.

Lieut. J. G. Ord, one of the best known and most efficient sportsmen in the southwest, in company with a young and popular lover of the woods, Mr. Charles Eccles, aged about 20, has been scouring the mountains of West Texas and Mexico in search of big game and the pretty things that abound in that wilderness. While at the north of the Pecos River, 22 miles from the Southern Pacific Railway, young Eccles, upon picking up his rifle by the muzzle as it lay on the ground, was shot through the hand, the ball going up the left arm and tearing the flesh and shattering the bones up to the elbow. Lieut. Ord immediately took up the main artery and ligatured it, thus saving the young man's life. "Talk about a game boy," said Lieut. Ord, "that young fellow rode those 22 miles to Comstock facing a bitter norther without a whimper. I led his horse all the way, and he did not speak ten words on the trip." At last accounts the injured boy was doing very well, and there are some hopes of saving his hand and arm.

O. C. G.

IN AROOSTOOK WILDS AGAIN.

The scene was not exactly in the Aroostook wilds, but at the headwaters of the Penobscot River, and only ten minutes walk into waters that empty into Aroostook River. Parties come up the Aroostook River and across into Penobscot waters to hunt. In my letter of March 2, I spoke of leaving this section with a Boston party. The day we left Clarence, Peavy and another guide from the Oxbow settlement on the Aroostook R. R., came there with a sportsman from Connecticut, and when I returned some three weeks later, the first of October, I found that Peavy's party had just left, as their fire was not all out. From what I learned and saw, signs of the Peavy party and another party had been moose hunting there all of twenty days, but going out of the woods in October. The result was that moose were not so plenty as they were when I left in the first part of September. Other parties went back with me the first of October; Dr. McGay from New York was with them.

I helped the Doctor's party to the hunting grounds; we had to cross one lake before we reached the lake where we were intending to hunt. When the team arrived at the lake with the supplies there was a heavy sea running, so that it was impossible to cross with the canoes, and we concluded to wait a while. Some started out for a hunt I showed the Doctor a road that went round the lake to a camp on the carry where we intended to stop that night, and I went part way with him, and when I got back to the canoes the wind had slackened some and I took part of the baggage and crossed; when I returned for the rest, the Doctor's friend and his guide had got back with a caribou. The Doctor's friend saw two caribou near the shore of the lake, he did not know what they were, but knew they must be wild animals, and he opened fire on one, firing five shots, three of them taking effect. We were to stop at the old camp until my man arrived, then we were all going up to the narrows I spoke of in my other letter. The next day the wind blew heavily again, and the Doctor and I took a cruise in the woods and got a few birds. When we got back to camp my man from High Bridge, N. J., had arrived; he also had some partridges killed on his way in. The next day we moved up the lake some three miles to a nice camp ground in the narrows. I had camped there before, so it was not much of a job to pitch tents; a table was already there made of cedar spilts, and a covering of splits was above it to keep off the sun or rain, and seats about it to sit on.

We had everything all ready for a hunt by 3 o'clock. I took Mr. Christie and started up the lake to a dead-water stream. We were intending to call for a moose on this stream that evening if the wind went down. When we got near the mouth of the stream we saw a deer walking and feeding along the shore of the lake. The deer did not seem to notice us, and we kept on without disturbing him, and some two miles up the brook at a shallow place in the stream there was a buck feeding in the middle of the stream. I paddled my canoe in very short range of him before he discovered us. He stood quartering and tail to, but he turned his long neck so that he looked back almost crosswise over his back. He stood a few seconds and then bounded for the woods. We passed on slowly, looking and listening for bigger game. We did not intend to kill anything but bull moose or bull Caribou. It was mostly bogs on the shores of this brook, and we were intending to call where there was an open bog on both sides of the brook. At the head of the bogs there was a high ridge on each side of the stream, and the water was so shallow in the brook between the ridges that a short carry had to be made if we went any further. The stream was some ten rods wide at the head of the bog and suddenly narrowing up to ten feet. When we got to this spot it was getting dark and the wind was still blowing. Near this narrow place in the brook we discovered a big moose wading along close to the bushes hanging over the water. I imagined I saw antlers, and I told Mr. Christie to fire; he did so and the moose started for the mouth of the narrow brook; he fired two more shots. The moose came to hard bottom as it entered the narrow and shallow brook and stopped, turned its head to look at us. We then saw that it was a cow and had no antlers. Mr. Christie said that he hoped he hadn't hit her, and as he spoke she staggered and fell. As we landed, another moose started within thirty feet of us, but through the thick bushes we could not see what kind it was. After dressing the game we started for camp. The next day we went back and took the hide and what meat we could, and hung up the rest to take some other time.

About this time another party joined us on the camp ground. Deer was so plenty that we did not have to leave the canoe to get them, as they were out on the shores and bogs. My man did not care much for deer, but thought he would shoot one at the last of his stay if he could. The weather was bad for calling moose, as it was windy and stormy, and we did not get but one good night during our stay. Two sportsmen, another guide and myself, went to the upper boys on the brook where we had killed the cow. The rains had raised the water so that we could go up the creek without carrying by. Above the dam on the brook, were two branches, one leading to the north and the other to the south, and bogs along the brook for four miles. I took the north branch, the other guide took the south. I called at different times for three hours before I heard a sound of a moose; I then heard one in a ridge. The stream took such a turn that the moose had to cross near the dam to come to us, and the other party had got tired waiting and had started for camp; they had not heard the moose, the noise of the water running through the dam prevented them from hearing him. He crossed just in front of them, and they heard him as he started through the thick alder bushes just in front of them. They had frightened him. We could hear his antlers rattle on the bushes and trees as he went off, and as we heard the other party talk after the moose started, we

well knew that that hunt was up. The chill of the night made us go to camp.

A day or two after this, Mr. C. and I were on another dead-water stream at the head of the lake, and Mr. C., as usual, sat in the bow with rifle in hand, and as we came round a bend, three deer stood at the water's edge. He fired at one. As the ball struck the deer leaped into the water and swam for the opposite shore, the other two leaping after the first, and he finished the three before they could land. We hauled them on shore, loaded them into the canoe and started for camp. When we got to the lake it looked a little risky to go down the lake, but the wind was with us and we started. The further we went, the rougher the water, but we landed safely, shipping some water.

This ended our hunt. Talk about camp life; and such appetites as we all had, with good big hard wood fires, and nothing to eat but moose, deer, caribou steak, cranberry sauce, best of Maine potatoes, pork and beans, bread, and a variety of other eatables. Every man was sorry to break camp, but the time had now come, and we packed up and went to the foot of the lake, hoisted a gate in the dam that gave us water to run our canoes with, the most of our game, down the stream to the next lake and met the teams that took us out twenty-five miles to the railroad. I left the canoes and camp kit for parties that were coming later.

LOWELL, Me. J. DARLING.

THE SPORTSMEN'S EXHIBITION.

The Board of Trustees of the Sportsmen's exposition have received the following additions to the list of exhibitors: Overman Company, Smith & Wesson Revolver Company, Reublien Brothers, Barney & Barry Skate Company, Outing Publishing Company, Chemical Lubricating Oil Company.

This increase clearly shows the growing confidence and interest in the exposition, and swells the number of rented spaces to nearly eighty. The attention of the association is now being given to plans, by which the sportsmen and the general public may be taken care of when the exposition opens and be properly handled on the several days. Arrangements are now in progress to devote one day each to the several geographical sections in the vicinity of New York. The dates are not yet decided upon, but one day will be devoted to all the shooting, fishing and field clubs of the State of New Jersey. On this day the organizations will reign supreme, and it will be known as New Jersey Day. One day will be set aside for Long Island, one day for New York State, one day for Westchester County and vicinity and one day for clubs of all the States. On each of these days official badges of recognition will be issued to every club, and special courtesies will be tendered to them by the Association.

Another special feature in the attendance will be a hotel-keeper's day, on May 13, when the convention of hotel-keepers of the United States will hold its meeting. Several thousand delegates will attend, and special arrangements will be made with the delegates to attend the Sportsmen's Exposition in a solid body. The event cannot fail to attract a large representation from every quarter. In the same line with this liberal policy, the Sportsmen's Exposition has undertaken the herculean task of sending by mail 200,000 circular letters giving information regarding the exposition. These circulars will be sent to every known sportsman throughout the United States, Canada and Europe, which will include ministers, lawyers, journalists, railroad officers and professional men generally, who are interested in field sports. This plan has been adopted as the most effective means by which the army of sportsmen who will, if they are well informed of the character and objects of the exposition, be desirous of becoming associate members of the Sportsmen's Association, by which means they will be entitled to the advantages of special reduced travelling rates on railroad and steamship lines. In order for the general public to obtain the benefit of the one and one-third rate of the several roads, the companies require you to be a member of the Sportsmen's Association, and the association has under its constitution, a membership of associate members for exposition purposes only, and for information regarding terms of membership and railroad rates, address Frederic S. Webster, Sec'y, 106 E. Twenty-third street, New York City.

Though this exposition is the maiden effort of the association, the management has been unstinting in its appropriations and expenditures. The outlay necessary to promote and successfully carry out the exposition on a liberal and dignified basis is very large, and represents a sum never before devoted to the sportsmen's interest. The association hopes by holding these expositions, to accomplish the education of the sportsmen by gathering together, from all climes, the manufacturer, the dealer, the inventor, the hunter, the guide, the painter and the author, and examples of all the animal life which are worthy to be entitled game, and which are the justification of the existence of the sportsmen, and hold conventions worthy of the cause we represent. And as we are seeking to serve the fraternity with a broad and liberal policy, we ask the sportsmen and general public not to commit an error by believing this exposition is intended as a money speculation. The association is a legally incorporated body under the laws of the State of New York, and the idea of the association is the study and dissemination of interest in field sports, and the holding of expositions and exhibitions. The assignment of assembly rooms or headquarters where those interested in field sports may assemble, and incidentally, the founding of a sportsman's library in such headquarters, for the use of members and visitors. The vast scope and variety of the exhibition will make it absolutely impossible for one to see and fully appreciate more than a small portion in one visit, and those who are inclined to keep conversant with the modern march of inventions and improvements in the appliances of the sportsman, must not fail to attend the exposition.

The magnitude of the undertaking is increasing each day. Offers for the Loan and Trophy Department are coming in so rapidly that we shall be able to select from the many collections only the best typical examples to show the resources of this great country as a paradise for the sportsman if properly protected. Several very valuable collections have been offered for exhibition and already accepted. Selections of typical specimens of mounted large game have been made from the collections of Hon. Theodore Roosevelt, Austin Corbin, William Zeigler, Archibald Rogers, G. O. Shields, Dr. H. Rowe, and many well known sportsmen.

CHICAGO AND THE WEST.

TRY IT BY THE FIRE, PARDNER.

CHICAGO, Ills., March 8.—A brutal newspaper paragraph has the following to say in regard to a recent attempt at Arctic exploration: "Some two months ago two enterprising newspaper men, representing Harper's Weekly, undertook a trip into the Arctic circle, going by way of Edmonton, for the purpose of studying and sketching the musk ox in his northern feeding ground. A few days since, one of them (Heming, of Hamilton, Ont.) passed over the C. P. R. eastward. The cold weather had affected him internally, particularly in the marrow of his bones, and he was prevailed upon to allow his companion to proceed to interview the musk ox alone."

HIM AND CONAN.

This months' McClure's Magazine has an article by A. Conan Doyle telling about a ski trip in Europe. Me and Conan are about the only great men that ever tackled the ski business, an' we're no skates, see? But if Conan will come over to Hamerica and interview Billy Hofer in the Rocky Mountains, Billy will teach him not to get himself photographed with a lot of snow chumped up and sticking along the bottom of his ski. That is very bad ski form, Conan.

THE FIRST HOUSE IN MISSOULA.

Mr. Will Cave, of Missoula, Mont., writes interestingly below of old, old timer friend Uncle Bill Hamilton. "A couple of evenings since, before a meeting of the Missoula Board of Trade, Hon. Frank H. Woody, Judge of the judiciary district, of which Missoula county comprises the principal part, made a speech on the subject of "Missoula in 1860 and 1895." In the course of his remarks, he referred to the fact that the first house in what is now Missoula was built by "Uncle Bill Hamilton," or "Wild Cat Bill," as he was familiarly known in those days. The speaker also referred to the write up of "Uncle Bill Hamilton" in a late issue of Forest and Stream. Mr. Woody has been in the valley since '56 or '58 and was well acquainted with Hamilton in the early days. I, myself, have lived in Missoula since '2. (The first house referred to was built in '64) and I'm perfectly well acquainted with the "first" house, but did not before know the name of the builder. After the close of the meeting, Mr. Woody told several anecdotes of "Wild Cat Bill," one of which was the same as the one wrote of in which Bill drove the "man eater" out of the saloon with the butcher knife. The description, however, was a little more highly colored than was yours. Mr. Moody also declared Hamilton a perfect master of the Indian sign language."

HOW TO KEEP MINNOWS ALIVE.

Mr. E. S. Whitaker, of Carthage, O., writes as below of a matter of interest to those who have often had their legs wetted by a sloshing minnow pail or a rough road, and who at the end of the road had often found most of their minnows wrong side up in the pail. He says:

"I have just been looking over 'the best paper on earth,' Forest and Stream, and in the issue of March 3, 1894, I notice your note and query in regard to the information derived by Mr. Jos. Irwin, of Little Rock, Ark., as to the best way of transporting the minnows.

"The best way that I have found was suggested to me in a conversation in 1886 with that genial sportsman, Tom Gaddis, who used to hold forth at the St. James Hotel, Cincinnati. We were having a bass fishing experience, meeting and exchanging notes. He had been down in Kentucky, and on one of his outings had overtaken a veritable 'old Isaac' wading the stream. He found he was using minnows for bait, which he carried in his pocket in a large-mouthed bottle that would hold five or six, which was two-thirds filled with water, and kept tightly corked, except when he wanted a fresh minnow therefrom. He was informed that minnows could be carried a long distance with slight loss if put in a two or three gallon jug two-thirds filled with water and kept corked. A friend and myself tried the experiment the next season and transported in that manner a jug full of minnows eighteen miles to the lake we were to camp on, and when we emptied the contents into the screens that were to be anchored for future use at the mouth of a brook, we found that we had lost but one minnow. It was a decided improvement on the old way of carrying in minnow buckets and changing water frequently, and losing perhaps one-quarter to one-third of the number at that. Since then when I had minnows to transport any distance I have adopted the jug system."

SOMETHING NEW IN GAME LAWS.

North Dakota has given us something new in game laws. Her legislature has adjourned and gone home, but before leaving passed the sportsmen's bill requiring $25 license of non-resident shooters. The non-export clause also passed. The result of this departure from the established lines of game protection will be watched with a great deal of interest by men in many States. It shows the singular bound forward into general prominence of game legislation matters in the West this season. I do not doubt there will be a wail from many who have formerly shot free in North Dakota. For my own part, no State can make the killing of a bird, by a resident or a non-resident, too hard a matter to suit me. Enough will be killed any way you can fix it. The Dakota men will now do themselves a further and pronounced benefit if they will watch closely the enforcement of the non-shipment clause.

SOME COUNTY LEGISLATION.

McHenry county, Illinois, is right in line with the progress of modern thought in protective matters, or may be a few miles ahead of the line. Its board of supervisors has passed a bill establishing a bounty of twenty-five cents a head for woodchucks, and ten cents a head for crows. In the opinion of these wise men, McHenry county is all going to the dogs because of the terrific destruction created annually by those ferocious animals, the woodchuck and the crow. There be wise men in some localities. In this same county of McHenry, the destruction of game fish by farmers who fish through the ice on the bass waters illegally, is greater than in almost any county of the State. Is it, then, really the wish of these wise farmers to destroy as early as possible every living wild creature once native to this region?

GONE SOUTH.

Mr. Geo. E. Cole, whom I deem to have been in the time of his activity, without doubt the foremost and most successful man in protective matters we ever had in Illinois, is at this writing in the South with members of his family on a search for health and relaxation. He will be gone about six weeks, visiting Florida, Georgia and other parts of the land of sunshine.

PRETTY.

The boat catalogue issued this season by Dan Kidney & Son, of West De Pere, Wis., is a pretty thing and describes pretty things. E HOUGH.

A LAST DAY WITH RUFFED GROUSE

FITCHBURG, Mass.—Your correspondent, J. Bruce Payne, says in the number of Feb. 3 that he would rather still-hunt the ruffed grouse and shoot one sitting or running on the ground than to shoot a dozen over a dog; further he says he never shot but one flying or on the wing. According to his own statement, he never shot a bird over a dog. Still-hunting is all right and sometimes when in the right mood I enjoy it, but it is not to be mentioned in the same month with hunting the king of game birds, the ruffed grouse, over a thoroughly trained pointer or setter. Let Bro. Payne go with us in imagination as I describe our last days' grouse shooting of November.

The snow came very early, then several warm days took most of the snow away except on the northern slopes. There were four of us, my shooting friend H. A. and his Gordon setter Don E. and myself and my black pointer Duke C., both dogs thoroughbred, upheaded, quick, snappy workers, with brains enough in their heads to see through any tricks the wily old grouse may try on. These dogs are thorough grouse dogs, and a dog that can successfully circumvent the New England grouse can give good shooting on any game bird that flies, and a sportsman who can bring to bag a good string of grouse can very easily "catch on" to most any kind of shooting.

We left the city at 7 o'clock a. m. and drove out about five miles. It was a lovely morning and an ideal day. Arriving at the first cover, we drove off the main road a short distance, donned shooting coats, put the guns together, and when all was ready, spoke to the dogs who had been lying in the carriage, intently watching every move; and when the command "hie on" was given, we were all quickly in the bush. H. A. goes to the right and I to the left, from thirty to fifty yards apart. We soon enter an open pine woods, have just entered when an old grouse goes sailing away from the top of a ridge ahead of us, and out of gun-shot. We are quickly through the pines, and come to the cover we are to hunt; this piece is nearly square, and we hunt toward the east. H. A. keeps to the right and I hunt along the north edge. This is generally a good cover for birds, but a hard place to shoot in, the brush is so very thick; it is a sprout lot and has apple trees in it. I work my side all through and never start a thing, but just as I reach the east edge I hear "mark" from H. A. quite a distance to the south and immediately get ready; but no bird shows. So I work up that way and meet H. A. at the upper corner, who says that a bird had gone across the corner of the next pasture into the next run. So, after him we go. This cover is long and narrow, just a good gun-shot across; there is quite a thicket in the right hand corner, and we make up our minds that the old fellow is hiding in there, so we decided to hunt the rest of the cover first, then come back and flush the bird across the open pasture, and thus secure an open shot. H. A. takes the right as before, and keeps close to the wall on the south side; I follow the north edge, and we work the dogs back and forth, they meeting in the centre. When about half way down the run I saw several apple trees on H. A.'s side and just as I am thinking "what a likely place that is," I hear "mark" from H. A., and at the same time the roar of three grouse getting out of there as only a ruffed grouse can get out. I caught a glimpse of only one just going behind one of the apple trees, and looking ahead saw a little opening between the pine trees, and as I saw a flash I swing in (with the eye of faith) and "unhitch" and hear the satisfactory thud as she strikes the ground some twenty yards from where I shot. I tell Duke "dead bird, fetch," and in he goes after her. I hear some tall fluttering, and Duke returns without the bird, looking rather cheap. I give a little twist on his collar and say, "fetch," and he disappears again, and very soon returning with a fine bird, still alive, held very lightly in his mouth, sits down in front of me and holds it up with an "hurry up and take it" expression in his eyes. Duke was naturally hard-mouthed, and had recently received some lessons by the force system, so when this bird fluttered he was a little shy about picking her up, but from that day to this he never has refused to fetch anything I have asked him to, dead or alive, and is always tender-mouthed. The force system is the way to always insure a good retriever.

H. A. said Don was pointing stiff as a stake under the first apple tree, when up went three birds, but he could not see them to get a shot, so we knew there was two birds ahead of us, and on we go after them. When within about seventy-five yards of the end of the run, Duke points, then immediately roads to the north edge, I cut around into the open just outside and saw the dog slowly moving along just inside the wall. After a little he swings to the right where the cover is very thick, so I get on top of the wall about thirty yards from the east end. Duke is out of sight, but pretty soon I saw Don drawing down toward my corner, with head high and nose out, until he looked about half again his usual length; wondering where Duke was, I looked and saw him following about fifteen feet behind Don. This bird was a runner, and this was the bird that Duke had been following all the time. Don in coming down through the thick brush struck on ahead of Duke without seeing him, but Duke kept right on "sawing wood" with the result that they both came to a dead stand about ten yards from the corner, Don ahead and Duke about six feet behind him. H. A. got over in the meadow at the east end; I was still on top of the wall on the north side. Now I tell you tha

bird was in a bad fix, with a double-barrel hammerless gun each side of her and two pieces of statuary in dog flesh behind her. I said "Trot out your bird and we will attend to her," but no bird showed itself. Then I tried to start up the dogs, but you might as well have tried to start the stone wall I stood on. After a while, I heard her start close to the wall at the east end; I quickly pointed two barrels just over the top of the bushes, which grew only about three feet higher than the wall, but I never saw that bird alive. I don't think she got more than six inches above the wall before H. A. let her down back where she started from. Don upon being told to "fetch" brought her out where we could inspect her at our leisure.

As there were three birds started, and we had only shot two, the other one must have gone clear over into the next cover; as it was some dstance over there, we decided to go back and attend to the bird that we left in the corner. I take Duke and go inside, and H. A. takes the outside; we find the bird very near where we expect to; Duke points her and as it is too thick for me to think of shooting, I smash in and flush her out, but, hearing no report from H. A. come out to find that he did not get quite far enough ahead, so lost a shot. We follow but fail to start her again, so turn about and go back to where H. A. shot the one behind the wall; look the country over and decide where we think the third one of the three started together would most likely be. We decide to try the first cover to the right; a little way in this cover there is an old wall and we naturally expect to find our bird beside this wall, but neither dog shows the least sign of game although they hunt it all through. Beyond, across a small piece of pasture, there is another cover, and we start for that.

Out in the pasture there was a large stone, and on the further side a few bushes, a little further along there was a clump of laurel, with a few maple trees scattered through it. This laurel grows from three to six feet high. I was standing in the open just west of the large stone, Duke just west of me, H. A. southeast of the stone with Don just in front of him, when he exclaims, "look at Don." I looked and Don was pointing straight at that large stone; I turned to look for Duke and he was backering Don and standing directly at right angles to him. Don did not move, but Duke commenced to work around behind him, never taking his eyes off of Don for an instant, until finally he came up close behind him. I supposing the bird was behind that stone, stood still expecting every instant to see him get up, pretty quick. Don commenced to move forward' Duke keeping just his distance behind, they drew around the west side of the stone by inches, seemed a little surprised to find that the bird was not there, then drew on down through the small bushes along the side of the bunch of laurel about half way. What a picture! I have it photographed in memory, but would give a good deal to have it on canvas. Don was slightly in advance, left forward foot up, leaning forward as far as possible without taking another step, almost a straight line from the tip of his tail to the end of his nose, eyes bulging as though they would burst from their sockets, mouth slightly open, with the saliva dripping from between his lips, and drinking in that scent which had frozen him in that position. Duke stood at an acute angle to Don, with his head held very high, his nose slightly over Don's hip; he was getting the scent direct, but showed his good manners by keeping his position. We should have liked to stay there and take in that picture more fully, but just then the grouse jumped up and we had other things to attend to. I was just one-tenth of a second too late; the bird belongs to H. A. He tells Don to "fetch," and after a great deal of trouble of getting in and out of the laurel, the dog holds up the bird to his master. Now, the man who says that he had rather sneak around on the still hunt and shoot his birds sitting on a wall than over a good dog, is sadly lacking in experience. This was an extra large bird, and after looking him over and smoothing out his feather he is put away in the game pocket, and we go on down the run, when H. A. bags another, and I miss a couple of good shots. Then we return to the team, get a bite to eat, and drive about a mile to another run.

H. A. soon bags another here. I flush one wild and mark her down, way down across the brook and beside the public road where there is scarcely any cover. I tell H. A. where she has gone, send him around into the road, then come up behind her with the dog, who very soon locates and points, and we have her right down pat between us, without a tree or bush in the way. I walk slowly up until she starts up to go across the road, but when she sees H. A. she towers, and we both wait until she turns to come back over me, then we put the contents of four barrels after her, then stand and see her go sailing over the tops of the trees on the hill back of us. Another grouse jumps up and starts after the first one, H A. has the shells in his gun, and I have only time to put in one but we give her three salutes, and she goes over the tree-tops after the other one; then two wiser and sadder men return to the team.

From there we drove some three miles, put up the horse at a farmer's and ate our lunch. I shall only give our experience with two birds that afternoon. We started a bird not long after we entered the woods at the end of a meadow; this one started very wild, and flew into some pines; after a lot of pounding on the trees we succeeded in driving her out, and she flew down into some birches. Just as the dogs began to wind her here, she started for the third time, and we marked her in some large woods; knowing how this woods lay, I called Duke to heel and went around to the upper end and waited for H. A. to drive her out. I did not have long to wait before out she came and gave me a good shot, which I beautifully missed. On we went after her, and after a while H. A. got a shot and knocked some feathers out of her, but she went sailing up on the hill side, so we followed on, and I soon start her once more, but am unable to get a shot. She went up into a pasture where there were bunches of pines with small openings, started her from beyond a pine tree, and she went down the hill on the other side.

This made seven times that we had started her, but as she was going the way we wished to go we kept on a after her

As I was going through one of these small openings with Duke slightly in advance, suddenly he stopped, turned to the right, drew into the pines just a little way, and pointed. I could see his hips and tail, but his head and shoulders were out of sight behind a pine tree. H. A. was above me in the pines and not more than twenty yards from Duke; he motioned Don to heel, and we both stood waiting for the bird to get up; but nothing started, and as I could not find a stone anywhere to throw in, I decided to go inside and take chances of shooting her in the pines. When I got in where the dog was I found he was pointing up the hill a little to the right of where H. A. was standing. There was nothing that I could see for a grouse to hide under, only short grass and three small branches of running hemlock. I stepped ahead of Duke and looked the ground all over, but could not see anything; talked with H. A., and he looked all around but could not discover anything at all. We did not try to be quiet, but talked back and forth, and still nothing started, so I shoved my foot along in the grass ahead of the dog, and up jumped a grouse right under my foot. I pulled on her just before she went out of sight in the pines, and had the satisfaction of seeing her come down, but she immediately went up again about six feet, then came down and run "to beat the band!" I told Duke to "fetch." and after her he goes, but H. A. thinking she might get away sings out "whoa," and Duke stops, but I say "let him go," and go he does. Talk about running. That grouse went around the trees, up the hill, then down the hill, came down past me where Duke caught her, and brought her to me. Just as I was taking her in wy hand she gave a flutter and away she went down the hill again. I told Duke he would have to catch her again, and he very soon returned with her. I was careful to have a good hold of her before I told him to "drop her." Found on inspecting her that I had only just tipped one wing. Why one grouse should be so wild and the other lie so close is beyond me, as well as are many other things they do. Just think of the fun we had with that bird, without a dog she would have let us go right by, and we never would have started her at all.

We started down the hill, and very soon Duke pointed the old wild one we had been chasing and had started so many times, and although he had to chase the last bird so as to catch her, when this one flushedhe never moved or stirred. I pat him and say "good dog," and we make for the team, and our last day's grouse hunting in 1894 is over, but the memory of the days we spent last fall after this noble game bird will go with us until next season comes around.

OMAR.

A COON HUNT IN TEXAS.

Last Autumn I spent a few weeks with a couple of genial fellows, Phil. and Tom Buntline, in a little Texas town, enjoying the delightful climate and the open hospitality of my friends.

One afternoon, Tom, who was always suggesting some thing for my amusement, proposed a coon hunt; as it was a novelty to me, I at once signified eagerness to go; so without more ado we mounted our horses, and strapping a couple of heavy blankets behind the saddles, set out for the cabin of an old negro, who Tom said, was a great coon hunter.

After a brisk ride of a couple of hours, we arrived just after sunset at a little two-roomed, boxed-house from which a troop of little darkeys came running out to the fence, blinking and grinning their big, black eyes to see who we were. My friends were recognized at once, and greeted with a chorus of welcome exclamations: "How-dye-do, Mass' Tom?" and "How is you, Mass' Phil?" sounded from all sides. These grinning little imps with glistening white teeth, took charge of our horses, and we went into the house where we found old Aunt Scinda Ann (all the old negro women in the South are called Aunt, and the old men Uncle) a bustling old negro woman who had belonged to the Buntlines' "foh de wah," and had "nussed" both my young frienes when they were "chillun," waiting to receive us. She was overjoyed to see both Phil and Tom, and asked a hundred questions about "her white folks;" but her curiosity was at length satisfied, and she set about getting our supper, while we chatted and smoked before the big open fireplace, in which a couple of hickory logs were blazing and crackling.

We were soon called into the next room to supper, there we found everything scrupulously clean. Aunt Scinda Ann herself was standing near the table ready to serve us, and woe to the unlucky little darkey who dared show his face in the room during the meal; he immediately disappeared amid a torrent of abuse and threats of future punishment. Our ride had given us a keen appetite, and we did ample justice to the dusky cook's fried chicken, hot biscuit, butter and coffee.

In the meantime, Uncle George, Aunt Scinda's "ole man," accompanied by two strapping negro boys, came in from the field. He, too, gave us a warm welcome, and was delighted when he learned the object of our visit.

Soon afterwards, we were ready to start. The two negro boys carried sharp axes. Uncle George himself had a rusty old army musket, and the little negroes carried long torches of fat pine. A blast or two from Uncle George's horn set all his own dogs, of which there were several, and all the others for miles around, to barking and howling. The woods was comparatively open at first, and with the aid of the torches we made fair progress, Uncle George stopping occasionally to cry "Hi, there, Buck! Hunt 'em up Trailer!" or some other words of encouragement to the dogs, but we tramped and tramped, without the least sign of success until I was weary and foot-sore. My limbs ached, and inwardly I cursed my luck for ever coming on the expedition, though I did my best to show no signs of fatigue. At last, when I seemed just ready to drop from exhaustion, old Blue, one of the lead dogs, set up a bark which was instantly echoed by all the other hounds in the pack. This seemed to put new life into our whole party. We paused a moment to see what course the dogs would take, and then started after them. Away we went pell-mell through the brush and thickets, over briers and brambles, and into gullies and ditches, out of which we managed to scramble somehow, bent on the headlong chase.

At length we came up with the dogs. They had treed the coon up a big red oak. Fires were soon kindled around in a circle about fifty yards from the root of the tree, and then one of the little negroes, who seemed as nimble as a squirrel, prepared to climb up and shake him out, but, after three or four unsuccessful attempts to reach the lower branches, he was forced to give up.

Next, the negro boys tried to call the coon down by rustling the dead leaves at the foot of the tree, at the same time making a peculiar guttural noise resembling the growl of the coon, but master cooney was not to be lured from his retreat. As the axes were brought into play, and while Phil, Tom and I sat smoking our pipes, the negroes made the big chips fly, and soon the mighty oak came crashing to the ground. Away went the dogs, barking and yelping while the negroes yelled at the top of their voices; but in the noise and confusion, the coon made good his escape. His trail was soon found, however. The dogs were in full cry after him. and he was soon forced to take another tree, but this tree was not so large as the first one, and Uncle George, taking a large pine torch, began to walk around it. At length he shouted that he had "shined his eyes." We all ran to see, and after scanning the tree closely in the direction indicated, I finally perceived what seemed to be two small balls of fire gleaming among the branches. These were the coons eyes, and Uncle George, handing me the gun, told me to "fetch him out."

Although was somewhat distrustful of the ancient firearms, I raised it and fired, when down came the coon almost on top of us. It was only slightly wounded with small shot, but the dogs instantly covered it and then began one of the fiercest rough and tumble fights I have ever witnessed, dogs, negroes, and coon all rolled on the ground together. The coon, throwing himself on his back, used his sharp teeth and claws with such fearful dexterity that more than one dog was sent back out of reach bleeding and howling; but he was at length dispatched and placed in a sack car ied for the purpose, and we started for Uncle George's cabin.

On the way, the fierce barking of the dogs announced fresh game, but it proved to be a large opossum which was having a midnight feast on the luscious fruit of the persimmon. One of the little darkeys quickly climbed the tree, and by vigorously shaking the limbs, succeeded in dislodging the possum, which came tumbling down, but there was no fight this time. On touching the ground the possum instantly "sulled" or feigned death, and all the shaking and worrying of the dogs failed to provoke the least resistance from him.

While I was examining the opossum, the little negroes cut a pole about four feet long, then splitting one end of it, the possum's tail was drawn through the split and curled around the pole which one of the negroes placed on his shoulder, leaving the possum dangling from the end, as a tramp carries his bundle.

We reached the cabin without further adventure, and there, wrapped in our blankets, slept soundly till morning, then, bidding the colored folks adieu, returned to town, well pleased with our hunt, and bearing the coon's skin as a trophy.

CHARLEY NOBLE.

Pickerel Ice-Fishing.

BOSTON, Mass.—While pickerel fishing on the Charles river recently, we hooked some black bass.

We had twenty-two pickerel to our credit at the end of the day. A very small catch to be sure, but some others who were in a cove above us had only seven fish for their pains, and they had twice as many traps as we had. We fished with shiners, while they had chubs. The shiner will not stand as much rough usage as the dark-skinned chub, but it is a more alluring bait.

We had a discussion as to the proper manner in which to insert the hook through the shiner so as to injure him as little as possiple. Also as to the proper depth to drop your lines. We would be pleased to have some notes from some of the pickerel men of Forest and Stream on the matter. We can always learn something from each other..

We saw that rapacious rascal the shrike, pursue come chickadee among the trees. He captured one and descended to the ground with him. The piteous cries of the little fellow brought us quickly to his assistance. The shrike waited until we were within six feet of him before he took wing. We were unable to save the hardy little fellow, and left the place with his death cry sounding in our ears.

JAY PEE.

Mr. and Mrs. James.

"My husband is a truthful man," said Mrs. James, "but he is also an angler. With the first warm sun of February his fly-book appears upon my drawing-room table. A little vise is screwed fast near it and a collection of feathers, floss silk and tinsel upset the tidy little room. Then it is yellow hackles and black ant and scarlet ibis and Wickham's fancy. Then it is letters to the fly tyers. While industriously tying a fly, James will remark that it is a pity he cannot go fishing this year, and I dutifully, if hypocritically answer, as I am expected to answer, by asking why he cannot go this spring. He always is busy, and each year is hampered by poverty and the care of the family, and then there is the garden, which needs so much supervision. Each year the discussion is almost precisely the same, and with a subdued chuckle, I follow my partner's lead and play into his hand.

"In April, James remarks that he will not go fishing without me—that I really need an outing; that he will not leave me behind, and I acquiesce. "When the maple leaves are as big as mouse ears is the time to catch trout" quotes James early in May. The maples begin to show green through their scarlet and orange blossoms. James sorts his flies, examines his leaders, puts his rods together to see that they are in proper condition, and packs his trunk. About this time he is very solicitous for my comfort, and wonders if I can be kept snug and warm in the club-house.

"The next stage of the angler's fever is anxiety for the home and garden. He ought really to stay at home to look after home matters, and he is sure that I will worry about domestic affairs if I go. Sometimes I go, oftener I stay at home to see that grape vines and fruit trees are sprayed, and the garden properly started.

"After many years' experience, one would think James might forgot his little annual comedy, but year after year we play our roles as if they were fresh and new.

"Well, James goes a-fishing in May. He puts on his flannel shirt, knickerbockers, heavy scotch yarn stockings and hob-nailed shoes His rod weighs three ounces, his leaders and lines are of the finest, and his flies are microscopical. He starts off in the morning early, walking several miles up stream in order to fish down. He

fishes all day; wet to the skin from morning till night, and when he comes in at night, later, rosy and happy and hungry, one has not the heart to be critical if there is a tinge of improbability about his adventures.

"Next spring James will regret his inability to go a-fishing, and I will be sympathetic, and so on to the end of the chapter." L. YALE.

A Combination Arm.

Mr. Myrick's article on combination arms brings to memory a small double gun I used before the advent of the magazine gun in our part of the country. One barrel was smooth-bored, and a 50 cal. round ball fitted it very neatly, with a thin patch; the rifle barrel was 36 cal. It had 26in. barrel, bar locks, and was well finished. The barrels had been put together correctly, that is they were the same distance from centre to centre at the muzzle and breach. The sight was on the centre of the rib, so the rifle shot a little over half an inch to the right, while the shot barrel would shoot a little to the left.

One morning while out prospecting, I went down to an elk lick a mile below where we camped. In one of the licks stood a large cow elk about 100 yards off. I intended to break the neck or shoot through the brain. I held steady at the butt of the ear and fired. The elk, instead of dropping in its tracks, staggered back a few steps. I had shot a little too low (and, as Mr. Myrick describes in his article on far away shooting) broke its jaws. I then fired the smooth-bore at the neck. When the rifle cracked, it dropped.

Since the advent of the magazine rifle, I want nothing better for an all around rifle than my 38-55, with my telescope, although I use my 22 Stevens with Lyman peep and front sight of home manufacture. Last Thanksgiving, in the presence of Mr. Strahl, I shot at a coyote 200 yards off hand; it ran fifty yards and fell dead. The bullet had passed just over the heart. LEW WILMOT.

Prairie Chickens in Confinement.

NORTHWOOD, N. Dak.—I have trapped eight prairie chickens and have built a comfortable coop for keeping them. They get screenings, wheat, and plenty of snow for feed, but they are very much excited and scared every morning when I present the feed to them.

Can you give me any points as to how to make it comfortable for the birds? And have not prairie chickens been successfully tamed before? If they do not thrive with me I would rather let them loose again. T. G.

[If you will give the birds some range and not show yourself too often to them, they will probably in time become quite tame, more so even than domestic fowl.]

Chicago Men in Florida.

Mr. A. G. Spaulding, of Chicago, is representing the tackle trade in Florida in great shape just now. Report has it that he is catching more trout (weakfish), bigger trout and fatter trout than anybody else at Tampa. All of which redounds to the credit of A. G. Spaulding & Bros., who no doubt, furnished his fishing outfit. It would be grievous now to hear if Mr. Spaulding were using the plain cane pole and ring-necked hook of the Southern coast country. E. HOUGH.

Prairie Chickens for Hawaii.

ST. PAUL, Minn.—The Hawaiian Islands are going to raise prairie chickens, and they have selected specimens of the hardy Minnesota stock for a nucleus. A dozen prairie chickens were netted in the northern part of the State several weeks ago for this purpose Pending certain forms to be observed, the chickens were kept in confinement two weeks before they could be shipped. For this reason it may be doubtful if they stand the long voyage well. Of the shipment the Pioneer Press says:

"George Markert, a well known insurance man of St. Paul, last week shipped to A. S. Wilcox, of Honolulu, Kania, Hawaii, a dozen live prairie chickens, six males and six hens, to be put in the national game preserves of the islands for breeding purposes. The game birds of the Islands at present are mostly brant and a species of quail similar to the California quail. A few Japanese pheasants have recently been bred with success, and it is believed that prairie chickens can be successfully propagated in Hawaii. The birds sent were ordered through William C. Smith, Mayor Smith's nephew, who is a resident of Honolulu, and will be kept under the protection of the Hawaiian government until coveys have become numerous enough so that there will be no danger of their extinction by sportsmen."

Virginia Game Killed by Cold.

PETERSBURG, Va.—Reports from all parts of the State confirm fears that partridges and rabbits have been destroyed wholesale by the intense cold and deep snows which have prevailed this winter. Whole coveys of birds have been found frozen, and rabbits also in great numbers, reduced to skeletons by hunger. J. L. K.

Quail for Virginia.

LYNCHBURG, Va., March 8.—Since my last letter, Mr. Jas. M. Cleland has sent him from Tennessee sixty pairs of birds which he had placed on ten different farms. Mr. Cleland put these birds in pairs in paper bags and placed them. He says after the birds picked their way out they appeared perfectly contented. Other efforts in restocking are being made. F. M. D.

Wild Pigeon Days.

Reading of "Backwood's" experience with wild pigeons, reminded me of an experience I once had. It was in the town of Maine, Ill., on the Desplaines River, about sixteen miles from Chicago. One morning on the 4th of June, 1858, (I remember the date, as on the 22d we had a freshet) when I went out of the house I saw large flocks of wild pigeons making for a piece of old growth of timber, directly opposite the house. Getting my gun, I secreted myself behind a bunch of bushes; the pigeons continued to come; I fired two shots and had all the pigeons I wanted. But they kept on coming. I could not begin to tell how many there were, but they must have been up in the millions. I could hear them in the woods, breaking limbs and fluttering over one another.

Now, can anyone tell how those birds knew there was plenty of food in that place for them at that time? I lived there three years, and that was the only flight of pigeons we had. But there was plenty of other game on the prairie. I have had six deer hung up at once; then there were geese, ducks, plover and prairie chickens all very easy to get. Now they tell me there is not one to be seen. ROSS.

A Woodcock Day.

"Hello!"

"What now?"

"Fun; do you want some?"

"Where?"

"In the Auchmoody woods."

"Are you sure we can find it?"

"Indeed we can. Three days ago Captain Bodine (of American Rifle Team fame) and I went there. We went over a good deal of ground but didn't see a bird. But I wasn't satisfied. I felt all through my skin that woodcock were somewhere in those woods. So I called old Fred into the wagon and we started alone. Well, we had fun, for we found lots of them in a particular part of the forest. Come, fetch out your dog and jump in." Who could deny Zeke Elting, the life-long patron of your Forest and Stream, the generous, intelligent sportsman who never took a selfish advantage—never "stole a march" on his companion in the field. At least that was my experience. Zeke kept a good hunting wagon, clean, well-fed dogs and a plump, reliable horse. These accompaniments, with his own qualities, made it a luxury indeed to go with him on a hunt. So I went.

It was about nine miles from town that we had to go to reach the grand old woods. As soon as we entered them I seemed to scent birds, so "cocky" was the appearance of all around us. They would rise at the next step. No. "Zeke, with all this fine ground and not a sign of a cock, how can there be enough for sport anywhere in the woods?"

Zeke smiled and said, "Wait a bit; just come on, they're here somewhere." I was doubtful.

Whirr. "Here they are," said Zeke, his black eyes sparkling, and the dogs seeming well aware of a change of pastime.

Bird after bird now whistled before us, almost invariably dropping to the hammer's strke. "We don't have to fire, Nelse," said Zeke, in his gleeful, facetious way: "Just point the gun at them, they'll come down of themselves, knowing it's of no use." He made this suggestion from the fact that we shot unusually good that day. But Zeke was no slaughtering sportsman, and soon said we had enough. So, with empty guns we broke for the open, as woodcock rose unharmed in our path, and took to wagon. Thirty-three birds were the reward of that day's trip. N. D. ELTING.

Nebraska Game.

OMAHA, Neb., March 10.—The intense cold spell was extremely destructive to the quail, especially in the extreme northern portion of the State. Sanford K. Brown, a well-known sportsman from Jackson, says that in his neighborhood whole covies were found frozen, and he is apprehensive that there will not be sufficient seed left to insure anything like an average crop next season. It was such reports as these that evidently induced the Senate to amend the new game bill in regard to Bob White, absolutely prohibiting the killing of quail for a period of three years. The Senate also changed the clause protecting the fish, making spearing permissible. It seems that spearing fish is a favorite mode of "angling" among the ruralists of the western part of this State, but as long as they seldom catch anything but buffalo, the change will be little commented on.

Geese and ducks continue to come in, but straggingly, and as yet but indifferent bags have been made by any of the shooters. The main issue of the wild fowl seldom reach this territory before the middle of March.

Colonel Sheppard and a party of four have been camped on the Platte for a week. They have bagged some few speckled fronts and pintails. Frank Parmalee and party are camped on the Platte near Silver City, and yesterday evening nearly a barrel of bluebills reached this city, all killed in a snow flurry in the morning. John J. Hardin, A. Hospe and Jack Knowles are in the sand hills near Paxton—a famous ducking grounds. They will have ample sport with the canvasbacks and red heads.

SANDY GRISWOLD.

A Story of Gen. R. U. Sherman.

In your issue of March 2 is a most appreciative notice of the late Gen. R. U. Sherman. Uncle Dick, as we used to call him. The writer well remembers being one of that famous first committee on game laws of 1876, appointed on motion of Mr. Sherman, and of which he was made Chairman by the speaker, Mr. Husted, on account of his pre-eminent fitness among all the members of the Assembly for the position. While it was remarked that a Republican speaker had named a Democratic chairman, the appointment was greeted with unanimous approval, and the committee (there were nine members, if I remember) proceeded to amend and codify the mass of heterogenous legislation in the game laws of previous years. It was no easy task, but the untiring efforts of Mr. Sherman brought order out of confusion, and after weeks of labor, and many sittings of the committee, before which all interests were heard, a bill was finally drafted and introduced by Mr. Sherman, and if I remember rightly, passed substantially as it came from the committee, and with the fond hope expressed that the game legislation of New York was settled for many years to come. Alas! every year since has seen any amount of tinkering, until one would hardly recognize in the New York game laws of to-day the labors of the committee of 1876.

I wonder how many of that committee are yet alive! Perhaps the Forest and Stream might call the roll.

During that session, Mr. Sherman was the recognized leader of his party on the floor; he led the minority with a consummate tact, and they followed him implicitly. He was gifted with a great deal of quiet humor, and not being a lawyer, was ever ready to get his legal friends in a tight place if possible.

I quite well remember, when on one occasion Speaker Husted and Robert Strahan, Chairman of the Judiciary Committee, both lawyers, were forced to admit the forgetfulness of a plain constitutional provision. A bill had been introduced by Mr. Husted, abolishing the office of justice of sessions (the justices of the peace elected to sit with the supreme judge in criminal trials). The bill was referred to the committee on the Judiciary, a committee composed entirely of lawyers, and by them, in due time through their chairman, reported favorably to the Assembly and put upon the calendar. When it came up for passage, Mr. Sherman, who had waited until nearly time for the final vote, rose with Blue Book in hand, and gravely moved as an amendment that all provisions of the Constitution in conflict with the act be repealed, and read the article showing the office to be of constitutional origin, and entirely beyond legislative control. The silence that followed was broken by the speaker rising to explain that he had introduced the bill at the request of a constituent without looking into its merits, and the Chairman of the Judiciary Committee hastened to say that the committee had reported it without looking into its merits, out of respect to Gen. Husted, who had introduced it. Meanwhile the countenance of dear Uncle Dick smiled serenely, and the Assembly audibly enjoyed the discomfiture of its legal lights, who had apparently forgotten a plain constitutional provision.

All three are now with the great majority, Strahan first, then Gen. Husted, and now Mr. Sherman. May his memory be ever green. W.

Shooting ior a Record.

GERMANTOWN, Pa., Editor Forest and Stream: I noticed the enclosed slip in the Philadelphia Times of this morning. I cannot believe that these gentlemen were out merely for 'sport," as I ungerstand the word, and yet from the account it would appear that they killed everything that came their way:

Until the arrival of J. Frank Turner, G. W. Bergner, of Philadelphia. held the record at Tampa Bay, Florida, for quail shooting. His record on snipe shooting is the best, being 117 birds in a single day. The recent entries of the game record at the Tampa Bay Hotel are:

February 11—Dr. D. Karsner, Germantown, Pa., 50 quail, 7 doves.
February 11—J. Frank Turner, Philadelphia, 2 doves, 5 English snipe, 5 quail.
February 14—J. F. Turner, Philadelphia, 15 quail.
February 16—Dr. Karsner and Mr. Turner, 26 quail, 3 doves. Looked like rain; did not go to hunting grounds.
February 19—J. Frank Turner, Philadelphia, 31 quail, 1 hawk.
February 19—Dr. Karsner, Germantown, Pa., 38 quail, 1 snipe. Rained hard first half of day.
February 22—Dr. Karsner and Mr. Turner, 26 blue bill ducks. These were shot from one of the electric launches on Tampa Bay.
February 23—Dr. Karsner and Mr. Turner, 58 quail, 9 doves, 3 plover, 3 snipe. Found 9 coveys.
February 25—J. Frank Turner, 4 quail, 1 dove, 1 rabbit; Dr. Karsner, 6 quail, 2 doves. Killed from wagon on way to hunting ground.
February 26—Dr. Karsner, 88 quail, 2 doves, 1 rabbit; Mr. Turner, 104 quail. 8 doves, 1 rabbit, 1 jacksnipe. The doctor was handicapped by shooting through burned woods. Mr. Turner beat the guide during the morning's shoot, and his record on quail is the largest for a single day's shooting.

Still keep up your warfare on the game question. You can stop it. It will take time, it will take fearless advocacy, but it must come to an end. A. H. S.

Sea and River Fishing.

ANGLING NOTES.

"ICE FISH."

About twenty years ago I first heard of the "ice fish" of Lake Champlain, and found upon an introduction that they were the smelt which it is presumed must have worked their way up into the lake from the St. Lawrence.

A few weeks ago a friend brought me a box of these "ice fish," and most delicious I found them on the table. Returning from the meeting of the Adirondack Guides' Association with Mr. W. F. Rathbone, we noticed from the car windows as we neared Port Henry that out on the ice there was a collection of fishing huts and fishermen, and I was at once reminded of the ice fish. We remained over for a day at Port Henry and made a visit to the fishermen.

The smelts, to call the fish by their proper name, are caught with hook and line through holes cut in the ice. The bait is the eye of a smelt or a piece of flesh cut from the fish near the tail, a strip as long and as wide as the little finger of a man's hand. The fish are caught close to the bottom in water from 50 to 60 feet deep, some of the men fishing with a single hook, and some with two hooks, one above the other all placed below the sinker. A peculiarity of the fishing is the manner in which the fish are brought to the top of the ice after they are hooked. The line is tied to the end of a stick about eighteen inches long. This is moved around and around over the hole as if one were stirring the water with the line; suddenly the fisherman gets a bite, and his right arm shoots up and out to its full extent, and the left hand, also extended, catches the line, the stick then catches the line below the left hand, and this is repeated until the line is reeled in on the end of the stick and the left hand, and the smelt is brought to the top of the ice and the hook pulled from its mouth. The men were catching the largest smelt that I ever saw, as they had fish on the ice that would run three to the pound, and I was informed that when the run of large smelts was on they were caught up to a weight of half a pound, and one had been reported weighing a full pound, but my informant, an old fisherman, was inclined to think it guess weight, as he had never seen a smelt weighing a pound.

I saw smelts that I thought were nearly fifteen inches long. These big fellows are not caught in the first of the fishing season, but when I was there large and small fish were caught at the same time. It is said that smelt are caught only in the vicinity of Port Henry and West Port, and there only at this season. No one that I questioned knew anything about the spawning of the smelt in the streams, nor did they know that they ran up the streams in the night to spawn. I presume if the matter was investigated it would he found that the fish do run up some of the streams after the ice goes out. If the smelts were baited to hold them in one spot it is fair to presume that they would be found in other parts of the lake than those where they are now known. In Sunapee Lake N. H., the smelts are baited by anchoring a bag of meat or bread, or chopped fish, and thus they are held in one place and land-locked salmon are also attracted by the presence of the smelts.

I think the Lake Champlain fishermen make a mistake

in placing their hooks below the sinker, at least my personal experience in smelt fishing has taught me that more fish will be hooked by using a leader with the sinker at the extreme end and the hooks placed above it. The sinker keeps the line taut, and the smelt biting so gently that it is difficult to distinguish the bite, more readily communicates the sensation of a bite than when the hooks are flying loose below a heavy sinker. There is no effort made to conceal the hook under the bait in ice fishing, the strip of smelt hangs like a wet rag from the bend of the hook, and too, the hooks are so large that it seems strange that the smaller smelts are hooked at all.

I found that the smelts caught at Port Henry had an attachment which was entirely new to me, in the form of a sucker. The sucker was very like a worm, a little thicker than an ordinary knitting needle, dark gray, somewhat mottled in color, and they seemed to be jointed in the body. They were from one to two inches in length, and the sucker which occupied one end of the body looked like the end of a tin horn reduced in size. These suckers could be seen about the holes in the ice after the fishermen had removed them from the smelts, wriggling about on the ice or in the icy water. They made no mark on the smelt, not did they do them any apparent harm, and they were entirely new to me.

THE NEW GAME CODE.

I have not had an opportunity to read the new fish and game bill introduced into the New York Senate by Senator Donaldson in its entirety, but I find that Section 140 still provides that it shall be lawful at any time to fish for perch, suckers, bull heads and pickerel with nets and fykes, and spear such fish through the ice in the streams and lakes and ponds of Warren county. Quite unexpectedly, I had an hour's talk with Senator Donaldson about the bill and other matters relating to it, and his eight years' service on the fish and game committees in the New York Legislature has taught him that the special laws for special waters are fatal to good game legislation.

His idea is that we should have a fish and game law as nearly uniform in its provisions as to seasons, as the diversified conditions of a big State will permit of. But once such a bill is drawn and printed, amendment after amendment is offered and generally passed, that practically nullifies the whole bill. The black bass season is still made to open on May 30. Senator Donaldson does not pretend to say that this is right to open the fishing on the first of June when the fish spawn all through the month of June, but the fishing interests on the St. Lawrence and Lake Ontario demand it, and this, coupled with the demands of fishermen in other parts of the State who wish to fish on Decoration Day make it impossible to pass a law that actually protects the bass during their spawning season. Up to this time the supervisors have been able to pass laws for their respective counties, giving bass protection until the first of July each, but the new bill takes the power from the supervisors. It is true that the supervisors passed some foolish laws and exceeded their powers, but they really meant to give fish and game additional protection.

So far as black bass are concerned, it would be a good idea for the State to refuse absolutely to furnish bass to restock waters that have been been fished out by fishing when the fish are on their spawning beds, and where the sentiment is in favor of this sort of fishing. I would suggest to the framers of the Donaldson game and fish bill that if the powers of the boards of supervisors are to be taken from them, so that waters planted by the State cannot be protected from all fishing for a time in order to give the planted fish an opportunity to establish themselves, that the fish commissioners of the State be granted power to close for a period waters that they desire to stock or restock.

This power the commissioners in New Hampshire now have. Section 10 of chapter 130 of the New Hampshire law reads: "If any person shall take or kill any variety of fish which have been or may be introduced by the Fish Commissioners, their agents, or any person authorized by them, in any of the waters of this State, within five years from their introduction into such waters, he shall be fined ten dollars for each fish taken or killed, or be imprisoned not more than ninety days, or both."

It does not follow that all waters planted with fish are to be closed for five years; trout waters that are stocked or planted year after year do not need to be closed, for the planting simply aids nature, but should the commissioners desire to introduce and establish a new species of fish in certain waters, they must designate the waters "by an order in writing, published in some newspaper printed in the county, and posted in two or more public places as near the waters as may be in each town in which any part of the waters are located, at least one week before the order shall be in force."

This is a matter that I am particularly interested in just at this time. The United States Fish Commissioner has commenced to stock New York waters with landlocked salmon on a large scale, all the fish planted being fingerling, and planted in trout streams tributary to lakes of large size. The supervisors in the counties where the salmon were planted have passed laws closing the brooks where the plants were made for a term of years, closed them to all fishing. If the powers of the supervisors are reduced, the young salmon will be at the mercy of every poacher until such time as they run down into the lakes, and when they return to spawn, unless the fish commissioners are given power to protect them as I have suggested.

One more suggestion and I am through with the code of game laws for the present, at least. Why there should be a law against taking "trout of any kind" in one section, and in the next section provide a different season for taking "salmon trout sometimes known as lake trout," I fail to understand. If the law should read "lake trout sometimes miscalled salmon trout" I would understand why "salmon" was used in connection with trout. We have no salmon trout in the State and never had, and on one occasion the Fish Commissioners resolved that salmon trout was a misnomer; but, calling the fish by its proper name, a lake trout is a trout of some kind, and the old law led to many misunderstandings and contentions, and the new law will not cause them to cease if the present language is adhered to.

A lake trout is just as much a trout as is a brook trout, and therefore why not designate the kinds of trout that are intended when the language refers to trout of any kind, or say trout of any kind except lake trout, so there will be no question about the meaning of the law.

THE FLY FISHERS' ANNUAL.

The Fly Fishers' Club Annual for 1895 reproduces a photograph of a room in the club, and a very inviting room it is. The walls are covered with pictures and cases of mounted fish, and over the fire-place the cases are piled one upon another. One can imagine that the album on a table in the foreground contains some of the photographs of club members which the honorary secretary says he would be glad to receive; all members are not yet represented in the club album. A rod standing in the corner of the fire-place, a poor place for a rod, by the way, if it is to remain any length of time near the fire, on end, is without doubt a salmon rod, perhaps with a record that the members will talk about over their pipes and cigars. The comfortable arm chairs, the writing table and all make the picture the representation of a place that every fisherman when a beholder will desire to have a place.

A. N. CHENEY.

NEW ENGLAND ANGLING NOTES.

Ice fishing has been carried to a disagreeable excess on Foster's pond in Wilmington, if we may judge from the complaints of sportsmen and residents in that vicinity. It seems that the operatives in the mills at Ballardvale have been fishing this pond whenever they have had a day off. They go on to the pond, where a great number of holes have been cut nearly all winter. They put out hundreds of set-lines and take every pickerel that will bite —whether small or large, it matters not. They not only fish through the day, but they leave their lines, someone watching them who lives near the pond, and who is friendly to the fishermen. In this way they took over 100 pickerel there on Saturday, March 9. Gentlemen residing in the vicinity who love to fish these ponds for pickerel in the summer, object to this ice-fishing with set-lines. They fear that the fishing will be ruined for everybody. They are well pleased with half a dozen fish from half a day's fishing, and are willing to return all small ones. There does not seem to be any law in Massachusetts to prevent fishing with set-lines, though there is a law that might be made to answer, but it must first have been accepted by the town.

Capt. Fred. C. Barker was in Boston for a couple of days last week. He was on his way back to Rangeley, from a trip to Forida. He did not find Mr. John Danforth, his former hunting companion, though he went to Florida as much to see him as anybody. Mr. Danforth has his hotel boat out with sportsmen, and Capt. Barker got by the boat's hailing ground before he was aware of it, and there was not time to turn back. Capt. Fred. goes back to Lake Mooselucmaguntic well satisfied with Maine fishing and hunting grounds. He expects a good number of sportsmen at his camps this summer. But the ice is remarkably thick, and he looks for a late opening of the trouting season.

The Inglewood Club is alive and flourishing, though it has not been making a great deal of sound the past winter. The number of sportsmen and club members who will visit these New Brunswick waters this spring is likely to be large. Considerable stocking of the club waters is to be done this season. The government hatcheries will furnish a lot of salmon fry, and it will be liberated in the club waters. A fish way has been put in order, so that the salmon can have access to the salt water, and good results are expected. The club voted last fall to plant wild rice about the lakes and ponds in their preserve in order that wild duck shooting might be improved. Mr. Harry B. Moore, of this city, was appointed a committee of one to obtain the rice, and he has done so, after considerable searching for the seed. Part of it will be sown on the snow, and a part of it after the snow has gone.

A late report from the fish hatchery of the Megantic Club says that the eggs are getting on finely, with no loss from the tremendously cold weather in February. Careful attention prevented loss from freezing. It will be remembered that the club has 50,000 brook trout eggs and 10,000 salmon eggs in process of hatching. From fish taken in its own waters, the club has 30,000 brook trout eggs, and 10,000 salmon eggs from the Maine hatcheries at Auburn, when he visited the preserves late in February. At last reports the eggs were rapidly "eyeing out," and doubtless are hatched by this time.

At the tackle stores of Messrs. Appleton & Bassett may be seen something curious in the way of young trout. Some time ago the firm obtained some trout eggs from the veteran trout culturist, Mr. Gilbert, and these have been hatching in one of the back windows of the store. The eggs are all hatched now, with remarkably little loss, considering that no running water has been had. Some of the little trout are about rid of the sack, and are beginning to dart, trout-like, when alarmed. Others are not so far along. These little trout will doubtless constitute a part of the usual open season display of the firm. Mr. Bassett remarks that if the trout live and thrive, he shall take them down to Rangeley on his spring fishing trip, and better luck not favoring him, he can add them to his score.

SPECIAL.

MOXIE POND.

IN TWO PARTS.—PART I.

Between the intervale farms of the upper Kennebec, and the settlements on the head waters of the Piscataquas, there stretches down from the great forest of northern Maine a mighty arm of timberland, nearly fifty miles long and covering the greater part of twenty townships. Lying at it does out of the beaten course of summer travel to the Rangely and Dead River regions on the one hand, and the Moosehead Lake on the other, this tract is little known to the tourist, and is visited by comparatively few sportsmen in summer or fall, And yet it is, I think, safe to say that there is no other section in the State of Maine so easily accessible, which offers so many inducements to the trout fisherman or the hunter of big game. The country is rough and wild in the extreme. It is broken by a confusion of high hills and rugged mountains, between which lie hundreds of lakes, ponds, bays and streams, many of which have never been fished except by the trapper or lumberman. Deer are very plentiful, and moose and caribou not extremely rare.

Partly from a wish to escape for a few days from the trials of an exacting profession, partly from a love of life in the open air, especially when combined with good trout fishing, and partly to see a new country, I started on the thirteenth day of last June, in company with a tried friend and companion, for a trip across this, to me, unknown land.

A drive of seventeen miles brought us to the last house on the border of the wilderness, in the plantation of Mayfield. There lives Charles Hilton, in summer a farmer, in winter a hunter and trapper; a man acquainted with the woods and lakes for many miles around. When he had learned our intentions he expressed grave doubts as to the feasibility of our plan—to go through to the Forks of the Kennebec, by way of the Austin and Moxie ponds, and allowed that he would not take that tramp at that time of year for ten dollars a day. But, as we did not require his services, his objections to the trip did not deter us in the least.

Having made arrangements to have our team taken around to the Forks, we got what information Hilton was able to give as to the route and started on an ancient "tote road" for the big Austin Pond. The distance to the pond had been variously stated to me by different people, the estimates ranging from five to eight miles; but all argued that we should be glad when we got there, and we were. The day was hot and sultry. The black flies and mosquitoes were abundant, and our packs were heavy, for the duration of our trip was an unknown quantity, and we had provided against all contingencies. Three long miles brought us to the south branch of the Austin stream, and here we halted for dinner. Unslinging our packs and jointing our rods, we took our way down the stream to a "deep hole" which Hilton had mentioned casually, as a place where one might catch a "hundred or two" trout, and I think very likely we might, for it was a magnificent pool, deep and dark, shadowed by great spruce and cedar trees, while at its head, the little stream tumbled in noisily, floating bubbles far out over the still water. It was an ideal spot. At each cast one or more trout rose, in their eagerness often missing their mark, and jumping clear over the leader. After amusing ourselves for a few moments, we took half a dozen quarter-pounders, and returned to the "tote road." By this time we had developed the traditional camp appetites, and we hastened to prepare our mid-day meal. When the demands of the stomach had been satisfied we proceeded leisurely on our way, making frequent halts beside the little spring brooks which were very abundant along our route. Indeed, so often did we pause to rest or to admire the great maple and birch trees which formed the principal part of this primeval forest, that it was six o'clock when we reached Hilton's camp, a little way from the shore of the Big Austin Pond. Leaving our pack at this camp, we proceeded immediately to the pond where we found a rude boat which Hilton had placed there for use during the fall hunting season. With this boat we went to the outlet of the pond, where were the ruins of an old dam, built for lumbering purposes many years ago. Here we easily caught enough trout for our supper and breakfast, and then we returned to the camp. A hearty supper and a good night's rest prepared us for the pleasures of the following day.

The first thing we did in the morning was to collect our things and move them to the shore of the pond, preparing to sleep there under a rude bark shanty we had discovered, rather than at the camp, which is unpleasantly situated in a swampy place, out of sight of the water.

After breakfast we decided to fish the Austin stream, which is the outlet of the Big Austin Pond, and this decision gave us, as it turns out, an experience the like of which we had neither of us before. Possibly this stream may have been fished before; it is even possible that it may have been fished before with the artificial fly, but for all practical purposes, it is a trout stream of the primeval wilderness. Never shall I forget that day. The murmuring waters; the waving shadows of the great trees; the moss-covered pine logs stranded on the banks from the east "drive" thirty years ago; the leaping trout, rising to every cast—these sights and sounds will always abide with me and come fresh before my mind when I think of the Austin stream. I shall not soon see such stream fishing again. In two hours we took and returned to the water 160 trout, ranging from a sixth to a quarter of a pound in weight, and averaging, as we thought, a quarter of a pound apiece. Then we caught six more to eat, and these six made us two good meals.

On this stream, at this time, I think a fairly skillful angler could in less than a day catch more trout than he could carry. But one may tire even of such sport as this, and so before we became tired of it, about noon, returned to our camping place and prepared our dinner. After eating, we tried to sleep a little, but sleep was impossible. The heat was intense; not a breath of air rustled the foliage or rippled the fair surface of the lake. Even the birds had ceased to sing, and there seemed to be no sounds to break the stillness, except the hum of the innumerable mosquitoes and other insects The black flies descended upon us in unincumbered millions. They stuck and struggled in our Nessmuck tar mixture. They crawled into our eyes and ears. They invaded the untanned regions below our clothing. To escape the flies we took to our boat, but the burning heat of the sun and its reflection from the water was not much more tolerable than the plague of insects we sought to avoid. I say sought, for they were with us still in unpleasantly large numbers, although the air was not so completely saturated with them as on the shore. Presently, however, a breath of air came from the northwest, then another cooler whiff. Great piles of white thunder caps hove up above the tree-clad hills in the west. Soon the sun was hidden, and distant thunder, becoming nearer, muttered and rolled and echoed and reechoed from the mountains round about. But the shower did not reach us, although we could distinctly hear the roar of the rain falling upon the leaves a mile or so away. After the shower had passed, a light cool breeze continued. There were no black flies upon the water, and the conditions for fishing seemed favorable. Around a large island near the centre of the pond seemed a likely spot for a little fly-fishing, and there we tried them, making long casts in shore; but there was no response. Then we tried trolling, but neither spinner nor spoon hook nor phantom minnow proved successful. Finally, we went ashore and caught a few of the "shiners" with which the shallow water in

this pond abounds, and by trolling with these, we took a few trout of about a pound apiece, which we were obliged to return to the water, having no use for them. But as this kind of sport did not seem entirely satisfactory, we drifted slowly back to our camping place and made our preparations for the night.

Sometime, perhaps a year before, a rough bark shelter had been built here, and the fragrant remains of an old shake-down still covered the ground. In front of this shanty, a little space had been cleared for a camp-fire, and it was altogether a fair kind of a wood's hotel. There we built our camp-fire, cooked our supper, and then seating ourselves on an ancient water bleached cedar log on the shore with our backs comfortably supported against an adjacent stump, we offered up incense to the cloud compelling deities. Meanwhile the rosy tints of evening changed from purple to gray; the loons' wild cry echoed from the south end of the Bald Mountain. A cold mist rose over the water; the owls began to hoot, and we knocked the ashes from our pipes and turned in.

F. S. BUNKER.

(TO BE CONTINUED.)

Goldfish as Bait.

Having used gold-fish for bait, I do not class them as the best bait, either for bass or pickerel. Being a lover of fishing, during the summer months I always keep a supply of live minnows on hand—obtain them from lakes, creeks or ponds

I had an argument with one who considered himself authority on which was the best killing (live) bait, and not being satisfied with his argument, I made up my mind to experiment, I made these trials on three consecutive Saturday afternoons, each time taking the same variety of bait—gold fish, chub, silver, stone fish, dark chub and sucker minnows. Stone bait are found at the bottom of the rivers, and resemble a small pike, with mouth like that of a sucker.

I gave the several baits a fair trial. I went by myself to a spot where I knew bass and pickerel were sure to be hooked. I had with me four rods, all fixed up with the same kind of lines, floats, hooks (gut) etc. Procuring a boat, I went out and ran her up on a large bowlder, thirty yards from shore, with four and a half feet of water, the boat lying crossways to the current. Lines were baited with the different baits, thrown out from the bow, one from stern and two from about centre of boat. I always baited same line with same kind of bait and changed the positions of the rods every little while. First afternoon, stone fish, gold fish, chub, sucker, were used. The stone fish caught three black bass, one pickerel; gold fish, one bass; one large chub, two pickerel; sucker, nothing.

Second afternoon, stone fish, dark chub, silver, gold fish. Stone fish; five black bass, three pickerel, two rock bass; goldfish; two pickerel, one black bass; dark chub; two pickerel, one maskinonge (eight and one-half pounds; minnow, two and one-half in. long), silver; three rock bass, one black bass, three perch.

Third afternoon, gold fish; four pickerel; (missed two fish); chub, three bass, three pickerel (missed one); stone fish; one bass, one cat fish, one large schub; dark chub, one maskinonge.

First two Saturdays were cloudy, with fine warm rain. Third was a bright, clear sky.

In one day, using only goldfish and stone fish, I killed forty-three bass and pickerel. With the stonefish, thirty-one; rest with the goldfish. My experience on the whole is—stonefish first, goldfish second, for bass and pickerel. Dark chub for maskinonge; chub (light) for other fish.

In Ottawa City, with a population of 45,000, the residence of the Governor-General and the seat of the Dominion Government, the game and fish laws are poorly enforced. I have seen pickerel caught within three minutes' walk of the Parliament buildings during closed season. Game is scarcer every year. River fishing is not nearly so good as a few years ago. Lakes are "stocked" from Government hatchery with trout and bass, and are fished out by Government officials by any means with which they can make the largest catch. Preserves show signs, "Keep off these grounds. Private property." Enough.

E. T. LOVEDAY.

Trout Fishing at Night.

CLEVELAND, O., Editor Forest and Stream:—In the Forest and Stream of Feb. 22, Mr. Arthur F. Rice, under the heading, "Trout that rise at night," speaks of his experience on an Adirondack lake where the large trout (presumably) were feeding, or at least rising, from 11 a. m. till 3 a. m., and asks for information in regard to it. I have not presumed to reply to his questions thinking that Mr. Cheney, or some other authority, would attend to the matter, but as they seem to be busy, I will give my own experience in the hope that it may be of interest to Mr. Rice.

In the clear streams of Western New York (including the celebrated Spring Creek of Caledonia) in which I have fished for several years, it is the custom to do a great deal of night fishing in July and August, as at that season the large fish seem to be moving and feeding only at night. Many anglers there do not start for the stream till after dark during the hot weather, and though smaller trout will rise at dark as before, the largest ones are almost invariably taken much later, particularly on warm nights.

Of course the leaders and flies used at night are much larger than those used in the daytime, and a long cast is not necessary. It is the custom to let the fly sink, and a bit of worm on the fly is a great help, though, of course, one does not dwell on that feature when telling about his catch the next day. The flies used are the red and brown hackles, grizzly king, white miller, etc.

I have taken many trout when it was so dark I could not see the fly or the surface of the water for that matter. One pool in particular I remember that was entirely surrounded and overhung with large forest trees, and at ten o'clock at night was as dark as any place I ever saw, yet I have taken trout there often at that hour during August.

Some years ago I read, in Forest and Stream, I think, of the taking of trout on one of the Adirondack lakes at night with small black flies. This matter brings to mind the discussion a few weeks since in regard to the small mouth black bass, and its power of seeing after dark.

I have seen a great many bass taken at night with a small spoon, cast with a fly-rod, and have myself lost large (and old) flies by their fierce strikes when it was too dark to see the rise. I can not now tell whether these were the large or the small mouths, but which ever they were, like the celebrated one-eared cat "in the possession of all their faculties," even if it was dark.

Game and Fish Protection.

CHICAGO AND THE WEST.

ECHOES OF THE BLOW BILL.

No news has as yet been received from Springfield in regard to the sportsmen's bill (the Mott bill), in the hands of the committees of the Legislature. The Blow bills, first and last, are conceded by everyone, including Mr. Blow, the game dealers and the Game Dealers' Friend, to have been licked, horse, foot and dragoons, by the sportsmen of the State.

With the defeat of these unwholesome measures the main interest of Forest and Stream in the matter ceased. There are, however, some bits of inside history of the fight which may be of interest if only in the way of reminiscence. One of the most amusing of these bits is the story of the way in which the Game Dealers' Friend, purporting to be a sporting paper, was kicked back out of the way by the Illinois State Association, whose interests it had labored so faithfully to injure by its support of the Blow bills.

A SHORT STUDY IN HERALDRY.

This so-called sporting paper has performed what in newspaper talk is called a "flop," a "crawfish" or an "eating of crow." The Game Dealers' Friend (American Field) can tell whether or not the last-named bird is good to eat, and whether it ought to be imported and kept on sale on South Water street the year round in order to supply a certain Chicago demand. Instead of a fat, husky, exultant rooster, such as we sometimes see a newspaper disport after having engaged in a "wrassle" with live issues of the day, the Game Dealers' Friend is entitled to run up as its emblem the picture of a fowl which might be described in heraldry as a raven, sable, with the inscription "Dieu et mon Diet."

THE HUMBLE CRAWFISH.

Or, there is the crawfish. I am not certain that the crawfish is not a better emblem for it than the crow. The crawfish is good to eat, and you can buy it. Moreover, it looks one way, but if you step on its toes it goes another. You can't depend much on a crawfish, but it's amusing.

Not long ago there was a meeting of the executive committee of the Illinois State Association, which I did not attend, because I was out of the city, but I have account of some funny things which happened there. Warden Blow was there, and Comrade George Washington Strell, the sporting Moses who led the van with the defunct Blow bill, was there. There was also a stenographer present, brought by Mr. Mott of the law committee. There were some mighty lively times inaugurated for Comrades Blow and Strell, and I opine that two more unhappy souls are seldom seen. The former professed absolute contrition, said he had eaten his two proposed bills, and they were no longer in the hands of the Legislature. He was wid de sportsmen now. And perhaps some of the sportsmen were foolish and blind enough to believe him, though it is hard to see what credence this man deserves after what he has done.

Mr. Mott also asked the sporting Moses to come out and define himself and the policy of his paper on the matter of the game laws. He called attention to the fact that the game dealers had had published several things in the American Field which were of detriment to the interests of sportsmen, and that the paper was in an unenviable light. Now, said Mr. Mott, was a good time, in the presence of the stenographer, to define the position of the paper above mentioned and the men who purported to represent it. The sporting Moses was put in a very awkward position. He said he thought Mr. Mott's remarks were uncalled for and unjust. He asked that they be expunged from the minutes, as they were not the sort of things which he, the Moses, liked to reflect upon as part of the record of the doings of the Illinois Sportsmen's Association. Mr. Mott, however, was insistent in his purpose of putting everybody on record. I suppose the sporting Moses was unhappier than about anybody, for he and his paper got the worst scoring that any man or paper ever did get in public, and it left neither one nor the other more than about knee high in the estimation of the sportsmen. He hated to eat his raven bird, but he done eat it, and has since also done a few lines of the same in print. The sporting Moses joined that great and good man, Warden Blow, in a public profession of a change of heart. He said in effect that he and his outfit foreswore allegiance to the Blow bill and the doctrines which a few weeks before it was announcing so pretentiously and cockily, and that the sportsmen and the bills framed by the sportsmen were the one true love of him, Moses, likewise of the Game Dealers' Friend, price $5 a year in advance. He had just been fooling all along. What was the use sitting on a fellow?

Then people smiled some. The crawfish is not a noble animal. He is dead easy, but he ain't noble. Really, it did not make much difference about the direction of this particular crawfish, for the Blow bill at this time was admittedly dead.

But this is not all of the record of humiliation of the Game Dealers' Friend (the American Field) or of its representative. The latter went to Mr. Mott and begged that the stenographic report of that meeting be suppressed, else it might be shown that an attack had been made at that meeting upon the American Field. He especially requested that all the facts be kept from Chicago and the West of Forest and Stream, lest the latter might use them to the disadvantage of his paper. Mr. Mott obligingly complied! The executive committee and the secretary, of course, lent no hand to any such action.

ON THE SUPPRESSION OF NEWS.

Unhappy Moses! Why did he not reflect that it is always the "suppressed" news that is sure to come out? Why did he not reflect that that is just the sort of news everyone always does hear about, and after which any newspaper man will go till he gets it? Perhaps ordinarily I should not care to devote much space or time or trouble to the story of the methods by which an unwise and weak-backed contemporary was forced to take back its own opinions, but the case being as it is, I feel forced to give these "suppressed" facts, just for a little garnishment for the dish of crawfish and crow which is the present diet of the above singular and misguided representatives of sporting journalism. I have many more details of the little recantation process of the above, but they will not matter just at present. We can use 'em after awhile, maybe, when I feel good. If there is anything more which our esteemed co temporary wishes "suppressed," I shall be glad, and I hope it will not be backward about offering the tip. But I beg pardon. In the nature of things, the crawfish can't be anything else but backward, can it?

From all of these things I infer that the best line of activity for a newspaper or a newspaper man is to stick close to the neighborhood of plain, horse sense, and absolute honesty and fearlessness in open or in secret. Do that, and you won't have to live on crow and crawfish, and you won't be scared all the time. For a sporting paper, this means to steer clear of all such fallacies as those of the late Blow bills. It means to swing clean into line on a definite policy, and not to try to ride two horses at once. It means to have just a little bit of sand, and a few convictions, and a trifle of self-reliance. These things have been wanting to a lamentable extent in the course of the paper above mentioned upon these topics of game protection, and that right at a time when the sportsmen needed all their friends, and even the small assistances. Moses, I charge thee, fling away ambition. By that sin much abler angels than you have got it in the neck before now. Take a rest, Moses. Lean your brain in your little hands, honey, and let it rest awhile. You ain't fit, just now, to go into a real hard game.

FOREST AND STREAM WILL NOT NEED TO RETRACT.

By the above I can best show something of the nature of the fight we have been having out here. In spite of a singular opposition, the sportsmen have won, and have defeated the dealers, the dealers' warden and the dealers' organ. We have never had so hot a fight in the West. Even the daily papers have taken up the cudgels in favor of protection, and that right earnestly. When Mr. Sloan, representing the game dealers, saw the managing editor of the Tribune in regard to a Tribune editorial which was damaging to the interests of the street, he was told that his mission was useless. "I am a sportsman myself," was the reply to him, "and I know that if you pass your law we will have no game left in three years." The Herald also, which at first gave space to Blow's vaporings, has changed its tone and come over to the sportsmen.

The sportsmen of this region have made more friends and whipped more enemies in the last two months than they ever did before. There never was so general and intelligent an interest in these matters. The public is evidently beginning to think. The more it thinks, the nearer it will come to the Forest and Stream doctrine—"Stop the sale of game, or else you must see the game soon pass away." I imagine the sportsmen of Dakota and of the entire West, who have been looking with such anxiety toward Chicago this winter, will take comfort in the fact that they have one friend in a newspaper not afraid to announce such doctrine and to stand by it. I imagine no one will be under the necessity of asking Forest and Stream to recant any unsportsmanlike utterances, or of framing for its use a better doctrine, or of asking for its sake the suppression of any attack that can be made upon a paper so loyal and fearless and a doctrine so incontestably sportsmanlike.

E. HOUGH.

909 Security Building, Chicago.

Massachusetts Trout Season.

Several hearings have been given at the State House of late upon a bill introduced in the House by Representative Young, of Springfield, the purpose of which is to open the market to domestic trout, so-called, two months before the open season, which begins April 1.

On this general subject interviews have been obtained with gentlemen prominently identified with fish and game protection.

Mr. Edward A. Samuels, who has taken trout in very many public streams in Massachusetts and in other New England States, also in Quebec, New Brunswick, and Nova Scotia, was asked:

"When, in your opinion, are trout through spawning?"

"That depends upon the latitude and the water."

"Do you think that in Massachusetts they are entirely done spawning in January?"

"I do not. In fact, I have taken trout in this state, even in April, that contained ripe eggs. As a rule, trout spawn in the early fall and winter."

"What do you think of trout as an article of food just after the spawning period?"

"They are not suitable to be eaten at that time. Every one admits that salmon are totally unfit for food after depositing eggs. Even poorest people would not think of eating them until they had been to sea and recuperated. So, too, trout must go through a process of recuperation after the exhausting effects of reproduction before they are fit for the table. Toward the end of December last, an Indian in Nova Sotia brought some trout to sell to me, taken, no doubt, through the ice. I remonstrated with him for taking them at that season. As he had been to much trouble in getting them, and was very needy, against my inclination, I gave him some money and allowed him to leave them. To satisfy myself as to the table qualities of the fish I cooked the finest one, and found it to be worthless. There was no trace of fat, and the meat was dry, white and tasteless. Had I not known to the contrary, I never should have imagined it to be the meat of a trout."

"How long a time is necessary after spawning for the trout to recuperate?"

"That depends upon the food. Almost invariably during the winter the food supply fails, and in the spring months it becomes more abundant."

"How early in the spring are trout in the best condition for food?"

"Trout feed largely on the larvae of insects which pass through their transformations in the water; but the fish do not take on much flesh until the 'ephemeridae,' or May flies, so-called, make their appearance. As these become abundant, the trout devour them voraciously, and accumulate fatty tissue very rapidly. When the spring is early, so that the water becomes warm, these insects are matured the latter part of April in favorable localities. In my experience I have found trout to be much more palatable in May than at any time earlier in the season."

"Are you in favor of a law opening the market earlier to trout artificially reared than the first of April?"

"I see no way that this could be done without causing the destruction of the native trout in our streams."

"What is your opinion of the raising of trout artificially as a means of providing cheap food for the people?"

"As a constant food trout could never take the place of other edible fish. In my own experience, and as a matter of observation, I find every one tires of them after a few meals, just as one tires of mushrooms or any of the so-called delicacies. If trout could be put in competition, as to price, with sea fish, such as cod, mackerel, etc., the latter would, in my opinion, be generally preferred. That any such competition could be brought about I regard as an impossibility. The great value of the trout lies in the pastime and recreation its capture affords the angler. The people should receive the benefits that the numerous streams within the borders of our own State would afford if the same efforts at stocking as are made in New Hampshire, Vermont and Maine were systematically made. In my opinion our State has never done a quarter part of what should be done in this direction."

John A. Loring said: "As early as the year 1866 I appeared before a committee of the Legislature in support of a bill which resulted in the establishment of the Board of Commissioners on Fisheries and Game, and I have never since taken a great interest in such matters.

"By giving those who cultivate trout in enclosures this privilege of selling for food in February and March, the Legislature would give them an advantage over the owners of streams not inclosed, but in which trout abound in the wild state. Furthermore, if this legislation were enacted, a temptation would be given to poachers to purloin wild trout during those two months to the detriment of the owners of those streams. As the law now stands the poacher has no inducement to carry on clandestine fishing, inasmuch as there is no market. Without a market the fish are of no value to the dealer in them. Give him a market as from fifty cents to $1 a pound and he has inducemment enough to buy, and the poacher enough to supply him. Give the poacher a market and he will furnish the fish.

"The laboring people in portions of the State where I have fished, have never relied on trout as an article of food, even where they were abundant. Trout have never been a cheap article of food. They have always been consumed by guests at hotels and private restaurants and by private persons to whom the expense, even at $1 a pound, was of no consequence.

"The effects of such a law would be prejudicial to owners of streams leased by them for substantial rent. The rental value of such streams would be substantially diminished, and the leases of the same would be subjected to a large expense to guard the streams during these two months."

J. Louis Stackpole said: "The trout cannot be said to have fully recovered from the effects of spawning earlier than the last of March or first of April. It is impossible, except for a skilled expert, to distinguish those artificially reared after being out of the water for a while. The inevitable result of such a law would be the depletion of trout brooks all over the State. No better evidence that these artificially raised trout furnish no part of the food supply of the people is needed than the testimony of one dealer, who said that, of 7,000 pounds of such fish sold, 5,000 pounds went to New York, and that the sale of them there closed about July 1, when the 'Four Hundred' go into the country.

"Again, the words 'artificially reared' are extremely vague, and will give rise to a large amount of litigation. To say that there are no trout exceeding nine inches long is nonsense. It is the larger trout, those over nine inches, that we rely on to furnish the spawn for reproduction."

Hon. George W. Wiggin said: "I think the trout in the old

streams, open to every one, are of much more consequence than the interests of half a dozen individuals who desire such legislation. The people, I think, are now excluded from more than five to ten per cent. of the streams in the Commonwealth, and those are mostly in Plymouth County. In fact I do not myself know of any leased brooks except in Plymouth and Barnstable counties.

"I see no reason for discriminating in favor of artificially reared trout as against wild trout. If it is proper to sell one earlier than the first of April, it is proper to sell the other. As it is practically impossible to distinguish one class of trout from another, the opening of the season for one in February and March will inevitably lead to the capture and sale of the other class during those months."

"Does the introduction to the bill of the nine inch limit remove any of the weighty objections?"

"I have caught trout in the mountain streams of New Hampshire weighing two pounds, and I have no doubt there are trout weighing one and a half pounds in many of the streams of Massachusetts.

"Another objection to opening the market during the two months in question is that our streams and ponds are many of them covered with ice, especially in the Western parts of the State, and an open market would induce fishing through the ice, which is a most destructive method, as the fish gather in schools, and having been poorly supplied with food for a long time, they take the bait easily and are easily exterminated. Again, the first of April or earlier has come to be almost universally fixed upon by the various States for the beginning of the open season, and uniformity in this respect is greatly to be desired."

Charles F. Chamberlayne, when asked his opinion, said: "In the first place, there is no call for this bill. As in years past, it originates with a very few men who desire a monopoly of the market by obtaining special privileges from the Legislature.

"I reside in Bourne, and the sentiment of our people is strongly opposed to this bill. The attractions of streams in our town have brought in hundreds of thousands of taxable property. The town has felt the benefits in every department of business. I should not regard it possible to preserve the fish in these streams if such a bill were passed. Many fish are taken there weighing from a pound to two pounds, and all less than nine inches long are usually returned to the water immediately."

"Do you see any reason, Mr. Chamberlayne, why the nine inch limit should be inserted in the bill this year, when an amendment offered in the Senate last year requiring a limit of eight inches was repudiated by the friends of the bill, and could not be carried on account of their opposition?"

"The Western part of the State is opposed to this bill, as shown by the action of the Legislature last year, by which the counties of Hampden, Hampshire and Berkshire were exempted from the application of the bill. This exemption was objected to by the Governor in his veto message. This amendment is evidently for the purpose of conciliating the Governor and the people of the Western counties, as the friends of the bill claim that there are no trout in that section nine inches in length."—Boston Herald.

Those Ninety Deer.

Editor Forest and Stream:

Several of your correspondents have mentioned the shipment of ninety deer from Maine to Boston. Some speak in praise of a Commissioner who happened to be in Boston and found it out from the newspapers. But no one seems to think it remarkable that so large a quantity could be shipped from a point where there are wardens nearby, and that the first notice the Commissioner got was in the newspapers. There is very little probability that it ever would have been known if the master of the vessel had not attempted to steal what he was entrusted with. The worst feature of the case is, that it is really in no way remarkable except that we have proof that it was done.

The same thing has been done many times every year, and that right under the noses of many wardens and at least of one Commissioner. They will deny it, and when proof is furnished will take no action in the matter.

A year ago, at a meeting of the "Game Protective Association," the statement was made that some two hundred deer and many hundreds of partridges had been shipped from Bangor; and it was more than hinted that it was done by the help of the wardens, and with the knowledge of the Commissioners. Both Commissioners and many wardens were present; but no one disputed the statement. The past fall, deer by the hundred and great quantities of partridges have been shipped, and no attempt made to prevent it except in a few cases which probably were not protected. One day Bangor would be full of game, the next not any to be seen, and this was repeated week after week, and with no local sale of any amount; in fact, a great deal of the time Bangor people could not get a piece of venison unless they bought a whole deer. I can bring plenty of proof that repeatedly gentlemen tried all over town and could not buy a pound, for the market men would not cut it, as they could do better by shipping it.

One of our prominent Bangor merchants offered to testify that he had paid money to a warden not to see a deer he was shipping to a friend, and gave the name of the warden to whom he paid it. On this being told to a warden, he claims that he has authority from the Bangor Commissioners to look after all outside matters, and the offer being made to prove it, the answer was, "If you can prove this you had better have the man arrested." Now there are just two horns to this dilemma, and the Commissioners can choose either which suits them best. Either they and their wardens know of these things, or they do not know of them. If they know them and do not try to prevent them being done they are dishonest. If they are so stupid that they cannot see what is right before their eyes, and every one else knows, then they are unfit for their offices.

To an observer it looks exactly as does the liquor business in Bangor. We have very strict liquor laws, and not only the city police to enforce it, but special liquor constables, appointed by the State; but the places are scarce in the United States where there are more drunken men than in Bangor. I have traveled from Canada to Mexico, and from the Atlantic to the Pacific, and have never seen so many drunken men in one day as I have seen in Bangor. Why? Simply because those whose duty it is to enforce the laws do not do it. There is law enough to stop the traffic in a week.

What we need for the protection of game is not more law nor larger appropriations, but a fair and equal enforcement of the laws we have. I say fair and equal enforcement. Our laws have not been fairly nor equally enforced. The rich have, from reasons best known to wardens, been allowed to kill, to waste, while poor men who have killed to feed their families have been arrested. Last winter a man selling salted trout, which he said came from Newfoundland, was arrested and fined. Just such trout had been openly exposed for sale in front of one of our markets. There was little doubt that the trout did come from out of the State, but it damaged the market men to have them peddled, and the market men must be protected. I saw trout on the bill of fare at the Augusta House in Augusta. Senators and Representatives were eating them; and I saw a large quantity of lake trout openly displayed on the street for sale. Yet when I stated the facts to Commissioner Stillwell and he promised to investigate, the result was that he told me that he had a letter from a warden, to whom he said he wrote to look the matter up, that there had not been a trout in the market for the winter. To-day a gentleman tells me that he ate trout at the Augusta House week before last. Our Commissioners often visit Augusta, and cannot help knowing this; but a poor man is fined for selling fish which there is little doubt were taken out of the State; and market men and hotel keepers violate our laws with impunity. People may try to respect the laws, but they have very little respect for men who enforce them in the way in which our game laws are now enforced.

MANLY HARDY.

BREWER, MAINE.

Saratoga Association.

The Saratoga County, N. Y., Fish and Game Protective Association, has been organized, with a large and influential membership. The President is James R. Gibbs, and the Secretary, M. S. Cummings. At the meeting for organization, active work was at once put under way in accordance with the resolution offered by Mr. J. E. Hodgman: Resolved, that a committee of eight be appointed by the chair, of which the President and Secretary of the Association shall be members, to be known as the Executive Committee. This committee shall have charge of all matters pertaining to the prosecution of violators of the game laws; the procuring of young fish and game birds for stocking purposes, and all matters pertaining to the management of the Association. Five members shall constitute a quorum, and their action shall be binding upon the Association. This committee shall, within ten days, select some suitable person for the office of game warden. They shall report to this Association, at a meeting to be held March 25, the name of the person selected for the office of game warden and the price per month agreed upon for his services.

The resolution was carried unanimously and the following gentlemen were named to act with the President and Secretary as such Executive Committee: John E. Hodgman, Dr. J. A. Pearsall, J. F. Swanick, T. F. Hamilton, Will H. Manning, Emmett T. Farrington.

An interesting discussion in regard to fish and game followed. Will H. Manning dwelt upon the rapid increase in Saratoga Lake of the large mouthed or Oswego bass. He expressed the opinion that these voracious fish were destroying the small mouthed black bass, very few of the latter being now caught in the lake. Mr. Manning said it would be a good idea to amend the law and allow Oswego bass to be taken on the first of May instead of the thirtieth, as now provided by the statutes. Mr. Hodgman agreed with Mr. Manning, but said it would be difficult to discriminate. If the laws were changed the privileges would most likely be abused and all kinds of bass would be taken by fishermen. The subject was referred to the Executive Committee and the meeting adjourned until March 25.

New Brunswick Game Laws.

At the recent session of the New Brunswick Legislature the game law was amended, making the open season for moose, caribou, and deer to extend from September 15 to December 31, instead of from October 1 to January 15. The trapping or snaring of these animals is made unlawful, the penalty being not less than $20 nor more than $100 for each offense, and in default of payment, imprisonment in the common jail for a period not exceeding forty nor less than twenty days. All persons hunting moose or caribou must obtain a license, which shall operate from the first of August for the period of one year, subject to the provisions of the game law, and for which a fee of $2 shall be paid. The penalty for not taking out such license is not less than $20 nor more than $80 for each offense, in addition to the fee and costs of prosecution. One half of the fine shall be paid to the informer, and the other half to the Game Protection Fund.

It is made unlawful for any person to kill for the purpose of sale, or to sell any partridge for the space of three years from September 20 next. Any person selling or exposing for sale any partridge during such term shall be liable to a penalty of not more than $20 nor less than $10, and in default of payment shall be imprisoned for not less than eight nor more than four days.

In the parish of Shediac, Westmoreland county, the shooting or taking of geese, duck or snipe after sundown is prohibited, under penalty of not less than $20 nor more than $40, and in default of payment, imprisonment for not more than twenty nor less than ten days. On the Bay of Fundy the destruction of gulls' nests, or removal of eggs after June 24 in any year is prohibited.

Last year M. E. J. Wetmore, of Saint John, was appointed Chief Game Commissioner for the Province. He has shown great sagacity in the discharge of his difficult duties, with the result that the illegal slaughter of big game this season has been somewhat lessened. It is admitted by the Government that the only way to secure adequate protection is to appropriate a large sum of money for that purpose, and that it would be in the interests of the Province if such expenditure were made, but as yet they have been unable to see their way clear to providing the necessary funds.

PROWLER.

FREDERICTON, March 11.

Club Co-operation Appreciated.

At the last meeting of the New York Fish Commission this expression was made of the co-operation of protective associations:

Resolved, That the Commissioners of Fisheries deem it proper, at this time, to extend to each and every of the numerous societies for the protection of fish and game throughout the State, sincere thanks for the uniform courtesy extended to them at all times and for the valuable assistance rendered the game and fish protectors.

Resolved, That the thanks of this Board are specially extended to Mr. Henry Traptie, of Syracuse, who has for years devoted time and money to promote the interests of fish propagation and game and fish protection.

Prizes for Vermin.

Wilkesbarre, Pa., March 6.—Editor Forest and Stream: The Luzerne County Sportsmen's Club offers four prizes of $30, $40, $20 and $10 in cash, or an $85 gun for first prize, to the four persons having the highest number of points to their credit for killing the birds and animals named and to be counted as follows: Catamount 10, weasels 9, Fox 8, mink 7, great horned owl 5, hawk 3, owls other than horned 2, skunk or polecat 1.

The contest will commence March 15, 1895, and close March 31, 1896. No two or more persons will be allowed to form a combination or partnership by placing skins, scalps or heads together to help another secure a prize.

Contestants must produce the heads of all birds and the skins, or scalps with both ears attached, of all animals.

The birds or animals to be counted must be killed in Luzerne County. Each contestant shall make affidavit that all rules governing this contest have been complied with. Scalps, skins and heads may be returned at any time to any member of the undersigned committee, by whom a record will be kept. The committee consists of E. A. Rhoads, H. S. Reets, T. B. Harris and J. F. O'Neill.

Game Laws for Rich and Poor.

Pawtucket, R. I.—Editor Forest and Stream: I wish to thank your correspondent, Mr. Bartlett, for his communication in Forest and Stream of March 2. Like him, I have bought and read your paper for a number of years, and, although I have read in it much about the decrease of game, I have looked in vain for something in the interest of that large body of men who work six days in a week, who are not rich enough to belong to a sportsman's club, and who do not get more than a half-dozen days in a season in the woods. So far as the State of Rhode Island is concerned, game laws do not amount to much. There is nothing left in the way of game for the sportsman who has to work for a living.

I hunted three days the past season over what, ten years ago, was as good quail ground as there was in the State, and never started a quail. This has been the luck of all my friends. The best grounds in the State are in the southern part, and they are all in the control of one party—preserved, from Kingston to Point Judith.

The cause of the decrease of game in this State is not hard to explain. The writer met four dagos in one squad last fall, each armed with an old musket, blazing away at everything, from a grasshopper to the side of a barn. The coming of nearly a million Canadian French into New England did not help the game supply as they seem determined to destroy everything that flies or swims. Saturday afternoons and Sundays the woods of this State fairly swarm with them. They were brought here by the mill-owners, the same class of men who preserve every foot of ground likely to have a bird on it, or a fish in its waters.

I often read in your columns where parties kill 300 or 400 ducks, some to give to their friends, some to eat; but, of course, none to sell. This would make market-hunters of them, and, of course, they do not wish to be in that class; but it seems to me the result on the game supply must be about the same. There is no doubt, as Mr. Bartlett states, that immigration and want of employment are largely responsible for the decrease of game.

Another thing—your rich sportsman will not kill out of season, but he will go to Newport and Watch Hill and eat illegal game all summer. I am informed that parties in the southern part of the State supplied thousands of August partridges to the hotels. It seems to me that, if the game of this country is to be saved, the rich and poor sportsmen must pull together; and if every law tends to the freezing out of the poor man who hunts only a day, once in awhile, he will kill when he can. This is human nature.

NITRO.

Bass In Adirondack Waters.

The subject of black bass for Lower Saranac Lake has been in the minds of several hotel men thereabouts for some years. Last week John Harding, the popular proprietor of the Algonquin and the obliging postmaster at Saranac Lake, saw Mr. Davis at the office of the Fish and Game Commission and put the matter before him. The latter assured Mr. Harding that he would do all he could to accomplish the desired end. Already application blanks have been forwarded for 50,000 fry. The pickerel, or grass pike, locally termed "shark," has destroyed the trout fishing in this lake, and it is thought that the introduction of bass will mean the ultimate destruction of the pickerel, for the latter is no match for its deadly enemy, the full-grown black bass, the tyrant of freshwater fish. Many hope this project will be carried out with haste. —Elizabethtown Post.

Value of Fishing Waters.

The Game and Fish Protective Association is receiving much encouragement in its effort to protect the fishing in Chautauqua Lake. A friend who wishes his name to be enrolled among the life members of the association and who is much interested in the development of the lake as a summer resort, as are many others, writes in commendation of the work being done: "I fully appreciate," he says, "the great good that will result in the protection of Chautauqua Lake game fish, and I know of no waters anywhere in this country that are better adapted for the propagation and growth of game fish than Chautauqa Lake. The shameful destruction of muscallonge and bass in this lake during the past few years should be stopped, and the sooner the association takes hold of the matter with the firm and resolute determination to protect the fish against the fish pirates, the sooner the lake will acquire a national reputation as the greatest game fish water of this country. There is no reason why it should not draw people, from the Mississippi Valley to the Atlantic coast." The writer goes on to cite numerous instances of hotels and club houses along the shore of Lake Superior and elsewhere that are alone supported by the fishermen who come from the south and east. From the city where the writer lives men go 1,000 to 2,000 miles to spend a few days along much poorer fishing waters than Chautauqua Lake should furnish when properly protected. Members of fishing clubs in the same city spend hundreds of dollars annually to protect fishing in the province of Quebec in order to enjoy two weeks' sport. Much of this money ought to be spent around Chautauqua Lake and with the proper protection of the fish every interest around the lake would receive a direct benefit. It is good business policy to make the lake a good fishing-ground, to say nothing of local pride in all that pertains to that lovely sport.—Chautauqua (N. Y) Journal.

New Jersey Game and Fish Bill.

The codification measure, introduced with the approval of the Fish Commission, has passed the Senate, and bids fair to meet approval in the House.

A bill has been submitted making it unlawful to place any German carp, leather carp or carp of any kind in any public waters or in any private waters not effectually barred off from public waters. The bill is approved by the Fish Commission and is one which should be adopted without hesitation. Carp in some public waters have become a public nuisance.

North Dakota Laws.

Fargo, N. D., March 9.—Editor Forest and Stream: The North Dakota Legislature adjourned at 11:15 P. M. yesterday. The Fargo Argus this morning publishes the following item: 'The code on the game law as finally passed requires a 50-cent license from residents, and $25 from non-residents to hunt in North Dakota. Non-residents cultivating 160 acres of land in the State are entitled to a resident permit. The open season for chickens, (grouse), ducks and geese is Sept. 1 to Dec. 1. Open season for deer, Nov. 1 to Dec. 15. Fish is protected from Nov. 1 to May 15."

C. E. ROBBINS.

The report of the Maryland Association meeting printed in our last issue should have been credited to the Baltimore Sun.

The Spangler Ideal Closer.

The Ideal Manufacturing Company have purchased the sole right to manufacture the implement known to the trade as Spangler Crimpler, and hereafter all orders should be sent direct to the manufactory or their jobbers, under the name of the "Spangler Ideal Closer." These goods will continue to be made of the first-class material and workmanship, fully guaranteed. This company also announces the perfection of their new implement, which will be known to the trade as the "Ideal High Grade Closer."—Ad.

The 25-20 Marlin Cartridge which is a recent addition to the repeating rifle cartridges is now being bought out by the U. M. C. Co., loaded with smokeless powder. The result is that the velocity has been increased about 125ft. per second. The bullet will, of course, hold up better at longer range, and this cartridge, loaded with nitro powder, will shoot about six inches higher at 100 yards than a cartridge loaded with black powder. At 200 yards nitro powder cartridges will shoot about twelve inches higher than the black. The accuracy of this cartridge loaded with smokeless powder is highly satisfactory. At 100 yards ten shots have been grouped in a circle two inches in diameter; at 200 yards ten shots have been grouped in a four-inch circle. They will be ready for the trade shortly.—Adv.

Garden and Forest.

The bound volume of Garden and Forest for 1894 has just reached us, and it contains much more than the usual amount of interesting material. It is also, according to our recollection, much more fully illustrated than usual, and the pictures are remarkably beautiful and well printed. Many of the half-tones, printed on handsomely finished paper, will compare favorably with magazine work. There is no publication in this country—nor, we imagine, in the world—which is better entitled to respect and admiration than Garden and Forest. In its own field it is without rival, and it is indispensable to all persons who are at all interested in the subjects of which it treats.

Prof. Charles S. Sargent, its conductor, is the man of all others who, by taste and training, is qualified to conduct such a periodical, and he could have no better coadjutor than Mr. W. A. Stiles. The tone of Garden and Forest is as broad as we should expect it to be under such a management. It interests itself in many questions collateral only to the subjects expressed in its title, but which have an important bearing on the public welfare. Thus it often discusses the care of city parks, the protection of forests and game in the reservation of the West, water courses in their relation to the public and other timely topics.

A bound volume of Garden and Forest will furnish many an evening's interesting reading, even to those who know but little either of gardens or of forests.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 9 to 12.—Pittsburgh—Duquesne K. C. W. E. Littel, Sec'y.
April 16 to 19—Boston.—New England Kennel Club. D. E. Loveand, Sec'y.
April 17 to 20. Los Angeles—Southern Cal. Kennel Club. Dr. R. J. Withers, Sec.
May 1 to 4.—Oakland, Cal.—Alameda County Sportsman's Association. F. Boell, Sec'y., Oakland, Cal.
May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.
Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at ——— P. T. Madison, Sec'y, Indianapolis, Ind.
Sept. 10—Morris, Man.—Manitoba F. T. C., John Wootton, Sec'y, Manitou.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells Sec'y.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

CHICAGO DOG SHOW.

(Continued from Page 213.)

OLD ENGLISH SHEEPDOGS (John Davidson, Judge).—The well-known Herdsman II. and Boxer III. were placed as named.

POODLES (John Davidson, Judge).—There was not such a showing as last year. The challenge classes were drawn blank. In open corded dogs, Ponce De Leon won from Lais, good in cords, Nero, untrimmed, coming third. In curlies Prince, the winner, is a good-headed dog, but falls away behind; Black Jack is coarse and fat in body; Dahomey, third, has the best curls but is down in quarters. In bitches Theo won, a nice-headed one with good curl; Princess, second, is weak in muzzle and curl should be tighter; Queen Zip, third, was not in the best of shape.

DALMATIANS (John Davidson, Judge).—These were poor, spots not distinct enough, and heads and ears faulty. Jack, the dog winner, was about the best of the six shown. Some of them were almost black in body.

BULL DOGS (E. A. Woodward, Judge).—The secretary of the Bull Dog Club had an easy task on his second appearance in the ring, but although entries were few, the quality was choice. All the winners have been repeatedly described. In bitches, Hucknall Gypsy, easily accounted for the long-faced Sally Brass II. Miss Mischief was absent. In light weight dogs Nuggett was alone and in the absence of Princess Venn, Juno II. had a walkover.

BULL TERRIERS (W. Mariner, Judge).—The classes were well filled and the quality very fair. Cordona was alone in challenge dogs and Attraction scored handily over Lady Dinah, especially in body. In heavy weight dogs first went to Bellerby King, improved on last year's form; Prince Gully, second, I thought beat him in head and eye; Chatauqua Clyde, third, is too cheeky and wide in skull and muzzle should be longer; Lord Rosebery has a nice, long, clean head and should have had the position, though he is not furnished up in body. Dutch Billy is rather coarse in head but good in eye. In bitches, Flower of the Valley was picked out for first, a nice, long, clean-headed bitch, with well-placed eye; second to Queen Lilly, fuller in eye than the majority from this kennel, but very well formed all round from head back; ears are not so smart as they might be; Burston Kit is a trifle heavy in shoulder and has a full, light eye; Countess of Dufferin, reserve, holds her own in great shape. Edgewood Trilby was hardly treated with hc. Edgewood Sport, the only lightweight dog, should be a little flatter in skull. In bitches the smart Edgewood Matchless scored again, followed by Lorna Doone, another daughter of Gully the Great; a nice, long, clean-headed bitch with a rather full eye; Chatauqua Nellie, third, has too much stop, and Emulation is short-headed. Edgewood Trilby won in puppies, and Prince Gully in the novice class, with Trilby, second. Frank F. Dole took the kennel prize.

BOSTON TERRIERS (John Davidson, Judge).—Quite a nice little show of these dogs of "cultuah," and the judge acquitted himself well. Jem Mace had no competitor, and Countess was absent in the 25 to 35 pound bitch class. In 15 to 25 pound dogs Commissioner romped in, a very neat sort with a capital head; Sandy has a wedgy, long muzzle, good skull but is cheeky, good tail; Hector, third, I did not see. In bitches, Topsy, a very neat little sort, beats Peggy in shortness and squareness of muzzle and flatness of skull, and in front; Ruth is a trifle snipy but is a very fair sort. Reuben, the novice winner, is too long in muzzle and has a "bully" look.

DACHSHUNDS (Jos. Wedekind, Judge).—There were a lot of entries comparatively speaking, but more than ever was type diversified. Hundesport Bergman won in challenge dogs. In open dogs Puck, a sweet headed little black was first, a little fine in body, not in shape, but decidedly a dog of quality. Second to Nips, a rather coarse-headed dog, too full in skull, chest should be deeper; Sandy, reserve, has a fair head, a little light in body, good loose skin. In bitches equal first went to Polly and Hexe Von Venlo, the nice-headed bitch that was at Detroit; Polly is a very fair sort, a little tight in skin, chest well let down and stands on good, strong legs, well muscled; Kutscka II. Reinecke, reserve, was at Detroit. There was nothing extra in the puppy class. W. Loeffler won the kennel prize.

BEAGLES (John Davidson, Judge).—A very fair lot, in fact better than in former years, Mr. Wixom's pretty team being much admired. In challenge dogs Ch. Sherry won easily enough from Joe, Paderewski and Adam; the latter coming in reserve. In bitches Ch. Elf won well over June M. In dogs over 13 inches, Hawkeye, first, beat another good one in Roger W., it's a very close thing between them, the latter getting it a little in head and rib, and losing in cleanness of shoulder; Joe, third, is too long in body; Dan J., beats him in head; Pomp, vhc., is also better in front and head. Trump has a coarse, long head. In bitches, Daisy Corbett won well in hand from Fancy M., who was lucky, as she is out at front and none too good in head; Alice, third, a little long but a good stamp, something on the Sherry order; Belle of Westchester, reserve, I liked for third; best head in class, barring winner's. In small dogs Razzle, first, Royal Dick, second, but the latter was lucky to beat Little Wonder, being too round and full in skull, good brush and body. In bitches the winner, Kitty Clover, loses to both Evangeline, second, and Dazzle, reserve, in type, only forging ahead a little in bone and substance; Ada, third, a pretty-headed one, ears not turned to head, good front. Alice won in puppies with a rather nice-headed one, Bessie Brown, second. Hornell Harmony-Kennels took the kennel prize.

FOX TERRIERS (James Mortimer, Judge).—A capital entry and the classes were well handled. Warren Safeguard and Warren Captious, were the challenge winners and the Rutherford Kennel had a rare innings with Warren Daybreak, Tip Top and Warren Salesman placed in the order named. Daybreak is a rattling good youngster, cleaner in head and front than either of the others, the dogs of this kennel are so similar in appearance that at New York we mistook Daybreak for the Providence pup. Hillside Royal, fourth, with his coarseness should have given way to a cleaner head and fronted dog in Hillside Domo; reserve, Streak of Luck, a fair sort, is a little strong in muzzle, perhaps a good fault; Raby Rival and Raby Truefit, the big dogs, were vhc. In bitches Geo. Raper's trio, Richmond Victory, Cowthorpe Gem and Richmond Pearl, were placed as named, the same as at Detroit, Warren Dorothy fourth, in the same relative position; Bit of Fortune, a small one, with a good front and ears well carried, deserved her place and Judgment's Reward (the nomenclature of these dogs takes the cake or rather the —), is a little full in skull, nice front and ear but she is on the small side. A bewildering lot of puppies came out, but outside of the winners mentioned above the quality was much mixed. In bitches, Selden Sweetness is one with good round bone, full in skull yet and ears are a trifle large, Bit of Fortune was second. Warren Daybreak and Salesman won in novice dogs and Richmond Victory and Cowthorpe Gem in the corresponding class. In wire hairs there were no challenge entries. The New York winning pup Encliffe Brisk won well in head over Mister Great Snap in open dogs with the well-known Brittle Beaut, reserve. Yale Tramp, vhc., runs the latter close with Compton Vindex, described before, hc.; Roath Rennie was the only bitch shown. The Rutherford Kennel took the smooth kennel prize.

IRISH TERRIERS (John Davidson, Judge).—Jack Briggs once more scored over Merle Grady, Jackanapes being absent in challenge dogs; Dunmurrey furnished the bitch class winner. That smart pup, Briggs' Best, was alone in dogs. Gessela III. won from the light bodied Briggs' Breeze, followed by the nice-headed Kate Carney, who was shown altogether too fat; plain-headed Colleen Rhue II. was reserve. Briggs' Best took the novice and puppy prizes.

SCOTTISH TERRIERS (John Davidson, Judge).—No challenge entries. The Colored Preacher won well from Kitib in open dogs, beating in body and coat. In bitches, Bessie, excellent in coat and body, but off in head, won from the well-known Glenshea. A great falling off in these classes from last year.

BLACK AND TAN TERRIERS (John Davidson, Judge).—Many of these are well-known and so do not require extended criticism. The old stayer, Broomfield Sultan, won again in challenge dogs, but Queen III., good bitch as she has been, has gone off considerably, and might have given way to Gypsey Girl, who beats her in front, cleanness of head, but is beaten in hind parts. The dark Rochelle Rush won in dogs over Play Boy, shown in great shape, very nice head and ear, but lacks thumb marks; Chicago Spider has been described. Gypsey Queen won in bitches, her tan is not clear enough; Rosette, second, is a rather big, coarse bitch, good head tan, but thumb marks run in; Canada Queen should have beaten her. Chas. Wilson took the kennel prize.

There was only one Bedlington, Endcliffe Wasp, spoken of before. Tweed, the only Dandie Dinmont dog, is soft in coat and a bit out at elbow. In bitches Lothian Judy was also alone.

SKYE TERRIERS (John Davidson, Judge).—Always a good lot here, though the winners were from a distance, and nearly all have been commented upon recently. Jenne of Dean, third, in open bitches, is small, snipy and short of coat.

No Schipperkes exhibited.

YORKSHIRE TERRIERS (T. Farrer Rackham, Judge).—A lot of "hair" dogs, but few real Yorkshires. Minnie Yorke occupied her usual place. In open dogs Bradford Rejected, won as he pleased from Damfino, who is smutty in head color, but good body color and coat; Fishpool Gem, third, has gone very smutty in tan. Prince Harry is a nice-colored one, that carries his tail too high. Pinkie Yorke won in bitches, mixed in body color, light in tan; second to Judy York, a light silver blue and Nina is also a silver

The toy terriers were the usual apple headed little "squirmers," and in smooths, firsts were withheld.

PUGS (T. Farrer Rackham, Judge).—A capital lot of pugs turned out. Drummer beat his kennel mate, Duke Howard, in challenge dogs, Attraction being out of shape. Haughty Madge won alone in her class but was shown too fat. Young Penrice and Al Von took their Detroit positions, followed by Finsbury Dong, a fair-headed one with the well-known Patsey Bolivar fourth, and Finsbury Duke, vhc. A nice little sort is Robbie Mac, excellent in size; the class was a hot one all through, but our detailed criticism will keep for another time. Hooker, the Detroit winner, won in bitches, followed by Mint, who has no trace, gets her ears up and should be deeper in stop; Queen Zitka, third, should be higher in skull, but a nice stamp all round; Princess Madge, reserve, would not show herself, but is a most promising sort with a good head. La Belle Senora deserved her letters. Queen Madge, another promising pup, but lacking trace, excellent in head and ear and very cobby, won in puppies. Finsbury Dong and Cashier's Daughter took the novice prizes. T. A. Howard took the kennel prize.

TOY SPANIELS (T. Farrer Rackham, Judge).—One fairly good King Charles in Puck was shown; a drop from last year. Puck has quite a good skull, and short muzzle, tan not clear enough.

A fair Blenheim, better in skull than in muzzle, was shown in Miss Ruby.

The Ruby entry was a snipy-faced, any other color, liver and white spaniel.

No Japanese were entered.

The Italian greyhounds were almost the same as at Detroit, Dixie, third in open dogs being the new face, a fawn and white, rather large sized.

TOY POODLES (T. Farrer Rackham, Judge).—The dog had some resemblance to a poodle, but Pearl, Jr., would make a very fair Maltese terrier, especially in size.

MISCELLANEOUS (John Davidson, Judge).—Ben Lewis, Jr's., terrier Frank, and a small Esquimo-spitz, were first and second in dogs, and the rough haired daschshund, Pennie Reinecke, was alone in bitches. H. W. LACY.

(Mr. Lacy's reports were received promptly on time, but owing to pressure on our columns, we were unable to publish them sooner.)

To Editor Forest & Stream

New York

There will be a Called Meeting of the board of Governors of the U S Field Trial Club held at Louisville Ky at 6th am all members of the club are invited to be present at the Meeting

W B Stafford, Secy & Treas

U. S. F. T. C. Matters.

We have received a long letter of explanation from Mr. Avent, in respect to his personal relations with the club, and other matters. The pressure on our columns restricts us largely to a mention of its important points.

He states that, when he became a member of the club, it was at the solicitation of Mr. Madison and that, when he was first put on the Board of Governors, he was not present and did not know who proposed his name; and that his re-election was without any seeking on his part as was also his election at West Point; that since he has been a member no one has worked harder for the interest of the club than he has, and that he is willing that every proposition and action which he made, should be known.

He says: "The only thing I have reason to regret is the unfortunate affair in which I was connected at Bicknell in 1893—that was very unbecoming, and at once, without any one suggesting I apologized to the three judges and they cheerfully accepted my apology. Through my efforts, Mr. J. N. Seal and Allie Pursons, of Jackson, and others, joined the U. S. Club in 1893. Again at West Point, I persuaded Prof. Osthaus, of Toledo, Ohio, Philip M. Essig, Natchez, Miss., Mr. James Angola, La., Mr. Cottrell, West Point, Miss., Mr. N. B. Nesbitt, Chesterville, Mass., and Mr. C. E. Buckle, Charlottesville, Va., to join the club. Go to their homes, trace their character and see if they are not every one gentlemen and thorough sportsmen that are worthy of membership to any field trial club, although three of them I know received one black ball each. Only one of them, Mr. Buckle, was proposed by me to go on the Governor's Committee. I proposed him because I thought his influence was worth a lot to the club, but some one else proposed Messrs. James and Essig, also Mr. Seal, making four of the gentlemen that I have proposed for membership on the governing committee. I am free to admit that I have told Mr. Madison and other that I was trying to get all the good members that I could in the South to keep up our side of the interest in the club. In fact, Mr. Madison asked me to use my influence in trying to get all the good members that I could. When it came to electing a committee for selecting judges, Mr Madison, Mr. N. T. Harris, and one other gentleman from the North was proposed by Mr. Madison. I then rose and stated that inasmuch as the Southern people furnished more entries than the North, that one of the committee should be from the North. Mr. Madison, one from the Central States, Mr. N. T. Harris, and one from the South, Mr. J. N. Seal. They were unanimously elected. I had no objection to the committee last year, Dr. Rowe and Mr. Madison; in fact, if Dr. Rowe was really able to attend to the affairs of the club, I would be willing for him to select every judge that I run under, and attend to all other business, but we regret very much to know of his illness confining him to his room, and he could not be expected to look after even his own business—and I have said it to friends that I did not think it showed good taste to have Mr. Madison the only one to select judges when he is running dogs good enough to win first. I am sure that when Mr. Madison thinks about it, he had rather win under judges that others had a say in the selecting. There is no sectional feeling in me. Many of my best friends live in the North and Northeast, and no such feeling is existing between the U. S. Club members." (Some reference to Mr. Damon is here cut out.) "The meeting of the U. S. Club at West Point was undoubtedly the most successful one ever held, and nearly every one present complimented the business way that the club had arranged their committees and all other busniess for the year. On Monday night, before the All Age Setter stake was run, Mr. Madison sent in his resignation, to the surprise of all present. We all regretted it very much. I tried to persuade him to withdraw his resignation, but he refused. I made a motion not to accept his resignation at that time, saying I hoped after Mr. Madison had time to reflect that he would still stay with us, and the meeting was adjourned until Feb. 5 at New Albany. Afterward I approached Mr. Madison four different times trying to persuade him to stay with the club, and he did not hint that I was the cause of his resigning. On Tuesday night, just before the governing committee was called to order, I was informed by Prof. Osthaus that Mr. Madison was resigning because handlers were members of the club. I at once stated that if that was the cause that I would resign myself if he would remain, and at the meeting we again refused to accept his resignation, appointing Prof. Osthaus a committee to telegraph Mr. Madison that Mr. Stafford has decided never to handle any more dogs in field trials, and that Mr. M. Buckle, Nesbitt and myself would resign of he would still act as Secretary and Treasurer. The following message was Mr. Madison's reply to Prof. Osthaus, and handed to Mr. Stafford to read when received:

" 'Indianapolis, Ind., Feb. 6, 1895.

" 'E. H. Osthaus, New Albany, Miss.

"'I will stick to my agreement with Taylor, Waters and Osthaus. P. T. MADISON.'"

"Messrs. Taylor, Waters and Osthaus denied the existence of any agreement and Prof. Osthaus again telegraphed Mr. Madison and reported at the meeting Wednesday night that Mr. Madison insisted upon his resignation being accepted. If I was the disturbing element in the club, I do not understand why my proposition to withdraw was not accepted together with that of the others. Was it necessary to disband the U. S. Club and form a new one as there is now a movement to do, to get the handlers out? Certainly not. There must be others in the club beside the handlers they wanted to get rid of also."

(There is more matter in Mr. Avent's article, but as it is personal and reflects personally on the reporter of a Western journal, and on one of the club members, we consider it improper for publication.

Mr. Avent has made a mistake in quoting Mr. Madison's telegram as sent. But, aside from that, there was a mistake in transmitting the message. Under date of March 10, Mr. Madison sends us a copy of his original message, which we obtained at the Indianapolis office. It is as follows: "Indianapolis, Feb. 6, 1895. Prof. E. H. Ostnaus, New Albany, Miss. I will stand to any agreement made by Osthaus, Taylor and Waters. "P. T. MADISON."

(This meant that Messrs. Osthaus, Taylor and Waters could act for him in negotiations with the club. The telegram containing a mistake, of course all the elaborate deductions drawn from the mistake are mistakes also.)

Duquesne Kennel Club.

Pittsburg.—We have made the following changes in our premium list:

In greyhounds, we have changed Class 31 to read, "Challenge Class, Dogs," and have added Class 31a, Challenge Class, Bitches, 1st prize, $10. In Spaniels, in order to conform with classification on No. 2 of the American Spaniel Club, we have changed Classes 68, 69, 72 and 73, to read, "Open Class, Dogs," and have added Classes 68a, 69a, 72a and 73a, all for open class bitches, 1st prize, $10; 2d, $5, each class. In beagles, we have changed Class 102 to read, "Open Class, Dogs," and have added Class 102a, for open class bitches, 1st prize, $10; 2d, $5. In skye terriers, we have changed the prizes in Classes 119 and 119a to read, "1st prize, $10; 2d, $5. In black and tan terriers, we have changed prizes in Classes 120 and 120a to read, "1st prize, $10; 2d, $5; 3d, $3. In pugs, we offer a kennel prize of $10 for the best kennel of four or more, owned and entered by one person or kennel, and have added a third prize of $3 to Classes 123 and 124.

Will you kindly publish the following note, by permission: "The Argyle Kennels have decided to give their dogs a rest after the Chicago show. Sir Bedivere, Le Prince, La Princess and the other good dogs of their string will therefore not be shown at Pittsburg. This will make it more interesting for others."

We have increased our kennel prize for Irish terriers to $10. We have also divided the challenge class, making an additional class, 113a, for challenge bitches; 1st, $10.

JOHN MOORHEAD, JR., President.

POINTS AND FLUSHES.

By a Staff Correspondent.

HUNGRY DOGS.

"I don't know what the general opinion is now about the supply of a dog's stomach while he is hunting. I know it used to be that he should go hungry, and perhaps not be fed until he came home from the hunt. Well, I regard the notion a foolish as well as a cruel one. If a dog don't care to hunt unless his keen hunger impels him, I wouldn't give a pin for him. I don't want a dog to hunt for a meal, but because he likes to hunt. I always took out my dog with, at least, a light meal; and if the hunt was long I shared my lunch with him in the field.

"N. D. E."

The foregoing communication from a correpondent does credit to its writer's high standard of what he considers true refinement in field sport, but which, much as it may jar one's sentiments to admit it, is erroneous. Underlying all the dog's effort is the impelling cause, namely, a hungry stomach. He is searching for a food supply. While he may have all the exterior appearance of spirited effort and unbounded enjoyment while searching for game, such qualities refer more to the manner of his pursuit than to the purpose of it. In fact the same motive which stimulates to effort the wolf, the wild dog, and other carnivorous animals, is the same which stimulates the domestic dog, though the latter has his efforts modified by his environment. They are all meat eaters, though the domestic dog may, from necessity, and habit, eat vegetable food. He, however, never does so from choice. As between vegetable and animal food, he always selects the latter. He has the same carnivorous instincts of his wild progenitors and brothers of the wilderness, though in domestic life he has them much modified for the time being, from want of opportunity to exercise them, and from an education which tends toward peacefulness. Still, the fierce instinct of the carnivora is never eradicated, it is merely suppressed. The first time that a dog sees a rabbit or catches scent of its trail, he is full of the excitement of the chase and desire to kill. If he is successful, he eats his prey. Many dogs have such a surplus of animal strength and courage that they enjoy a fight for its own sake, much after the manner of some men, though more deadly and intent on battling to the death.

In domestication, the dog is forced to live in an environment which is largely foreign to his nature. He is forced to eat a vegetable diet which he dislikes. However, he never fails to show his appreciation of a meat diet whenever opportunity offers. Though his environment may be artificial, his instincts remain unchanged. He takes pleasure in hunting for the profit there is in it for him.

It is a source of gratification that it is so, when one thinks of it seriously. The killing of animals out of pure wantoness could harldy be justified, but the killing of animals as a necessary means of subsistence is in accord with the laws of Nature and is therefore right. The carnivora are merely fulfilling the law of their being.

Thus it may be conceded that a dog never hunts for the sake of sport. He is out to kill regardless of the manner of it. If he can take his prey at a disadvantage or unawares, he does not hesitate to do so. He is a meat hunter, a seeker for results; it is not a sport, it is a matter of existence to him. When a dog has a full stomach and, therefore, when his appetite is satisfied, he takes but little interest in searching for prey. The needs of his being are satisfied. He is more disposed to rest and slumber. And it is wise that it is so, for were the carnivora to go on killing regardless of their own needs, the wanton waste of animal life would be frightful to contemplate.

It may be remarked, en passant, that many kind owners, who feed their dogs animal food, the food which is their natural subsistence, feed too much and too often. In a state of nature, obtaining a food supply represents vast effort. In all probability, a full meal is not a daily occurrence. The carnivora, from abundant exercise and proper food, are consequently in lean condition at almost all times, or rather what civilized man would call in poor condition. But man errs in making his own needs a standard for measuring the needs of the dog. Man is herbi-carnivorous, therefore he must eat more and oftener than the carnivora. The herbivorous animal must eat still oftener; indeed, the larger part of his time is occupied by constant eating. This is advanced merely to show that it is an error for man, taking himself as a standard, to thereby judge of the needs of the dog.

Now as to the matter of sport, it is largely from education Aboriginal man hunted for food supply. He was not especially particular in his methods of capture. With civilization and a limit to the game supply, came a restriction as to methods and sometimes a restriction as to season and quantity captured. The unwritten laws of sportsmanship are more stringent and restricting than are the statutes thereon. They prescribe the manner in which the capture may be effected under the name of sport. But this manner comes from education. The natural impulse of the boy when out hunting, is to kill game regardless of methods. With more experience and skill, he assumes a higher standard of sportsmanship. From killing birds on the ground, he advances to killing them on the wing. The restrictions of sportsmanship, aside from the ethical standpoint, are necessary; for if every one were to kill up to his own killing ability, there would soon be no game left. So thus, I fancy, the sport refers more to the manner of killing the game than to the killing itself; for we can hardly suppose that the mere killing is the sole source of pleasure. To justify the killing at all, it has always seemd to me that there must be always a main purpose to kill for a useful end; that is, to be used as an article of food. To kill for the mere purpose of killing can not be called a foundation for the superstructure of sport. Granting the intention to capture the game for a self purpose, the reasonable restrictions on killing, resulting from game being the property of the people and a knowledge of the effects of skill and modern equipment for killing, the sport necessarily lies in the manner of capturing. Once deny that the manner is of no importance in sportsmanship, and the bars are let down to all.

While man, by education, becomes a sportsman, the dog never arrives at a stage wherein he hunts as a diversion, or wherein he hunts after a prescribed manner. He does not adopt methods which place the pursuer and pursued on even terms. He captures by any means he can.

The manner of the dog, broken to work to the gun, is a very imperfect standard from which to judge dog nature. The dog simply hunts under certain restraint because he is not permitted to hunt in any other manner He prefers to hunt in a restricted manner rather than not hunt at all. The manner is not of his own choosing—it is forced on him. He may work cheerfully, but the manner of it is not his own. The dog is permitted to work, and man, the nobler animal, appropriates to himself the results of the dog's labors. But let the trained dog escape on a self-hunt, and he abandons all his education and manner of working to the gun and adopts his own methods, not for the sport there may be, but for the profit.

The stomach of the dog digests vegetable matter with difficulty. To perform its office properly, the dog should be at rest. I read some years ago—though how well authenticated the incident was I do not now remember—of a dog which was fed in the morning and then was required to work afield. Death was caused in some manner some hours after the dog had eaten, and on examination the food was found still unaffected by digestion. It is a mistake to feed a dog more than one meal a day. That meal should be abundant and nutricious. A dog so fed will live longer, will keep in better condition and will do better work than one fed oftener.

DOG CHAT

We learn that we are blamed for the omission from Secretary Stafford's official communication of the date and place of the recent meeting. A photograph reproduction of the communication is presented herewith. It is given so that it may be perceived plainly that the oversight is ours, as is also the blame of not publishing the communication a week sooner, even though it was received after the paper had gone to press. Surely if a Secretary who receives a salary of $500 a year for such careful and accurate work, sends us word that his club is going to hold a meeting, we should be able to supply the date and place ou of our own inner consciousness. There are some other matters of blame circulated diligently, which have no more foundatio than has this one.

Through a typographical error we were made to say last week that Mr. Geo. Douglas had sold his Woodland Prince to a Chicago fancier. Woodland Prince is owned by Wankie Kennels. Woodland Princess is the cocker Mr. Douglas sold.

Mr. P. T. Madison, Secretary-Treasurer of the Continental Field Trial Club, writes us that the club has seventy-five members.

Mr. W. B. Stafford, Secretary-Treasurer of the United States Field Trial Club, writes us that the Board of Governors of the club held a meeting at Battery D, on March 6. Messrs. Edw. Dexter, G. Muss-Arnolt, W. C. Ehrmann, Montgomery Ward & Co., D. W. Stearn, Abner T. Hetfield and J. E. Isgriff were elected to membership. Mr. Dexter was elected a governor in the place of Mr. Madison. Twenty-seven new members had been admitted within the last sixty days. Four resignations had been tendered; one had been accepted, the other three were under consideration.

Mr. W. S. Orr, E. Genesee St. Syracuse, offers $10 reward for the return, or information which will lead to the return, of the two year old English setter dog Dean; in color, ticked on body, black ears, tan on head. Mr Orr prized the dog highly as a companion and shooting dog. Dean disappeared on March 1.

Premium lists of the New England Kennel Club can be obtained by addressing the Secretary, D. E. Loveland, 125 Tremont street, Boston. Mastiffs, St. Bernards, American fox hounds, pointers, setters, collies, Boston terriers and fox terriers have $15 in challenge classes, $15, $10 and $5 in the open, and $5 and $3 in the puppy classes. The challenge classes for some other breeds have $10; open classes, $10, $5 and $3. Other classes have $10 and $5, first and second respectively. Entries close March 30. Entry fee, $3. Provision has been made whereby police and secret service men will be in attendance at all times. The dogs will be benched and fed by Spratts' Patent. The special prize list is long. A club cup (special prize), is offered for the best dog or bitch, bred and owned by the exhibitor, in each of nearly every breed.

The Waterloo Cup was won by Thoughtless Beauty. Fortuna Favente was the runner up.

N. E. K. C. Show.

Boston.—We have made a challenge class, dogs and bitches, for Boston terriers, Class 144a. We have also provided a kennel prize of $15 for best exhibit of four Scottish terriers, entered and owned by one exhibitor. The conditions under which our club cups were offered have been changed and will now be offered for the "best American-bred dog or bitch" in the twenty breeds enumerated in our premium list. Additional specials: The English Bloodhound Club offers their trophy for the best English bloodhound dog or bitch in the show. Competition confined to members of that club. A gentleman fancier offers $50 for the largest exhibit of mastiffs entered and owned by one exhibitor. The American Fox Terrier Club offers their Grand Challenge Cup, value $300, for the best fox terrier in the show. The Home-bred Stakes of 1895, $10 for the best American-bred smooth fox terrier in the puppy classes; $10 for the best American-bred wire-haired fox terrier in the puppy classes. Hill Hurst Kennels offer etching of Champion Cribbage for the best American-bred wire-haired fox terrier in the open class. Donor not to compete.

William Gibbons, England, offers a set of the Fox Terrier Chronicle from 4th to 10th volumes for the best American-bred wire-haired bitch in the open class.

D. E. LOVELAND, Sec.

American Spaniel Club Specials.

New York.—The following specials have been offered by the Spaniel Club for competition at the forthcoming shows. Open to members of the club only.

Pittsburg Show.—The Whitehead Trophy, for the best cocker spaniel stud-dog shown with two of his get. The get only to be judged. To be won four times. The Bell Cup, for the best brace of other colored cocker spaniels. To be won four times Five dollars for the best brace of Irish water spaniels, field spaniels and cocker spaniels respectively.

New England Kennel Club Show.—The St. Lawrence Trophy, offered by C. T. Sackett, for the best brace of cocker dogs or bitches, any color. To be won five times. The Bell paintings, for the best brace of cocker spaniels, under one year old, any color, dogs or bitches. To be won four times. The Saybrook Trophy, for the best American-bred field spaniel, to be won five times. Five dollars for the best brace of clumber spaniels. field spaniels, black cocker spaniels and other colored cocker spaniels respectively.

ROWLAND P. KEASBY, Sec.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

VILLAGE BOY.---By D. O'Neill, Providence, R. I., for sable and white collie dog whelped Oct. 17, 1894, by Royal Chief (Sir Christopher---Flurry IV.), out of Village Beauty (Fordhook Climax---Fordhook Alyssem).

WHELPS.

Prepared Blanks sent free on application.

FRISCO.---L. Loy's, Columbus, O., Maltese terrier Frisco, Dec. 10, 1894, five (two dogs), by Wheeler's Prince.

RIPPLE.---Park Beagle Kennels, Westfield, N. J., English Beagle Ripple (Drummer---Violet), Jan. 13, six (three dogs), by Owners' King (Jack Baunerman---Elora Chimer).

SALES.

Prepared Blanks sent free on application.

VILLAGE BOY.---Sable and white collie dog, whelped Oct. 17 1894, by Royal Chief out of Village Beauty, by John R. Howe, Central Falls, R. I., to D. O'Neill, Providence, R. I.

BEAUTY.---Black, white and tan beagle, whelped June 6, 1893 by Stormy out of Ripple, by Park Beagle Kennels, Westfield, N J., to Otto Amundsen, Brooklyn, N. Y.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

March 20-21.—YARDVILLE, N. J.—Two days' tournament at live birds; second day, handicap sweep at 25 birds, $10 entrance, birds extra. Chas. Zwirlein, proprietor.

March 26-27.— ROCKFORD, Ill.—Live bird tournament of the Rockford Gun Club.

March 27.—SPRINGFIELD, N. J.—Tournament of the New Jersey Trap-Shooters' League, under the auspices of the Union Gun Club, of Springfield, N. J. E. D. Miller, Sec.

March 28.—NEWARK, N. J.—Live bird handicap at Erb's grounds, under the auspices of the Newark Gun Club; 25 birds, $10 entrance, birds extra, handicaps from 33 to 26 yards, class shooting, four moneys. W. H. Green, Sec.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 8-10.—HOT SPRINGS, Ark.—Fifth annual tournament of the Arkansas State Sportsmen's Association; targets. Programmes ready March 1. John J. Sumpter, Jr., Sec.

April 9-11.—BURLINGTON, Ia.—Tournament of the Big Four Gun Club.

April 9-11.—WELLINGTON, Mass. Three days tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager

April 9-12.—LONDON, Ont.—Three days' live-bird and target tournament; $100 guaranteed; experts handicapped by distance and unknown angles. John Parker, Detroit, Mich., manager.

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth, Sec.

Control of Trap-Shooting.

There is probably no need of any further agitation on the subject of a governing body for trapshooters of this country. The meeting at the Astor House on April 3 will undoubtedly accomplish all that its promoters desire. Still it would never do to sit still and trust to the general public paying sufficent attention to the subject, as that same general public is a remarkably easy-going body of men.

We are now thoroughly convinced from letters and inquiries received at this office that there is a decided feeling abroad that a National Association is what is needed to place trapshooting on its proper footing among the sports and pastimes of the American people. A certain undesirable element requires curbing or annihilating, and only a central body can satisfactorily accomplish this curbing. Forest and Stream therefore calls attention once more to the meeting of April 3, at which a permanent organization will be effected.

DRIVERS AND TWISTERS.

The Climax Gun Club, of Plainfield, N. J., and the Keystone Shooting League, of Philadelphia, Pa., have arranged for a series of six races, three at live birds and three at targets. The live bird races will be shot under the following conditions: 15 men to a team, 15 live birds per man, American Association rules, $5 each man, losers to pay for the birds, with an optional sweep also of $5. The target races, which will come off later in the season, will be 15 men to a team, 25 targets per man. The first live bird race will take place on Monday, March 25. Among the members of the Climax team will be: Apgar, Van Dyke, Woodruff, "Dutchy" Smith, Keller, M. F. Lindsley, N. E. Money, P. "Jay," Zwirlein, Hill, Ivins, Cooper, etc.

The daily papers have recently been very sadly mixed up on trap matters. The entry list for the Morristown, N. J., 50 bird race containing the names of several shooters who had not, and never had, any intention of taking part. Inquiry, also, of a very superficial nature, would have informed them that Brewer was not going to shoot Class at Erb's grounds, Brewer having written Erb to that effect at least a week previous to the date set for the first match. As to Class claiming forfeit, that was absurd, as not a dollar had been put up by either man.

Paul North, he who cometh "from Ohio," was in town last week. Unfortunately I did not get a chance to see him to ask him how the Cleveland shoot loomed up, but I hear that he predicts a great time at the Chamberlin tournament. Like everybody else interested in the manufacture of guns, shells, targets or traps, in fact of anything connected with trap shooting, he expects 1895 to break the record in target shooting. Incidentally it may be mentioned that Paul had on exhibiton the photos of two remarkably bright looking children, a boy and a girl, who call him "Father."

The accident which happened to "Dutchy" Smith, mentioned

n the report of the Climax shoot, was a remarkably narrow escape. It must be remembered that "Dutchy" is a "south paw" shooter, and that it was the right barrel of his gun that burst.

Mr. S. A. Howes, Secretary of the Michigan State Trap-hooter's League, announces that the League's annual tourna ment will be held on April 18, 19, at Battle Creek, Michigan. The annual meeting and election of league officers will be held on the evening of April 18.

In a letter, dated Weir City, Kansas, March 9, Mr. W. W. McIlhany, asks that Forest and Stream will make a mention of the programme of the tournamen of the Amateur Trap-shooter's Association of Missouri and Kansas. Mr. McIlhany's request will be granted all the more readily because the programme contains some really interesting reading matter. The fact that "Jack" Parker, "Des-Chree-Shos-Ka Jack," some call him, will manage the tournament is a guarantee that here will be the smoothness of well-oiled machinery connected with the running of the shoot.

A new gun club has been organized in Springfield, O., under the title of "The Home City Gun Club." Its officers are: President, Joseph Beck; Treasurer, W. G. Holloway; Secretary, Frank Wragg; Captain, Harry Downey; Lieutenant, Hugh L. Ford; Purchaser, Philip Haerr. The Secretary, Mr. Wragge, writes as follows: "In accordance with instructions from the club, I write to inform you of the fact that we have organized a new gun club in our city, called the "Home City Gun Club." We have a charter list of fifty (50) members, and n addition about twenty-five (25) applications. We have modeled our constitution and by-laws after the ones published n Forest and Stream some time since We expect to hold a ournament on our opening day, and will send you notice of ame, also scores."

The Altoona Rod and Gun Club has decided to make its tour nament three days instead of two as previously announced. It dates are now July 10-12. July 10 will be devoted mainly to a 100 target race, with a target allowance; the race will be, in act, precisely similar as to conditions as the one shot on the first day of last year's Interstate shoot at Pittsburg, Pa.

Plans are on foot to reorganize the old Fountain Gun Club, of Brooklyn, N. Y., one of the oldest associations of the kind in this part of the country. The club when organized will probably hold its shoots at Dexter Park, L. I.

In regard to the Easter Monday tournament of the Standard Gun Club, of Baltimore, Md., at Point Breeze, Mr. W. F. Clements, secretary of the club, writes that the club offers a purse of $25 to the high score in a five man team race, at 20 targets per man, entrance free. All members of a team must be residents of the same county; city shooters barred.

The Lake Side Rod and Gun Club, of Burlington, Vt., held its annual meeting on March 13. The following is the list of officers elected for the ensuing twelve months: President, B. R. Seymour ; Vice-President, W. P. Conger; Secretary, J. S. Denning; Treasurer, W. S. Phelps; Captain, E. E. Morgan; Directors, C. F. Reynolds, E. H. Shattuck, F. Howes, H.E. Spear, L. O. Harding.

Mr. J. Harlan Murrele, secretary of the newly organized "Diahoga Gun Club," writes as follows: "The sportsmen of Athens, Sayre and Waverly, Pa , have just organized the Diahoga Gun Club. The following is a list of officers elected: President, J. S. Hamaker; Vice-President, William Heavner; Secretary, J. Harlan Murrelle ; Treasurer, R. S. Hickey ; Captain, A. H. Nevins. A membership of thirty is at present enrolled, but the number will be largely increased in a few weeks. Grounds directly at the Athens terminus of the W S. & A. Electric Railway have been secured, and arrangements are pending for the erection of a club house. Weekly practice shoots and a monthly tournament for the county championship badge, known as the Sporting Life badge, will be the regular order of business. Tournaments will be held several times each year, to which all shooters are cordially invited. The American Association rules will govern all contests. Notice of all events will be given in Forest and Stream.

A three days' tournament will be held at London, Ont., on April 9-12, under the management of Jack Parker. The tournament committee guarantees $1,000, experts being handicapped by distance and by having to shoot at unknown angles. Live birds and targets will be used in the various events.

The American E. C. Powder Company has branched out westward, having established quite recently agencies in Chicago and St. Louis.

Shoots advertised for next week at Dexter Park, L. I., are: March 26, First German Gun Club; March 27, Nassau Gun Club (members of the Fountain Gun Club as guests); March 28, Dexter Park Monthly Invitation shoot; March 29, Falcon Gun Club.

The Brunswick Gun Club, of New Brunswick, N. J., has reorganized and is now on the footing of a social, as well as a shooting basis. The officers are: President, James Deshler; Vice-President, Frederick Weigel; Recording Secretary, H. H. Stevens; Financial Secretary, Rush Burton; Treasurer, Joseph Fisher; Captain, V. S. Voorhees; Board of Governors, R. M. Pettit, H. B. Smith, A. W. Pettit, W. E. Sperling.

Mr. W. H. Willard, the new secretary of the Battle Creek, Mich., Rod and Gun Club, writes as follows: "The Battle Creek Rod and Gun Club held its annual meeting Tuesday, March 12, at S. A. Howes' gun store, and elected the following officers: S. A. Howes, President; N. E. Hubbard, Vice-President; and W. H. Willard, Secretary and Treasurer. The club will give its opening shoot Monday, April 1 On April 18 and 19 the club will give the annual Michigan State tournament, which every one is invited to attend. The programme will be varied and interesting to both experts and amateurs, and will contain novelties not introduced in a programme before. During the tournament the team race for the Shooting and Fishing trophy, which the Battle Creek Club has won twice, once from Lansing and once from Grand Rapids, will be shot; also the individual race for the expert, semi-expert, and amateur championships of Michigan. Valuable prizes will be given for best average each day. Programmes will be sent to as many shooters as possible. Anyone who has ever attended a shoot at Battle Creek is aware that the Battle Creek Club knows how to give a tournament. Targets will be two cents."

The big men in live bird circles are just now doing more talking than shooting. Perhaps it's just as well—for the pigeons anyway.

On April 11, the Harrisburg, Pa., Shooting Association will hold a tournament at live birds. The special event will be a handicap, distances ranging from 33 to 25 yards. For particulars address H. B. Shoop, secretary.

Trapshooting is evidently progressing in Russia. On March 17 the Empire Target Company received an order for 15 of its new traps and 50,000 targets, from a firm in Moscow, Russia. The order was written in French, and had it been on any other subject, Charlie Hebbard would have been totally unable to dicipher it. As it was it took him no time to get at the substance of the epistle.

The programme of the Boston Shooting Association's tournament on April 9, 10 and 11, shows that the management intends to look after the interests of the large body of shooters that will surely be in attendance.

Mr. John J. Sumpter, secretary of the Hot Springs, Ark., Gun Club, under date of March 4, writes in regard to change of dates: "At a meeting of the Executive Committee of the Arkansas State Sportsman's Association it was decided to hold the fifth annual meeting and tournament in Little Rock this year instead of Hot Springs, and to change the dates from April 8, 9 and 10 to May 13, 14 and 15. There have been a few cases of small pox in this city, which were greatly exaggerated all over the country, and a number of towns and cities have quarantined against us. While the committee has had no doubt about the quarantine being raised long before the time for the shoot, and all danger (if there ever was any) passed, still it was decided to change the place of meeting for this year to Little Rock. The Little Rock Gun Club has generously taken charge of the shoot, and as they never do anything by halves, the committee has agreed to change the dates from the second Monday in April to the second Monday in May, in order to give the boys more time, which will mean a most successful tournament. I have already received about fifty letters and postal cards from sportsmen throughout the country asking for programmes, and to all of these I would say that as soon as they are ready they will receive one. Mr. Paul R. Litzke, of Little Rock, has been elected Assistant Secretary of the association by the Executive Committee, and will take pleasure in answering all letters of inquiry. Anyone desiring programmes can procure same by addressing Mr. Litzke at Little Rock."

On March 16 a competition will take place on the Boiling Springs Gun Club's grounds, at Rutherford, N. J., for the Shooting and Fishing trophy. Any and all clubs eligible to compete for this trophy will have the opportunity given them on this date. The conditions are: Teams of six men, 50 targets per man, (30 singles, one man up, five unknown traps, and 10 pairs). The trophy represents the team championship of New Jersey. EDWARD BANKS.

The Grand American Handicap.

Pittsburg, Pa., March 16.—Editor Forest and Stream: In my article of last week, bearing on the Grand American Handicap, a typographical error accidentally crept in it and in one particular sentence changed the entire meaning of the writer's words. The sentence in question, as it appeared in Forest and Stream, read: "In one of them, and especially in the Grand American Handicap, have the interests of every shooter, high and low, expert and amateur, been neglected." The absence of the letter "n" created the havoc. Instead of the word "one" it should have read "none." While there is little doubt but that the readers of Forest and Stream readily recognized the true meaning of the sentence, I felt that a slight reference to the matter might not be out of place and besides would make all the more clear a statement that means just what it says.

The widespread enthusiasm that has been created by the Grand American Handicap is a matter of much pleasure and encouragement, and in return the assurance is given by the management that in order to merit further approbation all that is possible in the way of careful arrangements and judicious handling of the tournament will be carried out from start to finish. Already the closest attention has been given everything in connection with this, the greatest of great shoots, as it is the desire of the management to conduct the event without a flaw upon its record. Justice and equity will be accorded one and all, so that there will be no occasion for the slightest murmur of complaint. The many leading and distinctive features are bound to meet with unanimous approval. To begin with, arrangements have been made with Mr. Ben. O. Bush, of Kalamazoo, Mich., to furnish a set of his electric live bird traps and his patent Electric Unknown Pull. In an event of so great importance as the Grand American Handicap, it is essential that the order in which the traps are pulled should be absolutely unknown to all persons, the puller included. Mr. Bush's Electric Unknown Pull accomplishes this, and the order in which the traps are pulled will be positively unknown. Arrangements have also been made with Messrs. W. G. Clark and Thomas House, of Altoona, Pa., to funish a set of their Conestoga traps, which were so highly spoken of in Forest and Stream's report of the Boiling Springs Club's tournament in last week's issue. The work of the handicapping committee will be characterized by careful judgment and consideration in each and every instance. It will be the aim of the official handicappers, to positively ascertain the correct shooting form of all contestants. The relative standing and ability of each entry will command their closest scrutiny, since above all other details they are staunch in their determination to accord justice in every case, so that all shooters will be placed on an equal footing thus insuring a fair field and no favors and with equal opportunities to all to win the coveted prize.

ELMER E. SHANER, Manager.

Illinois State Sportsmen's Association.

Mr. H. B. Meyers, of 148 Monroe street, Chicago, Ills., Secretary-Treasurer of the Illinois State Sportsmen's Association, has issued the following notice to the secretaries of all gun clubs in the State of Illinois:

"The twenty-first annual convention and tournament of the Illinois State Sportsmen's Association will be held in Chicago beginning June 3 to 8, and it is the wish of the officers of the association to make this a most memorable affair in two particulars, first, that of the discussion of game protection and, secondly, to receive a large list of entries to the shooting contests of the tournament. In view of the very lengthy reports of the officers on the subject of game legislation, the directors have deemed it wise to make the convention a two days' affair and devote the entire session of Monday evening, June 3, to the reports of officers and the discussion of game protection, and on Tuesday evening, June 4, to the election of officers and other business that may come before the convention.

"I respectfully call attention of all gun clubs to articles IV. and V. of our constitution, as herewith appended, and invite clubs not now members of this association who desire to participate in the convention and tournament to comply with the provisions of the same at an early date, and to the members now on the roll to remit their dues and assessments with a full list of officers and members by May 1, 1895."

The articles in the constitution which Mr. Meyers calls attention to are worded as follows:

"Article IV.—Any sportsman's association or club in the State, organized for the protection of game birds or fish, or for he enforcement of laws against the killing of either of them, may become a member of this association, upon written application being made, accompanied by a copy of its constitution and a list of its officers, upon a majority vote of the Board of Directors being had to admit such association or club."

"Article V.—Sec. 1. The annual dues from each subordinate association or club shall be five dollars, payable in advance; and each association or club shall be liable for an assessment not to exceed ten dollars in any one year; said assessment only to be made upon vote of the association, at a regular or special meeting. Sec. 2. Any association or club in arrears for dues or assessments shall not be entitled to a vote at the annual convention; nor shall any person be entitled to contests for prizes offered by this association, as a member of such association or club."

He Wouldn't Do So Now.

MICHIGAN.---I have had a gun for seven years. When I was eleven I shot in a glass ball shoot at Devil's Lake. I didn't use to think anything of banging away at a flock of birds on the ground. But I wouldn't do it now, and it all comes of reading the Forest and Stream. WILLARD S. COE.

Gives It First Place.

MAINE.---I have purchased Forest and Stream for years at the news-stand, and give it the first place in the ranks of sportsmen's journals. J. V. H. HARRIS.

Onondaga Sportsmen's Club.

Syracuse, N. Y., March 15.—The medal shoot of the Onondaga Sportsmen's Club this afternoon included a Supper Shoot, the losing side paying for a supper at W. S. Barnum's Hotel, at Maple Bay. The match brought out about twenty sportsmen the opposing sides being captained by D. M. Lefever, and C. T. Arno. The shooters worked hard for their respective sides, but poor scores were made, as the wind was blowing a gale, and the traps were strung up to their highest tension. Arno's team won by nine targets, but both teams enjoyed the spread which was prepared for them. Col. Courtney and C. A. Ginty tied for a class medal and in the shoot off the colonel broke all his targets, winning by a single break. Chas. Becker won B Class after a hard battle, with the score of 33. Will Jennings carried away the C Class, with 33 to his credit. The day was fine, but the strong wind that was blowing made the shooting hard. Scores:

Medal and supper shoot, 50 targets, unknown angles:

The Dupont Tournament.

Mr. R. S. Waddell, of Cincinnatti, O., special agent of the Dupont Powder Company, has mailed a copy of the prospectus of that company's tournament, which will be held at Cincinnati on May 7, 8 and 9. The tournament is "open to every sportsman; no one barred; no handicap; contestants classify themselves." The amount of cash added to purses and offered as prizes is $1,220.

The system to be adopted at this tournament is to classify shooters (in a manner described below) as either experts or amateurs. All events are at known traps unknown angles, but experts shoot at one set of traps, amateurs at another set, $200 being added to the purses at each set of traps on all three days, the programmes for each day being precisely similar. Experts shoot eight events at 20 targets, $3 entrance, $15 added to each purse; amateurs shoot eight events also, but at 15 targets, $2 entrance, $15 being added to each purse. Experts have no part or lot in the amateurs' purses. In addition to the above money added to the purses, the Dupont Company gives $300 cash to be divided among the experts who make the five highest averages in events 4 and 6 on each day, the $300 being divided into five moneys. Another sum of $200 is divided into five moneys among the amateurs in a similiar manner for the highest average in these six events. The condition affixed to these prizes is that contestants in events 4 and 6 on each day must use Dupont's Smokeless powder. Machine and hand loaded shells for use in these events can be obtained on the grounds. If special wadding, etc., is desired, orders should be sent by April 1.

The prospectus, by way of explaining the classification, ect., states:

"The attention of contestants is particularly called to the following special rules, under which they are expected to classify themselves, and to accept the consequences of their own under-estimate of their skill. Any shooter making an average of ninety per cent. or more in any three events at traps for amateurs, will be excluded from subsequent events of that day at the traps for amateurs. Known experts will be limited to the events at traps for experts. In competing for cash prizes for highest averages in events 4 and 6 of each day, contestants expecting to make an average of ninety per cent. or better in the six amateur prize events, should enter in events 4 and 6 each day, at the traps for experts, as a ninety per cent. average or better in the six amateur prize events will exclude the contestants from sharing in the cash prizes for amateurs. Contestants at traps for amateurs may, under rule first, forfeit interest in cash prizes to amateurs for averages."

The conditions and general information take up the last page of the prospectus and are as follows: "Rules of the A. S. A. in force at date of tournament to govern, except when they conflict with the special features adopted herein: All shooting will be at unknown angles and from known traps. The system adopted is rapid fire, and sportsmen are requested to enter each morning in squads in all the events of the day. Should any desire to withdraw, the entrance fee of events in which they do not participate will be refunded. All shooting for purses and prizes is class shooting. The park will be open for practice shooting, Monday, May 6. Three cents each for targets will be deducted from all purses. Five blue rock traps and electric pull will be used at each score. These will be under the personal supervision of Mr. John Parker, of Detroit, who will assist throughout the tournament. Finely illustrated programmes of about twenty-eight pages will be ready for mailing March 20; these will be mailed to all the addresses we can obtain. To answer the many inquiries that come to us daily, and that

sportsman may have early advices of the Dupont tournament, we issue this prospectus. We submit our system under which sportsmen will classify themselves, believing that it will secure an adequate adjustment of all differences that may arise between experts and amateurs and permit equal enjoyment of the tournament by all classes. The more skillful amateurs will, we believe, prefer to class themselves as experts and share the larger purses and greater honors. A large number of sportsmen have signified their intention to be present and are already doing preparatory work with Dupont Smokeless. We have room for five hundred contestants at Spring Grove Avenue Ball Park and extend a cordial invitation to every sportsman to come and participate in this great shooting carnival. Address all inquiries regarding the Dupont tournament to R. S. Waddell, general agent, Cincinnati, Ohio."

Nebraska Trap Notes.

Omaha, Neb., March 12.—In regard to the J. C. Read-J. W. Den, 100 live bird match, Mr. Read being the victim of a combination of disorders, the men have drawn down their money, with the understanding that the shoot shall come off later in the spring.

The State Sportsmen's Association's annual tournament will be held in this city, June 13, 14 and 15. The local clubs are determined to make it an attractive affair. There will be $500 of added money and prizes aggregating in value double this amount. Frank S. Parmelee, the Secretary, will superintend the arrangements and he asserts that we are to have the greatest shoot ever held in this section of the country.

SANDY GRISWOLD.

Weir City's Programme.

Mr. W. W. McIlhany, Secretary of the Business Men's Gun Club, of Weir City, Kansas, who is also Secretary of the Amateur Trapshooter's Association of Missouri and Kansas, has mailed us a copy of his club's programme for the Ninth Annual Tournament of the Association at Weir City on May 8-10. Page 1 of the programme contains a list of officers of both the Association and of the Business Men's Club, and also a capital portrait of Weir City's Mayor, Dr. D. W. King, President of the Gun Club. Page 2 is headed by the query: Have you heard about Weir City, Kansas? The query, if answered in the negative, finds a reply in the following lines:

"The busiest and best business town of its size in Kansas. Not excelled in the United States for amount of shipments and the number of laborers employed. It contains the largest zinc smelter in the world. This plant has a daily capacity of 78,000 pounds, with twenty-six furnaces and twenty-two kilns. It employs 400 men, and its monthly pay roll amounts to $25,000.00. Its brand of "Cherokee" spelter has gained a world-wide reputation. Weir City, being the centre of the great coal belt, produces an immense amount of coal, which gives employment yearly to thousands of men. Train-load after train-load of coal leaves the city daily, and the monthly pay-rolls of the different mining companies of Weir City amounts to $75.000.00. An enormous trade is done by the numerous merchants of Weir City, the annual sales of one store being over $150,000.00. The light and water plant of Weir City is efficient in every respect. Three deep artesian wells supply the 6,000 inhabitants of Weir City and the 4,000 in adjacent camps, with crystal pure water throughout the year, while the streets of the city are brilliantly lighted by electricity, and over 1,000 incandescent lights are in use by the citizens.

Recent building improvements have placed Weir City in the front ranks, as its fine school buildings, magnificent churches and solid brick business blocks present all the attractiveness of a progressive city of the times. Its railroad facilities are unsurpassed, as the Kansas City, Ft. Scott & Memphis, with six regular passenger trains daily, and the St. Louis & San Francisco Railway, with its numerous branches, reach out in all directions."

The next thing in the programme to engross the attention of its readers is a clear and succinct statement of the rules governing the shoot. It will be noticed that the shoot is open only to amateurs, and that "no pooling or dropping for place will be tolerated." The seed has been sowed on good ground and the harvest is close at hand! The rules in detail are as follows:

"This is an association of trap shooters, with no other apparent object than an annual reunion, at which the amateur shooters of the great Southwest can meet and enjoy this popular sport and the society of each other for a few days. In order that this pleasant intercourse may be conducted to the best interests of all, during the meeting at Weir City, the following general and special rules will govern all contests:

"This shoot will be open only to amateurs, and all known professionals and paid agents of dealers and manufacturers will be barred. The statement is made here so that none can misunderstand it. The shoot is being run solely for the benefit of amateurs. When we wrote our address of welcome we forgot the 'professional' and 'paid agent', and, while we have but the kindliest feelings for them, we must ask them to excuse haste and a bad pen.

"No pooling or dropping for place will be tolerated. 'This is putting it plain, yet we but state the facts.' To aid in maintaining this stand, the management would like to have every shooter, before entering any event, sign the register agreeing not to drop for place, or to pool, and to help the management to suppress this evil.

"The graduating handicap will be used, which is simply this: All shooters start on equal basis of known traps and known angles. All winners of first and second moneys will shoot in the next event at known traps and unknown angles, and so continue until they fall below these moneys, when they may return to known traps and angles. To those who think this is no handicap, we say come and try it. Our unknown angles will be so regulated that one trial will convince the veriest amateur that they are a handicap. The rise for 10 and 12 guage guns will be the same, but 10 guage guns will shoot the traps in reverse order; that is: When 10 guage stands at No. 1, he will shoot No. 5 bird; at No. 2, he shoots No. 4 bird; at No. 3, he shoots No. 3 bird; at No. 4, he shoots No. 2 bird, and at No. 5, he shoots No. 1 bird.

"The Owl shoot, the Kansas vs. Missouri Team shoot, and the individual Championship shoot can be contested for only by shooters residing in Kansas or Missouri. Other events are open to any amateur.

"All shooting will be rapid fire from five traps (except at unknown traps, when only three will be used), and American Association Rules will govern, except that we reserve the right to regulate height and speed of unknown angles; and it will rest with the referee to use "no bang no bird" system, according to his judgment, i. e., unless the referee shall judge that the shooter wilfully refused to fire his gun, another bird will be allowed. All purses (except 6 and 7 on Thursday, and 8 on Friday) will be divided into four moneys: 40, 30, 20 and 10 per cent. All ties will be divided or shot off in the next event. Each shooter in a tie may draw his pro rata. Shooting will commence promptly at 8.30 A. M."

In the programme it will be found that all events are uniform both as regards entrance money and targets; each is at 15 targets, $2 entrance. This, of course, is necessary wherever the graduated handicap is used. The second day's programme contains the "Owl team shoot," three men to a team, bona fide members of the same club, 30 targets to a man, viz.: 10 known, 10 unknown, 10 expert rules. The Kansas vs. Missouri team shoot also takes place the same day; this is a six man team race, 25 targets per man, everything known. The sum of $10 is added to every purse in the ordinary sweepstakes, $50 being added to the Owl shoot purse; the club adds altogether about $300 in cash. The programme concludes with two pages of "Pointers," which contain a fund of information. The first of these "pointers" states that "Jack" Parker will run the shoot. What they think of him in Weir City is best told in their own words: "To those who have never met him, we will say that the Business Men's Gun Club considers that the crowning success of their efforts to provide a good meeting has been achieved in securing this popular and practical representative of the trap in the capacity of manager." Railroad rates at a single fare and special hotel rates have also been secured. The Weir City Hotel will be the headquarters of the shooters. The closing sentence is: "Grounds will be open and traps ready for practice on Tuesday, May 7."

For further particulars or programmes address W. W. McIlhany, Weir City, Kansas.

Bronx River Gun Club.

West Farms, N. Y., March.—A few members of the Bronx River Gun Club put in an appearance at the club grounds this afternoon. Targets and live birds furnished the sport, five target events being decided first, followed by four live bird races, 5 birds each sweep, American Association rules governing in all events. The live birds were a good lot of strong flyers, a brisk wind aiding them materially. Scores:

No. 1, 10 targets, everything known: Wheeler, 8; Nicholas, and McManus, 7; Edwards, 6.

No. 2, same: Edwards and McManus, 7; Usher and Nichols, 5.

Lever Beat Terry.

Marion, N. J., March 16.—W. W. Lever, of Elizabeth, N. J., and Dan Terry, of Plainfield N. J., shot a race at 25 live birds, $100 a side, 28 yards rise, 50 yards boundary, use of one barrel only, gun in any position. Lever shot his opponent out on the 23d round, as shown in the score given below. Sweeps filled in the balance of the day at the traps. Among those present were: Neaf, Apgar, F. Van Dyke, Nate Astfalk, of Elizabeth, who acted as referee, Aaron Woodruff, H. Folsom, C. W. Todd, Blodgett, Wm. Ross, J. R. Dickson, Tom Brantingham, Scott Terry and his brother, William, John Benner, W. Schorbe, Capt. Cramer, Jerry Maher, E. A. Geoffroy, F. Batsch, Chris Reinhardt, etc. Scores:

	4 5 4 1 3 3 3 4 4 1 5 1 1 4 5 4 4 2 3 4 4 2 5	
W W Lever	1 1 0 1 1 0 1 1 0 1 0 1 1 1 1 1 1 1 0 0 0 1 1	—16
	3 5 2 3 1 4 5 3 1 3 5 5 4 2 4 1 1 2 2 1 3 1 4	
D Terry	1 0 1 1 0 0 0 1 0 1 1 1 1 0 0 0 1 0 1 0 1 1 1	—13

No. 1, 4 birds, $3: Reinhardt and Capt. Jones, 3; J. Benner, 2.

	No. 2, * same:	No. 3.	No. 4.
Ross	0120—2	1101200—4	2200—2
Reinhard	1110—3	2121020—5	
Apgar	1221—4	2222102—6	2111—4
Woodruff	2022—3	1222102—6	2120—3
Jones	2101—3	1111110—6	
Terry	2021—3	1121122—7	
Folsom	1120—3	1002000—2	0102—2

Geoffroy		2101012—5	0022—2
Jersey		1122112—7	

*No. 2 and 4 were same as No. 1; No. 3 was 7 birds, $5.

No. 5, 10 birds, $5, two moneys: Geoffroy, 9; Apgar and Woodruff, 8; Ross, 6; Folsom, 5.

Live Birds at Morristown.

Morristown, N. J., March 12.—Frank Class, of this place, advertised a 50 bird race, $25 entrance, birds extra, for to-day. It was expected that Brewer, Elliott and several other crack shots of New York and New Jersey would be present. As it was, however, the field was composed of but four shooters, the scores they made being given below. Class shot in great form, killing 49 out of 50; T. W. Morfey was second with 45, E. D. Fulford third with 44, while James Timmons, of this place, could only total 39, falling down very badly in his first 25. From the number of first barrel kills it looks as if every shooter was dead on most of his birds. Scores:

Class	2 2 2 2 1 2 2 2 2 2 2 1 1 2 1 1 1 2 2 1 0 1 2 2	—24
	2 1 2 1 2 2 1 2 1 2 2 2 2 2 2 1 1 1 1 2 2 1 2 2 1	—25—49

Rockaway Park Gun Club.

The members of the Rockaway Park Rod and Gun Club held their March club shoot on March 9. There was a fair attendance of shooters, who kept things moving in a lively manner until nearly train time; almost 2,000 targets were thrown during the day. The captain of the club, "Schorty," does not believe in throwing targets so that anybody can break them; on the contrary, he screws the trap springs up to the highest notch and throws the targets as far and as fast as possible, the angles being very acute. "Expert rules" means practically one man up, five unknown traps, the indicator being turned for each shot. A glance at the conditions of the different events will show there was a great variety of styles of shooting. The purses were divided under the "straight out" system, those present preferring that system to any other suggested hitherto. John Fleming, Secretary of the Hill Rifle Club, Fifty-third street between Ninth and Tenth avenues, bossed the trap boys, and did his work, as usual, in an excellent manner. A. Roath scored all the events, while J. Salmon, of Rockaway Park, did the greater part of the pulling of the traps. The referee's department was in charge of Henry Heyer, winner of the '95 live bird badge of the North Side Gun Club, of Queens County, N. Y. The number of targets thrown gives ample proof that all the work of the shoot, clerical or otherwise, was done in a prompt and satisfactory manner. Among those present were: Thos. Lyons, one of the oldest trapshooters in this section, and a prominent member of the North Side Gun Club of Queens County, L. I.; T. P. McKenna, a member also of the Emerald Club, and appropriately enough shooting Irish shells made by Weekes & Co., of Dublin, Ireland; H. Walsh, who says he now prefers Rockaway Park to Canarsie; C. "McManus," with his setter dog, a son of Gladstone; B. E. Wickes, John Ertell, J. and E. Bourke, ruling spirits of the club; J. Meyer, C. W. Wash, R. Woods, H. P. Scott (the club's Adonis), John Tiernan, Major Spott, a gentleman fond of shooting with both gun and rifle, a veteran of the Franco-Prussian war, and a skilled taxidermist; Prof. Carl Dietz, M. Betz, L. H. Schort, B. Edwards, etc. Mr. Lyons is the inventor of the pulling apparatus used by this club, and by the New York County Gun Club In all probability he will have a specimen of this apparatus in use at the State shoot at Saratoga; it is many years since he missed a shoot of the State Sportsmen's Association. Scores made during the day are:

No. 1, 15 targets, everything known; Schorty and Woods, 13; Scott, 12; Wash, 11; Walsh, 9; Edwards, 7.

No. 2, 10 known angles, 10 expert rules and 5 pairs, handicap allowances:

Woods	0011101001010101010011	11 10 10 10 11—17
Wash	1110101111111010111	11 10 11 10 10—22
Edwards, 5	1110011111111111010	11 01 11 10 11—24
Scott, 3	1111111101000111001	11 00 00 10 00—17

JACK POT.

New Utrecht Gun Club.

On March 13, twelve members of the New Utrecht Gun Club, of Woodlawn, L. I., shot a special sweepstake under the the Club handicaps at the Eighty-Second Street and Third Avenue grounds. Class A men shot at 20 singles and 5 pairs; class B at 23 singles and 5 pairs; class C at 24 singles and 6 pairs. Scores:

D Deacon, A	1111111111011001111 —17
D C Bennett, B	1111011101011101101111 —18
M Van Brunt, A	1110011101111101111 —16
P A Hegeman, C	1111011110110111111111110—20
G E Grieff, A	1111111110101101111 —17
H P Fessenden, C	0001010110111101011110111—15
Dr Littlefield, B	1111100110111111100001 11 —16
C Furgueson, Jr, A	1100111011011100110 1 —13
A A Hegeman, A	1110111011101111111 —17
M F Lindsley, A	0000001111011010101 —10
J Lott, C	0001111011000011100101 00—11
W Gilman, C	1000101110000000000111101— 8

Five pairs.

Deacon	10 11 11 10 11 —8
Bennett	01 10 11 10 10 —6
Van Brunt	11 01 11 10 10 —7
P A Hegemen	00 01 00 10 10 00—3
Grieff	11 00 10 01 01 —5
Fessenden	00 11 10 10 10 10—6
Littlefield	00 11 00 10 00 —3
Furgueson	01 11 11 00 10 —6
A A Hegeman	00 00 00 w —0
Lindsley	10 10 10 10 10 —5
Lott	00 00 01 10 01 10—4
Gilman	01 10 00 00 10 00—3

The above totals show that Deacon won first money and the prize donated by the Club with a total of 25 out of 30. The other shooters finished in the following order, the numbers in brackets showing the totals shot at: Bennett 33, 24; Van Brunt 30, 23; P. A. Hegeman 36, 23; Grieff 30, 22; Fessenden 36, 21; Littlefield 33, 19; Furgueson 30, 19; Hegeman 26, 17; Lindsley 30, 15; Lott 36, 15; Gilman 36, 10.

Woodlawn, L. I., March 16.—This afternoon fourteen members of the New Utrecht Gun Club entered the seventh contest

for the E. C. Powder Company's Cup. T. H. Keller, of the United States Cartridge Company, was the only one to kill his 10 birds, winning the cup. Sweepstakes of different kinds were also shot during the afternoon, the scores being given below. Conditions of the cup contest are 10 live birds, club handicap. Scores:

T H Keller, B.	2222222222—10	Fergueson, 3d B.	2202002211— 7
D Deacon, A.	2220222221— 9	W F Sykes, B.	*2220122*2— 7

J Bohling, 26	1020102—4		

H. K.

Some Syracuse Scores.

Syracuse, N. Y., March 9.—Trap-shooting in Syracuse is becoming quite a fad. Scarcely a day passes but some of the local trap shots are at the traps pounding away for glory. A pretty race was decided at Mesina Springs to-day between six of our aspirants for the local honors of live bird shooting. The wind was blowing a gale from the west, right across the traps, making difficult shooting; the birds were a fair lot, and only a few got away. The honors of the day were carried away by Geo. Mann, A. S. White and Henry Chase, who killed all of their birds. Scores:

H Chase	112121221211121—15	C F Arno	611112112220211—13
G Mann	121112212221211—15	H George	111001201021110—10
A S White	211111221211221—15	W Holder	022220201121020—10

A. R. K.

Trap-Shooting at Mifflin.

Patterson, Pa., March 13. The following live bird events were shot to-day by members of the Altoona Rod and Gun Club at Mifflin, Pa.

No. 1, 20 birds, $10, two high guns:

Clover, 27	01222122000122022121—15
Clark, 30	10022111200211211021—15
Adams, 27	22220012211220202021—15
Kane, 27	12211012211220201021—16

No. 2, 15 birds, $7, two high guns:

Clover, 27	0102121210120112—11	Adams, 27	2011222201121112—13
Clark, 30	0211110012202222—11	Kane, 27	2212222121201211—14

No. 3, 15 birds, $7, two high guns:

Clover, 27	0011121212120101—11	Adams, 27	0122110111011221—12
Clark, 30	1112122212120101—14	Kane, 27	0110211112212211—13

Trap at Little Roch.

Little Rock, Ark., March 14.—The fifteenth contest for the Pulaski County medal resulted in a win for Duley with 42 out of 50; quite a creditable score in such a gale as was blowing on the day that the shoot took place. Irwin was very much in the race also, as he scored 41 and kept Duley guessing as to the outcome of the race. Dickinson, who is looked on as a sure winner of the trophy, scored 39, and thus narrowed the gap between him and Dr. French; at present he only leads the doctor two targets. While only two more contests will take place for the trophy, an interesting finish may be looked for.

Medal contest, 50 targets, known traps, unknown angles:

Duley	1111011111011111101111111111001011111100111111111—42
Irwin	1100101011111111111101111111111011111001111101111111—41

PAUL R. LITZKE.

Hartford Gun Club.

Hartford, Conn., March 16.—In cold and disagreeable weather, the members of the Hartford Gun Club shot off the seventh contest in the series of prize shoots this afternoon. The attendance of members was very satisfactory. The following scores were made in the prize shoot:

Risley	1111111111111101111111111—24
Goodwin	1111101111110101111111111—22
Sexton	10011 111 11011111101111111—21
Ford	1111101111101110110111111—21
Wadsworth	1110111110110111111011011—20
Jones	1100101100110111110111111—18
Melrose	1001111101101110111010111—18

Treat	0101110111010100111111101—17
Ropkins	1001110011101011010101011—16
Lucus	1000111001111011110000110—14
Buths	1001011001000101101100110—12

D. S. WADSWORTH.

Binghamton Gun Club.

Binghamton, N. Y., March 12.—The scores given below were made to-day by three members of our club in a friendly three-cornered race. The scores were very good considering the dark day, high wind, chilly atmosphere and lack of practice. Conditions of race, 100 empires, unknown angles:

H W Brown	1111111111111111111111111
	1111111111111111111111111
	1111111010111110111111111
	1111111111101110111110101—93
G W Kendall	1011111111111111111011010

	1111110111101111011100100
	1101111101101111111011111—81

WINFIELD

Climax Club Shoot.

Plainfield, N. J., March 13.—The members of the Climax Gun Club, held their regular monthly club shot at the Fanwood grounds this afternoon. The weather was altogether against good scoring, the light being bad and a strong wind blowing; in addition to the weather eccentricities, the targets flew high and low alternately making the shooting hard. The scores in the club shoot, given below, tells the story of that event, while the table shows how the boys shot in the various sweeps, the records of Van Dyke, Keller and Apgar being good ones. Van Dyke broke 49 out of 50 in the sweeps, while Apgar got 46 and Keller 45 out of the same number. During the afternoon, in both sweeps and club race, these three shooters shot at 75 targets, unknown angles; Keller and Van Dyke broke 67 out of 75, an average of 89 1-3 per cent., Apgar being close behind with 66 out of 75, an average of 88 per cent. During the afternoon, in the first event after the club shoot, "Dutchy" Smith had the misfortune to burst his gun. There was a flaw in the chamber of the right barrel and "Dutchy" had been shooting the left barrel during the afternoon; somehow or another he forgot the flaw and placed a shell in the right barrel. Result: The tearing away of the whole upper portion of the chamber of the right barrel, "Dutchy" receiving luckily only a slight scratch from a piece of the flying steel. A curious point about the break is that the crimp of the shell was not broken, while the thin top shot wad was still in position after the explosion, the whole of the upper side of the shell having been blown away. Scores:

T H Keller	1101111111111111011101111	—22
C Smith	1110110110110010011111110	—17
N Apgar	1110111100111111001111111	—20
F Van Dyke	1011010111010101111011111	—18
T Brantingham	1011110011110011111011111	—19
C Hebbard	0111101011110110000111111	—17
Capt Cramer, 5	1101100011110111110011110101010	—20
A Woodruff, 2	1011111011111110111111111111	—24
D Terry, 1	1101011010011001100010001	—13
R Manning, 2	1101011111111111111011111110	—23
J Darby, 7	0110010010111101111101010110100010	—18
S Terry, 3	1110111000101111101100001110	—17
D Darby, 5	1111100111011111111011001011111	—23
Swody, 6	0111111010101111101111100001110	—20
J Singer, 10	0100101101000000010010001101110010010—13	
Edwards, 5	1111010111110011011111110100	—22
W Terry 4	1100110101110101101110011011	—19

The above scores add 5 points to Woodruff's total; Darby and Manning scores 4, Keller and Edwards 3 each; Apgar, Cramer and Swody 1 each. In the sweepstake events which preceded and followed the club race, the following scores were made:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Wants to Meet Petty.

The letter below has been received from Mr. Sumner Paine, of Boston, Mass., and the suggestions contained in it have been forwarded to Mr. Petty:

"Boston Athletic Association, Exeter street, Boston, March 4.—Editor Forest and Stream: I have long desired to meet Mr. W. E. Petty in a friendly revolver match, but the opportunity has never presented itself until now. I shall be in New York the first week in April at the live-bird shoot, and should much enjoy shooting a friendly match with him if you can arrange one for that week. He shoots, I believe, with a Smith & Wesson target revolver, while I shoot with the Colt Army, so I would like to shoot five strings of six shots each with each weapon. The shooting with the Colt to be under Massachusetts State rules, viz., all six chambers to be loaded at once and the six shots to be fired within a time limit of one minute, one minute to be allowed between scores to clean and load. I should prefer to shoot outdoors at 50 yards, as that is a much better test of a man's skill than gallery work, but will leave that to Mr. Burnham. The only condition that I feel strongly about is that the shooting be done with service charges, as the tiny charges usually used in gallerys are not so good a test of a man's real shooting ability. I should recommend that the shooting of both style of weapons should be done on the same target, in order that they can be taken together as one match. If any of my suggestions do not find favor with Mr. Petty, let me know his ideas on the subject, and I have no doubt we can reach some amicable agreement.

SUMNER PAINE.

Dominion Off-Hand Rifle Association.

Parry Sound, Can., March 1.—The various clubs affiliated with the Dominion Off-Hand Rifle Association shot their monthly match this afternoon with the following results:

Parry Sound, First Team.

D. F. MacDONALD.

Pacific Slope Rifle Notes.

San Francisco, Cal., March 10.—The first general shooting festival of the year was held last Sunday in celebration of the opening of the picnic season by Capt. Siebe, proprietor of Shell Mound Park. The day was perfect, and many hundreds enjoyed the various festivities. The riflemen were out in force, and many were the dollars that crossed the cashier's desk. The following clipping from a local daily gives a good account of the shoot:

"The marksmen were in their glory yesterday at the Shell Mound range and succeeded in turning out one of the best match shoots in the history of the State. The militiamen were also on hand and many of them participated in the big event of the day—an open tournament, with cash prizes to the amount of $207. There were twenty-four prizes, ranging from $30 to $2, and the conditions allowed any rifle not under thirty-two or over forty-five calibre, and any sight except telescope. The tickets, good for four shots, were sold for $1 each.

It was an excellent day for shooting and the scores were far above the average. Dr. Rodgers, president of the Columbia Rifle and Pistol Club, won the first prize with a score of 95 out of a possible 100, and the lowest prize-winning score was 87. It will be seen, therefore, that the shooting was exceptionally good.

Following are the top scores:

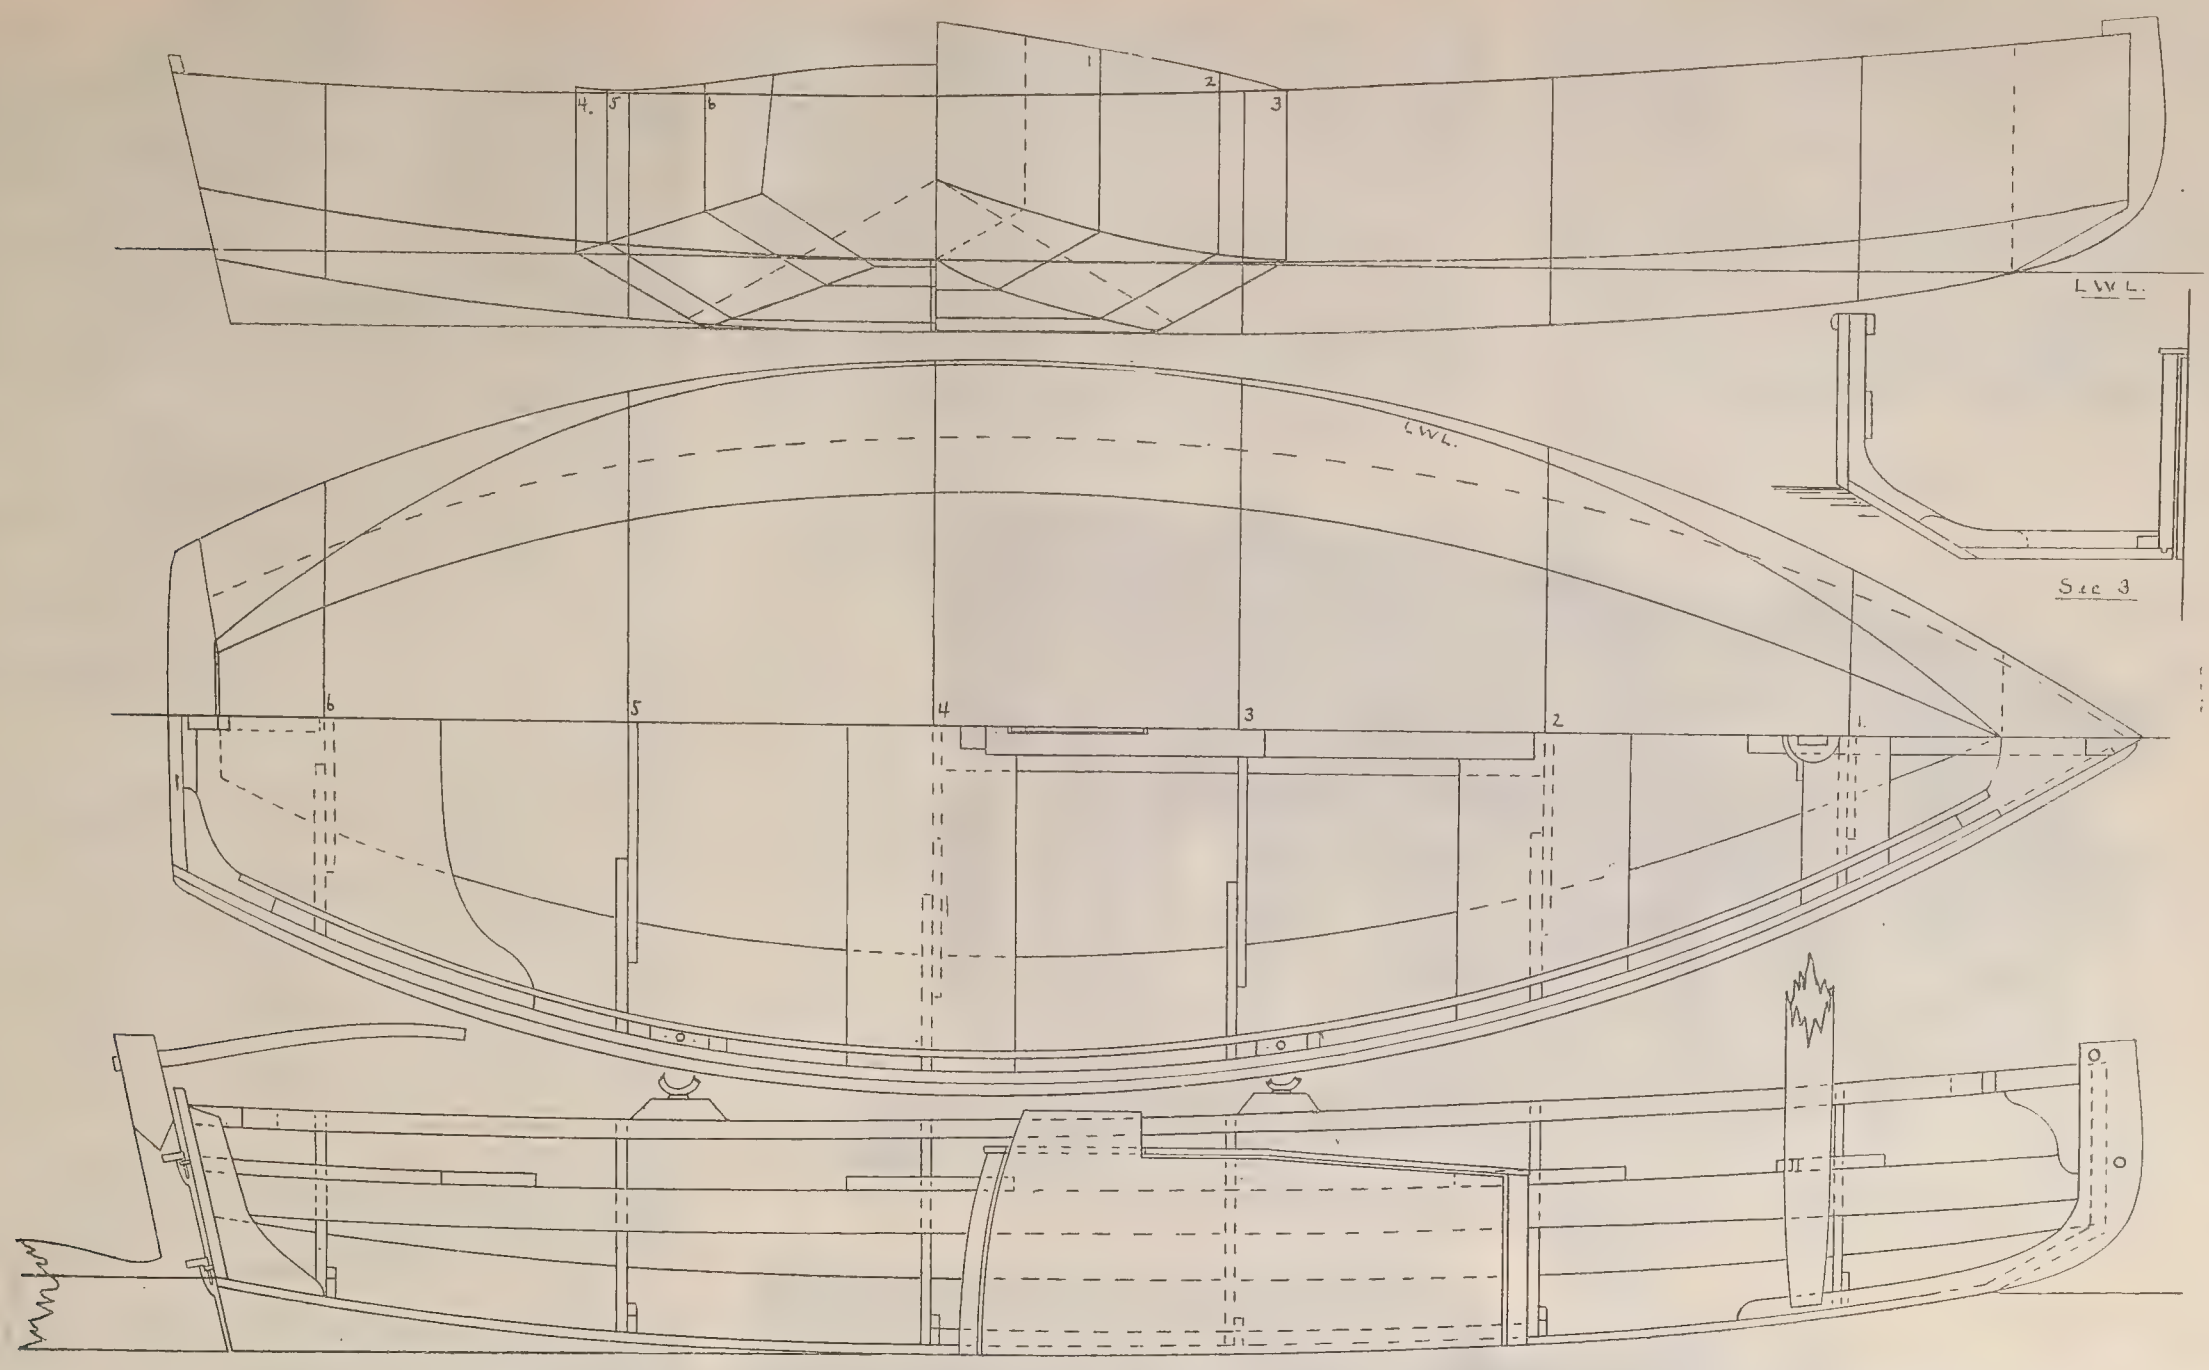
Dr. L. O. Rodgers	23 24 24 24—95
George Helms	24 22 23 25—94
John Utschig	24 22 22 25—93
A. Strecker	24 24 23 23—93
D. B. Faktor	21 23 25 25—92

J. E. Klein 91, F. O. Young 91, D. O. McLaughlin 91, Philo Jacoby 91, F. B. Schuster 91, R. Fiuking 91, L. Haake 90, L. Bendel 89, Captain Kuhnie 89, E. Blodau 88, Charles Thierbach 87, A. Ehrenpfort 87, W. Garms 87, A. R. Mocker 87, H. Huber 87

The first bull's-eye of the morning was made by John Utschig and the last by George Helm. The first of the afternoon was captured by Dr. Rodgers and the last by E. Blodau.

The shooting committee was made up of Dr. L. O. Rodgers, president of the Columbia Pistol and Rifle Club; Charles Thierbach, ex-president of the San Francisco Schuetzen Verein; Captain J. A. Klein, of the Germania Shooting Club."

The scores made by the members of the Columbia Pistol and Rifle Club to-day were as follows:



Target rifle, Kuhnle medal, 200 yards, re-entry, standard target: F. O. Young 88, Dr. Rodgers 87, D. W. McLaughlin 84, P. Bohr 77. Military rifle, Glindermann medal, Creedmoor target: E. Hovey 46, A. Gehret 44, E. Fish 43, H. R. Brown 44, I. Fetz 42.

Champion class, for members only, no re-entry: F. O. Young 88, Dr. Rodgers 84, D. W. McLaughlin 83, A. H. Pape 83. First class: C. Perry 85, A. Gehret 75, P. Bohr 76, C. Daiss 69. Second class: H. Folster 74, A. Fetz 72, H. R. Crowe 66, G. Manuel 64.

Medals for members only, no re-entry, pistol, 50 yards: Champion class: A. H. Pape 94, C. M. Daiss 90, T. Barney 89, F. O. Young 88, S. Carr 87, E. Hovey 87. First class: J. E. Gorman 93, Dr. Rodgers 87, D. W. McLaughlin 81, A. Gehret 84, P. Bohr 61. Second class: A. M. Kennedy 77, E. Fish 76, F. Dennis 71, L. Zimmerman 71, H. R. Crane 70, C. Perry 69, H. Folster 68.

Open to all comers, re-entry: Pistol, Blanding medal: S. Carr 95, C. M. Daiss 94, Dr. Rodgers 93, F. O. Young 91, J. E. Gorman 90, E. Hovey 90, E. Fish 82.

RACING DINGHY—DESIGNED FOR DOUGLASTON Y. C. BY V. D. BACON, 1893.

Yachting

The wonderful success of the new Fife cutter Ailsa in her first races lends special interest to the question of her dimensions, which, the draft in particular, are still in doubt. Her l. w. l. is, of course, but little under 90ft., and her extreme beam about 26ft., but whether this is carried down to the waterline or is merely due to a flaring side, is not definitely stated. The draft is positively stated as 16ft. 3 in., but in view of the other dimensions and of the large sail plan, there is good reason to mistrust these figures. Mr. Will Fife has already obtained fame from the manner in which he has set at defiance the "laws of Nature" in Minerva; but this is nothing to the feat he must have accomplished, if reports be true, in building a yacht of 90ft. l. w. l. and of high power, which will not only carry her huge sail plan well, but which has the lateral plane for good windward work on a draft of only 16ft. or a few inches more. Certainly this has never been done before, nor is there anything in the performance of older keel boats to indicate its practicability, and we shall eagerly await further and more authentic figures.

Those who are interested in the new Herreshoff boat may take their choice of various dimensions as published in different papers, with all extremes of beam and draft. As a matter of fact, the beam and draft of the new boat are as yet unknown save to the few immediately interested; at a guess, we should say about 25ft. for the beam and 18ft. for the draft.

It is hardly likely that the owner of the French yacht Nike II. is a reader of the New York Sun, and we hope, for his own sake, that he will be spared the pain of reading in that journal of the "Mike II." The mistake was probably due to the proximity of St. Patrick's Day.

The decision of the associated Eastern clubs in the matter of measurement is better than we had anticipated, but by no means as good as it might have been. We are strongly opposed to any attempts to measure the overhangs, as not only harmful but in every way unnecessary; but if any measurement other than the load waterline is to be taken, the best is that devised by the Atlantic Y. C. some years since; just as the very worst is that so tenaciously retained by the New York Yacht Racing Association, the so-called "mean-length. By the Atlantic method, the length for measurement is taken parallel to and a fixed distance above the actual waterline, thus including as nearly as possible that gain in length which comes from added immersion. This measurement is difficult to obtain, but at the same time it does tax the part of the overhang which is in or adjacent to the water.

The "mean-length' rule, with 1-2, 1-3 or 1-5 of the overhang, is open to the very serious objection that it does not necessarily tax that part of the overhangs which make length in sailing; but it does tax very heavily the portions which give beauty, grace and deck room, producing the sawn-off craft as nearly like a shoe-box as is possible.

No organization is strong enough to-day to put a prohibitive tax on long ends; the decrees of fashion, to say nothing of real utility, are too powerful. The Atlantic method is in no way unfair to modern as opposed to the old craft, but the adoption of a rule taxing any fraction of the overall length must inevitably have operated against the club which upheld it.

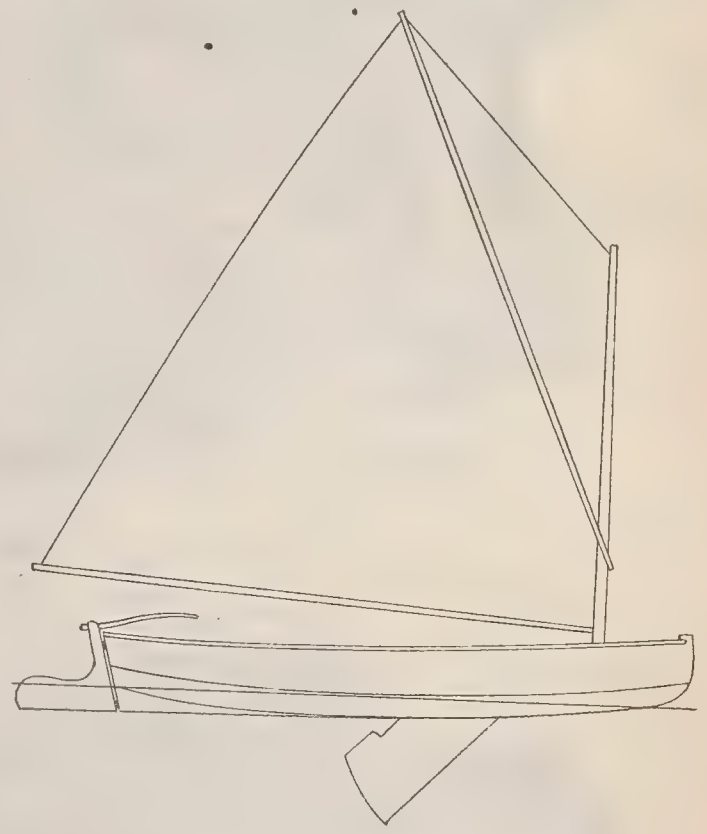
The one proper measurement of length for use in any formula is that of the measurement of l.w.c. with crew aboard; or, what is better, the English plan, of the owner placing his marks where he pleases and ballasting his boat so that they are never immersed when at rest in smooth water with crew aboard; the number of crew being otherwise unlimited. Sooner or later this method will be adopted in America, to the benefit of yacht racing. Under it the designer is free to take any reasonable amount of overhang, forward or aft, with the certainty of a natural penalty if his greed outweighs his judgment.

There is just one valid plea for the measurement of overhangs, that of vested interests as represented in the older boats. However strong this may be, there is the other side, that men about to build will have the newest models, and that if one club taxes the new in favor of the old, the new boats will go to some more liberal club. In such a case as that in the East, where the old boats demand, and rightfully, a certain degree of consideration, we would advise a medium course that would be as fair as possible for all parties. This would include the measurement of the waterline, with crew aboard, with an allowance of a certain per cent. to the older boats with plumb stems, such allowance to apply only to boats now in existence.. The amount of this allowance could be determined quite as accurately, as the value of the overhang would be measured under the "mean-length" rule; for instance, in boats with long overhangs at each end, the actual waterline would be measured; in boats with counters and plumb stems a deduction of 15 per cent. would be made from the measured waterline, and in boats with both ends plumb a deduction of 33 per cent. Something of this kind might be arranged to give all fair protection to existing boats, and yet to allow full liberty of design to the owners of new craft. It would be quite as fair and equitable as an absolute tax on overhang, and would produce far better results in the end.

In the course of a few years, the square-ended boats are certain to disappear in any case, and the boats built in the meanwhile will not have suffered out of deference to them.

We quote from the Yachtsman of March 7: In the last issue of the Forest and Stream to hand we read: "The report of the committee on revision of the classification and racing rules was discussed at length, but the proposed amendments were finally carried, with two exceptions; that limiting the crew to the number on board when the yacht is measured, and the following: If an overlap exists between two yachts when both of them, without tacking, are about to pass a mark on the required side, then the outside yacht must, as far as possible, short of tacking, give the inside yacht room to pass clear of the mark." The exception mentioned above strikes us as being peculiar. It was lately reported that the New York Y. C. had decided to measure with crews aboard, and the refusal to adopt the latter proposition (which is dealt with by Rule 19 of the British Y. R. A.) strikes us as being so unreasonable that we are inclined to doubt the accuracy of our contemporary's report.

We can assure the Yachtsman that our report was correct, and further, that the New York Y. C. has now on its books a rule identical with Rule 19 of the Y. R. A., and consequently quite different from the proposed rule, as above.



Capt. Charles Barr has been engaged to bring Vigilant across, sailing from New York this week to fit her out at Southampton, where some work will be done on her, as already ordered by cable. Capt. Barr will also sail her this season. The boat will be in good hands, as Capt. Barr has long since won a place as one of the ablest racing skippers on this side.

A New Racing Dinghy Class.

Editor Forest and Stream:

Acting on the article in the Forest and Stream of Jan. 5, the Douglaston Y. C. has started an almost identical class, with the exception that it is limited in length over all to 12ft., thereby making a size that small cruising yachts may carry on the davits or tow astern, and making a good all-round yacht tender and small racer combined. The design was furnished by V. D. Bacon, of the Cape Cod Yacht Agency, and is both novel and cheap; the writer's boat is just finished, at a cost of $50, and is one of the prettiest small boats he has ever seen, showing both speed and stability in every line. She was built by Wm. Petersen, of Little Neck, L I., who has three other boats for the same class in frame.

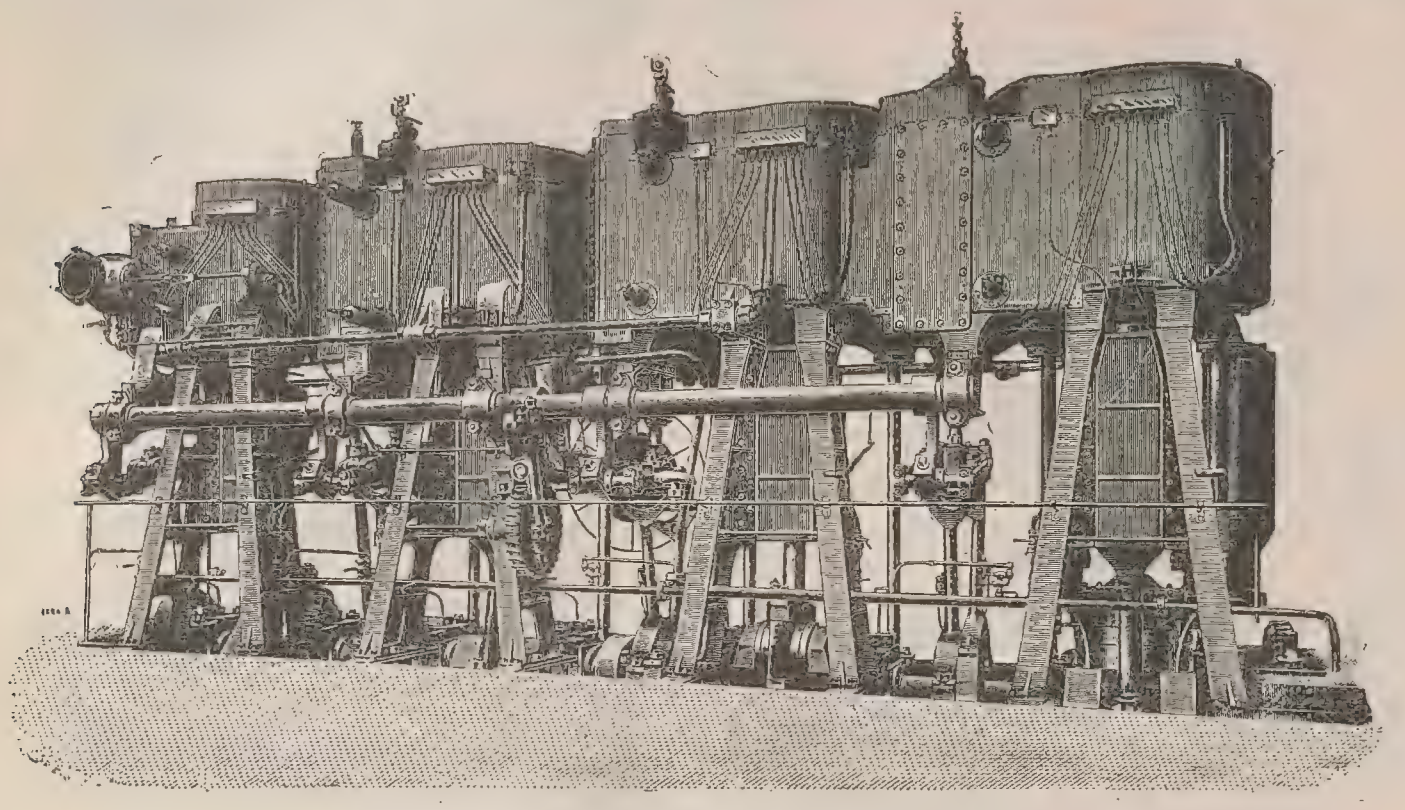
One great beauty of this type of boat is the extremely cheap construction, enabling even the poorest yachtsman—who are generally the most enthusiastic—to build from a new design every year. The writer's boat is 11ft. 7 1-2in. over all, and has comfortable seating room for six people; she is fitted with a spritsail with boom, and as one of the restrictions of the class is that all spar must stow inside the boat, each boat will carry about the same amount of canvas, thereby putting a premium on handling. As other clubs beside the Douglaston Y. C. are offering prizes for thi class, it is expected that there will be a fleet of 20 boats by June 1 The restrictions are as follows: Length over all not to exceed 12ft. draft, without board, not to exceed 1ft.; weight of centerboard no to exceed 50 lbs ; all spars must stow inside the boat, no telescoping spars allowed; boats, when racing, to carry only two people no shifting ballast.—N.

SAIL PLAN OF RACING DINGHY.

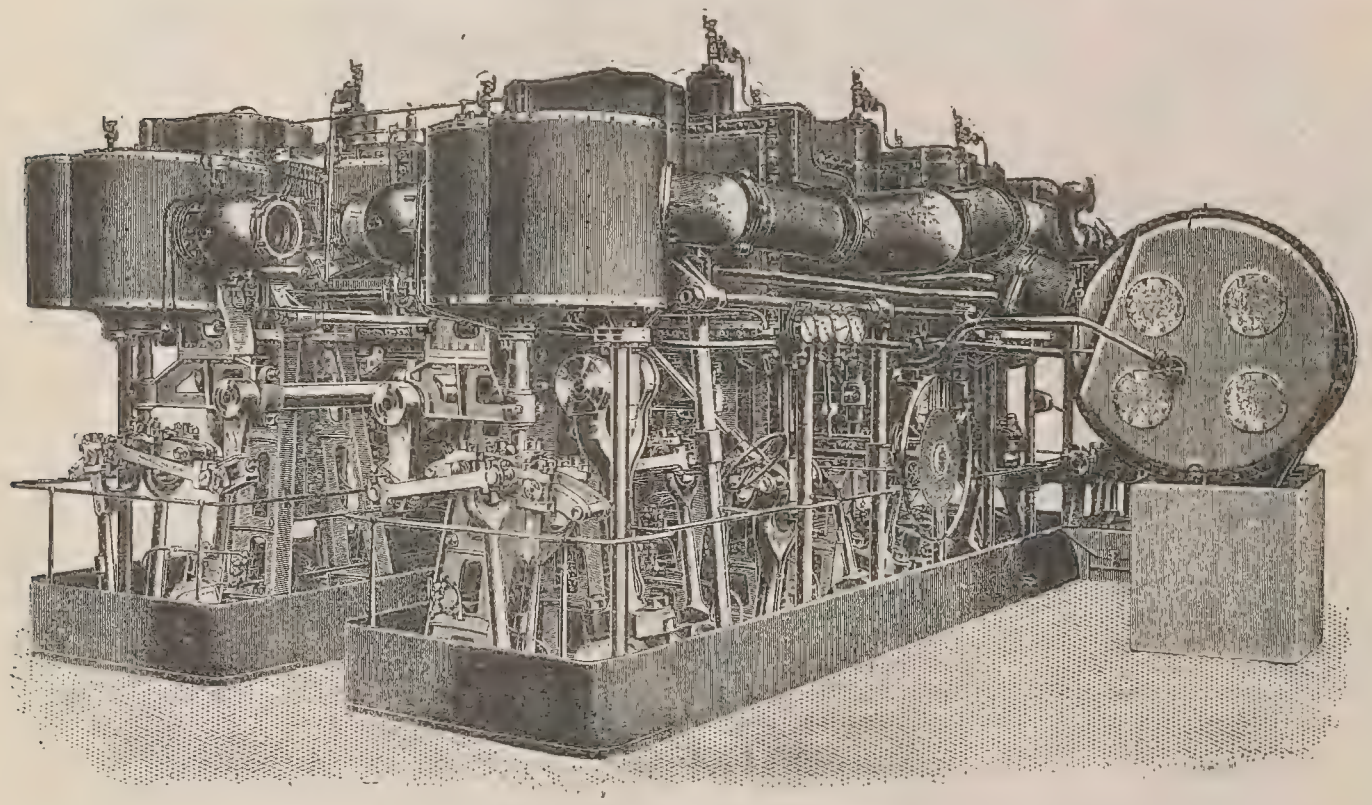
The Steam Yacht Giralda.

We are indebted to Engineering for the accompanying illustrations of the twin screw engines of the new steam yacht Giralda the boat which has attracted so much attention already on this side of the Atlantic.

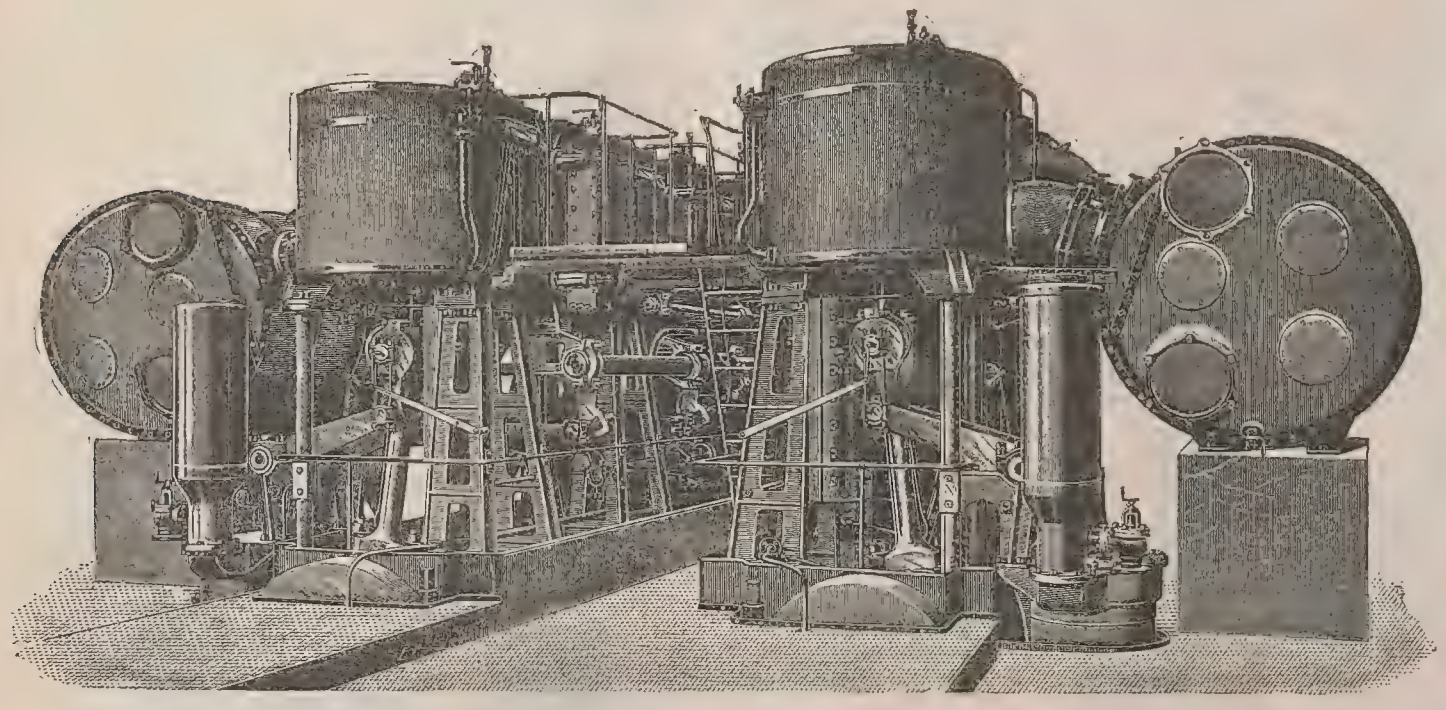
The twin screw yacht Giralda, which the Fairfield Shipbuilding and Engineering Company, Glasgow, have recently completed for Mr. Hugh McCalmont, is away on a cruise on the Mediterranean. The yacht is remarkable in several respects, combining the principal features of a pleasure craft and an armed cruiser Speed and coal endurance being a first consideration, the machinery naturally is of most interest, and we give three engravings, which illustrate clearly the main engines. These are of the high-speed type, and it is interesting to note that not only has Mr. Laing designed, and the Fairfield Company constructed, the fastest merchant steamer, but also the fastest pleasure craft, for the Giralda on trial on the Clyde made 20.9 knots, the power developed being 8,500 indicated horse-power, with the engines running at 220 revolutions.



The propelling machinery illustrated consists of two sets of triple-expansion engines, each set having four cylinders working on four cranks. Each set has one high-pressure cylinder 25 in. in diameter. one intermediate-pressure cylinder 40 in. in diameter and two low-pressure cylinders 45 in. in diameter, all adapted fo a stroke of 2 ft. 3 in. The high-pressure cylinders are each fitted with a piston valve, and the intermediate aud low-pressure cylinders with a flat slide valve, all being worked by the ordinary double eccentric aud link motion valve gear. The cylinder covers and pistons are of cast steel, made by Sir Joseph Whitworth & Co. The reversing gear is of the all-round type, with worm and whee gear worked by a small steam engine.



The condensers are constructed of sheet brass, separate and distinct from the main engines, and placed in the wings of the ship. The condensing water is supplied by two large centrifugal engines with pumps of brass supplied by Messrs. W. H. Allen & Co., Bedford. The main and auxiliary feed pumps are separate and distinct from the main engines, and were supplied by Messrs. G. & J. Weir. Two fire and bilge engines are also fitted in the engine-room, made by Messrs. Mumford, Colchester. A large evaporator for feed water make-up is fitted, and was supplied by Messrs. Caird & Rayner, London. The shaft for each engine consists of two pieces, each with two double-throw cranks, and, together with the tunnel shafting, is hollow, and all forged by Sir Joseph Whitworth & Co., Limited, of their fluid pressed steel. The propellers are fitted with blades of bronze. The crank and thrust shafts are 10 3-4 in. in diameter, and the propeller shaft 11 in., all with a 5-in. hole.



Steam is supplied by three double-ended and two single boilers made entirely of steel, having a total of 16 ribbed furnaces, and constructed for a working pressure of 170 lbs. per square inch. They are 12 ft. 1 in. in diameter, the double-ended being 18 ft. 3 in. long and the single-ended 16 ft. They are adapted to work with moderate forced draught and closed stokeholds. The boilers are fitted in two separate boiler-rooms, and arranged with one large funnel, air being supplied by ventilators for natural draught and fans for forced draught. The stokeholds are fitted with See's patent ejectors. The machinery and fittings are of a light construction, steel and brass being largely used.

The dimensions of the Giralda are: Length over all, ——ft.; length on load water line, 275 ft.; extreme width, 35 ft. 1 1-2 in.; and depth, 19ft.; the yacht measurement being 1,508 tons. The deck erections consist of a topgallant forecastle, large midship house 160ft. long, and a small wheel-house aft. In the midship house are situated the public rooms—the drawing and dining-rooms at the after, and the smoking-room at the fore end—all communicating with each other by an inclosed passage, running along the starboard side of the casings. The deck in these apartments and the corridor is entirely covered with oak parquetry, and the rooms are framed and panelled in solid hard wood, satinwood, oak, etc., varied in each apartment with furniture and upholstery to harmonize. The sleeping accommodation is all arranged on the lower deck, the height between decks being 9ft. 6 in. Forward of the boiler space are four large cabins entering from the vestibule abaft the smoking-room on the main deck, and abaft of engine space are the owner's cabin and another large state-room. All these cabins are substantially framed in mahogany, with light silk in the panels. The framing has been enamelled white throughout, thus giving the occupants all the advantage of the light which is here admitted by large sidelights, with stained-glass lanterns on the inside, and also from skylights on the deck. Neat fireplaces, with white metal grates, have been fitted up in all the public rooms and in the principal state-rooms, the other apartments being comfortably heated by means of steam apparatus. Two upright grand pianos have been supplied, one being placed in the drawing-room and the other in the owner's state-room, on the cabin sole, each with case made to harmonize with the surrounding frame. All the apartments are furnished and upholstered in elegant style, with brass or hardwood bedsteads, wardrobes, chests of drawers, writing-tables, chairs, couches, etc.; the floors covered with Axminster or Turkey carpets and rugs, silk curtains to windows and beds, and, in fact, everything which can be expected to assure the perfect enjoyment of a cruise.

There is a complete system of water-tight compartments, cutting off the engines from the boilers, and dividing one set of boilers from another. Only in some bulkheads have doors been provided, and these can be closed from the main deck. The coal bunkers completely surround the boiler-rooms, and the side bunkers are carried inward over the top of the boilers to the height of the upper deck, and along the whole length of the engine space. The side plating is 13-20 in., and 14-20 in. thick, and the bottom plating is mostly 1-2 in. thick. The frames are formed of heavy channel bars, spaced 2ft. apart, and the floors to every frame are 5-8 in. thick. The bulkheads forming the water-tight compartments and the coal bunkers are all 16-20 in. in thickness. The vessel is built of steel throughout. Two Gardner guns and four Hotchkiss guns, with two electric searchlights of Admiralty pattern, add to the resemblance to an armed cruiser; and her crew, of 60 Naval Reserve men, procured from the Orient service, with Mr. McCalmont himself as commander, with a master's certificate, encourage the idea that, although a private yacht, the Giralda may be regarded as at any time available as an Admiralty dispatch boat. She has a coal-carrying capacity enabling her to make a voyage of over 3,500 nautical miles at a speed of 15 knots; or of nearly 6,000 nautical miles at a speed of 12 knots. She is lightly rigged, with three pole masts and fore-and-aft sails with one yard on the foremast.

ENGINES OF STEAM YACHT GIRALDA—From Engineering.

A Summer Afloat.

PART I.

On Monday, July 2, 1894, we took the early morning train at Magnolia for Salem, and from there the electric street cars for Marblehead.

As we skirted round the beautiful bay at Salem, we wondered why yachtsmen did not more often use this splendid harbor. It is deep and wide and much larger than Marblehead, and in a northeaster far safer.

I think that if I could have any spot I chose on the Massachusetts Coast for my own, I would take one of the grassy knolls on the east side of Salem Bay.

It is an ideal place for a yachtsman's home. Woods and grass and bright deep water, what more could one ask?

We found the little * Cy-Pres moored to a dolphin in front of Billow's boathouse; her newly planed deck shining in a fresh coat of varnish, her sides immaculately white and smooth. New running rigging had been rove throughout, and she was shipshape in every particular.

It was not long before we had every sail set, the anchor stowed, and were gliding along before a gentle southeast breeze, heading for our home port, Magnolia, where we spent several days taking short sails—to get our sea legs on (and our hands, too).

On Thursday, July 5, we sailed to Salem, anchoring just north of the end of Derby wharf. After ordering our season's provisions sent down, we lunched on clam chowder and coffee.

As usual, the grocer's wagon was a long time in getting to the wharf. We amused ourselves by rowing about on the perfectly still water till we were very warm, then we walked up and down the wharf, getting much warmer.

Our patience was nearly exhausted when we saw the little wagon coming round the corner. We had hoped the goods would arrive while the tide was still high, but alas! our little skiff, that was floating up level with the road bed when we went to lunch, was now many feet below us, and a wet, slippery, crazy old ladder the only means of reaching her.

I got down into the dingy, while F. and the driver got the big box on to the edge of the dock. After much puffing and blowing on their part and many narrow escapes from taking a header on mine we got the box over the side of the dock, with one end resting on a round of the old ladder.

The driver steadied the top end of the box while F. attempted to climb down past it to help me lower it into the boat, when suddenly, no one knew how, or why, the lower end slipped off and down it came with a bang and a crash, nearly upsetting the poor little dingy.

By the time we were on board the yacht, it was too late to think of taking the long sail back to Magnolia, so we supped on boiled eggs and cocoa, hung out our anchor light and turned in.

We followed our usual custom and rowed round the harbor in the dingy. Seeing the familiar outlines of the little yawl Sea Fox, we went alongside and had a talk with the skipper and owner.

While telling us of some of his experiences, he remarked that if it had not been for his new anchor, he was sure that he would have gone ashore.

We learned on inquiring that he referred to a Babbitt anchor, in which both palms bite at the same time, securing thereby a much stronger holding power. There is no stock in this form of anchor, and consequently it takes up very little room. Both palms and shank lie close along the deck, and the nuisance of having the jib sheets wrapped around the stock is entirely overcome. Another

CUTTER SHONA IN MARBLEHEAD HARBOR.

great advantage is that no matter how many times you swing round, your anchor cannot get foul, as there is neither fluke nor shank sticking up for the cable to catch on. If, by any possible chance, the cable should get under the shank, it would turn the anchor over and clear itself, and the flukes would bite on the other side.

We were so pleased with the description of it, that we decided we must have one (and, reader, that is what you ought to do), and planned a trip to Boston for that special object; but we found on getting back to Magnolia that we could not go for several days.

It was Thursday before we were able to set sail, the wind was light from S. E., and we could just lay our course close hauled on port tack. As we approached Halfway Rock, the tide set us toward it, and we had to pinch hard to clear it. The wind freshened a trifle at this point, and our speed increased very materially. Our course took us well clear of the Whistler off the Graves, and the Brewsters also. As we rounded Shag Rocks and stood up Nantasket Roads, the wind increased, and we bowled merrily along through Hull Gut, past the two large spindles, and anchored just off the old town in about ten feet of water.

While lying at anchor, a very pretty knockabout sailed past near us. The owner hailed us, saying, "He was glad to see the Cy-Pres, as he had been very much interested in following her cruises in the Forest and Stream."

On Friday morning we took an early steamer from Pemberton Hotel for Boston. As we had forgotten the name of the firm who kept the Babbitt anchors, we commenced at one end of Commercial street and inquired for them at every hardware store and shipchandler's as we went along. Several stores had little ones weighing about twenty pounds, but we did not find what we wanted until we got to Morse's.

There we bought one weighing thirty-six pounds and lugged it back through the hot streets to the steamer at Rowe's Wharf. We got back to Hull by noon, and as the wind and tide were both favorable we took a light lunch and sailed for Marblehead. The weather was charming, and we enjoyed hugely the run across the bay.

Next morning was hot and hazy, with a very light wind and every indication of a smoky southwester.

We started early for Magnolia, but did not reach there till nearly noon. The wind continued from S. W. during Saturday and Sunday, and the heat was simply terrific. It seemed as though the harder it blew the hotter it grew.

We had noticed for several days that the pump worked very hard, and occasionally the check valve would stick when open, which annoyed us very much; so we started Monday, July 23, for Marblehead to have it overhauled.

* Former cruises of the little Cy-Pres have appeared in the Forest and Stream in 1893-1894.

We found there was no way provided for drawing the valve box out or removing the pump without cutting off the suction pipe.

I went ashore for Billows and showed him the dilemma we were in. He advised us to cut the suction pipe just below the cockpit floor, which we did, pulling the pump up through the floor and taking the pipe out through the cabin. This would seem to be a trifling job, but we found it quite otherwise.

The pipe had been forced into its place through holes bored in the timbers to receive it, and had been bent in several places. The bending had enlarged the pipe one way as much as it had flattened it the other, and it was almost impossible to get it out.

Poor Billows crawled on his belly under the cockpit floor and pulled and pounded till the sweat rolled off from him in streams.

We found after getting the thing out that a small wad of string had been sucked up into the pipe, which would occasionally get up as far as the valve, not only making the pump work hard, but, by holding the valve open would let what little water did come through run back.

It seems to me that every yacht's pump should be so constructed that it could be taken apart easily, and disconnected from the suction pipe in a moment.

If I ever build a boat, I shall insist that the lower part of the pump (which contains the valve) shall screw on to the upper part or barrel, and that the suction pipe shall be connected to the valve box by a "union," or else be made of galvanized iron, and put together in sections, so that it can be quickly disconnected.

There can be no possible objection to this from a mechanical point of view, and much can be said in its favor.

A pump that will not work and cannot be taken apart might some day put one's life in peril, and I for one do not care to take that risk when it can be avoided so easily.

We had hoped to get the work done in time to sail back to Magnolia that afternoon, but the plumber was so late in getting down to the yacht that we could not do it, so amused ourselves rowing around the harbor, which is always full of interesting craft of all sizes.

The plumber had to crawl in under the cockpit floor, where it was quite dark and very cramped for room, to solder the ends of the suction pipe together, where it had been sawed in two.

Noticing that he was scarcely able to see what he was doing, I got out my dishpan and held it so I could reflect a broad beam of sunshine on to the spot on which he was working.

It was surprising how thoroughly the whole space was lighted up, and how easily the man could now see to work. It was an experiment worth trying and one well worth remembering.

We started for home next morning, going out by Halfway Rock with a gentle breeze from the S. E.

Just before reaching the Rock it occurred to us that it would be interesting to get the compass bearing of the new whistling buoy, which is about two and one-half miles S. E. from the Whistler off Eastern Point, and sail round it; so out came charts and compass, and as we passed close to the Rock we laid our course for this small object, at that distance entirely invisible.

The breeze freshened slightly, and we were soon bowling along planksheer to.

About half a mile beyond the Rock we ran into very troubled water, and would have expected to find a reef there, had we not known that it was very deep. The only thing that we could think of to account for the boiling and bubbling of the water was, that probably this was the meeting point of the tide coming down from Boston and that running out from Salem and Marblehead.

After standing on our course about half an hour we could make out the Whistler with the glass, and before long rounded it, leaving it on our port hand, and squared away for a reach home. This outer whistler is a large nunbuoy with black and white vertical stripes, and the whistle is pitched about an octave higher than the red buoy off Eastern Point, or the one at the Graves in Boston Harbor.

A due north-westerly course from this buoy will take you clear of Eastern Point and into Gloucester Harbor; but close attention must be given to the stage and direction of the tide, as it runs very swiftly round Eastern Point both on the ebb and flood, and allowance must be made for it.

We spent the balance of the week sailing around Magnolia, taking out small parties of friends occasionally, and sometimes hurrying to put some poor seasick individual ashore.

Monday, July 30, we laid in a fresh supply of eggs, butter and bread; filled our water-jugs ready for a week's cruise "down East," and glided away from our mooring at 8:30 A. M., wind light from N. E.

After rounding Eastern Point we decided to go in between Milk Island and Thatcher's Island, as it would reduce the distance very much, and we also wanted to take advantage of the fair weather to explore this channel, which we might some time find a very convenient way of shortening the passage round Cape Ann in rough weather; we therefore kept closer in shore than we had been accustomed to, and as we approached Thatcher's Island were surprised that we did not open Straitsmouth Light between it and Milk Island, for we had observed that if we brought Straitsmouth Light to bear midway between them, we could run for it with perfect safety.

The wind was freshening steadily, and we were getting very close to what we supposed was Thatcher's Island, and still no appearance of the lighthouse.

Suddenly it flashed across my mind that what we had been regarding as Milk Island was the main land, and that Milk and Thatcher's Islands lay so that they appeared as one. The big towers that seemed to be on the low land near us were in reality a half-mile further beyond.

Acting on this theory, I put the tiller down, trimmed sheets flat, and stood off shore In a few moments we opened the channel between the islands, and, bringing Straitsmouth Light to bear midway between them, made for it. The water was perfectly smooth in the lee of Thatcher's Island, and we kept the lead going, finding nearly two fathoms in the shallowest part.

Soon after passing the bar the wind whipped round to northwest and began to pipe, so that we had a very exciting thrash to windward round Straitsmouth with our lee sail awash most of the time.

We ran into Rockport and anchored in our old place on the west side near the breakwater. Not long after reaching this very snug little harbor a sloop came in with double reefed mainsail and jib bobbed down. She had to take several short tacks to get past the end of the breakwater, and in one or two strong puffs we thought certainly that she would go over. The crew let jib sheets fly and shot her up into the wind not a second too soon.

Another larger boat came in later—she was a big Cape cat, and had a crew of five men on board, who were evidently strangers to the harbor, as they anchored outside, till a fisherman went out and told them where to find the entrance.

As they passed us we hailed them, saying, "It's blowing pretty fresh." They answered "Yes, it was rough outside, and they thought themselves lucky to get in at all."

As all had on oilskins, we concluded that they had been throwing considerable dust over themselves.

Both of these boats anchored in mid-channel and were abused a good deal before dark for obstructing the harbor.

There are two good places in this harbor to anchor, one close to the west arm of the breakwater, the other on the east side of the harbor near to the coal dock. Either place is out of the way of the numerous fishing sloops and schooners that make this their home port, as nearly all of them shoot up to the docks on the west side at the head of the harbor, where they lie sometimes three and four abreast.

We were very much interested in the way in which a crew of three men handled a large stone sloop. They took in all sail just outside of the harbor and shot her in straight in the wind's eye. As soon as she lost headway, one of them sculled a yawl up to the docks, taking the end of a line with him and making it fast. Then they warped the sloop up by means of a steam engine on the forecastle that operated the windlass. We afterward saw them raise the anchor and get up their mainsail with this same engine.

We got under way next morning about 7 A. M., with a light N. W. breeze. As we had often wanted to look into Pigeon Cove, we ran down in that direction, keeping outside of Dodge's Rock spindle till abreast of the harbor, when we went about on starboard tack and stood in toward the end of the breakwater.

A large three-masted schooner lay right across the entrance, so we could not run in; but we saw enough of the place to convince us that it was fully as large as Rockport, and probably more quiet in a strong northeast blow.

After standing back and forth across the entrance, once or twice to get the "lay of the land" fixed in our minds, we left the place, determined to visit it again some day, and, if possible, go inside and anchor.

[TO BE CONTINUED.]

MODEL YACHTING.

The American Model Y. C. Challenge Trophy.

The following regulations have been drawn up by the American Model Y. C. to govern its challenge trophy, which in the future will be open to international as well as home competition. The trophy, which was designed by Mr. George W. Townley, treasurer of the club, was made by N. M. Shepard, New York

AMERICAN MODEL YACHT CLUB.

Perpetual Challenge Trophy.

State of New York, County of Kings, } ss.
City of Brooklyn. U. S. A. }

October 5, 1894.

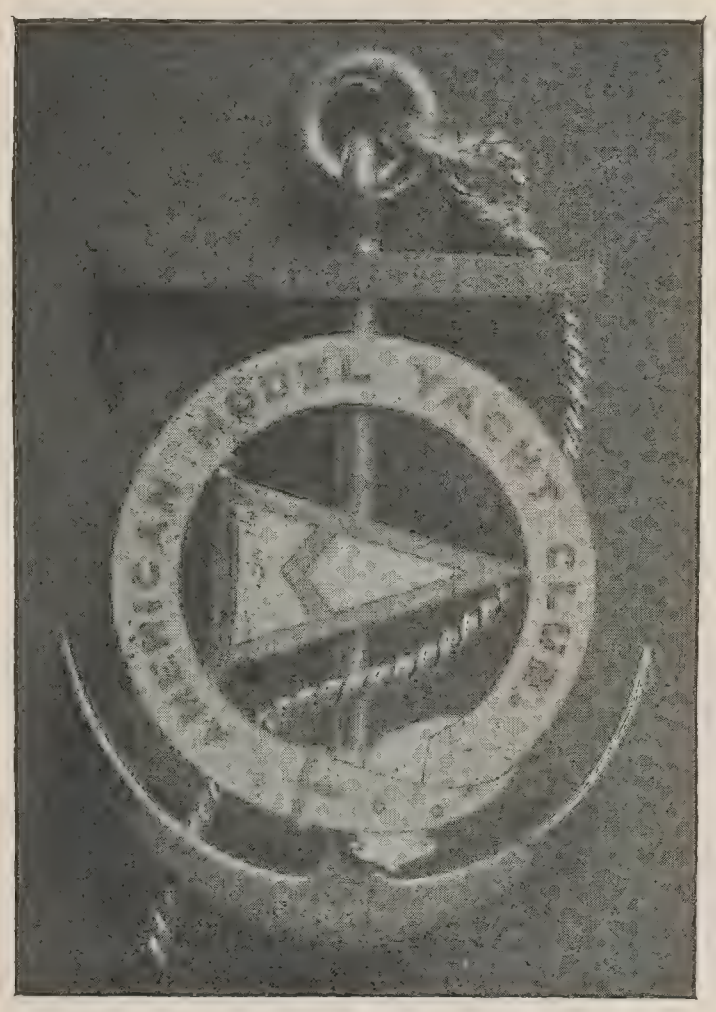
Revised articles of agreement and sailing regulations of the American Model Yacht Club perpetual challenge trophy.

These articles and sailing regulations were originally promulgated on June 3, 1892, and duly revised on Oct. 5, 1894, as hereinafter set forth.

Article I.—Trophy.—The trophy herein designated is hereby donated by the officers and members of the American Model Y. C., and shall always be known as the "American Model Y. C. perpetual challenge trophy."

Article II.—Objects.—The objects of this trophy are to stimulate the building and sailing of models of yachts, on scientific principles, for the purpose of ascertaining the relative merits of different forms as to speed and seaworthiness; and it is to be competed for as hereinafter directed.

Article III.—Dates.—This trophy is open to all duly organized and recognized model yacht clubs, to be sailed for once each year, either on May 30, July 4, or the first Monday in September; when challenged for, and on no other date except as hereinafter provided.



Article IV.—Challenges.—All challenges must be received by the secretary of the club, or by the trustees holding the trophy, ninety days before the date specified therein for a race. All challenges must be accompanied by a voucher as to the existence of the challenging club (see Article III.). All challenges must specify the name of the owner, the load waterline length, and the name of the challenging yacht. An excess of over two inches by official measurement (on the day of the race) of the length so specified shall bar a yacht from competing for the trophy. The challenged club must give the name of the owner and the name of the defending yacht, and shall name the place where the races are to be sailed when accepting a challenge. In case no challenge is received as herein before specified, the holders of the trophy shall not be subject to challenge for the same until the following year. All challenges shall be considered according to the date of their receipt by the secretary of the club or by the trustees holding the trophy.

While one challenge is under consideration another shall not be considered.

In no case shall a challenge be allowed to remain under consideration more than thirty days from the date of its receipt by the holders of the trophy.

If it does so remain without being acted upon and either accepted or rejected according to these articles and sailing regulations, and the challenging club being duly notified of the action taken, the trophy shall be forfeited to the challenging club.

The only reasons for the rejection of a challenge shall be the non-compliance of the challenge with these articles and sailing regulations, or the disqualification of the challenging club (see Articles III. and IV., and also Rule 2 of the sailing regulations).

Article V.—Committee.—The trophy racing committee shall be appointed at least thirty days before the date of a race, and shall consist of one member of the club holding the trophy (or one member of the staff of the journal holding the trophy as trustees) and one member of the challenging club; but shall not include either of the persons sailing the yachts in the races.

Article VI.—Duties of the Committee.—It shall be the duty of the trophy committee to appoint a referee to see that the yachts are properly measured before the race, that they contain no loose or shifting ballast, that they are properly numbered as hereinafter prescribed, that a proper timekeeper is provided; to lay out the proper course to be sailed over as hereinafter specified; to see that all buoys are properly anchored; to follow the yachts over the course in their skiffs at a proper distance not to interfere in any way with the sailing of the yachts, but close enough to be able to see every touch; to make a memorandum of every touch in order that the ten seconds may be taxed therefor as hereinafter specified; to see that the time is properly taken and computed and the proper allowances made for measurements and taxes; to direct the parties sailing the yachts which way to turn the outer buoy; and to see that the sailing regulations, as hereinafter set forth, are properly adhered to and carried out.

Article VII.—Referee.—The referee shall be chosen by the trophy committee as soon as possible after their appointment, and if possible must not be a member of either of the clubs interested; but must be a person well up in the sailing of model yachts in races for prizes, and a person whom it is known will render entirely disinterested decisions.

Article VIII.—Duties of the Referee.—It shall be the duty of the referee to see that everything is in proper shape for a start at the time and place specified for a race, and to call the race, also to see that the course is kept clear during the races. Should the trophy committee disagree as to a decision on any point or points, he shall decide after first consulting these articles and sailing regulations for authority. He, together with the trophy committee, shall attend to the awarding of the trophy and the proper signing of the receipt for the same as hereinafter directed.

The decision of the referee shall be final.

Article IX.—Property.—The American Model Yacht Club perpetual challenge trophy, when won, shall be the property of the club (for the time being only) whose representative yacht won it, and shall always be held subject to challenge as herein set forth.

Article X.—Receipt.—The club whose representative yacht has won the trophy, or to whom the trophy has been forfeited, shall by its officers and the owner of the victorious yacht sign the following receipt, viz., "We, the undersigned, officers and members of the ————, do each for himself and severally bind ourselves, that we will be each and severally personally responsible for the safekeeping of the American Model Yacht Club perpetual challenge trophy; the receipt of which, in good order, is hereby acknowledged; and that we will always, so long as in our possession, hold it subject to challenge as herein set forth in these articles and sailing regulations, and will produce it in good order at the time and place set for a race when accordingly challenged for; and, if defeated in such race in accordance with the terms and conditions herein set forth, will cheerfully hand the trophy over to the proper representatives of the winning club on their signing a duplicate of this the specified receipt:

"————Club.
"————Commodore.
"————Secretary.
"————Winner.
"————Place.
"————Date."

Article XI.—Dissolution.—In case of the dissolution for any cause whatever, of any club holding the trophy, the said trophy shall at once be delivered to the donating club to be subject to challenge as hereinbefore stated. In case of the dissolution of the donating club and having said trophy in their possession, said trophy shall be placed in care of some responsible yachting or sportsman's journal as trustee, to be perpetuated as herein set forth. Any club holding said trophy and dissolving, disbanding or breaking up in any way after the donating club has ceased to exist, shall at once on their dissolution place the trophy with some responsible yachting or sportsman's journal as trustee to be perpetuated as herein set forth.

Article XII.—Amendments.—The donating club do hereby reserve the right to amend these articles and sailing regulations from time to time as occasion requires, but to do so only when the trophy is in their possession.

Article XIII.—Final.—A full and complete verbatim typewritten or printed copy of these revised articles of agreement and sailing regulations, and receipt shall always accompany the American Model Yacht Club perpetual challenge trophy whenever transferred.

George W. Townley, Herbert Fisher, Frank Nichols, } Committee on Revision.
James H. Lane, Commodore.

For the members of the American Model Yacht Club.
October 5, 1894.

Sailing Regulations.

Rule 1—Yachts.—Only one yacht shall represent a challenging club, and only one yacht shall represent a defending club.

Owners only (and only one owner when a yacht is owned by more than one person) shall sail a yacht in the races for the trophy, and the owner starting in a race must continue to sail the yacht until the races are decided, unless he sees fit to withdraw the yacht from the races; and in such case the races shall be declared off for that date, and the yacht so withdrawn shall be declared defeated unless otherwise decided by a unanimous vote of the trophy committee and referee, all three voting.

Rule 2—Measurement.—Yachts shall not be less than thirty-five, or more than forty-eight inches, load water-line length. The rule for measuring load water-line length is that all length of boat below l. w. l. in excess of l. w. l. be added to l. w. l. the sum to be the l. w. l. length.

Yachts shall be measured for time allowance as follows, viz: To the square root of the actual sail area of the largest suit of sails carried, add the l. w. l. length and divide by two

$$\left(\frac{\sqrt{S.\ A.} \times L.\ W.L.\ length}{2} = \text{corrected length}\right)$$

the result being corrected length for calculating time allowance.

Rule 3—Ballast.—Yachts shall have only stationary ballast in a race for the trpohy.

Rule 4—Time allowance.—The larger yacht shall allow the smaller yacht time on measurement in which the corrected length only shall be taxed, it to be taxed, at the rate of ten seconds per inch for a one-mile course.

Rule 5—Time Limit.—The limit of time for making a race over the course shall be twenty-five minutes. A limit of two minutes shall be allowed for yachts to cross the starting line. The time of each yacht shall be taken as it crosses the line within the time limit. The time of any yacht that crosses after the time limit shall be taken as having started at the expiration of the limit. In case a race cannot be sailed within the time limit on account of lack of wind, the trophy committee and referee shall decide on a date agreeable to the parties sailing in the races when the races shall be sailed.

Rule 6—Course.—All races for the trophy shall be sailed over a given course, to be established by the trophy committee on the day of the race. If only one yacht appears at the starting line at the time specified for a race, the race shall be called, and such yacht shall sail over the course the same as though a competitor had appeared, have her time taken, and recorded, and be accordingly awarded the trophy. The races shall start from or across an imaginary line drawn between two anchored buoys, thence to and around a buoy anchored not more or less than one-fourth of a mile distant from line of starting, returning over the same course and finishing at the starting line. The first yacht winning two of the races shall be declared the winner, and the trophy shall be accordingly delivered to the proper representatives of the club to which the victorious yacht belongs.

Rule 7—Buoys.—Starting and finishing buoys shall be set about fifty feet apart at right angles with the line of the course. About fifteen feet behind the starting line a buoy shall be set which will fly a white flag, astern of which the yachts shall be released, and shall cross the starting line by the power of their sails only.

Rule 8—Signals.—There shall be a preparatory signal given, and shortly after the signal for starting shall be given.

Rule 9—Fouling.—Should the yachts foul during a race, such race must be sailed over again, unless, in the opinion of the trophy committee, one of the yachts did not stand any chance of winning. Should any yacht while in a race foul a buoy, such yacht must be sailed around said buoy again from the proper direction, provided the owner wishes to continue in the race.

Rule 10—Touching.—When in a race, if any person touches the yacht he is sailing, he shall be taxed ten seconds for each time he touches his yacht, and the time so taxed shall be added to the actual time taken to sail over the course and be duly considered in making up the time of the race. This rule shall apply to all races sailed for the trophy, and shall be enforced for every touch either by hand, oar, skiff or other means by which the movement of the yachts could be controlled. A person or persons not sailing a yacht in a race shall not touch or interfere in any way whatsoever with a yacht while sailing a race for the trophy, and should they do so, an appeal shall be at once made to the trophy committee for their decision as to any point or points raised; and as in other cases the decision of the referee shall be final.

Rule 11—Pushing or Towing.—When yachts are sailing a race no person or persons shall be allowed to push or tow said yachts, either when sailing or going about, and if any person or persons should perceptibly do so, such yacht or yachts shall be ruled out of the race by the referee if seen by him, or by an objection if sustained, made in accordance with Rule 14 of these sailing regulations.

Rule 12—Right of Way.—Yachts in tow must give way to yachts under sail. Yachts close-hauled must give way to yachts going free (this for obvious reasons). Yachts on port tack to give way to yachts on starboard tack.

Rule 13—Numbers.—Numbers must be supplied by the trophy committee, to be fastened on the starboard side of mainsail and to consist of figures not less than four inches in height and otherwise in proportion.

Rule 14—Objections.—If any objection or objections be made as to the sailing of any yacht in a race for the trophy, such objection or objections must be made in writing by one or more of the parties sailing yachts in the races, to the trophy committee as soon as the race is finished, otherwise it will not be recognized; but if proven in accordance with these articles and sailing regulations, shall be acted upon by the committee at once.

Work at Bristol.

(From the Boston Globe.)

Work on the new Cup defender at the Herreshoffs' has progressed slowly during the past week. It is now that the great designer is greatly missed at the shops when the important work of getting out the frames for the new boat is under way, and all the important details toward shaping the Cup defender and setting her up are in progress.

The second carload of bronze plating arrived this week on a box-car of the Lehigh Valley Railroad. The plates number 20 pieces, and are about the same lengths and widtns as those of the first lot. A sheet of aluminum also arrived, and was taken to the works. It is reported that experiments are being made with the lighter metal by the Herreshoffs. Representatives of metal companies were at the Herreshoffs' this week, and left samples of bronze and aluminum.

Workmen are still busy around the big keel of the Cup defender in the south shop. The large amount of surface that would be exposed to the salt water if the lead keel was unprotected would result in having quite a marine growth on the bottom, and it would be badly fouled up the greater part of the time. This will be remedied by sheathing of the lead keel with Tobin bronze, and the big mass of lead will be incased in plates of that metal.

Up in the boiler-shop on Burnside street the men can be seen at work on the frames for the new boat, and on March 14 some of the

frames were brought to the south construction shop, and placed near the lead keel. These frames look as though they were intended for the midship section. More of them will be brought down from day to day now, and it will only be a matter of a short time before the frames will be all ready to set up. More angle rons will arrive in a few days, bu t before these arrive the frames cannot be finished.

There is every evidence that Howard Gould's new 20-rater Niagara will be shipped soon. The hull was lowered from the position it was hoisted to in the south shop yesterday, and the workmen are engaged in boring the holes for the bolts that attach the fin plates to the keel. Whether a trial trip will be given the new boat before she is sent to her destination could not be definitely learned, as Mr. Nat's sickness prevents any possibility of his giving her a trial.

The other 20-rater, on the hull of which the men have been working, has had her double planking put on during the week, and yesterday she was turned right side up. The work on the interior of the boat will now be pushed forward, and already some of the deck beams have been put in.

There seems to be a disposition at the Herreshoffs' works to get through with the work on all the other boats, so that their attention can be given wholly to the Cup defender.

The spars and sails for the Gould rater have been finished, and she could be sent away on short notice.

The work on the new centerboard for Vigilant has progressed rapidly, and it is nearly finished. It is yet undecided whether Vigilant will be brought here to be fitted up for the season or not.

The new Hostetter steam yacht is so far advanced toward completion in the north shop that she can be launched at any time. A great part of the inside finishing is done, and the machinists are at work around the engine.

The steam yacht Viva, which has been laid up between the piers at the shops during the winter, was taken out into the harbor and left at her moorings. This gave rise to the rumor that the Hostetter steamer was to be launched.

Nat Herreshoff has made rapid strides toward recovery during the past week, and sat up for the first time. Naturally enough, he has lost flesh during his sickness, and he has had his beard trimmed, and this gives him the appearance of being badly emaciated. That he had a bad attack of sickness is demonstrated by his weak condition. Good weather, now that he is on the road to improvement, will hasten his presence at the shops.

He is consulted in regard to the work to be done by the foremen of the departments every day. It was very fortunate that the plans were so far advanced when he was taken ill. It is very probable that the great designer will be on hand before the boat is very far advanced, and those details which can only be looked after as the boat advances, will be superintended by him.

The publication of dimensions of plates and other material for the Herreshoffs which have arrived at the depot of late, has caused a strict enforcement of the rules and laws in regard to the trespassing upon the property of the railroad yards. A strict watch is kept over the newspaper men, and all cars containing material for the firm are to be locked until the teamster takes it away from the cars.

Saunders has part of the frames of the big catboat for J. P. White, of Warwick, set up. The deck frames on the Hollingsworth 30-ft. cat-yawl are in and the floor of the cockpit has been laid. The whole of the work on this boat is progressing rapidly, and she will be launched at contract time, which is May 1. The Dean boat has been completed and is finished bright outside.

John B. Herreshoff is in Washington, D. C., on business connected with the torpedo boats.

Winter Sailing in Florida.

After a trial of all the resorts on the east coast as far south as Lake Worth. I have returned to this place (Port Orange) to spend the time until spring. Port Orange is on the "Flagler" Railroad, about 114 miles south of Jacksonville. There is a good hotel here, with very reasonable rates, and besides the proprietor has both sail and row-boats free of charge for his guests' use. With the exception of one or two days, the weather has been just right for sailing all the winter, and I have kept two of the sailboats busy about all the time. One is a New Haven sharpie, about 23ft. long, with a single mutton-leg sail; she is just the type for these shallow waters (Halifax River), draws but a few inches, is stiff and safe in a breeze, and easily taken care of. The other is almost a copy of the Myra, the "up-to date skipjack" whose plans appeared in the Forest and Stream of Nov. 3 last. She is 22ft. over all, no overhang aft, but overhangs forward about 3ft. She was built by one of the local boat-builders here last fall, and fitted out with a cat mainsail (no jib) and launched after my arrival. While cranky, through not having any ballast, she is a very fast boat, especially in a light wind.

It is a pleasant forenoon's trip to sail up the river, here more than a mile wide, to Daytona, five miles and back. Daytona is called the prettiest town in Florida. Mr. John Dimon, a Brooklyn yachtsman, has just had a catboat built here, wide, with a clipper stem, not unlike Clapham's Bouncer boats. Another pleasant half-day trip is to Mosquito Inlet, six miles, fine view from the top of the lighthouse; while for sea bathing we simply sail across the river from the hotel, then a quarter of a mile across the Peninsular to the finest ocean beach in the world. Florida cannot be beat for yachting in winter, 250 miles of safe, smooth sailing on the east coast.

One word of advice: Don't bring a boat down here from the North. There is no place in the world where a boat or yacht for shoal waters can be built so cheaply as in these river towns. In summer, business is very quiet here, and they will build a yacht for bare cost of material and living wages. What do you think of a 38-ft. skipjack complete except sails for $225? I saw the contract signed myself. While the sharpie, or flat bottom, is the best for these waters, in my opinion, still the boats built here now are all skipjacks, or V-bottoms, as the local sharps term them. I intend to have built the coming summer a house-boat of about 40ft.; she will be a sharp-bowed scow, cabin 6ft. head-room, large windows, wide beds, regular cook-stove in galley, have lee boards and a rig like the New York sailing lighters; no trouble to hoist sail and get under way, and to draw not over 8 inches; will cruise in her the entire east coast far as Palm beach.

The Mediterranean Races.

The second meeting of Britannia and Ailsa took place on March 14 at Cannes, in the race for the Ogden Goelet and James Gordon Bennett Cup. Corsair also starting. Under the rule of the Union des Yachts Francais, Ailsa allowed Britannia 1 m. 13 sec. in 30 miles, and Corsair 19 m. 42 sec. The course was the same 10-mile trangle, sailed three times. The race was sailed in a light S. W. wind and partly in smooth water. Ailsa crossed ahead of Britannia and led by 2 m. 51 sec. at the end of the first round. With more wind and sea, she increased her gain on the second round, leading by 6 m. 33 sec., and she finished with a lead of 13 m. 13 sec., or 12 m. corrected time. The third race was sailed on March 17, off Monte Carlo, in a variable easterly wind and some sea. Ailsa started a minute after Britannia, and never passed her, finishing 1 m. 35 sec. astern.

Organization about Boston.

While the yacht clubs at the west end of the Sound have been at work with good results in the direction of harmony of action and uniform racing rules, the many clubs about Boston have followed the same course, of a conference and subsequent work by special committees.

While the first end in view was the selection of non-conflicting dates, the matter has gone much further, and a series of regulations have been established to govern all union open regattas. The usual difficulty has been encountered in deciding on one measurement rule that would be acceptable to all, but a solution has been reached which promises to be quite as satisfactory as any for the time, though it must ultimately give place to something more modern. The rules, as finally adopted, are as follows:

"Resolved, That all yachts, excepting knockabouts, be classified by their sailing lengths.

"That sailing length be a yacht's length three inches above and parallel with the load water line, without crew on board, and in ordinary sailing trim.

"That sailing length be the basis for figuring the time allowance, which shall be figured by Herreshoff's table of allowances, for all yachts, except knockabouts.

"That the classes be divided as follows:

"First class, yachts 35 feet and under 29 feet, sailing length.

"Second class, yachts 21 feet and under 25 feet, sailing length.

"Third class, yachts 18 feet and under 21 feet, sailing length.

"Fourth class, yachts 25 feet and under 18 feet, sailing length.

"Fifth class, all yachts under 15 feet, sailing length.

"Knockabout class, to be sailed under the rules of the Knockabout Association.

"That uniform numbers be used.

"That one entry of a yacht shall answer for the season.

"That all entries be made to Mr. A. T. Bliss, 111 Milk street, Boston, which must be accomplished with a correct certificate of measurement from some recognized club's measurer, which shall be accepted, subject to protest.

"That yachts protested on measurement must be remeasured in correct racing trim by the club's measurer, if so ordered by the judges, before they can enter another race.

"That all yachts shall sail in their proper classes, except in case of a yacht having no competitor in her class, she may be allowed to enter another class by permission of the judges.

"That the crews be limited as follows: First class 7 men, second class 6 men, third class 5 men, fourth class 4 men, fifth class 3 men."

We trust that this effort toward union and harmony may meet with such success this season as to lead to still better and more permanent rules. There is no place in the whole country so favorable for the establishment of systematic yacht racing on a large scale as the vicinity of Boston. About New York the North and East rivers are permanent and serious obstacles to regular interclub racing; but the clubs on Massachusetts Bay are very differently situated, and with a mutual good feeling and an established system of modern rules it should be possible to outdo both the Clyde and the Solent in the amount and quality of racing in small craft.

YACHT NEWS NOTES.

The Harvard Y. C. has elected the following officers: Com., J. L. Stackpole, Jr.; Vice-Com., C. F. Lyman; Rear Com., D. H. Morris; Sec. and Treas., Brooks Frothingham; Election Committee, B. Frothingham, R. M. Johnson and C. A. Pierce; Regatta Committee, M. L. Scull, J. K. Lothrop and R. B. Williams.

The New Haven Y. C. has elected the following officers: Com., H. S. Holcomb, schr. Thelma; Vice-Com., Henry S. Dickinson, sloop Rival; Rear Com., W. S. Hastings, sloop Carrie; Sec., F. W. Guion; Treas., G. R. Chamberlain; Meas., George W. Hunn; Fleet Surgeon, Dr. W. W. Hawkes; Trustees, C. M. Ford, F. G. Beach; Regatta Committee, C. P. North, L. A. Elliott, William A. Foskill, Jr.

Columbia, schr., J. T. Perkins, has been chartered by J. J. Astor for the season. She is now being thoroughly overhauled at Port Jefferson, under the charge of Capt. Jeffrey.

Two new boats have been shipped from the shops of Arthur Dyer, of Deep Haven, Minn., to Boston; one for W. E. C. Eustis, owner of the 17-foot Grilse, and one for Lawrence Brooks. Mr. Eustis' new boat is 46ft. over all, 33ft. l. w. l., and 10ft. 6 in. beam, drawing 2ft. 9 in. without board, and 4ft. 6 in. with board. She is of similar model to Onawa, double-planked and decked, and of light build. The center plate is of aluminum bronze. The smaller boat is a 17-footer, to sail against Grilse on Buzzard's Bay.

The handsome steam yacht Argo, belonging to the Argo Club, lies half sunk in one of the slips in the South Chicago shipyard. The beautiful cabins are ruined, and must be refurnished at a heavy loss. The sinking of the yacht was due to one of the peculiar freaks of the lake level on account of changes in the direction of the wind. Some three weeks ago, when the ice held the boat securely in its grip, a strong south wind caused the water, ice and boat to be lowered about 18 inches. A few hours later the wind came strong from the north, and the water rose some three feet. It quickly filled the Argo, which was held down by the icy grip. Since then the ice has risen to the surface. Nothing can be done to save the craft until the ice loosens its hold. The yacht has been fastened securely to the dock for fear the boat would go clear to the bottom in a sudden thaw.—Chicago Tribune.

Since the lines of the little cruiser Windward were first published in the Forest and Stream, eleven years ago, a number of yachts have been built from them. The best of these is Nanita, of greater sail area, lighter construction and more ballast than the original design; and as events proved, the fastest 18ft. keel boat about New York. She has been sailed single-handed between New York and Cape Cod, has cruised hundreds of miles every summer, and has sailed with success in a number of races, proving a most successful all-around boat.

Mr. George Wilson, 23 Sherwood street, London, has issued a neat little cardboard folder containing tables for computing the speed in knots and for converting knots to miles.

The New York Athletic Club will build a new club house 30x50ft. for its yachting department, at Travers Island, on the Sound. The club will give a regatta dinner this summer.

Canoeing.

Class C Canoes.

Chicago, March 11.—*Editor Forest and Stream:* As the owner of one of those much-scoffed-at Class C canoes, which a writer in your paper has described as "that mythical type of which we have heard so much and seen so little," I have been very much interested in your article on the "one design canoe class," for to me it seems to be a confirmation of the correctness of the views of many of our Western open-water canoe sailors, who have graduated from the class which requires a thorough knowledge of gymnastics, instead of any particular attention to the fine points of sailing.

My present canoe, 16ft. 6 in. x38 in., was built for me by the St. Lawrence River Skiff, C. & S. L. Co. last year, and I have no hesitation in stating that for open-water sailing, either with or without a passenger, she has been everything which the lovers of the sport could wish. She is fast, dry and roomy, and can be easily launched and housed by one person of average strength.

When sailing without a passenger I carry 100 lbs. of shot in a stiff breeze, and have a sliding seat the width of the boat, when closed. My weight is 140 lbs., and the sail area is 135 sq. ft. I have usually taken a gentleman as passenger who weighs 175 lbs., at such times have carried 50 lbs. of shot to offset our difference in weights, whether the wind was strong or light. I can notice very little difference in her performance, as far as comfort and ease in handling are concerned, whether or not a passenger is carried, but I rather prefer company in a sea-way, on account of the greater weight and steadiness given—good-fellowship being considered entirely apart.

Canoes of the size you mention have been tried here, but to us they have seemed to be neither one thing nor the other. They are not fast, and they cannot always carry two comfortably.

A Class C, with a passenger, in a fair breeze, will hold its own with almost any canoe except a racer, and under any condition would probably outsail and outweather a canoe of the 15x36 type.

It is the opinion of the writer that the W. C. A. should not allow under-building in Class C, which is now permitted. The present rule allows too much latitude, and should be changed so that a length of 17ft. may be allowed with a beam of 36 in., or a length of 16ft., with 40-in. beam, but any variation between these limits of length should necessitate a corresponding difference of beam. At present a pulling out and thinning down is allowable, which does not seem to be desirable. I may not agree with the New York canoeists, or they may not agree with me, which is the same thing, but the Class C canoe would be my choice for use in New York harbor and vicinity, considered both as a "one design class," and from the standpoint of general adaptability and utility.

JOHN W. KEOGH, Chicago C. C.

The Meet of 1895.

REGATTA PROGRAMME.

Event 1. Paddling and sailing combined, 1-2 mile alternately, total 3 miles; time limit, 1 1-2 hours. Start to be made paddling.

Event 2. Paddling, 1-2 mile straightaway.

Event 3. Sailing, 1 1-2 miles; time limit, 2 hours.

Note. Events 1, 2 and 3 are record races under Rule 5 of sailing regulations.

Event 4. Trophy paddling, 1 mile straightaway.

Event 5. Trophy sailing, 9 miles; time limit, 3 1-2 hours. See Rule 5.

Event 6. Dolphin sailing trophy, 7 1-2 miles; time limit, 3 hours. The canoe winning first place in Event 7 will not be allowed to compete in this event.

Event 7. Unlimited sailing, 3 classes, 6 miles; time limit, 2 1-2 hours. Starters in the trophy sailing race to be selected from this race according to elapsed time.

Event 8. Club sailing, 3 classes, 4 1-2 miles; time limit, 2 hours. First three members of any club to count. A club to be represented must enter at least three men. All men entered must have become members of the club they represent before the first day of the 1895 meet.

Note. The starters in Events 7 and 8 will be divided into 3 classes as follows, viz.: Class A, all who have won an A. C. A. sailing prize; Class B, all others except novices; Class C, novices For definition of "Novice," see Event 11. Class C shall have an allowance of 1 minute a mile from Class A, and Class B an allowance of 1-2 minute a mile from Class A. The starting signals for Event 7 will be as follows: First signal, 5 minutes before the race, preparatory for the fleet to assemble; second signal, 4 minutes later, Class C prepare; third signal, 1 minute later, Class C start and Class B prepare. A. C. A. flag will be hoisted. Fourth signal, 3 minutes later, Class B start and Class A prepare. A. C. A. flag will be hauled down. Fifth signal, 3 minutes later, Class A start. A. C. A. flag will be hoisted and left up.

For Event 8, the above will apply, except that the difference between third and fourth, and fourth and fifth signals will be 2 1-4 minutes each.

Event 9. Limited sailing, 3 miles; time limit, 1 1-2 hours. Sail area limited to 100 square feet, and sliding seat prohibited.

Event 10. Cruising-go-as-you-please. Contestants to start at any time during the day (date to be posted) for a point not over 10 miles from headquarters, carrying a necessary camp outfit, which shall include at least one tent, one camp bed or cot, one pai heavy blankets, change of clothing, cooking utensils, supplies etc. They shall make camp, prepare substantial supper and breakfast, with at least one hot dish, besides liquids, in each. The start for return shall be by signal to be given at 8:30 the following morning. Everything used must be properly stowed and carried both ways. Sail or paddle, or both, may be used. The committee shall disqualify any contestant who shall violate the spirit of the regulations. Prizes will be given to the one who shall finish first and to the one who shall exhibit the most practical cruising outfit, everything to be considered, provided he shall have finished the race.

Event 11. Novice sailing, 3 miles; time limit, 1 1-2 hours. Open only to members who have not sailed a canoe prior to September 1, 1894.

Event 12. Unclassified sailing, 4 1-2 miles; time limit, 2 hours.

Event 13. Novice combined paddling and sailing, 1-4 mile alternately; total, 1 1-2 miles; time limit, 50 minutes.

Event 14. Paddling open canoes not under 50 lbs. weight, 1-2 mile straightaway; single blades.

Event 15. Tandem paddling, 1-2 mile straightaway; decked canoes, double blades.

Event 16. Tandem paddling, 1-2 mile straightaway; open canoes, single blades.

Event 17. Club fours paddling, 1-2 mile straightaway.

Event 18. Paddling upset, 1-8 mile, usual conditions.

Event 19. Sailing upset and maneuvering. At signal throw paddle over astern and recover; second signal, canoe to be heeled over until top of mast touches the water; canoe to be righted and cross the finish line under sail.

Event 20. Hurry scurry, run, swim, paddle.

Event 21. Swimming, 200 yards.

Event 22. War canoe, one mile.

Note. The committee reserve the right to amend this programme at any time, and also to cancel any event in which the entries are not, in the opinion of the committee, sufficiently numerous to warrant a race.

Answers to Correspondents.

A. S. T., New York.—The designs of Colonia cannot be had.

A. T. S., New York.—Any good brand of marine varnish will improve the surface of a canvas canoe.

H. C., New York.—Such a canoe as Bat is perfectly capable of sailing in the waters you mention; but a wider canoe, of say 36-in. beam, would be better for such cruising in strong tidal waters.

RIVET, Toronto.—The board would fall to a vertical position, as far as permitted by the pendant. The strain on the trunk should be little greater than with a wooden board, and the trunk is apparently strong enough to stand it.

W. H. P., Toronto.—Expert opinions differ as to the merits of bamboo or good wooden spars. We have never been able to find bamboo of over 2 in. diam. in New York, and even that size is hard to find.

F. W. B., New York.—A good quality of cabinet-maker's glue is used for hollow spars; but the different makers of such spars have each their own special cement, which they do not sell.

C. F. W., Boston.—Arthur H. Clark, 24 State street, New York, will give you the required information better than we can.

H. L., Portland, Oregon.—A canvas canoe may be repaired by a patch of canvas laid inside or out, as convenient, and sewed fast, being cemented by white lead and linseed oil paint.

"BLACKAMORE"—Arlington, R. I.—1. What make and calibre of revolvers were used by W. C. Pettey and S. J. Fort in their match? 2. What make and calibre does Mr. Pettey generally use?—Ans.: 1. Both contestants shot 44 cal. Smith & Wesson target revolvers, Russian model. 2. Mr. Pettey owns and shoots a number of revolvers of different makes and different caliber. He has used 44 S. & W. revolver, however, most often in match shooting recently.

H. S., New York.—See list of game protectors for New York on another page.

C. H. F., Cleveland, O.—Can parties from the States go into Canada on a hunting trip, taking an outfit from here, and get through the custom house all right, or would we have to get a license to hunt up there?—Ans.: The customs require payment of duty on hunting and fishing equipments, to be refunded when the goods are brought out from the country. Non-resident license in Ontario, $25, in Quebec, $20. See "Game Laws in Brief."

G. E. H., Houston, Tex.—A punt gun is a large single-barrel gun attached to the bow of a boat by means of a swivel or rope, and used to slaughter ducks. These guns nowadays are breech-loading. They weigh from 80 to 130 lbs., the average weight being about 100 lbs. The bore of such a gun is 1 1-2 inches in diameter. The barrel is 8 feet long or thereabouts, and the load is 2 3-4 of powder and 20 oz. or more of shot, size No. 1 or larger. Punt guns as a rule are provided with a recoil apparatus in the nature of springs or rubber buffers at the point of attachment to the boat. Weapons of this character are prohibited by law in most States.

TODE, Providence, R. I.—At a Boston theatre a couple of young women give an exhibition of fancy or trick rifle shooting, and if it is "straight goods," they are wonders. For instance, one of them, back to target, sighting through a looking-glass, cuts the string that holds a swinging ball. Now, how is this done? Is it straight shooting or a put-up job? My chum and I have done considerable fancy shooting, such as sighting back through a looking-glass, cutting cards, holding the rifle on head, and the rest of that kind of nonsense that is never of any practical value, but when it comes to cutting a swinging string, it beats me. What is your opinion of it?—Ans.: The same young women have been exhibiting in other cities; their feats appear to be genuine. They may, perhaps, be seen at the May sportsmen's exposition in this city.

L. O. C., Saranac Lake, N. Y.—1. I would like to learn through your columns how heavy a gun Carver's is, that he uses 5 drachms nitro powder in? 2. Also the wadding used during Mr. Armin Tenner's recent tests. 3. And if articial birds break as well when the thermometer is about zero as when it is about 30 or 40 above?—Ans.: You are in error as to amount of powder used; in his races with Elliott, Dr. Carver shot a 7 1-2 lb. gun, and 3 1-2 drachms of powder. 2. See Armin Tenner's articles in Forest and Stream of Nov. 24, Dec. 1 and Dec. 15. From the composition of some artificial birds the colder the weather, the more brittle the targets. Unless exposed to a very hot sun, there does not seem to be much difference in the breaking qualities of a target.

SANCHO PANZA, Paterson, N. J.—1. How many toes has the osprey or she-hawk? 2. Goldsmith, in his "Animated Nature," says none of the deer kind have a gall bladder: is this true? 3. The common dittany on a cold frosty morning in the fall of the year, will be found surrounded by a coil of ice sometimes rising six inches above the ground. I have never noticed this coil of ice around any other plant. Did you or any of your readers ever notice it, and can you give a reason for it?—Ans.: 1. Four. 2. A gall bladder is absent in the Ceroidae. 3. We have never noticed it.

J. B., West Park, N. Y.—What kind of a water-fowl is this: About as large as a wild goose, rather short neck, a bright yellow bill and jet-black all over? I saw him two days in succession while hunting on the Hudson; he seemed wild and restless, seldom alighting.—Ans.: This may have been a cormorant (Phalocracorax dilophus), but the description is too vague for any certainty.

I. G. T., Mt. Pleasant, Pa.—Will some reader of the Forest and Stream, who may know, inform me through its columns whether there is any book published which treats on the capture of snapping-turtle?—Ans.: No book on the subject. See Holbrook's N. A. Herpetology.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MARCH 30, 1895.

VOL. XLIV.—No. 13. No. 318 BROADWAY, NEW YORK.

For Subscription and Advertising Rates see Page ix.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

MAINE PROTECTION.

Fish and game protection in the State of Maine is in a transition state. The wardens have all been legislated out of office, and it is uncertain just what the outcome will be. Many of Maine's citizens believe that the Maine commission should be thoroughly reorganized from the top down to the bottom, and that the charge of and responsibility for protection in that State should pass into other hands.

A letter which we publish to-day from Mr. Stanley is interesting as giving one point of view and we gladly give it a place. We think that no one has ever questioned the good intentions of the Maine fish and game commissioners, nor their entire devotion to their work. They have given time and money, which some of them could perhaps ill afford, in their earnest effort to increase the fish and game. On the other hand, it can hardly be doubted that among the servants they have employed, some have been worthless, and others worse than worthless, dishonest. The evidence which is constantly being brought up by persons of unquestioned integrity and great experience, shows beyond cavil that while Maine game and fish is sometimes protected, in many cases it is not protected at all. A letter from Mr. Manly Hardy, printed last week, gives an example of this, and other testimony of a like nature is not wanting. It cannot for a moment be thought that Mr. Hardy is either ignorant or prejudiced. On the contrary, there are few men in Maine who have had so wide an experience as he on both sides of the protective question. He is able to look at it from the point of view of the guide and woodsman, and also from the point of view of the dweller in the city, and of the summer visitor. Statements, such as those made by Mr. Hardy cannot be brushed away by the denial of any man, however worthy, nor can they be explained by the statement that no sufficient appropriation is made by the State.

It appears to be true that a considerable proportion of the Maine game wardens have been appointed either through political influence or from motives of personal friendship. Such men naturally feel no interest in enforcing the law, and care little about any part of their work except the drawing of the pay. In many cases it is believed that wardens have used their positions for the sake of blackmailing residents of the State, or through personal friendship have allowed neighbors to violate the law.

It is believed that before very long a new system will be introduced in Maine, and that with such introduction, the good work of fish and game protection will go on with a continually increasing momentum, but if such change is made, it must not be forgotten that to Mr. Stanley and his late colleague, Mr. Stillwell, is due great credit for long, faithfully and persistently working for protection in the Pine Tree State. We may not all have agreed entirely with their methods. We may have thought that in many cases they were too loyal to their employees, and blindly believed them in the face of testimony which was far more worthy of credence. Nevertheless, the fact remains that to these two gentlemen is due in large measure the abundance of game found in Maine to-day.

THE SENSES OF FISH.

It is hardly to be conceived that the fact that fish feed at night has been questioned by any of those who have written on the subject of fly fishing in the dark. The point of special interest is as to how the fish feeds and how it takes the fly. Most old anglers have fished after dark, and usually they use a light colored fly, under the impression that this will attract more readily than a dark one would.

That fish feed at night has long been known, and accounts of fly fishing in the dark have often been written. Also it is not very uncommon to catch in the early morning fish whose stomachs contain recently captured night animals. In streams in the Rocky Mountains it is quite common to catch at such an hour large trout, which have fed during the night on the little voles so common in the low ground along the streams, and which are nocturnal in their habits. We took one morning three trout from which fourteen of these little meadow mice were secured, seven being found in one large fish, and all had been taken during the night, the last one certainly within an hour or two.

How the fish discovers its food at night is not yet demonstrated. The senses of sight, smell and feeling have all been invoked to explain the act, but direct evidence is lacking to support any of the theories which have been advanced. We can only consider which one is the most plausible.

A good many years ago the question was actively agitated, do fishes sleep? And we believe, after a good many opinions had been expressed, it was concluded that probably fishes did sleep, but, really, we know and could know nothing definite about the matter. Very likely the same is true with regard to the method by which the fish discovers the lure offered to him in the dark. In the meantime, however, the experiences of anglers who have fished at night and their opinions are interesting reading.

It is reasonable to assume that fish being dependent on a sense or senses as guides in obtaining food supply and also in knowing what takes place, as is true of all animal organisms, these senses are so modified or developed as best to meet the needs of their peculiar environment.

To suppose the sense of smell is an important means of detecting food or prey would hardly seem to satisfy the conditions of a fish's life, since an advocate of it must perforce take his own sense of smell, governed by his own environment, with his own manner of breathing through his nose, as a standard of comparison. This is but remotely analogous to the matter under consideration, since what would produce certain phenomena in the atmosphere might not produce similar phenomena in the water. A man breathing through his nose might have different perceptions from a fish breathing through its gills. For instance, the exhalations of vegetable and animal matter are quickly and widely diffused through the atmospheric fluid which may change its direction frequently in short periods of time, widely disseminating the exhalations, and through the sense of smell bringing them to the consciousness of the people within an area more or less large. If the atmosphere is at rest, the exhalations are diffused equally in all directions. If there be a breeze, the exhalations are carried with it, and can then be detected a long way down wind of the object causing them, though they are confined to a narrow channel, and up wind of the object, cannot be perceived at all. In short, if there were color to the particles which produce scent, so that they would be discernable to the eye, they would be found to be governed much in the same manner that smoke is by the atmosphere. Advantage is taken of this fact in the well known practice of "chumming," for bluefish, and we have seen a trout drawn up the stream two or three hundred feet by a piece of meat hung in the running water. But were these fish influenced by the sense of smell or by that of taste? Very different are all the conditions in the water from those in the air. Owing to its greater density, the exhalations which produce scent, would find a greater obstruction in the water, and as streams have fixed currents, the scent would at most have but a small area. Running water is always laden with foreign bodies which might weaken or destroy the strongest scent. In still water, any scent would have but a small area. A bit of coloring matter dropped into still water spreads but little. In short, the sense of smell, as a theory of the manner in which fish seeks its food has not been well sustained.

Undoubtedly the sense of sight and hearing are those used in the search of food or pursuit of prey. Water is an excellent conductor of sound as everyone knows. Everyone who has fished for trout knows also how keen is their sight and hearing. The trout angler takes every precaution to keep his person concealed, and he takes equal precautions to observe unbroken silence. The many colored flies and the effort of manufacturers to make them resemble the natural flies are tributes to the fishes asumed keenness of sight and discernment. The expert skill of the fly fisher often fails to deceive the fish, which will rise to the natural fly and ignore the artificial one. Granting his keenness of vision in the day time, there is a good foundation for the inference that fish can see in the night, from the fact that they feed at night. Indeed, on cloudy days, and in waters heavily shaded under woods and deep banks, there is a darkness in the waters which would not be much intensified by night. If the fish have nocturnal powers of vision, it would not be more remarkable than analogous characteristics of many animals on land, notably the owl and cat, both of which can see well—though not all species equally well—by day or night. There is much other material testimony supporting the theory that fish can see in the night.

Every angler has heard the numerous splashes made by fish striking for their prey in the night, and many anglers while on the lakes or other waters, have seen them strike in the night. They will strike a spoon too, which is as devoid of scent as it is possible for anything to be, and to seize which they must depend entirely on sight.

On the whole, therefore, the probabilities seem to be against any theory that night feeding fish are guided too, their prey by the sense of smell, and the probabilities are narrowed down to the senses of sight and hearing, which last—in the case of the fish—would include perhaps feeling as well.

NEW YORK DEER.

A bill has just been introduced in the Assembly by Mr. Niles, which appeals strongly to all persons who wish to see the deer of New York more effectively protected than they are at present. As will be seen by reference to the full text of the measure, printed in another column, it is very brief, and its essential points are that it forbids the killing of females and young, and the hunting of deer with dogs.

The only reason for permitting the hounding of deer anywhere is that they may be more easily killed, but now adays there are many men who are coming to think that instead of making it more easy to kill game, the efforts of law-makers ought to be directed toward rendering such killing more difficult.

In many of the Southern States, where dogging has always been practiced, the hunters follow the hounds on horseback and endeavor to cut off the deer, shooting from the saddle. This is genuine sport, and demands real skill—a firm seat in the saddle and much expertness with the shot gun. In New York State hounding is very different, for the hunter sits at ease on the shore or in a boat until the scared animal is driven up to him. He has every advantage over the deer, and if it escapes, it does so only through bungling by the waiting hunter. The mere act of shooting can be performed as well by a woman or a child—as indeed it often is—as by the most skillful hunter.

In some of the States to the North of Mason and Dixon's Line, there are no deer at all, and so no laws concerning them; and in a great many others, there are laws against the use of dogs. A cursory examination of the Game Laws in Brief shows that in the United States and Canada there are no less than seventeen States and provinces in which the use of dogs in deer hunting is forbidden. It will thus be seen that the sentiment of the Northern States—in which the conditions are widely different from those in the South—as expressed in their laws, is distinctly opposed to the practice of hounding deer, and that New York is far behind her sister States in this matter.

The hounding of deer is advocated by many of the Adirondack hotel keepers and by the great army of summer visitors, who cannot hope to get a deer unless dogs are used. Those who urge the passage of this bill are supported by the sentiment of the best sportsmen of the country. The bill ought to become a part of the law of the State.

The Sportsman Tourist.

A VIS-A-VIS WITH A PANTHER.

Our camp fire was blazing brightly, its hot breath wierdly tossing the hemlock branches above it while we sat around it enjoying its genial glow and the rest that comes so gratefully to the tired men after the fatigue and excitement of the chase. One and another recounted his experiences of the day, embellished with all the trivial incidents that only the sportsman cares to tell or listen to. Ned Wilmarth, the youngest of the party, had just told of some curious tracks that he had seen on the sandy bank of the stream where he was watching a runway for deer.

"They look like cat-tracks in shape," he said, "but are as large as my hand."

Some one suggested they might have been made by a panther, when the conversation drifted to facts and speculations concerning that animal, whether its oft-repeated scream was a myth and whether it had ever been known, when unwounded, to attack man.

"Well," said Captain Burton, the most experienced hunter of the party except the guide, "I cannot say positively that a panther will attack a man unprovoked, though I thought one day I was about to have it proved to me that he would."

There was a unanimous call for the story of this experience, and a general stir of interest as the captain knocked the ashes from his pipe and settled himself comfortably to tell it.

"You may not think it worth hearing, since I am here to tell it, but the way of it was this:

It was a hot, droughty day in September when I was hunting partridges. I was having such poor luck that when I had got two birds I was so thirsty and tired, I was glad enough to come to a brook whose current, shrunken as it was by the drought, yet ran cool in the thick shade of the evergreens that clothed its banks.

"I took a good draught from a rocky basin and sat down on a mossy log to rest and smoke. But I was cheated of perfect rest in spite of the refreshing coolness and the softness of my seat, for I had scarcely taken the first whiff at my pipe when I began to feel an unaccountable uneasiness, a dread of some impending evil, an oppressive sense of some unseen, baleful presence.

"I suppose you have all experienced the same feelings and generally found them quite unfounded in anything tangible. No calamity befel you, no evil presence manifested itself before you. I recollected such impressions of my own, and argued with myself that these were as baseless.

"I scanned the thickets all about me, and listened intently. Not an animate object was visible, not a sound was to be heard but the monotonous trickle of the attenuated brook and the occasional stir of the almost stagnant air among the tree-tops. In spite of these proofs of its causelessness, I couldn't banish uneasiness and was strongly impelled to leave a place that seemed pervaded with an evil atmosphere.

"Ashamed to yield to so cowardly an impulse, and to confess myself unable to cope with mere nervousness, I resolved to overcome it and enjoy my promised rest and smoke. So I stretched myself at length on the mossy cushion of the log and tried to lull myself to drowsiness.

"The soothing sound of the trickling water and the sighing breeze, the lazy upward drift of the smoke that I watched through half-closed lids, dissolving among the knotted branches, were making some impression on my strained senses, when suddenly the monotone of the brook was broken by the sharp clatter of a pebble and the sound of quick lapping of water, coming from a little distance above me.

"Springing to a sitting posture and looking in the direction, I saw an enormous panther, not more than fifty feet from me.

"My movement had evidently first disclosed me to him, and for a moment he regarded me with a surprise as great as my own, while the dribble of his interrupted draught dripped from his thick under lip. Then his mouth opened and closed as if shaping an unvoiced cry, just as you have seen domestic cats do, and then he advanced a few steps and crouched down, still intently regarding me and nervously gathering his hinder feet under him as if for a spring.

"I caught up my gun without taking my eyes from him, and cocked both barrels. They were loaded with No. 6 shot, insignificant and ineffectual missiles against so formidable a beast, but they might blind him, I thought, if I could shoot straight and quick enough as he sprang.

"And there we sat staring at each other, I doing my best to exert the alleged power of the human eye to quell the wild beast; he evidently determined not to let a motion of mine escape him.

"So we remained for what it seemed to me an interminable time; for I was terribly afraid, though I believe I was cool and felt a kind of curiosity as to how the affair would end.

"If I took my pipe from my mouth or brushed a fly from my face, his eyes followed every movement, while he kept quite motionless, except a continual slow lashing of his tail, while I kept my eyes as steadily on his as their shifting glances would let me.

"I noted the shadows slowly lengthening on the pebble bed of the shrunken brook and wondered if the panther had a purpose of holding me at bay till nightfall put me at his mercy.

"Then a partridge came hurtling past me from beyond the position of my unpleasant vis-a-vis, evidently in affrighted flight. I could see out of the corner of my left eye that the bird offered a beautiful cross shot as he went past me. Then came another and another in similar startled flight. Then a hare scurried by, and a panting woodchuck came shuffing down the bed of the brook without heeding me, though he passed within reach of my gun-barrels.

"I was confusedly speculating on the cause of this generally alarm of the wood folk when the riddle was solved by a strong smell of smoke drifting into my face with the freshening breeze. The woods were on fire, and the flames were sweeping down upon me!

"I was conscious of some satisfaction in the thought that they must first reach my unwelcome visitor. Almost at the same moment he seemed to become aware of the common danger. He cast a quick glance behind him, another on me and arose to his feet with the lithe, instantaneous movement of the cat kind. He looked behind him again, and then with constant sidelong regard of me, began to move slowly away, well to one side of me, just as you have seen a tom-cat retire from the bloodless encounter of brag and bluster. So he slid deviously out of sight, but had hardly disappeared when I heard him retreating with long, rapid leaps.

"I lost no time in following his example to the best of my ability. I heard the flames roaring and crackling behind me and felt their hot breath on my neck as I ran down the brook at the best speed I could make. Half an hour later I was safe in the midst of cleared fields."

"I'll bet a cooky he wouldn't never ha' teched ye of there hedn't ben no fire," said our guide, poking a long splinter into the fire to get a light for his pipe.

"Considering the stake you wager," the Captain said when he had lighted his pipe with the same torch, "I don't care to take the bet and have it decided by my own experience."

ROWLAND E. ROBINSON.

FERRISBURGH, Vermont.

GLIMPSES OF CAMP LIFE.

IN THREE PARTS—PART III.

Camping in the snow is not always pleasant, but some times one "strikes it rich," to use a miner's phrase.

One day, nearly the first of December, the writer and a friend started from a ranche on the South Boise for a trip back into the mountains for the express purpose of getting a big buck. The weather was threatening, and a big snow storm was looked for at any time.

It was a good day's trail to our proposed camp, and long before we made it, the snow fell fast. It was not cold, so beyond making it wet and disagreeable we got along very well, but the higher we climbed the more snow we encountered, and as evening came it was "getting right smart deep," as Joe said. We were not sorry to mount the last divide, between the waters of Grouse and Deer Creeks, and though we sighted a band of four deer, we traveled on to make camp before dark. Deer tracks were all about us as plentiful as sheep tracks in a pasture lot, and we hugged ourselves in joy to think we had got up there before the snow had driven the deer lower.

GLIMPSES OF CAMP LIFE.
On Deer Creek in the Snow. Photo by F. F. Frisbie.

We were just going down the last hill to the little valley where we would camp, when up jumped three deer, two full grown fawns and a doe. Some pretty shooting and chasing of pack horses kept us out until the winter evening was upon us, but we got all three of the deer, so we felt happy in spite of the cold, fast falling snow and general gloom.

Imagine, kind reader, you who have looked upon such scenes, a dark winter evening, a snow-covered mountain country, with the pines and firs looking like great monuments of white, a little desolate valley and a something that from the river looked like a snow drift, and from the front, like a dark hole, and two tired and wet men, with four ditto forlorn looking "cayuses" just rounding to, in front of such a den. Nothing very cheerful about that, methinks I hear you say. But wait; gaze on this same scene an hour afterward. A bright, blazing, huge camp fire, throwing its light away back into the jack pines, making the interior of the den as light as day, and reflecting back heat enough to enable the hunters to discard their coats, though the temperature was below freezing in the open, for it had grown very cold.

Spread out on a canvas pack cover was a simple—but to the hungry men, a very satisfying supper, smoking hot. Fresh biscuit, fawn steaks, smothered in onions, fried "spuds," (potatoes) Java coffee (best brand from home) and to wind up, some California honey, with ranche butter, for the hot biscuit. And best of all, a good healthy mountain appetite, than which no better sauce can be found in the wide world.

We took our ease as we feasted on the good fare, and watched the snowflakes fall and melt, sputtering away in the blazing log fire. We could ever and anon catch a glimpse of the white form of old Dick, (Joe's saddle horse) through the jack pines, and the bell on the mare rang out clearly and noisily as she pawed away the snow, searching out the wild pea-vine, of which all horses in the West are so fond.

As old Joe drained the last drop from his second cup of coffee (a miner's pint tin cup) he wiped off his bushy beard, and with a deep grunt of satisfaction said, "Wall, my boy, I'm jist as satisfied as if I had eat a square meal, and now I'll smoke."

About forty miles north of the short-line branch of the U. P. R. R. lie two sections of rolling country, divided by the South Boise River, known as East and West "High Prairie." The "Little Camas" prairie lies south of this, and the "Big Camas" to the east. This is a fine country to hunt deer in late in the fall, after they have been driven out of the high mountains by the snow, and it is quite the custom of the ranchers and miners above to wait until the deer land up and get onto the high prairies and in the country adjacent, to go and kill their winter's supply of meat.

The country is quite accessible, and one can get in with team and wagon; and it is also an easy country to hunt over, compared with the higher mountains, there being little timber and not at so great an altitude.

Late one November, a party of five of us left a ranche on the South Boise for Fall Creek, which flows into the river from west High Prairie. As usual, when a party is made up indiscriminately at a ranche, everyone wants to go and some go whom you prefer to leave, and you always get a late start. It was, therefore, about dusk when we had covered the twenty-five miles we had to travel, and the snow was falling fast in great flakes, which melted nearly as fast as they fell, making everything damp and uncomfortable. It was not a pleasant prospect for a camp, but we had about concluded to stop, as the lava rocks made it very bad going for the team, when one of the party happened to think that he had heard there was an old cabin somewhere below Fall Creek, and he thought that if we could get to it it would beat a camp in the snow. So two of us, who were on horseback, started on, and after a brisk ride of a mile, found the cabin. It leaked some and there was no window, but it had a big stone fire-place where we could build a rousing fire and was a fair refuge from the storm. While one man went back to pilot the outfit, the other hunted up some dry stuff and started a fire. Soon all had come in, and each man busied himself getting camp in shape. Horses were unhitched and hobbled, bells put on and then they were turned loose. Firewood was brought by two of the boys, who found a dead pine near by and felled it, dragging huge loads into camp with a rope round a saddle horn on one of the cayuses. Supper was cooked on the fire in the great chimney and soon dispatched, and then the fun began.

One of the outfit was a chap who had tramped up into the mountains in the spring and had worked on the ranche all summer. According to his own story, he had tramped all over the country, and the tales he told were at least entertaining, if not instructive. The rest of the boys were of a different stamp, but they liked to get "Big Charley" talking and they did it. He could talk and eat, but was no hunter. "Could not hit a flock of barns," as one of the boys said, and he confessed that he shut his eyes when he pulled the trigger. The next day Charley proved that this must be so, for he shot five shots at a lynx which lay dead, (having been killed by one of the party) within twenty feet of him, and never touched it. The boys all warned him that if he went out with them and pointed his rifle in their direction they would shoot him.

Our hunt at Fall Creek was a short one, but we had some fun. Five deer and a lynx in less than two days' actual hunting was not bad.

I once spent a few days with a single companion in a charming spot near Bonaparte mines, Idaho, where deer were fairly plenty, and the weather was perfection. It was in September, that most charming month of the year in the mountains, when berries are ripe and game is ready for the hunter. The cold snows and storms of the later autumn have not come, the sun shines brightly every day, the air is crisp, cool and exhilarating, especially in the morning and evening, and one feels a joy in being alive.

Our little tent was pitched beside a pine that seemed to shelter the packs and the rest of our outfit. Our five horses had excellent feed and a crystal stream ran just below us. How we hunted from this camp, killed some deer, had one half eaten up by a bear, watched for the bear, didn't get the bear, didn't find the gold ledge we were looking for, etc., would spin this tale out too long, and besides we only started to give some "glimpses of camp life," not to write a hunting story in detail.

And now, kind reader, if the glimpses you have had please you, I am sure a good "square look" will delight you, and the only advice I shall offer in closing is to say, go, see for yourself.

"Now, all may come who seek, afar from crowds.
The grand in nature, for we now engage
The potent 'genii' of this iron age,
Fire, steam and steel and rise above the clouds!"

FRANK F. FRISBIE.

UNCLE RUSTY AND OLD SILE.

A Backwoods Correspondence.

BY F. BERKELEY SMITH.

IN CAMP ON LITTLE OTTER CREEK.

I'm goin to answer your letter to-night 'cause Rube is goin' down in the mornin' with what pelts we've got ready, and bring back some pervisions. I was mighty glad to hear from ye. I was wonderin' if it warn't about time for ye to talk a little to your ole pal.

Ye see we git our mail when they is any, ev'ry month. We uster get it ev'ry two weeks, but this allfired squall set in and froze ev'rything up s' tight that its more'n our mails wuth to get out to th' settlemint. I could git over thar oftener, snow er no snow, if I was able to be up an' about, but ever since I had that fall off'en the lidge up on Spottid Mountin, its been all I could do to git round th' camp and help Ed tote wood.

I was sorry that I couldn't git over to the celebration, but I'd be dad dinged if I'd let Ed drug me on the sled, so I hed to gin it up. Must have had a time, ez the feller said.

I kin jest git out now to fish on the pond. Ed he cuts the holes and sets th' tip ups and I kin watch 'em from camp, and when I see one rise up, I hobble out to it and yank thunder out of 'em.

Warnt that a snow we had? I tell ye I wuz afeard our ole shanty ed git snowed under sure, but Ed he kept pokin' it off 'um th' roof so now we kin git out and in preddy comfurbul.

Say what your a min' to, Ed Cummins is an almighty good man in th' woods, and he's preddy handy with trappin'. We've had better luck this winter than I ever see it since you and me was trappin' up on Shingle Shanty and round thar Goll; warn't that trappin' with a vengince? Ye see Ed's so powerful cunnin' thar aint nothin' he can't coax into his traps. He's goin' down to-morrer and shant be back for about four days and I doubt if he does then. I presume to say he'll git fuller'n er mink.

Wall, I swan, if Ed didn't go en fergit to take my letter to th' settlemint with him. Ye see he was so allfired sot on gittin' full that he come near leavin' the hull passell of hides. He's gone now, an' who do you think come along thro' th' notch but Charlie Munsey and Gus Skinner. Hope never to see th' back of my neck if it warn't jest az I'm tellin' ye.

They come on their snow shoes haulin' a sled with the awfullest moose on it you ever see. Goll, it warnt no earring they was draggin' nuther—weighed clus onto fifteen hundred, if he weighed a pound.

It was about sundown when I heered the dangdest yellin' and cussin'. Wall, I couldn't do nothin' but yell and cuss back at 'em, cause I cudn't git aout and travil none, cause m' leg is so sore. Preddy soon they come back up and said they was goin' thro' to the big shanty th' next day, and that all hands was goin' to drag out what pelts and ven'son they had to th' settlemint. Wall, what a time we had, I'd gin er doller to have had ye thar. Course they had some ole witch-er-pee-sass reduched ez you say about one-half with alcohol. Wall, sir, we riz thunder an a shanty, no use talkin'.

Bimeby, when we wus gettin' kinder quieted down, Gus, he begun to tell how him and Charlie Munsey got th' moose. Ye see they was gummin off back on "Peaked Mountain," ez they hadn't had any luck trappin', when all to once they came onto some tracks leadin off towards th' north. They follied it till it went up thro' Wild Cat Holler, up thar whar you and me got that bark for our camp two years ago last fall. They had thar dog with 'em, so Gus, he tuk th' haound and Charlie he clim up a big sprauce and waited. Wall, he said he waited about half an hour when he heerd th' dog comin' down th' mount'in lickety split, and jest as th' moose come along, Charlie onhitched and dropped him in his tracks. Gus, he come up, and was so oxcited, he up and jumped onto th' moose. Wall, sir, that animile want dead yit, and off he started with Gus a-ridin' him. Gus says he rid that moose more'n a mile fore he could git a holt on him and cut his throat.

Wall, its might lonesome, ez th' feller said, alone in this here shanty, and I wisht ye was here, but I suppose your happy cause your whar you kin git good licker and see somebody once in a while. We'll come out long towards the fore part of April. Wall, I must git to skinnin' what rats Ed has ketched. Old drive sends his respects. Yours faithful, SILE.

North Dakota Notes.

FARGO, N. D., March 5.—Our State Sportsmen's Association prepared an excellent game bill, which was introduced and reported favorably, but it has gone the way of many others this session, "been indefinitely postponed." for the reason that "it is fully covered by the code." We hope such is the fact, but have reason to doubt it.

The annual meeting of the South Dakota State Sportsmen's Association will be held at Fargo Friday evening, June 14, 1895.

Wild geese made their first appearance here this season on the 1st inst. Snow entirely gone, but rivers and lakes are not open. C. E. R.

Natural History.

WOODS NOTES.

I once caught a bear in a heavy steel trap by one of his fore feet, at the foot of the narrows in Mollychunkemunk Lake, one of the Rangeleys. I heard him scream two miles away and on going to the spot found he had climbed a crotched cedar and dropped down by the run, as they frequently do to try to free themselves from the trap. As he fell the trap caught in the crotch of the tree and he stretched down just far enough for his hind feet to touch a log which lay at the foot of the tree. I landed my boat within a rod of the bear and was astonished to see the creature jump; he would spring from the log into the air from four to six feet, then drop back, then rebound, and each time give one of his unearthly yells that was a blood circulator—which pranks he kept up until shot dead.

I had set a bear trap beside Sunday Pond, on the carry between Lake Umbagog and Richardson, and a few days after, a man coming up through the carry told me I had a bear in my trap. I at once started down, some five miles, to secure him. When nearing the spot where the trap was set I heard him holler and immediately after heard the trap jingle. When I got near enough to see the bear he was pounding the trap on a rock. It was on his fore foot, and he would lift the trap high in the air, then scream, then bring it down with great force on a large rock near by. He had just got caught, and would doubtless have released himself if I had not got to him just as I did.

A trap set in a swamp near the pond in the river was carried away by a big bear. After searching several hours I discovered the bear in the top of a tall fir tree. He had climbed the tree, breaking the limbs as he went, and reaching the top had slid the trap over the top of the tree, then propping had hung up with some eight or ten feet of the tree sticking up above and through the trap. I had to cut the tree down to get the bear.

I once set a log trap, or dead fall for a bear, a large trap, and when I went to tend it a Canada lynx lay dead in front of the trap some four feet away. He had touched the bait and jumped back just far enough for the heavy dead fall to hit him on the head and knock him away.

Very few people, or even sportsmen, have seen the winter feeding grounds and works of the moose, commonly called a moose yard.

In following up the late fall works or feeding of the moose, the hunter is guided entirely by the breakings of the buds of the twigs of small trees and bushes, with perhaps a little gnawing of the bark of a small willow or maple now and then. After following the signs a mile or two, it is easy to conjecture the mountain he is steering for, and it is quite probable that the moose have their winter yarding place decided upon in early fall, if not before mid-summer. I believe the bulls that live on the mountains in early summer, isolated from the herd, while waiting for their antlers to harden, after they have attained their full length and are in the "velvet," as hunters term it, and very tender, they discover a place to live the next winter and lead the herd there the next fall.

They commence at the foot of the mountain in early winter, working up the base and along the sides of the ridge, back and forth, and before the snow gets full winter depth, reach the top and commence working down the side of the mountain while the snows are deep, thus making it easier to break the deep snow, and peel or gnaw the bark from every small-sized tree in their way, preferring the willow, maple and moose wood, and making the woods look like new furniture, gnawing the bark high up, ten or twelve feet, by standing on their hind feet with their knees against the tree.

No one can imagine the appearance of the fresh works of a moose yard in winter—their well trodden paths in the snow in every direction, and the bright new wood as far as the eye can reach—and the sensation of knowing that you are in the immediate vicinity of the largest game of the forest and perhaps within easy range.

Three domestic heifers, two years old, are yarding this very winter in the Aroostook woods. They got wild during the summer by running at large in a pasture surrounded by the forest, and have been hunted with dog and gun by men trying to capture them, dead or alive, but are as wild as moose or deer. Their owners are awaiting deep snows.

In war time, when raw furs were worth more than greenbacks, and mink skins were worth a ten-dollar bill, I was one day fishing through the ice in the west arm of Mollychunkemunk Lake, one of the coldest days in February. I espied a mink coming from the shore, as if to cross to the woods on the other side, about a quarter of a mile. I at once started to get in shore of him so as to cut him off, which I easily did. Then a race commenced between myself and the mink. I noticed he was making for a bunch of snow in the middle of the lake, and as I rapidly gained on him he made a hole into the pile of snow as I came upon him. I thought I had him sure, and got down on my knees to try and see him as he disappeared in the snow. At that moment the ice gave way and I went headforemost into the frozen water. I soon scrambled out and found it was an air hole over a sunken rock. I started for my camp as fast as possible, about a half mile away, but before I reached the camp my clothes were frozen stiff and I had to lie down to kindle my fire.

BETHEL, Maine. J. G. RICH.

Cape Cod Winter Notes.

This storm-swept and ice-bound region has presented numerous anomalies in its natural history during the present cold season. The king eider, for example, usually a winter resident, or at least a casual visitor, has not been observed at all at Woods Holl. Last year it was in moderate abundance. The common eider has been limited to a colony of about 500, which are still to be found in the "hole."

Gunners have occasionally pushed flat-bottomed boats over the shore ice to leads of open water and have emptied a barrel or two into the flock, but then the sport was abruptly ended by the flight of the birds. Sheldrakes were plentiful for a week or ten days, when the first ice made its appearance. Whistlers were scarce; very few have been seen. Old squaws are as abundant as usual.

A very unusual occurrence here was the killing of a red head in the "hole" on Feb. 16. Another remarkable duck for the locality was a harlequin, which was killed Dec. 27, by Vinal N. Edwards, Jr., the first of its kind seen here. Auks and murres, usually common winter birds at Woods Holl, having been conspiciously wanting. Finally, there has been a remarkable scarcity of hair seals. Only one has been seen in the vicinity and that is a little one which makes its appearance about once a week. The seals are absent from Buzzards Bay also, and their disappearance has caused considerable guessing as to its cause. As a rule they are plentiful in winter, and especially in cold winters. Perhaps the fish upon which they depend for a livelihood have also been driven off or destroyed by the intense cold.

WOODS HOLL, Mass., Feb. 23. T. H. B.

Nests of Tree Frogs.

At a recent meeting of the Zoological Society, of London, Dr. E. A. Goeldi described the breeding habits of certain tree frogs inhabiting the province, Rio Janeiro. One species builds a nest of mud on the shallow borders of ponds for the protection of its young while in the larval state. In another species the female carries the eggs upon her back and the larval changes take place within the egg. A third attaches its slimy egg mass to withered banana leaves, forming a nest in which the young remain until they reach the air-breathing stage of existence.

The pouch intended to receive the eggs in some tree frogs is expanded so as to cover almost the entire back when filled. The young either leave the pouch as tadpoles or they may complete their metamorphosis within its protection.

Divers in the North River.

March 17, Editor Forest and Stream:—When crossing the ferry from Jersey City to Courtlandt street Saturday morning I was surprised to see a pair of divers in the river, which, from their size and appearance I took to be the red-necked grebe (Podiceps griseigena.) They were near the New York shore scarcely more than a gunshot from the boat, while another passed them about as close on the other side. The birds did not fly or seem much alarmed at their unusual surroundings, and attracted considerable attention and interest among those of the passengers who noticed them. J. R. SUCH.

Early Bird Notes.

One solitary robin has been here all winter. Every day when the weather is fair he goes to a house in the Sixth ward and they feed him.

Saw four (4) bluebirds Feb, 1, but no migratory robins until March 1.

Wild geese reported going north March 8.

THE SUNNY SOUTH. VII.

THE PLEASURES OF THE PIROGUE.

CHICAGO, Ill., March 9.—In one of his interesting articles from New Orleans, Mr. B. Waters has written very feelingly about the experience of a novice in a pirogue, and at the time I enjoyed reading the story, for I had been there myself and could bear testimony to the accuracy of the description. Anyone who has ever mounted one of these 'Cajun craft will be ready to concede it the teeterishest, ticklishest, trembliest and generally doggonedest boats ever contrived by a lay water-goer. The lazier a man is, the smaller he will make his boat. The birch bark of the Indian is the evolution of the easy-paddling idea deep-seated in the brain of one of the laziest of mortals. Now, the 'Cajun is the only mortal being lazier than an Indian, and thus the pirogue, the national and typical boat of the 'Cajun, is the only boat more teetery and ticklish than the birch bark. That it is harder to ride than a birch, anyone who has tried both will readily admit. A bare, round log is far easier to ride than a 'Cajun pirogue, which has qualities of its own in slithery slipperiness on the water. A man's first ride in a pirogue is much like his first attempt on the ski. He finds his mount possessed of a thousand malignant spirits eager to take a fall out of him.

If there is a better paddler in the world than the American Indian, it is the American 'Cajun. Let the novice get into the craft of either one alone, and he will probably not be able to keep right side up. But let the designer of the craft get into it with him and the case is changed. The racing canoe without wind in her sails, the bicycle standing still, become the canoe under sail, stiff and steady, and the bicycle in firm and confident motion. The lazy man has learned the art of saving muscular tissue by balancing, and he has learned to keep his balancing by the blade of his paddle in the water. Once in the pirogue, with a good paddler driving you on, and you are ready to swear that all your fears were unfounded. But let your 'Cajun stop to light a cigarette—which he is bound to do at least every three minutes—and the revulsion is immediate and abject. An ague seizes on the keel of the sassafras ship beneath you. It trembles and balances beneath you in evil ecstacy. You shiver and tremble with it, and try to balance against its freakish slips and shudders. With no support whatever, seated prone in the bottom of the knife-edged concern, with hands not daring to touch the gunwale, already almost submerged, you strain gigantically with all the muscles of your back, instead of lopping limply from side to side, The perspiration starts upon your brow. Your back aches with your effort to hold the boat erect. But still it shivers and trembles, as do the balances of one weighing delicate things. In suspense you feel about to cry out, to beseech, to implore, to promise ransom. Then your 'Cajun, who has nearly upset you by striking a match upon the gunwale, calmly sets the boat gliding again, and for three minutes you breathe, you chatter, you essay a feeble joke, till it all comes back again. For,

you see, a brown paper cigarette, with a pinch of tobacco in it will only burn so long, and if a 'Cajun smoke not, he perisheth.

There were four of these tickly, tiny dug-outs at our camp on Dead Man's bayou, away down at the mouth of the Mississippi, when I met my friends Foster, Divine and Organ there. Also there were four 'Cajuns who alleged they could take a man, his gun, ammunition and decoys in each and paddle the whole without a drowning. I boldly pronounced the latter an impossibility, and asked whether a mortal being had ever been seen in one of these boats, which didn't seem bigger than a collar-box mashed endways.

"Some man can wide in peewoog," said Monsieur Octave, "an' some man he fall out of peewoog, yas, him. You get in an' see if you prob'ly fall out, 'fore we go hunt."

So I went into a pirogue alone and paddled across the bayou to get a picture of the camp, and chancing to return without accident. M. Octave graciously said 'prob'ly I could go hunt. Mary Ann (Emilien), my pusher, the homeliest and best of the lot, also assured me that he had never drowned very many men, and didn't believe I would get drowned. "Mais, dat Mr. Org.' " said he, "he got our peewoog. We got 'ti' ' peewoog, yas." And this in fact was true. Mr. Organ was there first, and discovering Mary Ann's big pirogue to be a ship compared to the others, calmly appropriated it for the use of his 215 pounds of humanity, a good deal of which stuck out over the edge at that. There remained for Mary Ann and me a peewoog so very petite that I was ready to aver my shell-box would sink it. It may have been eight or nine feet long and say two fingers wide. I besought Mr. Organ to swap, pleading the inexperience of the only novice left of the crowd, all of whom had by this time had their first rides in the 'Cajun boats.

"Not if I know it!" said Mr. Organ. "I was in that little 'un yesterday, and I don't went in it any more. I got a family, a wife and a dog, and you haven't. It don't make any difference if you do get drowned. Go ahead."

ALONE WITH MARY ANN.

This was encouraging in the early morning, when at last we had made up our minds to go slay something to eat. But there was only one thing to do. If you expect to get hit, you get it, but if you go ahead in, sometimes you don't get hit. Of course, I determined to go into that pirogue. but I give my solemn word of honor I had not the least doubt in the world I would get a wetting, which might be serious to me, bundled up in shooting gear. I was confident it was my duty to go on and get drowned if need be. Therefore, I left some few simple directions as to the disposal of my effects, took a last glance at the bright morning sun and slid down into or on top of the baby boat which Mary Ann had pinned to the bank with the paddle. We showed a freeboard of an inch and a half above the water. The water looked very cold and black. I thought of the name of Dead Man's boyou and shivered. Mary Ann lit a cigarette. The pirogue shivered; we all shivered. When Mary Ann threw the match overboard I nearly fell out of the baat. "'Ti peewoog!" murmured Mary Ann.

The other boats crawled out ahead of us, gliding with a beautiful, easy motion along in the middle of the channel. I admired the perfection of the paddlers' art which kept them so stable. Mary Ann sent our boat along with equal beauty, but I cautioned him to keep in shore, and to spill me out on the side toward the bank when the time came, at which the others, a day older in experience than I, guyed me abundantly, but to no purpose. Every time Mary Ann lit a cigarette I groaned and protested I was not happy, and the others laughed heartlessly. Then all at once, before we had gone half of our three miles of paddling journey, I was seized of a strange confidence in the little boat and its master. I knew it was the right product of its environment. I admired Mary Ann as the possessor of an accomplishment worthy of a man. Then the little ship grew steady as a chair. My marrow crept no more, and my back no longer wobbled. We left the shore and went mid-channel with our friends. The tiny waves rippled along our side as the speed increased. The lesson was learned. The facon a piroguer was acquired. It is only the first step that counts. To-day I admire the pirogue and the men who handle it so skillfully. The duck hunter who goes to the mouth of the River to shoot—and there are few better or more accessible winter fowling grounds—must go to his shooting in a pirogue. At first this will dismay him, but if he keeps cool and trusts his paddler the chances are far in favor of his safety. When it comes to getting over the mud bars into the holes where ducks are working, he will see that the piragues is the boat proper for the country—the right thing in the right place.

ABOUT THE DUCKS.

But about the ducks. What difference about the ducks, anyhow, that morning within sound of the gulf surf? Certainly there were plenty of them, and certainly we did not get very many of them, and certainly we did not care. There was a very strong ebb tide that morning, and the ducks "went out with the tide." The bare flats became seas of bottomless, slimy mud, from which the water fell away in a thousand babbling rips and noisy channels. The passes connecting the pond hole of the rushes became slippery avenues of slime, on which the pirogue left a deep and narrow track like that of some giant serpent. We could not get to our intended shooting grounds without getting out and wading waist deep in the mud, a la 'Cajun. This Mr. Organ's pusher, Tom, the tough, was forced to do in order to have his freight back in time for luncheon, and Mr. Organ declares he never in his life heard anyone swear the way Tom did.

We pushed into the reeds in such places as we could, and watched and listened, though shooting very little. The keen salt air was refreshing, and the sights and sounds of the sea marsh novel to most of us. Out of the reeds came a continuous Babel of strident sounds, the discordant product of myriads of "marsh hens" (king rail). Now and then one of these big rail would steal from cover out upon some mud bank, eagerly observed, perhaps, by some gunner who had discovered that king rail is exceedingly good when broiled. It took snap shooting to get him, for his hurried run back to cover was almost as swift as flight.

Next to the rails in numbers were the raccoons. I never saw such a coon country in my life. Once we saw five in view at the same time, and hardly a mud bank but bore a ring-tailed visitor fishing for clams. They were smallish, and rather yellowish coons, as I learned by trapping one night in the rushes back of our tent. They had paths all over the marsh. Trapping coon is a main 'Cajun industry, though skins of such quality bring only about twenty-five cents.

We fooled around on the marsh for a while. then, with singular unanimity, got hungry and concluded to go in to camp, our little fleet of pirogues gathering in at about the same time. Then we sat and fanned ourselves at mid-day and ordered luncheon. This was about a sample of our shooting. I never was before a member of so dilletante a crowd of shooters. Nobody wanted to shoot, and Jim complained he couldn't get ducks enough to cook, but we smiled and told him to cook something else. And every man declared he had never had so lazy a hunt or so good a time. We just sat around and told stories, and woke Mr. Foster up and made him recite things.

One evening we had a visitor, a friend of our hosts, Dr. Jno. N. Thomas, the quarantine officer for Port Eads, at the mouth of the river. Dr. Thomas is a very ardent shooter, and we all turned out for a hunt that evening, a special dispensation from Mr. Octave permitting us to shoot after noon. We had seen some very large flights into a series of pond holes not half a mile from our camp the evening before. This evening the tide was not so good (the ducks seemed to come up with the tide) but we did get a few ducks that time. Dr. Thomas got something over a dozen in half an hour or so, and we could all see from our near.by stands that he was a rattling good duck-shot, for he fired only two or three shots which did not drop a bird. He was possessed of the proper enthusiasm, too, and waded hip-deep in the mud to get to his shooting stand, to which not even a pirogue could attain.

THE JUMPING-OFF PLACE.

It was Dr. Thomas as I remember it, who spread sedition in our camp by means of an invitation to come down and see him at Port Eads. One fine morning we folded our tents, or rather, the servants did, and we boarded the lugger of Monsieur Octave and sailed away from Dead Man's bayou, thus breaking up one of the oddest and pleasantest camps I ever helped to tenant. After a brief stop at Quarantine station to say good-bye to Dr. Mayer, we made sail down the Mississippi to Dr. Thomas' station at Port Eads, which is the very jumping-off place for the Mississippi, and the last point of authority of the United States this side of the big light ship. At this lower quarantine station. the atmosphere is very salty, tarry and generally naval. Here abide the pilots who bring in the big ocean-going vessels. Every other man you meet here is a captain, and a man on whose shoulders large responsibilities rest. The government has also officers, engineers, etc., stationed here on the never-ending work of keeping up the jetties. Port Eads, as everybody knows, was named after the great engineer who originated the jetty system. They gave him in contempt the narrowest and shallowest of the three main passes of the mouth of the big river to make his experiment on, but out of this he made the channel through which all the great commerce of the river comes. Dr. Thomas explained all about the jetties as we went down the river. Then the commander of the United States dredge boat invited us to dinner, and we kept him busy explaining where he got such oysters and such fish. And a crew of captains, everyone more nautical and good natured than all the rest, took us aboard a big steamer and out around the light ship, where we felt the full swell of the great gulf and realized that we were really out at sea and quite beyond the end of the Mississippi.

HYPNOTISM AND DUCKS.

For our Port Eads reception, at the hands of Dr. Thomas and his friends, I can only say it was of a piece with all the other kindnesses we received continually and continuously all through our whole sojourn in the South, and anything more than that could not be said. This said in cold type, will mean little to the traveller who is ignorant of the South but any man who has ever been in the South and met its representative men on anything of a social footing will know what it means, and will understand that out of such features will come memories far more keen and pleasant than any concerned with the actual sport of shooting, no matter what may be the size of the bag involved. Here, then, at the end of the river, the men from the beginning of the river saw their duck hunt end and fade away into forgetfulness, which quite swallowed up their original purpose. I suppose, to make this a really good shooting story, I ought to give a few figures of large size about the number of ducks we killed, and present particulars how any small remnant of ducks left by us can be most easily and immediately killed. It is all the fault of Dr. Thomas, Dr. Mayer, and all those sea-faring men down there in Louisiana. Our intentions were good. We meant to kill a few thousand ducks, and I meant to write a great story about it all, but these men made us forget all about it, and we fell to visiting instead of shooting. That was the way it all happened, and I disclaim responsibility for the whole business. All the way up the river my friend Organ was telling what a fine time he had had, the best hunt he ever had in his life; yet I doubt very seriously whether Mr. Organ killed over a half dozen ducks on his whole trip. Those men down there cast a spell over us I believe. Before the hypnotism of a Southern welcome, the Northern man is helpless as a babe. With this explanation I beg readers to pardon the smallness of our score of ducks. We hadn't lost any ducks. We thought we had, but we hadn't.

So one morning the big flyer, steamer Louisiana, carrying mails between New York and New Orleans, came into the offing headed up, and Dr. Thomas hustled us together to catch the fastest boat for the city to which it now became necessary for some of us to return. The captain of the Louisiana probably didn't want to stop, but he did, after nearly pulling a leg out of our tiny steam launch, so we went aboard and said good-byes which came hard. The ride up river, 122 miles to New Orleans, was one of the pleasantest features of our experiences on the Father of Floods. Then we left Mr. Foster, our host of the camp, at his home in the city, Mr. Divine returning to his home in Memphis and taking me along with him, and Mr. Organ continuing north to his home in Chicago, to which city I was glad enough I did not have to return for a time.

About further wanderings in divers parts of the South I hope I shall not weary by telling in coming numbers of Forest and Stream. As to the duck shooting at the mouth of the Mississippi River, I wish to say that it is there, plenty of it, open and accessible, such shooting as a Northern man knows nothing of in these days. But I must urge any intending visitor of these regions to be very careful to steer clear of charms and spells, lest thereby he, going stoutly forth resolved upon a quest for ducks, shall come back ingloriously of the firm belief that after all he hasn't lost any ducks.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

ADDENDA FROM THE SUNNY SOUTH.

Friends of Forest and Stream in the South have been good enough to send the following among other letters of comment upon the article on the "Sunny South," now current in the paper.

QUARANTINE STATION, PORT EADS, La., February 19.—Allow me to congratulate and thank you for your first article on the Sunny South. There is not a Southerner who reads this article who will not feel grateful to you, and every Southern gentleman sportsman will feel endeared to you for the kind words said in the article. We and our section here have been so misunderstood, misjudged and maligned that such expressions from a Northern brother make us believe that truth will at length triumph and prevail.

We are all one people of the greatest and grandest country under the sun, and there is no earthly sense or reason for sectional prejudice or feeling. The South today is as loyal to the Union as any other section of the country, and the opportunity only needs to present itself to see her stalwart legions hurrying to the front to uphold the Nation's honor.

Our weather here has been extremely cold—down to 18° above—at this, the extreme southern point of Louisiana. Snow fell last Thursday to the depth of six inches, and everything was frozen stiff. During this weather, with two companions, I went about twenty miles up the river above Fort Jackson for a snipe hunt, and in five hours our three guns brought down 72 jack snipe, 15 rabbits and 15 quail. The snipe shooting was particularly fine. Often they would get up just out of range and fly off for a half mile, then turn and come down with the wind at about seventy-five miles an hour, and as they passed over our heads we would drop them. As there was from five to ten inches of snow on the ground frequently, in falling they would tumble with such force as almost to bury themselves in the snow. I can say with certainty that such sport under such circumstances and conditions was never before enjoyed by any other sportsman in Louisiana.

Knowing that I shall read the other articles in the series with as much pleasure as the first, I am, yours truly,

JNO. N. THOMAS.

MEMPHIS, March 1—The articles on the "Sunny South" are creating quite a sensation down here. Aside from the personal interest of some of us, the articles are giving great satisfaction to the mass of people, on account of the frank manner in which you deal with the two subjects, "the North and the South of it," and certainly nothing could give a more graphic description of bear life in Mississippi than that of your stay with Bobo. I think some of my lady friends enjoyed these articles about as much as anything they ever read, in fact I have heard nothing but nice things about them. T. A. D.

GRAND RAPIDS, Mich., Feb. 16.—I want to thank you for the interesting reading to be found in your stories of the South published in the sportsman's own paper, the Forest and Stream, and I hope so long as you are one of its staff you'll never give up these trips and never fail to give the readers accounts of them. They will always remain in my mind as pleasant memories of a section of country so different from the North.

I agree with you that the South has progressed enough, so far as the sportsmen are concerned. If the north in one respect could keep up with the south, it would do very well. That one thing is to keep the spirit of hospitality.

I am not the only pleased with the stories of the Sunny South. I am sure that I speak in behalf of the majority of the readers of Forest and Stream when I say keep at it.

C. F. DISBROW.

BROWNSVILLE, March 1.—Salutations and thanks. As the open season on quail closed yesterday, and our guns are now laid away till the young squrriels are edible, which with us is about the first of May. and as our mutual friends have deputed me to give you a resume of happenings in this locality since November, when you visited us, I will endeavor to give the same in as condensed form as possible, a duty of great pleasure by the way, as we much enjoy reading in "ours" the like reports as to fish and game which it publishes.

To begin with, about 100 residents of our town and neighborhood visited the Big Lake in the Mississippi bottom, thirty miles off, for fur, fin, feather and fun, during the month of November, and never in the history of camping was there a greater abundance of the enumerated articles in evidence. Dr. Sevier, Sr., and the elder Moses went first, carrying their own and several other families, and these in turn were followed by others till our community was threatened with disruption nearly. And talk of the enjoyment men have in camp, why, they are not in it; wait till you see a sportsman's good wife select a camping place, order the arrangements of it, the cooking appurtances, the setting of tables, fixing the commissary department, the good things stored in proper places.

Well, of game and fish they got plenty, and returned in improved health and with the spirits that always attend such enjoyable outings. About the middle of the month, Dr. Taylor and his party had their annual two weeks—catching more fish, killing more turkeys, ducks and other game than in many previous years; our friends Moses and McConnies leading the list on turkeys by killing nine, and also by catchting a trout weighing five and one-half pounds.

About Christmas, Dr. T. D. Cooper and party crossed the river into Arkansas and got two deer, some turkeys and many fish, and will next fall return to the same locality.

Though all our sporting crew were not so fortunate as to be in camp, we nevertheless were not prevented from

paying our respects to the quail, which were and are now, after the most unprecedented slaughter, and three weeks of cold, the like of which no man in our section has seen, more numerous than ever known, and we shot till tired, and followed by eating to satiety. As a specimen of what we have left, will say that Dr. Taylor and friends flushed on the 26th. 35 coveys, averaging one dozen to the covey, bagging 54 to the two guns. Dr. Cooper and two friends on part of the same ground two days later found 25 coveys in five hours, bagging 45. We were much alarmed for the quail during the cold spell, and in a very few instances heard of coveys frozen, and while hunting rabbits, found a few very poor, but the weather moderating they, I think, pulled through. Other lesser birds suffered terribly, and in every hollow tree and sheltered place in the woods numbers could be found frozen, principally flickers, red birds (cardinals) and doves—the latter I fear totally destroyed as they were in 1876. In fact, I have not seen one in three weeks, though hunting several times, and all my friends give the same report.

That all-conquering little foreign devil, the English sparrow, has no casualties on his list, and in numbers come every morning to pick up the grain scattered on the cistern top for a mocker—a very Chevalier Bayard of the feathered tribe—who, with my assistance, dispersing the truly True Britons, repaid me with a skirt dance, performed to his own orchestra, and then, regardless of the cold, hied him to his home in the tree, as though to say, "I'll meet you early in the morning."

On the 25th, while trying a pointer pup, I heard a once familiar note, and following the direction in which he flew, soon brought to bag the first woodcock I have killed in two years, sent him to a sick lady who cannot eat quail and the last news was that the bird had been served broiled at breakfast, eaten, enjoyed, and the patient was convalescent.

Our next sport will be in April, and then our lakes, of which we have nearly twenty, covering from ten to fifty acres each, will we hope, be full of bream (I think you can call him sun fish) goggle eye (rock bass) white perch (croppie) and trout (black bass) channel cat, three other kinds of cat, buffalo, drum and others, and we do wish you could be with us and catch and eat a few of them.

And now I shall close, with the kindest wishes of Dr. Taylor, Sevier Cooper and Messrs. Keichley, Mann, Moses, Chapman, in fact everyone you met here, and many thanks for the kind thing you said of our people and country, and the assurance that the latch string is where you saw it when in our midst. We will always try to keep the big trees and the place for the wild fowl to come, love America as if she were our bride, and look with jealous eyes upon the millionaire and his attendant army of tramps.

BENJAMIN C. MILES.

CHICAGO AND THE WEST.

WHERE THE DUCKS WERE.

CHICAGO, Ills., March 22.—Johnnie Budsworth writes me from Rockport, Tex., under date of March 11:

"I have seen but very few canvas backs and have not killed any since our trip up to Hynes bay. Game is leaving fast, and there is not much shooting now.

"The shores of the bay are lined with fish killed by the cold snap last month. I think that was the coldest weather I ever saw."

Mr. Guessaz writes from San Antonio on March 17th, "the ducks are all gone from here."

WHERE THE DUCKS WENT.

That is where the ducks were. That was last week. At practically the same time, these birds were in the North as far up as the ice would let them go. R. A. Turtle, who killed forty ducks on the Kankakee, said he broke our a lot of loose ice and made a hole of open water, and the birds tried to get into this.

Still more marked than on the Kankakee was the main flight up the Illinois River. At the Swan Lake club grounds and on the Senachwine waters adjacent, the ducks were still more anxious to get into a little open water. There was in waiting for them a number of men who are in favor of spring shooting, who don't believe in it, but will shoot if the others do; who don't believe in large bags in the spring; who believe in killing all they can at any time; who will shoot in the spring but don't like to have it known. You see, there are several sorts of spring shooters, though nearly all of them classify under the head of these who hold the purely logical belief that if they don't kill a bird some one else is going to, right away. The main thing, of course, is to get that bird killed, somehow, as soon as possible.

At Swan Lake, if I am given the figures correctly, over 1,100 ducks, nearly all mallards and pintail, were killed by six guns in less than three days. The two Woods boys, keepers of the Swan Lake Club, with Charlie Lester, and one other gun, whose name I did not get, killed 190 ducks in one day. Mr. Paul Stone and Mr. Tom Parker, both of Chicago, are credited with 141 in one day. Mr. Stone is credited with 86 in half a day. Mr. Bangs and Walter Dupee are said to have bagged 219 in one day. I am told that the two boats brought in 240 in one day.

This is where the birds went from Texas, where they have been hammered at all winter. We, of the North, have welcomed them with open arms to a bloody grave.

It would be easy to criticize the above mentioned gentlemen, and to say harsh things of those who shoot in the spring, and of those who like to make extraordinary bags. I wish to make no criticism and to say no harsh word. I only wish to have the figures correctly stated, and if they are not correct, I hope we shall receive the correction. It is perhaps folly to urge the folly of spring shooting to those who like to shoot in the spring. The facts are well known to-day among readers of the sporting press. All I wish to say on the above is to ask two questions. Are these gentlemen quite sure that all these great birds, mallards and great ducks, ever reached a disposition such as a sportsman would wish? Were none of those killed on Swan Lake club grounds marketed? And are these gentlemen quite sure, after all, that if they had the chance to do all that shooting over again, they would want to do it?

WHERE THE DUCKS ARE GOING.

This is where the ducks were, and where they went. Now, where are the ducks going? I leave that for the gentleman to answer who like such shooting as I have tried to chronicle baldly and truthfully above. Inferences and comment on the destination of the ducks for the future I leave to others.

WHERE SOME OTHER GAME WAS ONCE.

Mr. Fred Taylor, one of the best posted men in the country on the game of the Indian nations, in which region he has long followed the cattle business, told me to-day that his annual hunt to the Nations this winter was a failure. He says that he went all over the best of the game country, clear up between the two Canadians, and travelled over a hundred miles around him in every direction, yet the country where he once found all the deer and turkeys he could ask he found had hardly a track. He says the whole region is shot out, and he was rather mournful as he said this, too. At the Sheridan Roost, where Gen. Phil. Sheridan once used to load an ambulance with wild turkeys whenever he felt like it, there is no longer a feather of a turkey. Mr. Taylor says all this has happened within two or three years. It was a great game country until recently, and to get into the Indian Territory was long held an equivalent for wagon loads of deer, turkey and chickens. Mr. Taylor says that even the chickens were gone where he once used to see so many of them. His report was rather gloomy.

WHERE THE GAME WENT.

A gentleman engaged in business on South Water street, in this city, told me that for two years after the opening of the Oklahoma country the Chicago market was flooded with deer, turkey, chickens and quail from the Indian Nations and Oklahoma. "We do not get very much from there now," he added.

THE PHEASANTS IN TEXAS.

Mr. H. E. Ambold, of Waco, Texas, to whom I wrote for information in regard to the experiment of raising Mongolian pheasants at that place, replies: "We are doing everything possible to make a success of it. As yet, we have no birds to speak of, but we hope in a short time to have things in shape to take care of a great many." Perhaps the experience of Mr. Howard Bosworth, of Milwaukee, Wis., would be of use to the Texas gentlemen.

HORICON CLUBS WIN AGAIN.

Diana club, of the Horicon marsh, won a closely fought trespass case to-day. The questions of title, navigability of stream crossing the club property, etc., all came up, and the result is a victory of great value to the club. The club lawyers were all ready to go to the Supreme court if they lost this case, but almost to their surprise, for it was a jury case they won. Three other small cases in the justice courts were won yesterday, in regard to which a Milwaukee paper (the Evening Wisconsin) has the following:

"HORICON, Wis., March 21.—The first cases tried under the game law of 1893, prohibiting the hunting of fur-bearing animals on the lands of another engaged in the raising of such animals, was tried before Justice J. E. Sawyer yesterday. The complaint was made by officers of the Diana Shooting Club, which holds the famous Horicon marsh under leases. Three cases were tried, the defendants being Max Meiske, Ernest Schriber and William Molchow. J. E. Malone, of Juneau, prosecuted the cases and the defendants pleaded their own cases. The defendants were found guilty and were each fined $5 and costs, or thirty days in jail at Juneau. Meiske appealed his case to the circuit court, but the others were conveyed to jail by Deputy Sheriff Charles Ward.

"The claim is made by the hunting club that by killing the musk-rats it is noticed that the best duck hunting is destroyed, as the small lakes grow up to vegetation, while if the rats are unmolested they keep the small ponds and lakes clear of vegetation, making fine resorts for the mallards."

SOME WOOD BUFFALO.

The "Winnipeg Commercial" of late date has the following interesting brief note in regard to the buffalo of the great North country, supposed to be practically extinct:

"Roland Secord, trader, arrived last week in Winnipeg on his way to Montreal, with a stock of wood buffalo skins, having come all the way from the Great Slave Lake, a thousand miles north of Edmonton."

Distances are great in that country. But I wish Roland Secord, trader, would tell us something about how he gets those skins and where.

THE SALE OF GAME IDEA.

Pennsylvania has this month stopped the hunting or pursuing of grouse for the purposes of sale. North Dakota has forbidden the export of game from the State for sale or other purpose. And there are others. The Forest and Stream idea on these matters seems to be growing in a suspiciously rapid fashion.

PURELY PERSONAL

Eddie Bingham, of Montgomery, Ward & Co's gun department, widely known among the shooters of the country, and prominent among the Chicago guild, is no longer the Eddie Bingham that he was. Last week he was married, and he is a luckier and better Eddie Bingham than he was.

Charlie Willard, of the Colts Co., was last week held up by foot pads and very badly injured in the struggle that ensued. He was going home late at night, and carelessly passing between two men on the sidewalk—which the Chicago man does not do late at night—he was seized by one of the men, who threw an arm around his neck and held him while the other struck him a number of heavy blows in the face and over the head with what he supposed to have been a sand bag. Mr. Willard was badly hurt and much disfigured. The robbers got very little, for they were frightened away by passers-by before they had gone through their victim's pockets. Mr. Willard saved his watch, but he got a dangerous beating and in a dangerous way. I imagine he would have been glad to be loose for two seconds with one handful of a good Colt six-shooter.

Mr. Fred. Quimby, of the Empire Target, New York City, was here during the week past. Mr. S. A. Tucker, of the Parker Gun, told me he was to be out on his coast trip by this time. Mr. Ben. Bush, of Kalamazoo, where the celery comes from, has recently visited Chicago in the interest of his electric trap pull.

Mr. W. Trilby Mussey (we call him that because he has had himself photographed with his feet in the picture, a sort of full dress altogether) volunteers to me the interesting shooting note that one of his colored boys at the billiard hall had been to South Chicago and had shot the eagle bird. I had not heard of any eagle bird being seen in these parts of late.

THE STORY OF A LETTER.

This morning I received a letter with the post mark of Brackettville, Texas, Jan. 31. It was directed to me in care of the New York World, New York City. It was in what is technically known as bad order. It was endorsed "Not here," and "Not found" in about seven different hand writings. In the lower corner was "112 W. 104 St." On the back of it was endorsed "Opened by mistake by Dr. N. S. Hough."(I don't know who he is, but he must be a nice man). Then the letter was shut together by a strip of official U. S. court plaster. In all it shows twelve different post office stamps on it, all of which I do not doubt mean something or other. Evidently this letter had had a hard time. But now note the excellence of the postal service, and also note the excellence of Forest and Stream. This morning when I got my much travelled letter, it had in it the following note from the Inquiry Department of the New York Post Office: "(N. Y., 107 I. Ed. 4—20,000.) New York Post Office, N. Y. Inquiry Department for Missing and Dead Letters. March 20, 1895, E. Hough, Esq., My dear sir: Enclosed appears to be for you. Yours in F. and S., J. Gayler."

I do not, just at this moment, place in my memory the gentleman who is so good as to write me the above note, and if we have met I beg his pardon for my remissness in this. But I thank him very sincerly for getting this letter to me, and I thank him for the expression "Yours in F. and S. So it took F. and S. to find the consignee after all.

As to the letter itself, it has a certain interest, and I give it.

FORT CLARK, January 25, 1895. E. Hough, Dear Sir: I saw in a late number of the N. Y. "World" your article on the winter excursion in the National Park on the Yellowstone, and your successful attempt to photograph the remnant of the buffalo. I wish to obtain a few specimens of your work, supposing it may be your intention to give the public the benefit of it, and will kindly put me in the way to do so. If otherwise, I beg you to put aside the request of an old buffalo hunter who has no claims on a stranger for special courtesies. H. S. KILBOURNE,
Major and Surgeon, U. S. A.

It is a further feature of this mysterious letter that the signature is a trifle blind, so that I am not sure that Major Kilbourne is Maj. Kilbourne or somebody else. In any event, I trust I shall reach him more easily than he did me. Of course I put my unknown inquirer in possession of the fact that the Forest and Stream story of the Yellowstone trip was the one he really wanted to read, and I imagine that since he is an army man and an old buffalo hunter, he will about wind up by becoming a Forest and Stream man for the rest of his natural life, and before long will be signing himself, "Yours in Forest and Stream." Of course, anything Forest and Stream can do for Maj. Kilbourne, (if this is Major Kilbourne) will be done promptly and gladly, and thanks to the friend of Forest and Stream in the N. Y. Post Office, the mail route now will be a trifle less grapeviney. E. HOUGH.
909 Security Building, Chicago, Ill.

LAW-BREAKING IN NORTH CAROLINA.

POPLAR BRANCH, Currituck Co., N. C., March 7.—Editor Forest and Stream: A curious state of things has for some time prevailed on this coast, which calls for attention by the authorities, as it threatens human life,, and has already caused more than one assault with intent to kill, and many violations of the statutes for the protection of game. For a long time night shooting for wild fowl—which is prohibited by law—has been constantly practiced in the waters of Currituck and adjacent sounds, marshes belonging to various owners have been invaded and much damage done, and, in at least two cases, watchmen employed by one of the shooting clubs have been shot at.

As is well known, the extensive marshes of this and adjoining counties have largely passed into the hands of clubs of northern sportsmen. These clubs protect their property—which is useful for only gunning—from poachers by watchmen who during the shooting season live on the marshes, patrolling them in boats—the only means of getting about. Much of the feeding grounds for geese, ducks and swans consists of coves, creeks, and ponds which are thus pretty well guarded, but for the open waters there is no protection, either by day or night, for neither State nor county provides officials to enforce the game laws.

In this community there are a number of worthless characters, who pay no regard to the laws, and who shoot by day or night on the property of other people, whenever they deem it safe to do so. The clubs of this county have been greatly troubled by these "marsh rats"—as they are called here—and there has by some clubs been a disposition to deal leniently with them, in the hope that good treatment would make them ashamed of themselves and induce them to abandon their evil ways. But mild measures were wasted on these fellows, and they have become bolder and bolder so that at last they have come to act as if they were the owners of the marshes.

At the Swan Island Club they at length became so aggressive that the superintendent, seeing that something must be done, took to sitting up nights with a rifle, and whenever he saw the flash of a night-shooter's gun he would fire a rifle shot at the light. The singing of these rifle balls did not prove agreeable music to the poachers, and they soon deserted the Swan Island marshes.

The Carrituck Club has also had its burdens to bear. "Marsh rats" shot on their property until the force of watchmen was doubled, and then not daring to continue to shoot, they broke the locks and carried off the chains of the ditch gates, and generally made themselves as obnoxious as possible.

Until this year the Narrow's Island Club has not been greatly annoyed by these depredators but its turn came at last. During the past season two of the watchmen were shot at and one was chased about the island he was on with blood curdling threats of what his fate would be if caught. The result of this was that the Narrow's Island Club offered, in one case, a reward of $200, and in

the other, one of $300, for information which will lead to the conviction of the men who did the shooting, and also doubled their guards and armed them.

It seems now to have become a question of life and death with the clubs. They must either give up their property to the poachers or they must defend it by force of arms. The lawless element in this community constitutes a very small fraction of the population, and although a few years ago the clubs were quite popular here, a great change in the way they are regarded has now come about. The sensible men of this community realize that we are all better off for the existence of these clubs, and that they bring into the country and spend here many thousands of dollars which we would not otherwise receive. They purchase poultry, beef and corn; they hire at good prices men who would otherwise be idle, or only make a precarious living by gunning and fishing during the winter. I talked with a young fellow the other day who told me that he made $100 clear last season working as guide or boatman at a club. It is commonly said that the rural mind works slowly, but it is certainly true that our people, although at first opposed to the clubs and to the protective idea, have now accepted this last, and feel kindly toward the Northern men whom we see down here each winter.

Now and then, to be sure, there is an attempt by some foolish or ill-conditioned men to impose on club members, or to make himself disagreeable. I was told of such a case not long ago. Non-residents, you must know, are by law prohibited from shooting afloat, while residents may shoot from boats on bush blinds, or from batteries. A local gunner found a lot of ducks "using" off a club point, at which a club member was tied out, and put his bush blind hardly a gun shot from the shore. Of course all the ducks which came went to his decoys. He had good shooting, while the club member on the point had no shooting at all, and could only foam at the mouth in impotent rage. As I say, however, this sort of thing occurs but seldom nowadays, and in the future there will be less of it than there has been in the past.

Some measures should be taken by State or county authorities to enforce our game laws. The gunning and the fishing are two of the most important industries of Currituck county, and when the ducks and fish go, our people will suffer a loss from which the community will be slow to recover. Every man in this and adjacent counties ought to make it his business to see that his representative in the legislature appreciates this state of things, and that he does his part toward saving the wild fowl of Currituck Sound. E. R. W.

Sea and River Fishing.

MOXIE POND.

IN TWO PARTS.—PART II.

Very soon, however, as it seemed to us, the chirp of half-awakened birds told us that another day was at hand; and in a short time every bird that could sing any kind of a song at all was doing his very best to convince us that life was worth living. Indeed, we thought so too, when we had washed the sleep from our eyes with the cool water of the lake, and had breathed for a few moments the fragrant atmosphere of that beautiful June morning.

Breakfast over, we packed our duffle, extinguished our camp fire and went on our way. Perhaps it may be two miles from this camp ground to the head of the pond, and as we went we trolled a minnow, although we rowed at a more rapid rate than is usual in trolling. However, we took and set free again six trout averaging about a pound apiece before we reached the carry at the inlet. Here we left the boat and carried our packs half a mile to the foot of the Little Austin pond. This pond is a deep turn, perhaps a mile long by a quarter of a mile wide, lying close up under the side of Bald Mountain. At the foot of this pond we found a crazy, old boat, which leaked so fast we had to sink it in shoal water and wait for it to swell. After a time the seams closed to such an extent that one of us by constant bailing could keep her clear, while the other paddled. In this manner we proceeded to the head of the pond. Here we found a ruined hunter's camp, its dirt-covered roof thickly grown with raspberry bushes, the old bench rotten, musty and tumbling down, the stove pipe rusted out, the door frame gnawed by hedge hogs, the whole place infested by mice, damp, dark and uninviting. But a shower was almost upon us, for much time had been consumed in making the carry and in waiting for the boat to swell, and it was now past noon. So, as this old camp was the only place of refuge from the rain, we availed ourselves of what shelter its leaky roof afforded, and while we waited for the shower to pass we ate a cold bite and jointed our rods.

After the rain was over we went out to try the trout, and here we met with an experience similar to the one mentioned above, while we were at the larger pond. The trout would pay no attention whatever to any artificial lure, but would readily take live bait, either in trolling or still fishing. And yet we found their stomachs completely filled with insects which we took to be black winged ants, although no such insects were on the water and no trout were breaking during our stay on these ponds. Neither could we find these insects in any abundance near the shore nor elsewhere about the pond. A precisely similar condition of things existed at Moosehead Lake about June 20, 1892. An explanation from some one versed in the lore of trout food would afford me great satisfaction.

However, the trout were there, and in a very short time we caught and put back into the water between twenty and thirty as handsome well conditioned brook trout as it has ever been my lot to see; red-bellied, yellow-meated, chunked specimens they were fat and sweet, weighing just about a pound apiece. But the lengthening shadows admonished us that darkness would soon be upon us, and so saying good-bye to the little dark, deep and spruce-bordered mountain, shadowed lake, we went ashore to make preparations for the night, taking with us three fish, which proved to be one more than we could dispose of at supper and breakfast, and they were broiled, too.

A broiled trout! Perhaps every trout fisherman may not know how to broil a trout; so, at the risk of prolixity I will describe the method as it was taught me one day by an old guide, when we were wind-bound at the Lilly Bay thoroughfare—Moosehead Lake. To get the best results the trout should weigh a pound or more, though broiled half-pounders are very good. Split the trout open on the back, remove the back bone, spread open, sprinkle lightly with salt and lay on a wire broiler. Above the trout, that is on the edge of the trout next to the handle of the broiler, lay some thin slices of fat salt pork. Then, when the broiler has been closed and fastened, support it in a vertical position before the camp fire by means of a stick three or four feet long, sharpened at one end, and stuck obliquely in the ground. The handle of the broiler hangs from the upper end of the stick above a little limb which has been left projecting to keep the broiler from slipping down. The bottom of the broiler rests on the ground about two feet away from the fire. Broil the skin side first, until the skin blisters a little and will readily separate from the flesh. Then turn and broil the other side until white crusts appear on the brown meat. The fat from the strips of pork above will afford nearly salt enough for a fish cooked in this way, unless it be a very thick fish.

We went ashore to make preparations for the night. Not far from the old camp, just across a little cold mountain brook we found a rude shelter, proportioned almost exactly like old woodsman Nessmuk's shanty tent. The sides and back were made of little spruce and fir saplings, perhaps four inches through, laid up between stakes driven into the ground. The roof was of slim maple poles, covered with spruce bark. In front of the shanty was a rude stone fire-place and just a half circle of stones to keep the fire-wood from the ground. Under this shelter we made a good shake down, although it was a little wet at first, but the fire by which we cooked our supper also dried the boughs, and by the time we were ready to turn in, we had as comfortable a bed as one could wish.

The night was dark, hot and close. Distant muttering of thunder and flashes of lightning told of far-off showers. But sleep soon came to our eyes; the fire burned low, and then the midges descended upon us in such forces that the tar mixture was not potent to repel them. So we built a fresh fire and wrapped ourselves once more in our blankets, but the little shanty was uncomfortably hot, the midges were persistent, the shake down became hard and "we wished for the morning."

At last it came, hot and "muggy" at first, but soon the sun shone forth in all the fervency and splendor of a long summer's day. As soon as the under brush had dried a little, we made up our packs and started across a three-mile carry to Moxie Pond. This carry was along an old tote road, into which the sun shone full and clear behind us as we toiled along the rough swampy path, and we were very glad indeed when we got across to the head of the Moxie Pond. Here we found that the water was some ten or twelve feet higher than it usually is at that season of the year, the gates in the dam at the foot of the pond having been closed, as we afterward found, to hold back the water for use in driving logs down the Kennebec.

It was scarcely noon when we reached the falls where the brawling stream comes tumbling down from Moxie Bay into the extreme head of Moxie Pond; but another thunder shower was nearly upon us, and we had barely time to cast a fly over the pool below the falls, and take a two-pound trout before we were obliged to seek shelter in a camp nearby. This camp, built I believe, by some sportsmen from Solon and Bingham, is altogether the finest camp I have ever seen built without sawed lumber. It has ample accommodations for eight men, and twice as many might sleep in the berths without being more crowded than men usually are in the lumbering camps. Opposite the berths is a huge rock fire place. The walls and roof are sheathed with shaved splits, and everything is as nicely furnished as axe and draw-shave could make it. On the door was a neat placard, stating that the camp could be leased from Mr. McCall Hackett, who might be found at his camps at Mosquito Narrows, three miles lower down the pond. The rent, as we afterward learned, was fifty cents a day. The camp being empty, we took possession, according to the custom here in the woods, and we were not a moment too soon in doing so, for scarcely were we under the shingles when the shower struck, and from that time until nearly night there was heavy and continuous rain. Just before sunset it cleared away a little, and we took an old boat which we found at the falls, where the river drivers had left it, and went down the winding bayou which leads to the more open part of the pond. On the way down my companion pointed out a spot where he had shot a moose two years before, and he also indicated a place, called "Joe's hole," where he had taken many large trout—four and five-pounders—late in September of the preceding year.

It is perhaps a mile from the falls to the head of the pond proper, and when one rounds the last turn in the crooked bayou, he must be dull indeed to the beautiful in Nature if he does not feel a thrill of pleasure as he gazes for the first time on the island dotted, mountain begirt lake, that lies spread out before him. To the right, Bald Mountain, bare and majestic, rises from the very edge of the water; on the left Mosquito Mountain, and a few miles back Moxie Mountain shut in the view, while directly in front, to the north, the lake stretches away twelve miles to its outlet, although picturesque islands and projecting headlands, intervening, limit the prospect in this direction.

But another shower made necessary a hasty return to camp, and we were lulled to sleep by the pattering of the rain on the shaved "splits" which covered the roof, and by the moaning of the wind through the tree-tops.

The morning came all too soon, and with the morning came also Mr. C. M. Hackett, above mentioned, who had learned of our proposed trip from the landlord of the hotel at the Forks, where we had sent our team. Thinking it full time for us to put in an appearance, Mr. Hackett had very kindly come up from his camp down the lake to inquire after our welfare and to offer us any needed assistance. We decided to go with him to his camp for a day, and were soon ready for a start. A pleasant row of three miles brought us to Mosquito narrows, where on a high bluff, commanding an extensive and beautiful prospect of lake and mountain scenery, Mr. Hackett has erected a completely equipped set of sporting camps, at which he provides entertainment for the modest sum of one dollar a day, with the use of a boat thrown in. Within half a mile of Mosquito Narrows are some of the best fishing grounds on the lake, notably the mouths of Sandy Stream and Mosquito Brook, where it is said very large trout may be taken early in the spring with bait; and also, later in the season with the fly. But unfortunately, at the time we were there, the fishing at these points was poor, owing to the great height of the water in the lake. We were, however, assured by many persons that four and five-pounders were not at all uncommon, and we were also told that one nine-pound trout had been taken from this pond.

Mr. Hackett has a good location; he has at his command some of the very best fishing and hunting in the State of Maine; he is a good cook, and an agreeable man, and all he needs to make his camp a glittering success is publicity. He should advertise in Forest and Stream.

Before noon great masses of cumuli again appeared on the western sky, and a terrible thunder storm was soon upon us. But as we were perfectly comfortable at Hackett's camp, we did not much regret this enforced opportunity to rest, and the time passed very pleasantly in listening to lots of mighty deeds in forest and on the water. Many a lordly moose and caribou, and many a gigantic trout again yielded up its sweet life during that rainy afternoon, and in the midst of it all a little wave of excitement was produced by a bull caribou (said to be a bull) which swam across the lake within easy rifle shot of the camp.

The next morning was clear and beautiful, and bidding good-bye to Mr. Hackett and his men, with some regret, we departed for the foot of the pond, where we had arranged to have a buck-board meet us at 2 p. m. Three miles down the lake brought us to Beech Narrows, where the notable nine-pounder is said to have been taken. Here high rocky points, covered with spruce and pine, made out from each side of the pond, and it is from the character of the growth on these points that the Narrows take their name. Here we paused to take a trout for our dinner—a pound and a half fish—and then we proceeded without delay down the lake past Caribou Narrows, past the old "headworks" used in towing logs, into a narrow crooked arm, to the outlet.

From this point a buck-board road runs five miles to the Forks, with occasional farms along the way where hay and grain are raised to supply the lumbering camps in this vicinity.

Near the dam is a rude log structure used for a river drivers' camp in spring, and a place of storage for batteaux and other driving paraphernalea during the remainder of the year. In front of this camp we built a little fire and broiled our trout. Just as we were coming to the end of a rather satisfactory meal we heard a dry stick crack around the corner of the camp and looking up we beheld a tall gaunt man, perhaps sixty-five years old, dressed in a greasy felt hat, a very dirty shirt, open in front, a ragged pair of trousers which did not quite come down to the tops of his red woolen stockings, and a pair of lumberman's rubbers. His thin, gray, unkempt hair straggled down from under his old hat over his shoulders, and his white beard was matted and besmeared with much tobacco juice and tar mixture. If he had not been so dirty he would have looked pitiful, but considering the great plentitude of water in this part of the world, and the relative cheapness of soap, we restrained our feelings and waited for him to develop his business with us. He said that his name was Tom Piper, and that he lived about half a mile out on the road to the Forks. He furthermore prophesied rain, and invited us to come with him to his residence and accept his hospitality until the buck-board should arrive. Then taking our assent as a matter of course, he picked up one of our packs and started. As we considered it inexpedient to part company with that pack for too long a time, we followed Mr. Piper at our best pace, and managed with some difficulty to keep in sight of his lank form until we reached his "house." This structure was even more rickety and filthy than its owner, and there arose from the whole establishment such an intolerable stench of fish offal and carrion, that we declined to abide with him, and proceeded on our way in spite of threatening rain, for it was now clouded in, and thunder was again muttering in the west. After half a mile or so of heavy walking it began to rain, and we were just about making up our minds to a five-mile tramp when the welcome sound of wheels was heard, and we were soon seated behind a heavy pair of woods horses on a stout buck-board, with a cheery fellow named Jimmy Phillips at the helm.

The rain fell in torrents, the road was rough, the mud in places was deep, but our driver was skillful and good natured, and in due time we saw below us, through the mist and rain, the little settlement of the Forks, and we were soon seated before a comfortable open fire in the office of the Forks hotel, for although it was the middle of June the afternoon had been cold as well as wet. After an excellent supper, we lost no time in seeking repose, and for about ten hours life was a blank. In the morning we took a little time to look about us before setting out on our homeward journey. The little village of "the Forks" is situated at the confluence of the Dead River and the Kennebec, twenty-four miles above the railroad terminus at Bingham, whence there is a daily stage. The settlement at the Forks originated in the importance of this place as a depot of supplies to that section, but since the building of the Canadian Pacific Railroad the business of the place has diminished very much, and the large hotel which was formerly crowded with teamsters and men going into and coming out of the woods, would now be nearly empty but for the summer visitor and sportsmen, who are just beginning to find out that "the Forks" is an excellent base of operations for a fishing or hunting campaign. There is the best of stream fishing within easy walking or driving distance of the Forks, and a two-dollar fee will take a party of four or less on to the foot of Moxie, whence we came. The Forks hotel is under the management of Mr. H. W. Wade, a very pleasant and obliging young man; the table is good, and the charges moderate.

About 8 o'clock we started for Bingham, and the drive to that place is one of the most pleasant I have ever taken. The road follows the river all the way, and the scenery is very picturesque and beautiful. Half way down is the celebrated "carrying place" where Arnold and his ill-fated men left the main river on their way to Quebec.

At Bingham we found a fairly comfortable hotel, and during our two hours nooning we had an opportunity to

look around the pretty little village. It is named for an English capitalist, who many years ago purchased a tract of a million acres in this part of the State. This tract is still marked on the State map as "Bingham's purchase."

The remainder of our drive, some thirty miles, was uneventful, and we reached home just at dark, well satisfied with the pleasures as well as the hardships of our trip. F. S. BUNKER.

Slack Line vs. Taut.

SAND LAKE, Mich.—It is refreshing to read the article on "Slack or Taut Line" by A. W. Cheney, and find one who can talk on angling, we believe with authority, and preserve a degree of sense in the meantime. I have argued this point with others who claimed to be professionals in the bass line, who would say that the fish when struck rushes to the surface and leaps into the air for the purpose of throwing his weight upon the leader to break it, that plenty of slack must be given just at the vaulting or the fish will surely fall on to the leader and be gone.

I have had the good fortune to be around when a good many young bass have been taken, as we have five lakes within a mile of our village, all with fairly good fishing, and I believe that failing to dislodge the hook by one or two headers for deep water, the fish frantically rises and breaks with the sole object of shaking the pesky thing loose. In bait casting with phantom or live minnow (this is quite apt to succeed) then if ever the line should be taut, I have often smiled at a companion, who, having nicely hooked a four or five pound fish would begin the grindstone act with a multiplying reel, and one couldn't wish to see a busier man for three minutes. Guiding the rod, holding hard against snags and weeds and leading into deep water, all with the left hand is no easy task, for the right hand must be all the time winding away or paying off. All this, coupled with the expression on the face of the individual, the glimpse of white rushing madly through the water, the nervous reach with the net, the final joy of capture, make angling glorious sport, and no part of my tackle would be so difficult to replace as the reel where the "little finger does it."

Last spring I received through the fish commissioner 5,000 baby bass for stocking the water of Sand Lake these being the fruit of Michigan's first experiment in hatching black bass. The hatchery is located at Cascade Springs in Kent county, and promises to be a success, as 35,000 young were distributed this season as a starter. Possibly, the tourist who has taken trout from the Rangeleys or Grayling from the Manistee, who has cast the "professor" for rainbows, and lured the salmon to destruction may not think the common black bass worth the trouble. But for me—from the days when, as a barefooted urchin, armed with a hickory pole, to which was tied a piece stolen from my father's chalk-line, I haunted the lakes, to the present time of more modern accessories, the bass have been pretty nearly good enough, and when we have a June day of leisure, when the wind is sou'west, when the lowering clouds promise just moisture enough, with a good companion to take his turn at the paddle, with phantoms and froggies and spinners, with a couple of Johnson's fancies for the more fastidious in answer to Frank's query, "Which shall it be, bass or trout?" I usually answer "Bass." J. H. B.

Color of Salmon Flesh.

I am sorry I can throw but very little light on the cause of the red flesh in salmon, but all salmon are not red. Instance the white-fleshed spring salmon of the Fraser River, equally good with the red, in both flavor and fatness, and so alike you cannot tell one from the other until cut, all coming into the river from sea together, and no doubt feeding together. In my experience of preparing our Atlantic salmon for commercial purposes, I one season drew the stomachs from the fish before freezing them. All the fish caught on the coast were full to repletion; the lower portion of the food was herrings and mackerel, badly decomposed, the later food not much the worse for wear, was the caplin (the food of the cod) and found nearer the shores, not a sign of crusticed nor ova of any kind, not even a sand eel. Who, let me ask, has caught them on their feeding grounds, to really know what their food is when out in the ocan?

Our Atlantic salmon vary in color of flesh just as much as they do in size, shade and color. Our large Metapedia River fish are quite light in color, so much so that Billingate refused to buy them in 1880 for that very reason, saying they cut white, and were bull trout. But we sold them to a Rotterdam party, who returned them nicely colored in London as "Dutch sugar-cured." Come through the Restigouche fish hatchery to-day, and among the two millions there of salmon eggs, you can see every shade of color, from nearly pure white to the deepest red; and from my observation I would assert that every salmon egg is different, one from another, no two salmon give ova of the same color or size. Fill a tray from each of a half-dozen of fish, place them side by side and the difference is plainly marked. So it is with trout, perhaps more marked.

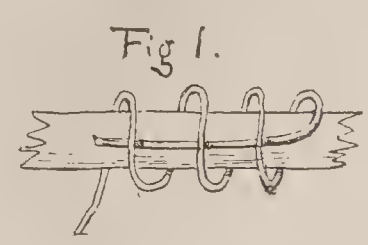
Another point is that on the salmon's first arrival from sea, his flesh is either pale or deep red; take him after four mouths in the river and the redness is gone, faded out, and although he may spend another six months, and may look nice and clean, although thin and lank, just cu into him and the flesh is very nearly white. It takes the sea water to restore the color. This I know from experiments I made with returning kelts in 1883 at Tadousac.

JOHN MOWAT.

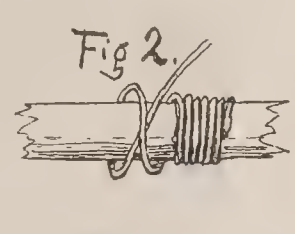
Kill Fish When Caught.

COLD SPRING HARBOR, Editor Forest and Stream:—The Boston Dumb Animals puts out these principles: "On two conditions we find no fault with trout fishing. 1st, That no more fish shall be caught than are eaten; and 2nd, That each fisherman shall carry in his pocket a little baton, and shall kill each fish as soon as caught, by a sharp blow on the back of the head."

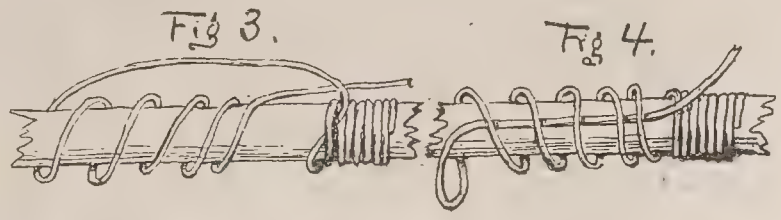
There is an excellent sermon in three lines below it. It is grand in its restriction of the catch, and grander in its humane instruction of saving agony to the trout gasping for breath in a rarified atmosphere and suffering more than the agonies of drowning. Some abler pen could work out this sermon. FRED. MATHER.



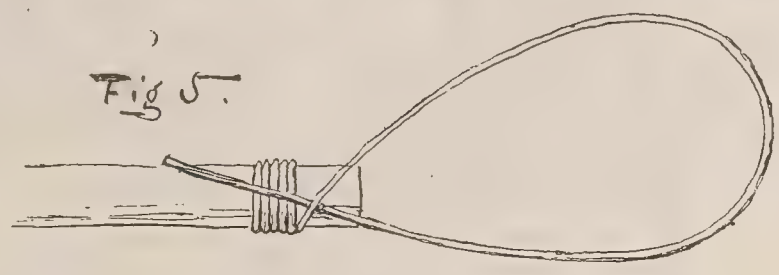
A FLY-FISHER'S GOSSIP.



Now is fishing time. Let me, rather an old hand with rod and line, remind you of some things you know, and maybe tell you something new.

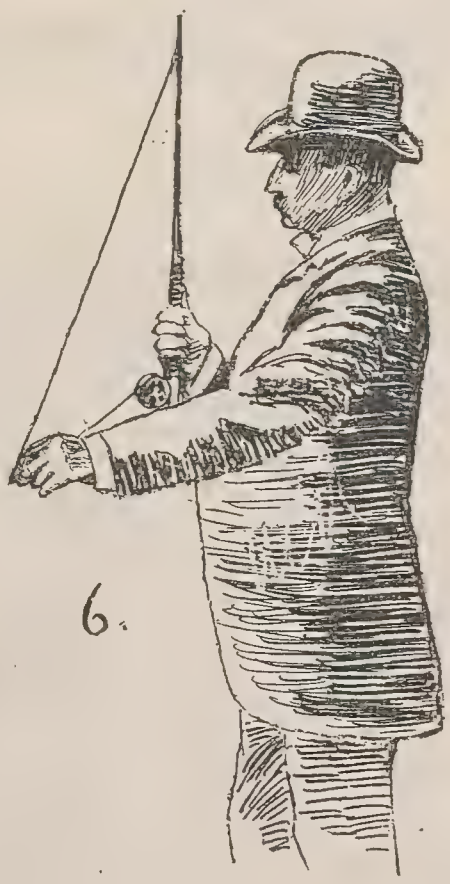


Do you know how to finish a whipping or lapping by drawing under the end coils so that there is no knot? If not, here is how to do it.

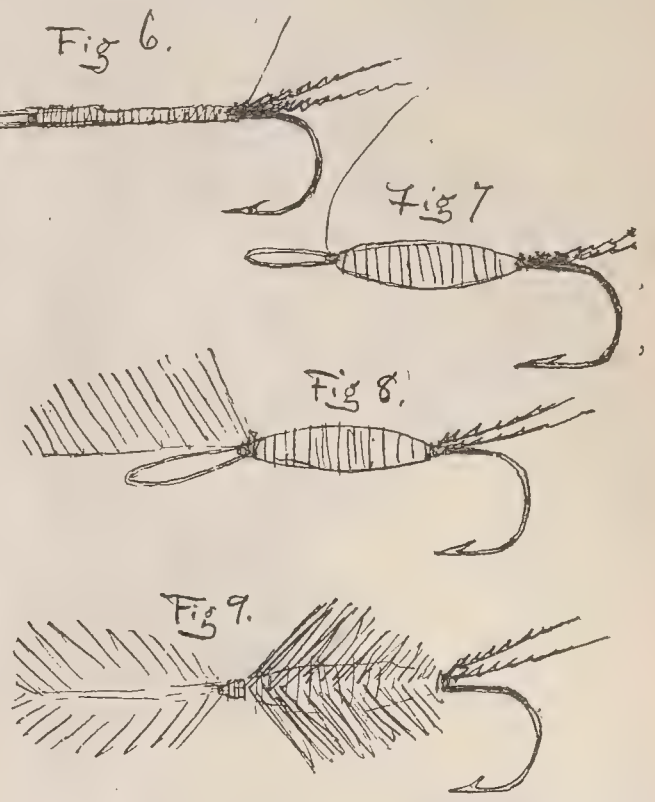


Take a joint of a fishing rod and a piece of old fishing line, waxed to prevent kinking. Lay one end on the stick and lap round and round as shown in figure 1, only laying the coils close together and drawing tight, not loose as shown here.

When enough turns are laid on, draw the end through



he last coil to hold it fast temporarily, as shown in figure 2. Lay the end in a loop and make a series of loose turns as shown in figure 3. Lay the end along the close lapping, and continue lapping over it as before. Every lap will unwind one of the loose coils, and when they are all gone, close the last lap by drawing on the loose end, which you can cut off close later on. When you want to finish the whipping of an end, such as a rope's end, in snelling hooks or in making flies, all you need do is throw a long loop in line with the object, holding the loose end with the thumb. Then whip round and round over the loose end, and when enough turns are on, draw the loose end tight.



Now, how to make flies. Go to some milliner and get all the old feathers, scraps of chenille, silk and wool she can spare you. Ask your butcher for a handful of hackle feathers of different colors, and surely get some peacock's tail feathers. Provide yourself with a pair of sharp-

pointed scissors, a skein of all sorts of fine silk, a bit of cobbler's wax the size of a hazel nut, laid in a slip of leather, hooks and gut. Split an inch of a stout quill tooth pick, flattened, lay round to round and lap two-thirds of it, and cut the loose ends to a point. This gives you a clip for holding things in position. Now take your hook, lay on a loop of gut with one end longer than the other; begin the lap with waxed thread at the head, down toward the thumb, finishing with the drawn knot shown in figure 2 and leaving a loose end. Lap on a couple of peacock ends for a tail. Take the chenille, wool or tinsel you intend for the body, lay one end over the last of the lapping, take a couple of turns with the silk to fasten it, and then put on your body, ending at the head of the hook. You can use stuff of any color for your bodies. You may imitate standard patterns, but an original design will do just as well and better.

Next comes your hackle, which is stripped from the feather and the thick end lapped on thus, (Fig. 8.) then reversed and laid around the body so that it looks like this. (Fig. 9.) Comb the hackle out with the point of a pin. Next take matched feathers and lap them on as shown above, reverse them and finish up with three or four turns and the second draw knot. A good way to learn is to buy a few large flies and dissect them, and then make them over again. Use the quill-clip whenever you want it. Change your flies frequently until you get that peculiar combination that attract the fish. Then make a couple more like it when you get time.

Everyone has his own idea as to what a fly rod should be. We used to believe in whips with very thin line, but tournament casting has taught us that the best work is done with a very stiff rod throwing a heavy line, tapering to a link of gut, as will be set forth in detail later on. For skittering, your rod cannot be too stiff. As a material, first class split bamboo is the best, but often developes flaws in the jointing, which are like the little rift within the lute. Ash and lancewood are no good. For all around long time use give me green-heart, especially now, when everybody swaggers with a split bamboo that

costs all of $3. The tubular steel rod may be the rod of the future. I have hefted one in the shop but never used one. The action was good. A novice should get two cheap split bamboos, interchangeable, one heavier

and stiffer than the other, and a couple of short tips in lance or green heart for trolling or bait fishing.

Every angler should have a good reel to his rod unless he prefers to fish as is done in the English midland waters, with a rod twenty-five feet long and a waxed line, tapering to a long single horse hair. With this arrangement the bait can be put in the water with great delicacy and

at a long distance. As the fish is played, the butt joints are taken off one by one until the landing net can be used. Very fine fishing it is too, but for casting, either with fly

br weighted bait, a reel should be on the rod, only let it e used as little as possible.

First, as to fly casting. There are many reels on the market. The English click, with solid plates and spool, operated by a guarded plate, is the best of the old style spindle reels, and the American "Expert," the best of all, as it is easy to clean, strong, tight and having an openwide spool, give the line a chance to dry.

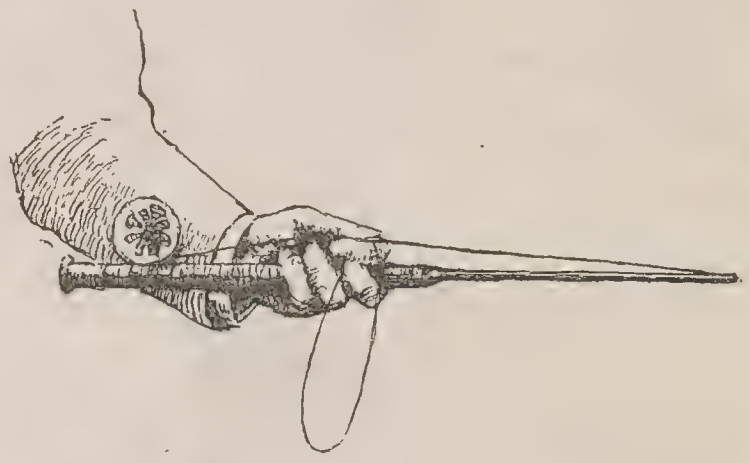
It is an easy matter to get a good fly rod nowadays, but until recently there were few good far-casting lines on the market. Now, just as every gun has its peculiar load of powder, wads and shot, so every fly-rod has its peculiar taper of line which can only be determined by trial. To

do this, get a long, heavy line, say as large as No. D, or even No. C, and cast with this until the rod can handle no more. Then you have its capacity with a line far too heavy for actual use, because the splash of its fall would disturb the water. Reel up half the length of the rod, and, for ordinary trout fishing, lap on a length and a half of the rod of line size No. F or No. G. Neither line needs to be tapered. They must be lapped together, as you cannot splice the plait. This can be done either by sewing the lines with a fine number of thread or as follows: End on two pieces of twine to the two ends of the two lines, strain both while you work from a small screw hook in the woodwork of a window to the chair of which you are sitting. You can tighten by moving the chair. Begin to whip about the middle of the overlap of the lines, marked as in figure 2. Whip towards one end for a quarter of an inch, then a half hitch, or nip on your quill clip to hold things while you cut the end of the lines slanting. Go on and finish with the draw-out knot. Repeat end for end for the other line, beginning close up to where you commenced your first whipping and working in the opposite direction.

Then lap a short band to strengthen the join where the two lappings impinge, and when the strain on the lines is loosened you have a very strong splice as shown in figure 4. Now thread the line on the rod and try how it works. You will find that the heavy main line goes out strongly by reason of its weight, takes out the light line with it, and when fully extended, sends out the light line sharply and smartly. You will also find that you have full mastery over the light line, and that you have gained about a length of throw in your cast. Now for another winning. I am going to tell you how to finish your line with a three plait of graduated gut, laid in without a knot, to which the regular leader for the flies is to be fastened.

Take three strands of moistened gut, which shall, when laid together, be a trifle less than the size of your

light line. Lay them around the light line for about an inch and a half, and put on a temporary lap about a quarter of an inch from the upper ends of the gut. Lap the loose end of the fine line along one of the strands of gut, and make the ordinary three-ply plait for an inch or so, drawing tight at every stroke. Now leave the end of the light line out and continue plaiting the gut for a couple of inches as shown in figure 5. Bend on a temporary lap or keeper. You can now strain the plaited gut over a hook against the line, clip the upper ends of gut off close up to where the line came in, but irregularly, so that there will be a taper when you lay on the permanent lapping where the line and gut join at A in figure 5. This should end on the single line. Now cut the end of the line off, bend on a permanent lapping where this line ceased to follow the plait, and your stretch of gut plait is started; that is at B, in figure 5.



Now there are three strands of gut, each presumably of about equal length. Let the longest one stand and clip the other two so that they run in thirds as at X in figure 5. Have your links of gut ready, wrapped in a wet cloth, and when you get within an inch or a little over of the end of the link in plait, lay a new strand alongside and work in with the short end as shown at C in figure 5, and then leave the short end out of the six plaits as at D in figure 5. You can commence with a longish end of the new strand between your finger and thumb, and draw it down and in after laying four or five plaits down. Once started, the length of your plait is a question of choice and industry, but anywhere from four to nine feet will go. Work slowly, for a mistake in the laying cannot be mended. I need hardly tell you to graduate the size of your gut at distances nor to work with moist gut, but don't clip an end until you are about finished, then stretch the plait with from three pounds down of dead weight for half an hour, the full length being wrapped in wet cloths and then ring the ends pretty close with a sharp pair of scissors. If you are plaiting in very fine gut at the end, use a lighter drawing weight, but don't clip too close, for the plait will draw with use and you will have to go over it for loose ends once in a while.

It is somewhat troublesome to make a plait of graduated gut, such as I have described, but it is worth it, for when wet its delivery cannot be equalled for fierceness and lightness. You may begin with a plait of three feet. not graduated, and then go on if you like it. It is well to finish with a strand of rather heavy gut, worked in and lapped as the silk line was, to which you can bend on your regular leader with the usual water-knot, thus avoiding the loop.

I have heard that gut, like horse hair, can be spun over a quill and was promised a lesson, but do not know how it is done.

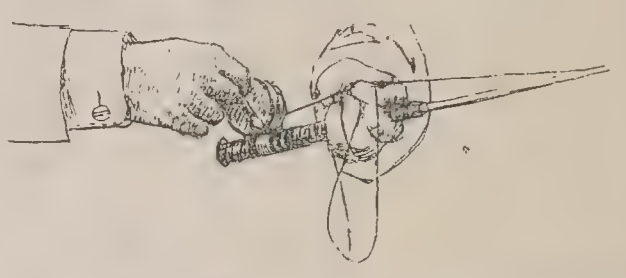
It is well to splice on to the other end of your heavy enamelled silk line, as much linen twist bass line as the reel will comfortably hold. It fills out the spindle, and comes in handy for trolling, or when you get on the big fish of the year that goes off with a big rush and draws upon the length of back line to keep him in touch with you.

In fly-casting, both for distance and delicacy, the left hand can do wonders with a long stretch of line, held between thumb and forefinger and between the reel and the first ring on the rod as shown in figure 6. The neatest way to get line out, if you have a clear space overhead, is by a series of dry casts in the air, not permit-

ting any part of the line or leader to touch anything, but paying out line by drawing with the left hand from the reel and letting go when the swing of the line in the air gives a pull to the line on the rod. There are several very pretty varieties of this, like the feats of a juggler with a riband of paper or stiff silk, and I have seen some wonderful casts made when the line was sent wriggling out through the air by mere vibration of the tip of the rod. Whatever cast you make, overhead, switch or steeple, there should be a moment when the line is pretty extended; then, your left hand being as shown in figure 7, you can let go and the slack will be taken out by the pull of the line that is extended, as shown in figure 8. So you will gain five or six feet more if you venture to hold a coil in your left hand. This latter is expert tournament work, but the touch of the left hand on the line enables you either to give a couple of feet and so ease a fierce cast, or on the other hand, to draw in and so straighten the line as against a vagrant puff of wind, or sharpen the strike of the hook by simultaneously indrawing line and raising top of rod, as shown in figures A and B. Especially in black bass fishing it is well to get your line out in water where there are no fish, then make a long cast over where they ought to be, let the flies sink, and then draw in in jerky style, sometimes slow, sometimes fast, until you get within ten feet of your fish; throw very quickly, as the fish will follow the line a long way before yielding to temptation. Having got your fish on, the next thing is to play him; with a limber rod, the more work you give it to do the better; do not try to set line in all the time, but let the rod bend, only giving line to prevent its breaking, and then as little as possible. Hold the rod steady and let the fish tug away. Presently the strain of the spring will tell on him, and the rod will straighten. Then is your time to get the line in board as fast as possible, and this is done far faster by stripping the line from the first ring to the hand holding the rod thrown by any other.

The disadvantage and danger in stripping the line is that the slack of your line must lay around loose, and is apt to kink and tangle. This can be avoided by taking advantage of intervals when the fish is not fighting, and then by holding the working line between the thumb and second joint of the forefinger of the left hand, and laying the slack in a loop, checked by a little pressure, or between any of the other fingers, and your hold on the fish is steady while you can regulate the tension of the slack of the line, and reel it up evenly, as shown in figure.

Now for a few hints to wind up with. Always test your leaders. Soak them in strong coffee for twelve hours, and then pull against a spring balance until the leader breaks. Re-knot and pull again; a good bass eader should stand a pull of two pounds, of course a fine trout leader need not be so strong, but it is better to break them at home two or three times than to have one part company with that big fish on. A rub with powdered pumice stone will take the gloss and glitter off the gut.



Test your flies also, and after soaking them, they nearly always go to the end of the shank of the hook. Don't throw the fly away, but whip the gut on again with fine waxed silk, as shown in figure A. Then reverse the gut, take a few turns around the hook and finish as shown in figure A. Graduate your leaders; fine at the end, heavy where they join the line.

Be very careful as to trees, bushes, etc., and have your eyes open in the back of your head as well as in the front of you.

When you wish to cover a likely spot, get your distance in other water so as not to disturb that you intend to fish. Very often the unexpected will occur, and you will get a strike when you are not looking for it.

For "skittering" use as light a line as possible, as the weight of the line will take it out.

Rely on your rod and your wrist. Give the spring of the rod fair play, and if it breaks, that settles it. Only

never hold a stiff wrist, and wait for a lull in the contest before you gather line in. Don't pull at one end when your captive is tugging at the other.

In netting a fish don't try to take him with the net, but hold it so that you can drop him back into it. Keep the left hand still until he is inside the bag, then raise quickly.

After considerable experiment I have found that the best costume for fishing is a knickerbocker, made with a very tight knee and no over hand, but wrinkled up the thigh to give ease in action. You can make a very good article out of a pair of trousers by putting them on inside out and hoisting the legs sufficiently and then basting in the knees, cutting waste cloth off and then reversing and finishing with buttons and holes on the outside. For dry fishing, as from a boat, I like gaiters, but for river fishing, wear woolen stockings and cheap tennis shoes; the rubber soles give a splendid hold on slippery rocks, and when they wear smooth you can roughen by criscrossing with a saw or a red hot wire. I never try to keep my feet dry; with tennis shoes you will walk your legs dry in ten minutes after you are out of the water. Be careful, however, never to sit still in wet clothes, as in a carriage. Then change before you start driving.

GRAY JOHN.

In North Carolina Waters,

NEWBERN, N. C., March 16.—Speckled perch are a gamey fish, and now take bait freely in Bryce's creek, so-called, though it is a deep and crooked stream, which would reach forty miles or more if the kinks were straightened out. In some places it is said to be fully 100 feet deep, and will average eight. It is noble for a creek and the quantity of black bass, ring perch, sobins, catfish, and pickerel which it harbors is something immense. It is the finest fishing stream in this section, emptying into the Trent River, some two miles above Newbern. From now until May, rod fishing will be fine. Speckled perch, locally known as chinquapins, are closely allied to the croppies of Minnesota, and the sac-a-laits of Lake Ponchartrain, La. running from a pound to two pounds in weight, seldom larger. They take cut bait, minnows and angle worms.

New River, as I wrote the other day, is a grand fishing water, where weak fish and black bass (Dr. Henshall's specialty) can be caught within an hour's sail of each other.

The Newbern Fish and Oyster Fair this season was something to be proud of, despite the fortnight of cold weather which immediately preceded it, although not quite up to the seven previous exhibits. At some fairs as many as nineteen varieties of oysters, as well as eighty varieties of salt and fresh water fish, all taken in neighborhood waters, besides clams, crabs, scallops, mussels and terrapins, were shown. These annual fish exhibits are becoming a more popular attraction even than Blackford's Fulton Market trout openings on April 1.

Dr. J. West Roosevelt and C. Stewart Davidson, of New York, are now here. Shepard Knapp and F. A. Coudert, Jr., have been shantying on New River, below Jacksonville, since January 1. CHAS. HALLOCK.

Black Bass Fishing at Night.

Seeing Mr. A. N. Cheney's article about black bass in the issue of January 19, I will give you an account of what I know about fishing for black bass at night with rod and reel. In the month of August, 1893, Professor Jos. Andrews, of Pittsburgh, Dr. J. G. Phillips and the writer, of Allegheny, took a fishing trip for black bass up the Castleman River to Fort Hill on the B. & O. R. R., 100 miles from Pittsburgh. Professor Rhinehart, of Pittsburgh, was encamped there with his family, whom we went to visit. We had good luck with them, making some good catches, but Professor Rhinehart's time to fish was after 8 o'clock in the evening. He would go up stream about a mile and then fish down, and get in about 10 o'clock with a nice string of black bass, weighing from three-quarters to one and a half pounds each. He caught as many as nine in the time mentioned. They were taken with a fly; the one used with best success was the white miller. An accident occurred to Professor Rhinehart which made him feel a little awkward. He had constructed a live box out of a barrel bored full of small holes, which he sunk in the stream with some large bowlders. We had three dozen or more live bass in it to take home with us; so in the morning before we left the Professor and one of his sons went down the stream to string the fish for us. While getting the barrel out of the water they let all the fish escape. We had a good laugh and went home empty-handed. P. F. S.

A WEEK ON BARNEGAT.

Early in August last, business called me to the office of the "Daily Spray," where I found James E. Burt, usually so bland and courteous, in a fever of ill-concealed disgust and upsetment. Two typos, shut in the composing room, and a recalcitrant press on which he was spending vain endeavor to bring to proper adjustment were the causes of his mental distractment.

"Say!" he broke out as he saw me regarding his ink-besmirched face with an amazed smile, "When September 1st comes I am going to leave this blessed town for one week, and go to some point where I'll not hear of business nor any of its relations. I'm tired out with this ceaseless grinding," and as if to emphasize the fact, he dashed his wrench to the floor and sat down on a convenient box. We began arranging for a week's outing.

"I'll leave the matter in your hands entirely as to details," he resumed, "and what do you say to Barnegat as our point?"

"Suits me exactly; in fact it would be hard to take me anywhere else at the time proposed, as fishing will be at its best, and the weather should be all that could be desired," I rejoined.

"I'll go with you boys," broke in a familiar voice, and looking up, we saw Mr. Devereux, Billy Devereux, as he is familiarly known to the newspaper world, and to the entire State, generally, who had noiselessly approached us.

A simultaneous groan from each of us was not lost on him. "I'll be good, boys! Honor bright! You can have your own way with everything!" Billy is about the best fellow who ever wielded a pen, but his propensity for practical jokes is so great as to keep some one in hot water continually.

"You'll not go with us unless you first go before a justice and enter under bonds to keep the peace," I ventured. "We don't propose having our lives worried out of us by your persistent deviltry."

"I'll be as meek as the great Hebrew prophet, and do all sorts of chores," ending with an irresistible "Say! can I go?" He was accordingly voted third man, and two days later our party was complete in the persons of Messrs. H. B. Ayres and W. C. Burroughs.

Irrespective of what the day might prove to be, the third day of September was set for the start. Burt was appointed commissary, and in my hands were left all details as to yacht and conveniences. As our week's cruise demonstrated, no party ever was in better hands than was ours while in the hands of Morton Johnson, Captain of the stout yacht Mary Louise.

The morning of September 3 broke dark and threatening. As we went to the depot in the early light, fitful gusts of wind swept through the streets and played merry tag with our numerous bundles. All hands, however, were promptly on time, and we were soon en route on the Pennsylvania Railroad to Barnegat pier, where we found that our every requirement had been anticipated, even to a good supply of melons carefully stored in the yacht.

"What of the weather, Captain?" I asked, as preparatory to sailing all eyes were fixed on the frolicking white caps which went chasing each other in wild glee.

"She's blowin' 'bout half a gale now, and unless I'm no prophet, before noon we'll get a regular screamer, but I think it's a dry storm, and we can ride it out all right. Say," he continued, "are all you fellows good sailors? If not, we had better make the first lee shelter and anchor until she blows out."

"Give us Cedar Creek Point, Captain!' I said, "these fellows are in my hands now, and the boat is in yours. If they are poor sailors it is their misfortune to be caught in a blow. We can find good anchorage there, besides good fishing."

"Well, we'll reef close and go," was his remark, and in a brief few minutes we were working our way among the innumerable craft out to the open bay, where, catching the wind, our yacht shot out like a race horse, and a beautiful six mile run, in an incredibly short space of time was the result.

As we ran onto the fishing grounds, the Captain, pointing to the rifts in the clouds, remarked, "I think we've seen the worst of this blow. We'll drop anchor here and have a go at the weak-fish. If it freshens again we can make Shelter Cove safe enough. The tide is right, and if the fish are on the feed, we'll find 'em in the lee channel, sure." And with a sweep of the tiller, the craft swung her nose to the wind, took up the slack of the cable and began riding the swells like a water-bird. The gale had dropped to a steady fresh breeze. The elements at last promised a good day's sport.

Inside the boat all was bustle. The jointing of the rods and setting of reels, the adjustment of floats and selection of leaders, made a merry confusion in the good-natured rivalry to secure the first fish.

"Bait's ready, gentlemen!" sang out the Captain from above. He had been busy at work on our shedder crabs. "The one who first lands a fish gets the best dinner."

Simultaneously, all lines were dropped overboard and paid out to the tide, the brightly painted floats dancing in perfect rhythm to the undulating waters. A sudden whoop from the emotional Devereux started all hands. He had a glorious strike and scored a clean miss, which brought a reminder that in the future silence on his part would be golden.

And now the turn came to the Captain and myself. Each secured a strike at the same instant, and each hooked his fish, followed by magnificent play on the part of the quarry. With that extra dinner in view, I rushed my fish; but my pliant bethabara rod was no match for the Captain's hand line, in point of speed, and he scored a clear victory by at least twenty feet and won his own reward, but was so ridiculed by the whole party that he laughingly said that in future he guessed he'd cut bait.

"Well, Captain," spoke up Burt, "you find us pretty good sailors I guess. I have always thought that seasickness was nothing but nervousness, which by exercise of the will could be thrown off."

"Well, if that is so," he rejoined, "I have seen some extremely nervous people in my time."

We had found the fish on the feed, sure enough. Small time now for talk. Each one was intent in his own behalf. The turbulent character of the water made the strike, when secured, of uncertain quantity; and when the fish was well hooked, as was frequently the case at a distance of 200 or more feet, the action of the water, added to the surging and pitching of the yacht, placed the prospects of capture on a basis of about three to one in favor of the fish.

For a moment, let us consider the weak-fish as he is, and I trust will ever remain. The true trout of the sea. None of the fauna of creation is to me more sublimely beautiful. The weak-fish, as usually seen in the stall of the fish monger, and the beautiful creature bearing the same name and just out of his native element, are totally unlike, save in form, for that moment alone is he to be seen in his indescribable beauty. Comparing the efforts of man to reproduce the matchless silver sheen of their scales, as still wet with the brine they throw out an iridescent splendor, his efforts sink into insignificance. And who, by looking, can tell where the blush of the pink and the purple of the iris begin and end on his perfect body? or what artist would care to undertake to match the yellow of fin and throat? Innumerable times, as I have stood regarding in silent admiration some particularly fine specimen which had fallen to my rod, and as the peculiar gutteral sound which they frequently emit reached my ear, it has assumed the nature of plaintive protest against the irony of their fate and an humble appeal for restoration to liberty.

Just when the family broil took place which caused this great estrangement, I knew not. Ichthyologists tell us that he is not a trout, and does not even occupy the position of second cousin. Still, they cannot deny that the contour of body and fin of many of the lake trout and that of the weak-fish is nearly identical. His manner of feeding is in many ways similar. He takes the bait with a snap, followed instantly by a rush, which suggests his ownership of the tackle and his determination to take immediate possession. His appetite, too, is capricious. I have fished for hours when thousands of them were in evidence, without a bite; however, of a sudden they would take the bait in any position offered. Irrespective of his family relations, he is a royal good fellow, and, as such, is esteemed by all lovers of salt-water fishing.

And now, back to the point of digression. Three hours of solid sport had but whetted our appetites for more. The Captain had been below preparing for dinner. He came on deck, and the instant his eye swept the horizon, he exclaimed, "Boys, why didn't you call me?" So intent had we been that we had paid no attention to the elements; indeed, I hardly think we would have noted the fact had it begun raining. "All tackle in!" was the first command, "and let two men bear a hand with me. If we don't catch a storm inside of ten minutes there's nothing in signs. The rest of you go below and make everything fast! Close and lock the windows!"

The cause of this anxiety was plainly apparent. Hanging directly over the bay was a gigantic pall-like cloud, draped in fancy festoons on its lower edge and already sweeping the surface of the water not more than two miles away. Directly through its center was an ominous gray streak, which needed no trained eye to tell that it was wind, which was already in evidence among our top rigging. Suddenly there was a dead calm, in which myriads of gulls swirled, uttering their discordant cries. The whole scene was grand and weird beyond description. A shiver through the entire length of the yacht, followed instantly by a blinding sheet of water, and the wild race through a September hurricane began. Luckily, our cable was in and our anchor shipped.

"Can we make Shelter Cove, Captain?" was the first query.

"No, nothing to do now but run before it," was the short rejoinder. "We'd go ashore trying to round the point. We've got a thirteen miles run to make, and it's a nasty trip."

Our sail had been shortened to the last leach and trimmed in only enough to keep the boat steady. Still, our rail was far under water, and the side of the cabin was continually awash. As we were driven ahead like a catapult, we now, for the first time, felt the long swell from the ocean which came rolling in through the inlet, and the effect of the terrific wind was to kick up a wretchedly exasperating sea. It required the sea legs of an old salt to move at all.

Turning from where I had been taking account of our fish, forty-six in number, and a fine lot they were, I encountered Burt, who was in the cabin. A deathly pallor was on his face, and such a woe-begone expression in general I have never before seen. Nudging Devereux, who was contemplating the exciting condition of affairs on the outside, I suggested doing something to relieve Burt's distress. One glance at his suffering partner was sufficient to arouse all his well known propensities as a torment.

"I'd exercise a little will power and throw off this nervousness," was his first remark. "For a great strapping fellow like you to give way to this weakness is disgusting. Here, smoke this cigar! It may be your last chance."

Poor Burt! His pallor now changed to a greenish yellow. He was powerless to resist the unmerciful teasing. "Here is something I think will settle your case," continued the persecutor, at the same time holding in close proximity to his mouth a long strip of pure fat bacon to which he had tied a bit of stout string. "You swallow the pork," I do not recommend this an ar infallible remedy for sea-sickness, but the effect in this case was magical.

Our objective point was the large cove near the old town of Barnegat. Once inside and we could get good protection from the hedges which fringe the banks. Toward that point we were then being driven, leaping from crest to crest of the waves, now and then down in the trough of the sea, the merciless wind driving a sheet of water with us, making it impossible to see more than a few rods ahead.

The humor of the Captain had entirely changed from that of the rollicking good fellow of a few hours before to the taciturn personage who feels the responsibility of his position and is intent on the discharge of important duty.

"Now, boys, our time has come to make shelter, and I guess we can go in all right if we haven't anything but a rag of a sail up," was the comment. "We can be pretty sure of no boat lying in the mouth of the cove."

Almost immediately, his sharp "Look there!" attracted our attention, and peering through the cloud of rain and spray we saw the outline of a large three-masted schooner which had put in from the ocean for shelter, and which was lying directly in the channel of the cove. A look of anxiety for a moment showed on his face, followed instantly by one of determination. With a muttered "I'll go in under her stern," he set the rudder hard down, closed hauled the sheet, and, with not five feet to spare, we shot under the schooner's stern and rounded inside the cove, where in less than a half-mile run we were in quiet waters, and where they were powerless to do us any harm.

Having made and eaten dinner, we went ashore, visiting the quaint old town of Barnegat. The wind lightened by the time we returned, and being tired out, we turned in and knew nothing more until daylight.

The Captain's cheery "All hands up!" brought every man to his feet. The wind had veered to the westward. Although the sky was overcast, there was promise of a good day. Anxious to reach Beach Haven, we requested the Captain to stand out at once. At 2 o'clock, we dropped anchor off Beach Haven, where we had been informed fishing was most excellent. Inquiry among the crews near us elicited the fact that for ten days little or nothing had been caught, owing to the presence of an immense school of porpoises which had been in evidence for several days past, and the result of our endeavors justified the complaint.

Moving over about two miles, we struck a school of sea bass, and within two hours had boated eighty-six of them, which provided excellent sport. During the afternoon, a continuous fleet of yachts was moving up the bay. From all the same story came. No fish below, water alive with porpoises. This to us was discouraging, as we had intended taking in Atlantic City and Anglesea, both famous spots for striped bass, weak-fish and king fish, besides an occasional drum and sheepshead.

Our objective point for the night was Sunken Ledge Island, where we intended trying night-fishing for striped bass, but we were doomed to disappointment. The wind, which had changed to southwest, blew in a dense fog from the sea. Although we had a good sailing breeze, the narrow channel at this point, coupled with the intense darkness as night came on, made sailing a treacherous undertaking at best. "I'm afraid we'll have to give it up and anchor for the night," said the Captain. "We are now in Great Oyster Bay, full of shoals and reefs. Once out of the channel, with nothing to guide us, we'd be hard aground in no time."

Burt was busy with preparations for supper, kneeling before the gasolene stove. The rest of us were making ourselves content with watching him. If our boat had been struck by lightning, things couldn't have metamorphosed more quickly. Ayres took a sudden bath in the gravy bowl, sousing Burt from head to foot. Devereax, too, lost his equilibrium, and finished by poking his head hard and fast between our provision case and the yacht's trunk. We had struck an oyster reef while gliding along at good speed, and the quick run of the halliards told us that travel for the night was at an end. A prompt and careful search assured us that the yacht had sustained no serious injury, and being in shallow water, were in no danger from a possible leak. Supper over, we were preparing for an early turn-in, when we were suddenly beset by a swarm of mosquitoes. Driven to desperation by their merciless assault, we nailed up every opening, even covering the stove-pipe hole. This had the desired effect, and we were once more at rest.

It seemed we had but little more than fallen asleep when I was aroused by a most peculiar noise on deck near the bow. In an instant I was wide awake and listening intently to the strange, long-drawn rasping sounds. Awakening Burroughs, he carefully crawled to the door. Beckoning for me, I saw a look of supreme disgust overspread his face. It was Devereux trying to sing, sure enough. There sat the irrepressible William, his feet dangling in the water. We were in time to hear the concluding lines of an old fishing ballad which ran:

"His only thought, his only care,
His only hope, and only prayer,
For the present world and the world to come,
Was a string of fish and a jug of rum."

Our wild hurrah brought him to his feet and the Captain on deck.

We had settled on having a trial at the snipe on the flats. As the tide was in our favor, guns and shells were out and, while we were standing across the bay, we partook of a hastily prepared breakfast.

Two hours of sport were allotted to us before the incoming tide drove us to our dory, during which time we were kept pretty busy. Having no stools and no way to prepare blinds, we were at a great disadvantage, but on counting up, we found we had twenty-seven jack-snipe and yellowlegs.

And so wore away the glorious autumn days. Our week passed only too quick.

Who, save those who have tried the experiment, can appreciate the benefit to mind and body derived from such an outing? Our hands and faces were browned, and with appetites keen as a coyote's, we reluctantly bade Captain Johnson good-bye and took train for home.

Dear old Barnegat! with its thousands of pleasant memories of sport in the years that are past, may its quota of fin and feather never be lessened. Surrounded on all sides by the largest cities of the East, it must ever remain the pleasure ground of the people.

Thanks to the efficiency of the advocates of protection, ruthless netting has been stopped, and no net, other than for the purpose of taking bait, should ever again be allowed in its waters.

Christmas morning, I found on my desk a handsome De Muth brier pipe, in satin-lined case, with the following inscription: "To the only man I was ever with a whole week and couldn't make mad. Signed, Devereux"

And each time as I take it from its case, some remembrance of the jolly good fellowship it represents comes floating in at memory's window, and in fancy I hear the whistle of the snipe and the hum of the reel, and feel the electric thrill of the scaled beauty as he rises clear of the water, shaking a thousand sparkling diamonds in the air, at last to succumb to the inevitable, and to count one more on the long list of victims of rod and reel.

Game and Fish Protection.

CHICAGO AND THE WEST.

Mr. C. E. Robbins, President of the North Dakota Sportsmen's Association, has the following to say in regard to the new game law just passed:

Fargo, N. D., March 18, 1895.—Your telegram of the 15th inst. was received in due season, but, until to-day I have not had any game law information that could be considered reliable, as no bills that were introduced were passed, the legislature having been at work this winter on some new "codes," and the compilation committee have run things to suit themselves and have adopted just what pleased them without reference to the rest of the people. The result is that we will have a whole lot of laws that will have to be repealed at the next session of the Legislature in 1897. Only a few of the present features of the present law were proposed by the North Dakota Sportsman's Association, although we presented a bill similar to the Minnesota law, somewhat modified to suit the conditions of this State, and a strong and constitutional bill in every particular; it was ignored and we were turned down this time.

Enclosed find a clipping taken from the Bismarck Tribune, of March 16, which I believe to be a correct synopsis of our new game law. Yours truly, C. E. ROBBINS.

The synopsis mentioned reads as below:

A new and distinct office was created and embodied in the Political code, the officer to be known as the State Game Warden, who is appointed by the Governor for a term of two years, and until his successor is appointed and qualified, and the bond required is $2,000, conditioned for the faithful performance of his duties. The duties of the State Game Warden are to superintend and aid in the enforcement of all laws of this State for the preservation of game therein. He appoints Deputy Game Wardens, to hold office at his pleasure, as follows: One in each county having less than 3,000 inhabitants; two in each county having more than 3,000 and less than 7,000 inhabitants, and three in every other county. Each deputy must be an elector of the county in which he is appointed.

For a license or permit to hunt with or without a dog during the open season, a non-resident must pay $25, and a resident of the State fifty cents. And in addition to the above, each man taking out a license must pay the county auditor—of whom all licenses are to be obtained—the sum of twenty-five cents, for issuing the document. A non-resident cultivating a quarter section or more of land in this State pays but fifty cents for a license. A resident may hunt on his own land without a license during the open season.

For the purpose of enforcing the laws of this State for the protection of game (game animals and birds) the State Game Warden and his deputies have all the power conferred by law upon such constables. Upon conviction had upon the report of any deputy game warden, he shall be entitled to $5, to be taxed and collected as a part of the costs in such a case.

All moneys for permits or licenses are paid the county auditor, and on Nov. 1 of each year, he pays out the sums thus accruing as follows: One-third to the State Game Warden, and the other two thirds is equally divided between the deputy county wardens, one, two or three as the case may be. This is all the money the State Game Warden or his deputies receive for their services.

All licenses are signed by the State Game Warden, and also by the deputy auditor when the same are issued.

(a) Prairie chickens, grouse, woodcock, plover, wild duck, wild geese or brant may be killed only between Sept. 1 to Dec. 1.

(b) Buffalo, elk, deer, antelope, caribou, or mountain sheep may be killed only between Nov. 15 and Dec. 15.

No one shall knowingly hunt upon the enclosure or cultivated lands of another without the consent of the owner, agent or tenant.

No person shall have in his possession more than twenty-five of the birds named in paragraph (a) in any one day.

No fish or any of the birds or animals named in paragraph (a) and (b) can be legally shipped out of the State.

The use of hounds or dogs in running or driving any of the animals named in paragraph (b) is prohibited.

PENALTIES.

(c) For each one of the birds named in paragraph (a) or their nest or eggs, shot, killed or destroyed in the closed season, the penalty is ten dollars; for knowingly hunting upon the enclosed or cultivated land of any other without legal permission, ten dollars for each trespass; for shooting or killing of each one of the animals named in paragraph (b) in the closed season, one hundred dollars; for the shooting and killing of each one of the birds named in paragraph (a) in excess of twenty-five birds in any one day by any one person, or for the shooting or killing of each one of the animals named in paragraph (b) in excess of five in number by any one person in any one day, one hundred dollars; and for shipping and receiving for shipment each one of the birds or animals named in paragraph (a) and (b), or for each one of the fish of this State, ten dollars for each game bird or fish and one hundred dollars for each animal so shipped or received.

Any person having in possession any of the birds and animals mentioned in paragraphs (a) and (b), contrary to the game laws of this State, is liable to the same punishment or fine as for killing of the same.

It would seem from the law that any person having a legal right to hunt and kill game animals and game birds in the open season can dispose of the same in our State for gain or profit, and may ship the same to any part of the State without an affidavit.

(d) Song birds are protected at all times, but quail are not protected. The use of snares, nets or poisoned grain is prohibited, to capture any of the birds named in paragraph (a). The use of gun traps, etc., is prohibited, to capture any of the game animals named in paragraph (b). Wild duck, wild goose and brant can be legally killed only with the gun held to the shoulder, and the use of artificial light, batteries, swivel guns, etc., is prohibited, and proper penalties are provided for disobeying any of the laws pertaining to the things named in paragrph (d).

FISH CULTURE.

The State Game Warden has nothing to do with fish. Senate bill No. 169 makes the State Superintendent of Irrigation and Forestry ex-officio the State Commissioner of Fish of North Dakota, and the stocking of the waters of the State, the protection of the fish therein, and the entire fish culture throughout the commonwealth devolve upon that officer. Favorable provisions are made for the accomplishment of these purposes without expense to the State.

New Mexico Game Law.

Santa Fe, N. M., March 12.—Everything has been pretty quiet here in the sporting line for the past few weeks. We succeeded in getting a new game law through the Legislature, which is a great improvement over the old one, even if not all we wanted. The old law was very brief, and allowed killing everything one could get at except in the four months of May, June, July and August. Deer, elk and antelope can now be killed only in the months of October, November and December, while the open season for turkey and quail is two months longer, running up to March 1. The shipment of game out of the Territory is forbidden at all seasons. H. B. H

Maine Fish and Game Laws.

The Maine Legislature will adjourn about next Wednesday, and all the questions relating to fish and game have been attended to, and the following can be regarded as the results of 1895.

Open time on moose, deer and caribou, October 1 to January 1, in which time one bull moose, two deer and one caribou may be killed by any one person.

Parts of game may be sent to a licensed taxidermist under such rules and regulations as may be prescribed by the Commissioners.

Cow and calf moose prohibited from killing at all times.

Jack Lights, so-called, forbidden, likewise snaring or trapping; or using dogs in hunting such game, under penalties of fine and imprisonment. Fine and imprisonment imposed if such game is killed in close time.

Trout and salmon, open time from the first days of May to the first days of October, in which twenty-five pounds may be taken, provided, that having less than twenty-five pounds, one additional fish taken is not a violation of the law. Citizens of the State may take in the months of February, March and April, trout and salmon, and carry the same to their own homes, and not otherwise. Winter fishing in Oxford and Franklin counties, forbidden. May use artificial minnows or insects or flies in fishing for same.

Twenty-five pounds is the limit at any one time to be taken or in possession. Cannot be transported except with the owner. Woodcock, open time September first, and partridge, September 20. Close, December 1.

A general law providing that the Commissioners have control of waters, and may close such as they deem for the interest of the State, after public notice and hearing, and when done notices are placed to warn the public and recorded in town or plantation clerk's office. An appropriation of $25,000 annually was made to enforce the law, and to propagate fish. All wardens are to give bonds for $2,000 for the faithful discharge of their duties.

It may be said that the State has adopted a new policy, that of enforcing the law vigorously, and replenishing our waters with trout and salmon. A large number of restrictive and prohibitory laws have been passed on certain ponds, lakes and streams. The Commissioners will probably publish all general, and private laws in their compilation this year, so that all legislation may be understood.

The State has suffered considerable loss of large game this season, not more than usual, however, the violators being market hunters, and those having lumber operations. While the Commissioners will bring complaints against many of them the game is lost. They had no funds from the close of the year till now this year, and hence could not pursue a vigorous policy of enforcement. I notice a communication in your last paper reflecting upon the Bangor Commissioner, which I will leave to him to discuss if he desires, and only say that the imputation that trout (Maine trout), being sold in the market, is a thing I have yet to be satisfied is done in a single instance.

Trout from the West are in our markets, or lake trout of some kind, which are of course used by any one, and are such as hotels put on their "fare." If our Maine trout were sold under cover of this fish, a stop would be put at once to the selling of any such fish. In fact very few Maine trout see the market even in open time. I have never been able to buy one from the market.

The Maine Sportsmen's Fish and Game Association, which has earnestly pushed the legislation, are feeling elated over the results of this session of the Legislature. Every measure urged has been carried. CHANDLER.

Schooners of Deer Meat.

Dixfield, March 18.—Editor Forest and Stream: Some three weeks ago you published an article in Forest and Stream entitled "Schooners of Deer Meat." Your comments on the Maine Fish and Game Commissioners seem to me to be unmerited and hardly fair. In the past you have upheld us in our work, and we have appreciated and valued your approval.

I can but think your information in regard to the fish and game affairs in Maine come from unreliable sources. That a great many deer and other game find their way to the Boston market, both legally and illegally, I know. With the means we have how could you expect it to be otherwise? The amount of fines collected by us the past year amounted to several thousand dollars. No doubt many escaped detection.

Can you expect us, with an appropriation of $12,000, to stop all the poaching and illegal transportation of game and pay our wardens, our own expenses, guard our salmon rivers, of which the Penobscot alone costs over $1,000. See to building our fish ways and employ a civil engineer at $5 per day, and expenses to survey and draft plans for same, building and supporting half a dozen hatcheries, feeding our young fry five months and distributing them to our numerous ponds and lakes in Maine, some of them carried many miles back into the wilderness? Collecting or purchasing our stock of trout and salmon eggs? Pay lawyers for defending and prosecuting suits? Protect 3,000 miles of unbroken forest, filled with large game, and as much more outside well stocked with fish and game? Patrol hundreds of miles on the Provincial border, beside hundreds of miles of sea coast, indented with scores of small bays and rivers from which just such schooners as you sneak of can escape, and many other expenses too numerous to mention? To do all this we have an appropriation of $12,500, and a salary of $500 per year.

That we have succeeded in making Maine one of the best fish and game preserves in the Union, none can deny. With the results I am more than pleased. The pay I have received for my services, and more with it, has gone faster than I earned it, and in a money point of view I am not so well off for being on the Commission as I would otherwise be, but I have the satisfaction of thinking of what we have done, will be of benefit to the State, and to the coming angler and sportsman. I am getting too near the allotted age of man to be expected to enjoy myself. Mr. Stillwell and myself were appointed on the Commission over twenty years ago, we worked together till his death. He was the best friend the fish and game ever had in Maine, and every sportsman coming into Maine has cause to revere his memory. We always made it a point not to answer any articles casting any insinuations on us. It is very apt to end in throwing mud, from which nothing but harm can come.

The State is waking up to the importance of our fish and game, and I think the present Legislature will give us about what we have asked for. The original bill has already passed, legislating the present wardens out of office, giving the Commissioners $1,000 a year and their expenses, putting the Land Agent on the Board with the present Commissioners—for the third. The law has passed putting a close time on cow and calf moose, under a penalty of $500, or imprisonment, or both, being discretionary with the court. Also making close time on partridges to Sept. 15. These are about all the changes there will be. Our appropriation has not yet come up. It has been reported favorably by the Committee—$25,000. It will come up this Wednesday and I think will pass.

It looks very favorably for a good season's fishing. In many new ponds and lakes that have been stocked with landlocked salmon, they are beginning to be caught in considerable numbers, which will add a great deal to our stock of angling waters. They are a very desirable fish, being the best for game and the table, and will thrive with the pickerel and will live in warm water, where the trout will die. In many of our ponds they have been caught in four years weighing as many pounds. In some ponds they never grow to over that weight, while in others—apparently with the same conditions—they will grow to ten or twelve inches. In one pond one was taken last spring, where they had been planted but six years, of twelve pounds. We now feed all our young fry four or five months before turning out. In this way they are large enough to care for and protect themselves. We have met with good success. Many new places are now coming up in which we are getting good fishing, and I believe in five years from now it will be better than to-day, if the present methods of stocking are kept up and the poacher can be kept out.

There is to-day as good fishing in Maine for large fish near some of our cities and large towns as there is at Rangely and Moosehead and our lakes and ponds, which were once good trout waters, where they have been fished out, or killed out by the pickerel, have been stocked with salmon, and they are beginning to be taken out in considerable numbers. Where the black bass have been introduced they have thinned out the pickerel, and the trout are putting in an appearance. The bass don't seem to interfere with the trout or the salmon. This is true in the large ponds or lakes in Kennebec county, and nearly half the area of that county is made up of lakes and ponds.

The season here now bids fair to be late, we have still two feet of snow and excellent sleighing; there is two and a half feet of ice on our ponds and lakes and unless warm weather comes on soon, the waiting angler will not get a chance to cast his hook into Maine waters before the middle of May.

When I sat down this evening I intended to write only one sheet, but after I got started I did not know when to stop. If I have given you any information of Maine matters or anything of value, you are at liberty to use it. But I have had only time to write the preface of matters of what might be said of the fish and game, and its interests in Maine, and tell the truth.

HENRY O. STANLEY.

DIXFIELD, MAINE, March 18.

Limited Licensed Netting.

In 1894 the Fish Commissioners of the State of New York were authorized by the Game Law, to grant licenses for the netting of frost-fish, and white fish, in the inland waters of the State, for such a limited period and under such regulations as they deemed proper, and accordingly large numbers of licenses were granted permitting such netting between Nov. 1 and Dec. 15, the nets to be set only between sunrise and sunset and removed each night.

Apparently they were granted indiscrimately to all applicants, and for the purposes of a test, no better course could have been adopted. Of these licenses, 59 were granted for netting white fish in Onandaga Lake, near Syracuse. For years past the Anglers' Association of Syracuse had substantially prevented all netting in this lake.

These licenses were closely watched, to some extent by a State Protector, and all of the time by the special protectors of said Association. Not a licensee was found having an illegally taken fish in his possession, though large numbers of white fish were taken; and only two were caught violating the regulations, by hauling their nets in the night, and these paid $30 for their breach of trust.

All but about three per cent, abided by the regulations. The Legislature is now asked to continue this system of licenses another year, and to permit bull heads (catfish), suckers, and pumpkin seeds, also to be taken with nets, by licensed netters.

In this connection the following questions have occurred to me, and I am searching for information, from which to be able to arrive at the proper conclusions:

1. Are white fish eaters of the spawn of game fish, the same as suckers, bull heads, and some other fish, so as to reduce the increase of game fish to some extent at least in addition to that resulting from the predaceous habits of so many fish?

2. Will the reduction of the numbers of such spawning fish, by netting them out, permit, or operate in favor of the increase of game fish in any waters?

Having been recently appointed the chairman of the Law and Legislation Committee of the New York State Association for the Protection of Fish and Game, I am looking for light upon these questions. It is now too late to obtain sufficient information for this year, but I hope to get it so that I can act intelligently next year, when we shall have had another year's experience with licensed netting, and when the question of its continuance or abolition will surely come up.

A short time since I addressed a letter to the United States Fish Commissioners at Washington, asking the above questions, and in answer thereto was answered as follows:

"In answer to the first question, I would say that many fishermen claim that the white fish eat large quantities of spawn, but we have no evidence from observation of our own employees either confirming or negativing the claim.

"In answer to the second query, it is recognized that several species of fresh water fishes are truly predaceous, not only living upon the young of other fishes, but also destroying them to a very large extent. To what extent fishes feed upon the spawn of other fishes has never been determined from actual observation, and the most that we infer has been from the statements of the fishermen.

"During last year a joint commission on behalf of the United States and Great Britain conducted a thorough investigation as to the condition of the fisheries in the Great Lakes system, and a part of its work comprised inquiries respecting the very subject you now bring up. The American representative, Mr. Rathbun, who is a member of this commission, is now at work upon his report, which, however, owing to the extent of the field notes obtained, will not be completed inside of several months. On account of the conflicting statements regarding the benefits which might be expected to arise from the catching out of greater numbers of the so-called spawn-eating fishes, he has as yet come to no conclusion regarding that subject. In nature, of course, it is taken for granted that a balance is always maintained between the several species of fishes so long as no disturbing element is brought into play."

This goes to show that this subject has been deemed worthy of consideration and investigation by an International Commission. Now, what is a disturbing element?

It appears to me to be the means whereby the natural balance is destroyed or overcome. For many years the substantial prohibition of netting in Oneida Lake has permitted bull heads to multiply by millions upon millions, and they are probably the worst spawn eaters in existence. They have acquired the ascendancy in that lake over the game fish; more bull heads than bass, 6 to 1, were caught last summer by angling upon the stone bars, the natural grounds for bass, for they had driven the bass away and taken possession and were therefore a disturbing element.

Before netting was prohibited entirely in that lake, hundreds of thousands of suckers were taken each year in the early spring in the shoal waters at the mouth of the Onieda River at the foot of the lake, which had run up on to that fine gravel bottom to spawn; but it was a rare thing to catch a rock bass or perch and it was too early for game fish to run up there to spawn; but when they did run up the grounds swarmed with suckers and bull heads. These suckers have multiplied under protection, by millions, until now no game fish spawn there, so that the suckers have become a disturbing element.

These facts are within my personal knowledge, resulting from my personal inquiries and investigations conducted during several years past. I have written this article for the purpose of opening a full and free discussion through the columns of Forest and Stream, and I request that every person who can give any information, facts, or ideas in the affirmative or negative, bearing upon the two questions, will send them in for publication, for the benefit of sportsmen and for my personal benefit, in order that in 1896 I can act intelligently in deciding whether limited licensed netting shall be continued or not.

In the meantime during 1895, let each and every person and association in this State watch the licensed netters, and get all

the facts they can in regard to their acts and actions in order to determine whether the regulations imposed by the Fish Commissioners are observed and followed and to what extent they are violated.

C. W. SMITH, Chairman of Law Committee.

Game and Fish in Minnesota.

St. Paul, Minn., March 16, 1895.—Editor Forest and Stream: The subject that is engrossing Minnesota sportsmen's attention just now is the non-spring shooting bill that has just passed the House. At this writing it seems certain to pass the Senate, and to become a law, though there is some outside opposition; mostly because it is a new venture in the Northwest, and so many gunners haven't the right understanding of the benefits we claim will accrue if it is allowed to go into operation.

On the 14th the Pioneer Press editorially writes against the bill, and this has elicited a strong defense by practical sports men. The Pioneer Press deals with these subjects fairly, and the pros and cons receive equal recognition.

We contend that the migration of wild ducks to the far North is not because more advantageous localities for feeding and breeding purposes are open to them there, but that because of incessant hunting here, they are obliged to move on to find places of rest and safety. When the Northward flight from the Gulf begins, the most natural route is up the Mississippi Valley. The constant gunning along the line drives them farther and farther North. While ducks are migratory by nature, the migration ceases when they arrive at places of safety. Heretofore they have not been able to find this to any extent even in Minnesota. Yet nowhere in the Northwest are more or better lakes for feeding and breeding purposes than this State affords. That ducks will remain here is demonstrated by the fact that on several private preserves—some within a short distance of St. Paul—where spring shooting is not indulged in, they have come in and bred; and in the fall the lakes are fairly alive with ducks, particularly mallards and teal. There certainly is no real advantage to be gained by shooting ducks in the spring.

They are lean and feverish, and but poor eating at best. A pair of ducks killed in the spring means a flock of ducks less in the fall. With all our natural advantages, if spring shooting is prohibited in the spring, and in the fall, before the time for the Southward flight, ducks will extend their migration no farther, the quantity and quality of ducks that may be killed here will satisfy the most ardent spring gunner that non-spring shooting is best. He can enjoy a season far longer than the two seasons as they now stand, and in place of lean, feverish birds in the spring, and small flocks and hurried flights in the fall, he can pick his birds from large and well-fed flocks.

Another provision of our game bill is in House File No. 380, which is a substitute for various other bills. I can do no better than quote from a private letter from a gentleman who is an ideal sportsman:

"This bill contains on page five, a provision prohibiting the catching of game fish for market purposes. My notion is that the best way to preserve our game fish is to stop the pot hunting of them. It is of little consequence for the State to spend $20,000 in propagating these fish if they are to be cleaned out of the lakes as soon as they reach a suitable size, by the pot hunters, and sold for a mere song upon the market.

"For illustration, I am credibly informed that one fish company alone took, last year, out of a little lake say north of Duluth, nearly twenty tons of black bass. What it would cost the State of Minnesota to replace these fish and have them reach a catchable size, would probably represent a sum of hundreds if not thousands of dollars.

"Of my personal knowledge I know that nearly fifteen tons of game fish were taken out of two lakes in Wright county last season, largely by parties who came here from Texas and Iowa, and who simply cleaned the lakes out to pay their outing expenses. Our first step in the direction of preserving our game is to protect them, and our most dangerous foe is the pot hunter."

In the last few days the Legislature of North and South Dakota, have passed game bills that practically conform to the Minnesota statute. The whole Northwest is alive on the subject of protection and preservation of game.

Our own movement for a voluntary auxiliary game and fish protective association is advancing rapidly. A meeting is called for Monday, the 18th, at which a large number of our citizens will be present, when an organization committee will be named to push the movement. WM. L. TUCKER.

St. Paul, Minn., March 23, 1895.—Editor Forest and Stream: At the election of officers of the State Board of Game and Fish Commissioners on Thursday, W. A. Timberlake, St. Paul, was re-elected President; Wm. Bird, Fairmount, Vice-President; A. F. Ferris, Brainerd, Treasurer; Fred Von Baumbach, Alexandria, Secretary, and S. F. Fullerton, Duluth, Executive Agent.

That the election was wholly voluntary, the sprotsmen of the State will not believe. That this Board has now been pulled into the political arena, is very evident. But the changes are now made, and it is the Board to do the work for the next few years. So, whether satisfactory or unsatisfactory, the interests are too great to allow to go by default, and the true sportsmen of the State must and will continue their efforts to assist in the work. When the new voluntary auxiliary association can be completed, a very potent factor will enter the field.

We nave this suggestion to make. The work outlined by Mr. Andrews should be continued by Mr. Fullerton; and to the Board and Executive Officer we would say that they could not do better than endeavor to secure the services of Mr. Andrews for a short time, if by any possibility he could be induced to devote any further attention to these interests, after having been so abused of late. His experience and information on these subjects would certainly be very valuable at this time, and Mr. Fullerton can win the highest regard of sportsmen if he continues this work on these lines.

From a personal standpoint Mr. Fullerton will be a very acceptable officer, and so should feel just as free as his predecessor to call upon the sportsmen for any assistance they can render. We will certainly decry the movement to antagonize his administration. WM. L. TUCKER.

A Non-Hounding Bill for New York.

A bill recently introduced in the New York Legislature by Mr. W. W. Niles, of New York city, reads as follows:

"An act to amend Chapter 488 of the Laws of 1892, entitled, "An act for the protection, preservation and propagation of birds, fish and wild animals in the State of New York, and the different counties thereof."

The People of the State of New York, represented in the Senate and Assembly do enact as follows:

Section 1. Section 42 of said Act is hereby amended to read as follows:

Section 42. No fawn or female deer shall be hunted, caught or killed at any time in this State, nor any part thereof be possessed at any time; the possession of the carcass of any such fawn or female deer or any part thereof shall be deemed prima facie evidence of a violation of this section by the possessor.

Section 2. Section 44 of said Act is hereby amended so as to read as follows:

Section 44. Hounding. No person, corporation, association or company shall hunt, pursue or kill any deer in this State with any dog or bitch at any time. If any dog or bitch shall be found hunting, pursuing or killing any deer or running at large in the forests of this State where deer inhabit, it shall be deemed prima facie evidence of the violation of the foregoing provisions of this section by the person, corporation, association or company, owning, using, having or harboring such dog or bitch.

Section 3. All Acts and parts of Acts inconsistent with this Act are hereby repealed.

This Act shall take effect immediately.

Niagara County Anglers' Club.

Lockport, March 21.—The Niagara County Anglers' Club, with the first evidences of spring, which are unusually tardy this year, has awakened to activity. It has accomplished much already in the way of increasing the fish supply in county waters, and its plans are all made for an unusually interesting campaign. Within the last week the club has planted 4,000,000 white fish from the Caledonia Hatcheries in Lake Ontario.

At the annual meeting recently held, these officers were chosen:

President, Hon. John F. Little; Vice-President, George Moody; Secretary, Frederick K. Sweet; Treasurer, Geo. W. Weaver. The question of the annual tournament was informally discussed and the sentiment seemed to favor the Thousand Islands as the battle ground in June.

The club last week deposited 2,000,000 white fish fry two miles out of Wilson harbor, Lake Ontario and the same number in Olcott harbor this week, Tuesday. Mr. Walzer, of the hatcheries, who accompanied the tiny fish, promised the banner club of the State 1,000,000 more white fish fry, and the same number of black bass, to be planted at Olcott. The bass cannot be obtained until sometime in June, he said. Salmon trout fry are a minus quantity in the Caledonia tanks this year.

The planting of the little fish in the stormy waters is an interesting occurrence, and the event attracted hundreds of people from all over the country to Olcott last Tuesday. The fry were but two and a half days' old, and about the size of pins, but with larger heads than that important article of domestic economy.

All the members of the Anglers' Club Committee could not get away and there were some substitutions. In the party from here were: President John F. Little, Jerome E. Emerson, George Emerson, C. L. Nicholls, and Tunis Outwater.

THE OLCOTT DELEGATION.

The citizens of Olcott, headed by Mayor William Henry Lockwood, responded nobly to the call for volunteers to assist in the planting. The fry came in 96 cans, which held from 12 to 115 gallons each. The tiny fish, only two or three days old, were lively as crickets when the car stopped at the R. W. & O. R. R. depot, Newfane station.

The cans were loaded on wagons and drawn to the west pier in the Olcott harbor. The men furnishing teams were James Rose, Samuel Lockwood, Thomas Plain. John Myers, Newell Clicknor, Eugene Halstead, William Everts, Charles Carigan, Fred Rockwell, Silas Nobles. Those who assisted in the work were: The Hon. William H. Lockwood, James L. Lockwood, William H. Tenbrook, Andrew J. Leonard, Nelson Shaver, John Babcock, Edward Moore, Sheba Stout, Peter Drake, Dan Shaver. The boatmen were: S. W. Lockwood, Cyrus Brown, James A. Martin, Fred Martin, Archy Kline, Frank Shaver, Jr., Edward Burns, William Nobles, William Drinkwalter.

A BARRIER OF ICE.

A disappointment was in store for Superintendent Walzer, of the Caledonia Hatcheries. The plan was to plant the fry out in the lake, two miles at least, to avoid the perch and other game fish that would capture the little fellows. The wind from the north drove the ice in shore and made it impossible for the boats to push through and out into the lake. The best that could be done was to commit the fry to the waters of the lake off the west pier. The swift current would carry them out into the lake, and the conditions were such yesterday that it is believed that the little new comers were troubled very little if at all by the voracious perch.

Superintendent Walzer, who came along with the fry from the State hatcheries, said before summer they would plant at least 40,000,000 white fish in Lake Ontario. He thought that another car load could be sent to the Anglers' Club before April 1. Their black bass did not come until some time in June, and he hoped to furnish the club a half million or more at that time.

MAYOR LOCKWOOD'S WELCOME.

Mayor Lockwood delivered a forcible and graceful address of welcome to the piscatorial pilgrims from the Caledonia tanks.

A large number of Olcott citizens applied for membership, to be voted on at the next meeting.

How Our Neighbors Do.

Newburgh, N. Y., March 18.—Apropos of your article upon removing game and fish protectors, I think the United States might take a leaf out of the book of their neighbor, Canada. These game guardians (I speak of the Northwest, where I was a resident some years) are appointed more for their aptitude for the work, being generally sportsmen of good standing, the question of political belief not being even asked, and the appointment being ostensibly for life, pending good conduct and efficiency.

I also came across another institution on the Canada Pacific, which met with my unqualified approval in the transportation of dogs on that line. I got on board the train at the Rockies, and my dog was checked as extra baggage, with a charge of $7.50 to Montreal, which was the sum total of all I had to pay, and my dog went with me and had my personal supervision. I felt I had paid my dues and was comfortable, and I met with great civility and kindness from all the train hands, and I do not think the charge was high for the distance. It saved me the uncertainty of mind, the constant tipping and the incivility from train hands, which one meets sometimes out here.

In contrast to the above, let me cite another instance. When coming away from the South, I was obliged to let my wife come ahead of me, and she brought the same dog with her, and got along as far as Chattanooga, on the E. T. V. & G. There, about five minutes before the departure of the train, the dog was put off, and the official insisted on its being expressed, which compelled its being crated. A box was obtained, and the dog expressed in a package about half big enough, and arrived at Newburgh two days after my wife, famished for water and food, and cramped almost to death. The charges from Chattanooga were $9 for one-third the distance. Next time I go South the steamboat lines will carry myself and dog, as they also know how to treat us both.

G. N. BARKER.

The Indiana Five-Year Quail Prohibition.

"We learn to-day from good authority that the bill to prohibit the killing of quail in Indiana for the term of five years has not yet passed, and perhaps will not, but it will take quick work or we may as well give away our dogs and guns and be done with it.

It is the duty of every sportsman whose eyes fall on this to sit right down and write Capt. A. J. McCutchan at Indianapolis and beg him not only to work for the bill to stop the sale of game, but to sit down on the bill to stop the killing of quail for five years. The bill of Mr. I. Walter Sharp covers the case. That is the bill that Senator McCutchan and Representatives Kamp and Holloway should endorse. — LOUISVILLE TRIBUNE, Feb. 22.

New York Legislature.

There is nothing new to report with regard to legislation at Albany this week, except that the bill to consolidate the Fish and Forestry Commissions has passed the Senate.

All of the game bills are held back awaiting the action of the Senate Game Committee on its Omnibus bill. The committee will probably consider the bill and give a public hearing on it some day this week.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 9 to 12.—Pittsburgh—Duquesne K. C. W. E. Littel, Sec'y.

April 16 to 19—Boston.—New England Kennel Club. D. E. Loveand, Sec'y.

April 17 to 20. Los Angeles—Southern Cal. Kennel Club. Dr. R. J. Withers, Sec.

April 25 and 26.—Toronto, Canada.—Toronto Kennel Club. W. P. Fraser, Hon'y. Sec.

May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Nov. 28.—Trials A. U. S. F. T. Club at Newton, N.C. W. B Stafford, Sec'y, Trenton, Tenn.

POINTS AND FLUSHES.

STANCHNESS.

Some months ago, I received a letter from a well-known field trial handler, one whose thorough knowledge of field trial competition and related matters is conceded by all, wherein he touched upon the matter of staunchness, as required in a field trial competition of the present day.

Concerning it he writes: "I am quite surprised that a judge should consider that following the handler in to a flush is unsteadiness on the part of the dog. Nothing, in my judgment, is more disgustingly imbecile in a dog than when he remains standing on a point while his handler beats out the country forty feet in front, and twenty to each side of him trying to flush a bird. It appears to me that there could be no greater illustration of inaccuracy in locating than such a performance.

"I understand it that the purpose of a dog is to locate and point the birds, and I do not know of a more useful position for a dog than behind his handler when he is going in to flush. I do not understand how such an act can be considered as unsteadiness."

There was a time, not long ago, when I thought differently from Mr. Titus, but later developments in field trial competition convinces me that his opinion is correct. His objections to the usage, which governs staunchness on point in competition, are well taken. Still, it is only within a recent period that in this connection the weakness of field trial usage has become plainly manifest, as a result of some abuses which have crept in, and which seem to be growing greater with each succeeding trial.

As the theory of staunchnesss was originally considered and applied, it was not far from correct, though never wholly so. Nevertheless, the abuses which have been practiced, never could have gained a foothold had the judges been properly observant in guarding against them.

In theory, it seems perfectly correct to assume that a dog would make either a true point or a false point, and that the handler should walk ahead and flush the birds at a proper distance if the point be a true one, or that he should find nothing if the point be false, all of which theoretically seem so simple that there could be no possibility of a misunderstanding or an error, much more an abuse of it.

In practice, however, it is far from being so simple a matter. First of all there are very few dogs, comparatively, which will point their birds correctly; that is to say, ones which will draw or road with accuracy and self-reliance, stopping on point at the proper distance from them. The larger part of the field trial dogs are faulty in these qualities. They road hesitatingly on a hot trail and look to the handler for prompting and assistance. Many of them point at too great a distance from their birds, an act considered by some sportsmen as being surely indicative of a keen nose, on the assumption that such a dog is pointing by the body scent, though it is well known that many dogs will point on the foot scent, many yards from the birds, and require constant urging to make them advance to the proper place to point.

As to how the handler can determine when the dog has at last reached the proper place, it is easily explained. The handler knows his dog thoroughly. All the acts and certain expressions of the dog have certain meaning. Every dog has certain methods of roading or seeking, differing more or less from those of every other dog, and which by use become habitual.

A dog, pointing on footscent, never points so rigidly as when pointing on the body scent. As he makes point after point in his advances to the birds, he becomes more and more rigid, feathers more and his eyes become more lustrous and fixed. his attitude then being what the enthuisastic writers would mistakenly term cataleptic. The trainer, from having observed many repetitions of the act, knows just when the dog is on a true point, and he can juggle his dog foward so deftly and quietly by a low note on the whistle, or click of his tongue, that no one other than an expert would observe that it was really the trainer who was furnishing the ideas and impulse to the dog.

There are dogs which will point on any scent, as there are dogs which will point without any apparent reason for it. The dog which will point on a true scent, but will not locate his birds accurately, is the most difficult one to judge. But there is one infallible circumstance by which the judge can rate the dog's ability in this connection, namely, if the handler is constantly coaching and helping his dog to locate the birds, that dog is an inferior performer. He has a defective brain. As to their handling, dogs may be, in a way, divided into three classes, those which are deficient in brains or interest and require the assistance of their handlers in all of the details of their work; those which will do some parts of their work accurately and correctly, but which require more or less assistance from their handlers in other parts, and those which are capable, self-reliant, and skillful, and can work correctly on their own judgment.

Field trial judges have never made a sufficient distinction in these matters. If a dog was helped a great deal, so long as it was done smoothly and good results were obtained, it was accepted as a good performance, and I have even heard such work referred to as being high class. No dog is a high class performer, which can not perform well without the assistance of his handler in such parts of the work as are strictly within a good dog's powers and within what is required for good work to the gun afield.

Judges have accepted results at trials without giving proper heed as to the manner in which they were obtained. The point work of a handler and his dog, having the semblance of good work, was often accepted as equal to that of the independent dog. Separate these two classes of dogs from their handlers, so that each, in strange hands, would have to depend upon its own resources, the independent dogs would not vary in working up to their standard, while the others would drop from their sham standard to their true level, that of the mediocre.

Returning now to the consideration of staunchness on point

it can easily be shown how the practice in respect to it at field trials was an advantage to the faulty dog which needed assistance, and how it was a harm to the approximately perfect dog, the one which used his brains and capabilities in the most approved manner for the success of the gun. Supposing now that the faulty dog—using such term in the absence of a better one to designate the dog which works on the judgment and assistance of his handler—has made a point after the habitual prompting and assistance have been given him. The handler walks forward to flush. If he finds nothing, he says: "The birds have run, judge!" He then sends the dog on. Another point is established. The handler beats out the ground many yards ahead, and to the right and left of the dog, in places so out of consonance with the point that it would be absurd on any reasonable assumption to give the dog credit for a point, even if the birds were found. If the birds are found so far away from the pointing dog, or so far down wind of him, that it was palpable that he did not have a true point on them, the same old excuse serves again and again; that is, the birds had run. Under the unreasoning exactions and practice in respect to staunchness, how could the judges determine whether the birds had really run, or not, from the dog's piont? The practice clearly discriminates in favor of the dog which will point staunchly on a hot footscent.

Now, there are times, under certain conditions, when the birds are wild and restive, wherein they will run a great deal and lie badly to the dog's points, if at all. Under such conditions, the faulty dog will make an exceedingly poor showing. At such times, some handlers make a most undignified competition, rushing and scrambling to make a good showing for their dogs. It is a pleasure to state that the majority of handlers compete with the utmost fairness, and the tendency every year is toward a more precise observance of fairness in handling, but one handler who scrambles is a hardship on every one who does not.

Let us now suppose that the good dog makes a true point on the running birds. He is trained to hold his point after his handler passes ahead of him, till the latter beats out the ground to his satisfaction and orders the dog on. The sensible dog knows that the birds have run away, as shown by his graduat relaxation on his point and the lessening of his eager watchfulness for the order to go on again; but he must work after a set form, one which puts such restraints on his intelligence that the faulty dog benefits by it. If the intelligent dog were to move on while his handler were beating out the ground to the point, under the present system such act would likely be considered as a fault. If the dog were to leave his point and circle the running birds, to head them off and stop their running, as some exceptionally wise dogs will do, most judges would consider that the dog had blinked.

If the dog is faithfully working in the interests of the gun, and if he is intelligent and properly experienced, he knows quite as well as does the shooter, how to make the best success out of the find, in behalf of the gun. If the birds are running, when the handler walks past the dog, the latter, if he be intelligent and correctly handled, walks by his side, or a few feet ahead, leading on directly to the birds.

The faulty dog might follow at heel, or after pointing might give up all effort and trust to his handler to do the rest, being glad to evade any responsibility.

Undoubtedly, if unrestrained, some handler under any conditions would soon discover ways of making an apparently good performance with a faulty dog, by glossing over the faults and supplementing the dog's inefficiency by their own efforts, but an experienced judge can easily detect what part of the work is done by the dog and what part is done by the handler, and separate and value it accordingly. If the handlers once understood that the dog was judged by what he really did himself, it would soon result in a better grade of competition, and a better trained class of dogs.

In judging more consideration should be given to intelligence and knowledge and unassisted good performance in working to the gun, qualities which are expressively called bird sense.

Considering the field trial progress and growth of the last decade, there is much upon which sportsmen can congratulate themselves. The changes have been radical and great.

The first rules of the old heat system, which were based bodily upon the coursing rules which then obtained in England, and which as applied to field trials were original largely in pretense, held a place till many trials had many times exposed to competitors their wretched inefficiency, and intelligent criticism had exposed it to the world. They were merely the swaddling clothes of the early field trial, used longer than they were fit. The public had been educated up to a much higher plane long before the first rule, with their cumulations of fallacy and bad English, were rejected. When the National Field Trial Club went into desuetude, the old rule accompanied it. A new club sprung up, entirely new rules were adopted, but they were all founded on the same erroneous theory, that is, the theory of coursing, which, as applied to coursing, is excellent, as in it there are but two things to consider, speed and quickness in turning, but which, as applied to the many complex and interdependent details of the work of setters and pointers, is absurd.

Finally, the heat system was rejected in toto, and the spotting system was adopted instead. This system obtains at the present time throughout the United States and Canada, and one can safely predict that the old heat system of conducting field trials is gone forever. There are some undesirable circumstances of handling, which have been passed down from the time when jockeying was more prevalent than it is at present, of which also it may be predicted that they will soon disappear. As soon as it is known that there is a firm public sentiment against all the little unfair practices and petty meannesses, such as whistling to turn an opponent's dog, or to balk or call him off a scent when roading, or off a point, if pointing, or to hurry in to flush scattered birds so an opponent's dog can not secure points, etc., just so soon will those practices be abandoned. If judges were to make a rule to the end that, if any dog be interfered with, intentionally or unintentionally, such dog will be run thereafter alone and given full opportunity to display his abilities, the trouble from cunning interference would soon cease. Finding that such acts failed in the end, those handlers, who now and then use such methods, would soon abandon them.

In any event, the matter of staunchness, which is always a constant and important consideration in the competition, should be so valued and managed that it would be in consonance with the competition and with the purposes of a dog in actual work to the gun afield.

The season has arrived when the field trial trainers and handlers get restless and stretch themselves for flight. In a letter, recently received from Messrs. Mayfield and Richards, Vinton, Miss., where they have been stopping since the trials ended, they report a very satisfactory winter season, and mentioned that they would hie northward about April 1.

B. WATERS.

E. F. T. Club Meeting.

The special meeting of the E. F. T. Club was called to order in Mr. F. R. Hitchcock's office, 67 Wall street, about 2 o'clock P. M., March 26, Mr. Pierre Lorillard, Jr., presided. There were present, Messrs. Carter, Orr, Ewing, Hodgman, Meares and Hitchcock. The constitution was amended so that three of the Board of Governors constituted a quorum, and five members of the club are a club quorum. Messrs. Sturgis and Phelps were admitted to membership. The club has 5,179 acres of grounds at Newton, N. C. Both the Continental Field Trials Club and the U. S. F. T. C. presented propositions to run trials in conjunction with those of the Eastern Club. The proposition of the former club was accepted, and the Continental Club will hold its first quail trials at Newton, N. C. Messrs. Lorillard and Hitchcock were appointed a committee on judges.

Gordon Setters.

Sistersville, W. Va.—In looking over the back numbers of Forest and Stream, I read the following remark, by Mr. Hough: "He is one of the despised Gordons." At the first reading of the item, I had a Gordon pup with whose dam I had hunted. The bitch was an excellent one. I supposed that she was an exception, if the Gordons are a despised breed.

I was greatly surprised to find that my pup was one of the best dogs I ever shot over. Fate robbed me of him, but fortunately a Gordon bitch whelped a fine litter of pups by him, and I purchased one. He was left entirely to himself, and, when I went on a trip after quail last December, I took him along, rather as an apology for a dog. He had chased birds all summer and, in fact, behaved in such a manner that I expected to see him chase the quail into the next county.

Our first flock flushed wild and scattered in the woods. My pup made point after point in the brush, and was steady to wing. Now note this, he was rushing along in the woods at a gallop, when I saw him make a sliding stop, and turn his head over his shoulder. He remained in that position until I walked in behind him and flushed the quail. He also, without training, remember, was steady to shot, with three double guns fired over him. After the first excitement, when the wire edge was worn off, he dropped to shot like a veteran.

These two Gordons I have owned, and the dam I shot over. I never saw either of them unsteady to wing or shot, nor willfully flush a bird, nor chase a rabbit. The dam would run away from a rabbit, and the pups only show a genteel interest in one.

They are simply tireless—fast and wide rangers, excellent and hardy fellows for all-round shooting.

What I wish to ask is, are those the reasons for despising the Gordon? Why are they not more in favor?. What are the faults, if any, of the Gordon setter?

J. H. PIERCE.

The New England Kennel Club.

Boston.—Through an error we published in our premium list the American Spaniel Club's old classification No. 1, not thinking for a moment there had been a change until advised by Mr. Keasbey, secretary of that club, that such was the case. It was furthest from our intentions to provide other than the best classification of that club.

We therefore withdraw that part of our premium list which says "American Spaniel Club Classification No. 1."

Had we been advised sooner of our mistake, we should have made our classification to conform to their more recent one, but, at this late day, much as we regret it, fail to see how we can do otherwise than adhere to our original one. Additional specials: From Pointer Club of America, $10 respectively for best pointer dog and bitch in open classes. The Collie Club of America offers a silver medal respectively for the best dog and bitch in open class, and a bronze medal respectively for the best dog and bitch in the puppy class. The Bedlington Terrier Club offers $5 for the best Aemrican-bred Bedlington terrier. Everything is booming.

D. E. LOVELAND, Sec.

DOG CHAT

Mr. Samuel H. Roberts, of Pawntucket, R. I., writes: "I have leased the shooting privilege of a large farm, and intend to secure some more quail from the South and put them out according to my own idea. Last year the birds were liberated in accordance with the ideas of a committee, and I believe I can obtain even better results than were obtained a year ago. The boys here are after some rabbits, and have subscribed $125, and I placed an order for some white ones yesterday. Chapman is now engaged trapping them. The sportsmen in Providence are also going into the scheme. The State Game Association is endeavoring to have the game laws amended, and they have commenced in the right way. Before the close of the present session of the Legislature, Rhode Island expects to have an ideal game law. The State Fair is arranging for the fall show. A more liberal classification and a little more consideration for the handlers is all that is necessary to make this the second show to New York."

Mr. F. L. Cheeny, Pittsfield, Mass., informs us of his misfortune in losing his valuable setter bitch. Under date of March 20, he writes: "I write, with regret, of the death of my Irish setter bitch Daisy (Chief—Leigh Doane), caused by lead poisoning. She was a faithful friend, and no man need ask for a better grouse and woodcock dog. She was a field and bench winner, and the dam of the field-trial winner Molleen and many other good ones. Her place will be hard to fill, both afield and at home."

In the absence of his brother, Dr. Bruette, who was confined to his room with a severe cold, Mr. William Bruette attended faithfully to the veterinary duties connected with the Chicago show.

When the Detroit and Chicago shows come round, Dr. H. Clay Glover generally makes up his mind that his Western interests require his personal attention, so we were not surprised to drop across him at these shows. Although not officially connected with the Chicago show, he was repeatedly consulted by the "regulars" during the week, and the benefit of his large experience was always at their command.

Mr. W. J. Higginson, 3 Gregory street, Rochester, N. Y., write us that there will be a meeting of the breeders, fanciers and lovers of the bull terrier at the forthcoming show of the Duquesne Kennel Club, with a view to forming a permanent organization in the interests of the breed of bull terriers. It will be held at Hotel Schlosser, April 10, at 8 p. m.

The Mere Kennels, Tarrytown, N. Y., weere exceedingly unfortunate in losing Blemton Victor (Victor II—Vindex II), an eleven months' old puppy, purchased of the Blemton Kennels soon after the New York show. He was turned out for exercise with the other dogs on March 2, and although they had treated him with friendliness previously, the older dogs there tackled and worried him, injuring him so severely by the rough treatment that he died a few days afterward. He made no outcry, otherwise Mr. Browning, the manager, who was near by at the time, could have saved him.

We publish this week a portrait of Delhi (Rip Rap—Queen II). He is owned by the Charlottesville Field Trial Kennels. He was the most successful young pointer of the past season, and, besides making a good showing in the records, he won the good opinions and praises of the sportsmen who saw him perform.

A correspondent writes us as follows: "Some years ago, I read an article in Forest and Stream regarding the use of pointers for hunting squirrels in the South. Who can I address for information concerning the matter? Perhaps some of our Southern readers can give information as to the use of pointers as squirrel dogs.

Mr. P. T. Madison, Sec.-Treas. of the Continental Field Trial Club, has issued a circular from which the following excerpt is taken: "The constitution, by-laws and rules are models of perfection, and are vastly different from any yet formulated by other clubs. They are now in the printer's hands and will be ready for mailing in a few days. It was decided to have no membership fee, but make the annual dues payable in advance, and, owing to the large number of responses to the invitation to become charter members, the annual dues were placed at only ten dollars. In order that there may be no delay in placing the club in a position to do business at once, the secretary was instructed to request the members to remit their dues immediately. It was also deemed advisable to double the membership as soon as possible. I therefore take this opportunity of publicly inviting the gentlemen sportsmen of America to become members, and thereby assist us in making the Continental the grandest field trial club ever organized in the world."

Duquesne Kennel Club.

Pittsburg.—Through an error, our premium list shows a class for American shaggy foxhounds. That is a mistake. Our classes for foxhounds are English foxhounds and American foxhounds. The Collie Club of America offers for competition to members of the Collie Club of America only, a silver medal for the best collie exhibited and a bronze medal for the best collie entered in the puppy classes.

JOHN MOORHEAD, President.

Wolfhounds at New York.

Hamilton, Canada.—You must pardon me for replying to the criticism of the Russian wolfhounds at the New York show which appeared in Forest and Stream of a recent issue, and which was signed Highland.

In his remarks on our new importation, Ataman IV., he states that "Ataman IV., a new comer, made here his debut in the open dog class, and while he had the easiest of an easy win, it was due entirely to the fact that he virtually had no competition, scarcely a dog in the class being in fit condition to show at a country fair."

In reply to this I make public my claim that Ataman IV. is the finest Russian wolfhound that has ever been imported into this country (that is, of those which have ever been exhibited—of others I know nothing), and that he can win over any other dog that has ever been shown.

Further on the article states that Ataman is "possessed of a very short neck"—and still further on it states that he is too straight in hind legs. This is surely enough to prove the qualifications of the would-be criticiser to criticise wolfhounds. From this, one would beleive that this breed of dogs should have long necks, the same as greyhounds, size for size. And that they should not have straight legs, much straighter than the greyhounds, size for size.

I certainly do not claim that Ataman is a faultless dog, for he certainly is not; but I do claim and am willing to back it up, as aforesaid, that he is the best Russian wolfhound at the present time before the public.

WILLIAM J. TULK,
Manager Terra Cotta Kennels.

Concerning Dogs and Foxes.

Ozark, Ark.—As I pen this letter, a red fox's skin, the first I ever saw, lies before me. The fox, which was evidently a young one, reared near where it was shot, and whelped last spring, was killed within four miles of this town, and in my favorite hunting grounds. No red foxes have been liberated in this State, so far as I have been able to learn, and the one killed must be the forerunner of a general movement of these animals Southwest. Joel Chandler Harris, in a charming article in the Century Magazine, entitled, "The Mystery of the Red Fox," says that the red fox has been gradually moving southwest for years, and that he drives out the gray fox wherever he goes. Near where this fox was killed, we have frequently run a fox which would apparently enjoy a chase of six or seven hours. I am satisfied this was a red fox, the sire or dam of the one killed. They are likely to become very plentiful here. I have heard that they could not be caught with hounds. Is this true? I am inclined to think that a cross between a fox hound and pointer would make a red fox hustle to get away, but never heard of such a cross being used in fox hunting. G. A. M.

Wolf Hunting With the Airedale Hounds.

Pipestone, Minn.—Editor Forest and Stream: It was on a lovely, balmy morning, with a southerly wind blowing and a slight dampness in the air, that my brother and I started from our kennels with seven couples of English foxhounds, to draw for a wolf that our neighbors had reported as having been seen very often within reasonable distance from us. Trotting quickly about eight miles, we shortly arrived at a good sportsman's place, a Mr. Cooper, who, mounting an old mare, gladly offered his services as pioneer to the rushes where he had several times seen the dog and vixen, with an odd cub or two.

I carefully drew this, but bar an occasional whimper, which showed that our quarry had been there lately, proved blank, and we had to look further. Then we steadily drew every likely-looking slough and run that we came to on our way without any result. About two in the afternoon, as we were slowly returning home, having just passed through a very likely tree-claim with a freshly eaten carcase of a horse in it, my brother came galloping up with the news that he had just viewed either a large collie dog or a wolf disappearing over the crest of a hill. I immediately collected the hounds and cantered up. Evidently there was something afoot, as the hounds had their heads up, feeling the intoxicating scent in air, and yet unable to quite start. My brother showed me the exact place he had seen the object as we drew nearer, but there was little need of it, as with a dash and a burst of music, the whole pack flung themselves gladly on the line.

Then what a gallop! We ran for about two miles and then came to a draw running in an easterly and westerly direction, the pack splitting, some running this way and some that. Luckily, at this critical moment, we caught a view of the wolf stealing down a dead furrow, and immediately got the hounds to the spot. They then settled and ran by section lines beautifully for about six miles. There the hounds clearly had simply run themselves out of scent, as by the time I had made a cast forward they took up the line and ran again with as great a vim and dash as ever. Another mile or so and we came to another tree-claim. As the hounds ran, simply screaming through this cave, we saw our wolf, dead beaten, with brush between his legs, dragging himself slowly along. At this juncture, I should have been able to have lifted the hounds to view, but a barb-wire fence intervened, and by the time we had broken the wire and torn the staples out, he had gained considerably. However, we got the hounds settled, though all were beginning to feel the effects of the cracking pace we had come. The wolf began to run with the usual cunning of its kind, and never another view for two miles of slow hunting down the small ice ponds and the dry course of the Flandreau Creek, till we saw it stealing up the side of a hill and disappear in some long grass. Then the four leading hounds faced as if for a view, when amongst them up jumped the wolf, with the hounds snapping at its brush, and with one supreme effort, succeeded in getting under a farmer's granary, where, after a lot of trouble, we ultimately managed to dislodge it, and after a short worry by the hounds, we ended the stout-hearted varmint's life by a hit on the head with a hunting crop. The distance altogether traversed in the run was about sixteen miles. The wolf weighed forty pounds.

EDWARD A. CASS, Huntsman.

The International Trials.

Chatham, Ont., *Editor Forest and Stream:* A few more lines, and I have done with the International Trials of 1894. For Mr. Davidson's information, I would say that I was not the reporter, nor had I anything to do with the reports in any way whatever.

Mr. Davidson is in error when he says that, in the trials of 1893, Tobe got second without an opportunity of being put down with the winner of first. The facts were: Tobe had just run a long heat with Ightfield Musa, had beaten her, and was called to go down with Cleopatra Mr. Davy asked for time to rest his dog, and a discussion arose as to the interpretation of Rule IX., which was left to the committee, who decided that the winners of first and second must run together. Then someone suggested—Mr. Davidson, I think—that as all wanted to get away, if the owners would consent to waive the rule, the judges could decide at once. Mr. Davy and myself, being the interested parties, expressed our willingness to do so, and the decision was given.

Mr. Davidson seems to object to my running to my dog when on point, a long distance off in timber, and says a dog is much more apt to impress the judges, whose handler walks quietly and leisurely up to the dog when he points, than one that has to be reached in the speediest manner possible. I fail to remember where Tobe or any other dog in the stake made a point at anything like the distance from his handler, that Luke did; so I don't see where he draws the comparison. It seems to me, however, that the judges are there to decide on facts, not by inference.

I got my information as to his opinion of the Toledo Blade from himself, so there is no imagination about it.

Mr. Davidson says he understands I am breeding to Brighton Tobe, and that I may expect to get more independence into my kennel by the cross As I did breed to him partly on Mr. Davidson's advice, he would greatly oblige me if he would tell me from which blood I may expect the most independence—the Irish or the native?—because, if I knew, I might, by breeding to a pure Irish or a pure native, get more of the desired quaity which I so much lack. Unfortunately, or fortunately, the bitch missed.

Manitoba Frisk, who has the same native blood in him, was no doubt a good dog, but he was not good enough to prevent, in a private trial, my winning a new hat from his master, with a son of old Mingo, Wm. Brailsford being the judge. Mr. Davidson has no doubt heard the old adage, "One swallow does not make a summer." It would be well for him to bear it in mind when writing about the natives and cross breeds. W. B. WELLS.

(There is nothing to be gained by continuing this discussion.)

Spaniel Club Meeting.

A meeting of the executive committee of the American Spaniel Club was held at the office of Dr. S. J. Bradbury, 110 East Twenty-second street, New York, Tuesday evening, March 19. Present: Messrs. E. M. Oldham, Dr. Bradbury and M. A. Viti; Mr. Oldham in the chair; Mr. Viti, secretary pro tem. Secretary reported receipt of a letter from the American Kennel Club, stating that it was the sense of that body that the specials presented by Geo. Bell to the Spaniel Club were vested in that club and could be offered as heretofore. Treasurer's report showed a balance of $200.25. Committee on Specials reported that the Duquesne Kennel Club, of Pittsburg, having complied with the Spaniel Club rules, the Whitehead trophy and Bell cup be offered at their show; also that the New England Kennel Club having complied with the rules, the St. Lawrence trophy, the Bell paintings and the Saybrook trophy be offered. The secretary reported that the New England Kennel Club had adopted the old classification instead of the new classification, and that he had written calling attention to the error. Messrs. Dr. Bradbury and Keasbey were appointed a committee to communicate with the N. E. K. C., and given power to act. Dr. Bradbury moved that sweepstakes be opened at W. K. C. show, 1896, to be known as the American Spaniel Club Sweepstakes for all sporting spaniels whelped in 1895; nominations to be made not later than September 1, 1895, and to be accompanied by forfeit of $2; second forfeit $3, to be paid January 1, 1896. Entries on which forfeits are not paid on the stipulated dates shall be thereby declared out. At least $25 will be added to the stake and the divisions will be 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, 10 per cent. to fourth. Open to club members only.

The Fox-Terrier.

A third and greatly enlarged edition of the "Fox Terrier," Mr. Rawdon Lee's monograph on that gamest of little dogs whose name it bears, has recently been issued from the press. It now contains 239 pages, and is a model of neat typographical work. There is nothing pertaining to the fox terrier of which it does not treat; his history, varieties, derivation, qualities, breeding, training and working, rearing, care, treatment, kennel management, preparing for shows, etc., are set forth in a most pleasing and instructive manner; indeed there is not a dull line in the work. Among the illustrations are portraits of celebrated dogs. There is in it much of value to the owners of any breed of small dogs. It is a most valuable acquisition to kennel literature, and a credit to its author.

National Beagle Club of America.

A regular quarterly meeting of the National Beagle Club of America will be held at the A. K. C. rooms, 44 Broadway, April 5, 1895, at 4 P. M. GEO. W. ROGERS, Sec.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

QUEEN ROY.—By Arthur E. Davis, Worcester, Mass., for blue belton English setter bitch, by Sig. Gladstone—Nellie H.

BLUFF.—By Dr. N. E. Oliver, Thornton, Ill., for Gordon setter dog, whelped Aug. 17, 1894, by Lawn Regnald—Lawn Hilda.

LAWN FLOSSIE.—By Maude B. Worth, for Irish setter bitch, whelped Oct. 15, 184, by Lord Elcho, Jr.—Ruby.

LAWN BUDD, LAWN BUTTON, LAWN BONNIE.—By Lawn Gordon Setter Kennels, for Gordon setter bitch, by Lawn Chieftain—Lawn Fayaway, and two dogs by Lawn Chieftain—Pretty Belle.

BRED.

Prepared Blanks sent free on application.

M. O'Brien's beagle bitch, to Tricotrim, Dec. 14, 1894.
Standard Kennels' beagle bitch Winnie K, to Tricotrim, Jan. 15.
Standard Kennels' beagle bitch Standard Perfection, to Tricotrim, Jan. 25.
Standard Kennels' beagle bitch Velvet, to Tricotrim, Jan. 27.
Fred. Brown's beagle bitch Nellie, to Tricotrim, Feb. 1.
Dr. Gardner's beagle bitch Una II., to Tricotrim, March 1.
M. O'Brien's beagle bitch Flossie, to Tricotrim, March 7.
E. Goodall's cocker bitch Rideau Rill, to Corktown Cupid, Jan. 4.
W. J. McGrath's cocker bitch Dot, to Corktown Cupid, Jan. 30.
Corktown Kennels' bitch Dot Smirle, to Red Obo, Feb. 15.
Corktown Kennels' cocker bitch Oenone, to Nerve, Feb. 15.
Dr. Jas. Ferris Belt's foxterrier bitch Adelina, to Hillside Royal, March 2.
Dr. Jas. Ferris Belt's foxterrier bitch Columbia, to Hillside Royal, Feb. 26.
Dr. Jas. Ferris Belt's foxterrier bitch Winning Hand, to Hillside Royal, March 1.
Herbert Bruso's English setter bitch White Lady, to Kent III., March 3.
Onota Kennels' Irish setter bitch Daisy, to Plunket's Lad, Feb. 2.
Onota Kennels' Irish setter bitch Alice Kent, to Plunket's Lad, Feb. 11
Onota Kennels' Irish setter bitch Molleen, to Inchiquin, Feb. 16.
Onota Kennels' Irish setter bitch Deloraine, to Plunket's Lad, Feb. 23.
Wm. Mariner's dachshunde bitch Gipsy, to Sandy, Feb. 17.
Eberhart Pug Kennels' pug bitch La Belle Senora, to Bradford Ruby II., Feb. 7.
E. F. Fishback's pug bitch Pet, to Bradford Ruby II., Dec. 26.
H. T. Foote's foxterrier bitch Whittle, to Brittle, Feb. 5.
Edward Watt's English setter bitch Beene, to Kent II., Feb. 20.

SALES.

Prepared Blanks sent free on application.

LINDEN TREFOIL.—Collie dog, by The Squire—Linden Mischief, by George Noyes Boyd, Concord, to the Seminole Kennels' Philadelphia.

QUENTIN.—White and black bulldog, whelped Dec. 2, 1894, by King Lud—Careless, by J. Danforth Bush, Wilmington, Del., to J. R. Painter, Philadelphia.

Two Irish setter bitch puppies, by Kildare—Luna, and Chief—Floss II., by Muckross Kennels, Springfield, Vt., to E. J. Husted, Gloucester City, N. J.

WAWASET BARON.—White, black and tan foxterrier bitch, whelped Dec. 10, 1893, by Holster—Hillside Freedom, by Dr. Jas. Ferris Belt, Wilmington, Del., to Mr. T. D. May, Chicago.

COLUMBIA.—White and black foxterrier bitch, whelped Oct. 3, 1893, by Declare—Winning Hand, by Dr. Jas. Ferris Belt, to Mr. Neil Lumaree, Wabash, Ind.

WINNING HAND.—White and black foxterrier bitch, by Champion Raffle—Warren Jostle, by Dr. Jas. Ferris Belt, to Mr. J. E. Dalton, Glenolden, Pa.

Black dog puppy, whelped April 22, 1894, by Commodore—My Lady Jane, by F. W. Kitchell, Perth Amboy, N. J., to A. C. Wilmerding, New York.

Black dog puppy, whelped June 11, 1894, by Othello—Ladybug, by F. W. Kitchel, to A. C. Wilmerding, New York.

Black dog puppy, whelped June 11, by Othello—Ladybug, by F. W. Kitchel, Perth Amboy, N. J., to A. C. Wilmerding, New York.

Buff dog puppy, whelped June 11, 1894, by Othello—Ladybug, by F. W. Kitchel, Perth Amboy, N. J., to Dr. Phillips, Deerfield street, N. J.

Black dog puppy, whelped Nov. 5, 1894, by Jasper—My Lady Jane, by F. W. Kitchel, to Miss Smith, St. Paul, Minn.

Black bitch, whelped Nov. 5, 1894, by Jasper—My Lady Jane, by F. W. Kitchel, to Miss Henderson, New York.

Black dog, whelped April 22, by Commodore—My Lady Jane, by F. W. Kitchel, to W. McDermott, Perth Amboy, N. J.

ANSWERS TO CORRESPONDENTS.

S. R. Washington, D. C.—Drop Shot is by Dick Swiveller (Champion Graphic—Champion Mealy), out of Bloom (Bang Bang, 4022—Bessie).

H. C. D., New York.—My bitch seems to be in good health, but shows no signs of coming in season. Please prescribe.—Ans.: Try manganese bi-oxide, given in the form of tablets, one grain each Give one three times a day after food.

W. W. B., Lawrence, Mass.—There is a black and white cross in the ancestry somewhere, which color reappears in the litter, notwithstanding the sire and dam are liver and white. It is a recognized pointer color, and no cause for dissatisfaction.

CONSTANT READER, Providence.—Blemton Rattler, 19661, by Venio (Vesuvian—Venilia), out of Rachel, 7002 (Result, E, 15874—Heatherbell). We can find no record of the other. Note our rule concerning anonymous communications.

Y.—What is a remedy for warts in a dog's mouth?—Ans.: Remove the warts with a pair of scissors and cauterize with nitrate of silver. Do not remove too many at once—say about 20 or 30 each day.

T. B. E., Philadelphia.—1. Address the International News Co., 83 Duane street, New York. Yearly, 15 shillings. 2. Brantford Rufus is by Brantford Red Jacket (Brant—Woodstock Dinah), out of Brantford Bonita (Brant—Bonita).

W. C. R., White River Junction, Vt.—My foxhound, eighteen months old, had distemper four months ago, and it left a trace of it in his head, which he shakes badly, scratches his ears and groans while doing so; is lively and in good flesh.—Ans.: Use the following as directed:

Boardman's Handbook of the Turf, from the press of the Orange Judd Company, is characterized by its author as a work within whose pages he has attempted the compression of what is believed to be the greatest body of information about the horse in his relation to drivers, sulkys, tracks, riding, trotting, racing and the laws pertaining thereto that has ever appeared in a single volume in this country. In doing this, his aim has been to produce a book of reference, the usefulness of which will render its possession material to every intelligent individual who breeds, trains, rides, cares for or loves a horse. The result is a book of more than 300 pages arranged in a convenient way for ready reference. Price $1

MASSACHUSETTS MATTERS.

As is generally the case the trout season in Massachusetts promises to open with considerable ice in the streams and ponds, especially in the interior and western part of the State. April 1 seems too early for the opening day, but such is the law, and if the trout still declines to rise to the fly, there are the worm and the minnow bait. Considerable preparation is being made for the opening, by fishermen who frequent the ponds and streams on the Cape. The members of the Monument Club will be on hand as usual. C. M. Holmes' place will be open on the 1st of April at Marshpee, and a number of fishermen are expected there. This is the resort frequently visited by Actor Joseph Jefferson and President Cleveland and party. There are some noble trout brooks in that vicinity, but alas! they are about all controlled by the rich and influential! Mr. Mark Hollingsworth will be there early this spring, for I understand that he is interested in a cottage there. Later he usually goes to the Rangeleys after big trout.

A petition is being circulated among Boston merchants, protesting against the proposition now before the Legislator to allow of the sale of cultivated trout in February and March. It is the same Gilbert bill, though I hear that Mr. Gilbert protests that he has nothing to do with it this time. The petition is being numerously signed, and even if the bill passes both houses, Governor Greenhalge is expected to veto it. One of the prayers of the promulgators of the measure is that "the poor may have cheap trout." This sounds well, but is anybody fool enough to be fooled thereby? The measure is catchingly drawn, but the well informed laugh at it.

Several deer, freshly killed, have lately appeared in the Boston markets. They are Maine deer, without a doubt, though it is in the midst of the close season. The hair on the hides is exceedingly long and thick, indicating plainly that the deer have been spending the winter where it is extremely cold. How did they get into the markets here? This is a question for the Maine game protectors. Were they crusted? One of them which I saw on Saturday, had a bullet hole in the side, just back of the shoulder, or rather it was more like the ugly wound that would be made by a shotgun at close range. The deer was very thin in flesh, and good for nothing in the market. The marketmen admit that they take the first offer that is made for them. It is too much to hope that sometime all marketing of game is to be stopped, as the Forest and Stream is advocating. It is too much to hope that out of the $25,000 that Maine is to give per annum for the protection and propagation of fish and game, that there will be money enough to stop this shameful shipment of game to the Boston markets? Will the new system of wardens and the new commission be able to stop the crusting of deer? The $25,000 appropriation bill has passed both branches of the legislature, and the new commission bill has also passed. Both only await the signature of the governor, at the time of this writing.

On the other hand the bill to prevent all fishing in B. Pond, except with artificial flies, seems likely to become a law. It will be remembered that it got as far as the governor, when Mr. Gilbert, of Canton, desired it recalled, and moved a reconsideration. The reconsideration was lost in the Senate, however, and the bill goes back to the governor. Mr. Gilbert claims that this bill is entirely in the interest of "the sport," as against the citizen. B. Pond is the fishing ground of Ex-Gov. Russell, of Massachusetts, and his friends.

A tremendous seizure of short lobsters has just been made in Boston. Detective Proctor captured over 5,000 of these illegal lobsters on Thursday. He was accompanied by District Police Detectives Rhoades, Hammond and Whitney and State officer Mullen. His first capture was made at Lewis' Wharf. From the steamer he siezed ten crates of shorts, and waited for a receiver to put in an appearance. Finally the receiver stepped forward and claimed that the lobsters were not intended for Boston at all, but were to be sent to New York. He desired the steamboat people to forward them to that city, but they declined to have anything more to do with them; hence they were consigned to Boston harbor by the officers. Boston lobster fishermen will be the gainers by about 2,000 lobsters, put out to grow.

The officers then proceeded to the freight division of the New York, Hartford and New Haven Railroad. Here they found over 3,000 short lobsters, in crates and barrels. These were possibly on the way to New York. The lobsters were pronounced the shortest ever seized here. In one instance, about 250 of them could be got into a barrel. The names of the shippers could not be ascertained. It was certain that they did not come from The Provinces, and Maine or New Hampshire—doubtless the former—is the guilty State. In every instance the receivers declared that the lobsters came without their orders; that they had notified the shippers, in fact, to send them no more short lobsters. SPECIAL.

THE SPORTSMEN'S EXPOSITION.

Among the applicants for information regarding the Sportsman's Exposition and the reduced railroad rates, there are judges, doctors of law and divinity, lawyers, civil engineers and manufacturers. The applicants reside in remote parts of the country, including Texas, Oregon, California, Idaho, Maryland, Virginia, Maine, North Carolina, Tennessee and Florida. The following additions to the list of exhibitors have been received during the past week:

A. J. Rich Company, Wright & Ditson, Marlin Fire Arms Company, George Barnard, Peck & Snyder, Lamb Manufacturing Company, St. Lawrence Boat Company, S. L. Crosby, Studer's Bird of No. American Natural Science Ass'n, Leroy Shot and Lead Works, Excelsior Target Company.

Mr. E. W. Pond, late of the U. S. Net and Twine Co., has gone into the manufacture of fishing tackle on his own account. He is well-known among the trade and is an experienced angler, fly-fisher and long-distance caster. Mr. Pond was formerly with the Horton Manufacturing Company, and will be remembered as their representative at the World's Fair.—Adv.

Always Strong and Happy is the title of a book on physical culture, by J. R. Judd, from the press of the Outing Publishing Company. This is a practical treatise on the care of the human body, including full directions for the development of the muscular system, and is designed as an aid to persons of sedentary habits, as well as those desiring a higher system of physical development. The author gives much valuable information with regard to training for various athletic events. Price $1.50

Answers to Correspondents.

J. S., Stevens Point, Wis.—What is the difference, if any, in the shooting qualities of ten and twelve gauge guns, and which will have the most powerful effect?—Ans.: The ten guage shoots a heavier charge than the twelve, and other things being equal, has a larger killing circle. Ten gauges also, as a general thing, make better patterns with large sizes of shot than twelve gauges. There is little, if any, difference in penetration, however between the bores.

J. B. S., Chestnut Hill, Pa.—Could you inform me in your columns, 1. If, according to Stoddard's map of the Adirondacks (1894) there is a road coming out of Nehasane Park on its northern boundary 3 1-2 mi. air line W. from Mud Lake and running N. W. through Township 15, State Park, St. Lawrence Co., south of Benson Mines, twice crossing the headwaters of the Oswegatchie River before the latter reaches Cranberry Lake? 2. If this river (Oswegatchie) is navigable in the least extent for a light canoe between these two points of crossing? 3. Where I can find a map (survey or otherwise) showing the northern boundary of Nehasane Park from Mud Lake westward, also the country immediately to the north—map to be on a larger scale and more minute information than Stoddard's? 4. The address of any of the owners of the new Connell Preserve, immediately north of Nehasane, as shown in your issue of Dec. 22, 1894, but not marked in Stoddard's last publ cation? Ans.: 1. There is an unimproved road or trail marked on the map substantially as described. 2. There are falls on the river, and while we have no exact information, we hardly think you would find it navigable between the points named. Write to the New York Forestry Commission for their large may 4. The tract is owned by Mr. D. C. Connell, of New York City.

Time to Think About It.

What you and I had better do, after this very unsatisfactory winter moping around home here, is to go down, or up, to Virginia and West Virginia, and have a real, bona fide outing. I think I can find that old sportsman. He is not so old but he has full knowledge of all the new-fangled fishing-tackle and shooting-irons that we use nowadays. He knows all about Virginia and West Virginia. The hills and gorges and defiles are filled with game this year more than ever before. So I hear. Partridge, wild turkey, grouse, pheasant, wild pigeon, quail, rabbit and squirrel are so plenty that they are running and flying all over one another in the narrow passes. Then, if we want real, live sport, we can go back thirty or forty miles from the railroad track and hunt deer and b'ar.

But we must keep out of trouble with the game laws. Every true sportsman does that, of course; not for fear of the law, but on the ground that game is entitled to a chance to increase and multiply on the face of the earth, same as—well—never mind that. What I was going to say is that I have precise directions about all that, in Virginia and West Virginia. My friend, Charles O. Scull, chief of the Passenger Department of the Baltimore and Ohio Railroad, Baltimore, Md., has just sent me a neat little leaflet telling how to get there—all about the close seasons for game and fish. Write and tell him that you want one—that you feel run down, aching for a sight at something, want to see how the fish bite down there. Mr. Scull will see you get one.

But, wait! I forgot about the fish. The South Branch of the Potomac has the best black bass in America, and they bite harder than Hamlet's shrewd and nipping air. The Cheat, Youghiogheny, Potomac and Monongahela are all great fishing streams. And they are all convenient to Baltimore and Ohio Railroad stations—some of them right there, guides waiting for a job at one dollar and a half a day, and "found." Write Mr. Scull. It is time to think about it.—Adv.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 9-11.—BURLINGTON, Ia.—Tournament of the Big Four Gun Club.

April 9-11.—WELLINGTON, Mass. Three days tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager

April 9-12.—LONDON, Ont.—Three days' live-bird and target tournament; $100 guaranteed; experts handicapped by distance and unknown angles. John Parker, Detroit, Mich., manager.

April 11.—MAPLEWOOD, N. J.—All day shoot of the Maplewood Gun Club, in connection with the April tournament of the New Jersey Trapshooters' League. O. L. Yeoman, Sec., Orange, N. J.

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth, Sec.

April 15.—PHILADELPHIA, Pa.—All day shoot of the Forest Gun Club at its grounds, 27th and Lehigh avenue; targets. William Morison, Sec., 1913 Ridge avenue, Philadelphia, Pa.

April 15.—BALTIMORE, Md.—All day shoot of the Standard Gun Club at Point Breeze. W. F. Clements Sec'y.

April 15-18.—ATCHISON, Kas.—Twelfth annual tournament of the Atchison Gun Club. Lou Erhardt Sec. and Manager.

April 16-18.—PITTSBURG, Pa.—Tournament of the Interstate Association, at Pittsburg, Pa, under the auspices of the Pittsburg Gun Club, $200 added money.

April 17, 18.—AUBURN, N. Y.—Two days' tournament of the Auburn Gun Club; open to all. C. E. Goodrich, Secretary.

April 17-19.—CANTON, Ill.—Annual spring tournament of the Canton Shooting Club.

April 23, 24.—BATTLE CREEK, Mich.—Annual tournament of the Michigan State Trap-Shooters' League. Annual meeting and election of officers on the evening of the first day. W. H. Willard, Secretary.

April 22-27.—KANSAS CITY, Mo.—Eighteenth annual tournament of the Missouri State Game and Fish Protective Association. W V. Rieger, Sec.

April 23-24.—ELIZABETH, N. J.—Third bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds; events open to all. Robt. E. Chetwood, Pres.

April 23-25.—GALESBURG, Ill.—Tournament of the Galesburg Shooting Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club; first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O.; $200 added money. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—EAST MCKEESPORT, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament under the auspices of the Interstate Association; targets; $500 added money. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-14.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith Sec'y.

June 13-15—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee Sec.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

Control of Trap-Shooting.

Owing to unavoidable delay on the part of the attorney who was requested to pass upon the proposed by-laws for a national association, the approved copies of the same were not received until Tuesday morning of this week, too late for insertion in this issue. Printed copies of the same, however, will be ready for distribution at the meeting of April 3.

This is the last opportunity that Forest and Stream will have of advocating the organization of a governing or regulating body for trapshooting, prior to the adjourned meeting set for the above date. That such an association will be not only beneficial to the sport, but is necessary to its welfare, is our firm conviction. An immense body of sportsmen, like the trapshooters of this country, divided up into a vast number of gun clubs and kindred organizations, are merely units when it comes to promoting the welfare of the sport they follow. Weld them into a homogeneous whole by the organization of a national body, and you then have a power that will command recognition whenever necessary, and that can make laws (and enforce them) that will further the interests of the sport by purifying it from the evils that now rob it of the good name which it should possess.

DRIVERS AND TWISTERS.

In the contest for the Miller medals, which took place on March 9, at West Farms, N. Y., the following scores were made, each man shooting at 10 live birds: M. Herrington, 9; H. Cathcart and H. Fensterer, 8; W. L. Hall and C. White, 7; Wm. Fisher and C. H. Dittmar, 3.

The letter signed "Dropper," which appears elsewhere is rather a peculiar epistle. It will be read with peculiar interest, as it is the first time one of the class has written to Forest and Stream. I think I know the note in Forest and Stream of March 16 that brought forth the letter. "Dropper" is quite right about the system also mentioned in that issue.

The Easter Monday shoot of the Standard Gun Club, of Baltimore, Md., will be an interesting affair, particularly the team race. The officers of the club are: President, C. E. Bonday; Vice-President, G. H. Gent; Secretary-Treasurer, W. T. Clements; Captain, John Devall; Directors, Dr. H. E. Lupus, W. E. Buckbee and L. C. Rice.

Jack Brewer's shooting at Zwirlein's grounds on March 21 was as good as any he has ever done; he did not look much like a back number.

The programme for the Pittsburg Gun Club's Interstate Association shoot, April 16-18, is gotten up in the attractive style that characterizes all publications that emanate from that quarter.

The members of the Iroquois Rifle Club, of Pittsburg, Pa., have decided to send in the club's application for membership in the Pennsylvania State Sportsmen's Association.

The present officers of the newly re-organized St. Hubert's Gun Club, of Ottawa, Can., are: President, W. H. Shaw; Vice-Presidents, H. Wooton and T. J. Coursolle; Secretary, L. H. Filteau; Treasurer and Captain, John Des Lauriers.

Miss Annie Oakley is receiving excellent press notices for her work in "Miss Rora" in England; her shooting and horseback riding has caught the popular fancy in particular. Regarding her rifle shooting, Miss Oakley, in a letter to the U. M. C. Co., pays a very high tribute to that company's 32-20 cartridges loaded with nitro powder.

The West Newburgh Gun and Rifle Association, of Newburgh, N. Y., is in a flourishing condition in every respect; its financial department is unembarrassed and its roster shows 150 members. The officers for the ensuing year are: President, David Brown; Vice-President, Harry C. Higginson; Treasurer, John A. Wood; Secretary, William C. Gibb; Captain, George H. Taggart; Directors, Joseph A. Snead, "Easy" Kissam and John J. E. Harrison.

A new Gun Club, entitled the Florists' Gun Club, has been organized in Philadelphia, Pa. Mr. John Burton is President, A. B. Cartledge being Secretary and Treasurer.

Secretary-Treasurer J. A. H. Dressel is smiling just now at the thought of all the cash he'll be handing out to the winners of the Grand American Handicap in a little more than a week from the issue of this paper.

The East Side Mutual Gun Club, of Newark, N. J., has changed its name, being known now as the East Side Gun Club. Beside the above change of name, it has also moved its quarters from Wiedenmayer's Park to Harry Henry's, 670 East Ferry street, grounds that can be very easily reached by the Court House or South Orange avenue cars. A large club house, etc., will grace the new grounds.

The Auburn, N. Y., Gun Club will hold a two day's shoot on April 17, 18, open to all comers.

The members of the Colt Gun Club, of Hartford, Conn., made the following scores in a 25 target race on March 9: Goodwin, Williamson, Risley and Green, 24; Browning and Alger, 23; Cook, 22; Pitkin, 20; Nichols, 19; Tucker and Olmstead, 17; Sexton, 16; Treat and Bailey, 15; Peard, 14; Colt, 13; Atwood, 9. J. M. Browning, of Browning Bros., Utah, shot as a guest of the club.

Mr. C. F. Rood, Secretary of the Valley City Gun Club, of Grand Rapids, Mich., writes under date of March 19 as follows: "The annual meeting of the Valley City Gun Club was held on the 15th inst, and the following officers elected: President, Col. E. Crofton Fox; Vice-President, R. C. Wharton; Secretary, C. F. Rood; Treasurer, W. S. Coleman. These gentlemen, with three others to be elected by them, constitute the Board of Directors. The club is stronger than ever, both numerically and financially, a considerable debt carried over from 1893 having been paid and a balance on the right side of the cash book winding up the business of 1894. It was decided to add $500 in cash to the tournament purses, and to make it a three days' shoot instead of two, May 30-31, June 1."

The second shoot of the New Jersey Trapshooter's League took place on Wednesday, March 27. Scores of the shoot will appear in the next issue of Forest and Stream.

In connection with the holding of the Arkansas State Sportsmen's Association at Little Rock, Ark., instead of at Hot Springs, Mr. Paul R. Litzke, of Little Rock, writes: "As announced in your last issue, the Arkansas State Sportsmen's Association will hold its annual tournament on the grounds of the Little Rock Gun Club. Mr. Sumpter's letter fully explains the reason for such change. The first and third annual meetings were held at Little Rock, and they were the most successful ever given by the association. Every effort will be made to sustain the reputation already established, and if possible make this tournament even more successful than its predecessors. Col. J. A. Woodson, John W. Dickinson and Paul R. Litzke will compose the tournament committee. We hope to be able to announce the added money in a few days, which we confidently expect will not be more than $300." Programmes will be out about April 20, and can be had by addressing Mr. Litzke.

Don't forget that regular entries for the Grand American Handicap must be made to the Secretary of the Interstate Association, Mr. J. A. Dressel, 313 Broadway, New York city, not later than March 30.

A sudden blossoming into print by pretty nearly all the "champion" live bird shots has occurred during the past week. If matches are desired, so much newspaper talk, save for advertising purposes, is entirely unnecessary.

The New Utrecht Gun Club, of Woodlawn, L. I., sent a team to Riverton, N. J., on Wednesday of this week, to shoot a team representing the Riverton Gun Club. Each team consisted of 10 men, each man shooting at 15 birds.

In the Dayton-Freehold-New Brunswick shoot, which took place at New Bruswick, N. J., on Saturday, March 23, Dayton came out on top, the teams finishing in the above order.

After the 25 bird race at Zwirlein's grounds on March 21, Brewer shot at 40 picked birds for practice. He shot a 10 guage gun, 26 yards rise, 50 yards boundary, use of one barrel, gun below the elbow, and scored 38 out of 40.

The April shoot of the New Jersey Trapshooters' Leauge will be held at the Maplewood Gun Club's grounds, Maplewood, N. J., on April 11.

A copy of the new shooting rules, for target and live birds, of the New York State Sportsmen's Association has been received from Mr. H. L. Gates, of Utica, N. Y. Owing to the pressure on the trap columns this week, these rules have been held over until our next issue. EDWARD BANKS.

Brewer—Elliott—Carver—Class—Cockburn.

The above head includes the names of about all the noted trapshots in this country, together with that of a Canadian, who is willing to shoot anybody under Old Dominion rules. The four first named are a strong combination at the traps, while Brewer, Elliott and Carver can all hold their end up when it comes to talking matches and writing challenges. The general public are generally pretty tired of newspaper talk about what these champions will and will not do. As, however, some of them have been attracting attention in the vicinity of New York by a letter or two in the New York Sun, it is perhaps just as well to state the positions of these shooters, that is, as they stand at present.

Brewer writes as follows: "I will bet $600 to $500, or $1,200 to $1,000, that I can beat any man in the world at 200 first-class pigeons, thirty yards rise, from five ground traps, otherwise Hurlingham rules to govern. I will also bet $500 to $1,000 that I can beat any man in the world at 100 selected pigeons, Long Island rules to govern. Again, I will bet $100 that Elliott will not meet me in a pigeon shooting contest under any of the conditions that I have named, with first-class birds, the match to take place within the next twenty days at Frank Class' grounds, as I feel confident that Mr. Class will provide first-class birds." In regard to this challenge, it is only proper to add that Brewer will not go to Kansas to shoot Elliott, but will shoot him "anywhere in New York State." He told Elliott so at Yardville, N. J., on March 21. Elliott offered to shoot him five matches, $100 a match, loser to pay for the birds, and winner to take all the gate receipts; two matches to be shot in the East (the Marion, N. J., grounds barred for private reasons), two at Kansas City, and the fifth at Pittsburg, Pa., or some other intermediate point. Brewer wouldn't go West and said so.

Frank Class' backer is willing to back Class against any shooter, Elliott preferred, naming Marion, N. J., as the scene of the conflict. Elliott and Class, however, came together at Yardville, N. J., on the above date, the result being that it was all but decided that these two men should shoot a race at 100 live birds, the match to take place at Morristown, N. J. Class' own grounds, on Monday, March 31. This match was to be made, and the money put up, at the Newark Gun Club's shoot at Erb's grounds on Thursday of this week.

On Monday, March 24, we received a clipping from the Canadian Sporting News, of Toronto, Can., containing a lengthy letter from C. Cockburn, of Toronto. Cockburn recites in this letter his views on the match shot with Brewer at Hamilton, Ont., on Jan. 18 of this year, stating that not only was he not to blame in regard to the outcome of the match, but that he can prove all his statements to the satisfaction of any doubters. He concludes as follows: "In order to disprove any lingering suspicion that may remain after my offer has been made that there was any cause on my part for collusion, I will go further and will shoot a match against Captain Brewer, J. A. R. Elliott of Kansas City, E. D. Fulford, Fred Erb, or any other man in the United States or Canada, at 100 live birds, 26 yards rise, for $250 a side, 80 yards boundary, old Dominion rules to govern in all except the matter of the rise, the principal requirements being single barrel gun below the elbow till the bird is on the wing, and 1 1-4 ounce shot. As J. A. R. Elliott was foremost among my slanderers, I much prefer that he should take the challenge up. If he or any other man will come to Toronto and shoot me a match under the terms proposed I will guarantee him his expenses. My business necessities, will not, I regret to say, allow me to leave Canada at present, or I would beard my traducers in their own den. For the same reason I cannot consent to keep this offer open indefinitely. I will therefore limit the time for acceptance to three weeks, the match to be shot from within one month of the date on which is covered the deposit of fifty dollars which I have now made with Mr. H. J. P. Good, editor of the Canadian Sporting News, as an evidence of my bona fides. With the assurance that if Mr. Elliott, Mr. Erb, Capt. Brewer, Mr. Fulford, or any other man accept this offer, they will not find me difficult to please in the matter of officials and preliminaries."

It is too early to guess what will be the outcome of this challenge on the part of Cockburn. At the same time it is unlikely that any match will be made, although Brewer may take it into his head to go North and tackle the Canadian.

Carver talks of coming East this spring, but says that depends in a great measure upon the amount of money in sight. If the "Evil Spirit of the Plains" comes East, he will find

plenty of matches awaiting him. Elliott, Brewer, Class, Morfey and probably one or two amateurs might be found willng to give him a trial for a $100 or two.

Grand American Handicap.

Pittsburg, Pa., March 23.—It is deemed advisable to refer to the matter of admission to the shooting grounds during the Grand American Handicap tournament, April 3, 4 and 5. In the past there has been more or less of an undesirable element present at all large tournaments, and in order to avoid a similar occurrence at Willard Park, the management desires to explicitly state that admittance to the grounds will be by card of admission. Cards can be secured by both shooters and spectators free of charge by applying to the Secretary-Treasurer, the manager, or any of the subscribers to the Interstate Association. The management has not been slow in catering to the personal convenience of the shooters. A new tent, 36 x 22 feet, equipped with gun racks, shell tables, and suitable stands for coats, hats, etc., will be thrown open for the accomodation of the contestants. In a nutshell every detail pertaining to proper arrangements has been attended to. Once again I would remind those shooters who contemplate entering the Grand American Handicap that this is the last week during which regular entries will be accepted. Entries accompanied by $10 forfeit, should be sent on or before March 30, to J. A. H. Dressel, Secretary-Treasurer, 313 Broadway, New York city. ELMER E. SHANER, Manager.

The Proposed System of Dividing Purses

In the issue of Forest and Stream of March 16, under the title of "Is not this what we want?" we gave a system of dividing purses suggested to us by a New Englander, who preferred to be known as "Green Amateur." At that time we praised the system very highly, and at this date we cannot see any material defect in its working. "Dropper's" letter in this issue is a great card for it, and the following from Mr. J. W. H. Reisinger, of the Meadville, Pa, Gun Club, dated March 20, is also decidedly favorable: "I have been greatly interested in the examination of a method published in your last issue, which explains the dividing of purses so as to prevent dropping for place. It ought not to be necessary to have such a system, but unfortunately a man is not necessarily a man of honor because he carries a gun, though I would certainly trust to the honor of a man who can shoot more readily than I would to that of one who cannot do so. Observation and experience have shown the necessity of something to prevent the disreputable practice referred to, and your method seems to fit the case. It is fair to all, and prevents dropping because a miss puts the shooter where he is bound to get less money. The members of our club who have examined the system are pleased with it."

Shortly after the issue of March 16 last had appeared, we received a letter from Mr. Elmer E. Shaner, of Pittsburg, Pa., asking whether the "straightout" system as given in that issue was not something like "Rose's system," a Rose score sheet being sent us by Mr. Shaner. Examination showed that the two systems were precisely alike, save in the number of "points" for each winner, termed by Mr. Rose "ratio numbers." Mr. Rose has gotten out a score sheet of a very complete character, the back of the sheet containing full instructions for dividing the purses with several examples worked out by way of explanation of his method. This sheet was copyrighted in 1894 and may be obtained by writing to Mr. A. R. Rose, Salida, Col., enclosing 10 cents for a sample copy. Any inquiries regarding quotations for any number of the sheets should be addressed to Mr. Rose, who states that he "will cheerfully answer any communications and will endeavor to make plain any point that is not thoroughly understood."

Since our issue of March 16 we have found no reason to change our opinion of this system. Mr. Rose's "ratio numbers" are rather better proportioned than those suggested by "Green Amateur," and for that reason we think his system, as explained on his score sheet, will find favor with the greater proportion of shooters. As the system is something that apparently fills the bill so far as absolutely preventing dropping for place goes, Forest and Stream is anxious to know of some gun club who will give the system an active trial at its tournament. If any faults are to be found in its workings, they will more readily appear in practice after droppers have thoroughly examined its capabilities and, to use a slang phrase, have "stacked up against it."

A Dropper's View of the Question.

Fleetwood, Berks County, Pa., March 22.—Editor Forest and Stream: I have taken a great deal of interest on the comments of the different writers on dropping for place, and must confess that droppers have been very severely belabored and lashed by them. I do not think that their remarks should be made to appear quite so odious to the public as some of the writers would make it appear. I hold that the mere act of dropping for place is only a legitimate business transaction, and allowable as long as there is no pooling for interests. For instance, if there happened to be a possibility of three straight scores and these three shooters should agree to pool, one would kill straight and the others would drop into the other places, dividing up the money received after the event was over. This system, I think, all shooters will agree should be abolished. Suppoisng there was no 24 in a 25 target race, and that there were three men who had a chance to brake straight. If two broke their 25, I think it would be perfectly legitimate for the other man to drop for second place, as long as he did not pool and divide with those that had killed straight. As in buying, in a business transaction you buy where you can purchase cheapest, so in shooting, you shoot where you can get the most for the money invested. If these gentlemen are shooting for fun and glory, I think they would do well to confine themselves to shooting for cups and trophies only. But I think they are out for blood or money like the rest, or why all this howling and kicking because 17 cannot win more than 18 and 19, and so 19 and 20 straight will kick if they cannot win more than 17 and 18. But such is the fortune of the wheel. Let them pay and learn like the rest of us, so that they can shoot up and drop into a nest lined with gold, if they can. All shooters are gambling to win, or why would we have to offer such large inducements, as at Cleveland and Knoxville, to draw large crowds of shooters together? If we are gambling to win let us do it in a fair and honorable way. I am very favorably impressed with the "straight out" system, and think it is the best system yet devised, so far as the amateur is concerned. It would effectually stop dropping for place, and would distribute the purses in fairer and more proportionate shares. It is even better than a handicap. DROPPER.

Vernon Gun Club Scores.

The members of the Vernon Gun Club, of Brooklyn, N. Y., shot the following sweeps on Saturday, March 23:

No. 1, 10 targets: W. H. Thompson and J. Lahey, 8; Wright, 7; F. A. Thompson and Osterhout, 6; Thompson and Livingston, 5; Allen, Emery and F. H. Lahey, 4; Everett, 3; Livingston, 0.

No 2, same: W. H. Thompson, 9; Emery and F. A. Thompson, 8; Balzer and Wright, 7; Welles, Osterhout and Livingston, 6; J. Lahey, 5; Allen, 4; F. H Lahey, 3; Everett 2.

No. 4, same: W. H. Thompson, and J. Lahey, 8; Balzer and Emery, 7; Welles, Allen, Osterhout, Wright and F. A. Thompson, 6; F. H. Lahey, 5; Everett and Livingston, 4.

No. 5, same: W. H. Thompson, 8; F. A. Thompson, 7; Allen, Wright, J. Lahey and Livingston, 6; Welles and Emery, 5; Everett, 4; Balzer, 3, F. H. Lahey, 2.

No. 6, same: Welles, Wright and F. A. Thompson, 7; W. H. Thompson, Emery and J. Lahey, 6; Livingston, 5; Allen, F. H. Lahey and Osterhout, 4; Everett, 3.

No. 7, 5 pairs: Wright, J. Lahey and Emery, 5; Welles and F. H. Lahey, 4; F. A. Thompson and Balzer, 3.

Pittsburg's Interstate Tournament.

Elmer E. Shaner, of Pittsburg, Pa., manager of the Interstate Association, has forwarded to us advance copies of the programme for the shoot to be held under the auspices of the Pittsburg Gun Club, on April 16-18. The Smoky City is undoubtedly a great trapshooting centre, and the success of a similar venture last year warrants the belief that this year's tournament will be even more of a success, if such a thing is possible. We know something about Pittsburg and her shooters, therefore we can vouch for the accuracy of the following, which is taken from the programme:

"As a trapshooting centre Pittsburg is in the front rank, and has long been recognized as one of the very best points for the giving of a tournament. Within a radius of 50 miles from Pittsburg there are 37 gun clubs, having a bona fide active membership of over 600. Among trap shooters the local gun clubs have the reputation of containing more members who will shoot through all of a programme, than any other place in the country. Last year's tournament, under the same management as this year's, was one of the big successes of the season, there being an average entry of 46 1-5 in each event during the three days. Every effort will be made to make the tournament of 1895 equally as successful, and the members of the Pittsburg Gun Club extend a cordial invitation to all lovers of trap shooting to become their welcome guests."

The first day, April 16, will be devoted to a handicap target race, entrance $5, targets extra, the conditions being as follows: 100 to 125 targets, 16 yards rise, known trap, unknown angles. Four moneys, 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, and 10 per cent. to fourth. Entries may be made up to the commencement of shooting by the last squad. Each squad to shoot at 25 targets before retiring. The expert shots will shoot at 100 targets, while the less skillful shots will be allowed to shoot at from 1 to 25 targets more than 100. No shooter will be scored more than 100 breaks. The handicapping will be done by Elmer E. Shaner, "Jim Crow," "Old Hoss," and Louis Lautenslager. The success of our last year's handicap, which closed with 44 entries, induced us to arrange a similar one for this tournament, with the exception that the style of shooting will be known trap, unknown angles, in place of the novelty rule. Any shooter's handicap, or information relating to the tournament, will be furnished upon application to Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa.

The rules that govern all tournaments given by this association are those published by the Interstate Association itself. The additional special rules governing the tournament are as follows:

"Any shooter who intentionally misses a target in order to obtain a certain place, shall forfeit all his interest in the purse, and will be debarred from taking part in any tournament given under the auspices of the Interstate Association. Shooters will be classified under the records they have made at their home clubs, or from the best information obtainable, into two classes—expert and amateur. That class of shooters whose usual averages rank them as experts, will constitute the expert class. Shooters who are classified as experts must at all times shoot in accordance with the expert rule—which is, targets from five unknown traps, known angles, rapid firing system. Shooters who are classified as amateurs must shoot at targets from known traps, unknown angles. Any shooter in the amateur class who wins or divides first money, must shoot in the next event in which he enters, in the expert class; if in this event he fails to win or divide any part of the purse, he will fall back to known traps, unknown angles, in the next event he shoots in, and so continue to graduate. Shooters classified as experts do not receive the benefit of the sliding scale. All purses of this tournament will be divided 40 per cent., 30 per cent, 20 per cent, and 10 per cent."

The club adds $200 cash to the purses on the second and third days of the shoot. The programme for each of those days is the same: Six 15 target races, with a $1.50 entrance fee, and four 20 target races, $2 entrance. Two sets of traps will be used so that everybody will get plenty of shooting. The tournament will be held at Exposition Park, six minutes run by electric cars from the centre of the city. Shooting commences at 9.30 A. M., sharp, each day. Headquarters of sportsmen during the tournament will be at the Hotel Anderson, Penn avenue, and Sixth street.

The above tells the story; for further information write to Elmer E. Shaner, who will gladly answer any inquiries.

Wilmington vs. Wawaset.

Wilmington, Del., March 18.—Editor Forest and Stream: How strange that some people will make mountains out of mole hills. Such is the case with W. E. Buckmaster, Secretary of the Wawaset Gun Club, of this city, in his report of a friendly shoot between Messrs. White, Huber and Miller vs. Messrs. Hartlove, Burroughs and Gaughen, the former members of the Wawaset Gun Club, and the latter members of the Wilmington Rod and Gun Club, a little friendly shoot which the respective club's had nothing to do with, only to collect the money for targets shot at on the respective grounds. Mr. Buckmaster would like to make the readers of your valuable journal believe it was for the State championship, which is not the fact, and he knows it. In the second match on the Wawaset grounds, when the Wilmington Rod and Gun Club boys came out ahead, Mr. Buckmaster was not one half as anxious to get the scores and publish the same as he was when the third match was shot. The original teams were Messrs. White, Huber and Springer vs. Hartlove, Burroughs and Gaughen. On account of business, Mr. Springer was unable to shoot and Mr. R. Miller (the best shot in their club) was substituted on the first shoot of the series. The three races were well contested and interesting throughout, and no doubt have revived some interest in trapshooting, which for a while was lying dormant. Mr. Buckmaster is a little previous in claiming that the Wawaset Gun Club is superior to the Wilmington Rod and Gun Club. The superiority of the respective clubs has not been settled yet, but can be settled if they would shoot more and talk less; 10 or 15 men per side will settle it quick.

DELAWARE.

Boston Shooting Association.

The programme issued by the Boston Shooting Association for its three day's tournament at Wellington, Mass., on April 9, 10 and 11, is varied and consequently interesting. For the first and second days the programmes are the same in nearly every respect. There are 12 events each day, calling for 230 shots and a total entrance money of $27.60. There are four 10 target races, seven 20 target races, and a 50 target race; the latter event has $100 guarantee, with a $6 entrance. On the first day it is shot at known angles; on the second day at unknown angles. Five other events are at known angles, five at unknown angles, and one, a 10 target affair, at traps in reversed order. For the third day there are eight events scheduled, the main event being No. 8, a team race, the conditions of which are as follows: "Five men from any State, 50 targets per man, 25 known angles, 25 unknown angles, entrance $30 per team." The 6th event is at 10 pair, shot in the usual manner. Outside of the team race the programme calls for 110 targets. All purses are divided 40, 30, 20 and 10 per cent.

From present indications New Jersey will have a contingent of shooters at the tournament, while both that State and the State of New York will enter teams in event No. 8 on the last day.

Emerald Gun Club.

The regular monthly live bird shot of the Emerald Gun Club, of New York City, took place on Tuesday, March 19, at Dexter Park, L. I. As usual there was a good turn out of shooters. The club is limited to a membership of 50, but so great is the interest in their monthly shoots that over 30 entries for the club's handicap is the usual thing. On this occasion exactly 36 members faced the traps. Of this number three, "Charles," T. H. Keller and Gus Greiff, arepresentative of Von Lengerke & Detmold, killed their 10 birds. Seven others killed 9 each, Drs. Hudson and Klein barely missing a straight score by losing their 10th birds. The day was fine and the birds fair; the first half were only medium, but the last half included some hummers. Scores:

Club shoot, 10 live birds per man, for club's yearly prizes:

F. D. KINNEY, Sec'y...

Endeavor Gun Club.

Jersey City, N. J., March 23.—The Endeavor Gun Club held its prize shoot for March this afternoon on the club grounds at Marion, N. J. The attendance was small, only five members competing in the club shoot, which was shot at unknown angles Scores are as follows:

E Collins, 25	1111110111111111101111111	—23
Strader, 30	1101110101111110010100100111101111	—21
Piercy, 25	0111111110000111011101111	—18
Creveling, 27	1011011001011000111111001111	—17
Ingram, 25	1001111111101010010110111	—17

The other resulted as follows:

No. 1, 15 targets, unknown angles: Strader 14, Ingram and Creveling 11, Collins 8, Piercy 7, Corson 4.

No. 2, same: Creveling 13, Strader 12, Collins and Piercy 9, Onderdonk 7.

No 3, same: Collins, Ingram and Creveling 11, Piercy 10, Strader 8.

No. 4, same: Creveling 14, Piercy 12, Collins 9, Strader 8, Onderdonk 7. J. A. CREVELING, Sec'y.

Pointers on the Knoxville Shoot.

Mr. R. Van Gilder, Secretary of the Knoxville, Tenn., Gun Club, sends the following, which will be read with interest by

all shooters, especially by those who intend to be present at the Knoxville shoot next May:

"The secretary, having received so many enquiries from shooters all over the country, the following pointers are hereby issued for their enlightenment:

"The meeting will be conducted upon a business basis. No known dishonesty whatever will be tolerated; it will subject the contestant to immediate withdrawal from all events and forfeit all entries, rights and privileges of the meeting. The shooting will be rapid fire, 16 yards rise, known traps, unknown angles; i. e., any angle outside base line of the traps; the programme contains 6 events, 20 targets, $3 entrance; 2 events, 25 targets, $5 entrance, and added money, all divided 30, 25, 20, 12 1-2—12 1-2 each day for 4 days. Revised A. S. Association rules, with a few exceptions

"A contestant may have his load challenged by any shooter. The secretary will then take any shell he has in his pocket. If more than 1 1-4 oz. shot, measured in Dixon 1106, struck measure, is found, the contestant will be barred from all further rights and privileges of the shoot, and will likewise forfeit all entrances paid in. Merit and skill is the rule in this meeting and not trickery. This is going to be strictly enforced. The excuse of not knowing what was in the shell, will not be tolerated, as it is the shooter's duty to know beforehand. Ten and twelve guage shoot from same score line, and under same rules. No greater number than 3 extra shells will be allowed for a contestant to take to the score than the event calls for. No contestant will be allowed to shoot who does not make an all day entry. He will be given a squad, and number in squad, and then shoot all day. If he fails to shoot in any event, the cashier, upon due notice, will refund his entrance money at any time. When squad 1 is shooting, squad 2 will be required to sit in comfortable chairs behind them in readiness. Everything else will be done that may be necessary to conduct an honest and successful meeting.

"There are now enrolled upon the $10 subscription entry list 112 names, exclusive of the club and some neighbors. Those who have not sent in their $10 will kindly do so at once, to enable us to get out our programme, which will not be issued until 100 men have paid in their $10 entry. Our limit is 125 entries, and no more; all who desire to get in the shoot had better send in their names and money at once. Those who cannot tell until the last moment, and expect to come and pay in their money here, had better write the secretary before they come, to find out if the entry limit is filled, as 125 is the positive limit.

"The manufacturers' fund, $500, is filled and with a few more to hear from. We are gratified and very thankful for their intense interest and support in this, the greatest meeting ever held in this country—where individual interest is lost in unity—with this support which exceeds the talent of the principals, the meeting is an assured success, and we trust the shooters and manufacturers will unite for the success of this shoot: as it is the club's desire for them to feel that it is their meeting, assisted by the club. Everybody says—says he—'I will meet you at—The Knoxville shoot.' "

Fast Birds at Yardville.

Charlie Zwirlein, of Yardville, N. J., has the reputation of providing fast birds for the shoots that take place at his grounds. He added to that reputation very materially by furnishing an extremely fast lot of strong flyers for the sweeps decided at Yardville on Thursday, March, 21. It is very seldom that such a lot of birds is trapped in one day, and it is more than a pity that the attendance was not numerically far greater than it was. So far as quality went it was fast enough. With Elliott, Brewer and Class among the entries, there can be no disputing the quality. Before Zwirlein advertised his shoot, he received the assurance from a number of Philadelphia shooters that they would show up and compete in a 25 bird race, $10 entrance, birds extra at 25 cents each. On this understanding, and knowing that he could reckon upon a fair contingent from New York and vicinity, he gave notice that he would add $25 to the high gun. The 9.10 train from New York brought Elliott, Brewer, Class and Van Dyke, W. S. Sawyer, a crack one barrel pigeon shot, and his friend, J. H. Dill, from Spotswood, N. J. The above six shooters found Eddie Hill, George Cubberly, J. W. Budd and Zwirlein ready for business, but not a single shooter from any locality near Philadelphia. In order to give the latter a chance to reach Yardville by the train reaching there at 1.40, a couple of sweeps were shot. Both were 7 bird events, $5 entrance, three moneys. No. 1 was divided up between Class, Van Dyke and Budd, in first place with 7 kills, Elliott, Brewer and Hill taking second money with 6 each, Zwirlein being alone for third with 5. Sawyer, the only other competitor, made his first appearance before five traps in this event, and showed by his work that the game was new to him. In event No. 2, however, he pulled himself together and killed all his birds, taking first money alone. In this race he made some excellent barrel kills, giving proof that he was catching on very fast. At the end of this event an adjournment was made for dinner.

Immediately after the above meal had been disposed of, entries were made for the main event. Eight men paid in their $16.25, an agreement being entered into that, in case any belated shooter should arrive after the event had been started, he should be allowed to enter or not at the option of the contestants. This arrangement permitted B. Kuser, of Trenton, to enter during the shooting of the 12th round. Before he had shot up his string as far as the others, he had put himself out of the race by missing his 4th, 8th, 9th and 12th birds. The birds furnished for this race were really splendid flyers, many of them being as good birds as ever left the traps. Brewer and Class made some great stops, while Elliott, although he made a bad start, losing three out of his first four birds, killed more than one corker. Brewer's position at the head of the list, with 24 out of 25, one dead out of bounds, is a great record on such birds. His first barrel work was as clean as I ever saw, the kill of his 5th bird being one of the kind that is termed "phenomenal"; although marked with the figure 2, the second barrel was entirely unnecessary. It must be stated here that Forest and Stream's trap score type fails in this instance to entirely describe the flight of the birds. The speed of the various pigeons cannot be shown, and the difficulty of getting on to right quarterers at this shoot needs further explanation than that given by the trap score type. A brisk, cold wind blew catacornered from the left to the right, aiding right quarterers and right quartering drivers very materially. Some of the right quartering birds were as hard to kill as any driver that has ever left No. 5 trap at Hurlingham. Eddie Hill drew just such a bird in the second round of sweep No. 1; it was a streak of dark blue and that was all. Brewer's 5th bird above referred to was another of the same kind. Elliott's 5th bird in sweep No. 2 was also another; when he had plunked both barrels into it, Jim jumped in the air, his feet went from under him as he struck the ground, and the champion measured his length upon the ground, marking very plainly the difference between the 28 and 30 yards mark! Class was shooting in strange form for him; his first barrel was very little use to him on many occasions; he made up for this, however, by making some good second barrel kills. Charlie Zwirlein shot a great race, losing his 5th and 9th birds dead out of bounds, but finishing in the second place with the good score of 23. Ferd Van Dyke, whose father, R. R. Van Dyke, of Dayton, N. J., had come over to see the cracks shoot, used his Winchester repeater in his usual style. He dropped his 13th, 16th and 20th birds, but found himself in second place alone with 22 killed. His miss of his 16th bird was, therefore, not so unfortunate as it looked at the time; it was a bad miss, as he had plenty of time on this bird. Eddie Hill, besides drawing hard birds, had plenty of hard luck. Sawyer made some good kills, but was also unlucky, his 20th and 21st birds falling dead out of bounds. Budd, who had killed 13 out of 14 in the sweeps before dinner, fell down most remarkably on his last six birds in the big event, missing five of that number, ending up with a total of 16 kills. The quality of the birds may also be noted by the fact that the close of the 5th round found Class, Van Dyke and Brewer with the only straights. Van Dyke missed his 13th, Brewer and Class following suit by spoiling their scores on the next round, when their respective birds dropped dead out of bounds. Zwirlein's black setter, "Nig," and a brown setter owned and handled by the veteran, Miles Johnson, did the retrieving in a quick, clean style. The scores made were as follows:

25 live birds, handicap rise, $10 entrance, birds extra, 3 moneys:

EDWARD BANKS.

Hartford Trap Shooters.

Hartford, Conn., March 23.—The following scores were made to-day by members of the Colt Gun Club, each man shooting at 25 targets: Manross, 24; Goodwin, 21; A. Bailey, 21; Pitkin, 21; Green, 21; Vibberts, 21; Browning, 20; Hotchkiss, 20; Cook, 19; Hills, 18; O. B. Treat, 18; Atwood, 16; Olmstead, 16; Sexton, 16; Hoskins, 14; Owen Treat, 14; Nelson, 14; Nichols, 14; Tucker, 13; R. Foster, 12; S. Colt, 12; C. Bailey, 11; Perkins, 10; Easton, 10; Thompson, 9; Peard, 9; Burke, 8.

F. W. GREEN, Secretary.

Hartford, Conn., March 23.—This afternoon was indeed an ideal one for trapshooting, as it was the first springlike afternoon we have had. The scores made in the club shoot as 25 targets were as follows:

"Ford"	1111111111110111111111111—24
Mills	1110111110111111111101111—22
Wadsworth	0111111111110111111011111—22
Melrose	1101111111101111011111011—21
Williamson	1111111101101011011011110—20

Clark	0010111010100111101011011—15
Sedgewick	0000100100111000011100001—10

DAN'L S. WADSWORTH, Sec'y.

Little Rock, Arkansas.

Little Rock, Ark., March 21.—Once more Dickinson won the Pulaski County medal. Although only four shooters participated in to-day's contest, it proved to be anything but a walkover, as the score shows everyone of the contetstants were very much in the race, and it was anybody's contest until the last gun was fired. When each shooter had shot his first string of 25, Irwin led with 23, Dickinson and Pemberton were second, each having scored 22, while Duley brought up the rear with 20. In the final string of 25, Irwin failed to keep up the gait he had struck, only scoring 19, thus jeopardizing all his chances of winning. In the meantime Dickinson and Pemberton each missed two targets, the race resulting in a tie, their scores being 45 out of 50. They immediately agreed to shoot it off at 25 targets each. This time Dickinson won, scoring 23 to Pemberton's 21. Not being satisfied another string of 25 was shot. Scores in detail:

Dickinson	1111111011110111111111011—22
	1111111111010111111211111—23—45
Pemberton	1111111111111111111011001—22
	1111111011110111111111111—23—45
Irwin	1111111111101111110111111—23
	1111111011011100111111001—19—42
Duley	0111011111111111110010111—20
	1111111110111101001111111—21—41
Shoot off for the medal:	
Dickinson	0111011111111111111111110—23
Pemberton	1110011010111111111111111—21
Twenty-five targets:	
Dickinson	1111111111111111101111111—24
Pemberton	1111111110111110011111111—22
Irwin	1110111010011111011011111—19
Duley	0111101110111111010111110—19

Boiling Springs Beat Passaic City.

Rutherford, N. J., March 23.—The fourth shoot in the series of five, arranged between the Boiling Springs and Passaic City Gun Clubs, took place this afternoon at Passaic, N. J., the visitors winning by three targets. The score now stands: Boiling Springs, 3; Passaic City, 1. Score of to-day's shoot as follows:

Passaic City.

W. H. HUCK.

Meadville Gun Club.

Meadville, Pa., March 20.—The scores given below are those of the poorest shoot this club has ever experienced. They were made this afternoon, and as an example of what the Meadville Gun Club can do they are not creditable; but as a proof o what low scores some very good shots can make when the wind, mercury, traps and trappers are against them, it may serve as an encouragement for beginners. You will get something better from us when the April medal contest comes off. Dr. Johnson's score of 41 out of 50, and Clark's 39 out of the same number of targets are above the average of their work, while every other shooter went at least 30 per cent. below his average. Scores, No. 1, 25 targets, everything known:

Ehrgott	1111111001010100111111111—19
E L Affantranger	0110010010010100010101101—11

F. M. D.

Wilmerding Gun Club.

Wilmerding, Pa., March 16.—The scores which are given below were made by the members of the Wilmerding Gun Club this afternoon. The day was a disagreeable one for target shooting, snow falling all the time; despite the wretched weather, the scores made were fair, Gelm's totals showing up very favorably. The Wilmerding Athletic Association having tendered an invitation to the members of the gun club to be present and shoot at their picnic on Decoration Day, an all-day shoot will be given by the club on that day. Scores made to-day are as follows:

Team No. 1.

J S McIntosh	1110111000110101101011100
	1011001011011111100010011—30
S Gelm	1011110111100001011111101
	0010111111111111111111110—38
D Scott	0011101111111111101010110
	1111101110011111100101010—35—103

Team No. 2.

W Sharrard	0001101011100111111101100
	1000111011100011100011111—30
F McIntosh	0101010001001111011011011
	1001110111111111101101110—33
S Bishop	1111100101100010100110101
	0100100111010100010010101—25— 88

No. 2, 10 targets: Sharrard and Scott 8, J. McIntosh, F. McIntosh and Gelm 7, D. Boyd 6, A. Mackert 5, W. Kilgore and S. Bishop 3.

No. 3, same: Gelm 8, J. McIntosh, Sharrard and Boyd 7, Scott 6, F. McIntosh and Mackert 5, Bishop 4.

No. 4, same: Gelm 10, Sharrard 8, F. McIntosh, Scott and Boyd 6, J. McIntosh and Bishop 4.

No. 5, same: Gelm and Boyd 7, F. McIntosh 6, F. Hepting 4, Scott 3.

A. A. MACKERT, Sec'y.

Brewer Shot in Great Form.

John L. Brewer, with a 10-gauge in his hands, shooting a match under Long Island rules, that is, 21yds. rise, 80yds. boundary, use of one barrel, gun below the elbow until the bird is on the wing, is just about invincible. In his match with Morfey on Saturday, March, 23, at Willard Park, Paterson, N. J., he killed 47 out of 50, completing his string with an unbroken run of 27 straight. Morfey shot very poorly, his misses coming in quick succession, mostly in pairs. Score:

Brewer	→↗↑↗↑↑↑→→←↙↗↗→→↗←→↑↑↑↑↑↗↖
	1 1 1 1 1 1 1 0 1 1 1 1 0 1 1 1 1 1 1 1 1 1 0 1 1—22

Syracuse Gun Club.

Syracuse, N. Y., March 21.—Thirteen members of the Syracuse Gun Club shot for the Club's medals this afternoon. Messrs. Rayland, of Rome, N. Y., and Dalley, of Baldwinville, N. Y., were guests of the Club. The scores were affected by the high and cold wind, which made the flight of the targets very erratic. Becker won class A medal, Morris the class B medal, Eddy winning the medal in class C. After the medal shoot the following shooters had a race at 50 targets, unknown angle. Mowrey 46, Rayland 44, Morris 40, Becker 37, Ginty 36, Fuller 32, Dalley 29, Boyd 27. Gening broke 26 out of 40, while Simpson, Case and Arno broke 24, 22 and 27 out of 30 respectively. Scores in medal shoot:

Syracuse, N. Y., March 23.—The Syracuse shooters are working faithfully, practicing for the Dean Richmond Cup contest at Saratoga, hoping to do credit to the clubs they represent. The grounds are at Messina Springs, shoots being held every Saturday. The shooters making the best averages will compose the team. The birds shot at this afternoon were a good lot, very few duffers among them, a good number being really fast. Scores:

A. R. K.

Cobwebs Defeat the Newburghs.

West Farms, N. Y., March 21.—The Cobweb Gun Club turned the tables on the West Newburgh Gun and Rifle Association of Newburgh, N. Y., in the second team race between these two clubs. The race was 10 men a side, 10 live birds each man, the Cobwebs winning by 77 to 71. The weather was clear and bright, with a northeast wind blowing across the traps from left to right. The birds were only a fair lot, several extra good ones leaving the traps occasionally. Knapp and Higginson were high men for their respective sides. Scores:

The Climax Gun Club Won.

Plainfield, N. J., March 25.—The first of the series of three matches at live birds between teams of the Keystone Shooting League, of Philadelphia, Pa., and the Climax Gun Club of Plainfield, N. J., was decided to-day on the grounds of the latter club at Fanwood, N. J. The Climax boys won by 7 birds, scoring the excellent total of 159 out of 180, an average of 88 1-3 per cent. Full scores of both teams:

Idle Hour Gun Club.

The Idle Hour Gun Club, of Brooklyn, N. Y., celebrated the anniversary of its initial shoot on March 18, by holding a shoot at Dexter Park, L. I., and also enjoying a good dinner prior to the annual meeting and the pigeon shooting. The officers chosen at the meeting to serve for the ensuing 12 months are: President, Henry Hoffman; Vice-President, William Burrows; Treasurer, J. F. C. Elfers; Secretary, Christopher Lakeman; Captain, John Bamberger. Three medals were presented to the club for competition: A diamond badge by President Hoffman, a gold medal by Fred Elfers; and a silver medal by Chas. Pyne. These medals will be first, second and third prizes respectively during the year. The club shoot at 7 live birds resulted as follows:

G Helmstedt, 25	11*112*—5	H Welshman, 23	0011100—3
Ch Coors, 25	021*121—5	H Huckfield, 23	0101001—3
Ch Lakeman, 23	2222010—5	Wm Burrows, 25	0000021—2
H Boemmermann, 25	0010111—4	J Bamberger, 25	0001200—2
J F C Elfers, 25	201*101—4	M Malone, 23	0000100—1
Wm Schmidt, 23	0211010—4	L Friese, 23	0000w —0
H Meyer, 23	0102100—3		

Vernon Gun Club.

Vernon, Tex., March 11.—The Vernon Gun Club held its regular shoot this afternoon with the following result:

Club shoot, 25 singles and 3 pairs:

G M Cook ..... 1111111110111110011111111 11 10 11—27
J G Matthews ..... 1111011111101110101110111 11 10 10—24
B Houssels ..... 0011110101101010101110011 11 11 01—21

H Otten	1211021211— 9		

*C. Steffens won Class A gold medal, A. J. Chester taking the Class B gold medal.

Outwater Defeats Johnson.

On Tuesday, March 19, John H. Outwater, of Moonachie, Bergen county, N. J., and Adrian Johnson, of North Bergen, N.J., shot a race on the grounds of the Union Hill Gun Club at Guttenberg, N. J. The conditions were: 50 live birds per man, 26yds. rise, use of both barrels, gun below the elbow until the bird was on the wing, $100 a side. A strong wind helped the birds very materially; without the wind the birds would have been classed as good ones. At the end of the 43d round Johnson withdrew, being hopelessly in the rear, the score standing 34-25 in favor of Outwater, who was doing some excellent work with his first barrel. Score:

J H Outwater ..... 1010212121112121001100111—19
121112111100122011 —15—34

Yachting.

In mentioning the report which was generally circulated about a month ago, to the effect that Mr. Watson had chosen nickel steel as the material for the skin of the new Valkyrie, we expressed the opinion that he had not yet found good grounds for abandoning the composite for the all-metal construction, and that the new boat would be practically identical with Queen Mab, Britannia and Valkyrie II. We can now state positively that this is the case, and that Valkyrie III. will be built with keel, stem, sternpost and deadwoods of teak, frames, stringers and ties of nickel steel, and wood planking. The keel was cast about March 4, the wood keel has been bolted to the lead, and the stem and sternpost set up, the frames rivetted and set up and the rib bands run. In model the new boat is similar to Britannia and Valkyrie, a keel cutter, but with her leading features carried to a greater extreme. The yacht will not be ready much before the Clyde races in July, and will only meet Britannia and Ailsa on the Clyde before sailing for New York.

Model Yachting.

The new trophy of the American Model Y. C. is likely to give a boom to model yacht sailing; and, in common with yachting and canoeing, a lively season is promised. We hope that the club may receive a challenge, as an international race of model yachts would come in well with the proposed races for both 90-footers and half-raters next September.

The difficulty, if not the impossibility, of obtaining true and reliable information about new yachts, is shown almost every day by the alleged news set forth under startling headlines, only to be replaced next day by something quite different and even more startling. The "exclusive" stories thus far published about the new Cup defender, her model, material and sailing master would of themselves fill a large book; and yet but little is positively known beyond a few main points. The attitude of the owners and designers, and the demand of the public for news, offers a strong temptation to indulge the imagination at the expense of truth, a temptation to which some of our esteemed contemporaries have readily succumbed.

Among those which have been foremost in spreading sensational and unreliable reports, the Boston Herald has long held deservedly the first place. Our readers will remember our exposure of its silly and sensational "fake" design of the Thistle in 1886; and from that time down to the present the Herald has been responsible for much of the misinformation on yachting matters which has found its way into the American press. False and foolish as the Thistle fake was, it has been quite surpassed by the Herald's latest exploit in giving the dimensions of the new Cup defender in a three-column story which appeared on March 16.

Divested of a great deal of irrelevant matter in the shape of self-laudation and mere idle chatter to fill space, the Herald's story is reduced to two plain statements; one of them new but not true, the other true but not new. The first statement relates to the as yet unknown dimensions of beam and draft, which are positively vouched for by the Herald writer as 22ft. plus some inches beam, and 22ft. 10 in. draft. The Herald's statements on these points are worth giving verbatim: "The Pilgrim outclasses by nearly a foot in draft. Isn't this a surprise? Everybody scared off in extreme draft except the Bristol man. What boats does she come nearest to on either side for beam dimensions? The Valkyrie and the Jubilee. Both of these measure 22ft. 6 in. extreme beam. The Cup defender does not measure quite as much as this; the above, however, are not far out from the correct dimensions. The Boston Herald knows them exactly. Pretty close, is it not, Mr. John B.? Few inches, eh! What boat on either side does she most resemble in draft, type for type? The Valkyrie, she is not far out from the Pilgrim's draft, although she is a different type of boat. In draft, Designer Herreshoff has seen Watson and gone him in feet hardly as many as there are fingers and thumbs on one's hand. It is not far off, though, the shortage being in line with baseball men's fingers, those that have bent up and shortened a little off their natural stretched-out length. There is about the same difference in the length of the draft, 22ft 10 in., that there is in the short fingers of baseball players. Still the above is purposely put, so as not to be absolutely exact. Pretty close, however, is it not, Mr. Superintendent?"

These dimensions, which are stated thus positively within the limits of a few inches, are accompanied by a sketch of a midship section similarly vouched for as practically that of the new boat. Assuming the beam given by the Herald, about 22ft., this fake section scales to a draft of but 17ft., instead of 23ft. These dimensions are something extraordinary, the alleged draft is not only unprecedented in any keel yacht, but is far in excess of what is desirable or even necessary; and the beam would indicate that while all designers have been taking more and more beam for two years, Mr. Herreshoff had in this one important boat resorted to less beam than the unsuccessful Navahoe. From whatever source they came, no intelligent yachtsman would accept such dimensions without the fullest corroboration; and if, finally convinced of their truth, he would never pass them by, as the Herald has done, without a word of comment on their import. So far as the Herald is concerned, it has evidently accepted them without an idea of their meaning or a doubt as to their authenticity.

So much for what is new but not true; now for the part that is true but not new. For several years there has prevailed among yacht designers a unanimity of opinion never before known; and, one and all, they have worked to greater extremes each year in several important particulars, greater beam and draft, smaller displacement and area of midship section, reduced lateral plane, higher center of buoyancy; and lower ballast, through deeper bulb-fins or heavily weighted centerplates. Herreshoff, Watson, Fife, Payne, Nicholson, Soper, Hope, the latter in fact, in the very small boats, going to the greatest extreme, have vied with each other in this cutting away of everything in the search for higher speed; and with most advantageous results. Now comes the Herald with the exclusive information that in the new Cup defender Mr. Herreshoff is doing just what he, as well as other designers, has been doing in previous boats; and just what everyone has confidently looked for in the present case.

There are a great many interesting things about the new boat which are yet unknown; in fact all that is definitely and positively certain is that she will be a keel boat, of great draft, and with steel frames, plated on the bottom with a bronze alloy, and possibly on the topsides as well. The general construction of the keel proper is also known, of three bronze castings of peculiar form. The dimensions, details of form, rake of stem and sternpost, shape, construction and position of rudder, are all unknown at the time of writing. Without claiming any inside sources of information, and admitting a doubt as to the new boat being a keel a centerboard or a fin craft, or of steel, bronze or composite construction, yachtsmen generally have from the first looked for certain things from Mr. Herreshoff in his next large boat, as the result of the races of Vigilant in the past two seasons. It has been confidently expected that the new boat would turn much more quickly, that she would have a hollower section and lower lead than Vigilant, that the lines would be fined and faired all over, giving an easier form, and that the very faulty sail plan of Vigilant, with the center of effort abnormally forward, would be improved by a lessening of the headsails and a proportionately larger mainsail, as in the British boats. It would indeed be news that only the unexpected had happened, and that Mr. Herreshoff had gone in exactly the opposite direction; but it is no news, as the Herald would have us believe, that he has done what every one looked for him to do.

One characteristic item of the Herald's exclusive news is that relating to the bulb keel, that it is acorn shaped in cross section, tapering fore and aft, and has its greatest section forward of the center. In these three respects it is exactly like the smaller and older bulbs from the Bristol shops, on Dacotah, Wenonah, Drusilla El Chico, and many more, to say nothing of the use of the same form by all other designers.

This wonderful story of the Boston Herald appeared next day in more condensed form in a number of papers in other cities, being in some cases credited to the Herald, in others being passed off as the work of the paper's special correspondent at Bristol. What is particularly amusing is the fact that this copying was done with so little knowledge of the matter in hand that the coefficient of the midship section was given as 35ft. instead of 35 per cent.

Before these stories were fairly off the press, however, the Herald was again to the fore with another exclusive announcement, as follows, in its issue of March 17: "In using the word 'draft' for 'depth' in yesterday morning's Herald, an error was made which led to a wrong comparison of the Bristol boat with others. The depth of the Cup defender is 23ft, while the draft is 19ft." The oft-repeated statements of the dimensions throughout the first article, some of which we have quoted above, show beyond question that there was no mere clerical or typographical error, as the Herald claims, but that the Herald writer actually believed the figures which he vouched for so boastfully.

But this is not all, after a little characteristic chatter to divert the attention of the reader, the article continues: "The exact dimensions of the Cup defender were purposely not stated yesterday, but they are given to-day. No doubt one dimension, that of beam, will cause surprise, for it puts a somewhat different aspect on the outcome, the following are the figures: extreme beam, 27ft.; extreme draft, 19ft." The article closes very briefly, with none of the boasts and bluster that characterize the first story.

Any doubt which might exist in the mind after reading the first story, that it was a most unwarrantable piece of sensationalism, is at once dispelled on reading the very lame attempt at its correction. The only tenable supposition is that in its search for sensation, the Herald has once more fallen a victim to its own blind credulity, and has accepted as true a most improbable and absurd fiction which it has palmed off upon its readers as truth and news. Had the figures been somewhat less extreme, the matter might have been passed over until some new fake could have been found to attract attention from it.

In the case of the Thistle fraud, there is reason to suspect that when it became known to Mr. Watson that the agent of the Herald was endeavoring to obtain the drawing by unwarranted means, the said agent was allowed to get possession of the rough drawings made for securing estimates, and in no way representing the form of the boat. As we showed at the time, and as subsequent events proved, the drawings were impossible ones, and should have deceived no one of ordinary intelligence or knowledge of yachting. In the present case, we should not be in the least surprised to find that the dimensions given in the Herald's first article had come more or less indirectly from the Herreshoffs themselves, in retaliation for the Herald's attempts to obtain the true dimensions in some way peculiar to itself. At any rate, we warrant that no one read the self-confessed failure of the Herald's exclusive "scoop" with more pleasure than Mr. John B Herreshoff.

The position of the yachting writer to-day is by no means an easy or a pleasant one, he is expected to know everything that is going on in the yachting world, especially in the shops and draft ing-rooms; and he is denied by owners, designers and builders together, even the most unimportant items of news. He is supposed to be fully posted on all the points of a new yacht before her first race, while he is denied all opportunity of seeing her until she i finally hauled out to clean or paint, in midsummer.

The ethical question of how far a man may honestly go, in his legitimate business as a news-gatherer, in obtaining information which is denied him, is one that each writer must decide for himself many times in a season. The attitude of many designers and owners is not of itself calculated to inspire any high motives in the breast of a writer, as they usually treat all alike, giving no more aid to those of established reputation and known veracity

than to such reckless and irresponsible writers as have shown themselves unworthy of confidence.

As concerns his duty to his readers, hardly a week passes that a yachting writer is not called on to consider some piece of news, often in a great hurry, which he cannot possibly verify. In this case one of two courses is possible to him; to weigh the matter very carefully by the aid of that special training which fits him for his position, taking into account the reliability of the source of information and the probability of the news itself, and giving it such a qualified indorsement as the circumstances seem to warrant; or, on the other hand, to rush it into print under flashy headlines, trusting to chance to verify it, or to some newer and equally unreliable story to engage the attention of his readers in the next issue.

The Herald also tries to make a point for the new deed by offering the present illness of Mr. Herreshoff as a justification of the ten months' notice of challenge. Throughout the whole course of the long controversy no objection has been made by the opponents of the new deed to the ten months' notice. The only point connected with it which has been criticized, is the absurdity of demanding ten months' notice after positively refusing in three different years to accept more than six months' notice. Lord Dunraven excepted, the first aim of the various challengers has been to secure the acceptance of their challenge and the arrangement of all details from ten to twelve months in advance, in which they have been repeatedly frustrated by the very peculiar limitation of six to seven months made and maintained by the New York Y. C. The ten months' notice is all right as a safeguard against surprise, but if the New York Y. C. will in the future meet all challengers in the spirit which it displayed for the first time in 1893, there will be no trouble over insufficient time for preparation, as it is as much to the advantage of one party as the other that everything should be arranged long in advance.

One good result has come from the unsuccessful agitation in favor of Newport for the Cup races in that Mr. F. P. Sands, one of the most active of Newport yachtsmen, with several others, has taken up the scheme of a series of open races off Newport, in August, after the cruise. Money has been liberally subscribed for prizes, some $6,000 being now available. Good cruises will be laid ut, and races will be held for all classes, large and small..

A report comes from Glasgow to the effect that a newspaper man has been allowed to see the new Valkyrie, of which the keel is cast and the frames partly erected. The boat is described as however deeper and having less flare to the topsides than Ailsa but with a hollower section than Valkyrie II. The ends are long, but in Watson's characteristic style. Nothing is said of the method of construction, whether composite or metal plated.

Our readers will be interested in the news that one of Mr. Linton Hope's designs will be seen about New York this season, the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, having received an order from Mr. John R. Suydam, who had the plans from Mr. Hope while abroad. The boat will be 29ft. over all, 20ft. l. w. l., 8ft. beam and 1ft. draft without centerplate, the latter increasing the draft to 6ft. She will be catrigged, with a battened sail similar to that which we published on March 9.

YACHT NEWS NOTES.

The annual meeting of the Minneapolis Model Yacht Racing Association was held on March 19. Officers for the ensuing year were elected as follows, the election in each case being unanimous: Com., E. F. English; Vice-Com., Chilson Aldrich; Sec. and Treas. (re-elected), John Hadden. Sailing Committee: C. Boyd and L. Green. The secretary's annual report showed an increase both in membership and boats. The news that the American Model Yacht Club, of Brooklyn, would send a 40-in. model to sail a return match in Minneapolis the coming season, was received with much satisfaction, and already two new boats are on the boards in anticipation of his visit, with two or three more 40's promised. The club expects to have a good season in 1895.

We understand that a new edition, the 8th, of that standard work, "Yacht and Boat Sailing," has been prepared by Mr. Dixon Kemp, and is now in press.

The report of the charter of Columbia, schr., to J. J. Astor is denied.

Algonquin, steam yacht, J. S. Watson, arrived at Kingston, Jamaica, from St. Jago, on March 11.

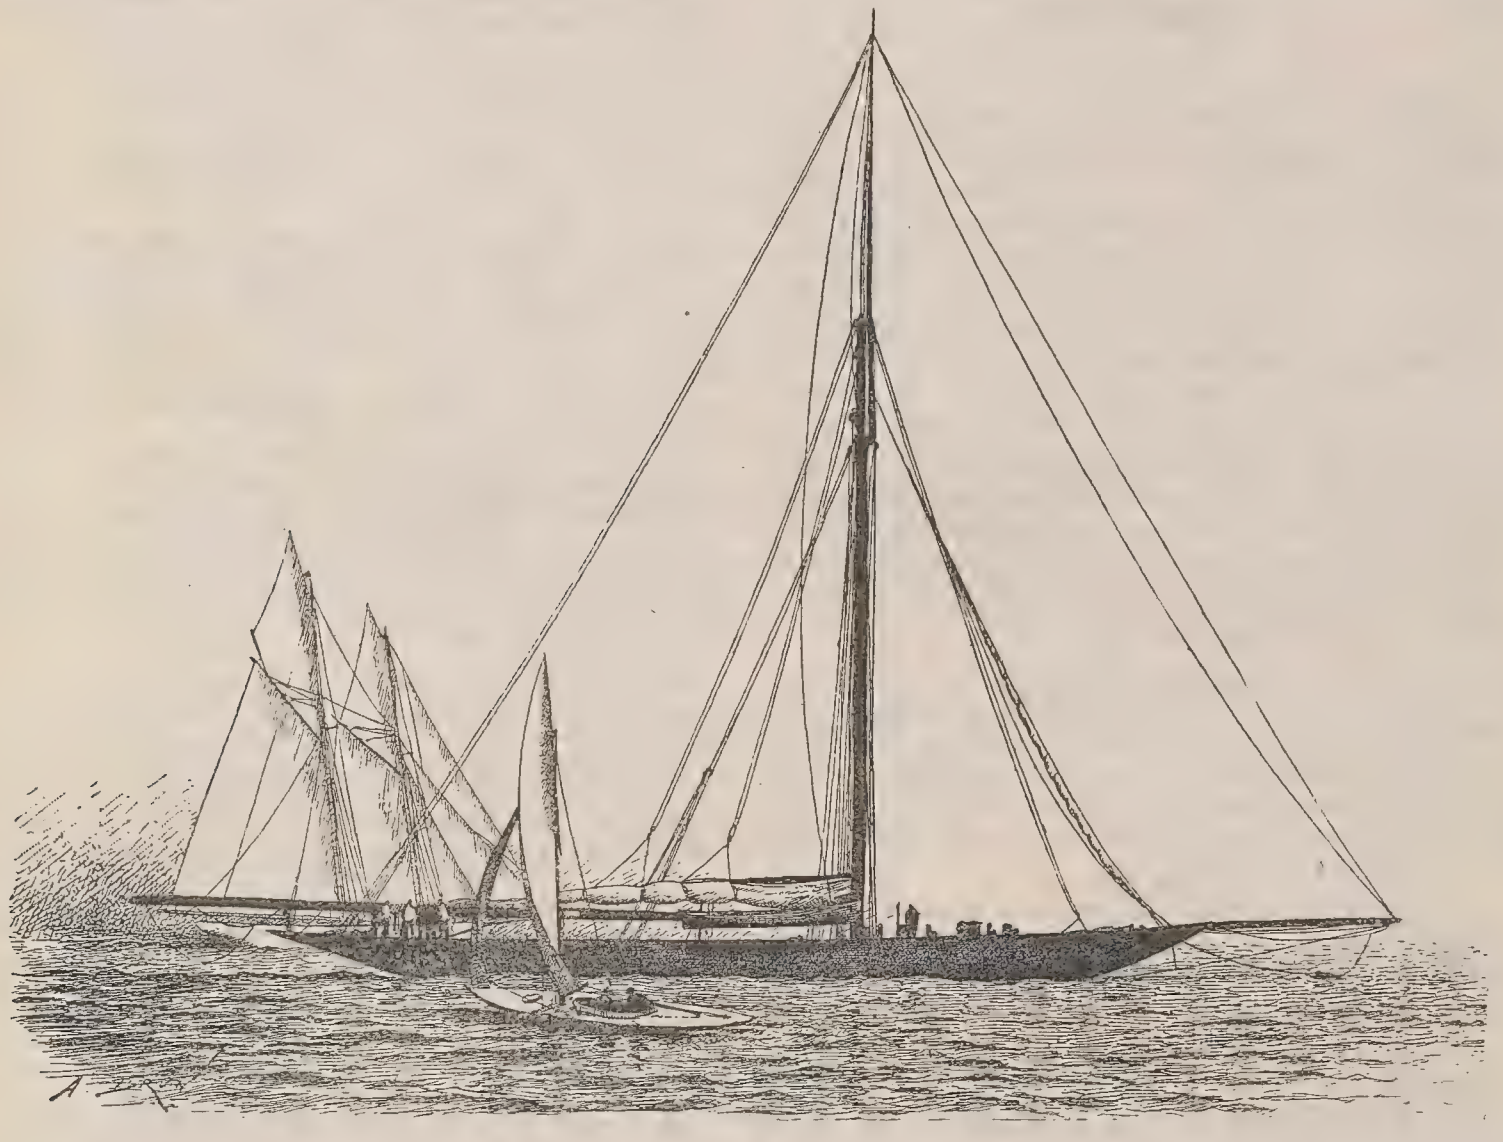
On March 19 Capt. Chas. Barr, with his crew, sailed from New York for Southampton to fit out Vigilant for her return passage. Capt. John Barr, Sr., has been released by Mr. Hopkins, and now is in the employ of Mr. Howard Gould as skipper of the new 20-rater Niagara. His berth as skipper of the cutter Yvette, owned by Mr. Hopkins, will be filled by young John, now a captain himself.

The Yacht Club Argentino, of Buenos Ayres, was honored recently by the presence of the American Minister, the Hon. W. Buchanan, accompanied by Secretary Fishback, who joined the members in a cruise in the yacht Nemo, under the command of Vice-Commodore Kimbal. But it happened that in the preparations for the cruise an American flag was not thought of, which mistake was rectified by borrowing one from the ironclad Libertad, after which the yacht may have been said to be sailing under the American flag, as the borrowed article was many yards in superficial measurement.—Panama Star and Herald.

We have received from V. D. Bacon, of the Cape Cod Yacht Agency, a very full list of yachts for sale, new and second hand, most of them of the Cape type.

The yacht Sea Gull, J. R. Adams, of the Philadelphia Y. C., was recently cut through by the ice in the Delaware and sunk in the club basin at Tinicum.

The Mediterranean Races.



The race of March 19, from Monaco to Nice, was very unsatisfactory, Britannia not starting. The wind was moderate, and the times at the finish, the yachts starting at 9:05, with 15 min. in which to cross, were:

Ailsa	10 19 57	Rolla III	10 52 51
Corsair	10 35 41	St. Marcial	10 54 48
Valkyrie	10 37 10	Contest	10 55 30
Aranella	10 40 3	Gareth	10 56 48
Dakotah	10 46 38	Yvonne	10 59 20
Bebelle	10 49 9	Lola	10 02 33

Ailsa, of course, won.

On March 23 Britannia and Ailsa met again over a 30-mile course, in a very light breeze. At the end of the first round Ailsa led by 14 min; at the end of the second they were not timed, but Ailsa was nearly half an hour ahead; Ailsa finished in a drift, taking 8 hours to cover 30 miles, while Britannia gave up. Both yachts were finally disqualified on the ground that they had crossed the line before the gun.

The accompanying picture of Ailsa on the Clyde is from a sketch by Mr. A. Brun, the talented artist of Le Yacht.

CUTTER AILSA. DESIGNED BY WILL FIFE, JR. From Le Yacht.

Jubilee.

"The prospects are that Jubilee will not take part in the seasons racing, the syndicate has not met with encouraging success in the effort to raise the necessary money, and now Gen. Paine has decided to sell the boat, according to the Boston Globe, as follows:

"The subscription syndicate to purchase Jubilee has come to nothing, mainly because Gen. Paine has withdrawn his offer to sell the boat. Mr. Foster has not yet given up hope of a new boat, though, for he has had the possibility in mind for some time. His plans are not, however, sufficiently matured to formulate publicly.

"Asked yesterday the reason for the withdrawal of his offer, Gen. Paine said that it was 'principally in view of some editorial utterances saying that Jubilee stood no chance with the boats of 1895. With such opinions scattered broadcast he did not feel that the boat ought to be offered to a syndicate in which some might regret their contributions or feel that they had contributed under a mistaken idea of the boat's chances.

"So Jubilee is still for sale. Her owner would like to see her raced, but does not feel like giving the needed time and money to it himself. His sale would be preferably made to a wealthy man or men who could well afford to take chances with her, win or lose, and to whom the financial end would not be the consideration that it would be to a syndicate.

"What he thought Jubilee's chances really were, Gen. Paine promptly declined to say, nor would he even guess at the probable speed to be gained by the alterations to the bow."

Work at Bristol.

(From the Boston Globe.)

The new Cup defender at the Herreshoffs' has taken a perceptible growth during the past week. The bronze keelplate has been placed in its position at the top of the big lead keel, where it will be held by large bronze bolts. Five of the steel frames have also been set up in the past few days, and it is now but a matter of a short time when the whole outline of the boat will be seen.

Workmen are busy at the shop on Burnside street bending the angle iron into frames for the new boat. The firm has been short of angle iron, but this was overcome by the arrival, on March 22, of a large quantity of short lengths from Pennsylvania.

A close watch is still maintained at the railroad yards to see that none of the material arriving for the Herreshoffs is inspected by the newspaper fraternity, and box cars in which the material comes are locked until it is taken away.

Another carload of bronze plates was expected to arrive on March 23, but information in regard to the size of the plates will be obtained only by scanning the plates as they are being carted to the works on the gears.

The greatest disclosure of the week in connection with the new Cup defender was the fact that the suit of sails to be furnished by the builders with the new boat, will be made in Bristol by the firm's sailmakers.

Within the past few months important changes have been made at the factory of the National India Rubber Company, and a second story has been added to what is known as the old boot room. The Herreshoffs have not the room for the making of the new suit of sails, and so J. B. Herreshoff has arranged with Manager Philip H. Coyle, of the rubber factory, for the use of the new room, which will not be needed by the rubber company for some time to come. The total length of the room is about 300 feet, but a partition will be built cutting off 100 feet of the room, and making the room in which the sails will be made about 200 feet in length and 60 feet in width.

Men are now at work in the room preparing it for the sailmakers, and the coming week will see the latter at work on the big sails. The room will not be large enough to make the big sails in one piece, so it is intended to make them in sections. The work will be done under the direction of head sailmaker Asa T. Hathaway, formerly of Fall River, who will be assisted by the other three sailmakers at the shops.

From what can be learned in regard to the new sails, it is estimated that the total sail area will be between 11,000 and 12,000 yards.

The material will be ramie cloth, made from the fibre of grass grown in China and Japan, and which has also been successfully raised in Texas. The cloth is far superior in strength, both when wet and dry, to the sea island cotton, and is lighter in weight.

It is said that the suit of sails to be made by the syndicate will be made from cloth woven by an expert weaver from England, who wove the cloth for the firm of which Ratsey, the famous sailmaker, is a member. It is said also that the cloth will be made on imported looms in the vicinity of Lowell, Mass.

The cloths in the sails of the Herreshoff suit will run from the leech to the hoist, instead of from the gaff to the boom, as on former boats.

Work on the Gould 20-rater Niagara is being pushed ahead rapidly, as it is intended to send her across to Southampton from New York by April 13. The workmen are busy on the hull of the new boat, and are putting on the deck and interior finishings. The fin and bulb are all ready to be attached as soon as the hull is completed. She will be rigged here, and a trial trip given her in Bristol harbor and down Narragansett Bay. She will be stripped after her trial trip, and will be towed to New York, where her fin will be taken off and the parts put aboard the ocean steamer.

The new 20-rater for the German baron is being rushed along, and during the week two representatives of the owner have been at the works watching the finishing of the boat and the work of attaching the hull to the fin. One of them is said to be a relative of Diaper, who was the pilot on the Vigilant during her race last year on the Clyde. They will stay here to go aboard of her during her trial trips and will also accompany her across the ocean on the German steamship. Orders have been given the sailmakers to push the work on the sails for the German boat, and the spars are now ready. She will be launched either Tuesday or Wednesday of the coming week. She also will be stripped after her trial trips, and will be towed to New York.

Work on the Hostetter steam yacht is nearly finished, and she can be put overboard at any time. The finishing touches in the cabin and crew's quarters are being put on, and the machinists are busy in the engine room.

The centerboard of Vigilant is completed, and will be shipped across to Southampton when Niagara goes.

Nat Herreshoff has made rapid strides toward recovering during the past week, and has put in considerable work on the plans which were left unfinished when he was taken ill. He came out for the first time at noon on March 21 and stayed a short time on the veranda at his residence when the sun was warmest. His rapid improvement within the last few days, and his consequent gain in strength, prophesies his early appearance at the shops where his direction and personal supervision of the work on the new Cup Defender is a necessity to make the construction of the boat a success.

Foremen of the departments consult him daily in regard to the work, and his instructions are as faithfully carried out as though he was present in the shops.

During the week a United States Government Inspector from the Navy Department was at the works for the purpose of looking over the Herreshoff style and make of boilers. The visit of the inspector is said to have some connection with the torpedo boats on which the Herreshoffs submitted bids to the Government a short time ago. The inspector was entertained by Pres. J. B. Herreshoff during his stay here.

The London Sailing Club's Model Competition.

The full details of the model competition and exhibition of the London Sailing Club, the subject being a single-hand cruiser of not over 30ft. over all length, were given in the Forest and Stream of Dec. 8, 1894; the exhibition taking place, as announced, between Feb. 19 and March 2. The competition and exhibition were both completely successful; and the result was very encouraging to the club. Mr. Dixon Kemp was the judge. The winner of the first prize was Mr. J. C. Enberg, a Swedish designer, who was in this country in 1893, and to whom we are indebted for the translation of the description of the schooner Sverige, which we recently published. The following description of the exhibition is from the Field:

The merits were to be decided by points; fifty being the maximum for hull, twenty-five for sail plan, and twenty-five for cabin arrangement. As usual, the names of the designers remained in sealed envelopes until after the awards were made.

The various designs are of very remarkable merit, and, what is more, it can be said that three-fourths of them are practically of equal merit, and it must have taken some nice discrimination in awarding the prizes. Certificates of merit, of course, under such conditions, are found to be plentiful, and the only wonder is that each model was not "decorated."

Another very striking feature in the competition is the marked influence the racing yacht has on the form of the cruiser. Whatever the merits of the type the rating rule has evolved, it is quite plain the single-handed cruising man thinks it all right to be in the fashion. Nothing looks more odd now, for instance, than to see a Marjorie or an Annasona among a fleet of up-to-date racers. Three or four years ago these new-fashioned racers were the oddities, but now are simply beautiful to behold That the cruising man likes to be in the fashion it is plain, and hence we suppose he desires sometimes to rule the form of racing yachts as they rule the fashion for all yachts, and even some kinds of coasters and pilot vessels. With regard to the hulls of the single-handers, they all present most symmetrical fore and aft and vertical outlines, and the displacements and ballastings are well judged. In some instances, however, enough consideration was not shown to the requirements of beaching or taking the ground, and a few of the models had very awkward, raking keels.

The weakest feature about the exhibits was, perhaps, the sail plans. They were not overdone with canvas, but many of them had five sails, and most "single-handed" men are satisfied with three at the outside, the favorite sail plan being main, fore, and mizen yawl rig. One was given a topsail of close upon 200 sq. ft., and we do not think even such a marvelous single-handed sailer as the late Mr. R. T. McMullen would have cared to have been shipmates with such a sail if actually single-handed. One of the designs is already in existence, and much approved of as a single-handed craft, and she, we may say, is sloop rigged.

The London Sailing Club wished to have their usual 1-rater competition, but in face of the fact that the rating rule is "hung up" and nobody knows what the future of it is to be, it was thought that such a competition at present would serve no good end. Mr. Dixon Kemp judged the models and designs, and the exhibition was opened to the public on Tuesday. After the awards were made it came somewhat as a shock to find that the first prize was taken by a foreigner, Mr. J. C. Enberg, of Norrkoping, Sweden (No. 17). The model and design are exceedingly well made, and the arrangement under deck excellent. All the falls of halyards, sheets, etc., lead to the cockpit aft, and the anchor chain is brought under deck to a ratchet winch in the cockpit, so that under ordinary conditions the latter craft could be got under way from the cockpit. This vessel is sloop rigged. The second prize aws awarded to a very useful sort of centerboard craft (No. 13), and, as in the other case, all the leads went to the cockpit. The design is capitally arranged below, and is the work of Mr. F. Shepherd, 6 Milton Terrace, Fitzhugh, Southampton. The five sail rig probably stood in the way of this craft taking first prize. The third prize was taken by Mr. P. H. M. Paterson (32 Eldon street, Greenock), and is numbered 13. Certificates of merit were awarded to No. 1 (Mr. J. Rennie Barrett, Lily Bank House, Johnstone), No. 2 (Mr. R. Von Lengerke, St. James Vicarage, Fulham), No. 3, Dorothy (Mr. Linton Hope, Greenhithe). This craft is well known on the Lower Thames as a capable little cruiser. No. 6 (Mr. J. R. Garthwaite, 99 Parliament street, Stockton-on-Tees); No. 10 (Mr. H. J. Dartnall, New Alma Road, Southampton). This craft has a Wastney Smith's anchor, the stock of which stows in the hawse pipe; a spindle rod for working the capstan leads to the cockpit aft. No. 11 (Mr. James Stow, Shoreham), No. 16 (Mr. Wilfred Barry, 9 Wellington Road, Charlton), No. 24a (Mr. Harly Mead, Hayle, Cornwall). Mr. Mead also exhibited a 30ft. model of the square stern type like the old Itchen

Ferry or Falmouth Quay punts. This design showed a displacement of 10 tons and a sail area of 488 sq. ft.; so her speed would scarcely have satisfied the single-handed cruising man. We have not space to enumerate all the models, but we may say excellent styles of craft were shown by Mr. J. P. Payne, Belvedere Road, Southampton (No. 9); by Mr. Harry Stow, Shoreham; Mr. Alfred Mylne, 116 Woodlands Road, Glasgow (No. 7), and by Mr. J. E. Odgers, 8 Bryant Wood Road, Highbury, N.

A table of the dimensions of the prize winners and the certificated designs is appended:

	Rig.	Sail area.	No. of sails.	Length over all.	Length l.w.l	Beam.	Draught.	Draught with C.B.	Displacement.	Ballast.

A Summer Afloat.

PART II.

(Continued from Page 238.)

It was a quiet, dreamy kind of a day. The gentle wind scarcely rippled the surface of the water, and as we crept along close to the shore, round Andrews and Halibut points, we were so contented and happy that we did not care whether any progress was made or not.

The peculiar feature of this shore is the forest of derricks that mark the stone quarries, and we were startled by the booming of the blasts, which were exploded in all directions at frequent intervals.

We picked up the red and black spar buoys that mark the passage over the bar into Annisquam, and drifted lazily along with the very last of the flood tide up to our anchorage off the second beacon.

There are usually a number of sail boats and one or two good-sized schooners lying at moorings just off the point, and a yacht going in should pass these boats keeping a little outside of them, and anchor in from two to three fathoms. The tide runs very strong both on the flood and ebb, but the holding ground is good, and there is plenty of room for a large fleet to congregate here.

We were charmed with the place and sat on deck all the afternoon and evening drinking in the beauty of our surroundings.

To the northwest rose the sharply cut sand dunes of Coffin's Beach, glistening white as snow in the bright sun and looking like glaciers seeking a way out to the sea. To the left were the pine-clad hills of Essex, thrown out in strong relief by the blue haze that enveloped them. Those nearest us were clear cut and well defined, those a little further off softer both in color and outline, each succeeding one growing more indistinct till they were lost in the blue distance.

To the south of us stretched away the beautiful Squam River winding in and out among the hills and spreading over the bottoms, with here and there an island meadow, dotted with yellow hay-cocks basking in the sun. In the distance we could see the spires of Gloucester and hear the bells tolling the passing hours: while high on the bluff the electric car went flashing and whirring along the broad high road. East of us and close at hand lay the picturesque village of Annisquam, with its quaint little cottages climbing one over the other, each bent on getting a better view than its more lowly neighbor of the lovely panorama spread out before them.

Looking north the eye was charmed with the beautiful coast line, huge granite rocks, bathing their red sides in the deep blue water, stretching on and on to the white tower of Annisquam Light, standing like a sentinel with its feet in the sea; while the gentle swell rolling in from the great Atlantic, rippled and laughed as it broke on the long bar on the further side of the channel.

After the sun went down and darkness crept over the little harbor, the lights in the village windows gleamed and danced over the smooth water and added a new charm to what had already been a perfect day.

A quartette of young men in a sloop yacht near us, unable to resist the spirit of the place, broke out into song, accompanied by one or two string instruments, and we were treated to a number of delightful numbers.

Their voices were sweet and strong, and they filled the valley with such melody as I am sure it had never heard before.

When we "doused the glim" that night, we felt that we had never been in a lovelier spot, nor ever spent a more charming day; and we determined, Providence permitting, that we would again, and that right soon, return to this quiet little harbor among the granite hills of Cape Ann.

We got under way next morning at 4 A. M., without waiting for breakfast, as we wanted to run on the last of the ebb tide. The breeze was so light that we could scarcely tell which way it came from, and at times we lost all steerageway.

After drifting lazily along till we were abreast of the lighthouse, we grounded on the bar, having been swept by the current too far to the westward. We towed awhile with the dinghy only to ground a second time, when we gave it up, anchored, dropped our head sails, and went below for breakfast.

While we were eating, a nice little breeze sprang up from the eastward. We left our half-eaten meal to take advantage of this favorable change, as it would be impossible to beat out against the flood tide after it once got to running, with as light an air as we then had.

It took us two hours to work out a mile and a half from our anchorage, but we considered it was time well spent, for if we had delayed starting an hour or two, we could not have gotten out at all.

As we passed between the buoys on the bar, the breeze freshened a little and we bowled along merrily across Ipswich Bay, headed N. N. W., for the whistler, on the Newburyport bar, thirteen miles away.

This we picked up at nine o'clock. We could see the spires of the town and the masts of the shipping over the low sand-hills of Plumb Island long before we could make out the entrance to the harbor.

A tug came out with two schooners in tow while we were yet a long way off. With the glass we followed their course down the river, and noted where they first appeared from behind the land, and were pleased to find that we had steered a correct course.

There are two buoys to mark the channel, painted with black and white stripes, and near them there are from two to three fathoms on the bar at low tide, but these buoys must be kept close aboard when going in or coming out.

The Government has been making some extensive improvements in this harbor during the past two or three years. It has removed the very dangerous rocky obstruction that was almost in mid-channel, between the old jetty and Plumb Island Light.

A large stone jetty has been carried out on the north side of the river mouth, and one started on the south side. These jetties approach each other at right angles, and very greatly contract the width of the channel at this point. The consequent rush of the pent-up waters has cut out the bottom of the river, entirely removing the old bar, so that now there is from fifteen to twenty-five feet of water where formerly there was but six or eight feet.

The breeze freshened as we drew near the whistler, and we tore along through the rushing tide that went swirling and boiling past the end of the north jetty. We kept well over to the Salisbury Beach Hotel and followed the chart from there up to the town.

The channel is well marked with black and red spar buoys, and if there is any breeze at all, there is no trouble in sailing up or down the river from the town to Salisbury Beach.

There is a very conspicuous beacon on Black Rocks just above the hotel, which is called the Toothpick, probably because of its tall, slender, pyramidal form; this is left on the right going up. Just below the town are two immense beacons built up of heavy timbers and planked over, one painted red and the other black.

Great care must be taken to pass between these, as there are mud flats to the right of the red one, and a rocky islet, which is under water at high tide, to the left of the black one.

We had no trouble at all in making this port, and dropped our anchor just in front of the Yacht Club House, at a little before ten o'clock. Almost immediately a man came out to us and kindly pointed out a good mooring which we could pick up and invited us to make ourselves perfectly at home at the club house.

The wind which had been freshening all the morning was beginning to blow half a gale, and as Cy-Pres is very uneasy when anchored in a tide-way, we thought it best to stick to our little ship till we were sure the anchor would stick to the bottom.

After the tide began to ebb, the S. E. wind kicked up quite a nasty little chop, which continued to annoy us till Half Tide Rock began to show itself out of water, when it cut off the seas very much, and we rode to our anchor more comfortably.

Newburyport is a quaint old town, and the streets of fine residences bear evidence that it is a prosperous one. The streets along the river front are crooked and narrow, but we found much to amuse and interest us in them.

Nearly every town along the coast has its own peculiar style of fishing boat; and those of Newburyport were, if possible, the most interesting and picturesque we had yet seen.

The fishing is most all done on Joppa and Salisbury flats, the fishermen going down the river at about half ebb, and coming back with the flood.

As the current of the river is very swift, they find that they cannot depend on sail power, so are obliged to row.

The boat most in use is a huge, high-sided dory manned by eight lusty oarsmen and a coxswain who stands up in the stern and sculls, with a long swinging motion.

Some of the dories are quite gay in their coloring and have broad red and white stripes running fore and aft. Others are one color in the body of the boat, with ends of a different hue, with perhaps a huge eye or circle on each side of the bow. They are fitted up to carry one rather small sprit lug sail, and that is tanned a very dark brown, almost a red, and is only used when there is a good fair breeze.

Numbers of these large dories passed us, and we never grew tired watching them.

We lay at anchor just off the Yacht Club House, and the club members were exceedingly kind and polite. They gave us the freedom of the whole place, including a pass-key to the gate at the shore end of the dock. They were annoyed so much by all sorts of people loafing and fishing around the club house, that they were forced to fence off the dock in order to get any enjoyment out of it themselves.

Just inside of us lay the yacht fleet twenty or twenty-five as

SQUAM RIVER.

smart-looking boats as one will see anywhere; all centerboards, of course, as they must cut across the flats occasionally, and a deep keel would be in the way for such sailing.

Among them I remember the Live Yankee, with a stem so nearly parallel to the surface of the water, that the weight of a man on her forward deck would lengthen her l. w. l. several inches.

The Raccoon was there, and later in the afternoon went out for a spin. She was sailed by a man devoid of fear, and got knocked down repeatedly, so that they had to let fly jib sheet and shake her up in the wind.

We watched her some time, and once or twice thought she would surely turn over, but she came up smiling every time.

The Myra, too, we noticed, the pretty little boat illustrated in the Forest and Stream of Nov. 3, and we thought she was the most graceful boat in the whole fleet.

During the afternoon, while the wind was blowing the hardest, a bold little youngster put out from one of the docks in a tiny little skiff, apparently made of three boards. He had a home-made leg-of-mutton sail and a jib, and was evidently as proud of his little tub as the owner of a forty-foot flyer would be.

He sat balancing on the gunwale, and it made us laugh to see how quick he had to jump from one side to the other when going about; but he never failed to get over in time, and seemed as much at ease in his little home-made trap as any sailor on the big three-master unloading coal at the dock.

Late in the afternoon a fog came drifting in; one of the chilly, uncomfortable kind, that drove us below.

We kept the oil-stove burning after supper, and this warmed and cheered us till we turned in.

The wind died out with the sun, and we had a very quiet, restful night, some rain falling at intervals.

We were up at 4:30 the next morning, and got breakfast as quickly as possible, for we wanted to start on our return trip before the flood tide should set in.

The sky was overcast, but the fog had blown away, and the barometer was rising; we concluded, therefore, to start, and got under way at six o'clock, which left us about an hour in which to reach the mouth of the river before the tide turned. The wind, what little there was of it, was from the west, and we ran before it quite rapidly, the ebbing tide helping us along.

The river is very like a lake at high water, from Salisbury Beach Hotel to Half Tide Rock; as the greater part of Joppa Flats are entirely covered, opposite Salisbury Beach.

Plumb Island stretches along parallel with the coast line, and reduces the width of the channel at that point very much, and the large volume of water passing through causes a very rapid current.

We glided smoothly and quietly along, enjoying hugely the gray effects of the early morning light, till we approached the narrow part in the river, when the wind died out completely; the flag near Plumb Island Light falling down, limp and lifeless.

We were carried onward and caught in the boiling, whirling vortex before we realized how perfectly helpless we were; and it was only by vigorous sculling with the rudder that we prevented the yacht from going down stream stern first. Guiding her was entirely out of the question, all we could do was to sit still and see what would come of it.

As the deepest water is on the left side coming down, we had kept well over on that side till we reached this point, which brought us dangerously near the north jetty. With bated breath and nerves strung to the highest pitch we shot past it, and plunged up to the bitt into the breakers outside.

Two or three tremendous combers came tumbling toward us, but we managed, fortunately, to meet them bow on, and did not get another drop of water on board. Had we swung around at the last moment, broadside to these great curling white-capped seas, the consequences might have been very disastrous.

After we became conscious of the fact that we were drifting helplessly along, and must go through between the jetties, whether we wanted to or not, where we could see the water boiling and whirling in its mad rush to the sea; we began to experience that feeling of which McMullen speaks, when he says, "He was not afraid, but very anxious."

Just before the wind left us to the mercies of the tide, our sympathies were aroused for two poor fellows hard aground on the point of Plumb Island.

One was a good-sized coasting schooner that was lying in two or three feet of water. The crew had rigged up gangplanks, and we could see them walking from the vessel to the shore and back again, evidently carrying out her cargo and ballast, in order to lighten her, so that she would float on the next flood tide.

The other boat was a sloop about thirty feet long, and she lay on her side, the mast pointing out over the water. She was nearly buried in the sand, and three men were shoveling as hard as they could to get her clear, so that the rising water would lift her out.

We found several schooners outside of the bar, standing off and on, waiting for the tide to turn, before attempting to go up the river, and the experience we had just gone through convinced us that the last hour of the ebb tide was not a good time to enter or leave the Merrimac.

When we went in it was nearly high tide, and there was no difficulty at all in handling the boat, even though the current was swift; but on coming out we failed to consider that the river had its own individual current, that would keep running strongly in the very face of the young flood tide, and would produce just the boiling, whirling water that we ran through in the last few hundred yards of our descent.

We had heard a great deal said about Newburyport being a dangerous harbor to enter, and several fishermen on the coast had advised us to let it go without a visit, which only whetted our curiosity the more; and now that we had been there and were safely out again, on the bosom of the broad Atlantic, we both agreed that we were glad we had done it, for it was pleasant to think that we had visited a new port, and overcome the real and imaginary dangers of its navigation.

The town itself is well worth visiting, and if yachtsmen will wait till the flood tide has very nearly stopped running, both when going in and coming out, they will not have the slightest trouble. It is necessary to have the best of ground tackle here, as the ebb tide is exceedingly swift, and if there is any wind blowing the boat will be very restless, and try to wander all over the harbor.

We found our little thirty-six pound Babbitt anchor, an excellent thing for such work; for, although we lay there a day and a half, there was not the slightest tendency to foul it. Soon after getting outside a light breeze sprang up from the westward, accompanied by a gentle rain, but this we did not mind, as we were well protected by rubber coats, hats and boots.

As the weather was very thick and we could not see objects that were over two miles away, we got our compass in place and took our bearings, steering by the card for Rockport.

About a mile out from the Jetties we saw what we supposed was a sloop at anchor, but as we drew nearer we found that it was the main topmast of a schooner, her foremast head and triatic stay appearing and vanishing as the waves rolled over her.

We altered our course and ran close to it so as to be sure that no one was needing assistance, and as we square away again we wondered what accident could have wrecked a schooner so near a port and no one apparently the wiser for it.

About eight o'clock the weather showed signs of clearing and the breeze increased a little, coming more from the south'ard.

We could dimly descry Halibut Point, and began to approach it rapidly. With brightening skies and freshening breeze we ran merrily along, reaching Rockport at a little before noon.

We kept well up the harbor and anchored near the coal dock on the east side.

(To be continued.)

Canoeing.

Milwaukee Notes.

Mr. F. W. Dikens, secretary of the W. C. A., writes from Milwaukee, Wis., about the doings of Mahn-a-wank C.C., of that city. "Our annual meeting and election of officers was held on March 5, at the boat-house, and F. B. Huntington was elected Com.; W. A. Dawson, Vice-Com; G. F. Gregg, re-elected Sec. and Treas. We had Mr. N. H. Cook and W. H. Crawford, of Dayton, Ohio, as visitors.

"A pleasant social session was held afterward at the expense of the newly elected officers. A novel scheme for awakening the interest of the members, and to get a larger attendance at the boat-house, was introduced by Mr. Friese. This is an organization of what he termed 'The Grub Club,' composed of members of the canoe club, the idea being to cook and serve lunches, etc., at the boat-house. This met with hearty co-operation, and subscriptions were taken up for a kitchen outfit, which has already been purchased, and the first spread will be given on March 17. The only rule so far adopted for the government of this club is, that a person to be entitled to membership, shall first pay his pro-rata of the expense and cook a meal. Any person making a kick on the articles laid before him shall pay the penalty by washing the dishes. We anticipate much enjoyment from this source during the coming season.

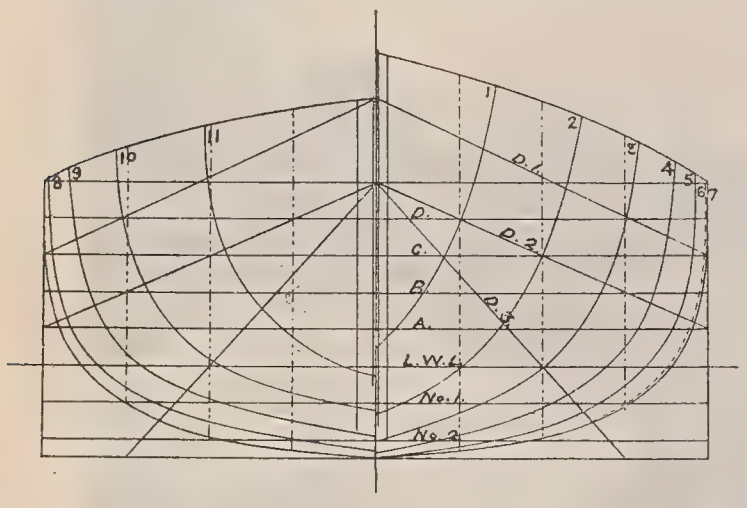
"Matters in the Western Canoe Association are rather quiet; the coming summer meet is heard of occasionally, and the attendance bids fair to be large from the territory directly adjacent to Ballast, but will perhaps be light from out this way, although the

active members all say that they surely intend to go, if they possibly can; and I know of several boats that participated in the aces last year that are now being fixed up for the coming season.

"We read with much interest the articles which appear in the Forest and Stream on canoeing, written mostly by Eastern canoeists.

E. HOUGH."

The "Rushton" Canoes and Boats.



The annual catalogue of Mr. J. H. Rushton, of Canton. New York, builder of the celebrated "Rushton" canoes and boats that have been so long known to our readers, is considerablly changed from those of previous years, a new arrangement being adopted. One of the most important of Mr. Rushton's specialties is the double-end lapstroke rowboat, adaptable for almost all purposes for which a boat can be used for pleasure, hunting or every-day service. This class of boat is shown in all varieties of models and sizes, and of finish and price to suit every use. As newly arranged, each model is designated by the name of a State, the stock sizes varying from 20ft. down to 13. Of open canoes there is a large stock to select from, including the standard Canadian model, and down to the well-known and popular Grayling and Voux.

In decked cruising canoes Mr. Rushton builds but one stock model, the Vesper, in various sizes up to the canoe yawl 18x36. Special craft, such as small cruisers, hunting boats and yacht' dinghies, are well represented, also sails, gear and fittings of all kinds.

One of the novelties is a collapsible boat, the patent on which is now pending. Mr. Rushton's efforts of late have been directed mainly to the improvement in model, build and material of those models of his canoes and boats which experience has shown to be the most popular, and the result is shown throughout the catalogue.

A "One Design" Canoe-Yawl.

As recently stated, the canoe yawl here illustrated is intended primarily for such comfortable sailing as is coveted by many old canoe sailors who have dropped out as sliding seats have become longer and sails larger, and as the preparation and maintenance of a racing canoe has become a science. The idea of the owners of the three canoes now building from the design is to have a boat that can be housed and handled as easily as the present 30 in racing canoe, that will be fairly smart and able, and in which an afternoon sail will be possible without donning a bathing suit, and with little more trouble than shifting to jersey and canvas shoes and setting the boat afloat. It is quite evident that, if the canoe justifies expectation in these important respects, any considerable number being built, the first attempts to race them under ordinary conditions would result in the destruction of the class by a few specially built racing machines; and to avoid this as far as possi-

BODY PLAN.

ble the three gentlemen, Messrs. W. S. Elliott, Schuyler Schieffelin and W. J. Stewart, decided on the "one design" idea, to be rigidly adhered to in model, build, outfit and size and shape of sails. Whether others, in building similar craft, will adhere to this plan remains to be seen; but there is a fair prospect of good sport to be had from a fleet of half a dozen or more. The dimensions and main points of the design were selected by Messrs. Elliott, Schieffelin and Stewart, the lines and details being worked out by Mr. W. P. Stephens. The dimensions are as follows: Length over all, 15ft.; l. w. l., 12ft. 6 in.; beam extreme, 3ft.; draft, 5 in.; freeboard, 10 in.; sheer, bow, 7 in.; sheer, stern, 4 1-2 in.; displacement, 362 lbs.

TABLE OF OFFSETS—"ONE-DESIGN" CANOE YAWL.

* The half-siding of after side of post is 3-16 in.

The figures given above are feet, inches and eighths of an inch.

The order for the three boats has been placed with the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, New York; the three to be ready in May. The details of construction, fittings and sail plan will appear next week.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 6, 1895.

VOL. XLIV.—No. 14. No. 318 BROADWAY, NEW YORK.

For Subscription and Advertising Rates see Page ix.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting).
Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

CONCERNING A CRANKY SUBJECT.

The crank is always an enthusiast, with an abiding faith in the superior usefulness of his hobby and a firm conviction of its ultimate recognition and universal acceptance. However much the family of cranks may differ as to the merits of their hobbies, they possess alike and in common the qualities of enthusiasm and unfailing hopefulness.

To the lay mind, that of the careless and unthinking part of mankind, the term crank implies a measure of ridicule. The crank's singleness of purpose to a hobby, or idea, or devotion to a mission, is so enthusiastic and unceasing, in season and out of season, that people of staid and plodding ways look upon him either as a bore, or a person whose mental equilibrim is not in true poise. Yet the crank is the true pioneer in the path of discovery, or the fearless advocate whose labor and loyalty force a conviction of truth to the heedless minds of the multitude. Of course, cranks vary in ability and in their usefulness of purpose quite as much as do the rest of mankind, but their tireless industry and love of their work accomplish much more than the perfunctory efforts of the average worker, who looks upon his labors as a wearisome task. The crank is devoted, and from his efforts he derives unlimited pleasure. His labor is pastime. His constant application to his subject brings to him a high order of skill both in theory and practice. But the enthusiast who is a crank at the start may at a later period be the great inventor whose mechanisms have revolutionized the industrial world, or the great scientist whose discoveries have blessed mankind. Without the love and enthusiasm for their work, combined with a devotion to it which excludes all else, their success could not have been so great, even if it were success at all.

In the realm of sport, the crank is specially numerous, and he is an indispensable factor in vitalizing and improving whichever branch wins his fancy. Thus there is the rifle crank, who talks to you of rifles, with the collateral details of twists, trajectories, point blanks, penetrations, powders, calibers, weights of bullets; of the thousands of experiments which he has tried, and the improvements he has discovered on existing methods. Who but a man who is in love with his hobby would show such endless devotion?

The crank who thinks the shotgun is the only and superior weapon is imbued with the same cranky stimulus for progress and improvement. He is ever alert to show the superiority of his favorite weapon and his favorite sport. He scoffs at the claims of the riflemen whose pleasure is in seeking big game, and the big-game hunter has a feeling of charitable pity for the man whose sport taxes not his skill or endurance or courage. Yet each in his way is advancing the general progress of mankind.

Then there is the dog man, who will talk dog all day, and the angler who will talk fish all night, and when these good fellows happen to meet, one will talk dog and the other will talk fish, so that the conversation in its two halves is of dog on one side and fish on the other, yet they are the men who educate the world in the beauties of their pleasant and useful hobbies. To the dog crank the world owes the numerous breeds of dogs, useful and ornamental, dogs symmetrical and strong, which are useful in the chase, and beautiful dogs for the adornmen of the home, and bold dogs to guard it.

To the fish crank, we owe the thousand refinements in the delightful art of angling—rods, reels, lines, hooks, flies, etc. And from the research of skillful anglers comes a knowledge of fish culture, a direct benefit to al mankind, one of the most important in adding to the food products of modern times.

The crank, too, is a generous fellow, for, not content with enjoying his pleasures selfishly, he insists that you must know what they are and how they can be gotten. If he cannot talk to you of them, he will write you. He will tell you where the best fishing waters are, or the best waters for cruising. If he knows where quail or snipe or woodcock, or any game is abundant, he tells his friends, and often writes the information to his favorite sporting journal so the world may know it. Thus, from his indefatigable activity, the world at large is a gainer. Everyone cannot be a crank, for a crank is a man with ideas, who is honest and faithful in furthering his work, and has confidence in its genuine worth; who is not disheartened or discouraged by failure, and one who, when he at last does succeed, has benefitted the world more than he has himself. But, at least, all can appreciate his true worth.

PHILOSOPHER, FROG AND MAN.

In our Natural History columns a correspondent relates how, once upon a time, in an arid desert, seeking to appease his thirst, he was beguiled and deceived by a mocking bird's note, which simulated that of a wild fowl, and seemed to proclaim the grateful presence of water where all was dry and parched. The incident has an interesting parallel in one that happened some 2,300 years ago, and has come down to us in one of those perfect verse flowers that make up the Greek Anthology. The hero was no less a personage than the philosopher Plato. This is Dr. Garnett's translation:

Naiads, your frog, hoarse minstrel of a strain
Aquatic, leaping lover of the rain,
Imaged in brass, I dedicate, well pleased,
To ye, in gratitude for thirst appeased.
Faint was I wandering, when the welcome croak
Loud from a nigh sequestered hollow broke,
And, following the inviting voice, I found
The twinkling spring clear-welling from the ground.

It is related that after hearing Socrates talk, Plato burned his poems. We should be thankful that this one escaped destruction, for in this picture of the thirsty wayfarer turning aside at the water cry of the frog, we have more of Plato the man than may be found in all the writings of Plato the philosopher.

CHANGING SENTIMENT.

It is not so many years since interest in game protection was for the most part confined to the Eastern States, and advocates of such protection were chiefly Eastern men. This was natural enough, for the game was exterminated first in the east, where the settlement was most dense, but as the centre of population moved further west and game extermination followed settlement, the notion of game protection followed too.

It is interesting to see the spread of this feeling in the northwest as shown by laws recently passed, or under consideration by the Legislatures of North Dakota and Minnesota, and to note the strong push which is being made among the sportsmen of the latter State to abolish spring shooting. The usual arguments are used for and against this change in the law. Those who wish the spring shooting to continue urge the ordinary and extremely short-sighted argument, that if residents of Minnesota do not shoot the ducks some one else will. Those who are in favor of the proposed law seem at present to have decidedly the best of the argument.

There are especial reasons why the abolition of spring shooting would be a benefit to Minnesota, as indeed to any one of the northern tier of States. Many of the migrating fowl, which, under ordinary conditions, pass on to Canada to breed, would, if undisturbed, breed now as they did twenty-five years ago, in Minnesota and in North Dakota. Old residents of either of these States can remember a time when wild fowl hatched their young in enormous numbers within their borders, and if they no longer do so it is because they have been driven away by being shot at just at the time when they are about to lay their eggs.

It is well known that in some large preserves in Ohio, Illinois and Michigan, the wild fowl which once passed on in spring to more northern breeding grounds, have, since spring shooting was abolished in these preserves, begun to stop there and to rear their young. Such families of ducks, remaining in these localities until the fall flight begins, form the best possible decoys and draw down thousands of migrating birds to share their resting place. A correspondent tells us that precisely this thing occurs on some preserves in Minnesota.

There can be no doubt that before very long the sentiment of sportsmen generally will so have changed that spring shooting will no longer be regarded as sportsmanlike, and while this may not come for some years yet, it will surely come.

NEW LAWS FOR MAINE.

The Maine Legislature has adjourned, and on another page we print the game laws passed at the session just ended.

An examination of them shows that the power of the commissioners have been greatly enlarged, and that many desirable amendments have been made. The commissioners are given authority, on petition of five or more citizens of the State, or whenever they may deem it wise, to regulate the times, places and the circumstances under which game and fish may be taken, and they may even entirely prohibit the taking of any kind of game or fish in any part of the State for a term of years, not exceeding four. This is a power which we believe has never before been delegated to the fish commissioners, and one which may well be entrusted to them. It is to be noticed, however, that they cannot authorize the taking of game or fish at a time when it is prohibited by law. Thus the power of the commissioners resembles those possessed by county commissioners, or county supervisors, of certain counties of various States.

The absolute prohibition of the killing of female or young moose at any time is a noteworthy step in advance, as is also the prohibition of the use of jack lights in hunting moose, deer and caribou.

Anglers will be gratified to note the amendment which reduces the limit of land locked salmon or trout to be caught at any one time from fifty to twenty five pounds.

In looking over these amended and improved laws, the inquiry at once suggests itself, how far can they be enforced? This, of course, depends altogether on the character of the men selected for fish and game wardens It will be observed that such wardens as may be appointed can be removed, and that they are obliged to give a bond for the faithful performance of their duties. This should insure a class of men who can be depended on to faithfully perform their duty. The residents of Maine, and all who visit that State for the purpose of camping, fishing or shooting, will read with satisfaction the changes recently made in the law. It should be remembered that most of these changes were suggested by the commissioners, who, having now received from the Legislature all that they asked for, having had their salaries doubled and their appropriation for the enforcement of the law doubled, will now be held by public opinion to a strict accountability for the enforcement of the law.

ALTHOUGH.

A clergyman who writes from the West and explains that he has become an admiring reader of Forest and Stream, through the fortunate circumstances of having annexed a son-in-law who was a subscriber, adds: "Although I have been for twenty-five years a minister of the gospel, I greatly enjoy the forest and hunting."

We are at a loss to understand the pertinency of that "although." It implies that there is something unusual in a clergyman's enjoying the woods and the sports of the field, and we are free to confess that in our opinion any such notion would be foolish and unworthy. A clergyman who has refrained from the enjoyments of forest and stream recreations, has denied himself their innocent pleasures, and deprived himself of the good they have in them for body and soul, has made a grievous mistake. If shooting and fishing were recreations unfit for a clergyman they would be unfit for other people as well; if they may be participated in by laymen they may be by the clergy, unless we are to accept as a guide for men of that profession the gloomy restrictions and repressive rules under which Pusey endeavored to go through life with never a smile.

The Sportsman Tourist.

AN ADDRESS TO THE AGED.

The season is open at last. The day so long looked forward to is upon you. Don't you remember—aged and experienced sportsmen—how, when the old kitchen clock that you have placed at the head of your bed the night before announced 5 o'clock, loud enough to be heard half a mile, you sprang out of your warm bed, quickly donned your shooting outfit, took your well-oiled gun from the corner, whistled for your faithful dog and started off, you knew not whither. The old dog suddenly comes to a point, and with throbbing heart and trembling hands you await the rising of the birds that you know are before you. With a rush and whirr the covey at last springs into view, and some how or other both barrels of your gun go off and only a few feathers drift away with the wind, to tell you that you were too hasty. You stand looking after the retreating covey, as if you could not believe that you had missed so large a mark, when it seemed but a moment before that you could not shoot into them without at least hitting half the birds. After tramping all day, you at last kill one or two lone grouse that sit on a limb and watch you while you shoot, and after having bought five or six from a more successful hunter, you go home at dark well satisfied and tell your father and mother or young wife about the good shots you have made that day.

Do you not remember all these things? Oh, ye aged and experienced sportsmen! ye were not always old. There was a time when your pulse would beat twenty beats a minute, and your hand would tremble as you raised your gun or waited for the game to show itself.

Don't you remember when, after tramping all day, and seeing only two or three birds, but bagging these by well directed and skillful shots, you raced through the underbrush and over fallen logs as though you feared the bird would come to life and be away before you could reach it?

Oh! ye aged ones, were not those happy days? But now you can stand with a face as long as a ten acre lot and knock the birds right and left and never feel that thrill of yore. If this is true, and you don't long for the field once in a while, I have but one remark to make, that is, "You have no soul." J. T. J.

UNCLE RUSTY AND OLD SILE.

A Backwoods Correspondence.

BY F. BERKELEY SMITH.

OTTER POND.

Here I be, settin' out afore the shanty. The sun's out warm and pleasant, but it ain't meltin' no snow—jest warmin' a feller and makin things seem kinder cosy like. Besides, it's Sunday mornin' and I don't tend no traps during the Sabbath, but ole Drive and me are takin' our comfort, so's to speak, arter the alfiredest hard week of tendin' I done in some time. Sapil is gettin' powerful scarce, and what does run into a feller's beech fall aint wuth skinnin'.

The dog says I'm a fool; that in his idee they aint wuth the gittin'. He jest paws 'em over, and lookin' up kinder disgusted like, says, "Aint that the meanest, pusilaminous batch of hides you ever see!" He's always at me to git up to the forks of the river, up back of whar you killed that dry doe two years ago. "Thar," says he, "is a huntin' ground." He told me he see where there's been sapil, and good ones too, along that leetle brook jest at the bottom of that fust ridge. I dunno; maybe the ole cuss is right. I presume likely he's confident; he talks about it most all day. He's always complainin' that he feels he aint done right by me. That he'd "be daddinged if he aint done all he could. He never see no meaner time for trappin' nor meaner huntin'—seems though there warnt nothin' travellin' bigger 'n a field mouse."

I swan, I never see nothin' that'd ekle it. I reckon we can't stand it here much longer; not that we haint had enough to eat, for I let down as nice a three year ole buck last week as ye ever see travel. The little cuss stood jest tother side of maple about forty rod from the pond. Thar he stood, cleanin'; a neater pair of horns you never see. Now and then some twig'd crackle, and he'd rise his head, or some twig'd come tumblin' down through the bare branches and sink into the dry snow, or through the woods twenty rods off you could hear a chick-a-dee-dee-dee-dee that set yer heart a-thumpin' agin yer ribs, afraid the little cuss 'd hear ye before ye could shoot. Wall, when the gun cracked that deer jumped two rod and then stood still and trembled. I see the little feller was hit bad and couldn't travel, and 'fore I could git to him he lay down and give up. I swan I never felt so mean at killin' no deer, as I done when I see the little feller a-layin' thar in the dry snow. He looked so pretty, standin' there agin' that maple in the light drift, and 'twarn't as if it was an ole buck that had tried a feller's patience so's to speak. Wall, I dressed him out and slid him acrost to camp. Goll, warn't he splendid eatin'. Drive wanted I should save his head for ye, and I done so.

I can't sleep at nights thinkin' about Christmas and the dance at Dewey's. Skinner's gals is goin', and Ed Partridge is a-goin' to fiddle. Does a feller good to git good licker and hear them good ole tunes like "Johnson Pond," and "Pass the Butter," and "The Rovin' Sailor," and "Hull's Victory." I was wishin' you could have been thar last year. The dog and me started Christmas Eve and mogged it through to Clear Pond, and jest about come night we come out at Dewey's. Goll, you never see nothin' luk the crowd that was thar—dogs and fellers in from the lumber shanty. Bimeby ole Hite come out, and Aunt Abby she 'vited us in and we had ven'son and hull chunks of mince pie, and some licker that warn't to be beat. Then we begun dancin and kept it right up till daylight, and then all hands started out to kill a fox—we done it too, and dont you forgit it. I took ole Drive and started him side the mountain, and Hike Eldridge killed it fore we'd been gone an hour.

Talk about mushrats! You never been to Moose Island up Otter Creek, have ye? Rats? Oh! Oh! Oh! Goll, I guess they be. That's the breedin' place fur all the mushrats in Hamilton County. Wall, one day brother Bill and me took a notion to go off up thar and git some mushrat. Bill Wilkins, he'd borrowed all my rat traps what I had, and the goll durned cuss haint brought 'em back yet. But thar, I'm gittin' ahead of my story. Wal, I made up my mind I was goin' to git some rats, but I had only one number 2 Newhouse trap, so brother Bill and me went down the day before to investigate. Wall, sir, them varmints was thick, no use talkin'. There warn't a spot as big as yer hand along the edge of the hull island, there warn't a hole. We commenced plugging up all them rat holes 'cept one right on the aidge of the river bank, and that we kivered up all around with chunks of rotten wood, so jest one of them rats could git through at a time. Then me and brother Bill each cut us a gad about ten foot long and went to swishin the river. When we come back to that hole we had plugged around with them rotten chunks we found it wore from the bigness of a six inch stovepipe to a half bushel measure whar them mushrats had been clawin' in. Wall, sir, we plugged up that hole agin with some more rotten chunks, and I squeezed that number 2 "Newhouse" open and held the jaws clus to the hole, and then brother Bill he begun to dance over the hole. Goll, you'd oughter seen them rats come out; out 'd tumble one and I'd nip him in the trap and knock his head agin the aidge of the scow, and then pop 'd another one, and I'd be ready for 'em, and all the time brother Bill he kept on dancin'. Wall sir, 'fore we finished we'd ketched seven hundred and eighty-two of the nicest, fattest mushrats you ever see. Brother Bill he said he'd gin a dollar to have had ye thar and see the fun. Wall, we had that ole scow loaded clean down to the water with mushrats. Bimeby we got down to them big rapids and the water begun to slop up about us some, and the ole scow begun to wibble wabble so's to speak, and my settin' pole slipped, and fore I knowed it I went kerslosh into the water, and out tumbled brother Bill and all them rats and we had a danged hard time gittin' ashore, and don't you forgit it.

SILE.

NEAR SITKA.

In almost every letter received by a "Johnny come lately" in Alaska, whether it be from the east, south or west, are condolences upon the dreadful climate, the privations endured, and other hardships, winding up with the request to "tell me all about it."

Here we are not in Desolation Land. The harbor is not filled with icebergs carrying sportive Polar bear, nor the streets with the wild Indian in war paint and blanket bordered with the scalp locks of adventurous globe trotters. In no part of the world can grander natural scenery be found than in Alaska, nor more easily reached. The Pacific Coast Steamship Co. brings one here as a prince would travel, and from the start the question is not how to kill time but how to portion it so as not to miss anything. Each change in the steamer's course brings some new beauty of the inland waters to view, until the mind is bewildered, and a sense of relief felt when the noon bulletin tells us we are due in Sitka the next day. Bright and early all are on deck, and soon after sighting the symmetrical cove of Mt. Edgecomb, we enter the island-locked Sitka Bay. The boom of a gun tells us we have been sighted by those so anxiously awaiting tidings from home, and soon we glide past the Indian village and are abreast the old Russian town. There are flags flying, streets are crowded, and all the population seems tending toward the wharf, where from the deck we can look down upon them, well dressed men and women are peering at us, hoping to see a familiar face; groups of neat-looking men in uniform, miners, Indians and all others a frontier town alone can contribute to make up a picturesque crowd. We hurry on shore for sight-seeing, passing long lines of squaws, surrounded by curios and furs, and soon come to and are shown through the Russian church, and see the fine paintings, robes of gold and silver, and jewelled head dresses, contributed by the nobility of Russia.

Such a variety of trips had been suggested when we reached Sitka that in discussing them we got muddled. Our first sport, however, was for the black bass, and procuring needle fish for bait, and fishing within quarter of a mile of the wharf, we caught in an hour over a hundred, averaging three pounds each. Next we tried brook trout on Indian River, and came back with dozens of the speckled beauties, which here ignore the fly and accept only the salmon roe. During this trip one of our party shot a king salmon, and wading into the rapids with gun in right hand caught the monster by the tail with his left, an indignity the fish protested against by one last flap which knocked his captor off his pins and into a deep hole, from which he was fished out by a smiling resident with the remark: "You have to be careful how you ford the rivers here."

Silver Bay, eight miles to the south, was next visited, and from the stream at its head we caught a great many large and beautiful cut-throat trout. Then came a trip to Kobleana Bay, eighteen miles to the north. Starting at daybreak a fine wind soon brought us abreast the site of old Sitka, where trolling lines were hauled in, and by the time we reached shore, the three eleven-pound salmon we had caught had breathed their last. Here some of the party tried some of the small streams for trout, and others searched among the scant ruins of the old Russian tower, which was burned by the Indians and its inhabitants massacred in 1802. The catch was small, and the find an old Russian brass lock, so all went aboard and in an hour we reached our destination, where four men in two hours caught nearly 300 pounds of salmon trout, many weighing four and five pounds. Mt. Venstoria, 3,216 feet just back of Sitka, was next climbed, and from its peak, a view never to be forgotten, was spread before us. Sitka nestled amid its islands, the Pacific at last meeting a barrier, lashing the outlying reefs into a line of dazzling surf, while to the East we were hemmed in by snow capped mountains. Indian tradition has it that inland on Baranoff Island are geysers, and that the country is inhabited by a tribe of natives who are never seen. Many attempts have been made to cross the is land, only thirty miles wide, but without success, and the mystery remains unsolved.

Our hunting trip was organized for the celebrated white grouse, but after a four hour climb over the summit of the mountain, crossing two lakes on the ice—in August—not a bird was seen, save an inquisitive blue jay, which was blown to pieces with fiendish delight. Another trip was to the hot springs, eighteen miles from town, and after a day's outing nothing can be more refreshing than their almost boiling waters whose virtues were made known to the Russians years ago. They cure everything, from a mosquito bite to "housemaid's knee." Mt. Edgecumb, towering alone and majestic, demanded inspection, and a party was organized to explore and shoot; its island, Kruzob, is the Indian paradise for the Alaska grizzly bear and many a time they have opened the gates for the hunter to enter—and deer are found in abundance. The legends hanging around the island are the talk of many a fireside. Little is known of its cruel and rocky coast to seaward, dense forests and surroundings of mountain and ravine, having up to the present time prevented a thorough exploration.

On Sept. 13 a party of five whites, three natives and a dog, sailed from Sitka on the sloop Loeta. At 4.30 p. m, we made landing for water, and then stood in for Crab Bay, where camp was pitched at 7 , and at 8.15 p. m. our first game was killed—a wild goose. At 5 o'clock all were aroused, camp was broken and bedding sent off to sloop, which started for the outside of the island while a hunting party of six began their climb across it. In about four hours we were at the top of the foot hills and for miles followed the marshy plateau with its many pools covered with thin ice. Here the party spread out, and the frequent bark of a rifle and dull report of a shot-gun announced the sport had begun—soon followed the hard work of the day; passing over the densely wooded hills, crossing the numerous ravines, many 60 feet deep, and only gotten over by following the well-worn deer and bear trails. One foot print of a bear measured eleven inches in length. About half past five in the evening the welcome sound of breakers was heard, and we came out on the beach at Chelecoff Bay, near point Mary, a walk of twenty miles.

Soon we were gladdened by the sight of our Sloop rounding the westward point of the bay, and amused ourselves until her arrival by skirting the beach, which here is composed of fine volcanic sand covered with tons of pumice stone. At last we saw the skiff sheer off with our bedding and stand ready to run her up on the beach, which was safely done, and she started for a second load, which was mostly provisions, and unfortunately lost through her capsizing in the surf, owing to the darkness.

The next morning, after a breakfast of venison chops, hard tack and coffee, parties worked along the adjacent hills, and at 9.15 p. m. were safely on board the sloop and under way for Katelena Bay. Before long we encountered head wind and heavy sea, keeping all hands watch and watch. We passed Sea Lion rocks 3.30 a. m. and headed for Virgin Straits, reefed sail and stood off shore until daylight, and after several exciting adventures came to anchor in Katelena Bay, where our last hunting was done.

The next morning we were underway for Sitka, which we reached at 9 p. m, with a total reward of twelve deer, one goose, six ducks, two grouse and a good time in spite of sunburn and dirt. TWO BITS.

WHERE GEESE ARE FEW.

In a recent issue of Forest and Stream there was given an account of wild-goose shooting in Connecticut. Let me give you a short account of that sport in New Hampshire. The first incident occurred at Rye Beach.

It was on a rainy, disagreeable day, late in the fall, when the sportsman, who is the object of this sketch, had been doing a little sea-shooting early in the morning, but had met with indifferent success, and, for a wonder, really was glad to haul up his beloved boat and return home. Having attended to various duties, he walked along the beach to the other end of the town, a mile or more distant. As it was then raining fast, an umbrella was taken for greater comfort, and, contrary to usual habit, the gun was left at home.

Near the beach, separated from it only by a high bank of stones, lies a large fresh water pond, nearly half a mile in length. Having reached the top of the high bank whence he could overlook the entire surface of the pond, he carefully scanned the water. Suddenly a strange sight greets him. At the opposite side of the pond, a fourth of a mile distant, calmly swimming from the seclusion of one branch of rushes to the shelter of another, are two beautiful wild geese. Now a wild goose is a comparatively rare bird in these parts, so imagine his feelings—two geese close at hand and no gun

Down go basket and umbrella, which are left to their fate. Rushing into the house, he hastily siezed gun and shells, pausing only to call to his fellow sportsman to "come on, there are geese in the pond." Tom followed closely after, and on reaching the edge of the pond they separated. Will started off in the direction taken by the geese, while Tom went along the beach under shelter of the bank, as the geese on rising were pretty sure to fly toward the ocean, and therefore might afford him an opportunity for a shot. Meanwhile Will crawled, crept and squirmed through the alders and rushes, continuously advancing until he was sure that he was within a short distance of where he had seen the game. Raising himself carefully up, he caught sight, through the rushes, of two heads, held up perfectly motionless, but with bright eyes intently watching him. They were barely twelve yards distant. Being a true sportsman, he, of course, prefers to shoot all game on the wing, so getting his gun in position, he raises himself up a little to start the birds, but to no use, they refuse to fly. At last, not really caring to lose so good an opportunity for a roast goose dinner, bang goes one barrel of the old gun, while the gun is still held to the shoulder to send the contents of the other barrel after them as they rise. But they fail to do so, and as no sign of them is to be seen, he goes forward to investigate. The cause of their quietness is very evident—there lay the two geese, each with a broken neck. The shot took effect in each case in nearly the same place. Meanwhile Tom, in his hiding place, hearing the single report, waits expectantly, but in vain, for either the second report or some signs of the birds. Concluding that the geese had already flown, he climbs the bank and looks across the pond, where sat Will calmly waiting, evidently for his appearance, for he at once beckons him to come over.

When within speaking distance, Tom could retain his

curiosity no longer. He shouted: "You didn't kill them both, did you? Where are they?"

"Look there," answered Will, and Tom looked in surprise at the dead geese, and being a good friend and true brother sportsman, his congratulations were hearty and sincere.

Yet another experience which befel the same sportsman may prove interesting. The scene of action in this case was Portsmouth Harbor. He had rowed down the river, landing on the marshes, in hopes of finding, in some secluded pool, a few ducks, as black ducks in small numbers are in the habit of feeding about there all winter.

While sitting behind an old stone wall, waiting for something to fly in, his attention was attracted by a familiar sound of honk, honk, and high up over head sailed along a single wild goose, which suddenly altered its course and dropped into a small pool in the centre of the open marsh, about 500yds. from him. Will strove to solve the problem of approaching the goose without attracting its attention, at least until within shooting distance. A small creek ran along to within 100yds. of where the goose was resting. It being low tide, the water had ebbed so as to afford an opportunity to approach the goose. Crawling cautiously along the creek, knowing well the extreme shyness of this fowl, he at length reached the point in the creek nearest to the goose. There was but one chance of approaching nearer, so he crawled over the bank, and lying perfectly flat, kicked himself along over the marsh toward the goose. Instead of taking alarm and at once flying, it evidently thought he was some strange animal approaching, and it assumed a defensive attitude, at the same time trying to conceal itself as much as possible. When within easy gun-shot, surprised that the goose had not already flown, Will raised himself on one knee, and, as the bird, at last realizing its danger, rose into the air, it came in collision with a charge of No. 3 shot, which suddenly stopped its upward career.

Another time, on the same marsh, there was an episode which did not result so pleasantly, but which left my friend and his companion in a state of very righteous indignation. "Al" had been on the watch for several hours over a flock of eight geese which were swimming about in a small pond, and which he had fondly hoped would come within gun-shot. There he was joined by Will. After watching them some time longer, the geese slowly swam down around a small island formed by the rising tide. Knowing that the outlet was a small creek, about fifteen yards distant from my patiently watchful friends, their hopes were high, the game was nearly theirs, when, down across the marshes from the other side, came three men who had also discovered the presence of the geese. Seeing that, apparently, the only chance now left was to cut off the geese before they flew, my friends left their concealment to approach nearer. They now discovered that the intruders had no guns, but had simply come down to satisfy their curiosity by a mere look at the big birds. The geese evidently returned the compliment, and doubtless concluding that they were harmless, and, instead of flying, continued on their way up the creek. It was then too late for my friends to return to their concealment, and the geese seeing them, and possibly seeing the guns, immediately rose into the air. Bang, bang went the guns, and one goose fell to Al's share, but the remainder of the flock departed. Very likely, fellow sportsmen, you have at some time been in a similar place, and know that, at such times, words seem very inadequate to express your feelings.

One more incident. At Rye Beach again. Crossing the beach in a severe storm, umbrella overhead and gun over shoulder, suddenly a lone goose is discovered down near the water's edge, evidently resting. Dropping the open umbrella to bring the gun into position, the wind catches the umbrella and it sails directly toward the goose, which furiously attacks it. Then, evidently bewildered, the goose rises into the air and flies directly toward the sportsman. A charge of shot stops it, and a rather surprised gunner picks up his prize and starts for home.

Natural History.

SKUNK CULTURE.

MARSHFIELD, Wis., March 16—Editor Forest and Stream: I have never raised skunks as a pecuniary speculation, but merely as an experiment, to study their habits, and I have also foxes and many others of the smaller animals. I have made their habits a thorough study, and have tried to learn the best way to raise them for fur.

Although my stock at all times has been small, yet I believe the business could be carried on to a financial success. Two rules which the producer must be governed by are these: To keep skunks when in captivity, keep them as close to their natural habits as possible; and, second, to get them as nearly black as possible, as the black ones always bring the best price. Skunks have to be raised on sandy soil, where no water is likely to settle, and where they can have plenty of yard room. If they are kept in a small yard they will wear their fur off by rubbing against the fence in their efforts to get out. As they burrow in the ground, it is very essential that a few stumps be left in the enclosure for them to burrow under.

I have never removed the musk sack from any of the young, and never experienced any bad effect to the fur after skinning them. The best way to kill them is with chloroform or by suffocation. They generally have from four to seven young in a litter, and the month of April or the first of May is generally the time when they give birth to their young. A few old hollow logs will afford all the shelter they need, but it adds a great deal to their condition if trees are left in the park. They feed chiefly on meat, but are very fond of eggs and milk, but as these would be rather expensive food, meat alone will suffice. During the cooler part of the winter they retire to their holes and remain until the warm days of spring open up, hence the necessity of having soil suitable for them to burrow in.

About six years ago I found six skunks in a hollow log. I plugged both ends of the log and hired a man to haul it as near as possible to where I intended building my park. I dug a ditch around quite a large strip of ground, and placed boards edgeways in the ditch so that the skunks could not dig under them. I built a fence around my park, leaving a few stumps in the centre. I then hauled the log into the inclosure and liberated the skunks. For a few days they seemed wild and spent most of their time in the log, but they soon got over it and would come out on hearing my voice. They burrowed under the stumps and made themselves at home, always contented when their stomachs were full. In the spring I was overjoyed to see numerous young ones around the yard, and in the fall had as fat and slick a flock of skunks as anyone would wish to see. Some of these I had killed and skinned by way of experiment, and the hides were pronounced as good and prime as any taken from their natural haunts.

Skunks are very nervous animals and dogs or strangers should never be allowed to bother them, and great care should be exercised not to give them any violent shock. Any information desired by those interested will be cheerfully given concerning the breeding of either fox or sknuk.

J. A. K.

How a Mocking-Bird Mocked Me.

The climatic differences of the seasons in the region through which passes the boundary line between the United States and Mexico are hardly so much those of heat and cold as they are of dryness and moisture. In winter and spring the rainfall is sufficient to fill all the rivulets and streams and to flood all the marshes and lowlands. The region is so far South that vegetation starts early in the year. Land birds are then abundant in the trees and chapperal, and ducks are plentiful in the ponds and streams.

In summer all this is changed; the growth of vegetation is largely suspended, and the growth of crops in the few cultivated districts must be aided by irrigation. The rivulets, ponds, and most of the small streams, except those in the mountains, dry up, and in traversing the country one is obliged to go long distances without finding any water. Notwithstanding this dryness of the region, many of the land birds remain there during the whole year, but in summer the ducks necessarily go to those districts where they can find congenial haunts. Among the birds which remain in that dry region during the summer is the mocking bird, with one of which I once had a novel experience.

Desiring to make a geological examination of a portion of the Sierra San Carlos, a short range of mountains in the Mexican State of Chihauhau, I went to Presidio del Norte, on the Rio Grande, and procured a span of mules and a light wagon for our journey of seventy-five miles.

My party, besides myself, consisted of two companions and a Mexican driver, who was also our cook. There was no human habitation on the way, and we knew that the district we were to traverse was very dry, but we confidently expected to find sufficient water for our purposes in the Arroyo Alamitos, or little Cottonwood Creek, forty miles from Presidio del Norte. We therefore took only a keg of water from the Rio Grande with us for use on the first day, and at night we made a dry camp, with about twenty-five miles of our journey accomplished.

To take advantage of the cooler part of the day for travelling, we started at daylight next morning, but because we were yet to traverse the worst part of our road we did not reach the Arroyo Alamitos until nearly noon. To our dismay, when we reached it, we found it dry, because if we should fail to get water there we had no hope of getting any until we should reach the Arroyo San Carlos, thirty--five miles further on. Tired, thirsty and hungry, for we had eaten nothing that morning, we at once began a search of the bed of the Arroyo, hoping to find a water-hole or a place where we might obtain water by a little digging. We found no water-hole, but coming upon an apparently favorable place we began to dig in the sandy gravel, throwing it out with our strong camp cups for want of suitable implements. We soon found the gravel moist, a few inches deeper it was wet, and in a short time we had enough water to enable us to make a comfortable camp.

While we were laboriously digging our small pit I distinctly heard the familar sound, "quack, quack, quack," and immediately remarked to my companions that our labor was unnecessary because the presence of a duck indicated that we were in the neighborhood of a pool of water. We listened, and the sounds were repeated. To my surprise, I then saw that they came, not from a duck, but from a mocking bird, which was perched on a bush a short distance away. He was unconsciously, but cruelly, mocking us in our distress.

It is probable that this species of mocking bird prefers to imitate melodious sounds, but it is well known that it will sometimes imitate the coarser notes of other birds. Its powers of imitation are such that observers in its native haunts are often mistaken as to its identity when it is audible but not visible. In this case, however, I was deceived in a more serious way.

I have never seen these birds so numerous as they are in the State of Chihauhau, and the Mexican natives capture great numbers of them for sale. Ducks are also plentiful there during the wet season, and it was doubtless then that the bird which deceived me had learned the lesson which it so inopportunely rehearsed in my hearing.

CHARLES A. WHITE.

Fox Outstripped by a Horse.

NEW YORK CITY, Editor Forest and Stream:—It is a fleet hound that can overtake Reynard in a stern chase, but on Montauk last summer I heard a well authenticated story of a horse running down a fox so that his rider effected a capture.

"When Fifthian was herdsman on Montauk, before the town sold it to Benson" said my informant. "He lived in the house at the head of Fort Pond, and had a big black mare, Meg, that was noted for her size and speed all through Suffolk county. Fifthian set out one morning to ride to Gansett on business, and as he came out on the plain east of his house he started up a fox in the bushes just ahead.

"The beast kept the road, which, as you know, is only a trail through the pastures, and Meg broke into a gallop after him. They had it neck and heels for a while, the fox with his ears flat and his tail straight out behind, and Meg a-gallopin' out of pure mischief. Bime-by Fifthian began to get interested and encouraged the mare so that she drew up abreast of Reynard. Then Fifthian lashed at him with his whip, and that not having much effect he made a noose of his lash and got it over the fox's neck, drew him up to the saddle bow and rode into Gansett with him hanging there, stone dead."

The above seems almost incredable, but I had it from a source which led me to regard it as true.

CHARLES BURR TODD.

English Starlings Hereabouts.

NEW ROCHELLE, N. Y., March 25.—On Feb. 22, while walking with an English friend, we heard in a marsh near New Rochelle, some whistling and trilling notes similar to those of the goldfinch, but louder and clearer. Looking up, we saw an immense flock of what appeared like black birds, about the size of robins. My friend said they were starlings, as he had known them well in England. On making inquiries at the museum, I found he was correct, as no species of the black-birds except the red-wings can sing as they did. The next day I saw more of them, and on March 9 another large flock, with a few early red-wings among them, the notes of the starlings, and the "quonk-a-ree" of the blackbirds sounding very well together. In England they breed as often as the sparrow, (six times a year) so at that rate they will soon be numerous here, but let us hope, better behaved than the sparrow, the tramp.

EDWIN IRVINE HAINES.

The Linnæan Society of New York.

Regular meetings of the society will be held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evenings, April 9 and 23, at 8 o'clock.

April 9.—L S. Foster, "Remarks on the Petrels, with an account of the Specimen of Æstrelata hasotata taken in Ulster county, New York on January 26, 1895." Deferred from meeting of March 26.

April 3.—William L. Sherwood, "Further remarks on the Salamanders found in the vicinity of New York City."

WALTER W. GRANGER,
Amer. Museum of Nat. History.

A Pet Mule Deer.

SANTA FE, N. M., March 13.—I have one of the finest pets now I have ever owned; it is a mule-eared fawn about ten months old. He has been raised in the yard with my greyhounds, and I don't suppose he really knows whether he is a deer or a dog. He will play with the hounds until he gets tired and then he insists on their letting him alone, and if they don't agree to this he proceeds to administer a course of correction with his fore feet in a manner that soon brings them to terms. He is perfectly familiar with the house, and if the door is left open will calmly walk in and take possession. The spring duck shooting is just coming on, and several parties are out in war paint already.

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18. Madison Square Garden, New York.—First annual Sportsmen's Exposition.

A DAY WITH THE BLUEBILLS.

Eight miles northeast of Ashland, on Chequemagon Bay, lies Kakagon—a succession of sloughs and sand ridges, extending across the northeast corner of the bay, between the high land and Lake Superior. These sloughs are bordered with beds of wild rice and furnish excellent shooting during all the fall months. Mallard, widgeon, teal, and an occasional saw bill, or spoon bill are to be found in the early fall months, and later when these have passed on south, or grown wary from too much education, the bluebills and redheads come in by countless thousands.

It chanced that on a Saturday in October last, as I sat in my office, looking out across the bay, the telephone rang, and in response to my "hello," a familiar voice said: "Can you get ready to take the Hazel for Kakagon in half an hour? My wife is out of town and I had as soon spend Sunday down there as anywhere." Could I get ready? Well, I rather thought so, as all my outfit was at the office, and a messenger, dispatched up town, supplied plenty of nitros for a day's shoot.

The little steam yacht Hazel carried us from the dock to the ducking grounds in a little over an hour, and we had paddled to our camping ground in anotner. Until dark we were busy pitching tent, getting firewood and arranging bed, and turned in early with the expectation of getting up before light and paddling to a slough or river, which makes in from the bay for several miles, and up and down which the bluebills take their flight in the morning and evening.

Next morning, as the purple streaks of the dawn began to appear in the east, we glided into cover at a bend in the river, which afforded an excellent view of a long stretch of clear water on either hand, and had scarce settled ourselves in position in our canoe when Doc, who was working the river on the east, said: "Look out! here they come." A whistle of wings, a crack from Doc's gun, a splash in the water, and I just caught a passing glimpse of two shadowy forms speeding out of sight in the gloom to the west. One poor victim, however, lay out in the middle of the river, his white breast gleaming in the uncertain light. Doc had been too quick for him. We were debating as to the advisability of picking him up before the current carried him further away, when Doc's "Mark here they come again!" brought us both as close to the bottom of the canoe as was possible, still keeping the east in view, the only point as yet affording light enough for a fair shot. There, against the flaming crimson, they were coming, a dozen at least. We had not long to wait; who does when bluebills are coming down the wind? It was crack, crack and crack, crack again as they wavered an instant after the first shot, and there were splashes too, following both right and left and more white breasts turned up to the light, and two cripples swimming away for dear life.

Have you ever chased a crippled bluebill? If you have,

my description will probably tally with your experience. It is impossible, if they are not badly wounded, to take them in any way but by shooting them the second time. Doc was in the bow, and I sculled him toward the bird far thest away, hoping to get near enough to dispatch him by the first shot. Once within range, Doc raised his gun, when down went the duck before he could shoot. "Hurry up," said he, "get up close and watch sharp, so I can give it to him when he comes up." We did get up close, and we did watch sharp, but the next sight we had of the duck was away to our rear, and swimming in a direction directly opposite to that he had pursued before going down. I turned the canoe on her heel. Doc snatched up a paddle and away we went after him again. He was making straight down the centre of the river, and as we came up, Doc put down the paddle and brought his gun to position. "He won't fool me this time," he said. But the duck did, for as we drew within range he sank almost out of sight, and in the uncertain light this made a very small target. Doc was getting desperate and as we came quite close, gave him the right, and as he seemed in no way disconcerted, cut loose with the left, still the bird swam on. Three more shells were required before we got that duck in the canoe, and we had almost a similar experience with every cripple that fell to our lot. It was my first experience in bluebill shooting, and I should like to learn from others if there is a tougher or more "foxy" bird when wounded.

At 9 o'clock we had a baker's dozen of bluebills to our credit, a mallard and a redhead, and paddled for camp, feeling pretty well satisfied. We cooked dinner, smoked, snoozed, read Forest and Stream, and took solid comfort generally, until time to start for the evening shooting, the record of which, together with a somewhat unique event which transpired that night, I will reserve for another chapter.

GEO. W. MIARS.

ASHLAND, Wis.,

A NEW JERSEY COON HUNT.

The night of Dec. 22 had been selected for a coon hunt, to which we all looked with great pleasure. We had previously arranged to meet at Leedsville, a small town about four miles out of Red Bank, where we were to join four of the most experienced coon hunters in that section, namely: John and Edward Grant, the latter better known as "Brickey;" George Mouser, and last, but not least, the old veteran whom all coons dread, Jake Antonides. We left Red Bank at 6.30 p. m. all bundled up in a farm wagon, Geo. Frick guiding the horse. There were seven of us, mostly novices at coon hunting. We had three common lanterns, one bull's eye, one pair of climbing irons, such as linemen use, and our Branchport friend, Harry Van Brunt, brought with him a revolver of the bull dog style, of large calibre.

Arriving at Leedsville shortly after 7 o'clock, we went into the hotel where we had arranged to meet the rest of the party, but, much to our disgust we learned that they had received word we were not coming, and had left about ten minutes prior to our arrival. Three of us started after them, being rewarded after driving about a mile by overtaking them. We found we were on the right way to the grounds. One of us drove back to the hotel to put up the horse and bring the others of the party, who were impatiently awaiting. In a few minutes the rest of the boys arrived, and after a "how-de-do" and a hand-shake all around, we were off. Going through fields, we found ourselves on a hill overlooking a brook, which Uncle Jake crossed to see if he could find any fresh tracks, we remaining on the other side. Finding some, he walked along the edge of the brook, we following on the opposite side. Going about 200 yards, we stopped to listen, and were startled by the cracking and snapping of twigs. In an instant we saw it was old Lion. He was all excitement and whining. Immediately he opened, and oh! such music. Away he went, speaking at every bound. "Lion's got a hot track this time, I can tell by the way he talks," said John Grant.

When about out of hearing, the dog changed from a yelp to a howl. "He's got him treed," said John. At that we all ran full speed in the direction of the dog. Now it happened that some of the party had no lanterns, and between us and the dog there had been a deep ditch dug, into which two of the boys fell. Fortunately, their injuries amounted to nothing more than skinned knees and elbows, and they both were too much excited to mind that.

On coming up with the dog, we found him at the foot of an immense chestnut tree which Walter Noble said he knew to be the largest tree in Monmouth county. Our next task was to get Mr. Coon out of the place in which he had taken refuge. We all wanted to climb the tree, except Harry Payne and John Mount, the heavy weights of the party. By the way, Harry Payne was lame, as he was one of the two who fell in the ditch. After many unsuccessful attempts to climb this monarch of the forest, we were at a loss to know what to do. Brickey despatched Mouser back to Leedsville for a gun and two axes. In the meantime we built large fires on the ground so as to light the upper part of the tree to see if we could locate his coonship, but all in vain. Near by this old chestnut there stood three smaller trees, so John Grant climbed up one of these and found, upon reaching the top, that a limb from the big tree, or coon tree, as we called it, spread to the tree which he was on. Reaching out, he siezed the limb and drew himself to the larger tree. Up he went like a monkey, and finally spied Mr. Coon lying all stretched out on a limb. Finding it impossible to shake him down, John came down to the ground again. Mouser had returned by this time, bearing a gun and two axes. Now that the coon had been located, John went up another tree close by, where, by the aid of the bull's eye, he thought he surely could see the coon. Tying a string on the gun stock, I put on the climbing irons and followed up the tree, drawing the gun up after me. When we had reached the top, lo and behold, Mr. Coon had moved so that nothing could be seen but the tip of his tail hanging over a limb as he lay in the crotch of the tree. Putting in a load of No. 4's, we fired, hoping to dislodge him, but met with poor success, so down to the ground we went again, and this time John went up another tree, so he could look right into the crotch where the coon was lying. On reaching the top, he drew the gun and a lantern up. All this time Lion never left the tree, but kept looking up as if he expected to see the coon drop.

Suddenly John cried out: "I see him! Watch yourselves now! Give the dog room!" and slipping a cartridge in the gun, took aim and fired. Up the tree like a shot went the coon, and when he could not climb any higher, he jumped and down he came. Lion was on deck to meet him, and on top when he landed. How the fur flew, but the old dog knew his business, and killed Mr. Coon in short order.

He was bagged, and away we started in search of another. Going about a mile further up the brook, Lion opened again. "No coon this time," said Brickey. "That track is cold." So much for experience, for he was right. The coon had gone in a hole sometime before.

Looking at our watches and finding it after midnight, we started back for the hotel. In crossing a field, I almost stepped on a covey of quail, which got up when I planted my No. 9 boot within six inches of them. After inviting us to come up again the next Saturday evening, our friends left us and went to their respective homes.

The drive back to Red Bank was very cold, as the air had grown considerably colder than when we started in the evening. We arrived at Red Bank about 2.30 a. m., where we parted, all promising to be on hand next Saturday if the weather proves favorable.

RED BANK, N. J. ONE OF THE NOVICES.

ANOTHER OUTING IN THE SIERRA.

On the morning of the 21st of September, a camping party of three left for a short sojourn in the beautiful snow capped mountains of the Sierra Nevada range. The air was crisp and bracing. Our route for the first twenty miles took us through the bottom lands and grain fields, and before old Sol had raised his head over the distant mountains, whither we were journeying, we had covered half of this distance. The Indian hop pickers were at work in the hop fields, chanting a weird Indian song, those nearest us waving salutations as we bowled along in our covered wagon. Though bearded men, we felt like school boys on a vacation, this exuberance finding vent in joke or raillery. During the day we were successful enough to bag a number of doves and a young cotton tail rabbit, which afforded us a supper.

The second day out we entered and passed through Placerville, whose history is inseparable from that of this glorious State of the golden west. It was here that the hardy, though footsore and weary pioneer, from "way back in the States" caught his first glimpse of the world's famed El Dorado. The rough-bearded and red-shirted miners have one by one disappeared, until there is but an insignificant remnant left. In their place came the honest granger, tilling the soil of the surrounding hills, whose surface here and there has been washed away, exposing the bed-rock in places, bearing silent evidence of the "days of old, in the days of gold, the days of forty-nine." Only a few miles distant is the historic spot where Marshall made his famous discovery, setting the world in a furore of excitement.

As we climbed the hills overlooking the little town, we caught a glimpse of the great Sacramento valley in the dim distance. About noon we reached the divide, along whose crest runs the road, over which our fathers trod on their way to the mines below, forty odd years ago.

We were now among the pines, whose lofty tops seemed to pierce the sky overhead. The balmy air was laden with the resinous scent of the boughs through which the wind sighed mournfully. Toward the middle of the afternoon we drove up to the famous inn, known as Sportsman's Hall. Passing this we reached the top of the mountain; just over the brow is another famous spot —Bullion Bend, so called from a stage robbery that occurred during the exciting times, following the rich strike in the Comstock silver mines of Nevada. Over this turnpike long lines of mule teams plied their way, bearing supplies across the mountains to the mines. Stages, laden with passengers and bullion, took the same route until the C. P. R. R. became a reality, when all such traffic ceased. Here the knights of the road waylaid and robbed the stage of a large sum in gold and silver bullion, which still lies concealed where buried by them near the scene of the robbery.

From Bullion Bend our route took us through wild and picturesque scenery. Winding down and around the mountain's side, hundreds of feet below us, were the clear and silvery waters of the American, moving restlessly over its rugged bed. Above us and across the canyon against the western sky, tinged with a ruddy glow from the setting sun, loomed up great craggy bluffs, that called to mind views of rugged fortresses and castles upon the river Rhine.

As twilight deepened around us, we drew up at Miller's and camped for the night. Next morning we drove for miles along the banks of the American River, whose riffles abound with trout, and as the sun was sinking behind the distant hills we neared our destination, and drove down the mountain side to the abode of friend W's dairy ranch, in the very heart of the Sierras. Greetings over, we set up our tent, gathered some wood, making other preparations necessary to our comuort, then settled down to days of solid enjoyment. I arose early the first morning. The air was pure and bracing and shouldering my three-barrel gun I started forth in quest of a buck. Late in the afternoon I returned, empty-handed and tired, but confident of ultimate success, as I had marked localities where deer signs were abundant. My companions had been after trout and had met with liberal success.

Daylight found me on the deer ground. As I trod noiselessly along I espied two objects standing motionless a few rods distant. I was in doubt whether what I was looking at were deer or some of the young stock belonging to my mountain friends; when too late, I realized my mistake; a bound and they were gone. I ran to intercept them, and suddenly I saw one standing in the white thorn, less than fifty paces distant. I brought my gun to my face, but the muzzle was dancing a horn pipe, though having killed many deer before. I realized I had a severe attack of buck ague. Of course, my bullet went wide of its mark. Nothing daunted, I wended my way across four-cornered peak in the direction of Bald Mountain. I had the wind in my face and as I neared the place I had marked, out ran a deer, bounding up the mountain side. At the crack of my rifle, he turned, displaying evidence of a fatal wound. The sound of the report had not died away when full a hundred and twenty paces distant another came into view, his head up and antlers thrown back, facing me squarely. I realized how difficult the shot was to make, but as the glint of the ivory ball showed through the hind sight, again my rifle cracked. The beautiful creature gave one bound and fell headlong to the ground. 'Twas the work of only a few minutes to prepare them for my trip back to camp. I carried first one then the other, until I reached a place accessible to horses, and returning later with the animals, carried the deer to camp.

We retired that night in great good humor, the keen, crisp air sharpening our appetites for the feast assured on the morrow. I sallied forth again the following afternoon after arranging a signal and answer, in case I met with success. Two hours later the signal was given and answered, I had brought the head with me, laid it in the trail and awaited the approach of my companions with the horse. When they caught sight of the trophy, which was a six-pointer, they gave voice to their delight in prolonged shouts. Congratulations over, I led the way to the deer's carcass After repeated efforts and failures, we succeeded in landing him on our bronchos back. We had no means of ascertaining his weight, but judged him at over 200 pounds. We have regretted many times that we had no camera with us. For the next two days we busied ourselves jerking venison. My success had kindled a desire in the heart of Charlie to emulate my example, so taking the younger W. as a guide and partner, and with a jay feather in the hat of each, to keep off the hoodoo, the boys disappeared from the clearing into the woods beyond. After some hours, and just as we were about to partake of a mid-afternoon meal, bang! bang! in quick succession rang out in the still air down the canyon. This was the help signal. George sprang to his feet, gave the answer hurriedly, made ready and galloped off. In the course of an hour I heard them coming down the mountain side, shouting and yelling at the top of their voices. Presently I caught sight of the trio through the woods, two in the lead swinging their hats vigorously, the other leading the horse. I strained my eyes to see the cause of all this hilarity. Strain as I might, I could only see the ropes wound across and over the saddle. On they came, and as they entered camp I saw the joke. On the saddle was the smallest of chipmonks, tied and retied with the rope used to secure my big buck. Our guests appreciated the joke and laughed immoderately at my confusion.

We were to return home the next day but one. As I started away for a last hunt, my companions wished me luck. After a few hours I again gave them the signal for help, and was answered by my companions, who were fishing a couple of hundred yards distant. Down went their rods and baskets, and a race began for my locality. A pole was cut, run through the legs; they shouldered it and trotted campward. They stuck to their job with bulldog tenacity, reaching camp at last and two tired men they were.

On the morning following we said farewell to our friend W. turned our faces homeward, where we arrived after two and one-half days' travel.

J. E. M.

A Tennessee Shoot.

MEMPHIS, Tenn., March 25.—Editor Forest and Stream: —The season for shooting game is about over in this territory, and I suppose, considering the weather, there has been as much real enjoyment in the fields and on the lakes around Memphis as ever was experienced by hunters in any country.

There have been more ducks in our lakes this season than for a number of years, and the fields have been more bountifully supplied with quail than during any season for the last ten years, but the weather was very dry up to the 1st of December and then very cold and disagreeable to the end of the season, and so but few birds were killed, and we have a right to expect a larger crop of game of this kind next season.

About February 20, my friend North called to see me, and together we made a trip into North Mississippi for quail, and I dare say no two men ever had a finer day's sport than we had. We left Memphis at 5 o'clock in the evening and traveled seventy miles to Talico, where we remained all night. The next morning we turned loose two good pointers, Jett and Guy, who were in the finest condition and form, and seemed eager for the hunt.

When about three miles away from this little town, the dogs made handsome points in some low sedge grass, and we were prevented from getting a double each out of this covey, from the fact that my friend fired both barrels, when he really intended to fire but one. After this he was compelled to fire his choke-barrel first; for if he fired the right barrel first both barrels would go off. He did not follow this covey, as they took cover in very thick woods; but it was not long before the black dog, Jett, made game, and directly Guy coming by, took the scent of the birds towards a low fence, and in a few minutes I called North's attention to this dog's most remarkable stand. He had crawled up till his fore feet reached the top of the fence, and scenting the birds just on the opposite side of the fence where they had stopped, making the point in that position, and in that position he remained until we called out to retrieve the birds which we had killed. We only got two birds from this covey. After that we got most woefully lost, having travelled out of our course, as we learned from a colored man whom we met. How far to Talico? "Se-se-se-seven mi-mi-mi-miles." Which way? "Dow-dow tha-that way." By the time we got this information clearly imparted it was 12 o'clock, and we hurried back.

Just here a most singular accident occurred. The white pointer, Guy, was running along in the road behind us, when we heard a curious noise, looked back and saw the dog lying on his side and kicking as if he had a fit. I got down and went to him, but in less than three minutes he was dead. This was the most singular death I had ever witnessed in my long hunting career, and I don't think I felt more powerfully the uncertainty of life, than while standing over the lifeless form of what was a few minutes before a beautiful, active representative of life. This dog had shown no signs of distress or sickness, and could not have been poisoned. He must have died of heart failure.

This left us only one dog, and after finding our way back to the trail it was 1.30 o'clock and only six birds in our bag, but the dog left to us was a good one and suc-

ceeded in finding six nice coveys of birds during the afternoon out of which we killed thirty-six, and altogether we felt that we had a very good day's sport.

I will tell you only of the first covey. They were beautifully located, at the head of a small branch in some low grass. I sent the boys, who were on the horses ahead, in the direction we thought the flight would be, to locate. This, North said, was great generalship. On the rise of the covey we got two, and when we went over the hill the boys had the others marked down. I called to North to hold on and give Jett time to locate each bird, which she did to the queen's taste. As true sportsmen, we left four for seed out of a covey of sixteen. ADAM.

BEAVER DAM LAKE.

This country is situated in one of the best hunting territories of Illinois. As a resort for game, such as chickens, quail rabbits, squirrels, a few turkeys, ducks and geese in season, we have much to boast of in the way of delightful sport in the field. Our prairies have but few streams, but the woods are dotted with natural and artificial lakes, and several considerable creeks, reflect the beauties of their surroundings. Beaver Dam Lake is the largest of the lakes, and in the shape of a horse-shoe, covers an area a mile long and one-quarter of a mile wide.

Twenty years ago it was the original channel of the creek, but the beavers dammed it up, changing the channel of the creek and leaving a slough. Seven years later, several members of our present club enlarged these dams, formed a stock company of nineteen members, named the lake Beaver Dam, and now it is one of the choicest sporting resorts in the State. The State stocked the lake with all kinds of game fish, mainly black bass, and for the last three years fishing has been grand. Three and four pound bass are considered nothing above the ordinary catch, and a member placed one to his credit weighing six and one-quarter pounds. I am not a real lover of the finny tribe, prefer the gun to the rod, so let me tell of a hunting trip which I had this fall, and perhaps you will agree with me that game laws or Providence have been the cause of our many birds the past years.

It was in the latter part of November, on a dark and gloomy morning, that I shouldered my twelve bore, called my Irish setter, Banks, and set forth to the lake. After disposing of some of my extra baggage at the club house, we started for a long ditch which leads west of the lake into a corn and weed patch—mostly weeds.

Banks eagerly started out ahead of me, and we had hardly gone one hundred yards when he came to a stand. His position was on the bank of the ditch, and I decided he winded the birds from across the branch. I crossed over, intending to flush and drive them into a large patch of weeds. Nor was my judgment wrong; for after starting them up and calling two back—one with each barrel—the birds flew into the weeds and scattered in an ideal manner. Banks retrieved the two dead, and we followed to the new location of the covey. He soon was winding them and had another point. Oh! it was a noble sight; he meant business, and I pledged myself to try and do my share. Up got a bird, and thanks to the second barrel, he was a dead one. Out of the covey of twenty-three, I killed eleven, and had I kept my promise and done as well as Banks, I doubt whether anyone else would have had an opportunity to try his skill on any of them.

After Banks had surveyed the ground once more, to make sure he had done his whole duty, we strolled on into the corn patch. When I arrived there I had lost my dog. I whistled, but he was evidently standing somewhere. For fifteen minutes I looked in vain, then I happened to think of that ditch, and there I found him, a perfect statue, standing in the ditch under a bank which the water had washed out. I stepped down, walked around, but couldn't get them up, when I wondered if he wasn't mistaken, but a glance at him convinced me he was right. I tried to urge him on, but he was motionless. Where could they be? Whurr—whurr—whurr—bang, bang! Another double. They had been under the caved bank also, and my dog was almost over them. Banks must have held his stand for twenty minutes. Being in the ditch, I couldn't exactly see where they flew, but knew the direction, so waved Banks to go ahead, following their direction. In a short time he had them side-tracked, and I bagged six more. I found one more covey that morning, but only killed two, and then I called my dog to heel and started for the club house for lunch.

I loafed about there until 3 o'clock, talking to the old man who watches the lake, and he asked me if I had any goose loads. I showed him some four drams and an ounce of OO, chambered. He said: "They are all right, the wind has changed and the geese will be in to-night, you had better be on the watch." I promised him I would, but hardly expected to see any geese. Banks and I had bagged nine more quail that afternoon, and as it was about 4 o'clock, we started for the north dam. As we got near it, my dog stood another gang of quail, and just as I was getting ready to flush I heard that welcome sound, honk—honk. Of course, I didn't shoot at the quail. I flushed them so that I could get my dog off of his point and hurried to the willows near the dam. I could hear the geese coming nearer and nearer, and finally saw them over the west end of the lake. There were about twenty, and on the first circle they came within about two hundred yards; I commenced calling, but they made one more little circle out of gun shot, and then lit in the lake. That seemed hard luck, but I was relieved from my disappointment by that same tell-tale sound of another gang coming, and it was a large one; I counted seventy-five. I called again, but the flock on the lake could outdo me at this, and the last ones, too, lit in the lake, so that I didn't get a shot. I waited about a half hour longer and it was getting pretty dark, when I heard the swish of wings near, and throwing my gun in the direction of the noise, found it to be a fine flock of mallards, within forty yards, just swooping down to alight. But I took down my gun. The temptation to shoot was strong, yet I wanted a goose in preference, so I took down my gun and let them go on. It was getting still darker, and I heard three more flocks of geese come in, but they didn't fly near me. So I decided to return to the club house, stay over night and get a shot in the morning as they went out.

When I got there the old man said: "Didn't I tell you? Now you come in to supper, and after that I'll tell you how to work it in the morning."

I was soon seated at supper, and when we had finished, the old man said: "I'll wake you in the morning before daybreak, then you go around on the west side of the lake, follow that ditch you hunted in this morning about two hundred yards, and then take an old road leading through the timber to the north dam. They will go out northwest in the morning, as they feed in that direction, and the wind coming from there they rise against it." I went to bed early, but I assure you it was hard to get to sleep, for geese were calling all around, but I was tired and soon drifted into a slumber which was as sweet as any I had ever experienced.

At the appointed time I was up and after a hot cup of coffee, the old man said: "Now when it gets about daybreak, I'll walk around outside of the house and make a little disturbance. This will perhaps start the geese over you, if they don't see you, and by the way, you want to leave Banks here."

"He will be all right if he is along," said I, "he understands it as well as I do, I can't leave him; he may be of some assistance," and so he was.

"All right," the old man said, "good luck to you, and above all don't get so near that you can see the water or the geese will see you." It took us about half an hour to get to the north dam, but we reached it without any mishap, and with the geese still on the lake and unawares of my approach. My dog and I lay close up to the dam, under a low but thick willow, and waited patiently for daylight. It seemed a long time. Two small gangs left as we were there, but it was so dark I couldn't see them, although they were near.

About 6 o'clock I could make the geese out, they were in the middle of the lake, and were fairly making the water foam with their flapping of wings. I could hear the old man across the water chopping wood and singing and then came the most exciting moment of my life. That gang of seventy-five had risen and were coming for the north dam. It seemed as grand a sight as I ever expect to witness, as they came on, the leader in front and his followers in a line behind him. I hugged the dam and squeezed down against the willow so they couldn't see me. On they came—still a hundred yards off. Banks knew his duty, and hid like myself. Finally they were within fifty yards. I waited until they had come a little closer, then arose, this turned them all to the right, so taking careful aim, I pulled the trigger, and down came two. I dropped the gun on another, and imagine my disappointment when I pulled the trigger to hear the gun snap. I looked at the geese and then at my gun, then I looked around to see if anyone else could see what had happened, but I only found my dog, who was standing behind me awaiting orders. All this was done in a short time. I cocked the gun and tried it again, and it went off the second time, but the birds were out of reach.

All the geese had now left the lake, so I turned my attention to the two I had hit. They were both crippled. One swam to shore, but the other was still fluttering about sixty yards out in the water. I sent Banks to bring it in, and after a good fight he managed by hard work to get it to the shore. During this time I had secured the other one, and shouldering the pair I went to the club house. The old man met me and shook hands. He wanted to know why I waited so long with the second barrel, and when I told him, said: "After this I'll bet you get your caps down tight." While I was waiting for breakfast I weighed my geese; one weighed eleven pounds and the other eight and one-half pounds. Breakfast being over, I collected my game, bade the old man and his wife good-bye, and started for the depot. I had a load on my back, nineteen and one-half pounds of geese, thirty fine quail, and a heavy gun. I was soon at home and surprised my friends by the game I had killed on the banner hunt of my life. BURGY.

CHICAGO AND THE WEST.

FRIENDS EVERYWHERE.

CHICAGO, Ills., March 30.—Anent mention last week of my mysterious letter, which was forwarded here by an unknown friend in the N. Y. Post Office, the following from another Forest and Stream friend.. this time in the Boston, Mass.. P. O., may have additional interest. Verily the paper does have friends everywhere. and there is no paper published so far as I know , which elicits friendship of so unique a sort. At the World's Fair it was always a source of surprise to see the way many visitors felt toward Forest and Stream, though strangers to anyeon connected with the paper. It was as though they owned the paper themselves—as indeed they certainly do. There is a great deal of hard work connected with publishing any newspaper, but I imagine it is a peculiar satisfaction to the publishers of Forest and Stream to feel that they give their readers something more than paper and ink, and receive in return something more than a financial payment. The letter from the Boston P. O. friend may, I hope, be published without formal consent therefor, and reads:

"Post Office, Delivery Division, Boston, March 28, 1895. Dear Sir: The U. S. Army Directory gives 'H. S. Kilbourne, Ass't Surgeon, Fort Clark, Texas.' 'J. Gayler' is the Ass't Post Master of New York, an angler and gentleman. All this has reference to your letter in the Forest and Stream of the 30th inst. The friends of that paper are everywhere. Yours, in F. and S., Edward Barker, (Supt. De'y Div.) Chairman membership committee, Mass. F. & G. Pro. Ass'n.

NIGHT FLIGHTS BY THE STARS.

A writer in the Chatauquan explains the unfailing instinct of direction in migratory birds to their knowledge of the stars, and says that when migrating birds can not see the stars at night they lose their way. One often hears old hunters say that the snipe "come in on the moon." I recall that once in 1878, in Iowa City, of a dark, rainy night, the residents were much astonished to hear the air above them for over an hour full of the whistling and twittering of passing birds, which were flying very low over the roofs of the houses. No one at that time knew what the birds were, but I noticed in a paper of a few days later date that a great flight of golden plover had appeared at that time along the west shore of the Mississippi River in eastern Iowa. The flight, as we heard it that night, was passing southeast, or toward the Mississippi, but it was in the spring time, and the birds should have been going north over the prairie country and not along the great flyway of the water birds; at least I should consider that this would be the case. As I look at it now, I believe this great flight of plover was entirely out of its reckoning that foggy night.

WINTER DYNAMITING.

The trout streams running into the Mississippi waters along the Iowa and Wisconsin sides have been visited much of late by winter dynamiters, and it is a pleasure to hear that two of the latter, F. Draper and L. Davis have come to grief in Richland township, near Manchester. Sheriff Odell captured them and they were fined $30 and costs each, one going to jail. They were shown to have killed thousands of trout from three to six inches long by exploding dynamite under the ice.

PROTECTIVE MATTERS AT CHICAGO.

Mr. M. R. Bortree is patiently waiting for the trial of the case he has brought against the Union League Club of this city for serving illegal pheasants, and says he will surely land them. There is little doing in protective matters this week, though word comes up from Springfield, that the sportsmen's bill is reported favorably by the joint committee of the legislature and is now before the house. The present committee have been very fair and courageous with the sportsmen all through this fight, and if the latter do not win in all they ask they will not feel that they have had churlish treatment at least. Blow, the renegade warden, persists in saying now that he is the sportsmen's friend, but his words have very small weight with the shrewder ones, who believe that one "flop" does not square a lot of unfaithfulness.

THE SEAL SKIN INDUSTRY.

From San Francisco one learns that the Alaska Commercial Co., the tidy trust which controls the fur seal trade, have been paying dividends of $800 on the $100 share, par value. for the last five years. Thus we learn why one's best girl finds it difficult to wear the skin of the fur seal. These fabulous profits, say the despatches, are creating some stir on the public mind, the latter having been taught to believe there was no profit in this monpoly. A little law suit developed the facts. Meantime from Washington comes the advice that the Treasury department is fixing up the regulations for the Commercial Company for the coming season. The number of skins to be taken will probably be set at 20,000, the same as last year. Sir Charles Tupper, the Canadian Minister of Justice, has resigned, and this pleases the Americans who want the seals protected, as Sir Charles seems to have had it in for the seals, and was opposed to measures looking toward stringent protection. Meantime the price of sealskin cloaks will continue to remain bove the reach of honest newspaper men in the lower walks of life. A good many of us will thus be barred out of the Patriarchs ball at New York, who would otherwise be fitted to adorn that assemblage. At least, I suppose they wear sealskin there, for it comes high.

SHOOTING NOTE.

The Œdipus of Sophocles, a Greek play, popular 400 years B. C., was performed last week in Chicago by Beloit college students in the Greek language. Sophocles was a great sportsman. There is not much other shooting news here this week.

BASS IN THE SUNNY SQUTH.

Mr. A. M. Nicholson, of Orlando, Florida, sends in the word that in four days last week he caught thirty-seven bass, fishing only a little while each evening, in Lake Eola. One bass weighed ten pounds, and it is gravely stated as matter of praise, that it was landed in one and a half minutes by the angler, who used a Cincinnati bass hook and a single strand of Barbour's linen thread, though I don't just know what that may be. If anyone up here caught a ten-pound bass he would fight him all day, clear into the stilly night, and the oftener he told about it the longer the fight would be. So far as I know, seven pounds two ounces is top weight for bass in the waters of this vicinity, and that is a great excess over the average weight. Yet they do say that in Florida the bass grow to be twenty-five pounds in weight, which is very discouraging to a Northern man of any ambition as a fisherman.

ONE CLOCK AHEAD.

Some time ago the Spratts Patent Co. sent out to this address a very pretty little glass clock with the name of their firm on the dial. The name of Mr. B. Waters was on the outside of the box, but Mr. Waters having retired to a quiet life in the village of New York, in the neighborhood of the Forest and Stream kennel department, he never got this clock at all, and at this writing he does not seem apt to do so. It is a pretty good clock. Nothing that comes into this office ever gets away. Gentlemen wishing clocks forwarded would better call in person, and they will always find us disposed to argue the matter in a perfectly fair way.

THOUSANDS OF QUAIL SET FREE.

The tribune of this city in its issue of March 26, has the following interesting and singular item in regard to which I wish we had fuller report. "Guthrie, Oklahoma, March 26.—The game law recently passed by the Legislature was put into effect yesterday. On the Rock Island road, near Chickasaw, officers discovered 5,000 quail being shipped in transit to St. Louis. After breaking the boxes that contained the birds the doors of the cars were opened and the meadows and fields fairly swarmed with game for a while. The birds had been trapped in the Chicasaw country.'

The number of quail trapped and shipped out of Arkansas and the Indian nations in the past ten years would probably run into the millions. The public has no idea of the tremendous extent of game destruction caused by the insatiate markets. I have known of an order from a Boston house to a Chicago firm asking for 300,000 quail. The figures of game actually killed and consumed would appal even a reader who is not a sportsman. Of course, such figures cannot long endure, for the game will soon be gone, even from such remote points as Oklahoma. Let us hope that the new law of the territory will always be as vigorously enforced as in the above instance.

But suppose the Western States and territories do make the best laws they can to protect their game. The premium for its destruction by illegal methods still exists so long as the great markets like Chicago, New York and

Boston remain open. The Eastern markets are even worse than Chicago, and if the sportsmen of the East are doing anything to regulate the Boston and New York markets, we see no record of it in the papers. We are having something of a fight out here at Chicago, and the fight is doing good. What are Boston and New York doing? What is Providence, Rhode Island doing? where so many prairie chickens are on sale this winter. I ask the gentlemen of the East to remember that these 5,000 quail were headed East. Not all of them would have stopped in St. Louis or Chicago, perhaps. Chicago sells trainloads of game to New York and so does St. Louis, and New York retail, it in the most shameless fashion. If the sportsmen of New York, Boston, Chicago and St. Louis will all work together, they may yet have something to do with setting free. or keeping free, many another thousand quail in the remotest districts of the West.

PROPOSED TEXAS LAW.

The brethren of the craft in the big state of Texas are wide awake this winter, and are right in line with a sportsmen's bill, which has been having a good backing. Mr. Bortree, president of the National Association, lays before me some correspondence he has from friends at Austin, including a copy of the corrected bill. The proposed Texas measure is an excellent one, and if it becomes a law, will have interest for all shooters South and North. Its main features are "a close season on quail from April to September, the prohibiting of the netting of quail, prohibiting night shooting at water-fowl, prohibiting killing antelope between January and first of August, prohibiting of having game in possession during close season, and the absolute prohibition of killing, capturing or taking any animal, game bird, water fowl or other bird protected by the game laws, or any snipe or plover, for the purpose of carrying or shipping the same out of this State, or for the purpose of sale or barter out of this State." It is also unlawful for any express or railroad company to take game for shipment out of the State.

The above bill has passed the Senate and has received a favorable report from the house committee. Its friends are very confident that it will become a law. If it does so the sportsmen of the country will have great cause of congratulation, for the traffic in Texas and other markets is a great and growing one. For long years the game of Texas has been held too abundant to be held worth protection, and the laws of the State have been lax and laxly enforced. To see this great commonwealth of the South swinging into line with a sportsmens' measure of so advanced a type, is certainly a pleasure, and if this bill becomes a law it will be one of the great accomplishments of the present active season in protective matters all over the West and South.

909 Security Building, Chicago., E. HOUGH.

THE SPORTSMEN'S EXPOSITION.

How far-reaching the influence of an exhibition devoted to the sportsmen of this country will be, will depend greatly upon the general support given it by the persons for whom it is held, as well as the public generally. It is reasonable to believe that the holding of an exposition in which all the paraphernalia used by the sportsmen is exhibited, and the gathering of the sportsmen themselves at the same time, cannot fail to accomplish great good. The board of trustees of the association has shown a commendable devotion to the work in their hands, are working with energy and originality. The task of getting together such exhibits as will be representative and cover all the departments is well-nigh completed. The list of exhibitors has been extended during the past week, and includes such firms as Charles Scribner's Sons, Burgess Gun Co., Hulbert Bros. & Co., W. W, Hart, B. N. Norris, The Ideal M'f'g Co., The Tie Co., Pieper Gun Co., Obrig Camera Co., and Cornwall & Jesperson.

The trustees have been offered for exhibition a very valuable collection of old fire arms and weapons, the property of N. Spering, Esq., of Philadelphia, Pa., containing forty or more pieces; among them a Moorish flint-lock gun, very old; flint-lock hunting rifle over 100 years old, barrel forty-nine inches long; three flint-lock guns from Revolutionary period; flint-lock carbine and powder horn, used during Revolutionary war; double-barrel, flint-lock fowling piece; muzzle-loading double-barrel hammerless shot-gun; breech-loading rifle, Hall patent, 1831, altered from flint to perc. lock; revolver captured from British during Crimean war; Maynard revolver, 1845, muzzle-loading, uses tape caps; muzzle-loading pistol, hammer on underside of barrel; Indian arrows and bows, and stone axe-head.

Charles Scribner's Sons will also make a very large exhibit of beautiful tinted plates of sporting scenes. Also their collection of game fishes of America and their sporting publications. Another large collection will consist of sixty oil paintings of game fishes of this country, of a very high artistic merit, and are loaned by the artists. Others loans of a more or less important nature are also coming in from time to time, which will serve to make the display very attractive.

TEXAS AND THE SOUTHWEST.

WATER AT LAST.

For the first time in many years Mitchell's Lake, the favorite hunting resort of San Antonio sportsmen, is brim full of water, wherein the haughty canvas back can once more indulge in a foot bath and, together with his red-headed congener, dive into the murky depths in search of succulent bulbs or an unlucky inhabitant of the deep.

To say that the heavy rains which have lately deluged this section were well received is putting it very mildly. Once more Southwest Texas has donned her green habiliments, until from the Colorado to the Rio Bravo she looks like a St. Patrick's day procession. Notwithstanding the lateness of the season, water fowl of all species are plentiful on that famous bottom. There is a splendid flight of ducks morning and evening, and about 300 acres of as fine snipe ground as ever a scolopax stuck his bill into.

A BAD SNAKE.

Mr. J. R. Tendick, accompanied by a young man named Barrera, who acted as guide, took a trip to Mitchell's Lake, early this month, in search of wild fowl. During the day Barrera stooped to pick up a quail which he had killed, and which had fallen near a bunch of cactus, when a monster rattlesnake struck at and hit him on the bare wrist. Barrera started to run, when the reptile once more plunged its venomous fangs into the fleshy part of his leg. The victim yelled for help and fell to the earth where Fendick found him in a semi-conscious condition. Meanwhile the rattler had quickly glided to his hole. The sick man was brought to San Antonio in a bad condition and placed in Santa Rosa hospital, where he lay at the point of death for several days. By careful nursing his life was saved, and as these lines are written I learn that he is convalescent and will be about his business in a few days.

The sixteenth annual meet of the Texas State Sportsmen's Association will take place in San Antonio beginning May 13, and will continue five days. Elaborate preparations for the coming event are being made by the local sportsmen, and the indications are that the tournament will be largely attended.

AT LAST.

For once in its lifetime the Senate of the great Lone Star State has caused an additional brilliancy to the glorious emblem of this boundless empire. Through the efforts of P. J. Lewis, the celebrated tarpon killer, the Senate has passed a bill which prohibits the shipment of game out of the State; makes possession of game during close season prima facie evidence of guilt, and in fact gives sportsmen pretty much what they ought to want. The bill has not yet passed the house, but I am assured by our representative that it will become a law. Please give "Texas and the Southwest" a credit mark.

TEXAS FIELD.

They Killed Her With Clubs.

I inclose clipping from Daily Times of March 20. The story divested of the reporter's superfluos verbiage, is substantially correct, but what will most interest Forest and Stream readers is the fact that, while three of the cubs are a jet black, the fourth is a light gray color, quality and texture of coat are the same as the others. A marked difference, however, appears in the eyes of the gray cub, being a pale blue instead of a brilliant black, as in the others. The cubs are in possession of Edwin Young, manager Eden Musee, of this city.

The clipping is substantially as follows:

"David Koegh and Andrew Yeckley, of Gallitzin, were in the city yesterday and to a Times reporter they related a thrilling tale of an encounter with a she animal of the genus Ursus americanus in an isolated portion of the Loop Run mountain, near Tipton's mine, in Cambria County, on Sunday last. Three frolicsome cubs with a lease on life of about six weeks were produced in evidence of the veracity of the story told by the men. Two of the little animals were of the ordinary black species, but the third one is really a freak of nature. The little fellow s coat is of a light grayish cast and he said to be the first of its kind ever captured east of the Mississippi river.

"Koegh and his companions were returning to Gallitzin from a visit to Fallen Timber by the way of Tipton's mines. They had traversed the distance through the mountains to a point within about three miles of the latter place when they were dumbfounded to see just ahead of them in the trail which they were following a monster black bear. The bear had evidently sighted them first, for before they could recover themselves bruin had charged on the intruders with a mad rush.

"Being unarmed, the chances were against Koegh and Yeckly, but, grasping clubs that lay on the ground at their feet, bruin's charge was met by a blow from a club in the hands of Koegh. To escape was next to impossible, as the men were handicapped by the snow, which took them up to their knees, and, now that the bear was thoroughly infuriated by Koegh's action, the only remedy was to fight it out.

"Yeckley, in his haste to grasp a club, stumbled and fell, and was about to be caught by the frenzied bear, when a heavy blow, struck by Koegh, hindered bruin's progress, which allowed Yeckley to regain his feet.

"Now began a terrific battle, which lasted half an hour. Men and bear alike were desperate and both sides fought to conquer. The bear charged and recharged, but each time was driven back by the men, who were almost ready to sink to the earth from exhaustion when the plucky bear, overwhelmed by defeat, turned and fled, disappearing in the underbrush, which at the place of the fight was profuse.

"Koegh and Yeckley then resumed their tramp toward Gallitzin, but had only gone a hundred yards when they came upon the cubs, which were snugly enclosed in the underbrush. Each of the men grasped two of the baby bears and placed them in captivity." H. F. C.

From time to time stories come from Pennsylvania of grizzly bears supposed to have been killed there. The only character different from those of the black bear (Ursus americanus) are assigned to these supposed grizzly bears, is color; and this as is well known, is of no specific value in the bears. Black bears are found of many different colors, but they all belong to the same species.

If the story of the killing of this bear is true it is remarkably interesting.

An Afternoon in Louisiana.

In the Fall of '93 I found it necessary to go South on account of my health. Fortunately my brother lived on a plantation in Lousiana, and I decided to pay him a visit. As the quail were plentiful, I spent most of my time hunting. My brother's setter Queen was a fine dog, and if there were any birds around she would find them. At first, my shooting was very poor, but toward the last I managed to do fairly well.

On the afternoon in question, I started about 3 o'clock, and had been gone 15 minutes, when Queen made a pretty point in some brown sedge near a fence row. At the rise, I got one. The rest of the bevy scattered nicely down the fence row, and I managed to get four more, much to my satisfaction, as five were about as many as I usually bagged. In the next field I flushed two coveys. One of them got away into the woods without losing a feather. The other settled on the edge of a briar patch, and I almost decided to give them up. Queen came to a point just short of the briars, and much to my surprise and satisfaction, I found they had stopped in the sedge just short of the briars. And as they rose singly or in pairs I managed to get six.

As I now had eleven birds, I started home by another route. Before going very far Queen set another covey. Just as I got within good range they rose. I let them have only one barrel, and two fell. As the covy went to the woods, I did not follow them. I had scarcely gone fifty yards further, when Queen came to another point. As it was so close to where the other covey rose, I thought she had found a straggler, but in this I was mistaken, for it was another covey. When they rose I again fired only one barrel, and again two birds fell. As this gave me a bag of 15 quail, I went home well satisfied with the afternoon's work, and my record of four quail in two consecutive shots. H. A. P.

The Growth of the Idea.

IRVING, Mich., March 5, Editor Forest and Stream:—I have had several chats with the leading sportsmen of Hastings, our county seat, and Middleville, regarding the Forest and Stream plank: Stop the sale of game.

On one occasion, while at Hastings, I overheard a gentleman, who as I afterward found out has never read our great paper, remark: "Let everybody that cares for shooting, kill what he wishes to eat and no more, when the law is off, and stop selling game," to which I replied: "That is right."

"Ah," he replied, "I have a convert already." "Not so," I answered, "for Forest and Stream taught me that some time ago."

Right there we became acquainted, agreeing that stopping the sale of game was the right way to replenish.

Working of the N. Y. Deer Law.

Three hounds from the town of Moriah drove a fine specimen of buck deer into the Bouquet Valley on Saturday. The dogs were caught off on the Laughlin Mountain but the deer came down to the Hunter's Home, several witnessing his approach to civilization. One of the hounds wore a collar on which appeared the word Hero, and also the owner's name and address, which was Mineville, N.Y. These dogs were closing in on the deer when two Elizabethtown men, who happened to be working in the woods, caught them and saved the life of the frightened animal. We actually believe the owner of the dog wearing the collar is a law-abiding citizen and does not want his dog to engage in chasing deer out of season. Such being the case, we feel that he will in the future take pains to see that his dog is properly housed, especially at this season of the year when the condition of the snow renders it well nigh impossible for a deer to keep out of the way of a dog. We hope and trust that the matter will receive the immediate attention of the owners of the dogs referred to.—Elizabethtown Post.

Jacksnipe Here.

YONKERS, N. Y., March 28.—The first and only Wilson snipe to arrive in this vicinity was bagged yesterday in the Saw Mill River valley by one of our local gunners. The bird was very wild, and would not lie for a dog to point. It was in fine condition.

A large flock of wild geese passed over my house late last night, going northward, and they seemed somewhat bewildered by the gale which was blowing at the rate of fifty miles an hour. J. WARING, Jr.

Sea and River Fishing.

FLY-FISHING AT NIGHT.

That trout will rise to the artificial fly at night—no matter how dark it may be—there seems to be no doubt of, whatever. At least, my experience in the old country tends to prove it. During a few days' sojourn on the Wharf in Yorkshire, England, I found the river so low and clear that no amount of coaxing could produce a rise during the day time, and we had to resort to "bobbing" with the natural fly, which consists in hiding yourself on a bank behind the bushes, poking your rod through and allowing a natural fly to skip on the top of the water—which, by the way, is considered tantamount to poaching in those parts.

On the advice of some old anglers, I there tried fishing with the artificial fly late at night, and in two instances did it with fair success, although the nights were very dark, and the flies used of the smallest pattern and of the most unobtrusive colors.

It is my opinion that the fish take the fly at night, not by sight, but that they are attracted to it by the commotion it causes when falling on the water, however lightly it may be cast. At least, it seems to me illogical to suppose that if they saw by night as well as in the day time, the same unfavorable conditions prevailing during the day would not equally obtain at night.

In this country I have made fair catches of black bass with the artificial fly at night time—in fact, there are rivers on which, according to my own experience, it is quite useless to cast a fly until the sun sinks behind the horizon, and from that time up to midnight I have had good sport, both casting and trolling with the fly.

I have had at one time some very fine sport of this kind on the Oswego River, where it would be quite useless to start in before from 5 to 5.30 o'clock p. m., but from that time on, up to 10 or 11 o'clock, the fish would keep rising all about us, and frequently it was so dark that we could not see, but only hear a rising fish, and had to cast for him by sound.

Popular belief is very strong in favor of a white fly (miller) for night fishing, but as far as my experience goes, I have not found it any more successful than any other fly. This is entirely in keeping with my theory, that it is the vibration of the water caused by the dropping of the fly on the surface that attracts the fish, and not the sight of it.

In cases where fish are caught at night with bait—as on set lines—I believe that it is the scent of the bait that guides them. Of course I do not contend that fish do not see at night time, but doubtless their vision is much obscured—if this were not the case, how could we account

for the fact that they are so much bolder at night than in the day time.

COLEBROOK, N. H., March 17.—I have had fine sport at Diamond Ponds after the day's pleasure, supper and camp work was done, fly-fishing at night. Amos Cummings and myself would attach a couple of light, attractive flies to our leaders, run our boat out to some good point, set a reflector lamp on the bow of the boat, thus throwing the light on the water; we would stand in the stern, in rear of the light; this would give us exciting sport, and as a rule, larger fish taken than in daytime.

Charles Perry, an old trapper and guide, told me he had fine sport fishing the same way at Third Connecticut Lake.

Diamond Ponds are on the Maine Central Railroad, the station Colebrook, N. H. A nice camp is kept by M. B. Noyes, a genial host. The ponds afford fine trout fishing, as no other fish inhabit the waters. G. A. G.

The several articles which have recently appeared in Forest and Stream in relation to night fishing for trout have contained much of interest to me, for one of those "epsodes" which come to everyone which follows the fascinating sport of trout fishing, came to me in the night. This is the story:

Only a few years ago I ran across what is known among the boys as a "snap." I was living at the time in Worcester, and together with as persistent and enthusiastic a crowd of anglers as any city can boast, had whipped about every stream, large and small, within a radius of thirty miles, until courage was about exhausted.

Then I ran across a good thing, and I didn't do a thing to it but fish it. Starting out at midnight, and returning twenty-four hours later, I kept the matter of where I go 'em,etc., pretty well inside the family, and I did get 'em every time I went after them. And such beauties! The boys nearly had a fit when I showed them a basketful that would average a pound apiece on my return one night.

The next spring I fixed it up to take a friend with me, and that's how I happen to have this experience. The first time we visited my "snap" it was beastly cold, and up to noon we did nothing, so we planned another trip, this time leaving town on an evening train and driving the last half of the way.

This brought us to the brook about 3 a. m., and not wishing to disturb our friend, the farmer who usually lies abed as late as 3.30, or, on Sundays, even till 4, we drove down a cross-road that crossed the stream to see how the water was. The night was still and warm, and the moon, which was growing pale, gave just light enough to make out the condition of the water. All signs seemed to be right. As we stood on the bridge, ten or twelve feet above the water, looking down into the "big hole" we noticed a tremendous wake shoot across it. Visions of a monster trout, of course, filled my mind, but Oliver would not have it. "Trout! You're crazy, that's a muskrat. A trout to leave a wake like that would weigh five pounds."

Now Oliver has a way of passing judgment on things, that leaves no room for further argument unless you know him about as well as I do, and the wake appearing again just at this time, I made a frantic dash under the buggy seat for my heavy rod and reel.

I jointed up and felt the line through the guides, you could hardly see the rod, and attaching a No. 2 sneck well covered with nicely scoured "enticers," I stepped onto the bridge just in time to see a trout of about one-half pound roll up to the surface. But, holy smoke! what jumped then? "There," said Oliver, "there's your trout just jumped off the bank. Trout! I thought you had fished long enough to know a trout from a rat!"

Well, that last speech had weakened me a little, but I had seen the small one for sure, so I dropped in, and almost immediately felt him. I let him have it, and very meekly said to Oliver, "I've got him already."

"Got him? Got nothing! Put him right up here on the bridge where we can see him. That's what I'd do if I had him. I'd put him right up here on the bridge."

Of course, that's not the way to handle a trout, not in the daylight, at least, but I didn't know much about trout fishing at night then. Oliver is also very impetuous. He does things with a dash. His strokes are all bold ones. That's his way, and that's why he is such a prince of good fellows to shoot or fish with. To make any impression on him you must do your work on impulse, something out of the regular, and I just itched to derrick that trout about forty feet into the air and "right up on the bridge." I knew I had a strong rig throughout, so I grasped the rod and line just above the reel and taking up the slack, I braced myself and hove a mighty heave, expecting to see a half-pound trout soar the length of my line, but I didn't. I did, however, see a trout come out of the water about four feet and fall back with the dullest "sickeningest" thud I ever heard. If a Newfoundland dog had fallen off the bridge he wouldn't have made more of a splash. Oliver said he would have weighed five pounds if an ounce, but I didn't say anything at all just then. I had parted a leader of good salmon gut, and lost the largest trout I was ever fast to. Later in the day we were again at the "big hole," Oliver on the bridge and I down on the bank just beneath him. Suddenly a figure sailed over my head and landed in the grass, while wild shouts of "landing net! quick! quick! with the landing," explained the trouble, but he was only a one and one-half-pounder.

As a farmer, who came down to learn the cause of the shouts, remarked, "Well, he's quite a nice one, but he ain't the old big one that lies under the bridge. Lots o' people had hold on him, but the' can't no one get him out." And I knew it well as he did. But you can see how Oliver "put him right up onto the bridge" when he had hold of him. Not! That's quite a while ago, and I have not been able to get the old rascal yet, but I still have hopes.

They'll rise all right at night if you approach them right, and that's not all I've learned about night-fishing, but it's enough for now.

BOSTON, Mass., March 21. C. H. MORSE.

Salmon Fishing For Sale.

Freehold on the best fishing waters of the Southwest Mirimichi River (Burnt Hills). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York City.—Adv.

NOTES OF AN ANGLER.

It has often been noticed that the same kind of fish cannot be caught in the same way in different localities. Whether it is because of the different kinds of food they are accustomed to is a matter of conjecture, but the fact remains. It sometimes seems as if fish become educated up to a particular way of being caught.

In a town in northern Massachusetts, near the New Hampshire border, the writer was once passing his summer vacation with a party of friends. The brooks and ponds of the neighborhood were pretty thoroughly explored by us, and fair fishing obtained. One day our wanderings led us to a brook of moderate size, with plenty of rocks and pools, clear as crystal, and just the place in which trout love to hide. We got down from our wagon, hitched our horse, and made ready our rods and lines, with every prospect of a successful afternoon's fishing. The brook ran along through the woods a few rods away from a farm house, and as we were arranging how we should work the stream, the owner of the farm came sauntering up with that lazy curiosity characteristic of his kind. After passing the greetings of the day, we entered into conversation, and our talk naturally fell on the subject of fishing. He said there were plenty of fish in the ponds and streams round about, and that he never failed to get a good string out of the very brook by which we were standing. We asked if he had any objection to our trying the stream. "Lord bless ye! no. But heow ye goin' to ketch 'em?" We showed him our rods and lines, which he examined with a quizzical look on his face. "I don't think ye'll ketch nary trout with them 'ere contrivances; not in this brook, that's sartain." Nevertheless, we thought we could, and we started off to work the brook, confident in our ability to get the fish if there were any. However, at the end of two hours of hard work we had to confess ourselves beaten, and back we trudged to the wagon, our efforts all for naught. As we were harnessing up, the old farmer again approached us. "Wal, what luck?" We told him and an amused smile broke over his face, as if to say, "Didn't I tell ye so?" We told him that we didn't believe there was a single trout in his brook, or that there ever had been any, for we certainly had seen no signs of them. "Oh! yes, there be, but 'taint everybody that knows how to ketch 'em. I've seen lots o' city folks come here jes' like you've done, with all these 'ere fancy riggins, an' knowin' all about trout, an' never ketch a one. They're fine fishermen they think, but somehow or other the fish don't seem to bite for 'em."

We were a little piqued at his remarks, for we had always had our share of luck, and flattered ourselves that we were not wholly ignorant of trout-fishing. However, curious to know something of his methods and the reason for our not getting even a rise, we asked him to tell us the secret about the fish in his particular brook. "Waal," said he, "there's nuthin' like knowin' the ways of the fish, and studyin' 'em. There is plenty o' trout in that there stream, but they don't notice nary hook and line. When I want a mess o' fish, I jes' take a tin pail an' a stick, an' I hold the meouth o' the pail in front of the hole where the trout ought ter be, an' poke the stick in the hole, an' the crittur comes out inter the pail jes' as nice as can be."

It was in vain that we tried to convince him that his method was unsportsmanlike; when he went fishing, he went to fish, not to "come the scientific with fancy riggins."

In tramping about through the woods of Tahiti, I came to a shaded pool, a bath in whose clear, cool waters was most refreshing after the heat of the day. The pool along the banks was filled with numbers of ula, or prawns of large size, and I was at once attracted by the prospect of future toothsome dishes of these delicious shell-fish. When a youngster, I had caught all my shrimps for smelt bait in the salt marshes near Boston, using a long-handled scoop-net. As these ula were nothing but shrimps of larger size, I soon perfected my plans for the morrow, when I intended to make a descent on the pool. On reaching the village, I got an old sailor to rig me up a net with a good stout handle, and the next forenoon I started on my tramp for the pool, carrying a good-sized basket for the fish, of which I had no doubt I should bring back a goodly number. My native friends, as I passed, inquired what I was going to do, and on being told, expressed doubt as to my success. But I knew what I was about, and in the evening on my return, I would show them that I knew how to catch fish. I reached the pool, and saw the ula, as before, in great numbers, hanging on to the banks, a foot or two beneath the surface, and almost motionless in the water. I dipped my net carefully and steadily, anticipating a rich haul, but no sooner had the net gotten within an inch of the creatures, than off like lightning they darted. Again and again I tried, but with no success, and I had to return to the village, beaten and empty handed. My friends were on the lookout for me, and good-naturedly rallied me on my failure. They told me their way of catching the prawns, but I could not see why my own way should not have been successful, unless, as I prefaced, the prawns were accustomed to the native method, and found my way novel and strange. When a dish of ula is wanted, the women catch them with a running noose made of plaited fibre of cocoanut husk. The loop is lowered over the tail of the fish, and with a quick jerk the fisher lands her prey. I am convinced that in no other way can the ula of Tahiti be caught.

A great delicacy with the Samoans is the palolo, or seaworm, a small stringy creature that visits the islands once a year. Its appearance is usually after full moon in November, and the time of its coming is accurately calculated by the natives. The palolo comes to the surface of the water in vast numbers an hour or two before sunrise, and disappears when the first rays of light break above the eastern horizon. A twelve-month elapses before it comes again, and the brief interval of its stay is devoted by the natives to a fishing excursion in which every able-bodied person, young and old, takes part Canoes and boats of every description are pressed into the service, and long before daylight the waters about the reef-openings and entrances to the harbors are alive with a clamoring, shouting crowd, supplied with baskets, and vessels of all kinds, with which to scoop up the highly-prized morsels. The flickering lights of candle nuts and torches made the scene a highly picturesque one. A couple of hours before sunrise the palolo begins to ascend from the clear depths below; a writhing, solid mass of worms of various colors, eagerly squirming upward to get their yearly glimpse of the outer world. Then follows a commotion and uproar of voices as the myriads appear at the surface; every beast and basket is plied, and every hand is busy reaping a rich harvest. As the sun's disc comes above the eastern waters, the wriggling mass slowly sinks till lost to sight among the coral branches below. Then the canoes turn shoreward with their precious catch, and the day is given over to feasting and rejoicing. Presents of palolo are sent, carefully wrapped in green leaves, to friends in distant parts of the islands—a delicate attention, and one that is highly appreciated by the receipients.

Uncooked, the palolo would hardly prove an appetizing dish to a foreigner, but when boiled it is by no means unsavory. J. B. BRIGGS.

MAINE NOTES.

Mr. Henry Pierce, of the King and Bartlett camps, Maine, has just returned from a short visit to his preserve. He went in with Mr. O. W. Whitcomb and friends of Farmington, Maine, and the party had some very good sport while away. A number of togue was caught through the ice at Big Spencer Lake, the largest one weighing twelve pounds, was brought out with them. Although the King and Bartlett preserve is already noted for its abundance of fish and game, a strong effort is now being made to multiply and restock it. The main camps are beautifully situated on the shores of King and Bartlett lakes, and into this sheet of water have recently been placed 225,000 trout eggs. Into Little King Lake, about one mile from the camp, they have put 15,000 salmon eggs, in addition to 700 yearling salmon put in the same lake last fall. A new fish hatchery has been built, and other improvements to be added this spring are a large and roomy family cabin at the main camp, and also a new camp at the right of the outlet of the lake some distance away, for the accommodation of any party of sportsmen desiring to locate in the woods away from other visitors. A number of maps of this county are in existence, all seeming more or less imperfect in tracing the trails and giving the distance from point to point where good fishing may be had. Mr. Leow Keach, of Boston, recognizing this fact, has lately produced a map, which, in the opinion of the writer (who spent some time on the preserve last fall) is a model of accuracy, and will be of great benefit to visiting sportsmen. Horseshoe, Parker—noted for its deer—and big Spencer Lake, with the trails leading thereto, are faithfully outlined. And Spencer stream, one of the most famous places in Maine for brook trout, is traced in all its windings through the preserve.

In the debate on the trout bill in the Legislature on Thursday of week before last, the Massachusetts Fish and Game, Somerset and Megantic clubs had to take a severe scoring about their alleged sensitiveness on the subject of liver fed trout, from the lips of Mr. Atwood, of Plymouth. If organized sportsmen do not oppose this measure, where can the opposition to it be looked for?

Quite an opposition to the Megantic Club has shown itself at times in that section of Maine lying near the preserve. The acts of the corporation have been unjustly criticised, and individual members have been scored through motives not altogether creditable, coming from those who have received benefits. That the club is a distinct benefit to the people living near the preserve is shown by the treasurer's report just issued. This report shows a larger amount in receipts and expenditures during the past year than ever before in the history of the club. When possible, supplies have been purchased from store-keepers near by, in that way giving them the profits of the business. There have been expended for supplies and wages during the year, either on the preserve or in its close vicinity, $9,000. In addition to this, over $5,000 have been paid by individual members to guides and others for personal services. These figures are careful estimates taken from the club books and speak for themselves; certainly they do not show that the corporation has been a detriment to the surrounding country. The club will soon issue a new and elaborate report, devoted to illustrations of camps and preserves in general. Dues for the coming year have been fixed at $20. Of this amount, $15 will be applied to running expenses, and the balance ($5) toward the payment for land recently purchased on Big Island Pond. HACKLE.

ANGLING NOTES.

SPAWNING OF RAINBOW TROUT.

A State Fish Commissioner, writing under date of March 5, says: 'We have received from the U. S Fish Commission 100,000 rainbow trout eggs, and they are hatching at the present time with our native brook trout eggs, while the parent rainbow trout that we have in the ponds at the station do not spawn until the middle of this month. Are there two varieties of rainbow trout, or what is the cause of this variation in the time of spawning? There is but one species of the rainbow trout which Jordan has declared to be the young of the steel-head trout, once called steel-head salmon, but the rainbow is most variable in its spawning habit. It is called a spring or summer spawning trout, and it does, as a rule, spawn between January and June, depending upon the water in which it is found, although it has been said that in various parts of California it may be found spawning during every month of the twelve. "The first of these trout that were brought to this State began to spawn in March and continued to spawn until the last of May, and as little was then known by Eastern anglers about the habits of the rainbow, the facts concerning the spawning were spread abroad and formed a basis for all future calculations as to the spawning time of the fish. Special laws were enacted to make an open season for the fish different from that of other trout, but since that time the habits of the rainbow seem to have changed and have conformed so nearly to the habits of the native brook trout that the two species have been crossed. In my opinion it is a waste of time and money to propagate the rainbow trout for the purpose of stocking Eastern streams, as in a majority of cases when the fish have

been so planted they have disappeared for good after their second year. Even in ponds where they can be confined to prevent their escape, they are not regarded as the equal of our native brook trout. I have long had a desire to see the black-spotted trout of the Rocky Mountains (S. Neykiss) tried in Eastern waters, if any of the Western fish are to be introduced, but the more I learn about the fish the more I feel that we should be satisfied with the fish native to our waters and the brown trout. The black spotted trout is a summer spawning fish, spawning from the first of May to the middle of June, and like the rainbow, a smaller percentage of the eggs is hatched than is the case with our native trout. The highest percentage of eggs of the black-spotted that I have seen given as good is seventy-five, but I have also seen that as low as forty per cent. only have been hatched. The eggs of this fish hatch in from twenty to thirty days.

PIKE PERCH AND WALL-EYED PIKE.

A gentleman asked me if there was any difference between a pike perch and a wall-eyed pike, and when I said no, he told me that he would write me a note asking the same question, and he would like an answer over my name. Therefore, I say again, there is no difference between a pike-perch and a wall-eyed pike. The pike-perch, which is the proper name of the fish, is also called wall-eyed pike, glass eye, blue pike, dory, horn fish, green pike, jack and jack salmon. There are two members of the pike-perch family, and the other than the one I have mentioned is the jauger or sand pike, very like the pike-perch in appearance, but a fish that does not grow to exceed fifteen inches in length.

FOREST AND STREAM AND THE GAME CODE.

The Forest and Stream arrives in Albany about 11 o'clock in the forenoon on Wednesdays. Last Wednesday the journal was on time, and a few hours later Senator Donaldson had his attention called to the suggestion in these columns about giving the fish commissioners power to close brooks in which they had planted fish long enough to establish the fish planted. This is something that has heretofore been regulated by supervisor's laws. The suggestion met with the approval of the author of the game code, and the next day an amendment was prepared to change the bill in this respect. This will really be an improvement upon the supervisors' laws for the same purpose, as the supervisors met but once a year and always some months after the fish are planted. Such power in the hands of the New Hampshire commissioners has been of great benefit in stocking new waters with fish.

RAILROADS AND FISHING.

To-day the angler is greatly dependent upon the railroads of the land for the means of reaching his fishing, and the railroads realize that good fishing on or beyond their lines is a source of profit to them.

By referring to the reports of the U. S. Fish Commissioner, it will be found that the railroads haul the fish commission cars free, thousands of miles each year; for instance, in 1892 the railroads gave the fish cars and their crews free transportation over 62,761 miles of road. For many years I have received free transportation over the Delaware & Hudson Canal Co.'s Railroads for fish cars, cans, men, etc., and every facility has been offered by the officers when fish were to be planted on the line of, or beyond their road. It well deserves the name of the "Fishing Line," for a number of the general officers are fishermen, and the road has a very friendly feeling for fishermen, as for instance: Last year I was leaving Montreal with a box of ouananiche and wished to make sure that the fish would reach home when I did. I had telegraphed for a carriage to meet me on the main line and drive me home in the early morning. I supposed I would have to make some private arrangements with the train baggage man and asked for him in the station, but upon telling the station baggage man what I wanted he said: "I will check the fish for you to the point where you leave the road." He procured a strap, nailed it to the box, checked it, and when I reached home at 3 a. m. I had five ouananiche less than forty-eight hours out of the water to exhibit to my friends. The latest evidence that the D. & H. has given of its interest in fish and game protection, is an order issued by Mr. J. W. Burdick, the general passenger agent, which reads:

"Any employee of the Delaware & Hudson Canal Company known to have intentionally violated the game and fish laws will be dismissed from the service of the company."

This order is far-reaching, as the road extends from Pennsylvania to Canada, through New York State, with a number of branches and leased lines. Mr. Burdick has set an example which, if followed by other of the railroads, will have a material effect upon checking illegal traffic in fish and game.

I happen to know that Mr. Burdick is a sportsman in the highest sense of the word, and thus he institutes an order which may make him the patron saint of the sportsmen of the future.

A. N. CHENEY.

TROUTING ON ELK RIVER.

"You grov'ling worldlings, you whose wisdom trades
Where light ne'er shot his golden wing."

I left Johnson City, Tennessee, July 1 for the trout country of Western North Carolina.

The day before the start was spent in preparation. This anticipatory period has always seemed to me one of the most enjoyable parts of the trip to the woods, for it is then expectation stands on tip-toe and imagination knows no master. With what feverish fingers we pick out this hackle, or that coachman! Holding it up to the light, we feel the barb, the feathers, and then closing our eyes, dream of quiet pools and shady places. An angler's outfit is of as much importance to him as a bride's is to her. I have hung over a large book of flies as lovingly as ever betrothed hung over her silks and laces. On this expedition I carried a seven-ounce bamboo rod, eleven feet long and in three joints. As a matter of precaution, I took along an extra tip. Next to the rod, I am most particular about the reel. It must be capable of song. I remember once, while standing below a saw-mill dam on a stream in North Carolina, an old mountaineer approached me. He had never seen a reel. I showed him mine, how it multiplied, and the advantage to be gained by its use. He heard me through, and then expressed himself as an anti-reel fisherman. During the conversation my fly had been dancing about in the most alluring way, now floating with the current, then skimming back over the surface, when quick as the lightning flashes, it was siezed and carried down stream. For twenty yards the line was taut, while clear and high, filling the little valley with sweetness, rang out the song of the reel.

"My friend," said the dweller in heights, "reckon you like that critter because she sings so pretty." Of course the reel must possess other good qualities, but this one first of all. The flies for this trip were the ordinary ones, those generally found in every trout angler's pack.

A month before the day of starting I had written Mr. S. M. Dugger, Banners Elk, N. C., about the fishing, asking whether the main stream, the Elk River, was high or low, and what luck the pioneers of the season had enjoyed. He reported a friend of mine as having taken a hundred trout in one day just three weeks before, while he himself had been nearly as successful. The river was low he said, but had water in plenty, and was not too clear.

Dugger lived a quarter of a mile from the bank of the Elk. In front of his house and gently sloping to the stream, was a meadow. Across the river was more meadow land, which stretched away to the dark forest, half a mile distant. Dugger allowed none but his own guests—for he kept a sort of anglers' inn—to fish in this meadow, and consequently the fishing was gratifyingly fine. Many a time in that quiet place have I filled my creel in an hour, and that hour before the sun had risen to the tops of the mountains which walled in the valley. It was not in this spot, however, I intended to fish this season.

Below the meadows the stream suddenly descends in a series of cascades, to a deep, narrow ravine. The trees here, white pine, hemlock, ash and birch, grow down to the water's edge, and sometimes meet overhead, completely shutting out the sky. The boulders are covered with moss, and on wet days, or when the saw-mill above is running and the water from the dam escapes freely, are very slippery. Mr. Dace, the owner of the land, had told me the fishing was good here, and kindly gave me free use of the stream.

Long before the sun had risen I was up and about, although I found myself not a little stiff because of the exceedingly rough roads I had come over the preceding afternoon, from Elk Park, where I left the railroad, to Duggers', a distance of ten miles. I saw Dugger had built a new house not far distant from the old one, and I thought to myself, he is profiting from us apostles of the art. Upon examination, I found the house to be almost entirely home made, all but the glass and iron work having been grown and manufactured on the little farm. The profits eked from angling sources seemed now meagre enough. The mountaineers are the true Democrats, for they possess the very life of Democracy, independence.

My shoes I found where I had left them the year before, in an old hollow apple tree. I prefer old shoes to rubber boots for wading. With thick, woolen socks and seamy shoes, my feet do not get sore, nor am I bothered with colds.

The walk through the meadows (for I purposely avoided the road) and down the bank of the river, over the boulders, was a wet one, the dew being very heavy, even for this latitude. The Elk had changed its course a little in the year I had been away, and in one place, where formerly had been a pool, was now a great pile of logs and sawmill refuse. I remember thinking at the time, how surprised some wanderer of a trout would be when he revisited the scenes of his childhood and found how completely his old home had been destroyed. For trout have homes and do year after year linger and abide in the same places. Why, I remember a hole in the old sheep pasture, where—but that's another story, and belongs elsewhere.

Some quarter of a mile below the log-jam, and two miles from Duggers', I began the work or sport, just as you please, of the day. The water at this place was comparatively quiet and slow, with here and there a bubble or fleck or foam, as a reminder of its recent rough treatment. Looking up stream I could see the last of the cascades, while below were little rapids and gently whirling pools. In places the sunlight broke through the foliage and lit up the dark surface of the waters. Out on the checkered surface of the pool, but not so lightly as desired, fell my brown hackle. Now, brown hackles are not the most tempting flies in the list, but for all times and places I prefer them. They are a sort of stand by with me, and a goodly number find their way into my book annually. I have used them with success in both the Rocky Mountain and Appalachian trout streams. In Northern New Mexico, along the Pecos River, I caught one fine morning in the season of 1890, a trout weighing nearly two pounds and a half with this fly. The particular fly used at that time I intend never using again, but to keep as a sort of souvenir. The most alluring-looking pools sometimes prove themselves great delusions. One would think to look at them they were trout palaces and parks, but upon examination it turns out that they hold not a fin. I have learned this to be true of things other than trout streams. Gently my fly floated up and down the stream, but there was no signs of Sir Trout or his family. Changing the hackle for a green drake, I again whipped the waters. There was a red bug floating around and around near the fly, and I was watching its feeble efforts to climb upon a leaf, when there was a splash up stream behind me. Turning about, like a pivot in its socket, on the boulder where I stood, I saw only a series of rapidly widening ripples, but it was enough. Quickly the drake left the pool and rested on the rapid waters some twenty feet above me. It was for an instant only. A flash of sunshine, a glitter of jewels, a surge through the water, a wild throb of the reel, a swish and a splash, a slow pulling in, a dip of the net, and he lay—Oh, the beauty! soft-cushioned in moss. He weighed just seventeen ounces.

I have noticed that the trout in these streams differ materially in shape. Now, for instance, this one was long and slender, while others I have caught were short and chubby. Thinking it was perhaps a sexual characteristic I made an examination and learned that it was not, as some males were short and thick as well as the females, and vice versa. I mentioned the matter to Dugger, who is very well informed upon such things, but he was unable to explain it to me.

Slipping the fish into the creel, I walked down stream for some dozen rods, where an old pine log hung out over a rapidly swirling pool. Crawling down to the end of the log, I seated myself astraddle of it, and began one of the most enjoyable half-hours of all my angling excursions. From up the valley came the sound of rushing water. On both sides was a thick growth of timber, with sunbeams darting here and there in the dark foliage. Above was the blue sky of this beautiful "Land of the Sky," below were little rapids and pools, while directly beneath me was a miniature maelstrom, the home, I felt sure, of a family or two of trout.

Adding a couple of hackles to the drake, I quietly dropped all three on the water. Surely a conference had been held in that place, and a plan of action agreed upon, for no sooner were those three flies on the water than as many trout seized each his fly and darted each in his own direction. Of course I was highly elated, but I must add, not a little astonished and confused. Perched as I was on that shaky log I could do practically nothing. It was a predicament entirely unforeseen. I am told that the hunter sometimes forgets to shoot, so fascinated is he with the movements of his prey. It was so with me in a sense, for I could do nothing but look.

How they made that water boil! Two of them I remember were in the air together, while the third acted as a sort of anchor for them, and in turn was similarly waited upon by the others. I wanted to be anywhere but on that log. Every movement I expected the loss of at least a part of the booty. Seizing the end of a broken limb I began crawling backward up the log, and to my great relief, soon stood on a big boulder about ten feet above the water. Now I could work. Slowly the catch was led to the right, out of the whirling water into a shallow ripple, and with the aid of the net soon lay on the pebbled shore.

Seating myself on a rock, I surveyed those trout for a full ten minutes. My heart was running over with joy. How often, brother angler, does it happen that a man lands his three at a time. They weighed a little over two pounds. From this pleasant place I walked down stream toward a spot Mr. Dace had told me afforded the choicest fishing on the river. Arriving there I found some boys in bathing. It looked as though they were tired of fishing and had sought to refresh themselves by a plunge. They had not seen me approach so engaged were they with their sport, and hiding myself in a thicket of rhododendron, I watched them with considerable interest for some time. I was much disappointed in finding them here though, for I had thought to make a strike worthy of remembrance.

Retracing my steps and passing the scenes of the morning's adventures, I floated my flies in a glassy bit of water near the mouth of Onorah Branch. Nothing happened at this spot worthy of note, except that I landed a remarkably short and broad trout weighing nine ounces. A little further up stream I unjointed my rod and following a widening mountain pathway was soon in the meadows and at Dugger's.

The nights are cold in that latitude, and a fire was kindled in the great fireplace directly after supper. What a pleasure it is to recline at ease in a soft arm chair and watch the shadows on the wall, and the glow of the coats, so ruddy. Then to cross one's legs and light one's pipe and read a romance old and racy. In this manner did I end the first day.

JAMIE L. KINGAN

Cape Cod Winter Notes.

While on a flying visit to Woods Holl, Mr. V. N. Edwards, of the Fish Commission, furnished me some of his recent observations upon the birds and fish of the locality. The unusual cold produced certain anomalies of distribution of animal life and led to the destruction of a great many common winter residents, especially among the fish.

During the night of Feb. 5, anchor frost first made its appearance. The temperature of the water dropped as low as twenty-eight and a half degrees. The spawning cod in the live boxes under the fish commission laboratory, and in the outside pools, were frozen as hard and stiff as if they had been out of water and thrown on ice. Shore fish, such as the chogset and tautog were seen lying on top of the ice in large numbers. Eels, with their usual sagacity, burrowed into the mud and escaped the widespread destruction, as far as heard from. Curiously enough, a lot of cod eggs in the hatchery, over which the same intensely cold water at twenty-nine degrees constantly flowed, were scarcely affected by the mixture of ice mush in which they were embedded. At this date (Feb. 23) they look as well as any other eggs in the boxes and nearly all of them will hatch.

Anchor frost is fatal to fish, but not at all injurious to the little animals called copepods, which are swarming now in the waters. Mr. Edwards has seen a great many strange things in the course of twenty years' collecting at Woods Holl, but he was surprised the other day upon bringing in a lump of ice which he found literally "alive" with those diminutive creatures.

These copepods form the natural food of certain young fishes now abundant in the icy waters of the harbor—fishes so small that even the ichthyologists are in doubt as to their identity. It is certain that some of the cod family are among them, as well as sculpins, eels and sand launce, but others are not recognizable.

WOODS HOLL, Mass., Feb. 23. T. H. B.

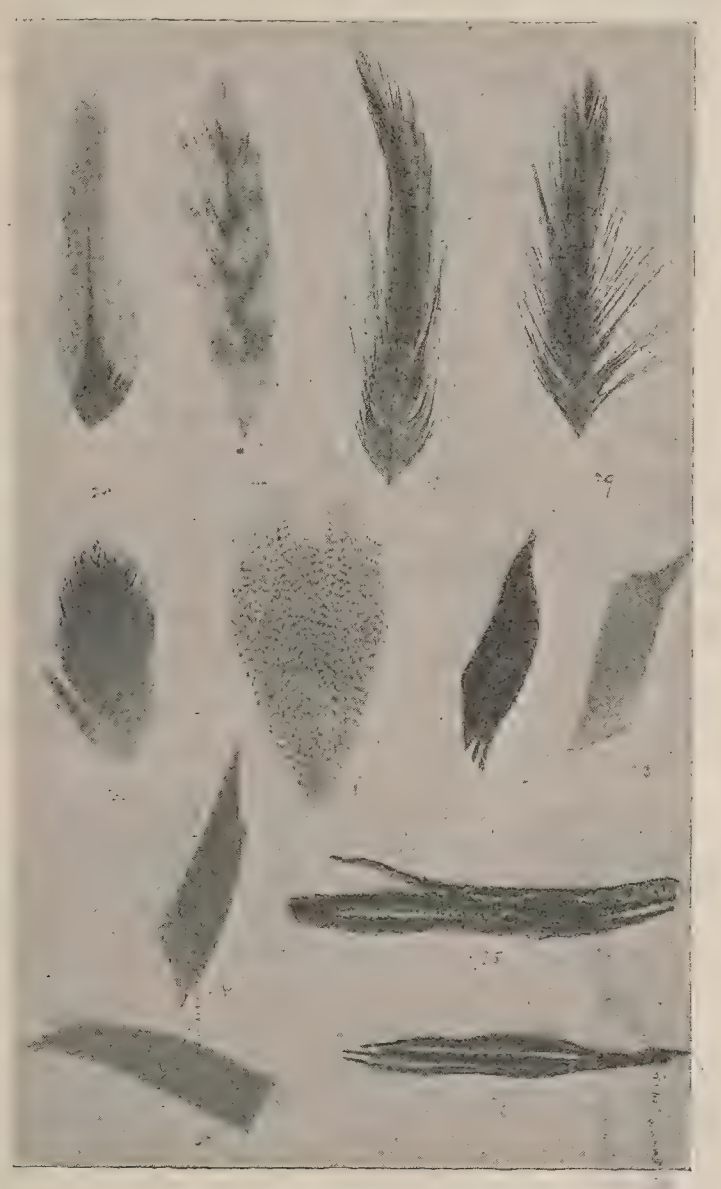
A Connecticut Fishing Club.

The Jewett City (Conn.) Piscatorial Club has recently been organized, and has for its object the stocking of streams and ponds within its territory with fry and yearling fish. It has a membership of fifty, and not a few prominent men of Norwich are enrolled upon its lists. The organization has been talked of and thought of for years, but at this time the fact of the swift decadence of the number of trout in our brooks and game and food fish in our ponds and reservoirs made it necessary to act at once. A new method of raising fry will be put in operation. It is also expected that white perch (a fish hitherto unknown in this immediate vicinity) will be introduced.

The officers elected at the first meeting are: President, Archie McNicol; Vice-President, J. H. Finn; Secretary, W. L. Sweet; Treasurer, C. W. Reynolds; Executive Committee, A. A. Young, Jr., L. F. Kinney, F. L. Leavitt, C. H. Fanning, D. P. Chabot. Committee on bait—C. H. Fanning.

MATERIALS FOR FLY-TYING.

The article entitled A Fly-Fisher's Gossip, in last week's Forest and Stream, has brought us a number of inquiries as to the various materials which are used in tying artificial flies. These inquiries are so numerous and so various that it is impossible for us to answer them all, and we are obliged to refer those interested in the subject to Mr. Keene's interesting little work, "Fly Fishing and Fly Making, for Trout, Bass and Salmon." This volume gives very full instructions as to fly-making, and is, besides, very fully illustrated with cuts, showing the different processes to be gone through with in fly-tying. It contains also two plates on which are shown the actual material, that is to say the feathers, silk, wool, tinsel, etc., used in making the flies. One of these plates, somewhat reduced; is given here, and we quote the descriptions of the various feathers shown:



"No. 26.—Silver black hackle, or white sock-a'-bonddhu. Choose for preference very clear black tapering center, pure silver white tips.

"No. 27.—Mottled hackle, from Plymouth Rock chickens.

"No. 28.—Cock-a'-bonddhu hackle, black center, brown tips. Acquire them whenever you get a chance. They are most useful for a variety of flies.

"No. 29.—Brown hackle. Ditto repeated. A good hackle is short in fiber, with thin, strong mid-rib. Get your hackles as near the colors I have described as possible, but do not discard those that are near the shade but not it exactly. On the hook they look different from what they do off it.

"No. 30.—Ibis. The feather shown is the small breast feather, and but inadequately expresses how beautiful and useful the whole feathers of the bird are. The entire skin is one blaze of scarlet, and hardly a feather is wasted in fly-making. A whole skin is quite necessary to the amateur fly-maker.

FLY MATERIALS.

"No. 31.—Mallard. This feather is from the breast of the mallard, and is given as typical of the sort of fibers required for a large variety of flies from its near relations—the wood-luck, pintail and canvasback. In all cases where this beautifully mottled feather is indicated, it is taken from the breast. The feathers from each are so similar that I do not think it necessary to repeat the others.

"No. 32.—Brown hen. Taken from the quill feather on a brown hen or rooster. Nearly every feather of a brown chicken is useful.

No. 33 and 34.—Feather from underside of mallard wing. These feathers provide the metallic-looking dun wings of a great variety of flies and vary in shade from a white silver pearly to a dull, almost black dun. Turn up the wing of the mallard and there they are before you.

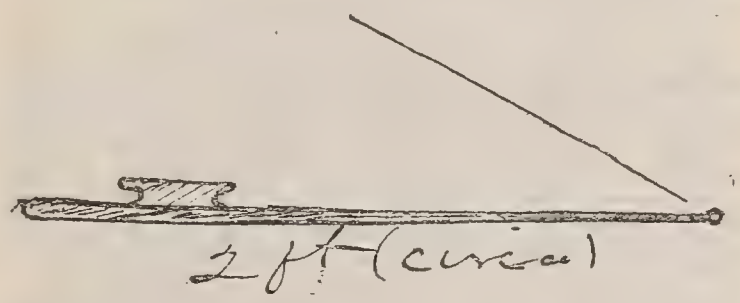
"No. 36.—Blue heron. This is a very useful substitute for the dove in the Henshall, though, perhaps, Dr. Henshall would not think it an improvement. It is sometimes impossible to get the gray dove wings, and a noted Florida fisherman tells me he has substituted this feather with great advantage among the many fly-rising fish abounding in the waters of that region.

"No. 37.—Ostrich herl from the plumes of the bird. This is exceedingly useful for the heads of flies, and makes a very attractive furnish-leader, both strong and light."

Smelt Fishing in Lake Champlain.

Editor Forest and Stream:—I suppose something about smelt-fishing is in order just now. One day last week two of us left Whalon's Bay about 9.30 a. m. and returned before dinner with two nice strings of fish. We fished just about two hours, in the bay next to Grog Harbor, south, and six miles north of Westport village. Two holes had been cut through the ice here which we reopened. We also entered into the labors of former fishermen in using their brush house to keep out of the wind. The day was cold, our lines freezing together when left out a minute.

This little bay is nearly land-locked, being exposed in only one direction. A brush house is simply a collection of cedar limbs and small trees placed to windward of the holes. A fire too had been built by our predecessors on the ice in the shelter of the bushes, and within a few feet of the holes. We soon found it necessary to relight it to warm our half paralyzed fingers. We found a treasure in a piece of cedar-pitch, the next best thing to pine-pitch, in starting up a blaze. We each reeled off about thirty feet of line. I sounded with fifty feet out and brought no bottom, though we were within four rods of the shore. We caught on the average one fish every five minutes, for at the end of the two hours we counted forty-five smelt and one perch; not a wonderful catch to be sure, but they were biting well when we had to come away to do "noon chores," that is, watering the stock and cleaning out stables, feeding again for the night, etc.



Luck runs in queer streaks. I caught all of the large smelt and not one small one, while my friend Guy caught all of the small ones. We fished in holes not eight feet apart, both baited and hooked alike and fished at the same depth nearly. We reel up our lines a la Canuck. The fish-pole is about two feet in length, having an eye at the end for the line to run through, and near the base a boat-cleat screwed on to keep the line on when not in use, and to hold the excess of line. Drawing the fish-pole to an easy distance with the right hand, a stick of about two feet long catches the line (with the left hand) about four feet down; then the fish pole again, and so on. The line in this way can be drawn up rapidly, about thirty feet in five seconds. Of course, all that is necessary is to keep a steady pull on the line, and as the fish nears the ice, slow up a little so as not to rub it off against the sharp edges. Some use the thumb of the left hand and the fish-pole in the right, but this is not so fast, and the cold, wet line makes one's hand ache. Then, too, the stick keeps the loops open and free to run out again, whereas when the thumb is used the struggling fish is apt to close up some of the loops while you are taking him off. Then come the fun to "pick up your dropped stitches."

I knew an old one-handed fisherman who had a way of his own to draw up his fish. When he hooked a fish he would run the length of his line on the ice, the hole being cut so as not to catch the fish as he passed out.

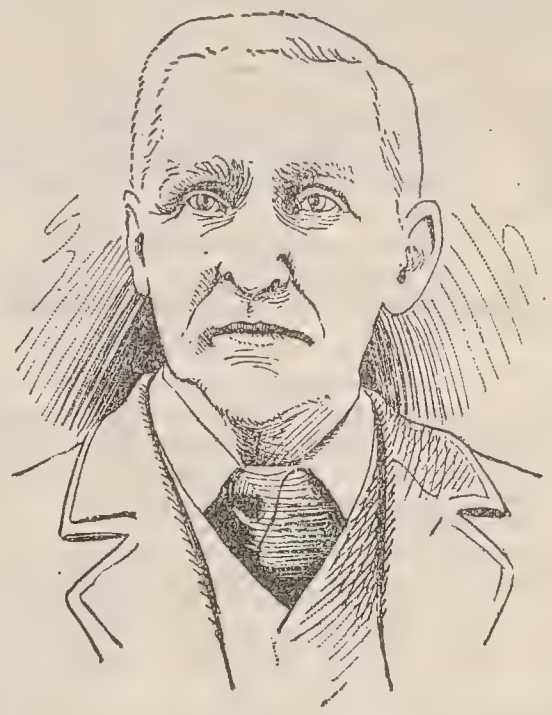
About here they use for bait the flesh of the smelt. The cut is made beginning at the vent on the belly and cutting away from the belly-fin for about three quarters of an inch. Smelt's eyes are also often put on the end of the barb, and I think it pays to cover this up, but not many do it.

All of the larger smelt we caught were roe-fish, not a single male of size being caught. This roe is delicious, cooked in the same pan with the fish. These fish have scales, but it is no trouble to remove them, for simply passing a knife blade once the "wrong way" loosens all of them; a washing then makes them as free from scales as a trout. They are cooked, rolled in flour or bread crumbs, with heads and tail left on. The bones of the smaller ones may be eaten, as with trout. Our largest smelt ran twelve to thirteen inches, and the smallest, six inches. There were fifteen small ones, four large ones and the rest medium. HEATHCOTE.

Our correspondent adds this fuller description of fishing a la Canuck: If in a sitting or stooping posture, the fisherman, assumes an erect position, on hooking a fish, at the same time raising the short fish-pole to the heighth of the shoulder with the right hand. Now the two-foot blank pole held in the left hand engages the line near the ice from the opposite or right side, and is immediately raised to the height of the shoulder, in a semi-circle described to the left from below, while the right hand, with the fish-pole, descends, describing a complimentary semi-circle to the right, from above to the ice, passes in front of the body to the left, and engages the line near the ice from the further side or left. When one hand is up, the other is always down. The arms are held far apart and rigid in order to keep the line taut. The same motion is gone through, only backwards, in holding a skein of yarn on the thumbs of both hands, while (say your sister) winds it into a ball. Reverse this motion, that is reel it from a ball of yarn on to your two thumbs, and you have the same motion nearly.

Smelt in Lake Champlain.

BOSTON Mass.—March 21.—In this week's issue I noticed Mr. A. N. Cheney speaks of the ice fish or smelt of Lake Champlain being taken only near Port Henry and Westport. I have taken many dozens of these delicious fish near Burlington when a youngster, and can say that they are taken in several localities in that part of the lake, one of the favorite places being near either end of the Burlington breakwater. So far as I could ever learn they were never seen in the lake in Summer, and it was then generally supposed that they came up from salt water via the St. Lawrence, every winter. C. H. MORSE.



Pennsylvania Trout Streams.

We have received word from Mr. Charles S. Lee, General Passenger Agent of the Lehigh Valley Railroad, that a number of trout streams in Bradford, Sullivan and Wyoming counties, Pa., tributary to the Susquehanna River, and adjacent to the line of the railroad, will be stocked by the commissioners of fisheries April 1. The list includes the following streams:

Stout's Creek and Ransom Creek, Ransom township; Falls Creek, in Falls township; Teague's Eddy, Washington township; Meshoppen Creek and branches in Meshoppen; Tuscarora Creek and branches in Skinner's, Eddy Township; Sugar Run Creek and branches in Sugar Run; Wyalusing Creek and branches in Wyalusing; Meyersburg Creek, Durell Creek, and little Wysox Creek in Wysox; Satterlee Run in Monroeton; South Branch Creek in South Branch; the head waters of Towanda Creek in Fish Pond; Two streams, feeders of Loyalsock Creek in Satterfield; Birch Creek in Bernice; Lopez, Loyalsock, Pigeon and Sauter Creeks, Rock Run and Sherman Run in Lopez; Ellis Creek and branches, and Glass Creek (two branches) in Seamans; Painter Den Creek, South Brook and Wolf Run in Newell; Open Run in Lee Road; Mehoopany Creek—two streams, headwaters of Mehoopany Creek in Ricketts; Pond Branch and Middle Branch of Bowman's Creek, and the south branch of Mehoopany Creek and Beau Run Creek in Beau Run; Sickle's Branch of Bowman's Creek, and Beth Run's Creek in Beth Run.

A Veteran Angler Gone.

Wesley M. Cameron died suddenly Sunday, March 24, at the Barrett House, Cincinnati, at the advanced age of nearly eighty-two years. Born in Cecil county, Md., he came to Cincinnati in 1832, and became a master builder and accumulated much wealth. He always kept his promises, and among his business associates his word was as good as his bond. Retiring from active business twenty-five years ago, he devoted much of his leisure to

angling for trout, at which he was an enthusiast. For eighteen years he made regular trips to Lake Superior and up the Michigan River, usually accompanied by his brother-in-law, the well known Forest and Stream correspondent, Alex Starbuck. His last trip was made about eleven years ago. About six years ago he was at Petosky, Mich., to obtain relief from asthmatic trouble, and was eager to go on another fishing trip, but was dissuaded by his wife and daughter, who feared the rough weather might prove injurious, although in other respects he was unusually rugged for a man of his age. He was an old time frequenter of, and at the time of his death, a director of the well known Curier Club, and was at the club rooms the Friday evening preceding his demise. He was a good-natured, genial, pleasant gentleman, fond of relating his experiences in the Canadian wilds, and had a host of friends who will miss his presence among them.

E. S. W.

The Doctor's Luck.

Tarpon fishing has begun, but tarpon catching is backward. Up to this writing but five tarpon have been caught in the Caloosahatchie River, and two at the mouth of the river at St. James—seven altogether.

My "luck" for the week is as follows: One silver king (tarpon) caught to-day, weight 118lbs., length, 6ft. 4in., time to gaff, one hour. One channel bass, or red-fish, as the natives call them, weight, 17lbs., length, 37in., time to gaff on light rod, 15 minutes. One alligator, length, 6 ft, shot with a .38-55 take-down rifle at 75 yards, from boat while alligator was swimming. One rattlesnake, length, 5 ft. I shot this fellow in a coil so that in shooting his head I unfortunately blew the rattles off also. This, with a string of large mouth black bass or trout, as they are called here, comprised my "luck."

RUFUS CLIPENS, M.D.

Early Montauk Trout.

A correspondent of Forest and Stream writes me that trout fishing was active near Helena early in March. On the 10th two anglers drove to Beaver Creek and returned the same day, bringing with them seventy fine fish of the red-throated kind—the fish which has been so outrageously slandered by calling it a "cut-throat."

Another fisherman caught forty-two in the Little Blackfoot, near Elliston, one of them weighing three and a half pounds. Our correspondent learned that the fish were taken with the fly.

"Beaver Creek," he writes, "is eighteen miles from Helena. The only way to get there is by team, which can be had for three dollars per day. The Little Blackfoot is also about eighteen miles distant, and can be reached by the N. P. R. R., fare about $1.45 for the round trip. The train leaves Helena at 8.40 a. m., returning arrives at Helena at 10 p. m."

At the date of this letter (March 17) there was a great deal of snow on the mountains, but the sun was bright and warm and an overcoat unnecessary. He has heard of numerous trout streams within a radius of twenty-five miles and has promised to locate them and send a full account of the fishing.

WASHINGTON D. C. T. H. B.

Big Pickerel.

ITHACA, N. Y.—Some extraordinary fine catches of pickerel have been made recently at the northern end of Cayuga Lake. At Union Springs a few days ago an Auburn party, fishing through the ice, caught a pickerel weighing nineteen pounds, the total weight of the day's catch being close to sixty pounds. Again, at Cayuga, March 25, Wm. Ferree and James Heffer, both of Au-

burn, caught a pickerel that tipped the scales at twenty-three and a half pounds, the aggregate of the day's work (for the landing of a pickerel of the above weight ought to be considered pretty hard work) being seventy-nine pounds.

So far as my knowledge extends, the meek and lowly Auburnan now holds the record for the biggest Cayuga Lake pickerel caught thro' the ice. M. CHILL.

Mr. Blackford's Trout Opening.

Mr. E. G. Blackford's annual display of brook trout in Fulton Market on April 1, gave material evidence that the trout season is open in fact as well as in law. There were trout from Sunken meadows and New Islip and Patchogue, L. I., trout from New Hampshire and Nova Scotia and Massachusetts, and wild trout from Canada, small piles of each resting in numerous mossy hollows around the counters. In the tanks were many trout, all of good size. One tank held a giant nine-pounder rainbow trout from the West. Some hybrid specimens of brook and salmon trout made a novel feature.

The origin and development of trout life was suggested by some trout eggs and small fry. A profusion of moss and evergreens, artistically arranged, made a most pleasing effect in the general whole. The opening day was not so attractive as a day or two later will be, when greater quantities can be obtained.

South Side Sportsmen's Club.

The following officers have been chosen for the fiscal year of 1895-96: President, George P. Slade; Vice-President, W. Bayard Cutting; Treasurer, A. Pennington Whitehead; Secretary, Francis O. de Luze; Counsel, George G. DeWitt.

Camp-Fire Flickerings.

"That reminds me."

At my early home there lived for years, almost as one of our family, an old Narragansett Indian, named Jim Wamsley, "Jim Injun," as every one around there called him. (I wrote an article about him that was published in Forest and Stream some time ago.)

Now Jim had a way which he said used to be practiced by members of his tribe, of occasionally catching a black snake alive, and while holding it stretched out at full length, he would bite along its back. The reptile had to be alive, mind you. A dead one wouldn't do. By so doing once in a while, he claimed that one's teeth, coming in contact with the hard, outer coating of the snake's skin, would be cleansed, whitened and preserved through life, no matter how long that might be. Jim would sometimes get bitten while handling the snakes. Once in particular, when we were fishing together, he caught a very large one and while biting along its spine, it managed to give him a severe bite on the left cheek, which looked as if cut by a keen knife, and bled profusely, but never troubled him afterwards, so far as I recollect. Whether there was any efficacy in the application of live black snake's skins to his teeth, or whether it was owing to his iron constitution, or to the coarse food that he often ate, I was unable to say, but he surely did have as splendid a set of teeth throughout his long life as I ever saw.

A few persons in our section really did believe that the soundness of Jim Injun's chewing machinery was owing to his occasionally biting live snakes, and among those persons was an elderly spinster relative of mine, who, having a good set of teeth, of course wished to preserve them. So she kept asking Jim to get a black snake for her to chew on, saying all the while that she would not be in the least afraid to bite it as he bit them, provided he would hold the reptile to keep it from biting her in return.

Well, one day he succeeded in catching a lively specimen of good size and brought it, squirming and twisting around his arm, into the house. As soon as she saw the snake—she being very nervous, and about as fickle-minded as any person could be, moreover being mortally afraid of snakes anyway—her ideas in regard to biting on a live one suddenly changed, and as she gazed on it in perfect horror, she said: "Jim, do you think I am going to put my mouth to such a hideous looking thing as that? Now you just take that dirty squirming snake right out of this house, and don't you ever bring another one in here as long as you live." He took it out, and it is needless to say that he never brought another snake around there to brighten up the old lady's teeth on. A. L. L.

Fall River Steamboats.

Change in Leaving Time.—Commencing Monday, April 1, 1895, the Steamers Puritan and Pilgrim will leave Pier 28 (old number), North River, foot of Murray street, at 5.30 P. M., instead of 5 P. M., as at present.

Sunday trips will be resumed for the season, commencing May 5, 1895. Steamers will leave New York from Pier 28, North River, at the same time (5.30 P. M.) as on week days. From Boston, connecting trains will leave Park Square Station of the New York, New Haven & Hartford Railroad at 7 P. M. (an hour later than on week days), connecting with boat at Fall River in 80 minutes.

Double service will be effective for the summer season of 1895 from Monday, June 17, until Saturday, September 14, inclusive.

During this period the Priscilla, Puritan, Plymouth and Pilgrim will be in commission and operated together between New York and Fall River, the same as last season. The Priscilla and Puritan will leave New York at 5.30 P. M., and run direct to Fall River, while the Plymouth and Pilgrim will leave at 6.30 P. M., run to Newport, reach there at about 4 A. M., remain there until 6 A. M., and then proceed to Fall River, reaching there at 7 A. M. From Boston, trains will leave Park Square Station at 6 and 7 P. M., connecting at Fall River with boats leaving there at 7.40 and 8.30 P. M., due New York at 7 A. M., the train leaving Boston at 6 P. M. will connect with steamer touching at Newport at 9.15 P. M. There will be but one boat (5.30 P. M.) from New York on Sundays. From the East there will be two boats every day in the week, excepting on Saturday, when but one boat will be run to New York.

Change in Pier Number.—Commencing June 1, 1895, Pier 28 (old number), North River, foot of Murray street, will be known, and advertised, as Pier 18, North River, foot of Murray street.

Music.—It is nothing new on the Fall River Line. Each of the steamers carries an orchestra at all seasons of the year.

The Fall River Line is the greatest water transportation agency in the world, and connects the two greatest cities in the United States—New York and Boston—serves thousands of patrons annually with unsurpassed accommodations on its wonderful steamers, and geographically considered is of incalculable value as a carrier between the South, New York, and the great manufacturing, commercial and resort centers and localities of the Eastern country.—Adv.

Steam Launches.

Marine Iron Works, Chicago, have just issued their 1895 catalogue, mailed free.—Adv.

Game and Fish Protection.

New Maine Game Law.

Chapter 194.

The Maine Legislature adjourned March 26, after passing a number of game laws which we print in full below:

An act amendatory of and additional to chapter forty of the Revised Statutes, relating to Fish and Fisheries.

Sec. 1. Section thirty-three of Chapter forty of the Revised Statutes is hereby amended, so as to read as follows:

Sec. 38. The governor with the advice and consent of the council shall appoint three persons to be commissioners of inland fisheries and game, one of whom shall hold said office so long as he shall remain land agent of the State, and shall receive in addition to his present salary annually, the sum of two hundred dollars; the other two members shall hold their office for three years, and until their successors are appointed and qualified, and shall each receive an annual salary of one thousand dollars. Said commissioners shall receive in addition to their salary, actual traveling expenses to be audited by the governor and council. The governor, with the advice and consent of council, shall also appoint one other commissioner who shall have general supervision of the sea and shore fisheries, and shell fish, regulated by this chapter, and shall hold his office for three years and until his successor is appointed and qualified.

Sec. 2. Chapter forty of the Revised Statutes is hereby further amended, by adding thereto the following sections:

Sec. 75. Said commissioners of inland fisheries and game shall examine dams and all other obstructions existing in all rivers and streams, and determine the necessity of fish ways, and the location, form and capacity thereof; introduce and disseminate valuable species of food fish into the inland waters of the State, and valuable food birds into the State. They shall examine into the workings of the inland fish and game laws, see that all violations thereof are duly prosecuted, and perform all other duties prescribed by law. They shall report annually to the governor, on or before the thirty-first day of December, who shall cause three thousand copies to be printed.

Sec. 76. The commissioners of inland fisheries and game shall have authority, upon petition of five or more citizens of the State, or whenever they shall deem it for the best interest of the State, after due notice and public hearing in the locality to be affected, to regulate the times and places in which and the circumstances under which game and inland fish may be taken; but they cannot authorize the taking of game or inland fish at a time in which so doing is prohibited by the laws of the State.

Sec. 77. Whenever they deem it for the best interests of the State, after like notice and hearing, they may entirely prohibit the taking of any kind of game or inland fish in any part of the State for a series of years not exceeding four.

Sec. 78. They may adopt, and from time to time, modify or repeal such needful rules and regulations, not contrary to the laws of the State, as they may deem necessary or proper for the protection and preservation of the game and inland fish of the State, in conformity with the provisions of Sections 76 and 77 of this chapter.

Sec. 79. They shall file in the office of the clerks of the cities, towns and plantations in the territory to be affected a copy of the rules and regulations adopted by them, and publish the same three weeks successively in a newspaper printed in the county and post on the banks of waters to be affected as near as may be like notices; and whenever any such rules or regulations apply to any unorganized township, a like copy shall be filed with the clerk of courts for that county and published three weeks successively in a newspaper printed in the county; they shall also immediately upon the adoption of any rules and regulations contemplated by this act, file an attested copy of the same in the office of the Secretary of State.

Sec. 80. Whoever fishes for, takes, catches, kills or destroys any inland fish, in any manner or at any time, in violation of any of the rules and regulations of the commissioners of inland fisheries and game, made and promulgated in conformity with the provisions of this chapter, shall be punished in the same manner and to the same extent as is provided for by the law for the illegal taking, catching, killing or destroying any such inland fish.

Sec. 81. Whoever at any time or in any manner shall hunt, chase, catch, kill, take, have in possession, or destroy any inland game in violation of any of the rules and regulations of the commissioners of inland fisheries and game, made and promulgated in conformity with the provisions of this chapter, shall be punished in the same manner and to the same extent as is provided for by law for the illegal hunting, chasing, catching, killing, taking, having in possession, or destroying any such inland game.

Sec. 82. Any person who willfully mutilates, defaces, or destroys any notice, rule or regulation of the commissioners of inland fisheries and game, posted in conformity with the provisions of this act, shall be punished by a fine not exceeding fifty dollars to be recovered by complaint or indictment; one-half of said fine shall be paid to the prosecutor.

Sec. 9. Section forty of Chapter forty of the Revised Statutes, and all amendments thereto are hereby repealed.

Sec. 4. The governor with the advice and consent of council, upon the recommendation of the commissioners of inland fisheries and game may appoint suitable persons as fish and game wardens, who shall hold office for a term of three years unless sooner removed; who shall enforce all laws relating to inland game and fisheries, and rules and regulations relating thereto, arrest all violators thereof, and prosecute all offenses against the same; they shall have the same power to serve criminal processes against such offenders, and shall be allowed the same fees as sheriffs for like services; they shall have the same right as sheriffs to require aid in executing the duties of their office. They shall, before being qualified to discharge the duties required by this act, give bond with two good and sufficient sureties in the penal sum of two thousand dollars, approved by the commissioners of inland fisheries and game, to the treasurer of the State, conditioned for the faithful performance of the duties of their office.

Sec. 5. The governor, with the advice and consent of council, upon the recommendation of the commissioner of sea and shore fisheries may appoint suitable persons as fish wardens, who shall hold office for a term of three years unless sooner removed, who shall enforce all laws and the rules and regulations relating to sea and shore fisheries, arrest all violators thereof, and prosecute all offenses against the same; they shall have the same power to serve criminal processes against such offenders, and shall be allowed the same fees as sheriffs for like services; they shall have the same right as sheriffs to require aid in executing the duties of their office. They shall, before being qualified to discharge the duties required by this act, give bond with two good and sufficient sureties in the penal sum of two thousand dollars, approved by the commissioner of sea and shore fisheries, to the treasurer of the State, conditioned for the faithful performance of the duties of their office.

Sec. 6. All acts and parts of acts inconsistent with this act, are hereby repealed.

[Approved March 18.]

Chapter 9.

An act to amend Section fifty-one of Chapter forty of the Revised Statutes, as amended by Chapter seventy-five of the Public laws of eighteen hundred and ninety-one, relating to Fish and Fisheries.

Section fifty-one of Chapter forty of the Revised Statutes, as amended by Chapter seventy-five of the public laws of eighteen hundred and ninety-one is hereby amended as follows: By inserting after the word "flies" in the seventh line the words "artificial minnows, or artificial insects," so that said section as amended shall read as follows:

Sec. 51. Whoever fishes for, takes, catches, kills, or destroys any fish, except suckers, with grapnel, spear, trawl, weir, seine, trap, or set lines except when fishing on the ice, and then with not more than five set lines, except in tide waters where such methods are not prohibited, or with any device or in any other way than by the ordinary mode of angling with single baited hooks and lines or with artificial flies, artificial minnows, or artificial insects, forfeits twenty-five dollars for the offense and ten dollars for each salmon or land-locked salmon and one dollar for each and every other fish so taken, caught, killed, or destroyed; and when such prohibited implements or devices are found in use or operation they are forfeit and contraband, and any person finding them in use may destroy them.

[Approved February 15.]

Chapter 109.

An act to amend Section nine of Chapter ninety-five of the Public Laws of eighteen hundred and ninety-one, as amended by Chapter two hundred and fifty of the Public Laws of eighteen hundred and ninety-three, to prohibit the killing of cow moose and fixing an additional penalty for killing bull moose, caribou and deer in close time.

Section nine of Chapter ninety-five of the Public Laws of eighteen hundred and ninety-one, as amended by Chapter two hundred and fifty of the Public Laws of eighteen hundred and ninety-three is hereby amended as follows: By striking out all of said section after the word "dog" in the second line, and inserting the following words, "jack lights, so called, torches, traps, or snares, any bull moose, or in any manner hunts, catches, kills, destroys, or has in possession any cow or calf moose, or part thereof, forfeits not less than one hundred nor more than three hundred dollars for every bull moose, or cow or calf moose so hunted, caught, killed, destroyed, or had in possession, and be imprisoned not exceeding thirty days; and no person shall, between the first days of January and October, in any manner hunt, catch, kill, destroy, or have in possession any bull moose, or any part thereof, taken in close time, under the same penalty," so that said section, as amended, shall read as follows:

Sec. 9. Whoever hunts, catches, kills, or destroys with dogs, jack lights, so called, snare or traps, any bull moose, or in any manner hunts, catches, kills, destroys, or has in possession any cow or calf moose, or part thereof, forfeits not less than one hundred nor more than three hundred dollars for every bull moose or cow or calf moose so hunted, caught, killed, destroyed, or had in possession and be imprisoned thirty days; and no person shall, between the first days of January and October, in any manner hunt, catch, kill, destroy, or have in possession any bull moose, or any part thereof, taken in close time, under the same penalty.

[Approved March 20.]

Chapter 82.

An act additional to the Public Laws of the State of Maine, relating to the illegal killing of Fish and Game.

That any person acting as guide for any person or party who shall assist or aid such person or party in killing any game or fish in violation of law, shall be held equally responsible for such violation of the law, and subject to the same penalties.

[Approved March 12.]

Chapter 87.

An act to amend Section twelve of Chapter thirty of the Revised Statutes, as amended by Chapter ninety-five of the Public Laws of eighteen hundred and ninety-two, relating to the number of Moose, Caribou and Deer that may be lawfully killed.

Section twelve of Chapter thirty of the Revised Statutes, is hereby amended so that said section as amended, shall read as follows:

Sec. 12. No person shall take, kill, destroy, or have in possession between the first days of October and January more than one bull moose, one caribou and two deer, under a penalty of not less than one hundred nor more than three hundred dollars and thirty days' imprisonment for every bull moose or parts thereof, and forty dollars fine and thirty days' imprisonment for each caribou or deer so taken, killed, or destroyed or in possession in excess of said number. Whoever has in possession, except alive, more than the aforesaid number of bull moose, caribou or deer, or parts thereof, shall be deemed to have killed or destroyed them in violation of law. But nothing in this section shall prevent any marketman or provision dealer, having an established place of business in this State, from purchasing and having in possession at his said place of business, not exceeding one bull moose, one caribou and three deer lawfully killed or destroyed, or any part thereof, at one time, and selling the same at retail in open season to his local customers.

[Approved March 14.]

Chapter 31.

An act to amend Section fifty-four, Chapter forty of the Revised Statutes, as amended by Chapter two hundred and seventy-one of the Public Laws of one thousand eight hundred and eighty-five, relating to the number of pounds of Trout and Salmon to be taken.

Sec. 1. Section fifty-four of Chapter forty of the Revised Statutes, as amended by Chapter two hundred and seventy-one, Public Laws of one thousand eight hundred and eighty-five, is hereby amended as follows: By striking out the word "fifty" in the third line, and insert the word "twenty-five;" also, by striking out the word "fifty" in the eighth and twelfth lines of said section, and inserting the word "twenty-five;" also, by adding to said section the following words, "provided, however, that the taking of one fish, additional, when having less than twenty-five pounds, shall not be regarded a violation of the law;" so that said section, as amended, shall read as follows:

Sec. 54. No person shall take, catch, kill, or have in possession, at any one time for the purpose of transportation, more than twenty-five pounds of land-locked salmon or trout, in all, nor shall any such be transported except in the possession of the owner thereof, under a penalty of fifty dollars for the offense, and five for every pound of land-locked salmon of trout, in all, so taken, caught, killed, in possession, or transportation, in excess of twenty-five pounds, and all such fish transported in violation of this section, may be seized, on complaint, and shall be forfeited to the prosecutor. Whoever has in his possession more than twenty-five pounds in all of such fish, shall be deemed to have taken them in violation of this section. Provided, however, that the taking of one fish additional, when having less than twenty-five pounds shall not be regarded a violation of the law.'

(Approved February 21.)

Chapter 125.

An act to amend section twenty-one of chapter thirty of the Revised Statutes, as amended by charter three hundred and three of the Public Laws of eighteen hundred and eighty five, as amended by chapter ninety-two of the Public Laws of eighteen hundred and eighty seven, as amended by chapter two hundred and forty eight of the Public Laws of eighteen hundred and eighty nine, as amended by chapter two hundred and eighty eight of the Public Laws of eighteen hundred and ninety-three, relating to close time on Partridges.

Section twenty-one of hapter thirty of the revised statutes, as amended by chapter three hundred and three of the public laws of eighteen hundred and eighty-five, as amended by chapter ninety-two of the public laws of eighteen hundred and eighty-seven, as amended by chapter two hundred and forty-eight of the public laws of eighteen hundred and eighty-nine, as amended by chapter two hundred and eighty-eight of the public laws of eighteen hundred and ninety-three, is hereby amended by inserting after the word "partridge" in the fifth line, the words "between the first days of December and September twentieth," so that section as amended, shall read as follows:

Sec. 21. Whoever kills or has in his possession, except alive, or exposes for sale, any wood duck, dusky duck, commonly called black duck, teal or grey duck, between the first days of May and September, or kills, sells, or has in his possession, except alive, any ruffed grouse, commonly called partridge between the first days of December and September twentieth, or woodcock, between the first days of December and September following; or kills, sells, or has in his possession, except alive, any quail between the first day of December and the first day of October following, or pinnated grouse, commonly called prairie chicken, between the first days of January and September, or plover between the first days of May and August, forfeits not less than five nor more than ten dollars, for each bird so killed, had in possession, or exposed for sale. And no person shall at any one time, kill, expose for sale, or have in possession, except alive, more than thirty of each variety of birds above named, during the respective open seasons, nor shall any person at any time kill, expose for sale, or have in possession, except alive, any of the above named varieties of birds except for consumption within this State, under a penalty of five dollars for each bird so unlawfully killed, exposed for sale or in possession; nor shall any person or corporation carry or transport from place to place in open season any of the above mentioned birds unless open to view, tagged and plainly labeled with the owner's name, and accompanied by him, under the same penalty; any person, not the actual owner of such birds, who, to aid another in such transportation falsely represents himself to be the owner thereof, shall be liable to the same penalty; nor shall any person or corporation carry or transport at any one time more than fifteen of any one variety of birds above named, as the property of one man under the same penalty; nothing in this section shall prevent any market man or provision dealer having an established place of business in this State, from purchasing at his place of business, any bird lawfully caught, killed, or destroyed, or any part thereof, and selling the same in open season at retail to his local customers.

[Approved March 21.]

Chapter 36.

An act to amend Chapter thirty of the Revised Statutes, relating to the protection of Game.

Section ten of Chapter thirty of the Revised Statutes as amended by Section two of Chapter ninety-five of the Public Laws of one thousand eight hundred and ninety-one, is hereby amended by striking out all of said section after the word "dogs" in the second line and inserting the following words, "jack lights, so called, torches, snares, or traps, any deer or caribou, forfeits forty dollars for every deer or caribou so hunted, caught, killed, or destroyed, and be imprisoned not exceeding thirty days; and no person shall, between the first days of January and October, in any manner, hunt, catch, kill, destroy, or have in possession any deer or, caribou, or part thereof, taken in close time, under the same penalty," so that said section as amended, shall read as follows:

Sec. 10. Whoever hunts, catches, kills, or destroys, with dogs, jack lights, so called, snares, or traps, any deer or caribou, forfeits

forty dollars for every deer or caribou so hunted, caught, killed, or destroyed, and be subject to imprisonment thirty days, and no person shall, between the first days of January and October, in any manner, hunt, catch, kill, destroy, or have in possession any deer or caribou, or part thereof, taken in close time, under the same penalty. Any person may lawfully kill any dog found hunting moose, deer, or caribou, or kept or used for that purpose. Any person owning or having in possession any dog for the purpose of hunting moose, deer, or caribou, or that is kept or used for such hunting, forfeits not less than twenty nor more than one hundred dollars for each dog so owned, kept, used, or in possession.

(Approved February 21.]

Law-Breaking in Massachusetts.

Boston, March 28.—*Editor Forest and Stream:* Thinking that it might not have come under your notice, I inclose herewith a cutting from a morning paper, in regard to the conviction of two violaters of the Masaschusetts game laws.

As the town mentioned is my old home the matter is of unusual interest to me, and I have often wondered that in the past there has been apparently so little attention given to the game interests of that portion of the State.

So far as I can learn there is no other portion of the State in which deer exist in a wild condition, and indeed I have been astonished to see how many people have expressed surprise when I have mentioned the existence of deer in my old home.

And there are deer there, and there would be a great many more if the law was enforced. It is no uncommon occurrence for people driving through the woods to have deer break cover and cross the road within a comparatively short distance, and sometimes even trot a short distance ahead of the team. I myself have seen them thus more than once, and in an afternoon's walk in the late autumn have tracked no less than nine on one road witbin less than a mile of the village of Farmersville.

The country all through this region, which is within the town of Sandwich, and less than six miles from the village, is especially favorable to them, there being many very large ponds, extensive tracts of oak and pine woods, thick underbrush, with numerous open grassy hollows interspersed. All this would be very favorable for the increase of the noble game, were it not for the persistence with which they are hunted and have been hunted ever since the close season began. There is hardly a day through the late fall and early winter when there is not a party in the woods either from Sandwich, Barnstable, Cotuit, or Falmouth, and many deer are killed.

The country is divided by the numerous wood-roads into thickets, and the method of hunting is to surround a thicket, put the dogs in on one side, drive through, and if when he breaks cover, "peaked-toes" does not fall a victim, the dogs are stopped and another thicket tried. Of course, many are run into the ponds and fall victims there, though I don't think that it is practiced as it is in Maine and New York. The weapon used is a shotgun loaded with buckshot.

Another thing that I think is even more fatal than the hunters in the fall is the freedom with which dogs are allowed to run in the woods in the spring of the year. In Sandwich and surrounding villages a great number of dogs are owned, and these running free, kill—I have no doubt—a good big percentage of the fawns. In fact, old woodchoppers have told me that they have frequently found the mangled carcasses of these little spotted beauties. Now, it seems to me that if these so called fox-hunters can be kept out of the woods, and all dogs found running deer shot, in fact the law enforced, there will be a time when it will not be necessary for Boston sportsmen to go way down in Maine for a piece of venison.

AN ADVOCATE OF FAIR PLAY.

The clipping reads as follows:

Sandwich, March 27.—Ever since the earliest settlement of the town the woods in the vicinity of that part which was formerly known as Hog Pond, and now bears the name of Farmersville, has been regarded as the home of the wild deer.

The great number of ponds in that section of the town and the green fields bordering thereon afforded them food and drink, while in the dense woods and thickets they find shelter in stormy weather and when pursued by hunters.

Deer are frequently seen in the town at certain seasons, while in the Hog Pond neighborhood they often are found grazing with the farmers' cattle.

Until within a dozen years there were certain seasons when the law permitted the hunting and killing of deer, but at present they are not to be killed at any time.

Charged with the violation of this law Charles W. H. Meiggs and Chester Baker were brought before Justice Swift of the First District Court this morning.

Meiggs is a hunter with a local reputation, and was before Judge Swift last week, when he was tried on a similar charge and acquitted.

Meiggs was to-day complained of by State Officer Proctor of unlawfully hunting deer on Dec. 10 last.

Meiggs owns a white dog with black spots, and the evidence offered by the government tended to show that Meiggs was hunting a deer on Dec. 10 with such a colored dog, while the defendant tried to prove that he was hunting a fox with a white dog with brown spots.

The defendant was questioned closely on this point, and some of his replies caused such a ripple of laughter that Judge Swift instructed the court officer to eject any one who thereafter gave expression to their feelings in such a manner.

Meiggs testified that he heard a dog in the morning of Dec. 10. He concluded the dog was chasing a fox. He followed the dog until afternoon but did not see the fox.

The court thought he was hunting deer, and fined Meiggs $100. He appealed, and was held for the April grand jury, giving $300 bail.

Chester Baker is a youth of about seventeen summers, and Officer Proctor complained that he not only hunted a deer, but killed one on Nov. 22 last. Baker lives in Cotuit, nearly five miles from the hunting ground in Farmersville, and he admitted that on the day in question he was hunting in the woods near Meiggs' house, but that he was after foxes.

Sheriff Harlow, of Cotuit, was a member of the party, but steadfastly held that he was hunting foxes in company with Baker and W. D. King, of Providence, nephew of millionaire King.

The only witness for the government was James L. Lawrence, a neighbor of Meiggs. He testified that on the afternoon of Nov. 22 he saw Chester Baker chase and shoot a deer, which fell dead in its tracks beside the road which leads from Farmersville to West Barnstable.

The defendant did not go on the stand, but his counsel claimed that while the defendant might have shot at a deer, it was not his intent to do so, and asked that his client be acquitted.

Judge Swift ruled that while the defendant went to the woods to hunt foxes he shot and killed a deer, and fined him $100.

Baker recognized in $300, and he will have an opportunity to appear before the district attorney in April next.

The conviction of Meiggs and Baker is the chief topic of conversation to-night. It is the first conviction since the law has been in operation, although for years the State and local officers have used every endeavor to obtain sufficient evidence for one. The slaughter of deer, it is claimed by the officers, has been continued ever since the law was passed.

New York Game Legislation.

Albany, N. Y., April 2.—The amendments to the Donaldson omnibus amendments to the Game Code were offered in the Senate to-day, and the bill ordered printed again, and to a third reading. The chief of the new amendments make the open season for hare and rabbits to end March 1, and the open season for pike and pickerel to begin May 10.

Deer Protection.

Ardmore, Pa.—Editor Forest and Stream: I chanced to get a copy of Forest and Stream recently which contained several articles on deer protection—a subject in which I take a great interest.

Let me give my idea of deer-hunters, of which there are several varieties. Two are very distinct from the others. My ideal hunter is found in the mountain region of Pennsylvania; of course he exists in other States. He never sets foot in the forest until at least the middle of November. He rises long before the break of day; he puts a lunch and compass in his pocket, ties the old hound securely to his box, shoulders his rifle and goes into the woods. He defies the elements. He stays until darkness stops him. He is the kind which, when trailing a deer, if he chance to find a dog-track, he stops right there and investigates it. If the evidence proves that the dog is guilty of running deer, the hunter turns away from the object of his pursuit, takes up that dog trail and follows it until the snow is crimson with the life-blood of the hound.

How can we best protect our deer? is a subject of every-day importance. Of course, opinions vary in respect to it—some recommend that dogging be stopped; others that the open season be shortened still further; and yet others believe that it should be illegal to kill deer in the water. Now, these are all common-sense ideas, and if formulated into laws and these laws zealously guarded and properly enforced, no doubt they would be fruitful in good results.

But, is it not a wrong practice to use buckshot for deer? and this because of their fearful wounding capabilities. For every deer secured with buckshot, at least two escape wounded, their fate a speculation. The shooter takes chance shots when the deer is too far away, or he shoots and only wounds when the deer is near. I do not mean that all the wounding and maiming of deer are done with buckshot, but I do mean that, in comparison with the rifle, the latter wounds but little. The temptation to shoot at a deer with a shotgun, when the deer is a little out of range of certainty, is indeed very great. In all my experience as a hunter, I never yet have seen the man who could resist the opportunity to shoot. A rifle-shot means a clean kill, or a wound so severe that the hunter eventually effects a capture, or there is a miss.

It may be summed up thus: At forty yards or under the shotgun is a wonderful killer, but beyond that range it is merely a weapon of awful wounding properties.

I well know that my statements will be met with the disapproval of the shotgun advocates, and some may think I have overdrawn the matter, but if I am not right in my claims, I would like to be shown wherein I am wrong. J. G. D.

The Best of Boats.

If there is a stream of water anywhere near you, you are depriving yourself of enjoyment by not owning a boat. The Racine Yacht and Boat Works, of Racine, Wis., will send a catalogue of all kinds of small crafts to any one who writes for it.—Adv.

Mills' Catalogue.

Wm. Mills & Son have issued their 1895 catalogue of fishing tackle, which includes the celebrated Leonard rods. This firm has borne an enviable reputation for fairness and reliability both as manufacturers and dealers in angler's supplies for nearly three-quarters of a century. While manufacturers of all grades of fishing tackle from the cheapest to the best, they state as their aim the production of "the highest grade of fishing tackle in the world."—Adv.

A Chronicle of Rhoda.

It is said that no man can break his leg but he finds with surprise that every man of his acquaintance boasts either a quondam broken leg himself, or of acquaintance with another man who does. Similarly, the publication of Mr. Whitehead's charming "Tale of a Dog," must have roused in many readers a desire to likewise chant the exploits of their own dogs. In our case, the pleasant chronicle seemed strangely paralleled in the life of our own little favorite, the brightest of all the forty odd that have been our own, and passed away to other ownerships more or less missed and mourned.

Rhoda was the exceptional dog one now and then knows, which wanted something better than to be the comrade of canines, and whose eager little asking soul was always demanding more light on the strange things of this world, from the moment her beautiful brown eyes opened to it.

Long promised to us as an exchange, Rhoda, when she did arrive, proved to be "Hobson's choice," for she and a little brother constituted the entire litter. Born in the big March blizzard of '88, its rigors proved too much for the feebler infant, and, in due course, the sole survivor made her long railway journey to us, growling most industriously over her enforced seclusion, and barking assiduously whenever the baggage man passed with jingling checks. As the infant numbered but six weeks on her arrival, I expectantly awaited a sprawling, pink-faced, wrinkle-nosed puppy, with big feet and a breath that smelled of onions, as is the inscrutable way of young puppies.

Even now I recall the thrill of delighted and amused surprise caused by her production from an overcoat pocket—a trim, wavy-coated, brown and white spaniel puppy, looking as sedate and demure and almost as mature, as she did late in life, except that her nose was a funny little pug affair, that time was to turn to the typical cocker, spaniel feature of later years. Her eyes were brown and round, and wistful. Her face wore a sad, pensive look that her impish behavior utterly belied. She sat in my hand and regarded my immoderate laughter with grave surprise. Rhoda did not love me then, though I became, after a year's probation, the only really desirable companion in all the world. No, her master absorbed all her thoughts as the rescuer from unknown perils, and he announced that she had followed him up the crowded thoroughfare from the station without mistake or confusion, though bumping her nose several times in endeavoring to jump the curbstones.

Rhoda's precocity grew apace. We found that she learned the meaning of words without any illustrative object lessons, through their repetition and the connection her bright little brain made with the acts with which they were associated. We had other dogs and took no especial pains with the little newcomer, till her brightness forced itself upon us.

Mr. Whitehead's gifted "Bug" seems to have received a more liberal education in the matter of nouns than our dog, for I can count but some forty that I am certain that she unfailingly understood. These nouns, embodying her chief interests, were easily associated with their attendant verbs, and it seemed to matter little how involved and lengthy the sentence which contained them, so that they were there. For instance, as we sat at some distance from the house under the apple trees, one of us turned to her and said: "Do you want your supper?" Yes, Rhoda evidently did. "Well, then, go down and knock on the kitchen door and tell them to give you your supper." Away she sped, down to the kitchen door, making her paws fly against the screening, and assisting her efforts by a vigorous bark. We all laughed and were surprised as well, for this was a combination we had never used, though the words in it were all familiar.

Such phrases as, Do you love the lady, the kitty, the man? Get up on the bed, the lounge. Go in the other room. Tell the man to give you some water. Do you want to ride in the steam cars? the horse cars? Look out of the window and see if the man is coming, and dozens of other similar ones were in daily use. They seemed to be acquired gradually by her, her developing intelligence seeming to make her quicker to grasp difficult sentences with each added year. Often we enjoyed trying wholly new words in combination with old ones, and rarely did she fail to catch the meaning merely by the tone of voice.

As she sat one day in her accustomed attitude by the dining-table, with her very ill-bred stare at us as we ate, I said, 'Rhoda, do you want some meat? Well, nudge the man—nudge him." This was an entirely new verb, but Rhoda showed her instant comprehension of it by nudging her master with such vigor that half the coffee flew from his upraised cup. This she always did thereafter in the same way when we used the word. It was never necessary to scream at her, or raise one's voice above an ordinary conversational tone, as, indeed, it seldom is with any dog with normal hearing, which is far keener than our own. Indeed, I used to enjoy whispering pleasant little secrets into Rhoda's ear, of which she showed her enjoyment by grateful kisses, subdued ecstatic whines, or, if it were something especially pleasant, by whirling round and round in excited circles. A whisper meant just as much as a shout, and we often tested her by such commands as, "Go, pick up that and give it to the lady. Go love the man," etc., all of which were scrupulously obeyed. Rhoda, however, never enjoyed rehearsing her tricks, unless for the admiration and applause of outsiders, or to further her own selfish ends, but would make off with all possible speed upon their completion to the darkest recesses under the bed or sofa. Indeed, though she played the piano or organ with great fervor and abandon when placed on the stool and told to "Play"—a feat which required but two or three lessons—she always did so in a fury of protesting growls, her little body stiff with rage. She would play since we wished it, her whole attitude plainly said, but she just hated it, and when excused she would fleetly vanish to be seen no more. That she understood the word "Play" was evident, for I once placed the guitar before her, and after repeating the command two or three times, the little dog promptly produced some chords of doubtful harmony but indisputable noise, from the strings.

It was not our purpose to make her a trick dog, though her capability seemed so limitless, for her distaste was so clearly manifest. Her whole coaxing postures and expressions after her performances, always said: "Don't humiliate me by making a show of me. Let me be just your little comrade and friend, to sit by your side and listen to your remarks." To be "shown off" always seemed to mortify Rhoda, whose dignity was her strong point. From a baby nothing so much enraged her as to be picked up and carried about in one's arms. This was considered an insult worthy of much resentful growling, even were there no witnesses to it, but did a dog chance to be a spectator, she would on her release fly at the unwitting offender, with the avowed intention of tearing him in pieces.

Notwithstanding a vastly aggressive demeanor toward the despised race of dogs, she was never guilty of a genuine bite in all her six happy years of life. Though she gave herself great airs over her superiority, personal injury was out of her scope. Though Rhoda was the most exemplary and devoted of mothers, when at the tender age of one year she became one, she held a very poor opinion of even her own offspring, and cast them off with scorn as soon as they were able to shift for themselves. One pup, Bess, remained for a year or more, but was merely tolerated, and, when she, too, was taken away, her parent evinced much unholy satisfaction over the whole of the door mat once more, and all the bones.

When Bess had been gone two weeks they met by chance on the street. Rhoda would surely display her pleasure at meeting her child once more, but no. After a second's surprised stare, she flew at her, remarking, "What, you here again? thought I had seen the last of you," and pursued her down the street with such aggressive notes of war that the populace paused to see the dog fight.

While the brood was young and tender, never did one receive more faithful care. No stranger, human or canine, was suffered to draw near, or to even glance that way, and when their mother went bone foraging, she conscientiously brought home five or more. When their baby fun and teasing waxed too annoying, it was her habit to flee to another room and energetically close the door between herself and her troublesome infants.

Insanely jealous of Bessie, the pup remaining, was she. It was her wont, at ten minutes of one (and we never felt sure that she did not consult the clock at this juncture), to take her seat at the window, and watch for her master, whose dinner hour was at one. As I sat there myself one noon, she seated in my lap, Bess also jumped up and Rhoda snapped savagely at her. I put her promptly on the floor, petting Bess with much extravagance, and telling her to "look for the man." Rhoda gazed at us both, lost in thought, her head tipping to one side at a more and more alarming angle. Suddenly she ran into the kitchen and returned with a child's shoe, the beloved toy of Bess, which her mother scorned to touch. Now, however, she began to toss it up and down and worrying it with much enthusiasm.

"What!" said Bess, from her exalted station, "my shoe? that will never do," and sprang to the rescue. Whisk! There was a twinkling tail, an abandoned shoe, and Rhoda was in my lap in an ecstasy of delight.

I would hesitate to chronicle isolated instances like this of our dog's strategy, fearing prejudice and fondness might seem to magnify an ordinary happening into sagacity, but the daily life of our quaint little friend was so full of similar instances that her acquaintances regarded her as a phenomenally clever dog, and her career was always an ovation, from clerks in the large bazaars, where Rhoda delighted to go shopping, to car and train conductors, who winked at the size of the always attendant brown imp. She much preferred a car seat to herself, and when she saw one vacant, would slip out and seat herself there with much satisfaction, gravely regarding the flying landscape.

For some never fathomed reason, the station, Knightsville, had a very pleasant sound in Rhoda's ear, though we had never paused there, and she invariably ran down the aisle and to the door when it was called out, coaxing us to follow. Once or twice I was obliged to call her in from the platform where she had gone to view the admired scenery. One day, cityward bound, Rhoda elected to sit behind me. Chatting with an acquaintance, I quite forgot her, when, as we were just gliding out of a station, a gentleman leaned over me and remarked, "Pardon me, but your dog has got off the train." I was glad of it. I hoped she would have time to enjoy Knightsville, for that was the village we were leaving behind, and heartily repent her sin, before I returned at night. Perhaps she was frightened even now, and hastening after the train that was bearing away her beloved mistress. I hastily looked from the rear doors. There, dimly discerned in the distance, was Rhoda, strolling down the platform in much apparent enjoyment, her back impudently turned to the departing train. No regret, no misgiving, was in that hilarious wag of the tail. At night, I stepped off the train at Knightsville, long enough to inquire of the station agent concerning my dog. Oh, yes, a little dog had got off alone from the morning train. What did he do? Why, he sat around in the station a while, and ran around, and then he went off across the fields.

When our train arrived home, Rhoda was at the station to meet me. She wriggled about in the shape of a crescent, and she thought it expedient to tuck her tail neatly between her legs, but there was an exultant twinkle in her roguish eyes that said she had carried her point at last.

Rhoda's wilfullness was her worst fault, and almost the only one for which she was ever seriously punished. When once she

wanted a thing she was determined to have it. Hours, days might elapse, but she did not forget, and in her own good time she won the day. Placed on the sofa and told to stay there, she was too knowing to disobey outright, but placed herself always in feigned slumber, on the extreme edge, and allowed herself to slide over until she fell upon the floor, when she would look about with an air of great surprise, as one who said, "What, did I fall? Well, now I am here, I may as well stay."

Her persistence would make one nervous, it was so unfailing. On one occasion she spied a mouse issue forth from a hole in a corner. Thenceforward, day in and out, Rhoda sat bythe hour before that mouse hole, oblivious to all else.

We used to quote,

"And waited patiently about,
Till Mary did appear,"

and would laughingly say, "Rhoda, are you waiting for Mary?"

This became in her mind the mouse's name at once, and we had only to inquire, "Where's Mary?" to send her flying to the corner. The grave little figure seated there so motionless became so upsetting to the nerves that I used to say, "Rhoda, Mary isn't there. She's gone to the city in the steam cars." Her implicit faith in my word was touching, and she always gave up the watch till the whistle of the train was heard, then she would run to me with excited panting, and inquiring looks, until I said, "Yes, there are the steam cars. Now you can look for Mary," and the vigil was again resumed. So far as I remember this was the only deception practiced on her.

Whenever a member of the family was away, Rhoda always inquired on each train's advent, if they were coming, and when at last she was answered yes, would run down to the station with joyful barks.

But the story of all her funny little ways would fill the paper. How she gave the alarm when the lamp was smoking and coaxed a neighbor in to repair the mischief; how she would sit up before the stove and beg by waving her paws, for us to open the draft or cast on more coal, this being a request which she would request quite as brazenly in the neighbor's houses; how she adopted a thick, long tangle of black hair cut from a visiting dog named Zip Coon, as her doll, and kept it under the lounge, bringing it out for the admiration of the callers when her mistress requested her to "go get little Zip Coon"; how she lamed her foot by a street car, and enjoyed the petting and sympathy she received, and, long after it was healed and forgotten, would suddenly exhibit it with drooping mien, and abject contenance for the commiseration of a friend who hadn't seen it at the time; how she would coax to be allowed to visit with her mistress, and be content to know she could go "to-morrow," and how when to-morrow came she began the day quite of her own accord, with whimperings and teasings, and the production of such articles of apparel as she thought would be needed, to hasten the time.

Rhoda never made a mistake in all the visiting list. The destination once announced, she always confidently led the way. Once told she might go, there was no denial after that. When we were about to set forth, I sometimes said, jestingly, "Oh, no, Rhoda, I think you'd better stay at home." "Will I, indeed?" she would declare, with a defiant sniff, and run far out of call. Yet, were I to pronounce this same mandate without previous promise, she would sink to the earth in abject despair and sorrow.

Her sense of fun was a very strong one, and she delighted to play practical jokes upon the more stupid ones, all of which regarded her as a vastly superior being. She would secure some small treasure, and begin guarding it and gloating over it and extolling its merits, till she would have a row of them seated before her quite wild with envy and curiosity, and then she would dart away and leave it for them to fight over, and to find it was a pebble or a piece of paper.

Sometimes, wishing to know the whereabouts of her master, I would step out of doors, where lay Rhoda, waiting for me (for she would forego the delights of a hunting trip to remain with her mistress), and say: "Rhoda, where is the man? Go find the man," and she vastly enjoyed conducting me to him, or giving me to understand that it was impossible to follow. But this time the spirit of mischief was plainly in Rhoda's visage, as I put the question. "I'll show you," quoth she, and led the way with much prancing and mincing, to a little culvert before the front gate. "Nonsense," I said, "The man, go and find the man."

"Yes, he was there," Rhoda reiterated. He certainly was, under those boards, if I would only look. As I advanced, to please her, her tail wagged faster and faster, and as I stooped and looked under, she gave vent to what was indubitably a derisive bark, and flew far away out of sight and hearing.

How the dog learned was something that daily puzzled us. There seemed more than the soul of a dog in her. Instances are many of the quick grasping of a new idea. One day, feeling rather lazy myself, I did not rise when she asked to leave the room, but said: "Oh, Rhoda, the lady is tired. Go in the other room and jump out of the window." This she promptly did, without illustrative gestures. Being reluctant, as I have said, to perform her tricks readily, she rather required some decision in one's utterance, and one day, to try her. I said in a casual and indifferent voice: "Rhoda, I wonder if you would go and shut the door for the lady?" Rhoda, who sat in a chair by the window, at her favorite occupation of watching sparrows on the lofty telegraph wires, looked around for me to say again "Shut the door," but I said nothing and she gazed forth again. Presently she looked at me again and I looked at her. She gazed at the birds, but her tongue began to lick her lips nervously—a sign of mental disturbance—and she turned imploringly to me once more, evidently wishing me to be a little more peremptory, but I still sat looking at her, and unable to bear it any longer, she got down, crossed the room, and gave the door a violent slam. Was not this conscience and memory combined?

Her tricks were not at all remarkable, except her knowing her right paw from her left, which seems to me a difficult thing for a dog to know unerringly, and one she never stumbled on, unless much distracted by outside interest.

When singing and playing I used sometimes to introduce words and sentences which I knew she would understand, and which would bring her promptly to my side to listen, much to the amusement of callers, till I ran them into a jingle I called "Rhoda's song," to which, as the objects multiplied more rapidly, she would listen with her little head tilting over farther and farther at each line, till there seemed danger it would screw entirely off.

These classic strains ran as follows:

Dear little Rhoda,
Riding in the steam cars,
Rhoda saw a kitty cat,
Rhoda saw a mousie,
The mousie, the kitty cat,
The birdie, the steam cars, etc.

Her appreciation of this lay was immense.

But, while I smile retrospectively, it is with a heartache, for though it is a year since Rhoda's loving brown eyes have looked into mine, the old horror is yet fresh when we set gayly forth, Rhoda and I, after the deep snow-storm, to plough our way to a neighbor's. I had been ill for four long weeks, and Rhoda had not left my pillow except under compulsion, and then she had collected all the small articles of my personal property she could find, and sat on them in a kind of proprietary frenzy. To-day was the first day we had gone to walk, and her happiness knew no bounds. I saw her ahead of me, on a snowy rise, floundering about on her back and kicking all her little heels in the air in a very unladylike but exuberant fashion. I saw her again when the cruel freight train had passed, lying on the railroad track, a pitiful little brown and white morsel—so still, so still. Rhoda, who, it seemed to me, could never die, was gone in a flash, in an instant, in the very midst of her happy, loyal little life, gone somewhere out into space. Is it strange that one's first wild thought should be, not there she lies, but where is she? Is it strange that to-day one cannot keep back bitter tears for the loss of the staunch, loving little friend and comrade whose mistress was all her world—or that one should feel sure that somewhere in another world there will be waiting the same little white and brown friend, with loving and delighted greeting, else the heaven that the lover of dogs pictures, will not be quite complete.

GREENE, R. I. MARIANA M. TALLMAN.

POINTS AND FLUSHES.

THE INTELLIGENCE OF THE DOG.

There is a slow but sure belief, steadily gaining ground with the public, that the dog is an intelligent animal, a belief widely different from that of the past, which relegated the dog to a class of mentally vacant organisms. Such he then was believed to be, and that belief still obtains in a limited way at the present. More intelligent investigation and comparison have shown that the old theories rested on no more tangible foundation than assertion and false sentiment, combined with a false pride, which refused the dog admission to a mental realm of which man claimed the sole, proud possession. Physically, man was but a higher development of the animal organisms, the material proof being constantly at hand, and comparative anatomy has so estabilshed it. But the psychological phases were not so tangible, and they, therefore, were matter for much speculation. It was not many years ago that there was a fairly uniform public belief that the dog was not endowed with powers of reason. The man who, at that time, would have dared to openly advocate that the dog had an intelligence similar to that of man, differing from it only in degree, would have been suspected of a weak head piece himself, and that he advocated a silly thing which wounded man's pride, irreverently went contrary to honored beliefs, and cherished a whim which was unbecoming and unworthy. The dog was conceded to be a living organism, but man appropriated all intelligence to himself.

The theory was that the dog's acts, while they might have an appearance of intelligence, were so in appearance only. They were really from instinct, as it was assumed were those of all the lower animals, all knowledge and the capability of it being arrogated by man to himself. Though there were many facts which indicated that the dog had intelligence and reasoning powers of no mean order, they were summarily cast aside and the more pleasing assumption of man being the sole animal which could have a thought, was accepted as the true doctrine. The fact that the dog had a brain, which it could be assumed Nature had not endowed him with for nothing, and that he had a nervous organization closely analogous to that of man, were not considered as pertinent to the matter, even if that fact was generally known, nor was the further fact considered that the dog depended on the senses of sight, hearing, feeling, smell and taste for his sensations and perceptions, precisely the same as does the nobler animal, man. His acts were summarily grouped with the acts of birds building their nests alike, without thought or prior experience, and with the migration of the birds, at a certain season, without a knowledge of whither they were going or why they went, though they all had an impulse to go in the same general direction. The bee hoards its stores of honey with no knowledge that a winter is to be provided for, and it builds its comb on correct geometrical lines, presumably by instinct. To this common plane of instinct, man relegated all the acts of the dog. He overlooked or ignored the fact that his own acts were not always from intelligence; that, in short, he has instincts himself. But he in his own case differentiates his instinctive acts from those which are from intelligence, but those of the dog and other intelligent lower animals are by him not so differentiated, though they can be so treated on the same lines of argument.

From the common standpoint of reasoning the matter, there is one most serious difficulty in estabilshing the dog's just right to be considered a reasoning animal, and that is that man takes his own mental standard of intelligence as a standard of all intelligence. As men have the power of speech, and the lower animal, have it not, or at least only in an extremely limited degree, it was an easy matter for mankind to agree that they alone were the sole beings which possessed intelligence. It was not considered that there were degrees of intelligence in the mental world as there are degrees of organisms in the physical world. Even among men, mentality varies from the highest, exhibited by the Caucasian, to that exhibited by the lowest savage races, which live a life no higher than that of some orders of lower animals, and who trust quite as much to signs to convey their meaning as to their powers of speech. All dog trainers insist on conceding intellect in the dog. They constantly observe intelligent acts which they cannot understand on any other hypothesis. They would do violence to their own intelligence were they to attribute the acts to any source other than to intelligence.

I was much impressed with the great change which time and a better understanding of the subject had brought about in the last few years, on reading in a circular letter some information and advice by Mr. R. E. Morgan to his patrons. He says: "To begin with, the owner or master of a dog should bear in mind one thing, his dog likes to be noticed and made something of. Always meet him with a kind word, a pat on the head, a rub of his coat, a good brushing, etc. Always make a companion of him at every possible opportunity. If going for a walk or drive take him along when possible. You will find this: That every minute given to your four footed friend you are practically educating him. A dog will get so used to his master that I think, and with reason for it, they will try to imitate, to a certain extent, their master's actions. I can recall now a certain noted setter (red Irish), of which I have often heard the friends of the owner say: 'See how — is imitating John's walk.' I would only add to this that they are both inseparable companions. No, the owner never will regret any attention paid his dog, either in or out of the field. It builds up a certain bond of friendship that ends only in death or separation. In handling my dogs afield, I use an ordinary whistle with a roll or pea in it. I prefer one not too loud. When I arrive at a field that I wish to draw or hunt, I drop my dogs at my feet, charge my gun and then I use the word 'Go.' I follow my dog or dogs quietly. This I consider of the most essential importance, as the human voice is far more dreaded by a game bird or animal than is the report of a gun. When my dog points, I go toward him, but never on a run or in a hurry. Go slow. Now is the time when slowness on the part of a handler is a virtue, and one that the sportsman will do well to cultivate. When near your dog, stop still. I generally say 'To ho, sir,' to the dog in a low tone of voice and repeat. Should my dog show the least inclination to go forward or to move, I say sharply, 'Look out, there.' If a single bird, and a person can almost always tell, I go to the dog and put my hand on his collar and rub his back along the spine the wrong way of the hair. This simple thing will often cause the most unsteady dog on points to be as steady as a rock. There is something about it that a dog likes and appreciates. When a dog has stood a reasonable length of time, I flush the bird or birds. Never allow your dog to do it. Better lose the shot than ruin your dog, for very few dogs that I have seen can or will discriminate between when his handler is absent or present, when it comes to the length of time he is to stay on a point. That there are dogs that will, I do not doubt, hold their points till about the time the handler gets there, and then flush the game regardless of all else. I always aim to flush my own birds, and find I get better work from my dogs by so doing. When I shoot I stand still. Do not stir an inch till reloaded, and be very slow about it too. I used a muzzle loader for years after breech loaders came in vogue, so as not to allow myself to move after shooting and to compel the dogs to drop to shot. I would still use one were I not afraid of accidents. If a sportsman will take, say, thirty seconds rest after a shot before starting on, he will do his dog a world of good. As to staunchness and steadiness, when I kill a bird, which is often the case, if it falls in a bad place for my dog to retrieve, I go as near as I can conveniently, but never to the spot where I think it is, and I say 'Dead bird. Fetch it.' When the dog finds the bird, I walk directly back or near to where I shot, and face the dog, and when he comes up I say, 'Sit up.' Then I take the bird from him, give him a kind word and start on after the scattered birds or more birds. Should my dog attempt to break shot or wing, I get to him as quickly as possible, take him by the collar and drag him roughly back to where he broke from, and then give him a cut or two with the whip. Right here let me say, should you have a shooting companion, politely tell him not to move till you do. Your companion will see the force of your request when he sees your dog perform. Let me add: Never allow your dog to commit a fault without correcting him. Do not say, as a good many do: Well, the next time you do it I will attend to you. Correct at the time. Now, in regarding your dog's movements in the field. Avoid using your whistle as much as possible. The less you use it the more your dog will look to you for guidance, and hunt to the gun."

Nearly all the advice in the foregoing is founded on the belief that the dog has comprehension, and that he can acquire knowledge from observation and experience. In short, that the dog has a perception of cause and effect, and therefore has powers of reasoning. The conclusions of so practical a class of men as are the trainers, are worthy of much consideration, for their conclusions are from practical experience and not from fanciful speculation.

HANDLING AT FIELD TRIALS.

In a pleasant letter, under date of March 27, Mr. Thos. Johnson mentions that it is probable that the Northwestern Field Trials Club will not give a field trial this year, as the Continental Field Trial Club and Manitoba Field Trial Club should fill the field. He says further that this does not, by any means, convey the idea that the club is dead, but he adds: "The Northwestern will lie in a dormant condition, ready to come, like the bear out of its winter quarters, resuscitated, reinvigorated and ready to take its place again. But when it does come, one rule will be vigorously insisted on, namely, that it is a dog trial only, not a dog and man trial; and Mr. Handler will use his whistle and do his yelling when so instructed by the judges. The time has gone past to play men on the assumption that dogs are really what the handler makes them. He adds to their education and, in times past at field trials, has assisted them in the manner he could interefere with the opposing dog, principally by whistling in a tone, or by a number of times, of which his dog was taught not to take notice. Our club want the training done before the field trial starts; and then to see to what perfection the dog has been trained, coupled with his own natural abilities. It has been demonstrated that a dog could win a field trial and never have a word spoken nor a whistle blown; recognized more and more every year that the great desideratum of field trials is the encouragement of good breeding, and I prognosticate that, when the rules are so framed that acts of disobedience and want of training are punished, by the culprit being thrown out of the race, more men will get interested in field trials, and will view them as a test of what the handler has done for his dog. The industrious, deserving handler will then make money, and the lazy loafer will get his deserts."

There is good, wholesome matter to ponder over seriously, in what Mr. Johnson says of the changes in field trial requirements. There never has been a proper consideration of the handler's limitation. What he could do for his dog, if the dog appeared to be a factor in it, was nearly always credited to the dog. Out of this grew all the abuses of handling, such as rushing, interfering with the opposing dog by whistling, loud and numerous commands, flushing birds, etc. I have a strong belief that Mr. Johnson's predictions will prove true, and that noisy and turbulent handlers, whoever they may be, will have to remodel their style to meet the new order of things, for truly the glory of the juggler-handler is departing. B. WATERS.

Field Trial Progress.

Gainsville, Va.—I have read with much interest your editorial on field trial progress. There is no doubt but that the support, given to, and interest manifested in, field trials as they have been managed and run, bears the highest testimony for the passionate fondness for sport afield with dog and gun, of the American people.

There is not a doubt in my mind that in many instances they have been run and judged unfairly, and the work of certain dogs reported incorrectly, and yet, I have liberally supported them for about ten years. Why? Because for my natural "fondness for the sports afield," and a lingering hope to be able to assist in the reformation and purification of field trials.

You say "At the present day, a field trial is so specialized in its management, judging and handling, that in theory there is little room for improvement." If we have a theory on false premises, we arrive at false conclusions. What evidence have we that human nature is different now from what it was in the darkest field trial days?

It cannot be truthfully denied that the spotting system, as practiced by some of the judges, instead of affording competition has prevented it. Human nature is the same now that it has been always. The spotting system gives a better opportunity for the misjudging of field trials than any other yet devised. With the most honest, most experienced and logical sportsmen, it is impossible to accurately estimate the relative merits of dogs not running together under the same conditions.

A sensible, good dog knows that he cannot find birds and do good work under the most unfavorable conditions. A dog of mediocrity will do fairly good work under favorable conditions.

The spotting system, with the purest and best judges, may eliminate merit, but never luck.

The most important stake run in the United States the past season, resulted in the mere luck of the drawing, one seriously, the two dogs getting the best time of day, and best grounds were placed, first and second. The bye was placed third, so that there was no competition except as to two dogs out of nine. This decision was not just.

The decision of the most important stake last year, 1893-4, was based on what one judge saw of the running of one dog, and two judges saw of the other two that were placed, running twelve or fourteen miles apart. Dear Forest and Stream is there not much room for improvement?

There must be something the matter with the judging when a very strong club is threatened with dissolution, on the simple question of the selection of the committee to select judges. If that is of such great moment to club members' interests, tell me, please, what chance of winning have the outsiders had under the spotting system?

The judging of the All-Age Stake at the Eastern in 1893, and the All-Age and Selling Stakes also was erroneous in 1894. No

one can make a reasonable hypothesis to show how they could have reached such illogical conclusions.

The United States Club voluntarily voted $120 to an outsider whose dogs in the All-Age Stake, Trial B, had been unjustly spotted out. This was a praiseworthy effort., the first attempt I have ever known a club to make to right a wrong. That was, in fact, "field trial progress", upon which the club should be congratulated and supported by every true sportsman. It matters not if handlers are represented in the club, when their efforts are for good, when they strive to promote fair and square competition.

The Southern Club generally recognizes the survival of the fittest. The Derby was run out to the end, as, no doubt, would have been the All-Age, had the weather permitted. Its rules are better than those of other clubs yet adopted. It is to be regretted that retrieving has been abolished, because when two dogs are about equal in other respects, the one retrieving the better should win.

The spot-in system would be better; that is, when a dog showed exceptional merit, though beaten by his brace mate, spot him to run with the next available dog in the second series. Spot in the best dog of each brace in the first series, and drop every dog beaten after the first series, but never drop a dog until beaten. Thus, the survival of the fittest under the same conditions. J. R. PURCELL.

Death of Jean Val Jean.

Roxbury, Mass.—All sportsmen who love a good dog, and especially those who fancy a good hound, will sympathize with Mr. H. S. Joslin, President of the New England Beagle Club, in the loss of his celebrated beagle, field trial champion Jean Valjean. While hunting without a master, he fell through the rotten planks which covered an abandoned well, and was drowned. Jean was one of the best beagles that ever appeared at a field trial. He possessed an abundance of hunting sense, combined with great determination, ambition and endurance. He had plenty of speed and a fine nose. The work he did at Oxford last fall placed him at once among the cracks of the country. In addition to his hunting qualities he had a remarkably sweet disposition, which made him a favorite with all. He won his honors in hot competition, and his record includes the reserve in the Derby of the New England Beagle Club in '93, and first in the All Age and Champion stakes at the trials of the same club in '94. His death is a loss that will be felt by all breeders of high class hunting beagles.

BRADFORD S. TURPIN.

Dog Shows—Customs—Kennel Clubs.

Compton, Quebec.—I wish to explain my difficulties in getting to the late New York show, and get advice thereon. In the first place, I took out Consul papers at Sherbrooke, Que., thinking that by doing so I could get through the American custom house all right, but I received word that I should have to put up $100 in cash into a custom broker's hands, and that he would then give bonds. I got the word at 6.30 P. M. on Sunday night, and I had to leave at 4 A. M. Monday morning. Well, I had rather a difficult job, but finally a friend came to my rescue and put up the money. I understand that thoroughbred dogs are duty free. If so, why should we have to put up the duty? At the same time that we took the show dogs through, we took a bitch to be bred, but did not have to put up any money, as she was for breeding purposes. Is there any sense in that? Last fall I sent my terriers to the N. E. K. show. As you know, they arrived after the judging was over, because the custom house at Newport kept them there twelve hours. I have sent dogs to American shows before and never had any trouble. Now, what I want to know is, Why do not American show committees make arrangements with the custom house, and if they do why does not the custom house know its business? I want to send some dogs to Boston, and want to know some way of saving all this trouble. What good are Consul papers? I did not have to put up any money without them, but my dogs were kept twelve hours.

I understand that the American and Canadian kennel clubs are for the purpose of promoting the good and welfare of dogs and dog men, but, so far as I can see, the American Kennel Club, for what reason I do not know unless it is for mercenary motives, is doing, through one or two of its members, all in its power to hurt the interests of dogdom between these two countries. No fair-minded American can expect us Canadians to humiliate ourselves so far as to place us on a par with a local club, and, what is more, we are not going to do it. We have tried to arrange things satisfactorily, but the A. K. C. will not budge an inch to do the fair thing.

I always have been in favor of one stud book between the two countries, but I am not willing to go further, except as far as recognizing wins and disqualifications. Now, the Canadian Kennel Club has a very good way out of this scrape, and that is for them to recognize all American wins. It will be giving our dogs a certain advantage over American dogs; and there is no gainsaying the fact that some of our shows are fully on a par with American shows, excepting New York. Why should one man just about run the A. K. C.? One man does not run us in Canada, and if he should try it we should make it uncommonly unhealthy for him. FRED S. WETHERALL.

The Field Quality of Beagles.

Wakefield, Mass.—It is with great pleasure that I read articles in your paper from the pens of experienced beagle men. While not as experienced in beagle work as some of your contributors I believe (as a result of my observations) that breeders need to strive for courage, hunt, nose and staying powers, more than for speed in beagles for practical work. I like a dog that has ambition, is not timid, and, when cast off, will get to work at once, going at a good clip and having the nose to back up his "hustle," not having to depend on a slow dog to work out the trail.

Speed is desirable, but we should not be so carried away with the speed craze that we neglect the more necessary qualities of hunting and nose. A hustling man does not amount to much without a level head, and a hustling dog doesn't suit a practical hunter, unless the dog has keen scent. Too many beagles of long pedigrees and of bench show stock, and some of field trial fame, have to be coaxed to "hunt 'em up," when the hunting ground is reached. Let breeders aim to produce dogs with the eagerness to hunt that spaniels have.

Mr. Kreuder, in Forest and Stream, of Dec. 22, says: "Speed without nose is all 'poppy cock,' and is a physical impossibility."

I cannot agree with him, for I have seen beagles hustle a rabbit fast and true for quite a distance, but, when the scent became weaker, on less favorable ground, where it required a good nose to carry the trail, these dogs were at a loss until my dog (Ringwood-Flute M. stock), nearly as fast but with better nose, worked out the trail for them. Now, these dogs had speed surely, but were without the proper nose for such speed, so that I claim that speed without a good nose is a physical possibility, and in too many cases a sad fact.

Jean Valjean cannot be a dog of this sort, or he would not have rightly beaten Buckshot, at Oxford. Jean must have the proper nose for his legs.

I once knew of a half-breed and Gordon setter that drove foxes very fast and that would take foxes from any hound in this vicinity, but as his nose was not as fast as his legs, he would get a check, and after the hounds straightened it out for him, he would outrun them again Now, which style of a beagle is the best and gives the most satisfaction when hunted alone, the sprinter without the right nose, or the steady-driving, keen-scented dog? I like Mr. Stoddard's letter, published some time ago, but do not like a dog with a "farm horse" jog. I believe in the hustlnig, level-headed, sure-scented, staying, road-horse style of a beagle. RURAL.

The Columbus Show.

The show of the Columbus Fanciers' Club, for the benefit of the Columbus Humane Society, was held in the City Hall, Columbus, Ohio, beginning on March 27, and running three days. There were about 200 entries. The show was a success. Mr. H. A. Bridge filled the office of superintendent most ably. He also judged setters, pointers, collies, Bassetts and beagles. John Cummings, Columbus, judged spaniels. Al. G. Eberhart, Cincinnati, O., judged Newfoundlands, Great Danes, Skye terriers, Scotch terriers and German poodles. S. A. Kenefick judged all other classes. The weather was fine, and the attendance was large. The trotting races for dogs excited much interest, as did also the trick performance of Mr. Eberhardt's poodle, Prince de Leon. Most of the dogs were owned in Columbus and vicinity.

American Scottish Terrier Club.

At the Boston Show, the American Scottish Terrier Club offer their challenge cups, to be competed for by members only, as follows: One cup for the best American bred dog; one cup for best American bred bitch, to be won five times before becoming the property of the winner, not necessarily to be won with the same dog or bitch. The club offers a cup for the best American bred dog puppy; one cup for best American bred bitch puppy. Open to all exhibitors of the breed.

HENRY BROOKES, Secretary A. M. S. T. C.

The Continental Field Trial Club.

Indianapolis, Ind.—The Continental Field Trial Club, having decided to hold a field trial on chickens in the Northwest, beginning Sep. 2, I will be glad to hear from gentlemen in that part of the country relative to locations for the trials. I can assure the sportsmen of America that the chicken trials of thi club are a certainty, as the club has no intention whatever of abandoning them.

We are anxious to locate the trials in a country where chickens abound, and at a point where livery and hotel accommodations can be assured. Information will be gladly received, either by mail or through the columns of Forest and Stream. P. T. MADISON, Secretary-Treasurer.

E. F. T. Club's Trials.

Brooklyn.—At the Governor's meeting of the E. F. T. Club. held March 26, it was decided that the trials of 1895, of the E. F. T. C., to be held at Newton, N. C., will commence with the Members' Stake, Nov. 16, and the regluar open trials commence with the E. F. T. C 's Derby, on Monday, Nov. 18, 1895.

W. A. COSTER, Secretary-Treasurer.

The Pittsburgh Show.

Pittsburgh.—The Duquesne Kennel Club offers $10 for the best four spaniels owned and entered by one person or kennel; also a second prize of $5 in class 74. If a special carload is made up from New York, the U. S. Express Co. will charge $3 per 100 pounds, and return all free.

JOHN MOOREHEAD, JR., President.

The Brunswick Fur Club.

Roxbury, Mass.—A special meeting of the Brunswick Fur Club will be held at Mechanic's Hall, Boston, Mass., on April 16, at 12 o'clock. The committee on the revision of the constitution and by-laws will make its report and other important business will come before the meeting.

BRADFORD S. TURPIN, Secretary.

Cropping Ears.

A friend sends us a resolution whereon he indorses "First to Act in America." Following is the resolution which was unanimously adopted:

"Resolved, That the Montreal Kennel Association does not approve of the cropping of dogs' ears, and sympathizes with the movement in England and elsewhere to abolish the practice. As the amount of pain inflicted in docking a dog's tail with a sharp instrument, when a very young puppy, is insignificant, and the healing process very rapid, the Association does not feel called upon to express a strong opinion against this practice on the ground of cruelty, though many of the members are against all such methods of so-called improving the appearance of the dog, believing that they are unsound in principle."

DOG CHAT

In a pleasant letter, under date of March 24, Mr. R. B. Morgan writes us as follows: "I am just home from Tennessee, where I passed the winter, and, barring the cold winter just passed, I have had a very good trip. Birds were not so plentiful as I have seen them in Tennessee, still they were in fair numbers, twenty-three bevies being the largest find in a day's hunt by myself and my assistant."

Mr. C. Walter Lougest writes us that he is importing two Bedlington terriers, dog and bitch, which he expects to arrive in time for the Boston show.

Mr. W. S. Clark, Secretary-Treasurer of the New England Beagle Club, has issued a notice that the quarterly meeting of the club will be held in Mechanic's Hall, Boston, April 19 at 2 P. M.

Communications intended for the kennel department should be addressed to Forest and Stream Publishing Co., 318 Broadway, New York. Mr. H. W. Lacey's address is now Nutley, N. J.

Circulars announcing the inception of a Metropolitan Kennel Club with social aspirations have been sent to prominent dogmen in New York and vicinity. The idea at present is to make the dues ten or fifteen dollars per annum, and establish a club home, with a limit of 100 members. Those who would wish to join such an organization should send their names to Mr. E. M. Oldman, Secretary pro tem, 166 West 79th street, New York city. Messrs. T. H. Terry, James Watson, A. C. Wilmerding, E. M. Oldham and James Mortimer compose the committee having the affair in hand.

The American Scottish Terrier Club was formed in March, its purposes being for the encouragement of the breed. Following is the list of officers: President, Oliver Ames 2d; Secretary, Henry Brooks; Treasurer, James L. Little; Executive Committee, Oliver Ames, 2d; Henry Brooks, James L. Little and S. Fessenden, Jr.

In our kennel specials this week, Mr. R. B. Morgan, Akron, O., offers a thoroughly trained dog, good on all game birds. Mr. C. F. Kent, Monticello, N. Y., offers trained foxhounds. Mr. Frank Pigeon, Saugerties, N. Y., offers blue blooded pointers and a cocker spaniel. Dr. James Ferris Belt, Wilmington, Del., offers a fox terrier bitch in whelp to Hillside Royal. Dr. Crawforth advertises for King Charles spaniels. The Westminster Kennel Club offers the services of the celebrated pointer Sanford Druid.

Sleeping Bags.

In another column will be found the advertisement of Hulbert Bros. & Co., New York.

They have just perfected arrangements for the sole control and sale of the Kenwood Sleeping Bags. This is something entirely new and merits the attention of all sportsmen. Sleeping bags have heretofore been so big and cumbersome as to lose their utility in the camp, as they were too big to transport with any degree of convenience, especially with other camp equipments. Those that have been made heretofore have been made principally of canvass, fleece lined, and heavy water-proof duck on the outside, and while quite comfortable when once in them were too big for ordinary use. The new Kenwood bag is an all wool heavy blanket, woven into bag shape, and fastened at the top, and down the center about 3ft., with patent fasteners, so that one can completely envelope themselves or leave their arms out, and still be protected from the weather. They are closely felted, and have a thick, soft nap inside. They will shed dew or an ordinary light rain without wetting through. A splendid arrangement inside of a log cabin on a chilly night, and would be almost indispensable in case of illness in camp. Just the thing on board of a yacht or house-boat. Another thing which commends them to the public is the price, ranging from $6 to $10, according to weight, while most bags heretofore have sold for from $20 to $30. They can be rolled up in a small parcel, and carried in a shawl-strap, and being put on the market by a firm who are so thoroughly in the sporting goods buisness, and knowing the requirements of the sportsman, is a sufficient guarantee of the worth of this new article.—Adv.

Philadelphia, Pa., Oct. 16, 1895.

Messrs. Wiley & Brush,
Agents Anker Bouillon Capsule Mfg. Co.,
New York.

Gentlemen:

I've just returned from a hunting trip through the Maine wilderness after deer, caribou and moose, which was the most successful, the pleasantest and the most satisfactory hunting trip I ever had. I took along a nicely filled medicine case, a bountiful supply of provisions and incidentally four boxes of Anker's Bouillon Capsules, which turned out to be one of the best things I ever used. Morning after morning we got up before daylight to go "moose calling," no time to cook breakfast, no time to eat it if it were cooked, but a capsule in a tin dipper, a little hot water poured over it, then drink it down and off we go well sustained for hard work, and from hunger until hours roll by and we return for late breakfast. On two different days I was unable to reach camp until dark, but in my canoe I had a tea kettle and tin dipper, and in my vest pocket two capsules, one for the guide, the other for myself, a fire at about one o'clock just big enough to boil the water, and then the capsules, and we experienced no discomfort whatever during the balance of the hunt until camp was reached, and our supper of brook trout, and steaks off a three-year-old moose gave us a feast to go to sleep on. You ought to introduce "Anker's Capsules" into sportsman's stores, they're surely going to fill many "a long felt want."

Yours truly,
THOMAS MARTINDALE.—Adv.

Sweet-scented Flowers and Fragrant Leaves. Imported by Chas. Scribner's Sons. Price $1.50 net.

This book contains in cyclopedia form exact and interesting information about all English sweet-smelling plants. There are 126 pages of this information arranged alphabetically, besides a comprehensive historical sketch and introduction.

As this is the only complete work of the kind published, it will no doubt at once become a standard among lovers of flowers.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 9-11.—BURLINGTON, Ia.—Tournament of the Big Four Gun Club.

April 9-11.—WELLINGTON, Mass. Three days tournament of the Boston Shooting Association: targets. O. R. Dickey, Manager

April 9-12.—LONDON, Ont.—Three days' live-bird and target tournament; $100 guaranteed; experts handicapped by distance and unknown angles. John Parker, Detroit, Mich., manager.

April 11.—MAPLEWOOD, N. J.—All day shoot of the Maplewood Gun Club, in connection with the April tournament of the New Jersey Trapshooters' League. O. L. Yeoman, Sec., Orange, N. J.

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth, Sec.

April 15.—PHILADELPHIA, Pa.—All day shoot of the Forest Gun Club at its grounds, 27th and Lehigh avenue; targets. William Morison, Sec., 1943 Ridge avenue, Philadelphia, Pa.

April 15.—BALTIMORE, Md.—All day shoot of the Standard Gun Club at Point Breeze. W. F. Clements Sec'y.

April 15-18.—ATCHISON, Kas.—Twelfth annual tournament of the Atchison Gun Club. Lou Erhardt Sec. and Manager.

April 16-18.—PITTSBURG, Pa.—Tournament of the Interstate Association, at Pittsburg, Pa., under the auspices of the Pittsburg Gun Club, $200 added money.

April 17, 18.—AUBURN, N. Y.—Two days' tournament of the Auburn Gun Club; open to all. C. E. Goodrich, Secretary.

April 17-19.—CANTON, Ill.—Annual spring tournament of the Canton Shooting Club.

April 23, 24.—BATTLE CREEK, Mich.—Annual tournament of the Michigan State Trap-Shooters' League. Annual meeting and election of officers on the evening of the first day. W. H. Willard Secretary.

April 22-27.—KANSAS CITY, Mo.—Eighteenth annual tournament of the Missouri State Game and Fish Protective Association. W V. Rieger, Sec.

April 23-24.—ELIZABETH, N. J.—Third bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds; events open to all. Robt. E. Chetwood, Pres.

April 23-26.—GALESBURG, Ill.—Tournament of the Galesburg Shooting Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club: first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O.; $200 added money. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For rogrammes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—EAST MCKEESPORT, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec.

May 30-June 1.—GRAND RAPIDS. Mich.—Valley City Gun Club's annual tournament under the auspices of the Interstate Association; targets; $500 added money. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N.D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith Sec'y.

June 13-15—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee Sec.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

Control of Trap-Shooting.

At the meeting held January 24, at the Astor House, by a number of representative trap-shooters, a committee was appointed to draw up a constitution and by-laws for a National Trap-Shooters' Association. The committee is composed of Major R. H. Breintnall, W. H. Wolstencroft, B. C. Everinghim, L. H. Schortemeier and Edward Banks. The by-laws, which they will submit at the meeting of April 3, are given below:

PROPOSED BY-LAWS.

No. 1. The order of business at all meetings shall be:

I. Roll-call, receiving of credentials and payment of dues.
II. Reading of the minutes of previous meeting.
III. Communications.
IV. Reports of officers.
V. Reports of committees.
VI. Unfinished business
VII. New business.
VIII. Election of Governors.

No. 2. No member shall speak more than twice on any one question, nor more than five minutes at any one time, unless with the assent of the meeting.

No. 3. Every member present shall be required to vote on all questions, unless he is directly or personally interested, or excused by a majority vote of the members present.

No. 4. In all cases of charges preferred, as provided by the Constitution, such charges must be made in writing, and filed with the Secretary-Treasurer, who shall forthwith serve a copy of the same upon the person charged, and the Chairman of the Tournament Board.

No. 5. The Chairman of the Tournament Board shall give notice to the person charged of the time and place of trial, which shall be not less than ten nor more than twenty days from the time of receiving such charges, by mail, addressed to his last known place of residence or business, and he shall be given an opportunity to be heard in defense.

No. 6. Like notice shall also be sent to the President of the State Association, in which the person charged resides or transacts business, and to each member of the Tournament Board.

No. 7. The Board shall report the result of all trials and the penalty inflicted, if any, within five days thereafter, to the Secretary-Treasurer, filing with such report the testimony taken.

No. 8. Immediately upon receiving such report, the Secretary-Treasurer shall notify the person against whom charges have been preferred, of the result of the trial, and the findings of the Tournament Board, and the time to appeal shall run from the date of mailing such notice.

No. 9. At least ten days' notice of the time and place of the hearing of an appeal, taken as provided in the Constitution, shall be given to the appellant, and such appeal must be heard and determined within thirty days after notice thereof has been received and the decision of the Executive Committee published in at least one representative sporting paper.

No. 10. State Associations shall, by reason of membership, as provided in the Constitution, have the right of representation and vote in meetings of the Tournament Board, for the trial of all persons living in their respective States, against whom charges shall be preferred.

Such representation shall be by the President, or in his absence, the Vice-President of the State Association.

State Associations shall be entitled to a voice at all meetings of the Association, but without vote.

No. 11. These by-laws may be amended at any meeting of the Association by a two-thirds vote, provided that notice of the proposed amendment shall have been duly filed with the Secretary-Treasurer, and published in at least one representative sporting paper, at least thirty days before such meeting.

DRIVERS AND TWISTERS.

This is the Grand American Handicap week, the greatest live bird event of its kind in the country. In the next issue of Forest and Stream, that of April 13, will appear all the scores made at Willard Park, Forest and Stream recognizing the fact that in every section of this country there are trapshooters who want to know just what was done at this meeting.

Manager Shaner, of the Interstate Association, announces that the association will give a tournament at Macon, Ga., under the auspices of the Macon Gun Club, on July 17 and 18, the Macon Gun Club adding $200 to the purses.

A feature of the afternoon's sport at the Springfield tournament of the New Jersey Trapshooters' League on Wednesday, March 27, was the pursuit and capture of an English snipe by Billy Drake, A. Sickley, Aaron Woodruff and John Hoffman. A pointer dog spent the best part of the day ranging a small swamp just out of gunshot of the score, repeatedly flushing an English snipe. After the team race the four shooters above named advanced on the swamp, bringing the bird back with them.

The success of the Interstate Association's live bird tournament at Willard Park, Paterson, N. J., is assured. The regular entry list closed on Saturday, March 30, with the great total of 57 entries, an increase of three over last year's entry list. With 57 shooters entered in the main event, it is a moral certainty that the side trap events will be well filled.

The Auburn, N. Y., Gun Club's tournament on April 17 and 18 next is open to all, nobody barred. I understand that this club is a candidate for next year's (1896) State shoot. It's record in '88 is a good guarantee of it's being able to run a State shoot successfully.

Mr. T. W. Sisty, of Dunellen, N. J., writes that the Dunellen Gun Club will have an all day shoot on Friday, April 19. He adds: "We have spacious grounds, with a separate live bird boundary alongside our target score, and have recently placed in position 5 empire targets and an empire electric pull. Our grounds are three minutes walk from Dunellen station, and are therefore decidedly accessible. We will have programmes ready for distribution in a few days, and will offer two cash prizes for first and second averages. If we can get 200 or 300 extra good birds; we will also have a 7 or 10 live bird sweep, in addition to the target events."

John Rothacker and "Dutchy" Smith are booked to shoot a live bird match against Al. Rust, of Philadelphia, Pa., and Charlie Zwirlein, of Yardville, N. J., on April 23. The match, which is for $25 a corner, 25 live birds per man, will be decided on Zwirlein's grounds at Yardville.

Fred Hoey has been doing some record work on live birds at Rome, Italy. Full details are not to hand, but a run of 50 straight shows that Hoey is upholding the honor of the stars and stripes, in a manner that cannot but be satisfactory to every American trapshooter.

Irby Bennett, of Memphis, Tenn., the Southern representative of the Winchester Repeating Arms Company, is in town. The details of the Memphis tournament have been slightly altered in a manner that I think will add to the popularity of the big shoot next June. The programmes, which will be out shortly, will make very interesting reading. The tournament, by the way, has been made one of three days, not four days, as previously announced; the dates now are June 11-13.

Capt. Bartlett, of the Burgess Gun Company, has arrived in the East after a long business tour in the South. Bartlett will now be found breaking targets in all the big tournaments; he is shooting this week at Willard Park.

"Sim" Glover, the Rochester crack, came to New York on Monday of this week. Glover entered in the Grand American Handicap some time ago, and had a gun built for him specially for the Interstate's tournament at Willard Park. Somehow the gun didn't come up to his expectations, so Sim spent Monday trotting around to borrow a suitable weapon.

My apologies are hereby tendered the Secretary of the Rockaway Point Rod and Gun Club for the omission of the scores of his club's March shoot for this issue. Where those same scores have hidden themselves is a mystery.

Roxborough, Pa., has a new gun club, which is known as the Gentleman's Gun Club. It was organized on March 27, with William Clegg as President; Jacob Boehret, Treasurer, and Charles Knettle, Secretary.

The McClure Gun Club, of Chester, Pa., has elected the following as its officers: President, N. W. Garvine; Vice-President, John Driscoll; Secretary, J. B Nelling; Recording Secretary, W. J. Tazewell; Treasurer, Thomas P. Fennell; Captain, William Gibbs: Directors, John Oliver and W. H. Hall.

The Brooklyn, N. Y., Times, of March 28, contained the following, which will be of interest to a large number of live bird shooters in this section: "The Nassau Gun Club passed into history yesterday afternoon after its shoot at Dexter Park, and hereafter the famous old Fountain Club will shoot on the same grounds on the same day. As it was the last shoot of the Nassau Club, so it was the first outing of the Fountain Club in many months. Each organization competed for its own prize. The Fountain's brought with them a solid silver cup, presented by Vice-President William R. Brixey, which is to be competed for, for eighteen months. Then each man will take the total of his highest six scores, and if any of the members should tie, such ties must be decided in a 25 bird race."

Mr. Edward C. Meacham, late President of the E. C. Meacham Arms Company, of St. Louis, died on March 26. Mr. Meacham was well-known to sportsmen and to the sporting goods' dealers of this country, particularly in the South. The company will continue to do business under the same name.

Judging from the way the boys are talking, the Boston Shooting Association's tournament at Wellington, Mass., on April 9-11, should be extremely well attended.

The New Jersey Trapshooters' League has devised an excellent scheme for keeping up local interest in trapshooting in its monthly tournaments. The team races at their monthly races are always closely watched, and produce a very satisfactory number of entries. The next tournament takes place at Maplewood on April 11.

The Interstate Association has perfected its plans for a great campaign in the South this season, and the Southern gun clubs are not backward in showing that they appreciate the efforts of the association to further the interests of trapshooting, as well as to advertise the various companies comprising the association.

The programme of the ninth annual tournament of the Ohio Trapshooters' League, which will be held May 14-16 at Dayton, Ohio, under the auspices of the Buckeye Gun Club, arrived at this office on Monday of this week. A notice of its contests will appear shortly.

EDWARD BANKS.

Illinois State Sportsmen's Association.

CHICAGO, Ill., March 30.—The executive committee of the Illinois State Sportsmen's Association met at the Sherman House, this city, last Thursday night, at 8 p. m., a full membership being out, also President Shepard, of the association and Secretary Meyers, together with John Watson, of Watson's Park, where the State tournament is held. The business of the meeting had to do mainly with the tournament preparations, and much of the business was routine, connected with the membership of clubs, payment of dues, etc. There are about thirty clubs in good and regular standing, and the shoot would be a great one even if it had no open tournament, as it always does. The committee gave the programme printing to Mr. Herman B. Meyers, the obliging and efficient secretary. Mr. Watson said that he would make his customary donation to the association for the open programme, which will, as usual, follow upon the close of the State events. Mr. Watson really gives this open shoot himself, though it has always been held under the auspices of the association, and he always follows implicitly the association's suggestions in details. The committee will send out a circular to the trade asking for merchandise donations, all prizes to be accounted for prior to May 1.

There was considerable talk over the handicap question.

Mr. Meyers said that a great many young shooters had come to him and said they could not afford to go into a shoot and be "wolfed out" of their money. He thought a good plan would be to take the style of "non winner" handicap used on the turf, by which a winner of an event could not qualify to win any event following. Thus, a winner of first in the open sweep would fall out, as would the next winner of first and so on. The experts thus gradually dropping out, the poorer shots would be left in to contend among themselves on a more equal footing, and would so stand a chance of getting an occasional look at some money. At the same time, a set of traps could be provided for the experts, so that they would not be left idle after falling out of the unclassified sweep as above mentioned. The idea seemed to meet with some favor. A tournament committee, consisting of Messrs. R. B. Organ, L. N. Hamiline and C. S. Wilcox was appointed, and will have charge of all handicapping, etc. under the shooting regulations. These may take measures to follow the present strong sentiment against crooked shooting at their shoot in June. Mr. Watson thought it would be very hard to prove a case of dropping, but did not object to the appointment of a referee to watch the shooting and expel any shooter found guilty of dishonest shooting. No referee has been appointed, and it may be none will be, but the association might now very well take cognizance of the fact that there has been much progress in such matters of late, and progress of a sort much worth their while to imitate if they wish to be well up with the current of shooting affairs. Chicago is entitled to front rank among shooting cities, and should be behind in no vital issue. It should be the first to expel the dropper from the society of shooters.

909 Security Building, Chicago. E. HOUGH.

Live birds at Wilmerding.

Wilmerding, Pa., March 23.—Four members of the Wilmerding Gun Club shot a race at live birds this afternoon on the private grounds of Mr. J. S. McIntosh, each man shooting at 25 pigeons. The birds were a good lot of strong flyers that were hard to stop, there being so many drivers among them. The dead birds were retrieved in first class style by Mr. John Brant's English setter dog, Art. Scores:

S. S. Bishop	10202002002*2110022011121—15
J. S. McIntosh	102221112*110101022011121—19—34
F. McIntosh	10112102012*11**112121102—18
W. Sharrard	122001*0000*0*21111111000—12—30

A. A. MACKERT.

Campbell Beat Brocaw.

The scores given below were made on March 19 at Yardville, N. J. The occasion was a match between L. Campbell, of Little Silver, N. J., and W. J. Brocaw, of Easton, Pa., Campbell winning by three birds. Match was shot under the new Long Island rules, conditions being as follows:

35 live birds, 25 yards rise, 50 yards boundary, $100 a side:

L. Campbell	1011111110110111011111110 1001010111	—26
W. G. Brocaw	1110010111101001110100110 0111111011	—23

Hartford Gun Club.

Hartford, Conn., March 30.—The Hartford Gun Club's programme for its all day shoot on April 12, includes the following events: Seven 10 target races at 50 cents entrance; one 15 target race, $1 entrance; one 20 target race, $2 entrance, and a 25 target race, $2.50 entrance. Targets are extra at 2 cents each. Purses divided into four moneys, and all events at known angles.

The scores made in the weekly club shoot this afternoon were as follows:

"Ford"	0110111111111101111111111—22
Risley	1111101111110111111001111—21

D. S. WADSWORTH, Secretary.

Bronx River Gun Club.

West Farms, N. Y., March 30.—The members of the Bronx River Gun Club held their monthly shoot for the medals in classes A, B and C. Dr. Jno. P Adams and C. White led for the medal in Class A, White winning in the shoot off; H. Fensterer won in Class B, the Class C medal going to B. Cruger. Scores: E. P. Miller, 20; Dr. Jno. P. Adams, 19; C. White, 19; H. Fensterer, 19; B. G. Loomis, 17; H. Cathcart, 16; Jas. Duane, 16; Bertram Cruger, 10; C. H. Dittmar, 9. The shoot was at 25 targets per man. The next club shoots take place on April 13 and 27.

JOHN T. MURPHY, Secretary.

Dayton-Freehold-New Brunswick.

The third and last match in the series of three-cornered races between the gun clubs of Dayton, Freehold and New Brunswick, was decided on Saturday, March 23, on the grounds of the Brunswick gun club. The teams were 12 men, each man shooting at 30 targets, expert rules. The weather conditions were all that could be wished. Dayton won with the score of 252 to 242 for Freehold and 226 for the Brunswickers. Scores:

Live Birds at Yardville.

Yardville, N. J., March 29.—A fifty bird race was shot here to-day at Zwirlein's grounds, the contestants being Gib Geiberson and F. Van Dyke. Each man shot from the 30 yards mark, the stake being $50 a side. Van Dyke struck a bad streak in his first 25 losing 8 of them against 4 birds lost by Geiberson. In the second 25, Van Dyke pulled up very fast, tieing his op-

ponent on the 50th bird, when Geiberson lost his bird, Van Dyke killing his last 17 straight. The tie was shot off at 10 birds, Geiberson winning by 9-8. The birds were good ones, being provided, of course, by Charlie Zwirlein. Other sweeps were shot during the day. Scores as follows:

Match: 50 live birds, 30 yards rise, 80 yards boundary, $50 a side:

Gib Geiberson.....1220021211222111110210221—21
2222200212120122021120120—19—40
F. Van Dyke.....2022012210002212202122002—17
1222022021222222222222222—23—40

Ties shot off at 10 birds:

Geiberson.....2112012122—9
Van Dyke.....2220222202—8

Sweeps, miss and out, $2 entrance, resulted as follows: No. 1: Jones, Bennett and Brewer, 4; Van Dyke and Bartlett, 3; Apgar, 1.

No. 2: Apgar, Van Dyke and Brewer, 4; Bennett, 3; Bartlett, 2; Jones, 1.

Scott Terry vs. W. Ross.

Marion, N. J., March 30.—Scott Terry, of Plainfield, N. J., and W. Ross, of Elizabeth, N. J., shot a 50 live bird race, $100 a side, on Al. Heritage's grounds this afternoon, Terry winning easily. The winner's work with his second barrel was very good, making several fine kills of apparently lost birds. M. F. Findley refered the match. Scores:

Scott Terry.....2202122212212021221221221—23
22221222*22102222221020*2—19—42

Climax—Keystone Shoot.

Below is given in detail the score of the live bird shoot between the Climax Gun Club, of Plainfield, N. J., and the Keystone Shooting League, of Philadelphia, Pa., which took place at Fanwood, N. J., on Monday, March 25, the Climax Gun Club winning by 7 birds; the summary of the shoot was given in the issue of Forest and Stream of March 30. Dan Terry won $46, first money in the optional $5 sweep that was shot in connection with the team race. Scores:

Good Scores at Syracuse.

Syracuse, N. Y., March 30.—The following scores were made by some of our shooters this afternoon at Messina Springs. The birds were a very fair lot: a cold north wind that blew across the traps made some of them hard to stop:

C F Arno.....2111122102121111211111122210110—29
H White.....1110112211111112111112121211111—29

Terry Beats Batsch.

Elizabeth, N. J., March 23.—Dan Terry, of Plainfield, and Frank Batsch, of this city, shot a match to-day at 50 live birds per man, $50 a side, Terry killing 46 to Batsch's 44. The officials were: T. H. Keller, referee; trap puller, Warry Squires; scorer, Wm. Parker. Scores.

Dan Terry.....0121012121221112121122110—22
21211221222*2111222222212—24—46
F. Batsch.....1112111121212212121222222 —25
021220122*2*2222*22210122—19—44

This match was followed by sweeps at crows and pigeons, event No. 1 being a match at 5 crows between T. H. Keller and Neaf Apgar in which each killed his 5 birds. Then followed other sweeps as below:

	No. 2.	No. 3.
Apgar	122212121221l2—14	121—3
Hossinger	112112211222—14	—0
Keller	1222121221210 —12	122—3
Trowbridge	1121121120 — 9	
Perment	121210 — 5	
Canon	12210 — 4	10 —1
Woodruff		121—3
Hedden		120—2
J Lindsey	—	0 —0
W H Hollis	—	0 —0

No 2 was a miss and out at crows, No. 3 being the same kind of sweep at pigeons. No. 4, another miss and out at pigeons, with 7 entries, resulted in a division on the first round between Apgar and Canon, Keller, Woodruff, Lindsey and Hossinger missing the first birds. No. 5, same as last, resulted as follows: Keller, Apgar, Woodruff and Hossinger 5, J. Lindsey 2, Canon 0.

Good Scores at John Erb's.

Newark, N. J., March 28.—The 25 bird handicap shot to-day at Erb's grounds brought forth a good entry list. Among the number present were: Brewer, Class, Aaron Woodruff, Chris. Wright, of Paterson, N. J., P. Jay, of Elizabeth, N. J., the Bennett Bros. (Fred and Will), of Boston, Mass., Capt. B. A. Bartlett, of Lakewood, N. Y., a representative of the Burgess Gun Company, of Buffalo, N. Y., etc. A regular gale was blowing all day, so that the scores may be considered very good. Results and handicaps as follows: Brewer (32), 23; F. Bennett (29), 23; John Erb (28), 23; Frank Class (30), 22; W. W. Bennett (29), 22; A. Woodruff (28), 22; Capt. Bartlett (27), 21; H. H. Stewart (28), 20; T. C. Wright (28), 20; P. "Jay" (28), 20; G. N. Martin (28), 19.

Meadville Gun Club.

Meadville, Pa., March 27.—This part of Pennsylvania is barely thawed out yet, and the cold winds from the lakes make the proverbial March gales even more keen than usual. This club will get into working order during April and will probably hold a tournament on July 4, although this is not decided as yet. Scores in to-day's shoot, 50 targets, unknown angles, were as follows:

Ehrgott.....11111111111110110010111110
00111011101110101111011111—38

Brewer—Cockburn.

When C. Cockburn's letter, the main portions of which were given in Forest and Stream of March 30, reached this office, a copy was made and the same handed to Brewer. After reading it through Brewer made a proposition to shoot Cockburn two races, each race for $500 a side, Cockburn to deposit $500 with Forest and Stream, Brewer, doing the same, in order to bind the matches. A letter to this effect was mailed to Cockburn, but up to the present no answer has been received from the Toronto shooter. On Monday of this week, Brewer came to this office and said he was anxious to shoot a race with Cockburn, and would therefore accept the latter's terms, his only stipulation being that the whole of Cockburn's $250 of stake money must be deposited in the hands of Mr. H. P. Good, of the Canadian Sporting News. If Cockburn will do this, Brewer states that he will go to Toronto and shoot the match on the terms mentioned in the above-mentioned letter. He added, however, that all the birds must be trapped from the same crate, each man or his representative trapping for the other man. A letter to this effect has been mailed to Cockburn. It is hard to see how, if he wants a match with Brewer, Cockburn can fail to accept the above terms.

Powder Hill Gun Club.

San Antonio, Texas, March 28.—Owing to a misunderstanding as to date, but a small gathering was seen at the grounds of the above club, but some excellent shooting was seen at the hands of A. B. Critzer. In the opening match of 15 singles and 10 pairs he killed out straight as follows: Dyer, 23; Ohnesorge, 22; Shaw, 23; Critzer, 25. That's a pretty hot sort of a quartette.

Second match, same: Critzer, 23; Shaw, 22; Dyer, 22; Ohnesorge, 23. Mr. Critzer then killed five pairs straight, and was still shooting when I left the ground. TEXAS FIELD.

Trap at John Watson's.

The following are the scores made recently at John Watson's grounds, Burnside Crossing, Chicago, Ills.:

March 12, Chicago Shooting Club, Club handicap:

L. M. Hamiline (3).....2211202221122l0—12
Ed. Bingham (1).....2211202222222122—14
P. F. Stone (1).....2202112122221121—14
M. J. Eich (2).....1021220121211101—12
Hy. Ehlers (1).....1211101121222l21—14

Ties on 15 in above (with handicap allowance):

L. M. Hamiline (3).....0221222222120210—12
Ed Bingham (1).....2112212221200w—11
P. F. Stone (1).....1100w —2
Hy. Ehlers (1).....1222222121111l1—15

Second ties 15:

*L. Hamiline (3).....1021210102212021—11
Hy. Ehlers (1).....1202021120220101—11

*Hamiline's handicap gave him a score of 14 to Ehlers 12, Hamiline winning after shooting at 45 birds.

March 13.—South Chicago Gun Club: 20 live birds:

A. W. Reeves.....1112221211211020l202—17
George Sibley.....0210212101000100l200—10

Same day: 30 Empire targets per man: Reeves, 22; Sibley, 18.

March 20.—Audubon Gun Club:

L. M. Hamiline * (3).....0220012122122l1—12
J. L. Parker (2).....2001121210221l2—12
J. W. McCauley (3).....0220211221011O1—11
F. A. Place (3).....1221121102002O1—11
Chas. Kern (2).....1012110012221l0—11
C. E. Wilcox (3).....0222102210102l0—10
J. E. Price (3).....2002110001201 21— 9
E. W. Heath (4).....0102022012012O0— 8
C. B. Dicks (3).....0201010120012 20— 8
W. C. Gray (4).....0200000010002 20— 4

*Hamiline won by scoring 15 with his handicap allowance added. RAVELRIGG.

Riverton vs. New Utrecht.

On Wednesday, March 27, ten members of the New Utrecht Gun Club, of Woodlawn, L. I., journeyed from New York to Riverton, Pa., with the object in view of shooting a match with a similiar number of the home team. The day was bright and clear, with a strong wind blowing from the West. The New Utrecht team was a strong one on paper, but it fell before the Rivertons, the latter beating them by four birds. The remarkable scores (remarkable for their lowness) made by both teams, is the best proof that could be given of the excellent quality of the birds provided for the shoot by the Riverton Gun Club. When such men as Capt. Money, Duryea, R. A. Welch, Dando, and C. Ferguson, Jr., can only kill 15 out of 20, the birds must be something out of the common. Junius Davis headed the Riverton total with 18, the highest score in the match. James Wolstencroft and C. E. Morris, for their respective sides, scored 17 each, while W. C. Browning, R. Deacon and Dick Pfister tallied 16 each. The failure of Tom Keller and M. F. Lindsley on their last six birds was one of the features of the match. Scores:

Riverton.

New Jersey Trap-Shooters' League.

The second tournament for the season of 1895 of the New Jersey Trap Shooters' League was held at Springfield, N. J., on Wednesday, March 27, under the auspices of the Union Gun Club of that place. Notwithstanding the fact that the grounds are somewhat out of the way, perhaps rather more apparently than in reality, eight clubs were represented by teams of five men, that number of teams competing in the league shoot. The most conspicuous absentee was the Boiling Springs team; an unfortunate combination of circumstances prevented that club from getting together a team.

E. D. Miller, secretary of the Union Club, and Dr. Jackson, its president, kept things going in a capital manner, aided very greatly by an able cashier. John S. Hoey, a member of the Riverside Gun Club, of Red Bank, N. J., besides shooting in several races, acted as referee, a position that Mr. Hoey fills at most of the important club live bird races in the vicinity of New York during the winter season. In addition to Mr. Hoey as referee, two judges were appointed to aid in settling doubtful breaks. Fred Quimby, of the Empire Target Company, whose targets have been adopted by the league, as the official targets of the league shoots, was one of the judges. A high wind was against good scores, while the trap boys every now and then threw the targets at very acute angles. The South Side Gun Club, of Newark, one of the oldest gun clubs in this part of the country (it is 15 years old), came out in first place, beating the home team by one target, and the Maplewood's by three targets. It is only fair to state that two of the regular Maplewood quintette, Warren Smith and O. L. Yeomans, president and secretary respectively of the Maplewood Gun Club, were missing from the team. The Riverside Gun Club, of Red Bank, N. J., entered a team in the club shoot and acquitted itself very creditably indeed, considering that this was its first shoot since entering the league. It's total was 101, only five less than that of the winners. Next in order came the Endeavors, of Jersey City; Climax, of Plainfield; Elizabeth, and Union Hill. The following are the scores made in the league shoot:

Five men teams, 25 empires per man, unknown angles:

Southside.

B. Henry.....1011101111110111101111011—20— 67

Besides the team race 13 other events were decided, all at unknown angles. In these sweeps, as in the team race, "Uncle Billy" Sigler, who was 63 years of age on March 25 last, carried off the honors with a percentage of 94 1-2. Van Dyke was a good second, Hoffman and A. Sickley making a good race for third place. E. Sickley and Gus Grieff both averaged 90 per cent., while Charlie Hebbard only missed a similiar average by a scant two-thirds of one per cent. The table below gives the percentages and relative standing of the shooters, outside of the scores on the team race:

													Shot		Per

Missoula Rod and Gun Club.

Missoula, Mont., March 24.—Well, here we are again, right side up with care. After a suspension of business of over eight months, the Missoula Rod and Gun Club "bobs up serenely," and is now in shooting trim for the season of '95. Coxeyism, washouts, strikes and other trifling impedimenta served as factors in the shortening of the struggles of the little club for the '94 season; and it is somewhat behind hand in appearing on the field of action this spring. It enters upon its new year with bright prospects for a much more successful season than any in its history. Last evening the club held its first meeting of the year. Last season's officers, excepting the field captain, were re-elected for the ensuing one. They are: J. M. Evans, President; W. P. Brayton, Vice-President; F. P. Kern, Treasurer; J. P. Merrard, Field Captain, and Will Cave, Secretary.

A recapitulation of the scores of 1894, developed the following percentages made by the members at the regular weekly medal contests of 15 singles at known angles:

W. H. Mace. 70 2-3; A. Harrity, 82; Frank Woody, 59 1-9; T. S. Jones 68 1-5; J. P. Meward, 76 1-5; F. P. Kern, 44 1-3; H. A. Stephens, 83; C. A. Searles. 80; J. K. Wood, 50; Robert Rogers, 89 1-11; W. P. Brayton, 62 2-3; F. Cowee, 50 2-5; J. T. Sawhill, 64 1-10; Lieutenant Devol, 70 2-3; J. M. Evans, 66 2-3; C Russell, 60.

The percentage of 89 1-11, made by Bob Rogers, entitles him to the season championship medal for 1894. It was decided that the medal contests of 1895 should be 20 singles at unknown angles, and that the initial shoot should be held to-day for a classification of the shooters; those breaking 12 targets or upwards out of the possible 20, to be in "A" class, and those breaking less than 12 to be in "B" class. A fair representation of the shooters appeared on the grounds at the hour appointed. After a little preliminary practice, the 20 singles, unknown angles, classification shoot, took place, resulting in the scores and classification (under which the shooters will remain during the four succeeding weekly contests), as follows:

A Class.

C. A. Searles.....11110100011101001101—12
R. Rogers.....01111110111111111111—18

WILL CAVE, Secretary.

San Antonio Opens the Ball.

San Antonio, Texas, March 28.—The San Antonio Express of March 25, announces the opening of the trap season with the heading: "Gun Cranks in Clover," and then inaugurates an article which sits heavy on an aesthetic stomach, as follows: "To those lovers of the gun whose delight is to stop the erratic flight of a whistling blue rock," etc. Now the bare idea of a blue rock whistling is enough to impart a pucker to one's lips much akin to that which is usually produced by indulgence in a persimmon that is pulled in its youth. Just imagine a well regulated, ultramarine stone whistling Yankee Doodle or Dixie to intercept a load of shot. I guess some one must have tampered with the reporter who wrote the lines with a considerable tamp or he would have done better. At any rate, we'll let it go at that and give the facts of the grand opening in truly professional style, as Forest and Stream always does:

The San Antonio Gun Club inaugurated the season with 36 shooters, all anxious to win something and they shot at keystone targets. The opening shoot was at 15 singles as follows: Merrill, 14; Adams, 11; J. Schmidt, 9; Chabot, 9; Eppstein, 12; Rothwell, 12; W. S. Smith, 12; Veith, 5; Prescott, 7; Shields, 12; Samuels, 9; Tendick, 11; Fritz Miller, 12; W. Miller, 12; Black, 12; Piety, 12; Stevens, 5; Ellis, 6; G. C. Smith, 5; George, 13.

The next was the annual prize shoot for members only, but some one had offered a large Teutonic beer mug, and a half dozen muggies as a prize to be competed for by the visiting sportsmen. The bait was very alluring, and the keynote was struck when a beer mug was offered. You should have seen Dickie Merrill, the celebrated dog man from Milwaukee, cutting up all kinds of fluid steel didoes in anticipation of glueing his fevered lips to the aforesaid objet d'art. A. W. Adams, he of rotund appearance and jolly disposition, was also one of the visiting contestants, and so were Messrs. Piety, of Kansas City; Miles and Wallace Miller, of Austin; Johnnie Schmidt, of Milwaukee, and John Ellis, of Galveston. The visitors rather did up the home folks in shooting, and Dick Merrill didn't do a thing but kill out straight, something which probably would not have taken place had not the prize been so much in his line. He snuffed the targets in a splendid style, and you Northerners had better take a good look at Dick when you see him. He'll make it hot for all of you this summer. Score:

Members.

Shields, 18; France, 18; Rothwell, 22; Black, 19; Veith, 12; Eppstein, 17; Bennett, 15; Learn, 20; Chabot, 20; Epp, 24; Phillips, 15; Prescott, 18; Tedick, 20; Smith, 14; George, 20; G. C. Smith, 9; Samuels, 21; Cann, 16; W. S. Smith, 25; Rhamsdorff, 8; Jordt, 16; Simpson, 12; Thiele, 23; Pancoast, 20; H. W. Adams, 21; Vernor, 26; Volbrecht, 23; McVicar, 23; Newton, 15.

Visitors.

Merrill, 30; Ellis, 19; Piety, 22; Miles Miller, 25; W. Miller, 27; A. W. Adams, 24

Mr. Vernor carried off the club's first prize; W. S. Smith, second; Jno. Epp, third; Volbrecht, fourth; Rothwell, fifth; Samuels, sixth; Pancoast, seventh; Black, eighth; Shields, ninth; Eppstein, tenth.

Event No. 3 was at fifteen singles, unknown angles, with eighteen entries. The following is the score:

Shields, 9; A. W. Adams, 12; Fritz Miller, 14; Chabot, 7; Ellis, 12; Merrill, 12; Rothwell, 12; Newton, 7; Samuels, 10; Piety, 14; Vernor, 9; W. Miller, 9; Black, 11; H. W. Adams, 13; Schmidt, 9; Rhamsdorf, 1; Kearney, 6; Smith, 4.

The closing shoot at 15 singles was participated in by 10 shooters, with the following results:

A. W. Adams, 12; Vernor, 14; Black, 11; Rothwell, 12; W. Miller, 13; Fritz Miller, 14; Smith, 7; Shields, 13; Merrill, 13; Piety, 8.

TEXAS FIELD.

New York State Association Shooting Rules.

Utica, N. Y., March 25.—At a recent meeting of the Committee on Rules, of the New York State Association for the Protection of Fish and Game, held at Albany, some important changes in the shooting rules were agreed upon to govern the 1895 tournament at Saratoga. To avoid uncertainty and save disputes, it was agreed to adopt the American Shooting Association Rules to govern both targets and live bird contests. Cut the following special rules out and paste them in your copy of American Shooting Association Rules, and you will thus have a copy of the New York Rules for 1895. It was found necessary to adopt some special rules to meet conditions existing here and the following was agreed upon:

TARGET SHOOTING.

American Association Rules shall govern where they do not conflict with the following special rules:

Rule 1. The rapid firing system shall be used, targets being thrown from known traps at unknown angles, and the angles to be changed after each target is thrown.

Rule 2. In ordinary sweepstake events, the management may permit 10 guage guns to stand at 16 yards, but in all State events 10 guage guns must stand at 18 yards, and shoot in separate squads.

Rule 3. No person shall be eligible to shoot on any team contesting for the team championship at inanimate targets unless he shall be. First. An actual bona fide citizen of the State of New York. Second. He shall have been at least thirty days a member of the club which he shall represent. Third. He shall be an actual bona fide resident of the county in which said club has its principal headquarters. If any club shall allow any person to shoot on a team not able to comply with all of the above requisites, such team shall forfeit its entrance money and all rights in the match, and be subject to such penalties as the Association may prescribe. No moneys shall be paid over, or any trophy be awarded, if a protest shall be made by any team contesting, until the same shall be decided and the tournament president shall determine how the protest shall be considered and decided.

LIVE BIRD SHOOTING.

American Shooting Association Rules shall govern when they do not conflict with the following special rules:

Rule 1. If any member of a team contesting for the Dean Richmond trophy shall be disqualified from shooting for any cause under the rules, after he shall have fired at one or more birds in the contest, the team of which he is a member shall forfeit all rights and also their entrance money.

Rule 2. Conduct. No person who acts in an unsportsmanlike manner, or who is intoxicated, or who persists in making himself disagreeable to contestants and management, or who willfully persists in using profane or vulgar language, or wilfully insists upon violating the rules of this association, shall be permitted on the grounds of this association, or participate in any contests on its grounds.

Rule 3. Birds Alighting. Any bird shot at (with either one or both barrels), with sufficient life to light on a fence, tree or out-building, and closing its wings, shall be declared a lost bird.

Rule 4. No person shall be eligible to shoot on any team contesting for the Dean Richmond trophy unless he shall be, first, an actual bona fide citizen of the State of New York. Second. He shall have been at least thirty days a member of the club, which he shall represent. Third. He shall be an actual bona fide resident of the town or city in which said club has its principal headquarters, or of a town or city in the same county immediately adjoining thereto. If any club shall allow any person to shoot on a team not able to comply with all of the above requisites, such team shall forfeit its entrance money and all rights in the match, and be subject to such other penalties as the association may prescribe.

No moneys shall be paid over or any trophy be awarded if a protest shall be made by any team contesting until the same shall be decided and the tournament president shall determine how the protest shall be considered and decided.

Rule 5. Dean Richmond trophy, value $1,150. Shall be held by the winning club each year in trust, to be accounted for to the State Association, to be shot for by three members of a club belonging to the association, such members to be residents of the town or city in which the club is located, or of a town or city immediately adjoining thereto, as provided in rule 4. Fifteen single live birds to each contestant. Entrance fee $20 per team. The team making the highest score shall win the "trophy" and 60 per cent. of the entrance money, and the team making the next highest score will receive the remaining 40 per cent.

HENRY L. GATES.

The Memphis Tournament.

Memphis, Tenn., March 25.—Now that the regular season for shooting game is past, of course a great deal more interest is being taken in the coming tournament, which is to be given here under the auspices of the Memphis Gun Club in June next. This, I think, will be one of the most pleasant tournaments of the kind ever given in the country, because the club is making a strong effort to bring together the best element of gentlemen sportsmen, who meet for the great pleasure they get out of it. The fact that this club is composed of the leading lawyers, merchants and business men of the city will go a very long way toward making it more a social gathering than the old stereotyped tournaments. Those of us not in the secrets of the management of this organization, are, of course, at a loss to understand how this managing committee can afford to make the offer in cash money, which they do. The only solution that we find is in this fact, that the club is composed of that progressive element which dares to do things, which other clubs would not undertake. The shooter who misses this tournament will always regret it, for these boys are full of fun, and are planning many pleasant surprises for their guests, not in the programme.

ADAM.

Weir City, Kansas.

Weir City, Kansas, March 23.—The live bird contest between C. H. Calhoun and Joseph Wilkinson, both of Weir City, took place upon the grounds of the Business Mens' Club to-day before a large audience. The day was all that could be desired, as the weather was clear and bracing, while a slight breeze across the traps helped the birds along. The birds were furnished by Wilkinson, and were all trap trimmed and trained. They were conceded to be the most even lot of strong flyers ever shot on these grounds. The match was for a purse of $300, and all the gate receipts, and was under American Association rules, modified to the use of one barrel. McIlhany, who last fall gained a decisive victory over Wilkinson in a 50 bird race, acted as second and bottle holder for Calhoun, while Wilkinson's brother performed the same office for the vanquished hero of the single barrel. Several hundred dollars changed hands on the result. The appended score shows Calhoun's remarkable race, and how he won it:

	1	1	1	5	2	5	3	4	5	3	3	5	5	1	2	4	2	1	5	3	1	5	1	4	1

MAMALUKE.

Rifle Range and Gallery.

Revolver Shooting in England.

The opening shoot for the season of 1895 took place at the North London Rifle Club on March 6. The conditions for the revolver championship of the club (won last year by the American, Walter Winans), is shot for under rather different conditions this year. Last year it was the stationary targets at 20 and 50 yds., six scores at 20 yds., and two at 50 yds. This year it is as follows: Six scores at 20 yds. stationary; one score at a disappearing target at 20 yds.; one score at 20 yds., fired with each hand alternately; and two scores at 50 yds; only one score made on any one day to count during the season. The first prize will be a larger gold jewel than last year's.

On the opening day, March 6, the scores were at the 20 yds. stationary target. The results were as follows:

Luff	577677—39	Gould	764635—31
Major Mundy	763776—39	McCormack	505674—27
Comber	775766—38	Ricketts	445346—26
Major Palmer	776764—37	Ashby	346635—27
Carter	564477—33	Treadwell	433544—23

On March 13, same target:

Major Palmer	566775—36	Lieut Richardson	664644—30
C F Lowe	557577—36	J McCormack	770456—28
Carter	575575—36	W Evans	754353—27
Comber	736666—34	Howe	776704—27
Frost	577663—34	Treadwell	243706—22
Skilton	367754—32		

None of the above scores are good enough for the championship, but the better shots have not begun to shoot yet. The interest when the scores begin to run high does not usually begin till June.

San Antonio Riflemen.

San Antonio, Texas., March 28.—The season of 1895 was fired in by the crack of twenty rifles at the San Antonio range. The scores below will bear witness to the fact that the members of the San Antonio Rifle Club still retain their old-time cunning, and there is no doubt that the shooting this year will eclipse that of former times, both as to quantity and quality.

One performance in particular is worthy of mention. It is that of Mr. Emanuel Seffel, a young man of twenty-five, who broke all previous records by making the magnificent score of 96 offhand at 150 yds. He made six 10s and four 9s; two of the 10s were 12s on

the rest target, and three were 11s. Counting the score altogether on the rest target, the score reaches the high figure of 102, as follows:

12 9 10 11 9 9 10 9 12 11—102.

Of course, every one present held their breath after the eighth shot had been fired, and the entire club watched the result of the ninth shot which proved to be a 12.

It was evident by this time that the previous best record of 90, made by Texas Field two years ago, would be broken, unless an accident took place, and when the young but nervy marksman slid the cartridge in the rifle for the last shot, all eyes were strained and the suppressed excitement was intense. After a long aim the rifle cracked out a broken record. The shooter immediately announced a 12, which was confirmed by the pointer's stick as its white disk was placed in the center of the black bull's eye. Then pandemonium broke loose, and the young rifleman was carried around on the brawny shoulders of those present. He was rolled all over the place, and all hands adjourned to the wood pile where a little exercise soon brought everybody in a normal condition.

TEXAS FIELD.

Cincinnati Marksmen.

Cincinnati, O., March 24.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions, 200 yds. off hand, at the Standard target.

The first 8 men on the list shot in competition, with 8 men of the Central Sharp Shooters' Association to-day, beginning with the 11th shot and ending with the 35th, an account of which will be sent to the sporting papers later on. Weather conditions, light good, unsteady 3 to 5 o'clock, wind blowing in gusts. The scores published are the 4 best out of 8:

Gindele	9	8	10	8	9	8	10	7	9	10—88
	10	9	8	8	9	9	10	10	10	9—92

Petty—Paine Revolver Match.

We published week before last the conditions of a challenge which Mr. Sumner Paine, of Boston, sent to Mr. Wm. E. Petty, the amateur revolver champion, for a match to be shot at fifty yards with full service charges. The conditions, as named by Mr. Paine, called for five strings of six shots each with a Colt's revolver and five strings of six shots each with a Smith & Wesson, each string to be fired within a time limit of one minute, and one minute to be allowed between strings for cleaning and loading.

When shown the terms Mr. Petty demurred on several points. He is not familiar with the Colt revolver, whereas he argued Mr. Paine won one of the prizes, and a better position than himself, in the first Winan's trophy competition, with a Smith & Wesson revolver, and thus showed himself to be a master of that weapon.

Mr. Petty agreed to shoot, however, under the following modified conditions: five strings of six shots each; each string to be shot in one minute. One minute allowed for loading. Each contestant to furnish his own weapon and ammunition. Trigger pull to be not less than three pounds. No cleaning to be allowed between scores. Full charges only to be used. Any open sights. Distance fifty yards.

Arrangements had meanwhile been made to secure a range, and Wednesday, April 3 was selected for the date of the match.

Mr. Paine, however, wrote that the match had better be considered off for the present, explaining that he had not shot a Smith & Wesson revolver for three years, and was therefore not in form with that arm.

"Of course," he added, "there would be no use competing with a Colt against a Smith & Wesson, as the Colt would stand about as much chance as a boy throwing snowballs."

So far it had seemed to be rather a match of arms than men, but Mr. Paine's sportsman's blood had been fired, and he concluded his letter by saying that he had purchased a Smith & Wesson revolver, and would shoot Mr. Petty on his own terms before the summer was over.

Monday morning Mr. Paine turned up at the Forest and Stream office, having come on to New York to attend the Grand American Handicap. While talking over the match and shooting matters in general, the following characteristic letter, which had come in the morning's mail was opened:

New York, March 30.—*Editor Forest and Stream:* Yours of the 29th just received. Will agree to all of Mr. Paine's conditions. Yours, etc., W. E. PETTY.

But unfortunately it was too late for the match. Mr. Paine had not brought his revolvers with him, and considered the time too short to send for them.

Not to be outdone by Mr. Petty's concessions, however, he said: "I will make it a special point to come on here the first week in May to shoot the match. That will give me a little chance to get in trim with a Smith & Wesson, and will give Mr. Petty the same opportunity to become familiar with a Colt's revolver, if he so desires."

Mr. Petty has not at this writing been communicated with regarding a date in May, but as he is a thorough sportsman and anxious to meet Mr. Paine, the match will no doubt be arranged.

Yachting.

With a full appreciation of the value of the centerboard in certain types, we are still of the opinion that when the Volunteer type is once abandoned in favor of such a keel boat as Vigilant, the retention of the centerboard is more a matter of sentiment than science; and that the best results can be obtained by a keel of sufficient depth without the centerboard. This is apparently the conclusion arrived at by those most competent to judge; Messrs. Herreshoff & Iselin; and no doubt their experience with the heavy board and powerful gearing in 1893 added to the two serious mishaps of last year, has influenced them in resorting to the keel type.

This decision, however, has given serious displeasure to a certain class of ultra-patriotic yachtsmen, who, forgetting or ignoring both America and Sappho, are in deep despair over the abandonment of the national type. It is a pity that Mr. Herreshoff has not catered sufficiently to established prejudices to at least put a dummy centerboard in the new boat, but he has not; and the America's cup must this year be defended, with what degree of success is now uncertain, by a keel boat.

The outlook just now, while hardly to be called discouraging, is far less favorable on this side and correspondingly more favorable on the other than in any previous cup contest. But one defender is building, and the work on her, so far as can be learned, is progressing but slowly during the illness and convalescence of her designer, on whose personal efforts her completion and working up depend almost entirely. At best, she will not be ready before the middle of June, and "ready" in a new yacht usually means at least a month or six weeks of trial and alteration before hull, spars, and sails can be considered in condition for real trial racing and effective working up. Any unforseen delay may still further defer the launching and fitting out. Apart from the new boat, there will be in the trial races but two older craft, Vigilant and Navahoe, as the scheme of fitting out Jubilee seems to have failed of realization.

On the other side, there is now a new boat that has made an exceptionally fine showing in her first races, and which promises to be still faster by midsummer; a boat specially suited for American conditions. Still another boat is now well under way, and will be afloat before the defending yacht. So far as number of boats and early preparation go, the challenger, with Britannia, Ailsa and Valkyrie III., is far better off than the defender, with the new boat, Vigilant and Navahoe.

If those who are bewailing the defense of the cup by a keel craft are really in earnest, there is still time for them to prove their vaunted belief in the centerboard type, not the morfydite Herreshoff production, but a genuine American centerboard yacht, with little or no keel. The construction of such a boat is a simple matter, far different from the building of a semi-fin boat, and there is yet ample time for such work. If the centerboard adherents are willing to back their ideas with money and work, we venture to say that Mr. A. Cary Smith could turn out the design in very short season, and a steel hull of this model might be run together in a few weeks. As to the expense, it would be but trifling compared with the new Herreshoff boat, or even Vigilant, and there should still be enough believers in the erstwhile national type to form a second cup defense syndicate. If, however, nothing of the sort is done, and all is left to Messrs. Iselin and Herreshoff to do the best they can, there can be no excuse for waiting and grumbling should the new Bristol keel boat prove a disappointment.

On Nov. 27 the Forest and Stream published the first authentic news as to the construction of the new Valkyrie, which was confirmed a day later by a cabled report in the New York Herald, on the authority of the Yachting World. On March 31 the Boston Herald announced, on the alleged authority of "an American yachtsman now in Scotland," that the new yacht would be of composite construction, with nickel-plated frames.

The Boston Herald makes a most surprising proposition apropos of the 90 footers, nothing less than that in order to reduce the cost of these great boats, a limit should be placed by mutual agreement on bronze construction and silk sails; making compulsory either steel or composite construction. The Herald has always decried and ridiculed all attempts to produce sensible, moderate boats by means of special restrictions or similar methods, crying for the highest speed, without regard to cost or general utility. Now it has swung to the other extreme, and calmly proposes to stop all experiment and improvement, by an arbitrary limitation to the cheaper materials for both hull and sails.

This is nothing less than making a restricted class in the cup contests; while the general owner is at liberty to use the best material in the market for his hull, the cup defender is limited to a material that is cheap but otherwise totally inferior. This is progress with a vengeance.

We learn as we go to press that a cable message has been received from Mr. Brand by the Seawanhaka Cor. Y. C., stating that he will bring out a new boat, Minima, and that a formal challenge will be sent by mail after a meeting of the Minima Y. C. on April 1.

YACHT NEWS NOTES.

The committee on lectures and entertainments of the Seawanhaka Cor. Y. C. arranged a novelty for the afternoon of March 28 in the shape of a ladies' reception, which passed off very successfully.

Houri, 21 footer, has been sold by W. Butler Duncan, Jr., to E. B. Hart, of the Indian Harbor and Huguenot clubs.

Fleur de Lys, schooner, Mr. George Trotter, of New York, which has been in English raters for two seasons, recently sailed for New York. According to a report in the Field, on March 28, when off Torbay the main boom broke and killed a seaman, the yacht putting into Torbay.

The case of Lord Dunraven against Mr. A. D. Clarke, arising out of the sinking of Valkyrie II. by Satanita on July 5 of last year was decided some time since in favor of Mr. Clarke, but this decision has just been reversed by the Court of Appeals. Mr. Clarke will, it is said, appeal to the House of Lords.

Marian, steam yacht, has been purchased by Mr. E. D. Fox, to replace the Rex, recently sold to W. B. Tyler.

The annual meeting of the New Jersey Y. C. was held at the club house, on March 28. The following officers being elected:

Com., Frank S. Ketchum, slp. Charm; Vice Com., Alfred Wenzel, slp. Wanderer; Rec. Sec., George E. Gartland; Treas., Edward F. Fisher; Fin. Sec., Frank Springling; Cor. Sec., Louis Wunder; Meas., William Sherman.

Regatta Committee—Alfred Wenzel, William Sherman and John W. Dickinson.

Trustees—Frank S. Ketchum, Edwin A. Stevens, Theophilus Butts, William T. Salter and Alexander Berry.

Thursday, May 30 was fixed as the date for the twenty-fourth annual regatta of the club.

Commodore Ketchum has appointed Messrs. Louis Wunder, Daniel O'Brien and B. A. Deetjen as the delegates to the New York. Y. R. A.

Oneida, steam yacht, Com. E. C. Benedict, Seawanhaka Cor. Y. C. sailed from New York on March 27 for Southern parts and the West Indies. With Com. Benedict were Messrs. C. H. Leland, of the S. C. Y. C., and James H. Ross, of Montreal.

Anita, steam yacht, has been sold by Wm. Du Pont to J. G. Cassatt and S. M. Provost.

On March 26 a meeting was held in Chicago for the purpose of reorganizing the old Chicago Y. C., the following officers being elected: P. F. Pettibone, vice com.; W. A. Paulsen, rear com., W. D. Boyce; sec., George Root; treas. Thomas Bradwell; judge advocate, C. E. Kremer fleet surgeon, Dr. W. Blanchard.

There is now building at Poillon's yard, under the supervision of John Driscoll, a bulb fin yacht designed by her owner, Cornelius Vanderbilt, Jr. Her dimensions are: Length over all 32ft., l.w.l. 21ft., beam 7 ft., draft 5ft. The rig shows a jib tacked to the stemhead. The planking will be double.

Work at Bristol.

There is little news from Bristol this week; Mr. Herreshoff is reported as recovering, and taking a greater part in the work from day to day, though early last week he suffered a slight relapse. On March 26 Mr. C. Oliver Iselin visited the works, and also saw Mr. Herreshoff at his home near by. It is reported that the lead casting for the keel is rough and poor in places, and that parts have been cut out and replaced, the bottom being sheathed with Tobin bronze. In the method of attachment of hull and keel, the new boat is decidedly a departure; through the brass castings which form the keel plate are 40 log screws of Tobin bronze, each 8in. long and 1 1-2in. in diameter. These log screws run into the lead, forming their own threads as they are screwed down.

The Mediterranean Races.

As the result of the disqualification of both Ailsa and Britannia in the race for the Nice Tenn prize on March 23, for crossing the line before the gun, the race was resailed on March 27. The course was 30 miles, three rounds, in a strong breeze and heavy sea. While Ailsa led for a time she was headed by Britannia early on the third round, and was finally beaten by 16 min. 38 sec. elapsed time. The two started under jibheaders, but finished under lower sails only. Ailsa suffered from the stretching of her rigging and the strains incident to a hard race in a new boat, and, however the two may compare on further trial in heavy weather, she will undoubtedly make a better showing when sails and gear are well stretched.

On March 28 the small raters raced, but the steam yacht race was postponed. On March 29 the big cutters met again for the Bennett prize, in a reefing S. W. breeze, Britannia turning in one reef and Ailsa two. Starting ahead, Ailsa led by less than a minute at the end of the first round, and finally won by 2 min. 7 sec. elapsed time. The steam yacht race was again postponed. On leaving Nice for Cannes on March 30, Britannia grounded on a sandbank, but got off without damage. The two will probably not meet again until the Thames races in May, and not until the Clyde races early in July, will Valkyrie III. join them. Lord Dunraven has, however, made arrangements with Mr. Walker for some private matches between Valkyrie III. and Ailsa as soon as the former is ready.

A Summer Afloat.

PART III.

(Continued from Page 238.)

One of the charms, to us, of this snug little harbor, is the great number and variety of the fishing fleet that make this their home port. We are always interested in watching their maneuvers, both when running in and going out, and have picked up many a point that will perhaps some day stand us in good stead.

Before turning into our bunks for the night, we lashed the dingy fast alongside, as there was not room for it to swing astern. The night was perfectly calm and quiet, not the slightest sound disturbed our slumbers. When daylight began to appear, the fishermen, one by one, got up sail and stole quietly out of the harbor, leaving us the sole occupants.

As we had just passed a long, and in some respects a trying and exciting day, we lay in our bunks longer than usual, and did not get breakfast till eight o'clock, and it was ten when we catted our anchor and again put to sea.

We found quite a heavy swell rolling outside, which would indicate that the wind had blown much harder out at sea than it had anywhere in our vicinity for the last two days.

We ran out before a N. W. breeze, and the rolling of the boat in the swells came very nearly jibing her once or twice, and we were very glad when we got an offing so that we could alter our course and bring the breeze over our quarter.

We ran round outside of Thatcher Island, very close to it, and then put straight for Eastern Point, the wind strengthening some and veering round more to the westward. Low cotton-like clouds arose gradually in the west, their under side being cut off straight and in parallel lines. We expected the wind to increase as these clouds got up higher, but were very much surprised to meet just off Eastern Point a stiff southeast breeze, which held true and steady all the rest of the day.

We rounded the point about noon and stood up Gloucester Harbor, past Tenpound Island, dropping our anchor just south of Fivepound Island, in about three fathoms of water.

After dinner we took the dinghy and made the circuit of this quaint and picturesque old fishing harbor, in which there is every kind of a boat to be found, from the three-masted, square-rigged ship down to the fourteen-foot catboat. Fishing schooners in all stages of construction and decay; on one hand the bright, new, graceful hull just getting her spars on board: on the other the old abandoned hulk, bleaching her ribs on the sand.

It is astonishing to see how easily the fishermen handle large schooners in this crowded harbor. They are constantly running in and out, but an accident is a very rare thing indeed.

We got under way immediately after getting back to the yacht, and had a lively little race with two quite large schooners, which were beating out to sea together.

We could handle our little boat so much quicker, and could run through so much smaller places, that we gradually worked out ahead of both of them. All three of us were on port tack standing toward the west side of the harbor, when we noticed a little way ahead of us that a small sloop that had been leading us was losing her wind, so we went about immediately and stood back toward Eastern Point Lighthouse. The breeze freshened as we got nearer the point, and soon we were plowing along with our lee rail awash, while our friends, the fishermen, who had kept on the other tack, were entirely becalmed.

We held our breeze strong and steady till we ran out of sight of the other boats. We made our home port, Magnolia, and picked up our mooring at 4:30 P. M., after one of the pleasantest weeks we had yet spent on the water.

We had intended to continue our trip to the eastward, but I was called back to attend to some important business in the interior, and had to give up cool ocean breezes and lounging on deck, for hot, dusty sleeping-cars and railroad lunches.

The Cy-Pres swung idly at her mooring, unattended and uncared or, till Monday, Aug. 20, when we again put her in shape for a run down to York and back.

We spent Aug. 20 in airing cushions, bedding, clothing, etc., and n getting the necessary stores on board, not forgetting a fresh upply of coal-oil and water.

Tuesday, Aug. 21 was bright and fair, with a stiff breeze from the westward. An old fisherman advised us to take in a reef if we were going round Cape Ann, as it looked windy in the N. W.

We did not think it at all necessary to do this, but as we had known Captain "Bill" for many years and had great respect for his nautical knowledge, we took his advice and started with ngle reefed mainsail and foresail at 8:30 A. M.

EASTERN POINT.

For the first two or three miles the wind continued steady, but as we passed out beyond Eastern Point, the puffs began to come a little harder from the northwest, and small, round cotton-like clouds began to come up over a sky that had been perfectly clear and of an intense bright blue.

The wind came off the land in harder and harder puffs and long before we reached Thatcher's Island we were glad we had our reef in, and before we rounded the eastern end of the island we would have felt easier if we had had two reefs in.

It was a strong lower sail breeze for large schooners, and pretty heavy for our little twenty-two footer, rolling her down in the puffs till our lee rail was well buried.

As we approached Thatcher's Island we met quite a little fleet of coasters coming before the wind; they were all cutting in close to land to get into as smooth water as possible, and they bothered us considerably.

We would luff sharply to clear one fellow, only to fall broad off to clear another, who had shot up into the wind to enable his small crew of two men to get his sheets well in before bearing up for Boston. A large three-masted schooner going east overtook us just before we reached Thatcher's Island, and went past us boiling through the water like a steamer.

Very much to our surprise, she did not go on round the Cape, but came about and stood back for Gloucester, and we soon lost sight of her round the hills of Eastern Point. Her actions puzzled us very much, as we could not account for her sudden change of purpose.

The captains of such vessels do not sail them for fun, or to show off, and why they should turn back after running three or four miles beyond Gloucester Harbor was a puzzler for us.

We were inclined to think that the sea was too heavy for her on the other side of the Cape, and after going far enough to see what she would have to face all day, her skipper preferred to put back rather than to try to drive a light vessel through, with a small crew of men. However that might be, we saw a sloop pegging away ahead of us, and although we knew she was double our size, we made up our minds that we would go on if she did, "come what would, let go what might."

As we passed Cape Ann lights we met heavy seas, and as the wind had hauled more to the northward, we were obliged to get our sheets in flat, and hammer into it, frequently plunging our bows under and taking quantities of solid water on our forward deck. The Cy-Pres behaved beautifully and worked out to windward in grand style.

As soon as we could safely do so, we went about on starboard tack and stood in toward the coast, running in as close as we dared; the sea getting less and less troublesome every yard we went. When so close to the rocks that we could almost step ashore, we put her about again, and on port tack stood along almost parallel with the shore, bearing away a little as we ran out by Straightsmouth Light to keep clear of the sunken rocks that make off from the point. Here we struck the heavy seas again and had quite a tussle with them, but the skipper, with his hat off and hair blowing about in the wind, held the little craft down to her work, and she responded nobly, leaping from one sea to another and shaking the water from her decks as though she enjoyed the fun as well as we did.

We did not need to keep this tack very long, as the entrance to Rockport Harbor was well to leeward, so, as soon as we could clear Straightsmouth Point on the weather side, we went about on starboard tack, and with sheets well started, fairly flew down the western side of the little peninsular into Rockport, where we were soon swinging at our anchor in water as still as a duck-pond.

We could scarcely realize that we had just left such a rolling, jumping sea outside.

F. was drenched with salt spray, and as his waterproofs dried in the sun, they became crusted over with particles of salt.

On comparing the weather conditions of this day with our first trip round the Cape in '92, we came to the conclusion that the wind was fully as strong, and there was more sea this time than before.

After dinner we went ashore and climbed the hills that lie between Rockport and the sea, and had a beautiful view of the coast in all directions.

We sauntered along down the rocky heights back into the village, stopped at the stores to replenish our larder, and then rowed slowly out to the yacht. As we rounded the end of the granite pier, that forms one side of the inner harbor, I saw that she had shifted her berth, and putting more muscle into my oars, hurried toward her. We reached her just in the nick of time, as she was on the point of fouling another boat, and in five minutes more would have been on the rocks.

The only way we could account for the dragging of her anchor was the fact that a large tug came in while we were on shore, towing a thirty-five foot sloop that had parted her bobstay just outside. She ran across our bows and might have dragged our cable and dislodged the anchor; or her swells may have caused the yacht to pitch violently and so break the anchor out.

We got out our kedge, a twenty-five pound folding anchor, which we always keep stowed in the cockpit ready for immediate use; carried it out into a good place and dropped it, then cleared our main anchor of grass and weeds, pulled ourselves out to the kedge, dropped the anchor, lifted the kedge on board and stowed it away.

The wind continued to blow hard all day, and in the night we could hear it moaning through the branches of a large tree that stood near us on the shore.

The morning dawned bright and clear, but the wind was still blowing hard from the N. W.

Several of the fishermen left the harbor just as we awoke, and we watched them pitch and plunge as they got into the heavy seas outside.

We got our breakfast at six o'clock, and by seven were ready to start for Portsmouth. Knowing the wind to be strong and the sea heavy, we sailed under a reefed mainsail and forestaysail, the same canvas we carried the day before. F. took the tiller after we hoisted the mainsail, while I shook out the foresail ready to hoist, and then got up the anchor.

I had to work lively to get the foresail up, jump aft and trim in the sheet, then forward again to clear and stow the anchor before we should run out of the little pond of a harbor into the sea outside.

We found the seas larger than we had expected, and the wind was all we could stand up under.

The little Cy-Pres struggled along, her lee rail several inches under water, and the spray flying over us in sheets.

In ten minutes after leaving the shelter of the breakwater we were soaked to the skin, and as we had forgotten to close the skylights, everything below was afloat.

We were not long in making up our minds that a twenty-five mile thrash to windward in the teeth of such a breeze and sea, would be more like work than fun, so put back into the harbor as quickly as we could, anchoring just where we were before.

A fishing schooner lay near us, and the skipper remarked, as we were furling our sail, that there was no pleasure in sailing in such weather, and we agreed with him.

We got everything out of the cabin, blankets, cushions, clothes, towels, pillows, etc., and spread them around on deck to dry.

About eleven o'clock the wind began to moderate, and by noon had fallen almost calm. We considered for a time the advisability of making another start for Portsmouth, but decided that the sea was still running and to be caught outside in a calm, under such conditions, would be anything but enjoyable, and that we had better stay where we were till morning.

We went ashore in the afternoon, and walked around the head of the sandy bay toward the Rockport Granite Company's docks, scrambled out on to a rocky point that commands an extended view of the bay, and sat there a long time enjoying the blue sea, the still bluer sky, the green hills, the crooked road lined with fine old trees, and the queer old abandoned docks back of and outside the breakwater.

We thought the very spot we were then sitting on would be an ideal place for a summer home, as there was a pretty beach of yellow sand at our feet, where some children were playing and bathing.

On our way back to the yacht we went out on the breakwater, passing along a queer, narrow, dirty street, built along the side of the harbor. Out near the end of it we saw a building two stories high, about 15ft.x20ft. square, that was entirely empty, with the exception of two tiers of bunks around the sides; not a table, chair, or any other article of furniture could we see.

Just outside of the building we saw a Dago cooking the evening meal; he was stewing or boiling something in a large kettle over an open fire built among the rocks. We had often seen a crowd of men standing around the fire, each with a tin pan in his hands, and had guessed that they were eating from a common pot; and this closer view of the "shebang" confirmed our surmise.

We also discovered what it was that had smelled so outrageously. An old fellow, all in leather garments, was trying out dogfish, making some kind of fish oil or fish soap; he had the dirtiest, vilest smelling establishment it has ever been my luck to get into. Why! a glue factory was sweet perfume to the stench of that place.

F. had complained several times that the odor from the shore was very unpleasant when the wind was from the west, but fortunately it hauled around more into the south during the afternoon and we were not troubled by it any more.

There are a number of fine docks on the west side of Rockport breakwater that are well worth visiting. Their massiveness and size impress one immediately, and one cannot help but wonder what has become of the business that would warrant the building of such large and expensive docks. As we wandered over them, we remarked how easy it would be to put gates across the entrance and shut them at high tide, thus floating a vessel all day at her dock, or one could reverse the operation and float a ship in at high tide, and shut the gates at low tide and have a splendid dry dock for repairing boats and good-sized ships at very little cost.

About sunset, the very pretty twenty-five foot sloop Eda, of Peach Point, Marblehead, came in, and anchored just outside of us, with three young men and a sailor on board.

We were up at five o'clock next morning, and under way at 6.30; with a light breeze from S. W., barometer steady at 29.95 degrees.

As we passed by the Eda, they hailed us, asking: "Where we were bound." When we replied to Portsmouth, they said: "They would follow us at once," which they did, as soon as sail could be got on her.

As we drew out from under the land off Halibut Point the breeze fell very light, and we scarcely had steerage way on for some time. There was a thick haze over the water, so that we could not see anything of the land, after getting three or four miles off shore, till we picked up White Island light.

The Eda kept more to the westward of our course, and being much nearer shore had a better breeze, as the air was coming off the land. About the time we reached White Island she was abreast of us, nearly two miles in shore of us, holding a good breeze. This breeze soon reached us, and we bowled along right merrily, reaching Whaleback Light at 12.30.

We ran up the harbor, keeping well to the eastern side, and dropped our anchor in ten feet of water, right under the walls of Fort McClary.

The Eda kept over to the west side, and turned close round Fort Constitution, as though she was going up the river, but gave it up and stood back across to Peperells Cove, anchoring to the eastward of us, or further up in the cove.

The haze continued during the entire run across, so that we never got a glimpse of Mount Agamenticus, and could not make out the square towers of Wentworth Hotel till within two or three miles of the harbor.

(To be concluded next week.)

The Seawanhaka International Cup.

The race committee of the Seawanhaka Cor. Y. C. has lost no time in perfecting all possible arrangements for an international contest next fall between Mr. J. Arthur Brand in his half-rater Spruce III., and such half-raters as may be available on this side; in fact, the scheme, as now outlined by the committee, has taken on a much wider scope. In order to discuss the matter thoroughly and to secure the co-operation of others likely to be interested, the committee arranged a dinner at the club house on March 28, to which were invited a number of gentlemen representing the canoeing and boat sailing interests about New York. Mr. Cromwell, Chairman of the Race Committee, occupied the head of the table, vice Com. Rouse, Schooner Iroquois, being at the other end. Com. Benedict was absent, having sailed in the Flagship Oneida on the previous day for the West Indies. Among those present were: Messrs. Oswald Sanderson, F. B. Jones, C. W. Sherman, Alexander Rutherford, Robert Center, J. F. Tams, C. B. Vaux, William Whitlock, John Hyslop, W. S. Elliott, C. W. Wetmore, W. P. Stephens, Schuyler Schieffelin, W. Butler Duncan, H. C. Ward, W. C. Kerr, and Dr. Valentine Mott.

During the dinner the proposed races and the small racing craft were informally discussed around the table, and with the coffee the chairman called on several gentlemen for their views on various matters connected with the sport. Vice Com. Rouse announced his willingness to build a half-rater; Mr. Wetmore, for the committee, detailed just what had been done. Mr. Vaux spoke on the canoes and small craft of New York, Mr. Hyslop discussed the possible measurement of the sails of such small craft, and Mr. Stephens gave a brief history of the origin of the one raters and one-half raters, and a description of the various types. After the party left the table, Mr. Stephens exhibited a number of pictures, designs, and sail plans of various small raters.

While the immediate end in view is a series of races between Spruce III. and American craft, the committee has proposed the establishment by the Seawanhaka Cor. Y. C. of an international challenge cup, open to boats and yachts of not under 1-2 rating or 15ft. sailing length, and not over 2 1-2 rating or 25ft. sailing length. The proposed conditions, to be submitted to the club on April 2, are as follows:

1. The cup shall be a perpetual international challenge cup, open to competition to yachts belonging to members of recognized yacht clubs of foreign countries.
2. Challenges shall be made through the yacht club to which the owner or owners of the challenging yacht belongs.
3. The dimensions of the challenging yacht shall not exceed such as would bring its classification within the limit of racing classes under the Seawanhaka rules of 15ft. to 25ft. sailing length.
4. The races for the cup shall be limited to a single challenger, to be met by only one competitor.
5. The races shall be not less than three nor more than five in number.
6. The course shall be, or near, the waters of Oyster Bay, so long as the cup is in the custody of the Seawanhaka Cor. Y. C.
7. The crews shall be limited, except in the case of a challenge in the 25-ft. sailing length class, to amateurs, and in all cases the helmsman shall be an amateur.
8. If practicable, an international system of measurement for yachts competing for the cup shall be agreed upon.
9. Not less than three months' notice shall be required from any challenger.
10. The races shall take place between May 1 and October 1.

The sum of $500 has already been subscribed for the purchase of a cup, and several designs by the leading silversmiths were exhibited at the dinner.

New York Y. C.

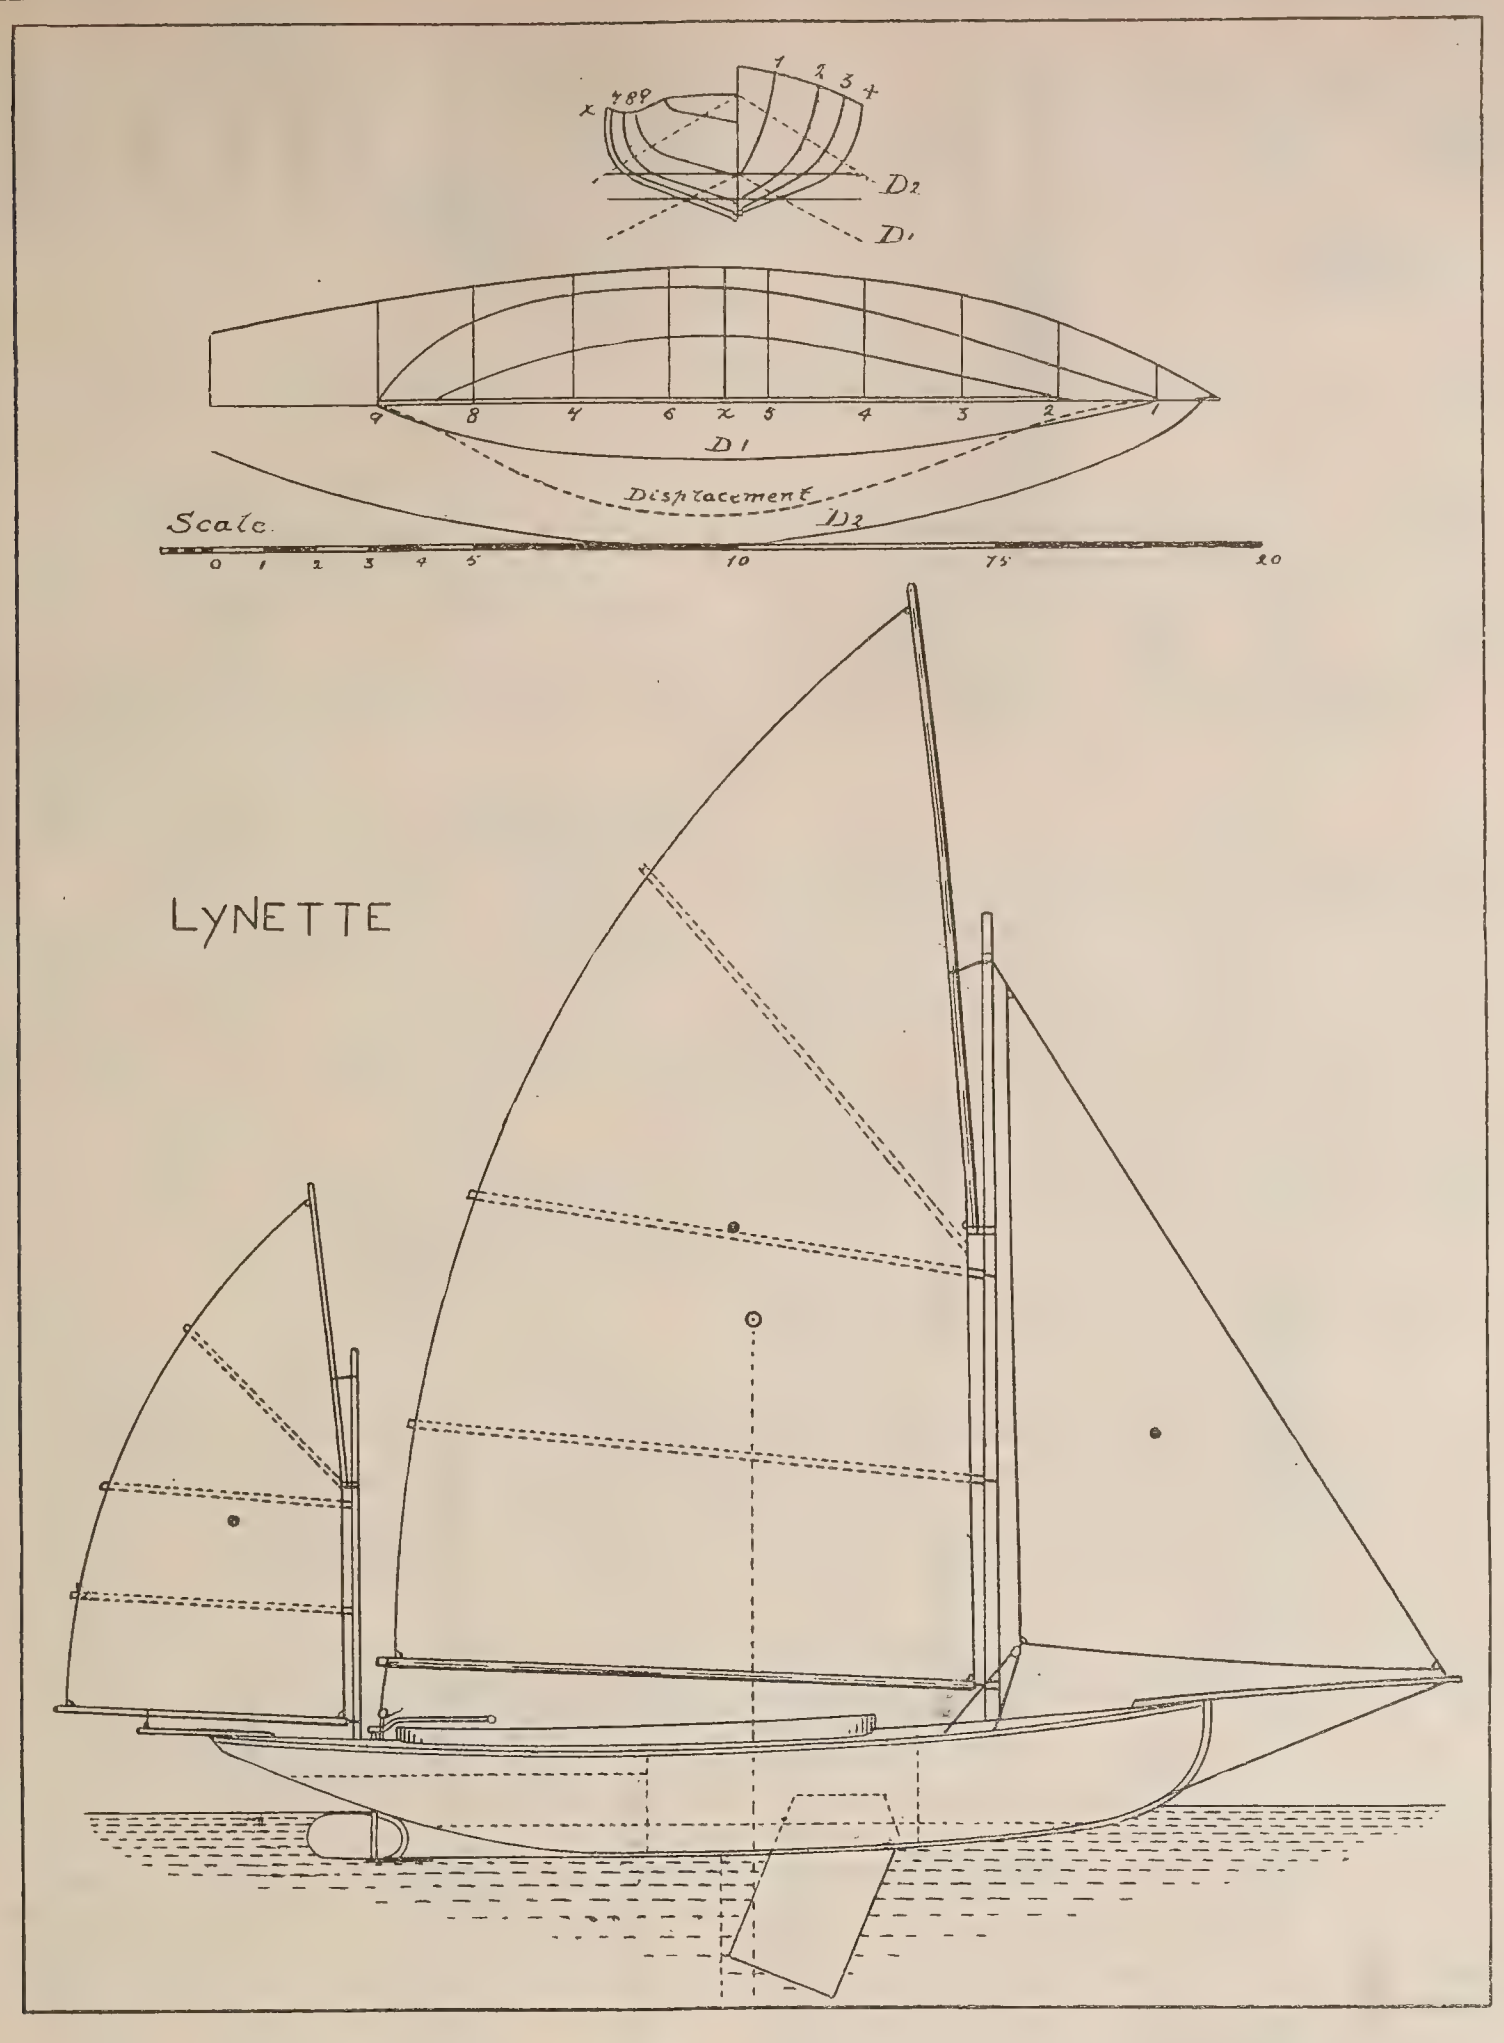
The second general meeting of the New York Y. C. was held on March 28 at the club house, Com. Brown presiding. The date of the annual cruise was fixed by a motion that the fleet should rendezvous at Glen Cove on Monday, July 29. The following letter was read:

A number of summer residents and citizens of Newport have subscribed a sum of money for the purpose of holding a series of yacht races off that port, to be sailed under the rules and regulations of the New York Y. C., except, possibly, in the division of the classes, immediately on the return of the New York Y. C.'s cruise to the eastward.

It is proposed to give at least four days' continuous racing over outside courses for not less than three classes of schooners and five classes of sloops, cutters, and yawls. Schooners and sloops, etc., to race on alternate days.

GLOUCESTER HARBOR.

The races to be over a fixed course (equilateral triangle), twice over, except for smaller classes; no time limit. The committee to have power to stop any race, and award prizes at the end of the first round if there is reason to suppose that the full course cannot be completed before sunset. The races to be started so as to make one leg as much as possible to windward.



After the larger classes have finished over the outside courses, it is intended to give prizes for smaller boats, in such classes as may seem expedient to be raced for over courses principally or entirely or inside of Narragansett Bay.

The undersigned, for the subscribers, request that the New York Y. C. officially authorize their Regatta Committee to take charge of the racing and carry out the programme as has been approximately outlined.

GOUVERNEUR KORTRIGHT
ROBERT GOELET,
FRED. P. SANDS,
WOODBURY KANE.

The proposal was accepted with thanks, and the Regatta Committee will be entrusted with the handling of the races.

A communication was read from the Gas Engine and Power

Company asking the aid of the club as a body, or the members individually, in defeating a bill now before the Legislature, No. 1,432, introduced by Assemblyman Gleason, and referred to the Committee on General Laws, as follows:

An act regulating the qualifications of persons that operate and manage boats and launches employing oil, naphtha, and electricity as propelling or motive power. The people of the State of New York, represented in Senate and Assembly, do enact as follows:

Sec. 1. It shall not be lawful for any person or persons to operate or manage any boat, launch, or vessel using as propelling or motive power oil, naphtha, or electricity, without having a certificate of qualification therefor, qualifying such person or persons to act as engineers.

Sec. 2. Any violation of this act shall be punishable as a misdemeanor.

Sec. 3. This act shall take effect immediately.

The bill was referred to a committee, with power. Secretary Oddie read the following letter to ex-Com. Morgan sent in accordance with a resolution passed at the last meeting:

March 4, 1895.

Dear Sir: At the last general meeting a resolution was passed unanimously requesting me to convey to you the appreciation of this club of the services you have rendered to it, and the thorough, sportsmanlike, and disinterested manner in which you have fulfilled the obligations of your office. It is unnecessary for me to personally add anything to the above, but I cannot close without expressing to you the great pleasure I have had in serving under you. Yours very truly,

J. S. V. ODDIE, Secretary.

The following new members were elected: R. T. McCabe, Murray Brown, Albert J. Morgan, Le Droict Langdon Barber, Stuart Duncan, John P. Duncan, J. H. Gibbons, U.S.N.; A. L. Norton, U.S.N.; Claude Bailey, U.S.N.; T. B. Baldwin, Stanford White, S. M. Prevost, J. Searle Barclay, Richardson Clover, U.S.N.; F. S. Moseley, Arthur T. Sullivan, J. G. Schmidtlapp.

Small Boats About Toronto.

Toronto, March 25.—*Editor Forest and Stream:* As you have been publishing a number of designs of small craft lately, I venture to inclose the lines of a small cruiser designed by me during the winter of 1892 and 1893. She was intended to fill in a gap between the narrow Toronto Bay sailing skiff and the beamy saucer-shaped Una and cat boats, possessing much greater stability than the one, and performing much better in a sea than the other. Such a good all-around boat has she proved, both for day sailing and general cruising, that her builder, John Hendry, of Toronto, having an order for a boat of her size and for substantially similar purposes, has built from my lines without alteration.

I should here mention that although her sheer plan resembles that of Mr. Wicksteed's Elsa, I did not see the latter's lines until after I had chosen the main features of the Lynette design, and was surprised to find how closely they agreed in sheer plan, particularly as to the bow.

Her dimensions are:

Length over all 19ft. 6in., load water-line 15ft., extreme beam 5ft., beam, l.w.l. 4ft. 4in., draft 11in., ballast under floor 300lbs., center board 76lbs., sail area 230sq. ft., rating .57.

The rig shown in the sail plan is not the original, which measured only 170sq. ft. in two pieces.

During the past winter, the Royal Toronto Sailing Skiff Club have made changes in their rules, so as to permit the use of overhangs both fore and aft and have otherwise changed their rules so as to permit of boats such as mine competing in their races, making a complete change from the old sharp sterns to square sterns and overhangs; this is likely to debar entirely the old type of sailing skiff.

Although I cannot claim any active share in this step in the evolution of the Toronto sailing skiff, yet I may safely say that the superiority Lynette displayed over the ordinary type of skiff has had its influence in the accomplishment of this change. As a cruising man, I am not with them in one of their rules, which prohibits the use of ballast, except in the shape of a center board, which, in the third class 16ft. l.w.l. and under, must not be more than 100lbs., while a crew of four men is allowed. To me it seems that more ballast and a crew of only three would tend to produce a much safer and more serviceable type of boat.

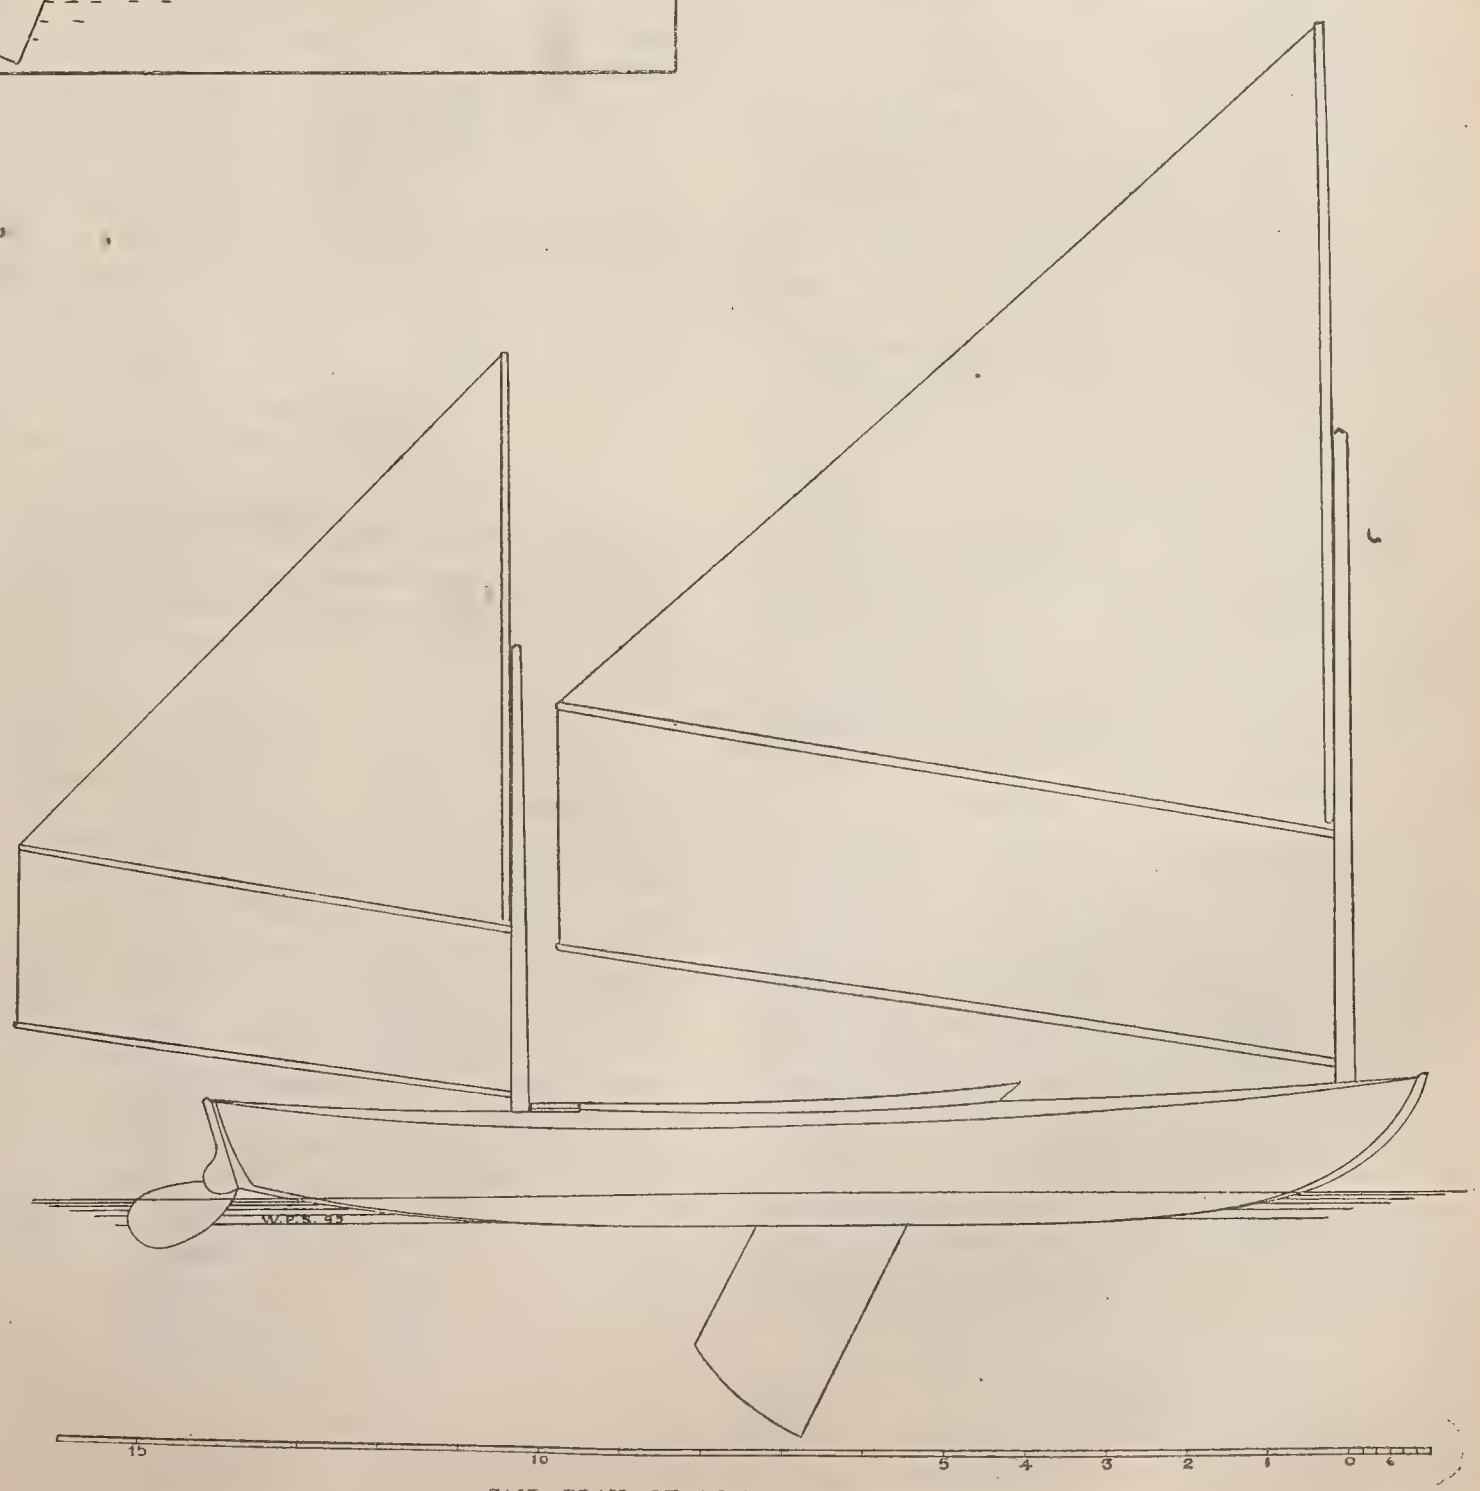
Another class which promises to give some excellent racing this season is the new 18ft. class of the Royal Can. Y. C., for which at least our new boats are building. These are all center boarders, of considerable beam and long overhangs. I believe that there was a tacit understanding among those about to build, that bulb fins would not be used, as being undesirable for local purposes. As some ten races have been set for these boats by the Royal Can. Y. C., not to mention the races of the Skiff Club, in which some at least of the new boats will participate, a great deal of lively sport may be expected on Toronto Bay this summer.

The Skiff Club's class of 16ft., and under, promises well, and much interest is likely to attach to their races, as some boats built under the new rules are likely to meet the old cracks.

Only during the last year have Toronto's sailormen roused up to the possibilities of small boat sailing outside the old-time skiffs (which were evolved from the row-boat); but now a regular boom is under way. As one who built to the new Skiff Club rules two years before they came into existence, I heartily welcome the change and sometimes feel sorry that I did not give Lynette a racing rig when getting her new canvas. J. EDW. MAYBEE.

Canoeing.

Canoe sailors will learn with pleasure that the Marine and Field Club will hold its annual regatta this year, the canoeing outlook so far being sufficiently promising to warrant a successful day's sport. Mr. W. S. Elliott, who has managed the previous Marine and Field races, is again in charge, and he has assurances of entries from a number of canoeists. The date set is June 29, and at least four events will be arranged the Marine and Field Club trophy, held by Mr. Schuyler Schieffelin; the Marine and Field Club challenge cup, which will be a handicap; a handicap race for a special prize, and a tandem paddling race for the cup now held by Messrs. Douglas & Palmer. A race will be arranged, if possible, for the new "One Design" canoes. A good regatta of this sort early in the season is likely to give a stimulus to canoe racing, both about New York and throughout the country.



A "One Design" Canoe.

(Concluded from Page 260.)

The general arrangement and the sail plan of the canoe illustrated last week are here given in the accompanying drawings. Two more canoes have just been ordered by Messrs. Wintringham & Arnold, of Brooklyn, making five in all. The great problem of canoe designing; the adjustment of weights and spaces so as to give room to the crew, to put the weighted centerplate in the best position, both as regards weight of ballast and as lateral plane, to place the crew's weight near enough amidships, and to secure a good balance to an effective sail plan, was made more than usually difficult by the lessening of the water-line length from the standard 16 ft. to but 12 1-2ft., and each of these points was attained only by many compromises between conflicting interests.

The demand of the owners was for a middle space of not less than 4ft. 6in., and the bulkheads were so placed as to secure this. The form of plate selected, after careful consideration of various shapes, was the ordinary one; but the absence of the 18-in. limit of drop made it possible to use the plate in a different way from that in the 16x30 canoe, dropping to a nearly vertical position. To get rid of the lifting pendant below water, the ingenious arm and tackle introduced by Mr. Linton Hope last year was adopted, the light plate of 3-16in. brass, of 40lbs. in weight, requiring only a single part to the pendant, led through a check block on the deck just within the coaming. The plate was located as far aft as possible, there being no after deadwood or scag; the only limitation being the necessity for room abaft the trunk for the feet to pass without lifting over.

On the other hand, the sliding seat was moved as far forward as possible, in order to keep the weight of crew amidships; and, in particular, to admit of the largest possible mizen. The floor is

SAIL PLAN OF "ONE DESIGN" CANOE.

placed 2in. below the water, there being no opportunity to introduce a self-bailing well without serious disadvantages. The breadth of the well, 20in., allows an 8in. side deck.

The centerplate trunk is built with 1-2in. headledges, leaving sufficient width in the trunk for the lifting handle of the centerplate. The slot through the keel, however, is just wide enough for the 3-16-in. plate to pass freely. The handle is a separate casting, slotted out to span the upper corner of the plate, and secured to it by rivets. The after ends of the handle on each side of plate are not tapered down, but left full thickness, 5-32 in, and when the plate is fully down they rest in the keel and prevent it falling ower. A knot may also be tried in the lifting pendant, just outside the check block, for the same purpose. The pin is of 3-8in. brass, firmly fastened in the plate, the ends projecting 5-32. On the inside of the trunk at the fore lower corner, just above the keel, are two brass castings of a V shape, one fastened to each side of the trunk. When the plate is shipped, it is dropped down the trunk until the ends of the pins or stud rest in the two V plates.

There is a deck hatch forward and another aft, giving access to the two compartments. The coaming is pointed and flaring. The sliding seat, droprudder and deck tiller are of the usual canoe type. The total sail area was limited by the owners to 110sq. ft., the cut of the sails selected by the owners being the very serviceable one so well tested by long use. In proportioning the sail, everything was governed by the positions of the masts, the mainmast being stepped as far forward as the construction would admit, 6in. forward of the l.w.l.; and the mizzenmast close against the sliding seat. Even then the absence of a scag promised too strong a weather helm unless the mizzen was kept down in size, the figures finally selected being 75sq. ft. for the mainsail and 35 for the mizzen, or 110 in all.

The specifications presented by the St. Lawrence River Skiff, Canoe and Steam Launch Company in tendering for the order, as given below, call for the highest quality of work. Two methods of construction were shown by sections of canoes, in one the planks being ship lapped, and in the other the seams being caulked by a thread laid in grooves in the adjoining edges of each plank; the grooves being cut, and the thread laid in one plank by a special tool.

Specifications for three sailing canoes (new type, as designed by Mr. W. P. Stephens) for Messrs. Elliot, Schieffelin & Stewart. Each canoe as follows: Length over all 15ft., length l.w.l. about 12ft. 6in., beam extreme 36in., other dimensions as per drawings, oak keel, stem and sternpost hackmatack natural crook, floor timbers, oak; frames, oak or rock elm; planking, Spanish cedar topstreak; rest, white cedar; 5-16in. before smoothing down; construction, new blind double caulked method, copper riveted and burred.

Watertight bulkheads fore and aft (guaranteed tight), of two thicknesses 3-16in. or 1-4in.; white cedar and Spanish cedar or mahogany (latter showing inside of cockpit), each bulkhead inclosing thickness of canvas, lapped under bulkhead, and whole fitted between special bulkhead frame.

Deck beams, cedar; cockpit coaming, mahogany or quartered sycamore; decks, mahogany or Spanish cedar; cabs, mahogany or quartered sycamore; deck hatches fore and aft, raised above decks and set over; centerboard trunk, oak or cedar, capped with same kind of wood as used in decks.

Plate brass centerboard not to exceed 50lbs.; polished brass drop rudder; polished brass Baker or Butler lock thwartship deck steering gear, complete with chain, turnbuckles, etc.; main and mizzen travelers, polished brass (attached or sent separate, as preferred); polished brass jam cleats, "Blanche" cleats and "alligator" cleats, and boxwood deadeyes, not to be affixed, but to be supplied, with screws, etc., for same; wire rope tackle and check block for centerboard hoisting gear.

Sliding deck seat 36in. over all. Suit sails 110sq. ft. area, or area as per design. Two hollow spruce masts made two pieces in length, shells 5-16in. or 1-4in. cemented, then tightly wound diagonally with elastic duck, glued as wound, then painted spruce color, rubbed down, varnished and rubbed down again and again till smooth surface; two hollow spruce booms, same as masts, except in size, and instead of being canvas wound and glued and painted, to be varnished natural color and served at intervals of 18in. or 20in. Sail material, imported Union Silk, close bighted, edged with non-elastic web: one reef (quick reefing line gear) to each sail.

Aluminum head gear to masts; two boxwood deadeyes lashed to each yard; double halliards to each sail, mainsail halliards to lead through double block at stemhead; sail fittings complete; cordage to be the kind known as the English canoe cordage, or of best braided linen cord obtainable.

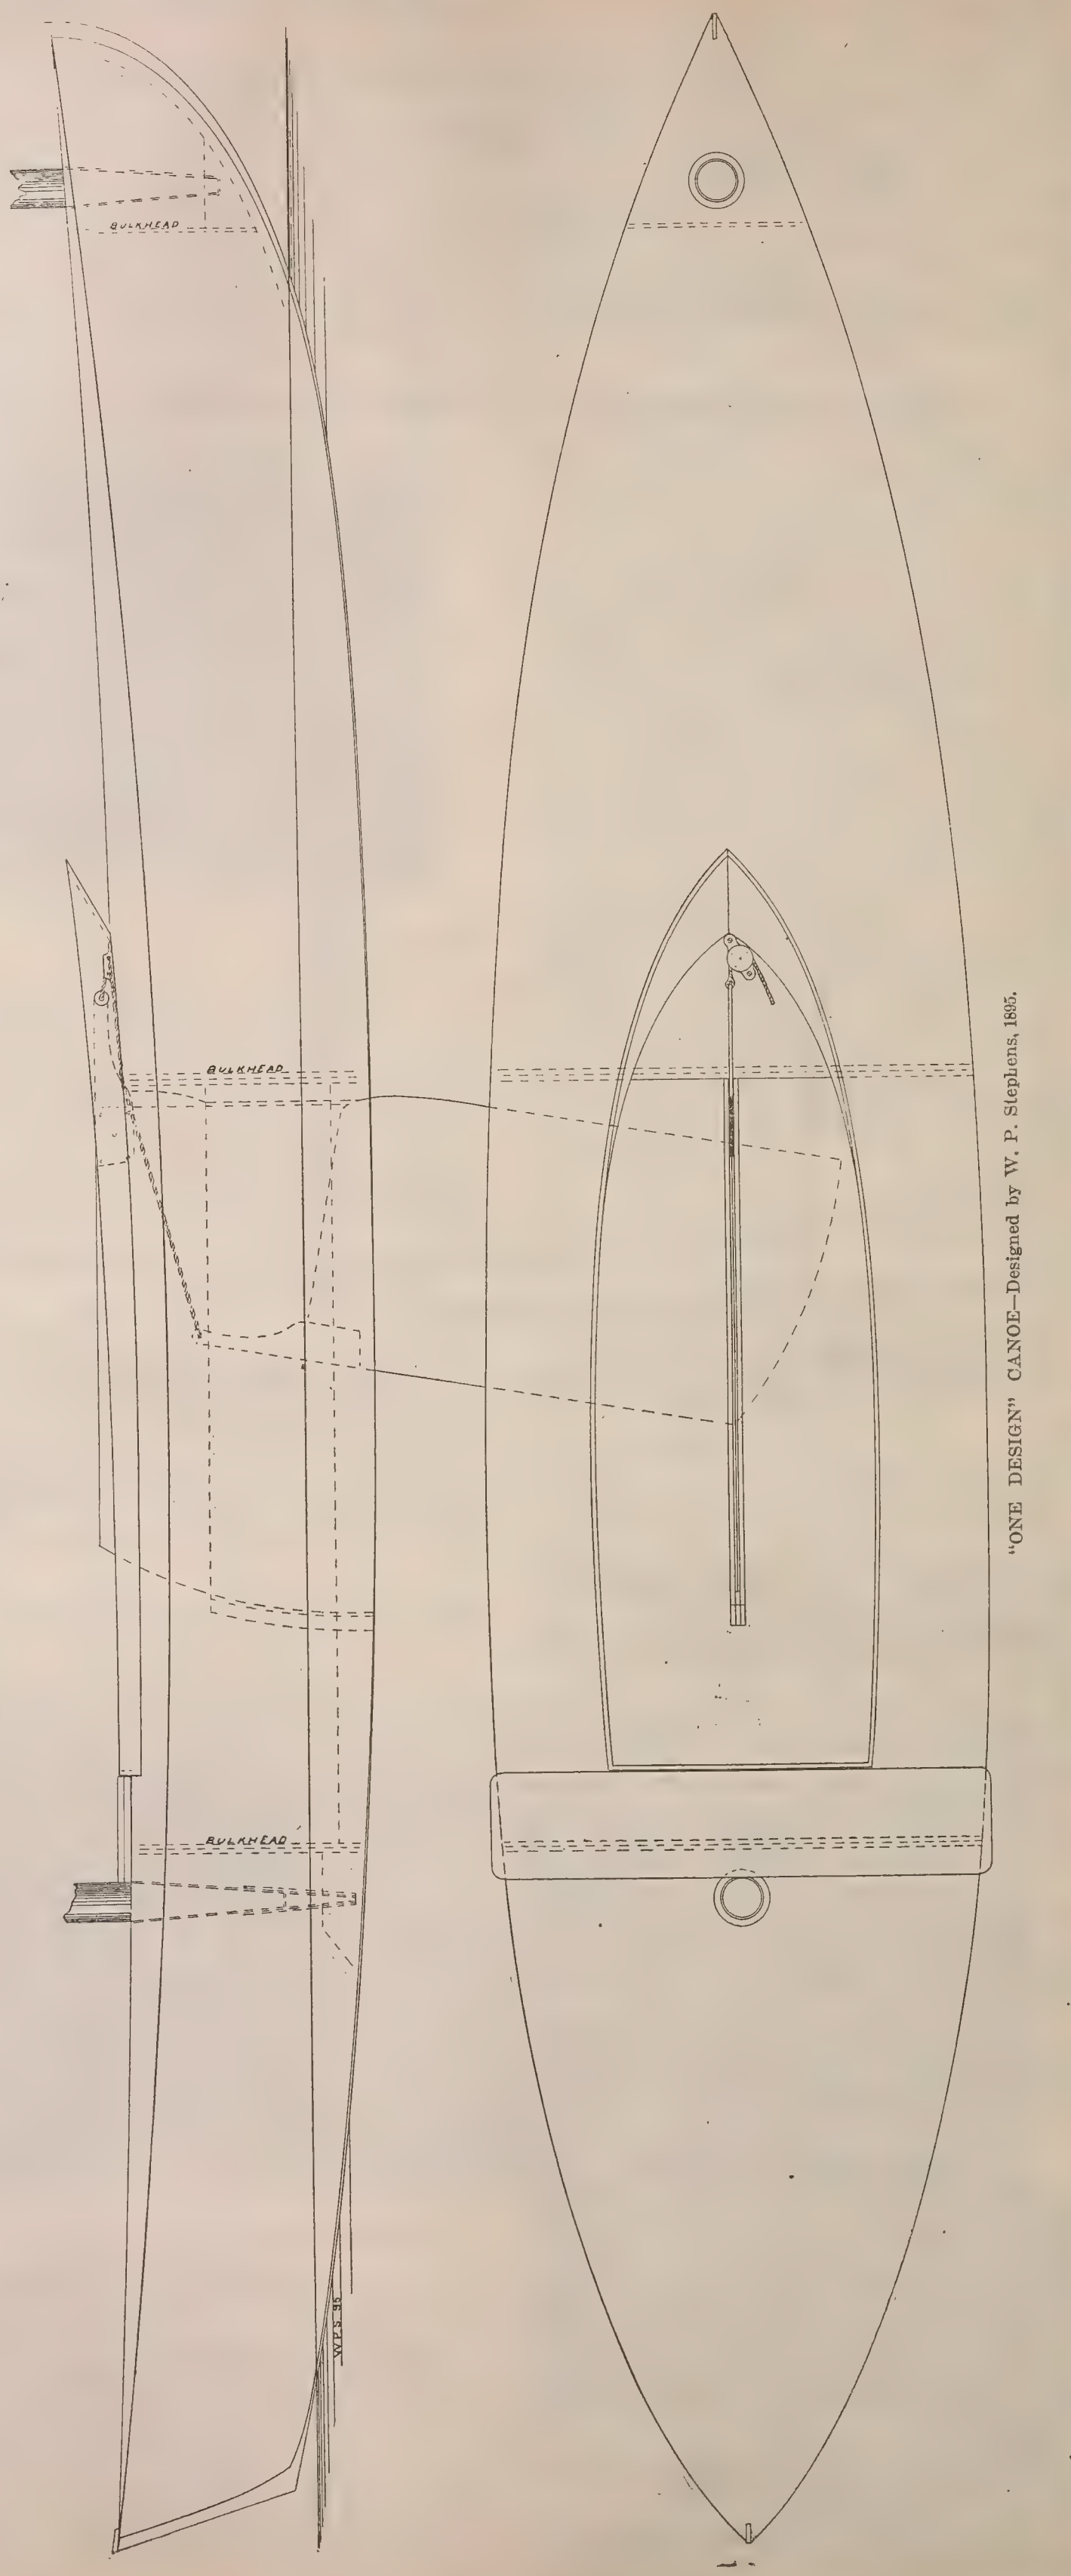
Two mast tubes and brass mast plates, 2 3-4in. diameter at deck; two movable water plugs in keel; one ventilation water plug in each bulkhead; removable floor boards to cockpit; brass stem band; all fastenings brass or copper; woodwork under decks (that is, inside) to have one coat of oil and one coat of spar composition; outside to be highly finished natural color in navalite two coats; all material to be selected and workmanship first-class throughout.

Yankee's Races This Year.

It may be taken to go without debate or call that from 1886 up to 1892 the American sailing canoe, for racing purposes, went ahead in bounds and leaps toward the fastest racing machine under the rules of that country. With the unlimited sail area and unlimited sliding deck seat allowed in America, it was yearly more hopeless for the English canoe, bred under narrow limits, to hope to compete with success against the "unlimited" canoe in her own waters. But, after all, what was it beyond a practical demonstration that superior driving power, permissibly applied to equal hulls without taxation, was bound to win the trick in every race, bar accidents. Superior driving power, of course, here includes sail area and length of sliding seat—that is, ability to forcibly carry the largest sail area on the smallest hull.

With the very large fleets of racing canoes in America this game might have been, and doubtless was, expected to last well on for many years; but it has gone down in the same rapid and unsatisfactory manner that it has in England, and now, on all hands, they are on the same lookout for something more sensible, more useful, and more marketable, as we were a couple of years ago. The 30-in. hike-balanced gossamer is in the States passing into the fossilized state of extinct species; but, even in its decline, we are, here in England, again threatened with a challenge by one of the declining machines—the Yankee, a 16ft. by 30in. watertight cylinder, with a sail plan and sliding man superimposed.

The Yankee was raced here all last season, and was thoroughly beaten as to winning, but we venture to say that in straight-away speed in a steady breeze, in which she could keep her bottom in the water, we doubt if there was a canoe with us that could hold her; but then, of course, races are not won by mere straight-on-end speed. Yankee was poor to windward, hopeless in short tacking, and, we might venture to add, very doubtful as to a performer in really rough water. But when she comes back from America, where she is said to be undergoing considerable alterations, her keel rockered at each end, probably her rig changed, possibly a bulb-keel fitted, what may we, or ought we not to expect? All depends on the course to be sailed, and the wind and sea that may prevail, a beating or a solemn event.



As to the racing for sailing canoes, the programme of the Royal Canoe Club is not yet settled as to locality or time; but with the certainty of more than one outside challenge for the £50 cup this year, it is highly desirable that the racing should be conducted at one place, and be spread over sufficient time for tuning-up to racing form and for mending after possible accident; also in such manner only as following out the programme over one course can the niceties of tidal set, shoal water, and wind vagaries be fairly grasped by competitors before the important international race. Whatever the ultimate choice of locality may be, one thing the club is pledged to is that it shall be on open or tidal water, a vastly different kind of racing to the placid Bourne End Reach, high up the Thames inland; and where soe'er it be we must not hold our American visitor in her altered state as of the same racing form as she exhibited last year; and, further, the Royal Canoe Club has to look to the fact that competitors of undoubted "go" are coming from other districts to fight for the Thames trophy.

Possibly in such circumstances the old club will see the advisability of organizing more than one cup defender, especially as the Dragon, the only one we hear of, of up to date form, is scarcely all that might be suggested for heavy open water, though excellent, no doubt, for moderately smooth water.—The Field.

[Yankee is now in New York, where she recently arrived by steamer, on her way to Clayton for alterations.]

"ONE DESIGN" CANOE—Designed by W. P. Stephens, 1895.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 6, 1895.

VOL. XLIV.—No. 14. No. 318 BROADWAY, NEW YORK.

For Subscription and Advertising Rates see Page ix.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

DUCK EGGS.

The open season for duck shooting in New York has been from Sept. 1 to March 1. This has just been changed by a bill which was passed last week to extend the season to May 1. In other words, having once abolished the spring shooting of wild fowl on their migration to nesting grounds, far north or within her own borders, the intelligent Empire State has receded, gone backward, and set for other States an example of improvidence and foolishness.

Now that one more fraction of protection has been removed from the migrating egg-laden hosts, it is in order for some spring shooter to view with alarm the ravages of the duck-egg barrelling Eskimos, up there in the Arctic, and to harangue us on the folly of permitting any ducks to get by, to fly up there to lay eggs for the savage to barrel. There is not a more enthusiastic, determined, self-denying and work-early-and-late game protector on earth than the spring shooter, who takes his gun and braves the inclemency of an April day to save what ducks he can from the fur-clad, blubber-eating, unkempt and insensate, egg-stealing Eskimo.

NO VACATION.

David M. Stone, the veteran retired editor of the New York Journal of Commerce, died on Tuesday of last week, in his 78th year. Mr. Stone was a self-made man, an able and distinguished journalist, a public-spirited citizen; and in writing their obituaries of him, his fellow journalists took occasion to point out as one of the noteworthy features of his career, the fact that during all his forty-four years of service with the Journal of Commerce, he had never taken a single vacation; not even a day off. He was "chained to business," even on holidays.

This is a remarkable record, and to have made it Mr. Stone must have been a remarkable man. First, in that he kept his health, and was not compelled for a day to give up the business grind; and second, that every spring he withstood the fishing fever and went contentedly from home to office, even when Mr. William C. Prime was writing his captivating fishing papers for the Journal. Most of us, who have been working at one thing and another for so long a period as forty-four years, have been compelled at some time, by reason of bodily infirmities, to forego business; but here was a man whose unwearied clock-work routine demonstrated what a perfect machine the human organism may be. And many of us, too, have reasoned that we were not getting all the good there was in life, if we missed the tumbling waters where the trout hides, or the brown fields over which the cloud shadows glide, and the dogs range. Most men cannot stick to business day in and day out for forty-four solid years; they could not if they would, and should not if they could. Life and the pleasures of life are to go together; the wise man makes certain of his share as he goes along.

Even this editor, who, in forty-four years took no holiday, gave in his life an example of the necessity and value of recreation, for Mr. Stone, like all other sensible people, had his diversion from routine. He was an intelligent and enthusiastic floriculturist. His home in Brooklyn was set amid grounds famous far and wide for their flowers; hyacinths, tulips, asters and others, there were more than 25,000 in all. In the care, cultivation, display and reposeful companionship of such a garden, supplemented by the exhilaration of speeding behind his fast horses, Mr. Stone doubtless found that complete change of attention and interest that constitutes the chief benefit of recreation of whatever character.

SNAP SHOTS.

The story of the killing of deer in March by residents of the town of Sandwich, Mass., is not a pleasant one to read, but it is gratifying to learn that steps are being taken by the authorities to bring the law-breakers to book. The utter disregard of the statutes protecting deer on the Cape has long been a source of dissatisfaction to law-abiding people, and many complaints have been made of this lawlessness. In the report of these trials, however, the most unpleasant feature was not the violation of the game law, but the implication, clearly expressed, that certain witnesses committed perjury, and that their perjury caused a ripple of laughter to run through the room.

It has often been said, but bears saying many times over, that it is not all of shooting and fishing to shoot and fish. Week by week, and year by year, the truth of that is being shown anew in these pages, wherein are recorded the nature studies, the travel experiences, the observation, suggestion, wit and wisdom of the sportsman tourist. "I think," writes Col. Mannsell, sending his story of sport in Ireland, "that the short historic sketch in the foreground, with the illustrations of old castle and tower, will serve the better to bring out the light and shade of the picture of sport in this work-a-day life." That is a happy way of putting it, the light and shade of sport. Without the light and the shade what a dreary waste would be the literature of rod and gun.

A correspondent alludes to the time "twenty years ago, when the Maryland farm laborer stipulated that he was not to have wild duck on his bill of fare more than three times a week." Is not this a variation of the old story of the apprentice who stipulated that he was not to be fed on fresh salmon daily We believe that the salmon story, though ascribed to a thousand different localities, has not been verified. Perhaps there is no foundation for this Maryland duck story. If there is we would be glad to know it.

Here is a hint for any old trapper or any young trapper to whom the Forest and Stream may come. Whenever you find a black fox in your trap, just see to it that he shall not get away. A black fox skin is worth many times its weight in silver. One sold at the grand annual fur sale in London the other day for $850. If a black fox comes your way, hold on to him.

Speaking of prizes, what is a rattlesnake worth? That depends. If the fortunate snake man were to come upon and subdue a specimen greater and more beautiful than the one whose skin adorns this office, he would hesitate to part with it for any inconsiderable sum. Yet, in Vermont, it has been determined that a rattlesnake shall be assessed at one dollar. That is the magnificent and munificent reward the State bestows upon the hero who slays a rattler within her borders. The Legislature could not have had in view to encourage the professional snake killer, for while at a dollar a head one might make day's wages in Texas, he would starve amid the sterile covers of Vermont. If the bounty is intended to stimulate amateur snake hunters, it may be said that one who would not adventure a set-to with a rattler out of pure human nature, would not be invited thereto by thought of one paltry dollar. The average Vermont Yankee, or even Canuck, who chances to slay a deadly snake, is likely to think himself a veritable St. George, and would scorn the stingy remuneration of this bounty. Moreover, is not rattlesnake killing, like virtue, its own reward? If one would not kill a rattlesnake for glory, would he for a dollar? What is likely to be the effect of this Vermont rattlesnake bounty on Vermonters, snakes and snake stories? These are points on which we would value the opinion of that Vermont farmer, sportsman, naturalist, wit and author, Rowland E. Robinson.

The late W. S. Kimball, of Rochester, was an active and interested member of several sportsmens' organizations, including the Rochester Rod and Gun Club. He was at one time vice-president of the New York State Association, and president of the Genessee Valley Fish and Game Protective Association. His ample means were always generously given to advance the interests of rod and gun.

President L. D. Huntington, of the New York Fish Commission, tells us that his office has on file no annual reports of the Commission prior to the thirteenth, which dates from April 12, 1882, and that any of the missing reports, to complete the files, would be very acceptable. If any reader of this paragraph can supply the documents, we hope that he will communicate with President Huntington, whose address is No. 53 Broadway, N. Y.

A Michigan correspondent, who has been down in Georgia, writes of a trap-shooting match in which the birds used were quail. There is no accounting for taste, and perhaps as a simple matter of sport, the trap-shooting of Bob White may find its defenders. But there is something in it to disgust most field sportsmen. In this Thomasville affair, some of the local sportsmen secured about 300 quail and challenged a team from the Piney Woods Hotel, and from the Mitchell House, to shoot a match. The Piney Woods people refused to shoot, claiming that it was unsportsmanlike. The match was shot, resulting in the local team coming out ahead. "It was mighty poor sport," says our correspondent, "the birds seemed to be starved, and dying of thirst, and very few of them could be made to fly. Many of them got to the woods with broken legs, and those that did escape unharmed were quickly pounced upon by the horde of darkey boys, so that few of them got away."

We have taken occasion to refer to the admirable record of Chief Game and Fish Protector Pond, the head of the New York force. Maj. Pond has administered his office in a way to accomplish results; he has been an honest, sensible, efficient, respected official. He should retain the place. In it he can do more than any new man for the State. If the proposed law shall be enacted, the Chief Protector will be at the head of the game and fish protectors, and of the forest wardens as well. To a long and wisdom-giving experience in the general field of fish and game protection, Maj. Pond unites a thorough knowledge of the Adirondacks. Both of these qualifications are essential to the equipment of a Chief Protector. We know of no one else possessing them. And yet it is confidently asserted that because of his politics, Maj. Pond is likely to be set aside for another. Such a change would be nothing less than a public misfortune. It is a tremendous pity that the law should not provide that the incumbent of the office of Chief Protector might be removed only for cause and after a hearing.

There has been a long standing complaint of the depredations upon the Wyoming elk supply by hunters who capture the game alive for export. The industry has come to an end by the adoption of a law forbidding the capture of large game of any species for purposes of exportation. An exception is made in favor of specimens intended for public parks, and even then the shipper must secure the permission in writing from the State game and fish warden.

The fish and forestry exhibits at the Cotton States and International Exposition, which will be held in Atlanta next September, promise to be of magnitude and interest. The United States will have an aquarium which will far surpass that of the World's Fair. Commissioner Macdonald is now in Florida arranging for a supply of sea specimens for Atlanta. The forestry exhibit will be under the direction of Mr. B. E. Fernow, of the National Bureau of Forestry, who promises that there shall be object lessons for stimulation to improve methods of forestry and of farming.

The late Allan Gilmore, of Ottawa, was one of Canada's oldest and best sportsmen. He was a well known enthusiast in fishing, shooting and yachting, and was a liberal promoter of out-door sports. Col. Gilmore was at one time during Mr. Hallock's incumbency, a considerable stockholder in the Forest and Stream Publishing Company. In 1879, Mr. Hallock was his guest on the Godbout River in lower Canada, a notable salmon stream, of which he was sole proprietor.

The Sportsman Tourist.

UP THE TOMBIGBEE.

If Charles Dickens were alive and could take a trip up the Tombigbee River on a cotton steamboat, he would find some of the same kind of people he describes in his "American notes," written nearly fifty years ago. He would still find the man on board who shovels food into his mouth with a table knife and cuts butter from the butter dish with the same knife, and he would also find the vulgar politician making "spread eagle" speeches.

Mr. C. F. Clarke, from Des Moines, Iowa, and your correspondent shared a stateroom on a "cotton steamboat" plying between Mobile and a little town called Pickens, situated on the Tombigbee River, four hundred miles from Mobile. We were seven days making the round trip, and had an excellent opportunity of studying the planter, lumberman, stock-grower and moonshiner.

Our steamer was old, and had run on the Tombigbee and Alabama for the past twenty years. She was 160 feet long and 27 feet wide, and could carry 1,200 bales of cotton at one load. She had a cabin on the upper deck, running nearly the whole length of the boat. The front end of the cabin was left for the smokers and chewers. A long line of state rooms on each side of the cabin was headed by a barroom on the starboard and the purser's office on the port side. The after part of the cabin was cut off by curtains, forming the ladies' cabin, and when this was occupied the oaths and obscene stories were somewhat curtailed, for the roughest specimen of the whiskey-drinking cracker will lower his voice to a whisper when told "there's ladies in the cabin." On top of the cabin there was another cabin called the "Texas," which the darkey passengers occupied, and on top of the Texas the pilot house was located.

The captain, who was part owner of the boat, was about fifty years old, and "put together to stay." His good nature bubbled over in every speech and story. We said we were from Iowa, and wished to see the Alabama "elephant," that the antives kept hid on the Tombigbee River, and we especially wanted access to the pilot house, where we could see the bottom land and wild game up and down the river. "That's all right," said he, "come on board; you may eat, drink and sleep as much as you please; you may occupy the pilot house or any other part of the boat, and you may play draw-poker all the time you can spare from eating and sleeping." He was a good story-teller, knew everybody from the Mobile to the head of the river, and generally called them by their given names.

The mate was a large, muscular man, about forty-five years old, had been many years on the Red and Mississippi Rivers, had recently killed a dusky roustabout on the Mississippi River, and was now in hiding for that overt act. He had a bad face, with eyes that would drop when talking to you, and a voice that sounded like a "siren fog horn." The darkies stood in mortal dread of this fiendish officer, and would scramble up the steep, slippery, clay bank, carrying barrels and other packages weighing 200 pounds and upward. Often he would load heavy boxes on the shoulders of four darkies and make them carry the same over two springy, twelve-inch planks, to the shore, and then up a slippery clay bank to the top, forty feet above the water, cursing them from start to finish.

We had a pilot who could make the mammoth steamer do his own "sweet will." He had manipulated the wheel of this steamer for twenty consecutive years. This pilot was the coolest man we ever met on a boat. He was making a difficult landing, and at the same time telling us a story. The captain, who was of a nervous temperament, sang out: "look out for that stump!" "There's no stump there," said the pilot. "There's a stump right dead ahead, covered up by the high water, I saw it on the down trip," said the captain. "The stump you are talking about is about twenty feet above," said the pilot, who now finished his story, and the boat in the meantime softly touches the bank, as if landing upon a cushion of feathers.

We steam up the river towards a high bluff of vertical rocks, upon which a negro boy is waving his hat. The pilot steers the boat straight for the rocky bluff, and tells the mate to get the "post office" ready. We were approaching the rocks at full speed. We got nervous, and anxiously wished the pilot would ring the slow bell. He is telling us about his boy, who is an expert cyclist. We think he is forgetting his stop bell. He holds the bell cord in his hand and continues to talk about that boy, while we, with bated breath, calculate the time it would take to get our boots, coat and vest off, that we might be in swimming costume. At that he rings; we draw a long breath, the boat slows down and touches the rock so lightly that there is no jar perceptible. The mate produces a long, bamboo pole, with a canvas bag attached to the tip, in which the darkey puts a letter. We back up, and are soon on our course, losing but a few moments in taking on the letter. "Do all of the boats stop for a letter?" we ask. "Certainly. That letter may contain an order for goods that this boat will bring on the next up trip."

The pilot blows the whistle three times for a railroad bridge, which we soon approach. He rings the speed bell, and steers straight for the pier that held the draw-bridge. What does he mean to do? He will certainly strike the pier! He said "I have the best violin in the State. It's a charmer! If I had it here I would play you 'After the Ball,' keeping the jack-staff pointed for the pier with provoking coolness. The captain became nervous and said, "I think—for this high stage of water—you are running too devilish near that pier." "No danger of striking the pier. There is more danger of striking the 'butment on the starboard, than hitting the pier." And turning to us he said, "I think that After the Ball is the sweetest music that has been written in twenty years." At this point we were within fifty feet of the pier. The pilot still held the wheel hard over to port, but the current, to our surprise, carried the boat away from the pier, and when we passed through we were nearer the shore abutment than the pier.

"While you boys were sweetly sleeping last night," said the pilot, "the engineer came very near killing this old boat."

"What was the matter?" we inquired.

"I gave the back bell in the middle of Rattlesnake bend, and just then the engineer caught the shaft on the centre. She was headed for a rocky bluff, and all I could do was to try and find a soft place on the rocks. I just missed a sharp rock by a few feet, and seeing something darker than the rocks, I put the cut water into it and saved the boat. It was some mud that the late rains had brought over the rocks. Had she struck that sharp rock, or bucked her brains out on the bluff, she would have sunk before you could have got into your pants."

"Close call for the passengers. Why didn't you wake us up?" we said.

"There wasn't time. It was all over in thirty seconds."

"How deep was the water at that bluff?"

"Twenty feet; 'twould about cover the deck over your state room." Then he told us of burned and wrecked steamboats, wherein many people were burned or drowned, until we were convinced that we were on a treacherous and dangerous river, and began to speculate as to chances of getting out of our state room in case the boat sank or burned. The pilot seemed to read our minds, for he broke out again in this wise: "Do you see that old wreck in the mud, and those boilers on the bank? That is all there is left of the steamer Wm. H. Gardner. She caught fire among her cotton bales, and they ran her ashore on that mud bank. Twenty-one people lost their lives. A great many were saved by clinging to the floating bales of cotton. This boat was close behind, but we could not pass the burning boat. We tied up to the bank and went after the floating passengers with the yawl. Our captain swam out and saved two ladies. It was a dreadful scene."

The guard, or rail of the main deck of a loaded cotton steamboat, is only six inches above the water, and should the boat take a list, or roll from any cause, sufficient to take in water, she would sink so rapidly that people in their berths would be caught and drowned without a moment's warning. From that time until the trip was over we slept in pantaloons, stockings and vest, that we might be ready for a swim at any moment.

Every county, save one, from Mobile to Pickens, a distance of 400 miles, voted "dry" on the temperance question. In our unsophisticated verdancy we expected to find, at least, a small majority of the people living in these dry counties temperate, but strange to say, from "all sorts and conditions of men" living in counties bordering on the Tombigbee River, ninety-nine per cent. drink whiskey. We counted over one hundred jugs, holding from one to three gallons of whiskey stowed in the front end of the cabin. As each jug was delivered to white men living in these "dry" counties, we concluded that the planters voted dry to keep the whiskey from the darkies.

Every man whom we saw from Mobile to Pickens and back used tobacco. We started with about one hundred passengers, only two of whom were ladies, both of them getting off at the first landing. The men were planters, lumbermen, cattle and hog buyers, all of whom patronized the bar and played "draw poker" by turns. When not playing or drinking they sat in a great circle around a hot stove, talking about the low price of cotton, the mistakes of the Cleveland administration, and the way Kolbe was cheated out of the gubernatorial office. As they talked they spit on the stove, the steam from which filled the cabin with an odor that was nauseating.

The young Alabamians wore modern clothing and "tooth-pick" shoes, but the older men still wear the broad-brimmed "cow boy" hat, broad-toed boots, and allow their whiskers to grow very long, ending in a long "goatee." We had just come from Florida, where the natives were tall, lank, lean and bilious, but we found the people of Alabama were short, fat, vigorous and healthy.

Among the passengers was a cotton-seed buyer, who was the personification of vulgarity. He was rotund, robust and ruddy, was a great talker and enjoyed a practical joke—on the other fellow—immensely. He weighed 330 pounds, wore long whiskers and a frilled shirt, both of which were stained with much tobacco juice. When sitting down his knees projected only about four inches from his enormous abdomen and he seemed to be helpless; but once on his feet, he could kick the boys' hats off and walk the deck for hours with any of us. He had been a steamboat captain "before the wah," in the palmy days when cotton was king, and sighed for the good old days when cotton was twenty cents per pound. He was a Democrat of the "deepest dye," and had many word "scraps" with the Populist farmers on board. While telling a story he had a far-away look in his eyes and talked in a profound and dignified tone of voice, until he reached the culminating point, when he would burst into a laugh that not only shook his sides, but the stove and desk as well.

All day long did we steam up this beautiful river, changing the scenery with every revolution of the wheel. At one place we went ten miles around a bend to make one mile on our course. We passed several plantations that were owned by negroes, one of whom owned a plantation of 1,500 acres, which he bought soon after the war—"on time" for $6,000, and paid the last dollar within three years from the date of the purchase. This plantation is now worth $15,000. He is the wealthiest negro on the Tombigbee River. Many times did the river seem to be stopped by a limestone bluff, running at a right angle of the stream. Then we made reverse courses like a mammoth letter S, with the bank lined with a dense growth of maple, beech, birch, oak and other hard wood trees. Many of these trees are decked out with the mistletoe, an air plant that clings to the branches of trees that stand in or near the water.

The bottom lands on the Tombigbee are fertile, and grow from forty to fifty bushels of corn to the acre. Each planter has a landing at which he ships his products, and receives his merchandise, though it be only a pint of whiskey; for all of the boats land on call, if only to take on or leave a letter.

Among the men on board who took too much fire water was a cattle buyer from Mobile. He had $1,000 which he exhibited recklessly and was anxious to bet on this, that and the other. He had a loaded revolver, with which he kept everybody extremely nervous. Our captain finally captured the revolver, and we felt more secure. The bar-room had a window that opened out on deck, called the "nigger hole," where only the darkies drank. Here the cattle buyer would stand and treat the darkies, but drunk as he was, he would not drink with a nigger. He soon got "drowsy" and fell asleep in his chair. At the next landing he was to get off, and the captain had great difficulty in getting him ashore. He said he would not go, and wanted another drink. The captain had the bar-room locked up, and took a bottle of whiskey, with which the drunken brute was induced to go ashore.

The Tombigbee is the home of many geese, ducks and other wild game. We saw many wild turkeys, of which we will write in our next letter.

R. P. Bell.

SPORT IN IRELAND.

In happy soldiering days in old Ireland, an infantry regiment on the line of march from the garrison town of Athlone to that of Birr, twenty-two miles distant, halted for "ten minutes of refreshments" at the gate-lodge of the extensive demesne of "The Doon," lying midway between the old castle and the large square mansion, the residence of the head of the O'Moinagh family, Anglice the O'Moony, himself a very chieftain of the soil, a nobleman of noblemen. The most unromantic member of the large family of Tommy Atkins of the British army could not fail to be struck with the peculiar beauty of the landscape. Having left behind en route many miles of flat and comparatively uninteresting peat bog, here we found a veritable oasis in the desert.

It was with regret that we all heard the bugle sound, "fall in," after this too brief period of refreshment. The colonel resumed his place, the band struck up, the colors floated in the summer breeze, the regiment continued its march, and again the prosaic bog succeeded the poetic oasis.

Since that time I have more than once renewed my acquaintance with men (not men only) and things, in this most picturesque part of old Ireland. It is of this spot, its ancient history, its peculiar features, as an introduction to its sport, that I now propose to speak.

Situated in the centre of Ireland, in the heart of the great bog of Allan, several "Eskers," or gravel-hills—

DOON CASTLE.

running east and west as far as the river Shannon—seem to rise abruptly from the surrounding bog. These Esken, a puzzle to the geologist, are apparently an eccentricity of the glacial period. On one of these stands the strong castle of the Doon, the home of some of the old kings of Ireland, the architecture of which dates back to unknown ages. On another Esker near the mountain is a so-called Danish fort, surrounded by a double-ringed foss, and connected with the castle by a series of subterranean chambers of the rudest masonry, intended, apparently, to enable the king or chieftain, with his retainers, to retreat from castle to fortress, or vice-versa, as he was pressed by an opposing force. From this castle they were wont to sally forth, accompanied by wolf dogs, to assist at a faction fight, or other tribal struggle.

On another of these Eskers, named Bunthulla, "the world's end," on the bank of the silvery Shannon, eight miles distant, was built in days still further back, when Ireland was called "the Isle of Saints," one of the great colleges under the protection of the clergy called "Clonmacnoise," anglice—"The retreat of the sons of the nobles"—where were afterwards built seven churches.

From the castle of Clonmacnoise ran a road from Tara, named the "Pilgrim's road," (The celebrated Hill of Tara, in the county of Meath, twenty miles from Dublin, is supposed to be the site of a magnificent royal palace.) Through woodland and over bog, this "Pilgrim's road" ran—constructed on piles or beams of oak, which to this day are found in the bog, blackened and hardened by long immersion in its preservative moisture. The Pilgrims who traveled on this road in those barbarous days

must eagerly have sought the protection of the powerful chieftain of castle and fort.

"Clonmacnoise" is full of interest to the archaeologist and the artist.

There it is, the city of the dead, the resting place of king and prince, of bishop and warrior, and of the venerated saint, St. Ciaran, who died A. D. 523. There, too, its tower (its use unknown) and mined archway, its cathedral and castle, and there are celtic crosses, with all their old associations, and in all their beauty.

To hark back, after this brief description, and travel, if we may, by the "Pilgrim's road," to view the present surroundings of old castle and fortress.

We leave the peat bog, with all its peculiar picturesque-

SUBTERRANEAN CHAMBER.

ness and enter a natural forest (one of the few remaining forests in Ireland) clothing hill and dale with wide spreading trees, oak and ash, beech, birch and pine, with the most luxuriant under-wood, laurel and holly in abundance. Here is the home of many a song bird, thrush and blackbird, redbreast and wren, goldfinch and linnet. Overhead the untiring songster, the syklark. Here, too, in forest, the woodcock rears his family, and finds shelter from rain and storm, and in fine weather he saunters forth on the adojining peat bog to join his more adventurous brother, the bird of passage from foreign parts, from Corfu, Kefalonia, or other favored Mediterranean winter resorts. Here the squirrel and rabbit vie with each other in activity, only concerned to avoid the cunning fox. Outside the forest, in the bog, grouse and snipe are found in large numbers. Can it be wondered at that the O'Moony of all the O'Moonys, the lord of the soil, surrounded by a loving and admiring tenantry, should consider himself a chieftain of chieftains? The following is told of one of the heads of the family, who visited London not many years ago. Accustomed only to command, and being short of funds, he entered the bank of England and presented a cheque. Wondering at hesitation on the part of the clerk, in not at once giving him the needful, he stated in strong and unhesitating terms that he was "The O'Moony of the Doon." It was a further cause of surprise to him when he was informed by the bank clerk: "I don't care whether you are the O'Moony of the Doon, or the O'Doony of the Moon."

It was in company with this chieftain that I had many a days' sport in the woodcock coverts, in the snipe bogs, and duck-shooting on the waters of the Shannon, not far distant. Some reminiscences of these days may not be without interest.

A grouse-shooting party, consisting of the chief, a neighboring squire, my eldest brother and myself, assembled on a bright day in early autumn.

The squire, a keen old sportsman, had the arranging of the shoot, and in his eagerness to make a good score, selected the best ground for the chief and himself, my brother and myself, mere boys in sport, having "the leavings." The day was hot indeed, the sky without a cloud. We boys no sooner appeared on the open bog with our brace of setters than pack after pack of grouse took flight for parts unknown, leaving us dejected, cast down, and in despair. We heard many a shot from our friends, proving to be at long range, while we walked on without touching a feather. Even our setter dogs seemed in despair, looking at us as if to say "what fools we are to hunt the barren ground."

Evening had set in, we must have another try, on a piece of rough high ground in front. No sooner had our dogs got on this ground than there was a splendid set. We approached the dogs in doubt, up got a single grouse. He speedily fell to my brother's gun. Another set! What can this be? Another single grouse, which I bagged. This went on for some time. Single grouse getting up, and we boys with our "eye in" dropping grouse after grouse until darkness set in, and we called "cease fire." With glad hearts we carried home our heavy bags, to find our friends already dressed for dinner. We were to dine out at a neighboring squire's house. There was astonishment at our big bags, while our friends had but one or two grouse. There was no time for explanation till after dinner, when we had to tell our story, and as we accurately described the place of the battue, more than one person was astonished. We had overstepped the territorial bounds, and got into the lands of the giver of the dinner party, and the grouse we had shot were his, and those our friends had scared with their long range unsuccessful firing.

What splendid cock-shooting we had in these same bogs near the woods in early winter, when woodcock, having spent their nights in the well-sheltered woods, came out to bask in the sunshine in the rough hillocks of the adjoining bog. How picturesque the sight! The long line of beaters, each man clad in the peculiar dress of the country—tall hat, tail coat, knee breeches, many men bare-footed—the gunners interpersed among the beaters, the air resounding with the merry "Hi cock! Hi cock!" then the excited "Well done, your Honor!" as the heavy woodcock was cut down, as a result of the well-directed aim.

Speaking of the "well-directed aim" reminds me of a day's cock-shooting with the Squire. He had kept his best shooting for me—a great mark of favor. We were walking beside a thick hedge, he on one side, I on the her, through which we could not see, keeping in line as t we could. A cock got up in front of the squire. I could not explain why, but I fired in the supposed direction of the bird. Just as the squire was about to bring the gun to his shoulder, I had, to his utter astonishment, "cut down" the cock. Without seeing the quarry, I had "wiped his eye," and alas! I had made a life-long enemy. His face, showing just indignation, cannot be described, as he handed me my cock when we met.

Memories of duck-shooting on the Shannon, near Clonmacnoise, will linger long in my mind. Not only was the sport good, but the picturesqueness of the scene, with its historic surroundings, round tower and Irish cross, on the banks of Ireland's grandest river, the Shannon, with perhaps the most brilliant of setting suns, added greatly to the charm. The caretaker of the sacred grounds of Clonmacnoise, the renowned Keeran Molloy, was the keeper of the chieftain's duck-shooting equipment, punt and swivel gun, small boat and paddles. The party of four gunners was divided equally in punt and small boat, one gunner working the swivel gun, the other with shotguns ready to pick up wounded duck, or to shoot a stray snipe from the marshes close by, after the swivel gun had done its work. Keeran had the post of honor, as steersman of the punt. No Micmac Indian ever used more skill—the straining of eye and ear, the creeping from cover to cover, the careful observation of wind and sunshine—in the still hunting of caribou, than did Keeran Molloy in steering the punt on to the quarry, the long string of ducks, mallard and teal, with an occasional sheldrake and diver from the distant sea, as they rode proudly on the rippling waters of the Shannon; the small boat, with its occupants, keeping at a respectful distance. Through bullrushes and sedge grass we move up wind, carefully avoiding all noise, nor does the gunner in charge of the swivel gun use less skill. With eye and ear he is on the lookout for the supreme moment, when the scouts of the party of ducks, having given the alarm, the flock rises simultaneously from the water, and now is the time for the discharge of double B shot into "the brown" of the flock. Ducks fall in numbers; gunners

THE CITY OF THE DEAD.

Nos. 1 and 2 seize their small shotguns, gunners 3 and 4 paddle up with rapid strokes, and a battue succeeds, only to end when all wounded birds have been accounted for.

Often we have brought to bag fifteen or twenty ducks as the general result of one such battue. We can now stretch our legs, hitherto cramped in the confined space afforded by punt or boat, and before starting for another such battue further up or down the river, you may well turn and gaze on the sun, now sinking behind the round tower of Clonmacnoise. Later on, when you return to your quarters at the Doon and lay the spoils before the admiring inmates of that hospitable house, you must acknowledge that you have had a good day's sport, and that "life is indeed worth living."

MIC MAC.

TWO TALES OF THE ROAD.

In one of my previous communications I referred to a rather thrilling night ride which I had on the occasion of a certain trip to the post-office for the camp mail. The incident has suggested a day ride which I had on a certain occasion, and which, while wanting in those particular features which always give to night adventures a peculiar creepy charm, is yet I think of sufficient interest to deserve recounting in this connection.

Before touching upon this incident, however, I want to relate a peculiar experience which I had one day while trout fishing, which illustrates better than anything I ever heard, a type of unconventionalism quite peculiar to a certain class and certain localities in the far West. I was, on the occasion in question, fishing in a park or open piece of ground about three miles down the valley from our camp, with my mule feeding and slowly following along after me. I had a few days before lost a particularly fine trout in a pool at the lower end of this park, and so absorbed did I become in planning just how I was to get him this time, and in making estimates as to his length and weight, that I quite forgot about my mule. Indeed it was not until I had hooked and, after quite a hard fight, landed the trout in question, that I thought to look after my mule, and then I noticed that a man was walking toward her from the road, where stood another man, evidently the first one's partner, silently watching his operations. There was no mistaking this fellow's purpose, I thought, and having no desire to part with my mule just then, I immediately started back toward her. I concluded quite naturally that neither of the men had seen me, and thought that as soon as they observed my presence they would give over their evident designs upon my animal.

I felt almost sure after a little that the fellow must have seen me, but as he kept steadily on his way, I at length shouted to him: "Stranger, that mule belongs to me."

To my surprise, however, he did not hesitate in even the slightest degree, and then to my unutterable astonishment, he replied in the most nonchalent matter of fact way possible: "Wall, I reckon I'll have to use her a little bit."

The cool assurance and audacity of the fellow nearly took my breath away, but I managed to say to him: "But you can't use her, she belongs to me, and I want her myself."

"I reckon I'll have to use her just the same," came the reply in that same tone of cool unconcerned assurance, and the fellow kept right along on his way. I had on that day a short, light overcoat, which gave me a rather dudish appearance, and doubtless disposed the bold fellow now quite near me to believe that I was a tenderfoot without the nerve or means with which to protect my property. In one of my overcoat pockets, however, there reposed a Smith & Wesson 44, which I could use with about as much facility as the average man, and I suddenly determined upon a plan through which I hoped to continue in the possession of my mule.

We approached the animal from nearly opposite directions, and almost at the same moment, and just as his hand reached out to grasp the bridle rein near the bit, I showed my gun full cocked and with finger on the trigger under the mule's neck, saying at the same time in a quiet tone of voice: "Stranger, that mule belongs to me."

I had the drop on him dead to rights, a fact which he was very quick to recognize, and in the same quiet voice as before, he said as he looked into the dark, ominous muzzle which yawned before him: "That settles it."

Then he turned about and walked back to the road, never once turning his head to look in my direction. When he reached the road he picked up his pack, and he and his partner resumed their way, apparently as unconcerned as though they had been merely chatting with a friend, and not trying to rob a stranger of his mule. It was the coolest, boldest bit of audacity that I ever witnessed, and for some moments I was undecided whether to be angry or amused at the incident. Its humorous aspects, however, appealed to me so strongly that my anger cooled quite rapidly, and many times during the balance of the day did I find my face wreathed in involuntary smiles as I recalled the beautiful nerve of the fellow who "reckoned he'd have to use my mule."

There was nothing amusing, however, about the other experience which I referred to in the beginning of this article, and while no hostile demonstrations were openly made against me, yet I never had the slightest doubt that a man meditated my death, and but for my wariness and the fortunate appearance of another man, would doubtless have attempted, and probably succeeded, in carrying out his fell purpose. It was on the occasion of a visit to Georgetown, where I had been sent by the manager to get $5,000 cash, which was needed for a special purpose.

I was accompanied by a fellow named Martin, who, together with another man, had a contract for building a tramway for the company, and whose mission, like mine, was for the purpose of securing money. He had completed part of his contract, and had received a check from the company, with the proceeds of which he expected to pay the wages of the men employed by him and other expenses incident to their contract. The fellow came of a very respectable family, but he was a hard character himself, and it was freely prophesied by those who knew him best, that he was sure to become involved in some sort of trouble before the completion of his contract. He was ordinarily, however, a clever sort of a fellow, and proved to be a very pleasant companion on the way over, the prospect of soon getting hold of a good, big sum of money, doubtless having upon him the same effect which it has upon humanity in general.

We reached Georgetown rather late in the afternoon, but while the bank was still open, we decided to postpone our return until the following day, both on our horses' account, and because darkness would surely have overtaken us before we could have covered half the journey, and a night ride over a rough mountain trail is not the pleasantest sort of experience imaginable. I lost track of Martin shortly after our arrival, and as I had a personal letter from the manager to one of the officers of the bank, who made himself very agreeable to me, I didn't think much about him during the evening or speculate as to his whereabouts. When I came to retire, however, I thought it a little strange that I had seen nothing of him during the evening, and finally decided that he had been indulging in a little time, a weakness quite common to the rough western spirits, when first visiting a town after an absence of several weeks or months sometimes, in a small mining camp. The next morning after breakfast, as Martin had not shown up, I decided to repair to the bank, secure my money, and, if after a reasonable time he failed to appear, to start on my return journey. After a short delay at the bank I obtained my money, and just as I reached the street, who should I encounter but Martin. That he had spent the night in a wild debauch was very evident to me from the first glimpse which I caught of his haggard face. His eyes were bloodshot, and withal there was a look of the most profound dejection upon his face.

"Well, where on earth have you been, Martin?" I asked after a moment's survey of him.

"I've been makin a night of it," he replied in a hoarse voice, and then he gloomily added: "I drew my money yesterday and lost every cent of it last night at faro."

I was too surprised and disgusted at first to say anything, but in a moment I said: "Well, you are a fool."

"I know it," he laconically replied, and then after eyeing me intently for a moment, he added: "You've got a lot of money with you now; lend me some of it and I'll go and win back the money I lost."

"In the first place, I haven't got much money," I replied, determined to deceive him if possible with reference to the amount which I had with me, "and in the second place, if I had ever so much, I wouldn't let you have any, for it would be simply throwing it away."

There was an angry and desperate look in his eyes as I finished, for he realized that the hope which he had entertained of getting back the money which he had lost and saving himself from disgrace was not to be realized.

For a moment he glared at me angrily, and then said in a low and rather threatening tone of voice: "You've got

a lot of money, I know, and can let me have some just as well as not. Come, don't be foolish, now; let me have it, and I'll make it all right with H. (the manager) when I get back to camp."

I was obdurate, however, and when in a moment Martin began cursing me violently for my meanness, I turned on my heel and left him. Hastening to where my horse was stabled, I ordered him saddled, and in a few moments was on my way back to camp. I had gone four or five miles, I should think, when the sound of a fast galloping horse on the road behind me came to my ears. The very first hoof-beats sent a thrill of apprehension over me, for I seemed to realize almost intuitively that the new comer was none other than Martin, and such it proved to be.

"What is the scheme now," I asked myself, with a nervous start, for when I recalled his great anger at our recent parting, and the desperate frame of mind he seemed to be in, his evident desire to overtake me now seemed to presage trouble of some sort for me. The horse's foam flecked-breast, dripping flanks and fast heaving sides, told the story of the hard ride which Martin had made, and I thought that I knew him well enough to know that he had not done it without some clearly defined object in view. I kept my eye upon him as he approached, and as he drew near to me, it was very apparent that his feelings toward me had undergone a great change since our recent parting. He very contritely begged my pardon for his display of anger and the harsh language which he had used toward me, but pleaded in extenuation that he had felt so desperate at the loss of his money, and the disgrace and trouble that were certain to follow, that he scarcely knew what he said or did. "I did perfectly right in refusing him the money," he said. "and he only hoped that I wouldn't feel angry at him for the manner in which he had acted." Of course I couldn't fail to respond to such a frank acknowledgment of wrong as this, and I assured him that I treasured up no hard feelings against him for what he had said to me, but at the same time I could not disabuse my mind of a certain vague suspicion which I entertained concerning him. From what I had heard and knew of the man, I found myself very strangely disposed to doubt his profession of repentance, and to see in them merely a cloak for concealing his real designs toward me. As to what they were there was of course little doubt; for if he was actuated by any sinister purpose whatever, it was unquestionably robbery.

I hurriedly ran the situation over in my mind, and figured it out about thus wise: That after having squandered the money due on his contract, he would hardly dare return to camp and face the anger of his partner—a fellow that would bear mighty little trifling with—and their employees to whom there were due several weeks' wages; that having decided to seek other pastures, he had determined to go away as well heeled as possible, and knowing that I had a considerable sum of money about me, he had decided to try and despoil me of it. That he would not hesitate to shoot me if it became necessary to the success of his scheme, I hadn't the slightest doubt, and as I considered the many miles of dreary mountain road and trail ahead, where, despite the utmost precaution on my part, undoubted opportunities would be given him for carrying out his purpose, a feeling of despair and terror came over me.

My first impulse was to turn about and return to Georgetown, but thinking that this would probably precipitate a hostile demonstration on his part, I decided to wait a while in the hope that I would meet some one on the road whom I would make acquainted with my fears and ask to be permitted to return with him. And thus we rode side by side for several miles, he mourning the loss of his money and formulating no end of good resolutions for the future, while I watched with constantly increasing anxiety for the sight of some friendly traveler. None appeared, however, and when at length we approached the spot where the trail we were to follow led from the main road, I could with difficulty control my agitation for I knew that it probably would be somewhere on this trail that he would seek to put his malign purpose into execution. It was a lonely, rugged trail, traveled by few people, just the spot one would seek for the commission of a dark deed, and, glancing at Martin's face, I fancied that I could detect in his eyes the gleam of sinister anticipation.

One thing I had decided upon, and that was under no circumstances would I lead on trail, which I had no doubt he would endeavor to have me do, as it would give him just the opportunity he wanted, provided he had designs upon me. If he declined to lead himself, it would be ample confirmation of all my suspicions. In a moment more we drew up before the entrance to the trail, and almost simultaneously brought our horses to a standstill.

"Go on," he said, quietly, indicating by a motion of his hand that I was to lead.

"Go on, yourself," I replied in as quiet and unconcerned a voice as I was able to command, although it struck me right away that it sounded strangely unnatural. Martin was not slow to notice it, and as he glanced at me, I think he must have suspected my reason for not wishing to lead.

For a moment he eyed me with a scowling visage, and then with the suggestion of a sardonic leer upon his face, he asked in a mocking tone: "Pray, what is your reason for not wishing to lead?"

"I have no particular reason," I answered, uneasily, for there was an ugly threatening look to his face, "only that I prefer to have you."

"Oh, you do, eh?" he answered, in the same mocking tone, but there was to it now a ring of anger, suggestive of a realization of balked hopes.

Then for a moment we sat there eyeing one another, a flush of anger slowly deepening on his face, while with me the feeling rapidly developed into a conviction that each succeeding moment would see him reach for his revolver and make an attempt on my life. I had some time before quietly loosened my revolver in the holster, so that I could use it quickly in case of emergency, and the protruding handle and my right hand resting carelessly on the pommel of my saddle only a few inches away, told Martin's experienced eye that in case of a break I was very liable to get into action quicker than he.

I don't know how long it would have been before hostilities would have begun, but just at that instant the sound of hoofs came to our ears, and in another moment there appeared around the shoulder of the mountain on the main road a man whom I recognized as George O'Connor, a resident of Georgetown, and who had visited our camp on one or two occasions. If I could have named any particular person whom I should have wanted to appear on the scene at that critical moment it would have undoubtedly been George O'Connor. He was a great big fellow with the thews of an ox and courage of a lion—he was subsequently, for a number of years, city marshal of Leadville—and as my eyes rested upon him a great wave of joy and thankfulness rushed over me. Martin's discomfiture was so complete that for several moments he stared at O'Connor in a foolish, helpless sort of a way, and then realizing that his game was up, he struck the spurs into his horse and started onto the trail, remarking to me at the same time, in a tone of mock politeness: "Since it is your wish, why I'll go ahead;" and he went on without waiting for me.

When O'Connor came up I explained the matter to him, and he agreed with me that there was little doubt that Martin intended to do away with me and then rob me. At his suggestion I returned with him to Georgetown, and on the following day he accompanied me back to camp. We found on our arrival there that Martin had not shown up, as we suspected, and indeed he never did, much to the disgust of his partner and their employees.

The manager was a little nervous because of my failure to turn up the day before, as it was expected I would, and he had, he said, a presentiment that it was occasioned by trouble of some kind with Martin. As I finished, he remarked with a laugh that O'Connor had a happy faculty of turning up just when he was wanted, and then told a thrilling story of how he once rescued him (the manager) from a very perilous position, which I may possibly at some future time give to the Forest and Stream.

SANCHO.

THE SUNNY SOUTH.—VIII.

NINE DAYS IN THE FORTUNATE ISLES.

CHICAGO, Ill., March 20.—History recounts that less than one hundred years ago a large slice of the country in the Mississippi valley, not far from Memphis, sunk from sight, and became the bottom of an inland sea, which sea was afterwards run for the accomodation of ducks, geese, and other wild fowl. I have no doubt whatever, that after a while some more of this country will sink, and leave Memphis alone standing above the surface of the surrounding country the perfect realization of the imaginary land known as the Fortunate Isles, which we read about in the poetry books. Indeed I am not sure that the title may not apply to Memphis in advance, for already it is a spot fortunate to visit for one who is a lover of the sports of the field. Certainly I was very well content to be situated at Memphis with nine good, long, glorious autumn days on my hands between my Louisiana and Texas trips.

I do not recollect that I went out hunting more than three different days, but I could have gone every day, and when one is conscious of ability to do a thing, he isn't always so particular about actually doing it. We would all round up early in the day at Tom Divine's office, and tell shooting stories and make plans and discuss shooting localities and keep Tom Divine from transacting a day's business. Then we would go out and eat something and come back and do it all over again. The first quail hunt that actually materialized, out of all our threatening, was one which Mr. W. F. Allen and I had together. We took his black pointer, Jess, and Mr. Sim's setter, Jim, both very good field dogs, and I am pleased to say, not field trial winners, which latter I carefully avoid whenever possible. And rode out one glorious morning six or eight miles into the rough hill country near the once celebrated, but now dilapidated village of Raleigh. The modern part of Raleigh consists of some mineral springs and a fine hotel, an electric road connecting the same with Memphis. The ancient part, which is older than Memphis itself, is represented by a few weather-beaten buildings, which speak appealingly of the past. All around the little village are forests and fields, cotton patches, briar thickets, sorghum grounds, everything necessary for a perfect quail country. The sun had not become warm when Mr. Allen and I delivered our horse and buggy into the hands of a colored man we picked up, with the instructions that he drive around to a farm house, about three miles distant, meeting us there in time for lunch, after we had hunted across the intervening fields.

THE NEGRO IN SPORT.

The negro makes a large factor in the field sports of the South. In the North we do our own camp work, teamdriving, etc., to a large extent, and when you speak of this to a Southern sportsman it always causes surprise. The Southern idea of comfort in camp means a large tent, abundant camp furniture and two or three servants to do the work—an idea which certainly grows upon one, and which one is not disposed to call a bad one after he has gained acquaintance with it. The negro, too, is the general errand boy of the South, and there is one of him always present whichever way you look, either in the city or in the country. In the North if you want your team taken around three or four miles through the country, you may or may not be able to get a farmer's boy to do it, and usually you compromise by letting one of your own party do it. In the South you simply hail the first negro, and the negro doesn't ask any questions, and doesn't say anything about any pay. A good deal of the time he doesn't get any pay, but he has put in the time just the same, and feels just as happy. The Southern men say that if you go to putting exact values upon the services of the colored population, and thanking them for what they do, and treating them as if you were under obligations to them, you spoil them so that you can't get along with them at all. I don't know anything about the theory of these things, and do not wish to involve the constitution of the United States in any serious argument, but I know that practically the two races get along better and more pleasantly in the South than they do in the North, and they both seem to be about as happy as they do in this country. If I could have one of the most sincere wishes of my heart gratified, I would export about four thirds of all the Chicago city negroes, and I wouldn't send them to Liberia either. We don't understand them here, and we are not good enough for them. I would like to have them all have a liberal education among people who are on to them.

THE OFFNESS OF AN OFF DAY.

Well, anyhow, our negro man got around to the farm house all right, and was asleep on the sunny bank when we got there about the middle of the day. Then we sent the horse and buggy on over to another plantation where we rounded up in the evening, and that was the end of the negro. I can't just figure out where he laid up very much money at it, for I don't remember that either of us ever gave him anything before his disappearance. I simply give this incident in its bald simplicity to show the difference between the ways of the North and those of the South. I suppose that Mr. Allen will give him a sack of meal some day or something of that sort if his future services as a driver should reach a value of that magnitude. I don't understand just how they do fix these things up.

As to the day's hunt, I prefer for personal reasons to draw a veil over it. When a fellow is shooting in good shape, and doing what is pretty well for him, he doesn't mind going into details a little and talking about the whirring bevies, and the swift right and left and the little puffs of brown feathers that always, at the crack of the newspaper gun, or nearly always anyhow, fly forth upon the crisp morning air. If I had been quite alone and had shot as poorly as I did that day, it might have been different in the telling, but as it is, a certain regard for Mr. Allen leads me to keep a mite closer to the truth. We found plenty of birds—a dozen or two of bevies—and the dogs did beautifully, but when it came to the swift right and left business I didn't see so many puffs of brown feathers on the crisp morning air that morning as I would have been pleased to note. I don't believe in the unbridled slaughter of game, but I would have given a good deal to have had the double snaffle and curb off my gun for about one hour that day, and I wouldn't have done a thing to them but kill a basketful in pure revenge. As it was I didn't get quite a basketful. Mr. Allen is a large man, and a mighty polite man all through, and a very fine shot. He gave me all the chances, but I think it must have caused him pain to see me shoot the way I did, unless he was interested in it from a statistical or scientific standpoint, wishing to discover how badly a man really can shoot sometimes. Usually I can kill a bird once in a while, but this day I couldn't have killed a mess for supper if I had worked all day. I had a perfect gun, a good load, and besides, I don't think the gun and load make very much difference anyhow if you point the gun right. I didn't have any headache, wasn't sick, didn't have any excuse at all. I just couldn't shoot. Mr. Allen could, and so between us, or between him, we got a good little bag, twenty-seven or thirty-seven, or somewhere around there. I don't like to talk about that hunt.

"THE CEDARS" REVISITED.

The next day I went out quail shooting from Memphis. I was under the guidance of Irby Bennett, who thought it would be a good thing for him to go and live a while at his other place, that delightful country house, the Cedars, which I have before now mentioned in these columns. The Cedars is owned by Mr. Edmund Orgill, but Irby Bennett goes out there and lives whenever he feels like it. When we went out last summer, Mr. Orgill was absent in England, but this time we were fortunate, for it was Mr. Orgill himself who drove the drag up to the railway station when we got off for the Cedars. I know I ought not to say such specific things under such circumstances, but really I couldn't help thinking, as Mr. Orgill drove up that day, that I had never in all my life seen a heartier or more sportsmanlike figure. The years have never harmed him, and I hope they never may. Tall, large and robust, he would do for a type of the sportsman, and his beautiful place, the Cedars, is a typical sportsman's home. Mr. Orgill is of English birth, though of long residence in this country, and he has all his native love for sport accentuated by long development in a country where the practice of sport is so easy as not always to be appreciated. His love for the thoroughbred animal is also apparent, and he will have no other kind about him. We had this time the additional pleasure of his company on our voyages around among the beagles, the fox terriers, the horses, etc. If Mr. Orgill isn't a happy man he ought to be ashamed of himself, but I reckon he is, anyhow he looks like it and acts like it. He didn't even seem to care when Irby Bennett announced that he had come out to stay awhile, and was going to depopulate the covers of the Cedars of all their quail. I expect he knew Irby couldn't depopulate anything.

ANOTHER MAN OFF.

Along about 2 or 3 o'clock in the afternoon we got into our shooting clothes, Mr. Will Orgill and Irby Bennett and I, and started out to see what we could find. We had the pointer Rake with us, which the same might be a field trial dog, but was none the less a rattling good meat dog, as he proceeded to show to our entire satisfaction, finding us six bevies before dusk, and showing as handsome work as any man ever saw. Of course, it was all a joke about our wanting to depopulate any quail covers here on the Cedars, and we only took a couple of birds from each bevy, never going more than three-quarters of a mile from the house. I wish it distinctly understood, however, that such depopulating as was done, was done at first by Mr. Will Orgill and myself. Talk about my shooting badly when I was out with Mr. Allen, it was nothing to the way Irby Bennett shot that day. I shot very badly, it is true, but nobody ever did shoot as badly as Irby Bennett did. You know he is the Southern agent of the Winchester Repeating Arms Co., and at the trap is a hummer, but he was trying to shoot one of the full choked Winchester shot guns on quail, a new gun he had just received. At his fourteenth or sixteenth shot, or somewhere along in there, maybe it was nine or seven, he hadn't scored a bird yet, and Mr. Will Orgill and I were having more fun guying him than in shooting ourselves. "I can't hit a flock on the ground," he said, "and I might as well quit. This is my off day." Then I offered to trade guns with him, giving him my cylinder for his choke bore, and in desperation he did this. As luck

would have it, the next rise we had was a bevy that got up wild in a corn field about forty yards from us. The others did not shoot, but just for fun I turned the pump gun loose at a bird on the out edge of the bevy, and killed it stone dead at a distance of fifty-five or sixty yards. It seemed so small at that distance I could hardly see it over the gun.

"Well," said Irby, "that's the furthest I ever saw a quail killed in my life." (Nor did I ever see one killed so far.)

"It's that kind of a gun," I told him calmly. "You don't know how to shoot it, that's all." And really I got the next bird I shot at with it, too, it happening to be a very long shot.

"That settles it," said Irby, "that's the gun for you. This un's good enough for me." And he stuck to the cylinder and killed his four straight with it, very handsomely. So we had a nice little shoot, and spreading out the fat, brown birds nicely on a platter, fifteen I believe we had, we took them proudly in to Mr. Orgill to show him what nice thoroughbred quail he raised. And Mr. Orgill told us that if we would come again when it was not so extremely dry, he would take us out for a run with his beagles, which pleasure I don't doubt Irby Bennett will some day have, for if he takes a notion to go out to the Cedars and live for a while, he surely will go.

MR. BENNETT AND THE PINK TEA.

While I am talking about Irby Bennett I might as well give all the facts about him, and not cover anything up. You see, Irby is a red-hot society man. At the hour of twelve each day he changes his hat and clothes, and when the hour of six strikes he promptly gets into evening clothes, no matter where he is. These habits make him of value at all the social functions of his city, of which there are a great many, for Memphis is nothing if not advanced. Well, anyhow, Irby was invited to a pink tea, or something of that sort, just at the time Tom Divine and I wanted him to go out quail shooting with us. We were going down to Batesville, Mississippi, on an early morning train, and Irby had promised to go along, till this pink tea came up, set for the day of the hunt. Irby said he couldn't jump the pink tea without getting a divorce, but we told him that, while we hated to see as nice a home as his broken up, we couldn't let him off from the hunt. We reasoned with him all the afternoon, and finally he gave in and said he would go with us. It was a case of love and duty, an love won, at least temporarily. But though Irby said when he left us that he was going after a lawyer to see about a release from the engagement, he never came back. At the depot the following morning he was absent. So Tom Divine and I went on without him, and left him to his pink tea. Therefore, when we got back we called him no longer Irby Bennett but "I. Willy Bennett," neither would we let him eat any of the birds we sent up to his house. This stern justice I hope will be noted by all readers who hesitate between a quail hunt and a social occasion such as the above.

A QUAIL SHOOT AT BATESVILLE.

But I suppose a great many people will want to know about the trip Mr. Divine and myself had to Batesville, how many birds we killed, how many were left, etc. In deference to these, I will dignify our little sortie with a description. We got to Batesville about noon, for the distance is only about fifty or sixty miles from Memphis. We struck a freight train which had deliberate habits. As we had to be back at Memphis the next morning, this left us only half a day for our shoot. We promptly got a couple of saddle horses and a small boy, who rode behind one of the saddles and filled the responsible position of marker and horse-holder in general. The country I found to be just rolling enough to be a good quail country, and not so broken as to make it hard to mark the bevies down. There was the usual variety of cotton, corn, sedge and thicket, and as usual, the entire country was full of quail. We rode along slowly over the fields, and the dogs did most of the work, though it was no work at all for them to find birds, and indeed we got a nice double point on a fine bevy by the roadside, hardly a half mile out from town. (We had Mr. Allen's Jess and Mr. Sim's setter Jim out again, and as usual they did very handsome work.) We started in all, twelve big full bevies during our short hunt that evening, and picked up a very nice little bag before dusk, hardly having walked 200 yards the whole afternoon. This horseback method is the commonest form of quail shooting in the South, and it has very much in its favor. In the North it is rare as a form of sport, for many reasons. The hunter who goes after quail on foot in the fresh autumn weather of the North, might be very glad to crawl aboard a horse before he had walked all day in the warm air of the average quail shooting day of this region, where the horse is held a part of the equipment. With the horse, he is able to thoroughly enjoy every moment of his outing. Our shoot was in late November, yet part of the time we were obliged to shoot in the lightest possible dress, it was so warm.

Batesville I should call one of the really great quail countries, and of course it is not so much shot over as the ground immediately about the big city of Memphis. All that region is still full of quail and I hope it will always remain so, as indeed it always will if the present objection to market shooting is always left valid. At Batesville we found some posted land, and I think that had not Mr. Divine been acquainted there, we might have had more trouble on that head. The country was very dry, and the chief objection to shooters seemed to be the fear of fire from gun wads. In such heavy, dry cover, it would take but a few moments for a fire to wipe out a farm, and a shooter careless with a match might start a fire, though, I think, the modern wad could hardly be held an element of danger such as the newspaper wadding of the negro hunter. A stranger going into that country to shoot might have a little trouble in getting in over some of the best grounds, but once certified to by the right men, he would be received with the utmost courtesy. Indeed, I saw nothing but the best possible exemplification of this disposition at any time or any place, with one exception, which occurred in Texas, and that not at the hands of a native Southerner. I am sincere in my admiration of the Southern sportsmanship, and believe that the better and more gracious principles of sport are understood and practiced there as no where else in this country. Beyond doubt it is true that the "game hog" is not so common there as in the North, unless it be true that my experiences and inquiries fell among exceptional surroundings. I heard so little bragging about big bags, of killing all the birds of a bevy, of being a successful bird butcher, in short—and saw so much of an easier way of looking at the pleasures of the field. I have some acquaintances here in Chicago, who never fail to tell me with expansion of the chest, how much game they killed at such and such a time, how many hundred pounds of fish they have taken. No doubt they feel they have done well and as a sportsman should, and no doubt, too, the desire to crowd the limit is a very human one. But I cannot help thinking they would lose much of their inspiration and change many of their habits if they were thrown for a time in associations with their brethren of the lower half of the country, where the game has been kept abundant in spite of the march of the years. Of course, the conditions for the increase of game are far more favorable in the South than in the North, but I cannot think the greater abundance is due to these natural conditions alone, and I believe it a fair statement to say that the members of the craft who live north of the Ohio can not be harmed, and might be benefitted by a study of the conditions that obtain in the sportmanship of the Southern side.

My Batesville trip was the last shoot I had about Memphis, and all too soon I found my nine days gone and was saying good-bye to my Memphis friends, then to take train for New Orleans. At that city I was to meet still another party of friends and start for the coast country of Texas to see something more of this big land of America, and incidentally to get tangled up with the ducks of the Gulf country.

E. HOUGH.

Natural History.

The Washington Beaver.

The shipment of about a dozen beaver brought on last winter from the Yellowstone National Park to the National Zoological Park in Washington, reached there in good order, and the animals appear to be doing well and to be taking kindly to their new surroundings. They have dug long bank holes in the ground bordering the stream which is their home, have built three dams on this creek, and are now engaged in the construction of a house. There is every probability that they will breed this season, and if they do so, a good stock of beaver will be established in the Zoological Park.

As yet they are not sufficiently at home to continue their work during the day, but there is no doubt that after a time they will become so accustomed to their new surroundings and to the presence of spectators, that they will be seen at work feeding and at play during the daylight hours, at least in the morning and at evening. It is certain that at some points in the Yellowstone National Park the beaver have become so tame that they are often seen in the daytime.

The success which attended the capture, transportation and turning out of these beaver is very gratifying, and this success is due entirely to the interest, energy and good judgment of Mr. Elwood Hofer, in whose hands the matter has been from the beginning.

A Jaguar in New Mexico.

The range of the jaguar is usually given as north to the Rio Grande, or a short distance beyond it into Texas. Instances are recorded of its having occurred as far north as the Medina River in that State, but it is usually regarded as rare in Texas, though southward its range extends as far as Patagonia. We recall no instance of its occurrence in Northern Texas, and are inclined to think that the capture mentioned below, if authentic, is the most northerly record for this species. We should be glad to receive from any of our readers who may have information bearing on this subject, notes on the jaguar or its range.

Mr. Herbert Brown sends us the following account, taken from the Prescott, Arizona, Courier:—Some weeks ago, Peter White, a hunter of some celebrity, better known as "Bear Sign Pete," was hunting in the vicinity of Willow Springs, in this county, and it came to his knowledge that some animal had been killing full grown cattle in the neighborhood; something unusual, as the mountain lion usually confines his depredations to colts and calves. Proceeding with his dog and gun to the locality, White found eight carcasses of cattle, one of them apparently recently killed; the head was severed from each carcass, almost as clean as if done with an axe. Proceeding from this point up into the rocks near by, he found a freshly killed and partly devoured calf. About this time his dogs dashed around excitedly as if on a fresh trail and he was almost deafened by a strange and terrible roar, a deep sound of "pu pu." Simultaneously he looked in the direction of the sound and threw his Winchester to his shoulder, and none too soon, for dashing toward him came a great panther-like animal, which rolled almost against him as the smoke cleared from two rapid shots from his rifle. Both shots took effect, and the animal's brains were entirely torn out by the bullets. In his twenty-one years' experience as a hunter, White had never seen an animal like the one before him. It was a heavy-set, short-legged, broad-jawed animal, weighing about 250 pounds. Its four canine teeth are over two inches in length, are of scimeter shape, projecting below the lower jaw and above the lip on either side of the nose on the upper jaw. The head is broader than that of a panther. The animal was of a light yellow color, the fore part of the body thickly covered with black spots and rosettes of spots down the sides; its long leopard-like tail was black ringed. The animal could not stand high, as its legs were short and large; its claws are more on the order of the talon of an eagle than those of the cat tribe. White brought the hide to Prescott for inspection, and the general verdict was that it was the hide of a leopard, as some of these animals are said to have been killed in Tonto Basin years back. The writer took a look at the hide yesterday and can say that, beyond all question, it is that of a jaguar, an animal which ranges from the southwestern part of the United States to as far south as Brazil. When a boy, the writer was on the ground at the killing of one of these animals in the Panhandle of Texas, just after it had leaped from a cliff upon a deer in the plain below. The deer's back and neck were both broken by the jaguar, which, in a few minutes, was riddled with bullets by about fifty men armed with rifles, who ran down the slope and surrounded the thicket in which the jaguar was; the jaguar charged through the line of men at the first fire and almost disemboweled a dog in its death-agony. As it was about dinner time, the deer killed by the jaguar came in very handy. The party was the Elgin party of state surveyors, from Waco, Texas, which operated in the Panhandle when Ft. Griffin was the most western settlement.

Mongolian Pheasants in Michigan.

HOLLAND, MICH., April 3.—The first Mongolian pheasants raised in Michigan, or at least the first I know of raised in the State, were liberated here last week; five pairs being turned out in one place.

Two pairs were first let out last Wednesday. Brush was placed against a log, leaving a space underneath in which it was the intention to place the birds and allow them to come out when they pleased. A peck of wheat was scattered around near. But the pheasants did not seem to understand our plans, for as soon as I had placed one pair under the brush-pile they ran out and flew, the other pair escaping from the box in which we had brought the birds. The last pair flew south for about 200 yards and alighted about 100 feet apart. The others went north for about the same distance, coming down 300 feet apart. They did not fly near the ground, but at a height of thirty feet.

The other three pairs were put out Tuesday in the same spot where the first had been liberated. We left these in the box, only removing a board from the front. They could thus get out when they wanted to, and without being frightened. Plenty of wheat was left for them to feed on for a few days. We bought some wheat from the farmer on whose land the pheasants were liberated, and he will put out some each morning where they will be liable to find it. We think it advisable to feed the birds for a couple of months until they learn to find their own feed.

We have kept seven here, and expect to have fifty young pheasants to put into the woods in September.

Why do not more of you sportsmen do the same as we are doing? In every almost town and village there are enough who shoot, who, if they would club together, could purchase a few of these birds and either turn them out at once or breed them as I have done. They can be bought in the fall at $2.50 per bird, in the spring at $5 each, or a setting of eggs for $5. Our club will sell a few eggs this spring to anyone who desires to start them in his locality. We will not dispose of any to those who mean to keep the produce, as our only desire is to see these birds tried in as many places as possible. We do not doubt that they will some day be plentiful enough to furnish excellent sport. I should be glad to reply to all inquiries or give any information in my power in regard to pheasants or pheasant rearing.

ARTHUR G. BAUMGARTEL.

Early Arrivals on Long Island Sound.

NEW ROCHELLE, N. Y., March 30.—It seems that migratory birds along the coast choose three great highways of migration, the Hudson and Connecticut Rivers and Long Island Sound.

A great many of the birds common on the Hudson, as the cardinal, are very rare on the sound. I have lately captured several birds which are rare at this season of the year, having arrived some three weeks or a month ahead of time. On Feb. 22 I captured a purple finch (Carpodacus purpureus) in spring plumage. On Feb. 2 I saw a mocking bird (Mimus polyglottos) but did not secure it, as I had only a rifle with me. It was probably an escaped cage-bird. On March 23 I shot a myrtle warbler (Dendroica coronata.) The warblers as a class do not come north until May. On March 30 I got a ruby-crowned kinglet (Regulus calendula) which arrives generally with the myrtle warblers.

E. J. H.

Mother Carey's Chicken Island.

OSWEGO, N. Y., April 4.—I think your readers would be interested in the fact that a Proscellaria pelagica, stormy petrel, or Mother Cary's chicken, was killed here a few weeks ago. It is odd that so distinctly a salt water bird should have found its way so far inland. It seemed in good condition and was fat.

E. L. L.

Starlings in Confinement.

Editor Forest and Stream:

In a recent issue of your valuable paper I noticed an interesting account of a flock of starlings seen near Flatbush, Long Island.

This interested me greatly, as my friend and neighbor, B. A Overbeck, of Alleghany, Pa., has quite a flock of them that he keeps in a cage. The cage is about fifty feet long and thirty feet wide. The rear to the north and west is boarded up and roofed. Mr. Overbeck recently visited the home of his childhood in Northern Germany, and while there fancied the blithe little fellows and brought twenty of them home with him.

The starling is about the size of our red epauletted black-bird.

During the winter the plumage changes from the beautiful gold and bronze to a sooty black, but when the snow is gone and the blossoms are on the trees, a lovelier iris comes to the burnished dove. The dull black changes to a beautiful bronze, and the little dull yellow stars that are dotted all over his body glow and sparkle like diamonds.

In this flock almost all are males, and the lady birds avail themselves of the privilege of selecting their husbands. In making her selection, the chief point of merit considered is the singing. The bird that sings best is most sought after as a husband.

One magnificent singer received the attention of two ladies of the cage, and they did "battle royal" to determine which should win the affections of this gallant bird. No more jealousy, hatred or backbiting was ever shown by the fairest ladies of the land than was exhibited by those two contending starlings.

Here and there in secluded nooks in the cage are nailed oblong boxes, lengthwise of the box. Up at the top is a hole that is scant two inches in diameter. These holes must be of the exact size or the starlings will not enter the boxes. The first my neighbor bored were too large. The starlings would hang on the sides of the boxes, course the hole round and round, and when they found it

unsuitable would fly to another, measure it carefully and thence to another. The diameter of the hole must be the same as the distance from the back of the head to the end of the beak, and when the holes were bored that size the starlings quickly entered and evinced great joy at the change. I understand that in their native country there is a bird somewhat larger than the starling, that robs their nests when possible, and to keep him out they select holes that barely admit their bodies

Rude nests were quickly built, and were soon filled with treasures of pale blue eggs, and great was the rejoicing among the members of this colony of starlings when the peeping of young birds were heard in the rude boxes. About fifty starlings were hatched during the season, but all died when nearly full grown.

The parent birds, usually so blithe and gay, would grow sad and dispirited, the twittering of the birdies grew fainter and fainter and when all was silent in that feathered house, we knew the last of the mothers' treasures had died.

Various kinds of food were used, but none availed. The birds were dying for dainty morsels that could not be found in a cage, but can be gathered in great abundance in the fields and forests of Northern Europe. Perhaps some reader of Forest and Stream can advise us how to raise this year's broods of these pretty songsters.

JAMES M. NORRIS.

Children of the Devil.

We old fellows remember that in our boyhood days of trapping, the smell of the skunk was not upon our garments, for the animal was not worth skinning, and was only caught by accident, or to rid the poultry yard and the barn of a nuisance.

We thought it a disgrace to "git stunk up by skunk," yet the trade in skunk's fur is venerable with years, and the fragrant memory of it comes down to us through the mist of centuries. For it is recorded in Parkman's "Discovery of the Great West" that among La Salle's furs, which were put under seal by the intendant at Quebec, were 284 skins of "enfants du diable." The illustrious author slightingly mentions them as a "not very precious," but perhaps even then under another name they would smell as sweet to patrician noses as they do now.

AWAHSOOSE.

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18. Madison Square Garden, New York.—First annual Sportsmen's Exposition.

CHICAGO AND THE WEST.

SWAN LAKE CLUB AND SPRING SHOOTING.

Mr. E. W. Bangs, president of the Swan Lake Shooting Club, where the heavy bags of ducks were made as mentioned in Forest and Stream of March 30, hands in the following statement as to the position of his club on the spring shooting question. It is, of course, very gladly printed, and it would be a great pleasure if the coalition of clubs along the Illinois River could be secured, as Mr. Bangs suggests, for no straighter or stronger step could be taken toward the abolishment of spring shooting in Illinois. That it should be stopped by law is now coming to be thought by a great many sportsmen, who realize that conditions are different to-day from what they were in the past. Until it is stopped legally, and for all alike, there will of course remain much force in the plea of those who say they need not stop shooting till the others do. To stop it legally will mean very much of a fight, but that fight, if won here, would be won for Wisconsin and Iowa and other sister States also. United action of these clubs would be the best possible beginning for such a fight, and no club's counsel thereto can have more weight than that of Swan Lake Club, which is made up largely of wealthy and well known sportsmen, whose position has always been upon the side of progress.

Mr. Bangs' letter follows:

"CHICAGO, April 5. Mr. E. Hough, Forest and Stream.

Dear Sir:—I have read with considerable interest the recently published comment on the large bags made this spring on the excellent preserves of Swan Lake Club, and while I think I meet the spirit of the writer of the comment in saying that I do not take it to be made in the way of any strictures upon the sportmanship of that body, I realize that in minds less temperate, wrong impressions might easily be seated, and would therefore like to say a few words which will set forth exactly the position of our organization on the subject of spring shooting.

"My own gun was one that did some of the heaviest of the shooting referred to, and I have nothing to offer in way of palliation of that fact except to say that had I feared publication of the facts, or had I been ashamed of the act, I should not have gone out to shoot. I take the position that it is legal to shoot, not unusual to shoot, and very desirable to shoot at this season, when so heavy a flight was on. The clubs all along the Illinois River shoot in the spring, and while I do not claim to be purely logical in the matter, I am human enough to feel that a bird in the hand is worth two in the bush in the coming fall, and I am disposed to want that bird, if others feel entirely at liberty to go after him whether I do or not. This may be selfish, but I repeat it is human nature. In this position I do not bind any member of my club, many of whom may feel differently, though we have no club regulation prohibiting shooting in the spring.

"I would like to say that our keepers have not marketed any ducks this spring, except in one case, where I personally thought the facts warranted it, and not then birds killed by themselves. They do not go out alone to shoot for the market, and when they take out club members, the latter do the shooting. It may be remembered that under our original lease of our grounds from the father of our keepers, the latter were allowed to do a certain amount of shooting on our grounds, that being part of the consideration. Afterwards, seeing the position this might place the club in in the eyes of some, we took up this consideration by a sum of money which we gave them instead, thus buying them off from shooting on the grounds, which till then they had a perfect right to do. I have known of no bird wasted on Swan Lake shooting this spring, though most extraordinary bags were made, it is true. Some shooters have said that they found the spring birds in very good order this spring. So much as that I cannot say. The mallards at first were not very fat, but very soon became so, and were in as good order as any I ever ate. The pintails were poor and thin.

"It may be seen I do not wish to alter or distort any facts for or against spring shooting. The truth is, though some may think it comes ill after my direct admissions above, that I do not believe in spring shooting personally, and neither does Swan Lake Club believe in it as a body. More than that, the club and all its officers would like to see it stopped, and wish now and here to take a decided step looking to its abolishment. By this I mean an abolishment which shall be a condition, not a theory, and a condition which shall fit all sorts and conditions of men alike, so that we can still possess human nature, and not possess spring shooting. It is no use theorizing. What we want is a law, and one that is enforced until it is respected. I wish to say that the directors of Swan Lake Club are unanimously and unqualifiedly in favor of just such a law.

"To begin the work of securing such a law, I suggest a union of all clubs owning preserves along the Illinois River waters, and as many of the Mississippi River clubs as like to join. I feel sure the Princeton Club, on the Goose Pond waters above us, would join such a movement, and so no doubt would the new club going in below Bureau. The Duck Island Club, on the old Beebee grounds, would be equally willing I think to go in with us, and so should be also the Spring Lake Club and our near neighbors, the Hennepin Club. Here we have in close compass a large body of sportsmen, of whom I trust it is not too much to say that they are all sportsmen in the full sense of the term, and of liberal and advanced beliefs. I suggest that these clubs convene their respective directories at an early date, and elect delegations to be sent to the second day meeting of the convention of the Illinois State Sportsmen's Association, which is to be held at the Sherman House, Chicago, June 4 and 5, there to confer with that body as to the best means of securing the passage of a law in Illinois prohibiting the shooting of wild fowl in the spring season. By that time we shall know what has been done at the present session of the Legislature, and shall be in better position to estimate what can be done at the next session. I promise for my club that it will be behind none in the serious attempt to have this measure passed. If the other organizations near it, which lie under practically the same conditions, will join us in this movement, I believe we may do something more practical than theorizing.

"If we should have a law prohibiting such shooting, the members of the Swan Lake Club could look to it that their grounds were really protected in the spring. As it is, it being legal to shoot at that season now, if our members did not shoot, the grounds would be overrun with poachers from near-by waters. The place where we did our shooting in the spring was small in extent, and I venture to say that had we left our guns in their cases and remained in the city, nearly the same number of birds would have been killed. This I say, not so much as excuse for our conduct, for we do nothing covertly, as for argument showing that the only practical way to get at the matter is to get a law passed which shall stop it for all alike. If the preliminary steps suggested above seem to my friends in the other clubs named wise and desirable, it would give the members of Swan Lake directory great pleasure to hear from them as early as possible."

"E. W. BANGS,
"President Swan Lake Shooting Club."

PROPOSED WISCONSIN LAW.

Wisconsin has been having the usual trouble over game laws at this session of the legislature, which has been common among the States of the Northwest. At this writing it seems there is no law yet actually passed, but there has been reported by the joint committee a bill which has some little show at least of becoming a law. This bill makes the legal trout fishing season April 1 to August 1; the season on bass, wall-eyed pike and muscallonge opens June 1, and runs to March 1 the following year; the season on deer is the first twenty days in November; the season on ducks, geese and brant is made from September 1 to May 1 of the following year, permitting spring shooting, excepting on mallard, teal, wood duck, plover or snipe; the season on prairie chicken, quail, grouse, woodcock, partridge or ruffed grouse is from September 1 to December 1. It is forbidden to use a dog or dogs for hunting quail, chicken, grouse, woodcock, snipe or plover. Mongolian pheasants are protected for five years.

ILLINOIS OFFENDERS.

The usual spring grist of offenses against the game and fish laws around Lake Calumet, just south of Chicago, is coming into evidence, and it is said that the game warden and his assistant have arrested a number of men this week for illegal shooting and fishing. Fred. Knack and J. Larson, found fishing with nets, were arrested and fined $25 and $10 respectively. E. Semler, Louis and William Dick, Axel Morrell, W. Dennison, J. Hoffman, and J. Long, all of Pullman, were arrested for shooting from a sail-boat, which is contrary to law, and were fined $10 each. D. Levi & Co., No. 1906 Wabash avenue, were prosecuted for having quail in possession contrary to law, but they escaped conviction. J. D. White, Momence, Ill., was arrested for killing quail out of season. The case is still pending.

CHICAGO FLY-CASTING CLUB.

Eight members of the Chicago Fly-casting Club attended the annual meeting this week. Mr. G. W. Strell was re-elected president; Mr. J. E. Strong was elected vice-president; Mr. F. B. Davidson, secretary; Mr. Strong, Mr. F. B. Orr, Mr. B. W. Goodsell, members of the executive committee.

GONE TO THE COAST.

Col. A. G. Courtney, of the Lefever gun, dropped in on the spring house-cleaning operation of this office to-day. He is on his way to the Pacific coast for his annual trip to the gun trade.

E. HOUGH.

THE SPORTSMEN'S EXPOSITION.

MADISON SQUARE GARDEN, N. Y., April 4.—The great exposition to be given of field sports of this country is becoming an item of general interest and comment. If there has existed any doubt as to how the sportsmen themselves would look upon the exposition, there is no longer reason for conjecture. The hundreds of letters asking for information have been a gratifying surprise, and an evidence of the unanimity of good will towards the exposition. The offers of trophies and ancient arms and weapons for the loan display increase each day. Prominent sportsmen are anxious to do all they can to assure a splendid representative exhibit of everything in the line of mounted game. The occasion will be one of unusual privilege. The committee of measurements and records desires this exposition to be as complete as possible. The Hon. Theodore Roosevelt, Archibald Rogers and George Bird Grinnell are gentlemen who are familiar with the best types of our North American game, and this committee should have placed before them a full collection of our North American game animals to pass judgments upon.

Here permit us to urge every sportsman who owns typical heads of our large game to send at once to the secretary of the association a list of the same, with such data as may be authentic. The association expects to have 500 heads of the various species pledged for exhibition. There has never been an opportunity before to compare the largest heads of our antlered game, and this occasion should be made a memorable one. Below is given a list of the articles which are needed in order to make the exhibits of a historical nature complete.

A primitive dug-out, an old birch bark canoe, a flat bottom boat, a modern canoe, a racing shell, a catapult or slung shot, cross bow, boomerang, blow gun, Indian arrows and bows, blunderbuss, primitive guns of different designs, Kent rifles, flint-lock guns and pistols, percussion guns and pistols, and various kinds of sights and levels.

These collections will interest the general public, and be an incentive to others not now devotees of any special field sport to take up some one of them.

A very interesting, unique and instructive exhibit will be that of Messrs. Tatham & Brothers, the well known shot manufacturers, whose shot tower has been a land mark in New York City for over half a century. This enterprising firm is constructing a shot tower to be placed in the exposition, where the public will be shown the method of making shot. The lead will leave the furnace at the top of the thirty-foot tower, and the shot will fall to the bottom, and the several sizes be sifted as they fall at the base. The packing and labelling will be done in plain view. This exhibit will reveal to the public the mystery of how shot are made round and of a uniform size and weight.

As the management intend making a great feature of the various club nights, it is their desire that all shooting, fishing, golfing, lawn tennis or other clubs formed for out-door sports, should send a list of their officers and members to the management of the Madison Square Garden, that they can be furnished with tickets for the special evenings upon which the clubs from their vicinity attend.

SPORTSMENS' EXPOSITION ASSOCIATION.

THE BIG BEAR OF HUNT'S CANYON

I was camped at the head of Hunt's Canon some seasons ago in a broad open flat, and was building a jacal (hackell) or pole house and a big corral for a cattle ranch. "Where is Hunt's Canon?" "Well it is in Colorado, and has such nice water and grass and timber and bear and deer and turkeys that I feel a little reluctant to mention the exact locality." But there I was, with a negro named Sol and two Mexicans, doing chopping and house-building under my direction. My partner was away on the roundup, and I had my hands pretty full, attending to our cattle that I tried to keep around camp, and bossing the work.

It was forty miles from the nearest settlement, and was and is now one of the most lonesome places I ever saw. One night after sitting around the camp-fire till late, the Mexicans and I rolled into our blankets, leaving Sol cooking bread. After a while I was aroused by a twitch on the arm and sat up. It was a moonless, clear night. Sol poitned across the canon, and there stood a shadowy form seeming to be watching the camp. It looked at first like an enormous man in flowing robes. Sol whispered "Injuns, boss." A moment after it sunk down on all fours, and Sol said with a sigh of relief, "Oh, my, it's only a bear." We built up the fire and saw no more to disturb us that night. Sol looked for tracks in the morning, and found three sets together, one big, old bear and two small ones. We were busy, and concluding that they were just traveling through, forgot them.

In two weeks we had the place fixed up nicely; I paid off the men, and they went home up the country, leaving me in my new house, monarch of all I surveyed. Penley was not coming down for another month, and I rode hard pretty much all day attending to the cattle and felt quite jolly, but at night, whew! It is not good for man to be alone, and it was a wretched life to live. After two weeks I gave in, and concluded to go up to the settlement and hire a man and make something for him to do. So next morning I saddled a good horse, locked up the house, and struck out for forty miles in the saddle. At noon I was at the post office, and forgot the dreamy monotony of Western life in reading my letters from home and the newspapers that were always two or three weeks old when I got them. That afternoon I heard that Bob Gray had nothing to do, and I rode over to Lew's ranch and found him—We soon made a trade and started back for my ranch the next day.

When we got to the cabin we unlocked the door, and it was a wreck inside. I had hung up half a beef in the cabin, and that confounded old bear had come prowling around and smelled it; she had smashed in about half the side of the house that had the window in it, and after pawing over the flour and everything else, had walked off with the whole half beef. There were the tracks of the two cubs also.

We cleaned our guns that night and held a council of war. I concluded that we could not hunt her for a day or two, as the cattle were somewhat scattered; and by that time a runner came down and warned us that the Indians had broken out again, and we locked up the

house, turned the cattle loose and went up to the settlement, where we had another ranch. We found the stockmen for miles around mostly forted up at the Lewis ranch; there were about forty people, men, women and children, and we had very jolly times. But the thoughts of that old bear hurt me. We remained forted up for about two weeks, during which time the Indians killed about forty men on the Cimarron and that vicinity. Then the soldiers came out and chased them back towards Camp Supply, and we went back to our deserted ranches. I went out three times while we were forted up to get in outlying settlers with half a dozen of the most reckless men I ever saw, and we had some brushes with the gentle red men; but at present I am going to tell you about a great big bear, and will not make game of respectable Cheyenne warriors by introducing them into this story.

So at last one night Bob and I got back to the ranch, cleaned up the house, killed one of someone else's calves. I know now that that was wrong, but I was young then and the calf was very fat. The next morning we went down into the canyon to kill that bear. Bob had a Sharp's .45-70, I had a Winchester .44-40, model of '73. We were gay and confident. We went down that deep canyon afoot. At last we found tracks. They were large and fresh. I can see that place in memory as if I was there. It was a small oval valley in a deep canyon, surrounded by walls hundreds of feet high, with three big pines on one side of the slope, then some bushes, then a ledge of rock that crossed the lower end of the valley, then a drop off of about ten feet. We went down cautiously to the ledge, looked over, and there was our bear snuffing around with her two cubs. She must have weighed 1,000. Oh, she was large. Bob shot her once and I shot her three times, and then she ran for the ledge to come up and see us. There was no place she could climb up easily. I ran for the nearest pine, dropped the gun at the foot of the tree, and went up like a squirrel. When I got to the first limb, about twenty feet from the ground, I stopped and straddled it. Bob was up the other nearest tree. The bear was at the foot of his tree and very mad; she grunted and she squalled, she tore the bark off Bob's pine, and then she came over and interviewed me. I shot at her ten times with a Colts' .45, and hit her some, and that only made her madder. The cubs stayed off about forty yards in the grease wood brush and foole l around and whined some. Then I smoked, and Bob said I was a coward to run. Then I asked him when he was going to get supper. We sat in those trees for eight hours. The bear stayed with us.

Then Bob said, I have an idea. I said that I was glad of it. He took a paper out of his pocket, crumbled it up, set it afire, and dropped it into the grass at the foot of the tree, the leaves and the dry grass caught, and the fire and the bears went down the canyon. I slid out of the tree and got badly burned and choked getting my gun and then Bob and I ran up the canyon and went to camp. That evening we pacted our horses and went to the home ranch, twenty miles away. That fire burned up all the range for about twenty miles, and old Blank vowed he would kill the man that set the range on fire, but we were modest and didn't say much about it. That old bear may be there yet, but I didn't hunt her any more; she was too large and tough. Now I kill ducks, they never chase me up trees. But I wish I had killed that bear, that's all.

KANSAS. W. J. D.

A "Partridge Dog."

In your issue of March 23 your correspondent "Omar" takes me to task for having said in a previous issue that I would prefer to still-hunt the partridge and shoot him sitting or running than to shoot him over a dog. He then gives a very interesting description of his last hunt for 1894. Now, the dog he writes about, and the dog I mean are entirely different breeds of dogs.

I have never seen a thoroughly broken setter or pointer at work, but I would like nothing better than to accompany "Omar" on a trip with his dogs, when I assure him I would have no idea of shooting a bird sitting, but would do my best to take them on the wing, and to perfect myself in that part is just now the height of my ambition in the shooting line.

The only dog that I know of in this section that is a partridge dog, that is so called around here, is owned by a saloon keeper, who does not lend him, but puts in a good many days each season in hunting the partridge with him.

I have no doubt that he shot upwards of 200 partridges last autumn over his dog, but not a single one of them did he shoot when flying. When you speak of a partridge dog around here, it is expected that the dog will have sufficient scent to locate and follow the scent of the partridge, and in getting close will rush in barking, flush the bird, and nine times out of ten, drive it into a tree when he will sit down and bark at it.

The dogs are generally spaniels, although I have seen collies tree a partridge, but they hunt usually by sight.

If "Omar" will notice my previous letter, he will find that the farmer said his dog would sit down and bark at the partridge in the tree, when it was dead easy to shoot the bird, whose whole attention was taken up with the dog.

When I said I would sooner shoot the bird sitting or running, after my own efforts locating the bird on the still-hunt, I meant it, rather than having a dog to drive the birds to a tree and then shooting them. The above mentioned hunter one afternoon shot fourteen partridges out of trees over his dog, while I, hunting in another section, put up probably a dozen and did not secure a single one. A record of seven partridges for twenty-one times hunting is more satisfactory to me than would be a record of twenty-one partridges for seven times hunting, shooting them out of trees over a dog.

Presumably "Omar" never before heard of this kind of a dog, and in writing his article had only his own thoroughly broken dog in mind, or he would have acknowledged that when a man can go alone into the woods and successfully match his cunning against the wily partridge, he is entitled to him. Let "Omar" try it some day without his dog, and give the readers of Forest and Stream the result of his day's work.

I have long been desirous of owning such a dog as he has, but they come high, and in these hard times one cannot afford many luxuries. J. BRUCE PAYNE.

Gunning on Cape Cod.

I have never seen anything in your valuable paper from old Cape Cod. I know there is a good deal of good fishing and gunning here and thought somebody away from here might like to hear from this locality.

I would like to tell you what sport I had one time with black ducks. I live in Centreville, a village on the south side of the Cape, and for the best shooting I drive over to Barnstable, on the north side, a distance of about seven miles, and a long drive it seems in winter, as we must be there before daylight if we would get any birds.

I had been over there one morning, and was on my way home through the woods, on an old woods' road when I thought I heard a duck quack. I stopped my horse, and then heard it for sure. I got out of my wagon, walked down through the bushes, and came suddenly upon a little pond just as the ducks started up from the water. I didn't shoot, but just watched them as they flew all around me. There were lots of them, about 500, I should judge. Well, they went off, and I went down to the pond and sat down in the bushes. Soon a flock came back. I shot and killed some of them, and then more flew up from around the pond that until now I hadn't noticed. I shot and killed ten "dead ones." Being well satisfied with my bag I went home. The next morning I was on hand before daylight, and as soon as daylight came so did the black ducks. It being a very calm morning, after I had shot a few times the smoke hung over the pond so heavy that when the ducks came in they smelt it, and instead of lighting they flew straight through the pond and came over where I was, making very good wing shooting. I soon had eighteen dead ones, and as that was enough for me, I went home to wait until Monday morning, this being Saturday. Monday morning I went with two friends, and we had just arrived when over the hill came some men, saying in very kind tones, "Do you want any assistance, gentlemen." We said "Yes," and down they came where we were. The ducks didn't come in very fast, and I was surprised, until when talking it over later in the day I learned four men were there all day Sunday shooting at everything that came in.

That ended the shooting in that place, as a black duck is very shy, and it takes but a little shooting to drive him away. W. F. HALLETT, Cape Cod, Mass.

Still-Hunting Deer.

And speaking of water brings me to the subject of hounding deer. I have little respect for the hunter who can not get his deer by stealth and good marksmanship. The man who cannot glide through the forest from hill to hill, stump to stump, and walk logs like a cat, seeing deer before they see him, or should a deer break cover, bring it down with a repeating rifle before it gets out of range, should be content to keep camp. It is bad enough to throw buck-shot from a scatter-gun at a deer, but to drive them into the water with dogs is heathenish. A deer's sense of smell, hearing and sight, together with his swiftness of foot, are his natural and only protectors, and a hunter should have sufficient self pride to be willing to put his skill and cunning against that of the deer.

I have killed deer in Ohio, Michigan and Wisconsin and never used a larger gun than the 38 Winchester, and never hounded them nor ambushed them at their crossings. I have shot them standing, running and lying down, but always gave them a chance to stay away or get away from me.

For instance, one October, while camped on the North Star route, nine miles south of Republick, upper Michigan, while hunting in the heavy timber, I came to the foot of a ridge, on top of which there stood a large pine stump. When I reached the stump I walked up a spur root, bringing my gun to a ready as I stood erect. Thus I was prepared for what might be within range, and this is what I saw—a ten-point buck lying down forty-five steps distant, facing me. What magnificent antlers, and how his eyes gleamed in the early morning light. He either thought himself undiscovered in that small depression behind a bunch of twigs, or was transfixed with fear and surprise at the apparition before him, for he never blinked while I drew a bead on his right eye and fired. My aim was so true that the skin around the eye was not broken. The buck had come up the ridge a little to my right, and had faced about and laid down so he could see anything that might follow his trail. He did not expect an enemy to come at him over that large pine stump, and there is where I fooled him. But I gave him a chance.

G. W. CUNNINGHAM.

Heads and Tails.

"Heads I win, and tails you lose" has been beaten by the boys in Sandwich and Bourne, Mass. It is now "heads I win, and tails I win," with the boys in these towns. Owing to the ravages of muskrats in the cranberry bogs in Sandwich and Bourne, the town officers in both towns decided, a couple of years ago, to offer bounties for their destruction. Without consulting the selectmen of Bourne, Sandwich voted to pay twenty-five cents for every muskrat's head, and about the same time Bourne voted to pay the same sum for every muskrat's tail. It did not take long to set the boys to trapping, and they were equally spry about learning that the head of a muskrat should be taken to Sandwich and the twenty-five cents collected, while his tail should be taken to Bourne and another twenty-five cents collected. This went on for a year, much to the delight of the boys. But the officers of both towns begun to "get on" to the game, and at its annual meeting each town voted to change its tactics and pay, Sandwich for the tail, as Bourne had been doing; and Bourne for the head of every muskrat, as Sandwich had been doing, and thus stop the double bounty business. This was exactly the change the boys had been hoping for, and at the beginning of last year they had only to take their muskrat's heads to Bourne and the tails to Sandwich, and get the double bounty on each rat the same as before. It is said that it has taken the best part of another year for the officers of the two towns to find out that they have again been playing into the hands of the boys. This year they will doubtless consult with their neighboring town fathers, and the boys are likely to be obliged to accept only one bounty on each rat. SPECIAL.

Minnesota Wildfowl.

BRECKENRIDGE, Minn., March 28.—Geese and ducks are coming in this week in great numbers, but no spring shooting goes in Minnesota. F. J. S.

The Ontario Season.

BELLEVILLE, Ont., April 3.—Spring has been very backward this year. The rivers are generally clear of ice, but that on the bay here is as strong as at any time during the winter.

April was ushered in with a snowstorm, yet some of our migratory birds have arrived. The first robin was seen on Sunday, March 24, and during the snowstorm on Monday last the first swallow was seen skimming the surface of the river.

The observance of the game law is improving, although cases of its violation are occasionally reported. Mr. Smith, our local warden, is alert in the discharge of his duties, and the commissioners have recommended him for the position of Chief Warden, which has for some time been vacant.

The following paragraph from a Brockville newspaper is given for the information of all concerned: "A whole car-load of live moose from Mattawa, and bound for New York, passed over the C. P. R. on Saturday. Mr. W. H. Leavitt, who is familiar with the Mattawa country, and is in regular communication with friends there, says quite a large number of moose calves have been caught this winter, the work being rendered easy by the unusually deep snow." R. S. B.

An Unfortunate Quail-Stocking Experience.

The Saratoga Club bought about 300 quail for restocking purposes. At last account they had about fifteen left to set out. This unfortunate waste came from ignorance of the quail's habit, conditions, etc., and bad management. MOCCASIN.

Sea and River Fishing.

THE DEVIL'S GULLY.

A mild morning a few days since, after a winter of long and continuous cold, tempted me out for a short walk for the sake of a little exercise and a breath of fresh air. The snow was still too deep in the woods to venture on any of my favorite summer rambles, and I had to confine my footsteps to the high roads where it had been well beaten down, and accordingly found my way up the long hill road which rises gently from the village to a higher terrace along which it is almost level for three or four miles. As I mounted the slope of the hill I found the ground quite bare, and one or two teams which I met were dragging slowly along, with one runner on the gravel and the other tilted up on the snow bank beside the road.

Reaching the summit of the road, where a depression in the range of hills gives a passage to the upper terrace, a short turn to my left brings me down to the spot which is locally known by the title of this epistle.

It is singular to note how many spots of various interest his satanic majesty seems to have pre-empted in this country, and his selection of them must have been governed by a very wide variety of reasons, and the spot in question must have been picked out as a refrigerator in summer when the infernal regions became too hot to bear, for it is always cool in its depths, in the hottest midsummer day.

Here, in some early convulsion of nature, the rocky range has been split, leaving a cleft 100 feet deep, and not much wider at top, through which pour the waters of a once full brook, formed from three, which, rising in the second range of hills, unite their waters in a great meadow on the upper terrace and plunge down sixty feet at a leap into this ravine, through which they tumble more gently, over ledges and through pools, until they emerge in the meadow above the village. The water never cut this cleft for itself, for its edges are sharp and broken, and there is another outlet to the brook three miles above, at the upper end of the long meadow, where the ridge falls away and the water plunges down to the lower meadow, by a series of smaller falls. The great meadow has evidently been slowly filled up by the deposits worn off from the hills, until the water found this cleft and deserted its old channel, though for many years a sliver was kept open by the owners of an old mill, long since gone, at the upper end, by which a part of the water in spring and early summer was sent that way.

But I am wandering from my text, and have already got miles away, for I took this ramble to see once more the scenes of many pleasant hours in my boyish days, for many a fine trout have I seduced from his cool and shaded home in the depths of this same gully.

Right on the brink of the fall, with one corner reaching sixty feet down on to the ledge, and the others on the higher rock above, stood, and still stands, a stone grist mill, built in 1833, which, with its five run of stones, bolting seives, corn-crackers, etc., was the pride of the country, and at the other end of the dam, some fifty feet across, was a fine sawmill. Where the streams from the two mills came together was a hole in the rock, not much bigger than a washtub, in which, when the gristmill was running, and the sawmill was not, I have found many a nice fish.

It was no use fishing the "Devil's Gully" when the sawmill was running, for there was too much water to get through it, and that was too full of sawdust, but when the waters got low in the summer months, and the gristmill was working lazily along with a partial load, it was my delight to go around behind the sawmill and slide and scramble down to the bottom by the help of the trees and bushes, and after getting a good trout from the first hole, as I usually did, made a jump from stone to stone, picking up others here and there, until I came out at the lower end, some four or five hundred yards away.

There was no other practicable way of getting out there, for the east side was a perpendicular precipice, and the west one, though not so steep, was not easy to climb, if encumbered with a rod and basket, or "string of fish," as was more common in those boyish days. There was soil enough left in the crevices of the rocks to support a strong growth of hemlocks, which entirely shut out the sun, and on the west side, where the slope was not so steep, a few oaks were mixed with them.

It was at the lower end, however, that my anticipations were usually gratified, for here a huge boulder of white quartz had been dropped in the mouth of the gorge, and served as the base of a decaying dam, which

long before my time had served for one of the earlier mills of the village, which had long disappeared, save a pair of millstones, hewn from native granite, which were the predecessors of the "Buhr-stones, which had taken their place in the new mill.

Here in the ruins of the old dam, behind the big boulder, was my favorite halting place, and casting over it into the foam below, I have often secured three or four nice trout before they became too frightened by the struggles of their comrades to pursue the bait any farther, for this was before I learned to cast a fly, when the old-fashioned "angle worm," now called "barn yard hackle," was a bait not to be despised or ashamed of. Once I caught an eel a foot long, which had run up from the river, and as I had a light rod, a slender bamboo, which had been given me, I had a pretty tough job to secure him.

All these old recollections came back to me the other morning as I leaned against the corner of the old mill and looked down over the sheet of ice which reached from the crest of the dam far down to the bottom of the gully, and made me wish for a year of boy's life once again, and another sight of the forests and streams of my youthful days.

The ice, accumulating for many winters in the old wheelpit, has cracked the huge granite stones from the bottom almost to the eaves, and although iron braces have been put in against the ledges to support the walls, I fear the day is not far distant when it will give way, or have to be pulled down and rebuilt, and the brook has so shrunk from the destruction of the forests that the latter result seems hardly probable.

The old pond is a morass, or a sand bank in spots, only the shell of the sawmill is left, and it is used as a lumber shed for old sleds and dilapidated remnants of wagons and other such rubbish; the wheel is gone, and only the remains of the old log carriage are kept to show what it once was.

The young folks of a later generation, with the help of a few plank and stone steps and the roots of friendly trees, have contrived to make a path down to the rocks below the mill, and here on a bright, hot summer day may be sometimes seen a party of them enjoying the cool shade, and dabbling in the water, utterly oblivious of any vested rights or claims of its pretended infernal proprietor.

WM. W.

ANGLING NOTES.

ANTICS OF THE SALMON TRIBE.

Under the heading of "Antics of the Salmon Tribe," English anglers have lately been giving extracts from their personal experience with salmon, grilse, sea trout and the common river or brook trout. Some are useful, and all are more or less curious.

One angler relates that to stone a hooked and sulking fish by dropping a stone above him, that is up stream, is useless, although if a stone is dropped into the water a couple of feet below him, it will, nine times out of ten, start him.

Another states that by casting stones into a pool and making a commotion in the water, salmon will often rise to the fly when they have utterly refused it before the pool was stoned. I have seen this tried by men in this country for other fish than salmon. One angler of my acquaintance frequently took out with him in his boat in lake fishing a small cargo of cobble stones, and when the fish refused to bite, he cast the stones into the water with faith that he would get returns in the shape of fish. Another was in the habit of taking a good-sized branch of a tree, and with this he fairly churned the water when he deemed it necessary to do something to induce the fish to bite. More than one angler have I known to agitate the water with an oar in like manner for a similar purpose. Truth compels me to say that all these antics of the fishermen produced nothing to make me a convert to their methods

Sir John Edwards Moss relates that by putting a fly lightly and gently over a pool, the fish therein are induced to jump although there may be no previous indications of jumping on the part of the fish. In this he is corroborated by another angler. The peculiarities of the salmon family, why they do one thing at one time and another thing at another time, or do dissimilar things at the same time in different waters, etc., are mentioned over and over, but every fisherman has had experiences of this sort. There is one thing that I wish to mention as an antic of one member of the salmon tribe, which I never have been able to explain in a way to make the explanation hold water. Why is it that the lake trout when at the surface in the spring, absolutely refuses to rise to the fly in one lake, and does rise to the fly in another?

Over and over I have cast a fly directly into the boil made by a rising lake trout, and not the least attention has the fish paid to it. I have known a lake to be covered with small black flies, and the lake trout feeding on them by coming to the surface and sucking them in and yet they would ignore an artificial fly cast on the water. At such times the trout would take bait readily, and when removed from the hook their mouths and throats would be filled with the flies which they had sucked in. I know that in some Adirondack lakes small lake trout have been taken on the fly in the spring season.

Lake trout run up the Nepigon River clear to the foot of Virgin Falls, and there they take the fly in the rough water, and their rise and strike and play cannot be distinguished from similar actions on the part of the brook trout until the fish show their forked tail or they are brought to the net.

As a rule, the lake trout is a deep water fish, and is rarely found in streams, and they are frequently condemned as bait-taking fish, and so get a bad name as a game fish.

A gentleman sat near me in the cars a few days ago talking to a companion about the lake trout. He condemned the fish in unmeasured terms, and satisfied me that he knew nothing about it personally, for the lake trout is a game fish, and is entitled to rank with the best of the non-jumping game fishes, but why it will not take a fly when feeding at the surface, I never have been able to explain. If anyone ever discovers a fly that the lake trout will take with reasonable certainty, the fish will at once rise in the estimation of anglers and occupy a place second to none. Fish for them with a ten ounce rod and single gut leaders, and when you get hold of a fifteen-pound fish you will know you have been fishing by the time you get the gaff into the fish. One trouble is, too often the lake trout is fished for with bed cords and weaver's beams, to which unbreakable cod hooks are attached, and the fish has no show whatever in the hand over hand encounter, but it is a game fish just the same when fished for with light tackle.

MOTHS.

I am not entirely happy unless I can keep a fly book in my desk where I can put my hand on it at any time during my waking hours. When the fishing season is over, I always put one fly book, sometimes two, in one of the drawers of my desk, although I know full well that it is dangerous. During the winter there is not a week that I do not have those books out for some purpose or another, generally to look at the flies, and recall some sport that is behind me, or to build air castles of the sport to come. Once or twice a week I blow tobacco smoke through the books as I sit at my desk smoking, and it is a pleasant remedy to apply. For years and years I have not known a moth in my fly books or in my flies anywhere, but this winter, being more than usual away from home, the fly books in my desk did not get the usual amount of smoking, in fact they were utterly neglected for other things. One day I opened one book and found traces of a moth; opened another and found more traces of moths. For a few moments I was in despair, but I found that they had made their way between two leaves only in each book, and but few flies were injured. But moths had been in the books and I could not tell where they would break out again, and I could not watch them daily for another outbreak. I decided to resort to heroic remedies, as I thought, and taking out the flies, I placed them in benzine long enough to thoroughly saturate them and then spread them out in the open air for the benzine to evaporate, which it did very quickly. Some of the flies had wings of dyed feathers, and I had my doubt about results, but I spread the flies on sheets of writing paper, and while the cure for moths was thorough and complete, I could not discover that a single feather, natural or dyed, had faded in the least, nor did the colors run. As to the books, I simply baked them in the oven of a store to kill any lingering moth eggs, and I now think I am well out of the scrape with the loss of only half a dozen flies on such a matter.

A. N. CHENEY.

TROUT FISHING AT NIGHT.

A few weeks since, I noticed in Forest and Stream a communication from Arthur M. Rice in regard to "trout rising at night." While the experience I have in mind is scarcely of a similar nature, it has, at least, to do with "fish that pass—that rise in the night."

On the very summit of the Bitter Root Mountain, midway, beside the trail leading from the Missoula River in Missoula county, Montana, up the Fish Creek to the summit, down Lake Creek and thence to the North Fork of the Clearwater, in Shoshone county, Idaho, lies a beautiful little sheet of water, covering perhaps an area of 100 acres, its outlet being the Lake Creek mentioned. Often during the past twenty years I have heard of parties of prospectors or packers who had camped by this lake, and who, by building large fires on the shore at night had been enabled to catch quantities of trout "all of the same size," and with "almost any kind of bait," even to a "piece of red flannel" attached to a common hook.

I made my first and only visit to this lake in company with a party of four others, late in September, 1893. We had started out on the trip with the expectation of going down to and across the Clearwater for large game, but on arriving at the lake found that two of our pack animals would not be able to stand the trip down the mountain and back, as there were already about ten inches of snow on the summit, and the mud and slush on the trail were such as to render packhorse locomotion exceedingly difficult. It was decided to remain a couple of days at the lake, and then to take the track back. (The day following our retreat from the summit, began the snowstorm which eventually brought about the trials of the Carlin party along the Clearwater, only about fifty miles air line from the lake in question.) Upon our arrival at the lake we were surprised at finding a camp of four rail road boys (and a most jolly sportsmanlike party it proved to be) who had been there a couple of weeks, and also several lodges of Flathead Indians. Little game was reported, but the boys had great sport catching trout at night, but they had caught only an odd one now and then in the day time. We had reached the lake about noon, and having our appetites right along with us, about the first thing we did was to inquire of the railroad boys what they had in the way of fresh meat. They had no meat, but plenty of trout. One of them led me down to the side of the lake, and there, a few feet back from its edge was a miniature pond, formed by scooping out a hole in the sand and rocks, and fed by a spring of ice-cold water. The pool was fairly alive with trout. They had been caught from the lake at night and immediately transferred to the spring, where they must perforce remain until their presence was required at the frying pan. And they were beauties. They averaged about three-quarters of a pound each in weight, and all appeared near that size, but once in awhile one could be seen that would weigh a pound, and as often one not weighing half a pound, and the strange part was that they comprised four separate species, that most beautiful of the family, the rainbow trout, predominating. There was also the common mountain trout, and what I suppose to have been some sort of a lake trout, yet of a plainly different type, and then a few bull (erroneously often called salmon) trout.

We had the entire variety represented at our quickly prepared and thoroughly relished dinner. After the meal was enjoyably dispatched, nothing would do one of our party but that he must a-fishing go. The railroad boys insisted that it would be of no use, as they had already demonstrated the fact to their satisfaction that t he trou in that lake would only bite at night.

Our "Walton" would not be convinced, and in a short time he was standing on a log whipping the placid waters to his heart's content, but to no other purpose. Finally, tiring of this sort of sport, he induced one of our new found friends to assist him in the construction of a small raft, and when it was finished, the two paddled out into deep water about 150yds from shore, and in the course of a couple of hours secured a liberal supply of trout.

That night both parties and the Indians were all mixed up on a large fallen tree, upon which was built a bonfire. The tree itself being water-soaked, would not burn. The sport we had, due probably as much to the novelty of the situation as to the mere pleasure of successful fishing, is beyond description. Suffice it, that by the time we were ready to quit the log, the spring pool was full to overflowing. As to why the fish would rise to the fly at night, and not in the daytime, near shore, but would rise in the deep water during the day, the theory advanced by our party was that in the daytime the fish for reasons "known to the jury" and peculiar to themselves, frequented the deep water well out in the lake only, but at night came in to the shoal water near shore to feed, and were attracted to any particular spot by means of the bright light of the fire.

WILL CAVE.

BOSTON AND MAINE.

BOSTON, April 6.—Most remarkably cold weather has followed the opening of the trout season in Massachusetts, and very few strings have been taken. Indeed, the fishermen have generally stayed at home. A few warm days are wanted.

Another party has got back from Monomoy, and only very poor success is reported. But the very latest reports indicate better weather, with a few brant in sight.

One salmon has already been taken from the pool at Bangor, though the ice is not yet out of the river below. It seems that the ice moved down from a favorite fishing spot, and a number of fishermen gave the salmon a try March 30. One salmon weighing twenty-three pounds was taken. Mr. Perley was the lucky fisherman. This is one of the earliest catches on record at that pool. Mr. Robart, the veteran trout fisherman, who has visited the Rangeleys for so many years with Mr. Clark, now deceased, is getting ready to try the salmon at Bangor this year. I hear that Senator Frye, of Maine, and Senator Chandler, of New Hampshire, will try for trout in Nova Scotia waters before they visit the Rangeleys and Senator Frye's camps there.

Her Majesty's steamship Blake touched at Boston last May in charge of Vice-Admiral Sir John Hopkins. Now the Vice-Admiral is a lover of the angle, and though one of the first officers in the British navy, he is as gentle as old Izaak himself when at the salmon camp. The result of the stop at Boston last spring was an invitation from that most genial of sportsmen, John Fottler, Jr., to visit the St. John at Gaspe, where Mr. Fottler, with Mr. Ivers W. Adams own a splendid salmon privilege. The Vice-Admiral thoroughly took in the trip, and did much to make everybody happy. If he saw any of the boys flagging in their exertions he would point to the salmon rocks, and in a quiet way admonish them to "keep the beggars moving!" In fact this was a favorite saying of Sir John. At last the stay came to an end, and when the party had last shaken hands, Sir John took off his hat and waving an adieu he swung it high in the air, and admonished all hands to "keep the beggars moving!"

Mr. J. W. Barney, a Boston rod maker, and lover of the Forest and Stream, was also one of the party. Out of pure love for the Vice-Admiral he has made him a most beautiful salmon rod. The rod is fifteen feet long and weighs twenty-six ounces. It is from a log of dagme wood, which Mr. Fottler got in Cuba last year. It is most artistically wound and mounted. It rests in a case of Florida red cedar, also made by Mr. Barney. Outside it is bound with nickel in a new design. Lettered in gold in the centre of the top is "keep the beggars moving." Inside the binding is of leather, but inscribed, between a couple of the Blake's special flags, "H. M. S. Blake, to that sturdy Briton and devoted angler, Vice-Admiral Sir John Hopkins, from J. W. Barney." The rod in its case has been shipped to Bermuda, the winter quarters of Sir John. All the party would like to see the face of Sir John when he opens the box.

SPECIAL.

NEW ENGLAND TROUT AND SALMON

BOSTON, April 6.—The residents of Oakland, Maine, or at least those who like to fish, are very much elated just now over the prospect of good salmon fishing beginning as soon as the ice breaks up in that wonderful chain of ponds or lakes, starting almost from the very doors of the town.

Messalonskee Pond, ten miles long, located close to Oakland, is the first lake in the system, then Long Pond, seven miles in length, after this comes Ellis Pond, a horse-shoe shaped sheet of water, on which is placed the fish hatchery. North Pond comes next, nine miles long, and East Pond, six miles long. This completes the list, and as all these ponds are connected, they afford a wide range for the salmon and trout which have been put in each season during the last five years from the hatchery at Ellis Pond. About two and one-half years ago a law was passed making a close season on salmon in these lakes for five years. That law has just been repealed, and as salmon weighing six to seven pounds have been caught through the ice during the past winter, the fishermen take it for granted that fine sport awaits them as soon as open water shows itself. As the waters are full of fresh water smelt, the salmon have plenty of bait, and therefore thrive splendidly.

William P. Blake (president of the Kennebec Fish and Game Club) and his son, give a great deal of time and attention to the hatchery, and do everything possible to help and encourage the good cause. Another prominent resident of Oakland who is waiting impatiently for the coming season is Geo. V. Rogers. This gentleman is positive that no finer salmon fishing will be found anywhere in the East than that which will soon be had in the waters mentioned.

To celebrate the opening of the trout season in Massachusetts, the windows of the tackle stores along Washington street present a bewildering display of fishing tackle. Dame, Stoddard & Kendall's attractive show has called forth many compliments, and right in the centre of their window is a magnificent painting of a large trout by "Brackett," which has been very highly praised.

Boston anglers who have endeavored to reap the joys of

trout fishing during the past ten days, have found it rather difficult to keep up a high degree of enthusiasm in the face of the raw and chilly weather they have experienced. The Cape, as usual, has been the favorite stamping ground for this early sport. Mr. John Caswell spent a couple of days fishing in that vicinity, and came home with a nice mess. J. A. Littleton and friend tried the Big Nickerson Bog at Mashpee with very good success. Another party who control one and one-half miles of Scrotan brook, near Sandwich, and also some good marsh fishing in that vicinity, felt quite well rewarded with the results of their trip, much better in fact than with the weather they experienced, which they described as pretty uncomfortable. One enthusiast whom I have talked with was fishing from a very small, cranky boat, and having hooked a big fellow, forgot his caution, and as a result was tipped out head first into the ice cold water up to his armpits. Although a fisherman for many years, he never had an accident before, and strange to say, is suffering no ill effects, but is decidedly against repeating the performance.

Trolling tackle for use in the big lakes after the ice moves out is now being looked over, and the tackle houses are all quite busy with this particular branch of the trade. Reports from Newfound and Minnedasaukee lakes in New Hampshire are rather discouraging at present. During the last days of March the thermometers in that vicinity registered down to twelve degrees above zero, and wagons were rolling over the ice in every direction at Wolfboro and Centre Harbor. Sebago and the Rangeleys, in Maine, are also strongly encased in ice fetters. In spite of this, many people predict the earliest season in years, each one basing his belief on different grounds. HACKLE.

Do Fish Talk?

Your editorial on the "Senses of Fish" is interesting, and though much is known in connection therewith, still there is sufficient mystery about their life under the water to afford wide margin for speculation. I have heard "fish stories," and have personally witnessed strange things while in pursuit of them, but it seemeth better to me that others should spin the yarns, being better posted piscatorily than myself. I am tempted, however, by your editorial, to add my mite relative to the conversational powers of fish.

In May last, while anchored off the mouth of Seal Creek, one of the numerous branches connecting the Virginia broadwaters, we were much interested in listening to the voices of the fish, as they passed with the flood tide. While in the cabin during the day, or at night in stormy weather, we never heard them. But after sunset, when all was calm and we were seated about the table, the sounds were often sufficient to make themselves heard above the continuous cackling din of the marsh hen that vibrated over the meadows. To me it was uncanny to hear these mysterious tones, sounding directly under our feet.

They seemed to pass in schools, slowly, as though taking their time; we could hear them approach from forward, creak! creak! creakity! c-r-r-eakity! they sang, as they passed below. Now and again a distinct grunt would be prominent among the creakity! creaks! then from afar a drum would sound his note: Br-r-oom! now deep and resonant, now subdued, and quickly the answering br-room! br-oom! was heard on either side the yacht, as the finny host passed on. The smaller squeaks and creaks were incessant, continually in evidence, like the song of crickets in August. The heavier tones of the drum and other fish being mere incidents in the procession.

I tried faithfully on two occasions to induce them to investigate my tempting lures, sitting patiently on deck for an hour at a time and changing bait often in the hope of finally suiting their appetite, but in vain.

I could plainly hear the drum sound as I sat there in the moonlight, but the marsh cries filling the air on every hand vere sufficient to drown the other voices. At first these "siren songs" were exceedingly interesting to me, but when the novelty had worn away, I found them very annoying. Often I have left my state-room, after turning in for the night, and gone on deck for a little time with my pipe. There, I knew what manner of bird or beast it was that voiced its wild nature. The yap! yap! of a prowling fox, the salty, gutteral laugh of the gulf gull, or skimmer, as he swept by on noiseless wing, to show for an instant only, as he swung across the shimmer of moonlight that bridged the inky blackness astern. All these I love to hear as I sit on deck on quiet nights, but down below, those grunting fish! Ugh!

WILMOT TOWNSEND.

A Note from Dr. Kingfisher.

Editor Forest and Stream:

When a hunter gets "rattled" while waiting and expecting the appearance of big game—or small for that matter—or when the game comes to view unexpectedly and he begins to quake and shake so that he can't hold his gun onto a haystack, or a "flock o' barns," why will every writer, including the editor of Forest and Stream, persist in calling this state of the nerves "buck fever?" when every fledgeling M. D. and drug store cub knows that one don't "quake" nor "shake" while the ague is on, but only while the chill lasts; while the fever is shaking the marrow loose in your bones, and your teeth are chattering like a king-fisher windin' up his reel with the click on.

Don't throw us into a fever, when this is no fever. Call it by the name our fathers used before us, "buck ager," or to be precise, "buck ague."

Next, with an attack of "buck fever."

New York Spring Shooting.

The Fuller bill, allowing spring duck shooting, has become a law. It extends the open season to May 1.

An Oswego correspondent writes: "The local sportsmen are delighted over the change in the duck season, which allows them to shoot until May 1st, instead of March 1st, as formerly. The ducks are quite plentiful in the lake and numbers have been killed."

Of course they are delighted; but it is just such satisfaction as the child feels who roots up the planted seed and finds that it has sprouted. The mature view of the subject given in these notes by Mr. Geo. R. Peck, of the Auburn Advertiser, who writes: "A friend of mine, who is supervisor of one of the best wards in the city, although not one of the most progressive wards, said to me yesterday: 'George, I bought a pair of black ducks yesterday for fifty cents, and the man of whom I bought the pair said they would not have nested here.'

"I cant't say whether this particular pair of black ducks would have nested here or not, but I do know that thirty black ducks were raised in Canoga marshes last year, which was the second year of a short spring season—the season closing March 1—and some were raised down the river. Teal ducks nest in this section and so do wood ducks. Why, wood ducks have nested in the inlet of Owasco Lake and been killed early in August before the season opened and before the ducks were hardly able to fly.

"The gentlemanly sportsman (?) who sold my friend a pair of black ducks, probably never did anything to encourage a pair of black ducks to nest and raise young in this section. I wonder if he ever even thought that a pair of ducks getting ready to raise young needed protection and his encouragement! I doubt if he ever looked at it in that light. In the fall, after the ducks are raised and ready to take care of themselves I blame no one for shooting them or game of any kind. It is the time to kill the game and fish and the time to eat them. It is the privilege that the law of nature has conferred upon man. But because nature has given man a game to be killed in the season, it does not follow that nature gave man the privilege of butchering game in the mating and in the procreating season.

"The other day two men caught a female pickerel in Cayuga Lake which weighed nineteen pounds. When they dressed her they found five pounds of row in her. A few days afterwards William Ferree brought one to Auburn and hung it in front of a fishing rod and tackle store. She weighed twenty-three pounds, and probably contained six pounds of roe. The fish ought never to have been shown, least of all to the multitude, from the front of a fishing rod store, and the proprietor did not permit the fish to remain there long. The pickerel were probably caught off their laying beds. A hook is dropped on a bed and the fish in removing it gets caught. It is the way to destroy 30,000 eggs, and like duck shooting in the spring, it is just as bad.

"When the sportsmen of the country take up in dead earnest the defense and protection of the females of game and fish to procreate, then game and fish will increase and multiply."

New Hampshire Legislation.

Manchester, N. H., April 5, 1895.—Editor Forest and Stream: The Legislature of this State has adjourned, much to the relief of the people in general, but no class has reason to be more grateful than the sportsmen, as each hour of the two last weeks of the session brought rumors of a coming storm that seriously jeopardized the interest of hunter and fisherman. The source of the danger was the farmer element, which desired to do away with laws that restrict them from doing whatever they wish with fish and game found on their land, at any time of year, brought about in part, I presume, by the habit of grouse budding apple trees, assisted materially by a desire to lawfully snare various kinds of game. The promoters of the mischievous bills had sympathizers among non-agriculturists; men who neither knew nor cared for anything connected with the question, but liked to curry favor with the few selfish and short-sighted land owners. As far as the House of Representatives was concerned, they would have succeeded in their wicked endeavors, but the consideration and greater wisdom of the Senate killed the iniquitous bills, as they came from the lower branch. Little respect has ever been paid to the fish and game laws by the advocates of the defunct bills, yet to have taken down all bars, which was the practical effect of the legislation the destructionists desired, would have been deplorable. As finally settled, thanks to the Senate's firm and sensible stand, the changes made in the laws were few and not detrimental to sportsmen, but mostly of a highly commendable character.

These changes consisted of asking for a report from the Fish and Game Commissioners each alternate year, instead of annually. Extending the open season on deer, caribou, and moose from Nov. 1 to Nov. 15, and prohibiting them with dogs at any time, under heavy penalty, and the summary disposition of dogs so engaged by Game Wardens. The season on woodcock, ruffed grouse, partridge and quail was shortened by changing the opening from Sept. 1 to Sept. 15. The open season on lake and brook trout was shortened two weeks on each end, causing it to begin May 1 and to close on Sept. 1. They prohibited the killing or having in possession passenger pigeons and turtle doves until the first day of August, 1898. They appropriated $500 for the importation of foreign game birds, and care of native varieties. They passed a joint resolution to stop the depositing of sawdust and shavings in several ponds and streams. Appropriated $500 for an addition to the Cole brook fish hatchery. Authorized the Governor and Council to end the joint tenancy between Massuchusetts and this State, in the Plymouth fish hatchery. They prohibited, for four years, fishing through the ice in twenty-five ponds and lakes in various towns, and all ponds in the towns of Croydon, Grantham, and Washington; they also stopped fishing at all times during the coming five years, in streams emptying into Dan Hole pond in the towns of Tuftonborough and Ossipee.

The sportsmen of the State are not exulting over the few good points they gained, nor mourning for the many they hoped to secure that were really necessary, so much as they are congratulating themselves upon the evils they more or less narrowly escaped, and though they are not borrowing trouble, so far as I know, profiting by recent experiences, they should recognize the fact that their forces in future legislatures must be awake, or field sports in this State will suffer by the turning down of good, if imperfect, regulations. Meantime the motto of the New Hampshire sportsman, during the next two years should be, "Enforce existing laws."

At a meeting of the Hillsborough Co. Game and Protective Association, the 2d inst., the President, Mayor William C. Clarke, declining a re-election, the Secretary, Mr. Charles J. Darrah, was elected to that position, and Mr. Fred. Thurston, Secretary and Treasurer. PAYSON.

A Minnesota Association.

St. Paul, Minn., April 3.—Editor Forest and Stream: A meeting was held last night to form the Voluntary Game and Fish Protective Association of Minnesota, as an auxiliary to the State Game and Fish Commission.

The following committee was named:

For Minneapolis—F. F. Davis, C. S. Brackett, Wm. L. Wolford, W. L. Bigelow, W. P. Andrus, James Griffin.

For St. Paul—Uri L. Lamprey, Dr. C. A. Wheaton, H. B. Goodenow, Wm. L. Tucker, Crawford Livingston, R. W. Matthews.

For the State at Large—C. N. Nelson, Stillwater; O. McFarland, Dalton; J. H. Claggett, Montevideo; L. Z. Rogers, Waterville, H. B. Griffin, Buffalo.

A call for a general State meeting was agreed upon for May 15 at Minneapolis and the following general letter was ordered to be printed and sent out by the secretary:

"Dear Sir—At a recent meeting of a number of gentlemen interested in the subject of preservation and protection of game and fish in Minnesota, recognizing that these natural resources constitute a large food supply for the use of our citizens, it was resolved to support a movement for a voluntary State Game and Fish Protective Association, as an auxiliary to the constituted Minnesota Game and Fish Commission; to assist in the further preservation, protection and propagation of these immense interests, and to render such aid to the State Commission in restraining and prohibiting violations of the laws made for the protection of these bounties of nature as the conditions require, and we are in a position to offer.

"Previous to this letter this subject has been discussed in the columns of the Pioneer Press, Minneapolis Times, and Forest and Stream; also a number of gentlemen interested in this matter in the State, have been communicated with as regards the necessity of such a voluntary association and as to the good we might accomplish. The idea has met with a hearty approval from all quarters, and the indorsement of our State Board of Game and Fish Commissioners.

"In accordance with the general interest that has been manifested, the present committee has been formed to open up a general correspondence, that we may soon have a permanent and working organization to assist in preserving, protecting and propagating the great natural food supply of our State. Upon no consideration will it be allowed to become of a sectional character, or operate to the advantage of a peculiar class of persons. Farmer and townsman, club and individual, will work side by side in pure, unselfish effort in a public work, for the public good.

"You have no doubt observed during late years that the game and fish reserves of Minnesota are fast becoming depleted through the indiscriminate hunting and fishing, both in and out of season. Naturally, there are cases which the State Board does not become acquainted with, though where they do, they vigorously prosecute.

"We will be perfectly voluntary in character, without salary to any officer; and with a membership fee of not more than $1 yearly we should enlist the support of a very large number of gentlemen of like tastes. The game resources of Minnesota are worthy of the effort. We can be of much service in effecting additional legislation. There is a growing sentiment among sportsmen of the whole country that laws should be passed prohibiting the sale of game.

"Recognizing you as a gentleman liberal in your views on this subject, we make this a personal request to give us your good will and assistance in forming a permanent organization; and for this purpose kindly consider this an invitation to be present at a State meeting called for May 15, to be held in Minneapolis, that we may organize and adopt a suitable constitution and by-laws and thus perfect the organization."

For this purpose all friends of the movement are requested to send in all names of clubs and individuals, that they may be communicated with.

"Mr. Lamprey presided at the meeting. Mr. Tucker, who in the first instance started the movement, spoke as follows:

"Gentlemen—In calling your attention to the fact that an effort to form a protective game and fish association was being made, the purposes of which were outlined to you in a circular letter, we wished to see what the sentiment among representative sportsmen and citizens of the State on the subject of a good protective system of game laws really was. Responses that have come in are very gratifying to us, and show a healthy and solicitous regard for the game interests of the State and a willingness for co-operation. We cannot fail to see that these interests have been by many per cent. benefited by the work that has been done by the State Game and Fish Commission since its organization. Valuable as these reports have been, we also cannot be insensible to the fact that much yet remains to be done that can be done, and can readily recognize the necessity for a general movement by all classes of citizens interested in this subject to extend a helping hand to the State Commission, the members of which I must say to you have been and are ready at all times to encourage any effort in this direction and will very gladly accept our co-operation. I very much regret to notice by the annual report submitted to the Governor recently, that during the year just closed no organized gun club in the State has proffered the assistance to the commission that they have so earnestly desired and that they were so willing to receive.

"By this same report you will notice the general decrease of exportation of game; the saving of $25,000 as the value of the venison product that has been kept within the State during the year; the valuable increase that the fish supply of our lakes and streams has received; that our present game laws have been sustained by the Supreme Court on all points brought up for its decision; of the large per cent. of convictions that have been secured, and of the confiscation of large amounts of pot hunter's paraphernalia. The game laws of Minnesota are recognized by our sister States as the best fish and game laws in existence in this country.

"This state of facts indicates, conclusively to our minds, that the citizens generally are awakening to the fact that the subject of game represents more than the one pleasure of hunting it. It is a great food supply, in its season. The once very prevalent opinion among many people that game laws are class laws, is giving way to a more enlightened consideration of the subject. In rural districts this notion to some extent exists. Again I would direct your attention to why this is so. In many instances a proper regard has not been shown to the farmer's rights. We have invaded his property, without leave or license, at times abusing the courtesies he has shown, until the name of city gunner is to him a synonym of a finely polished rascal. Now, the farmer is in reality one of our best protectors and propagators of game. It is his fields and his woods that sustain game life, and in which our game is found; not in the streets of a bustling town or city.

"And now, gentlemen, in veiw of all these facts, it seems very proper to ask you to assist in forming a game and fish protective association that will be a valuable auxiliary to the constituted State Commission. By the organization of an association of the character that has been outlined to you, these facts present themselves for our consideration: We would give a good moral support to the State game laws; we would assist in their enforcement, and the protection and further propagation of game where practicable. When we should have on hand more funds that is needed for actual expenses, to purchase and turn loose in the State any game we may acquire; to keep up the natural feeding grounds of game birds and ducks, planting waste lands in favored localities with celery and other food; to overcome the antagonism and to cultivate the good will of the farmer element of which I have spoken; and to co-operate with associations of neighboring States, that we may influence legislation to the extent that the shooting and fishing seasons open and close at the same time in these States.

"There can be no better time than the present to form and put in motion a game and fish protective association that may long exist, the value of which may be noted as year succeeds to year, and it will be a pleasing memory to us to know that ourselves laid the cornerstone. It is no scheme for personal aggrandizement. It is to be a popular movement in behalf of a popular subject. So you have been asked to come here tonight to form an organization committee, that we may open up correspondence with gentlemen of like tastes throughout the State and at the proper time to form a permanent organization."

After other addresses the following resolutions were adopted

as embodying the principles and purposes of the proposed organization:

"In pursuance of the objects for which this meeting was called, be it resolved, that we constitute ourselves a committee to organize a voluntary State game and fish protective association, as an auxiliary to the State game and fish commissioners, to aid said commission in the performance of its duties.

"The objects of the association will be:

"First—The bringing together of all clubs, local associations, and individuals in the State, interested in the protection, preservation and propagation of game and fish; to form one State protective association.

"Second—To encourage and assist in the organization of local clubs in any district of the State where it is the general wish, and the importance of the interests demands it.

"Third—To assist the State board in securing evidence, and the prosecution of offenses against the statutes on this subject.

"Fourth—To represent the sportsmen of the State in advocating any legislation that may be deemed essential for the further advancement of the preservation and advancement of game.

"Fifth—To locate and plant with suitable foods any waste lands that will make feeding grounds for any of our game birds; and to keep all natural feeding grounds that now answer the purpose.

"Sixth—To expend any moneys on hand not necessary for actual expenses and other purposes of this work, for the purchase of any game animals, birds and fish, that may be suited to this climate; for the purposes of introduction and propagation of any such species.

"Seventh—To correspond with associations of neighboring States that we may work in harmony for these interests, and influence legislation to the extent that the seasons may open and close at the same time in these States.

"And be it further resolved that we, both individually and collectively, will at all times seek to cultivate the good will and support of all classes of citizens, that the pleasures of the forest and stream may be enjoyed by all persons; and to mediate in any and all cases if injury or injustice between the gunner and the owner or tenant of any lands and waters; and furthermore, we will labor to cultivate a better general understanding as to the value of the game and fish products to the State and to the individual, especially seeking to impress the fact that these products should not be a subject of sale, barter or commerce.

"And be it further resolved, That this association shall be perfectly voluntary; that no salary shall attach to any of its offices; and that it will not be sectional in character, or operated for the private purposes of any of its members or any class of citizens."

Indiana Quail.

Portland, Ind.—In your valuable paper of March 30 I see a short article headed, "The Indiana Five Year Quail Prohibition." Speaking from my observation in this part of Indiana, where I have resided most of my forty-four years, I think a prohibitory law unnecessary. On almost every farm, notices warning hunters to not trespass are conspicuously posted. These restrictions, together with the short open seasons; and mild winters have enabled Bob White to hold his own in this part of Indiana. Our lawmakers must have taken this view of the matter, for they adjourned without making any change in the law.

C.

Michigan Legislation.

A bill to change the deer law has been introduced in the Michigan Legislature, and embodies a non-resident license fee. It has been recommended by the house committee on fisheries and game and provides a uniform open season for deer in the two peninsulas from November 1 to November 25, provides that not more than five deer shall be killed by any one person during a season, licenses hunters from outside the State for $25, and provides for the payment of a license fee of not more than fifty cents for Michigan hunters.

A correspondent writes about it as follows:

I hope this unnecessary measure may yet be crushed and may not become a law, as the existing law, which prohibits shipping deer out of the State is all we needed in this section. The proposed license bill must perforce allow the hunter his game—providing he buys the right to kill it—to take where he pleases, so what do we gain.

The alleged sportsmen of our State seem to think the one important object is to keep the neighbors out and shut our eyes to violators of the good laws we have within. They make spearing of fish illegal, yet dozens of baskets of perch, blue gills, bass and pickerel have appeared upon the streets of our village on sale, all bearing spear marks, visible to anyone except the game wardens. Our open trout season is from May 1 to September 1, and a good justice of the peace has been seen with rod and line and bulging trout bag, wandering beside the trout streams the tenth day of April. Still we must keep the rascals out by license, and make our name odious to the best fellows, as a class, in all our sister States, the true sportsmen. It makes me hot.

SAND LAKE, MICH. J. H. B.

National Association.

Please announce that the Arkansas State Sportsmen's Association has recently made application and been admitted to membership in the National Game, Bird and Fish Protective Association. President M. R. Bortree, of the National Association, will soon appoint county secretaries in various sections, to act in conjunction with deputy game wardens, and furnishing information in the walk of game and fish protection.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 16 to 19—Boston.—New England Kennel Club. D. E. Loveand, Sec'y.

April 17 to 20. Los Angeles—Southern Cal. Kennel Club. Dr. R. J. Withers, Sec.

April 25 and 26.—Toronto, Canada.—Toronto Kennel Club. W. P. Fraser, Hon'y. Sec.

May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.

Shpt. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at —— P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10—Morris, Man.—Manitoba F. T. C., John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells Sec'y.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 28.—Trials A. U. S. F. T. Club at Newton, N.C. W. B Stafford, Sec'y, Trenton, Tenn.

That women can write, and write well, in a field of literature which, by assumption, has been held as belonging to man almost exclusively, is fully demonstrated by the charming articles, A Chronicle of Rhoda, published in our issue of last week, and A Tale of Max, published this week. These writers have most pleasingly and gracefully told of dog life, so unaffectedly, yet with such fidelity that Rhoda and Max seem to be dogs we knew. Only those endowed with a genuine love of the dog can write of him with such sympathetic appreciation and touches of true pathos, as they also are the only ones who can understand and write of him as he really is; that is, of him as an intelligent animal, loyal and devoted, with a comprehension of his place in domestic life far greater than is comprised merely in a place to sleep and some food to eat. In observing the finer features of the dog's domesticity, man has been negligent, even if he has the nicety of sentiment and delicacy in coloring necessary to portray them. There being in evidence such superior talent and wisdom in presenting the merits of the dog in his true relation to man, we trust that the writers mentioned and others will feel encouraged to write more of their pets. For such writings, there is a welcome place in the columns of Forest and Stream. We can assure all our contributors that no apprehension need be felt concerning the appearance of the offensive carper or wrangler, for to such our columns are not open. For these charming sketches, we bespeak the consideration of our readers as a meed justly due them.

THE STORY OF MAX.

In a small western town, some thirty years ago, lived a family of five persons, the father a struggling lawyer, the mother, too, struggling in her way, between early traditions and manifest destiny in the way of housework, and the bringing up of her three children. Of these, James, the eldest, was bright, restless, loving and sickly. Paul, the second child, sturdy, undemonstrative, though not less affectionate; and Helen, the baby, much younger. Their home was a large place in the suburbs, with a square, roomy house, in front of which were two southern-looking verandas, one above the other. Tall catalpas, too, towered by the gate and beside the porch, lending an additional southern aspect. But the thicket of evergreens to the south, every tamarack, spruce, hemlock and other evergreen, everyone of which had been carried hundreds of miles by the two boys, and lovingly planted, spoke of the North. In the little orchard down in front, peaches reddened and apples turned golden in their season. In the back-yard was another grove of native forest trees, also planted by those two loving boys, and here crab apples and wild plums perfumed all the neighborhood in spring; and buckeye, rose bud and dogwood gladdened the eye with their beauty. Ground ivy grew lush below, and all manner of wild flowers, from the early meccoon and spring beauty, to squils, lung wort, and last of all, brilliant cardinal flowers in early autumn. Two catbirds yearly built in the thick branches, and robins and blue birds whistled before the leaves came.

The time of this little tale was midsummer, and the hot sun beamed down on yellowing grass and stricken trees. Most of the flowers had ceased to bloom in the garden, and tall weeds stood wilted in the vegetable patch. The catbirds made frequent visits to the large tub of water beside the well, covered by a big old-fashioned curb, and with a windlass and bucket, which splashed in the cool water many feet below.

Here Helen loved to play, and always at her side was Max, a small tan and black dog, with a sharp, aggressive muzzle, and soft, beautiful, dark eyes. His stout body was poised on short, strong bench-legs, ornamented with bright tan, as also was his muzzle. He did not look as if built for speed, but the suspicion of a rat, or prying cow trying to enter a gate carelessly left open, speedily turned him into an animated tornado. How quickly after a sharp race through currant bushes and raspberry vines he would bring the identical chicken his mistress had thrown the stick after and lay it at her feet! It seemed impossible for her to go any place without him—shut him in ever so securely, he found some way to get out and follow—at first afar off, and later, well knowing he would not then be taken back, boldly frisking about her. Much as he desired to go always, he yet knew Sunday, and made no attempt to follow to church, but quietly bided at home content to follow with his eyes alone.

Occasionally he accompanied his master to the courthouse, and on one occasion caused even the grave judge to laugh. It was Max's daily habit to sit on his haunches, with begging paws upraised, beside his mistress at table, and, seeing a man sworn with lifted hand by the clerk, sympathetically assumed his characteristic attitude. The trick was self-taught.

He was a very sociable dog, which quality once made him much trouble. A friend from a neighboring city paid the family a visit, and during her stay, made much of Max. Returning home, she failed to notice that he followed her aboard the train. Fifteen miles on her way he was discovered by the brakeman and was pitched off without mercy. Poor Helen soon missed her faithful friend, and even the anxious mistress was not ashamed of tears over his unaccountable taking off. Days dragged on, until nearly a week had passed, when one afternoon, a little lame, black dog was discovered slowly moving over a field toward them. At last he made his way under the fence into the door yard, and finding his two mistresses, looked up appealingly into their faces and wearily laid down. The poor fellow had swam full creeks and journeyed many muddy miles wholly strange to him, lame and fasting! Great was the joy over his return, the lost was found; the dead restored to life.

Helen gathered him to her breast, regardless of mire, and the dainties of the cupboard were lavished upon him, though he seemed almost too pitifully weak to eat.

And yet it was not so very long since all original sin seemed to be wrapped up in his little black body! He would race like a whirlwind after flying hens and regardless of expostulation, would worry them to death. He grabbed slow-waddling ducks by the neck and shook them until they yielded up the ghost. He ran off with hats and shoes, jumped at the clothes on the line waving in the wind and tore them into shreds, or trampled them in the dirt; he dug unsightly holes in the yard and went to sleep on the choicest flower beds, and did many other acts of depravity.

His very last wickedness, and the one which finally broke the back of his mistress' patience, appeared to scare him into grown doghood; for after it he never committed the slightest misdemeanor, and became the dignified, intelligent, helpful dog which any member of the family on occasion would have fought for.

He had accompanied his mistress and the baby girl, trundled in a spic-span new cab, down town and back. Baby had been handed over to faithful Martha, and Max followed them into the back yard. The mistress was busy for several hours, but finally opened the door on the porch where the cab had been left in all the glory of fresh varnish and silken upholstery. Alas! what had become of the elegant top which had been its pride so lately? Not a vestige remained. Wrath seized the soul of the long suffering woman, for well she knew whose work it was. Quickly she caught up a bit of rope, and calling the culprit, tied it about his neck.

Some intuition brought the children, and as the rope ran over a beam in the woodhouse, a wail broke forth. Feeling a strange, sick sensation, but with a stern front, with secret gladness, she lowered the struggling puppy, and, as a great favor, allowed them to carry him away into the country.

Mournfully the little procession filed out of the yard, with Max dumped into a basket, going to his fate! The little rascal proved quite equal to the emergency, for by the time the weary children put in a tardy appearance, he came on the scene, shame-faced and contrite, as though he quite understood the case. And it must have been that he really did, for from that time he seemed above all temptation, and betook himself to altered ways.

Not long afterwards he gave an exhibition of his better intentions by destroying eleven rats from an overturned corn shock, after which we were proud of him.

Like most successful persons, however, he sometimes met opposition, though rarely defeat. It happened occasionally that a big, old pugnacious rat was game, and bit him before he could shake it to death. The pain and bleeding muzzle seemed to madden him, and he would slay it over and over again as though one death was insufficient.

When the lads were growing tall and slender, and the girl had come to delight in Miss Alcot's books, another dc maoge, a big, "gangling," loose-built, utterly undignified bird dog, with yellow eyes and great feet. The old favorite, now growing gray on his muzzle, though still active and watchful as ever, plainly showed his disgust and sense of wrong. He had always a fine sense of personal rights, growling if roughly treated, and biting if kicked. Indeed, so far was this trait carried that he never forgave the family doctor and one or two others, and never failed to bite them if possible. He felt the presence of this new-comer to be a personal affront, and grew unhappy and morose.

A few months later, in the discharge of a duty, "disaster followed faster" for poor Max. A shiftless borrower had left the wagon house doors open, and he, over zealous, or perhaps fired with morbid anger, rushed out on the heels of a passing horse. One kick from its shod foot, and he sank with a broken back. It was piteous to see him slowly crawling back to us with his fore feet, his beautiful dark eyes fixed on us so fondly and appealingly. Silence and sorrow fell on the household. His loving young mistress and playmate refused to be comforted, and begged so earnestly for a physician's help, that, to satisfy her, a young medical friend was sent for and kindly came. With gentle care he injected morphine, and a few hours later Max was found asleep, with his head on his paws, in the dear old familiar attitude, asleep with a soundness that never would waken. He would not need to be shut up from following any more, nor stand begging by his mistress' side at table, and open gates could trouble him no more forever.

The old mistress and the young tenderly laid him in a clean box on a soft bit of carpet and securely covered it. Then they went out in the summer afternoon into the deepest shade of the grove, where doves were cooing and moaning, and after the lads had dug a grave, tenderly lowered him on green boughs and flowers, heaped the mold above him and left him to his everlasting rest.

For many happy years, those whom he had loved, came occasionally to his quiet, shady bed, but now he is left alone. Strangers have profaned the old, familiar ways, and summer sunshine waned and winter snows fallen since the last one who loved him, though only a faithful dog, passed through the gate and out into the world.

INDIANA MRS. M. E. BANTA.

POINTS AND FLUSHES.

POINTING.

There is a common belief that the dog was specially made for man's benefit, and that many of his instincts are also to enhance his capabilities in serving man. Thus the act of pointing, according to common belief, refers to serving the gun, and has no selfish reference or benefit to the dog himself. He is merely an organism with instincts supplementary to those of man, if common belief is true. Now, I have sometimes thought that the assumption—for it is assumption after all—was a reflection on man himself—and an admission of his own weaknesses; for, if it were essential to his existence, his functional powers of scent would probably be equal to the pointing of birds, and therefore he could point the birds himself. But such functional powers were not necessary to his existence. His powers of scent, as compared with those of the dog, are dull and inefficient, yet they serve a useful purpose to him, inasmuch as, though they may be too feeble as an aid in obtaining a food supply, they enable him to detect vitiated and harmful atmospheres, which would be unhealthy to him. His superior intellect and peculiar physical formation are ample forces in his struggle for existence. By his own unaided effort, he can obtain all the food that is necessary for his existence.

But, being intelligent, he has observed that he can better succeed, with an economy of time and effort, by domesticating animals and diverting their efforts to his own use; thus the horse and ox, having great weight, size and strength, and not being keen competitors for the food necessary to man, meet his universal approval for hauling heavy loads or carrying weights. Had they been carnivorous, or even had they been herbi-carnivorous, they would then have come into competition with man in the incessant struggle for existence, and therefore would not have been considered as having been specially created for his individual profit. Man further diverts the functions of many of the herbiverous animals. The milk intended by nature for their offspring, he takes from them and appropriates it to his own use.

The tiger, the wolf, the lion, and others which by nature are fierce and not susceptible of domestication, but which are nevertheless a part of animal life, he looks upon as enemies, yet from their standpoint they undoubtedly look upon man as a special creation for their benefit, a food product under the head of delicatessen, since they eat him on favorable opportunity. It is the incessant struggle of preying on others or being preyed upon. But this is drifting away from a direct consideration of the subject, though it is illustrative of the manner in which man appropriates to his own use anything which will be to his advantage.

In the universal struggle, it is very proper for him to do so, but it is equally proper to call things by their right names.

The dog in domestication is a most useful animal in many ways. His loyalty is so pure that he can be trusted with his liberty, and his intelligence is so great that he can be left to adjust himself unobtrusively yet correctly in domestic life. He acts as a brave and vigilant guardsman of his master's person, his family, his home and his property. His devotion to his master is greater than his instinct of self-preservation, which is generally considered the strongest instinct of all in the animal world, for he will face any peril to guard his master or to guard from injury those he loves. In the far regions of the North, where snow and ice make a most cheerless and uninviting region for man's habitation, the dog has a further usefulness in drawing sledges and thus affording a means of traffic and travel; and as an aid in the chase, he is invaluable.

But all the natural abilities, with which he is endowed for the capture and destruction of his prey, are for his own advantage in supplying the needs of his nature. His powers of scent and speed enable him to track his prey, and his activity, strength and natural weapons—his teeth—enable him to kill it. The dog being of a nature susceptible of domestication, man, finding him a useful auxiliary, cultivated him for the same reason that he does the ox, the horse, and goats, sheep and poultry; that is, because it is profitable to do so, though from the dog's superior intelligence, affection and loyalty, man bestows more sentimental consideration on him than he does on any of the lower animals.

In seeking his prey, the dog has to depend on the functional powers provided by nature, which, in domestication are precisely the same as those of the dog in a wild state. He follows by the scent till the animal is sighted, when he tries to run it down by his superior speed. Dogs soon learn that they succeed far better and with greater safety to themselves by hunting together. This they do intelligently. They learn to act not only as individuals, but as packs, each individual working complimentary to the efforts of his fellows. The work of greyhounds running cunning is an illustration in point, as is also their manner of fighting a wolf, or small bear. While they have instinctive powers, their manner of applying them is intelligent.

Now, in working to the gun, it is a common belief that the dog points instinctively, for man's pleasure. The reason commonly accepted is most flippantly defined as follows: In old times, the dog was used to follow birds and when near them was taught to drop while a net was thrown over him and them, to effect a capture.

This is a most trivial explanation, and one hard to believe, since any practical shooter knows how difficult it would be to make any success of such methods.

At length, as firearms improved the dog naturally developed an instinct in consonance with the new order of things, and began to point. Such is the common explanation, one too absurd for serious consideration.

Any dog, which seeks birds naturally, points because it is necessary for him to do so to make his attempts successful. He could not capture birds in any other manner. Of course, by careful selection, the instinct to point will be more uniformly transmitted and will be more certain to appear in all the progeny, but the practical application of it is always intelligent. Dogs which have not even a remote claim to being bird dogs, will learn to point them if given the proper opportunities, this, too, as a matter of intelligent observation.

The manner in which the act of pointing is an assistance to the dog in effecting a capture, is easily explained. The birds run and when close pressed by the dog seek concealment. The dog must at that juncture rely entirely on his nose. As he draws closer, his muscles grow more tense, his eyes glisten and his manner shows determination. He intends to kill something. When he is near enough to spring, he stops. There is still part of the problem to solve. But his stop is but suspended action. He must accurately determine the exact whereabouts of the birds before making his final dash to capture. After he has located, or at least when he thinks he has done so, he makes a swift spring with wonderful agility. If he has miscalculated the whereabouts of the birds, his efforts are fruitless, for he springs in the wrong direction, the birds flush and are gone. If he is over eager, and presses too close before making his point, the same result follows. By repeated failures he soon learns to observe proper caution. Every one who has had much experience with young dogs has observed these traits. Foxes and wolves employ the same methods. Man takes the dog, and by a system called training, educates the dog to work to the gun. It requires weeks to accomplish it. Much punishment is required in most instances before the dog will forego his own natural desire to capture the birds for himself. The training is one constant effort at repression in its main features. He is permitted to work to the culminating stages, when the man intervenes and diverts the dog's efforts to his own profit. Breaking in, breaking shot, chasing and flushing are simple traits of the dog's original intentions, which crop out now and then with the best trained dogs.

STANCHNESS.

To those who have an interest in field trial competition and also to those who seek a knowledge of what constitutes the proper manner of field work, Mr. Johnson's letter on Stanchness will be read with pleasure. I frankly admit that Mr. Johnson has scored a point on me in this matter, for no longer ago than last fall when I was his guest in Winnipeg—and by the way it seemed more like being at home so pleasant to me was my stay there—we talked over this same matter, and I then held that the dog should remain on his point while the handler went forward and flushed. This was considering stanchness as it relates to a competition. I was apprehensive that, if the most rigid stanchness was not insisted upon, any departure from it would soon lead to abuses. By the way, while writing that article on stanchness, my remarks to Mr. Johnson recurred to me, and I wondered whether he remembered it. His letter, of recent date, will show that he did. He says:

"I read Forest and Stream of March 30, in your article on 'Stanchness,' in which you endorse Mr. Titus' opinion when he says: 'I do not know of a more useful position for a dog than behind his handler when he is going in to flush.' While I must congratulate you on your change of front, I must say that I don't think that there is a more ridiculous position for a dog, than behind his handler when he is going in to flush. I have always claimed, and I think when you were judge at our field trials, I was ordered to flush and was told to flush myself and not let my dog flush. I said that my dogs were taught to tell me where the birds were. They were taught to be stanch until I came up, and then at command to move up to a flush; that they could charge me with a flush, etc. I said: 'You can charge me with what you like. Your extreme penalty only consists of my not being awarded a prize, but you cannot make me work my dog, only in the manner I think correct.'

"Mr. Brailsford was more docile than myself, when he competed at the Eastern trials, which is explained best in his own words in a letter he wrote on his return home to the English Field, describing his experiences in America. He wrote: One peculiarity in American field trial judging deserves mention. When a dog points his handler is ordered to put up or flush the birds, and the dog is expected to remain pointing until this is done. As frequently happens, the poor man, devoid of the powers of scent, tramps about at random without accomplising his purpose, and failing, he is then ordered to let his dog go and 'locate.' During the progress of the Derby, at the Eastern meeting, Cameron patted his dog while on point to lead him—Cameron—up to the birds, whereupon the presiding judge called us together and told us that this was not allowed. I replied: 'We will obey, but this is our English practice; and I ask, Which knows best where the birds are, the dog with his powers of scent or the man without them?'

"My contention is that when you get to your dog, he must remain stanch until you get to him. He must move up at command and you must move up with your dog (the dog, say, half a length ahead of you) to a flush. The dog must of course remain steady after the flush

"I presume your change of opinion has come about in consequence of modern requirements; but did it ever occur to you that a good many of the modern requirements are ancient English practice? Once more, let me congratulate you on your good sense; for has it not been truly said that it takes quite a lot of courage to admit you were wrong. No one has a greater respect for Mr. Titus' opinion or anything appertaining to dogs than myself, yet I must disagree with his half measure of what a dog should do when you go up to him on a point."

There is one point in his letter which, while correct according to a strict intrepretation of Mr. Titus' statement, is not quite in accord with what Mr. Titus really meant, for his writing in this connection was more a protest against usage at field trial and a protest against penalizing the dog for following behind his handler, than an attempt to define the true procedure. That I did not so understand it, I think Mr. Johnson will concede if he will permit me to call his attention to a sentence which I wrote in the same article, as follows: "If the birds are running when the handler walks past his dog, the latter, if he be intelligent and correctly handled, walks by his side, or a few feet ahead, leading on directly to the birds." Therefore I think that Mr. Johnson and myself agree perfectly on this matter. It is perfectly true, as Mr. Johnson says, that we insisted on stanchness as he describes it, but that was the usage then, and for that matter it is now in this country, though I hope to see it abolished to be superseded by one of more common sense. If an abuse of it were to crop out, the judges have it in their power to instantly adjust it While this matter is under consideration, it is but just to Mr. Johnson to mention that he has always maintained that the general usage and opinion were incorrect, and he had the moral courage to stand openly by his convictions. Furthermore, he was almost alone from the first in stoutly insisting that dogs should work properly to the gun; that they should work without the frantic, noisy efforts of the handler, that an opponent's dog should not be in any way interfered with, and that professional handlers were not eligible to membership in field trial clubs, simply because as interested parties it violated a principle of equity to have them in the membership.

REGISTRATIONS AND DISQUALIFICATIONS.

In the March number of the American Kennel Gazette, there is the following query and answer:

"O. P. H., Boston, Mass.—If I purchase a dog from a man who has been disqualified, and the pedigree is a straight one, can I have the dog registered? I have heard that registrations as above have been refused, and would like to know positively, as I have an opportunity to get a great bargain.

"Answer.—A dog transferred by gift or sale, by a disqualified person, subsequent to his or her disqualification, cannot be registered. Rule XVII, Rules governing Clubs; and Rule XXIII, Rules governing dog shows, both provide that, 'The disqualification of an owner shall apply to all dogs owned by him.' At a meeting of the club held February 23, 1893, it was 'Resolved, that the secretary be directed to refuse the privileges of the Stud Book to all persons under the penalties of suspension or disqualification.'"

The last citation of the law of the A. K. C. is irrelevant as an answer to the question asked. It applies solely to the person under suspension or disqualification, and therefore is not pertinent.

The first quotation, that is, "The disqualification of an owner shall apply to all dogs owned by him," has most certainly a strained and far-fetched interpretation in the answer given above. Of course, it is reasonable and proper that the disqualification of the owner should apply to dogs "owned by him," but when such disqualified owner sells a dog to another person, such dog is not then "owned by him."

To interpret the rule as given in the official organ of the A. K. C., is contrary to the letter of it, and truly not in consonance with its spirit. For it then not only punishes the offender, but incidentally it punishes an innocent party; that is, the man who contemplated a purchase. The dogs in themselves had committed no offense, and the only odium which attached to them was that of ownership; when that was removed there was no further reason for their disqualification.

The disqualification of the man was a punishment, but to carry it so far as to interfere with his business or way of earning a livelihood, is on the borderland of vindictiveness. Moreover, it is an unwarranted interference with the rights of a man who is not under disqualification; for it in a manner dictates to him where he shall not buy, even though he wishes to do so in a legitimate transaction.

But the reductio ad absurdum of the interpretation is best shown by granting it as true. If "all dogs owned by him," are disqualified, then the rule is retroactive and applies to all dogs ever owned by the offender. A personal disqualification would thus work harm and hardship to many innocent parties. It is lacking in all principles of equity to assume that the disqualification of a dog, which rested entirely on his ownership, carried over to all other ownerships. It would be just as reasonable to hold that the disqualification of a man also disqualified his brothers, cousins and uncles, or that the get of his dogs, though owned by innocent parties, was disqualified.

No one will gainsay that an offense against the rules of the A. K. C. should be visited with proper punishment. The disqualification is such punishment. It denies the privileges of the A. K. C. in their direct and widespread collateral relations. Such is punishment enough. To carry it further would hardly advance the best interests of dogs, nor could it then be justly called a true interpretation of the mission of a governing body. B. WATERS.

N. B. C. Meeting.

A quarterly meeting of the National Beadle Club of America, was held at the rooms of the American Kennel Club, 55 Liberty street, Friday, April 5. President H. L. Kreuder in the chair. The members present were: J. W. Appleton, H. L. Schellhass, A. D. Lewis, John Bateman and George Laick.

The president stated that he, with Mr. H. W. Lacy, had laid the matter of the killing of Mr. John Bateman's dogs before the Society for the Prevention of Cruelty to Animals. Mr. Bateman then stated that the man who had killed his dogs had been brought to trial and convicted, and, on his recommendation for mercy, the man was fined $10.

Voted that the secretary be instructed to thank the society for the part they had taken in the matter.

Voted that all members in arrears for dues be notified by the Treasurer to settle up their accounts with the club at once.

Mr. Schellhass as a committee reported that new evidence had been received by the Stud Book Committee against John Jarvis and that the same is now to be investigated.

Notice is hereby recorded that our delegate to the A. K. C., Mr. Schellhass, has been elected by the American Kennel Club to the Stud Book and Field Trial Committee, and also to the Committee on Constitution and Rules.

Voted that the list of official judges be brought before the annual meeting for revision.

The president appointed Mr. Cleremont S. Wixom, Covert, N. Y., as one of the official judges of the club in place of Mr. Pottinger Dorsey, and the secretary was requested to notify the American Kennel Club of that fact.

GEO. W. ROGERS, Secretary.

Hungry Dogs and Work.

Central City, W. Va.—I would not invite disputation, but your staff correspondent thinks my opinion that the dog ought not to be kept in keen hunger the live long day while pursuing game, is an error. I beg to make a reply. He says: "Underlying all the dog's effort is the impelling cause, namely, a hungry stomach. He is searching for a food supply."

Applied to wild animals, his theory is good, but with the dog, man's appointed companion, there is an impelling cause that seems almost to exclude the idea of the pursuit of game to obtain food for himself. I have not hunted with hounds, only with bird dogs, and what I said was meant to apply to them more particularly. I never had one that hunted too slow; but they were generally over-eager, and I kept them well fed, but, observe, not gorged. I am sure they did not hunt for a food supply. But take the rabbit dog, the little terrier for instance. See the panting eagerness of the animal rushing from covert to covert! He catches his game, kills it, and leaves it. And the rat terrier; he pursues and kills the rodents with a gusto known to every one. But he eats not rats. They must therefore pursue for the very love of pursuit. That this desire results from heredity, originating in man's first training of the dog, or a special trait given by Providence for man's use, we may decide as best suits us—the fact remains. My own motive was to insure the comfort of the dog in saying what I did.

N. E. D.

National Greyhound Club Meeting.

New York.—A meeting of the National Greyhound Club will be held on Friday evening, April 26, at 8 o'clock, at the Grand Union Hotel, Park avenue and Forty-second street, New York. At this meeting measures will be taken to entirely reorganize the club, and the invitation to be present is not only extended to its members, but also to all who are interested in the greyhound, deerhound and wolfhound. By order of the President.

C. F. LEWIS, Secretary.

DOG CHAT

The periodical scare of rabies, which impels people to believe that every dog which acts at all strangely is mad, seems to have begun with the springtime. April 4 had two instances of such delightful fright, ones which are eagerly sought. In the first case, the central figure was a dog running along Bayard street. He was described as frothing at the mouth, and endeavoring to escape by running into a crockery store and seeking safety behind the counter. Policemen arrived and attempted to catch him. He endeavored again to escape and broke some crockery. The policemen lassoed him, and then led him away. The terrified creature soon broke away from them and was then followed by a mob. He sought safety in a dark hall. A policeman shot him. According to all time honored usage, it should have been stated that the persecuted animal was mad, but instead it was said that it was not known whether the dog was mad or not. On the same day, a yellow dog, described by a daily paper as frothing at the mouth, snapping at lamp posts and tumbling over the pavement, bit a man, and then sought safety in concealment. The policeman gave his pistol to a young man with instructions to kill the dog, after he, the poilceman, had driven him from his hiding place. When the dog rushed out, the young man shot and hit a boy in the neck, fortunately making only a flesh wound. The policeman then killed the ferocious little yellow dog with his club. Then he arrested the young man. A stray dog and shooting at random are serious matters.

Mrs. Fin De—Don't you know, Mr. Fin De, that when I observe your great love for your dogs and devotion to them, I almost believe you married me for love, and not for my money.

Mr. Fin De—Oh, bosh! You silly thing. Don't you know my dogs are worth $25 a piece. See!

A story has stared on its circuit. It is a good one from the beginning, and, with the embellishments gathered from a good itinerary, ought to be of the best at the finish. It happened in Boston; and of course it is cultured. It seems that, in the Eleventh precinct, there are people who buy milk. It also seems that the milkmen deliver it very early or the people rise later. Anyway, their milk cans and contents were taken from their door steps and were never more, or no more. For two weeks, the wicked depredations mysteriously continued. The milkmen, whose occupation should place them above suspicion, were considered as acting in bad faith. One morning, after the milk had been delivered, a policeman and a milkman watched in the afflicted district. They saw a dog. "Keep your eye on him," said the policeman. The subsequent porceedings are naively described as follows: "The dog paused before a doorway in which was a can of milk and then he walked slowly up the steps, and smelled the can. In a moment he took the can in his teeth, walked down the street, and started off the way he had come. The policeman and the milkman followed at a short distance. They saw him turn into Armandine street and climb up into the veranda of a house. He set the can down for a moment and contemplated it, and then he picked it up in his teeth again and shook it gently. In a moment the wooden plug dropped out of the can, and, setting the can down, he proceeded to lap the milk from the can contentedly. The men watched him until he had finished, and then they saw him pick up the empty can in his teeth and leave the veranda. He passed down into the back yard, and out into a clump of bushes in the rear of the house. He was lost to view for some time, and then he came out again and proceeded to the veranda, where he lay down and soon was asleep. The policeman and the milkman went out into the bushes to look around. There they discovered fourteen empty milk cans." The villain escaped the just deserts of his crime against the peace and dignity of the State, as the sequel shows: "From Boston comes a tale of a dog who is a thief and who was caught in the act, arrested, taken to a police station, tried and finally liberated because no law applicable to four-footed criminals could be found." Probably the dog was "mad."

A meeting of the Executive Committee of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, on Friday, April 19, at 3 P. M.

Another mournful incident illustrative of the readiness with which the ordinary man will have an emotional faith in his powers as a natural diagnostician, occurred recently at Katterskill, N. Y. In the main it is the old familiar story of a lost dog of a valuable breed, and of a man and a gun. The dog is peacefully seeking his way home. The man, who probably could not diagnose a wooden leg, sees the strange dog, and that is taken as sufficient evidence of the dog's madness and as a good chance to kill something. No doubt many dogs are killed maliciously. Many men are too ready to kill first and find a reason for it afterward. In the instance under consideration, Gov. Morton's St. Bernard Leo was the

victim. The Governor had taken two of his dogs to Albany, and, owing to inconvenience in keeping two there, one was sent back to Ellerslie. Leo was without his companion and pined for his old home. He escaped on the first opportunity, and the Governor believes he was returning to Ellerslie. He offered $25 for his return. At Katterskill, Mr. M. V. Eckler saw the dog, thought it was mad and shot it. The collar of the dog was returned to its owner. The fool-killer is not abroad in the land.

This week in our kennel specials we note in new advertisements that Dr. J. R. Housel, Watsontown, Pa., offers pointers. Greyhound puppies are offered by Mr. E. Painter, East 165th street, New York. Al. Parker, Cincinnati, offers a broken Irish setter bitch. A pointer brood bitch is offered by Mr. Samuel Berry, Brooklyn. Edward S. Rawson, Port Richmond, N. Y., wants a fox hound puppy.

The class list of the Toronto Kennel Club can be obtained of the Secretary, Mr. W. P. Fraser, 124 Victoria street, Toronto.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

Prepared Blanks sent free on application.

NAMES CLAIMED.

LADY SNAPSHOT.—By T. E. Roberts, Pawling, N. Y., for liver and white pointer bitch, whelped July 16, 1893, by Axtel King Don—Bessie Girl.

KING RIP, 36,607.—By T. E. Roberts, for liver and white pointer dog, whelped Jan. 18.

MORT'S NED, 36,608.—By T. E. Roberts, liver, white and ticked pointer dog.

FLIRT OF DOVER, 36,610.—For liver, white and ticked pointer bitch.

BRED.

Eberhart Pug Kennels' pug bitch Cashier's Daughter to Port Wine, Feb. 18.

Miss B. Curry's pug bitch Minnie to Eberhart's Cashier, March 19.

Miss Etoile Ashford's pug bitch Tiddle De Winks to Eberhart's Cashier, March 7.

Geo. T. Reed's beagle bitch, Spot R, to Milliard, Feb. 25.

Jos. Smith's English foxhound bitch Vexation, to Jimcrack, March 21.

WHELPS.

J. F. Stoddard's English beagle bitch Winine K, March 26, five (two dogs), by Tricotrin.

SALES.

FANNIE.—Black cocker bitch, by Eberhart Pug Kennels', Cincinnati, to Mr. O'Brien, Chicago.

JULIET.—Fawn pug bitch, by Eberhart's Cashier—Cute Lady, by Eberhart Pug Kennels', to F. B. Threadgold, Algonquin, Ill.

PORT WINE.—Silver fawn pug dog, to F. B. Threadgold.

QUAKER LASS.—Foxterrier bitch, by Warren Landlord—Warren Chance, by S. W. Price, Philadelphia, to B. C. Thomas, Columbus, Ind.

MORT'S NED, 36,608.—Liver, white and ticked pointer dog, by T. E. Roberts, Pawling, N. Y., to Morton Haines, Pawling, N. Y.

ROYAL BRANT, 36,609.—Liver and white ticked pointer dog, by T. E. Roberts, to Geo. Daniels, Pawling, N. Y.

FLIRT OF DOVER, 36,610.—Liver and white ticked pointer dog, by T. E. Roberts, to Geo. T. Record, Dover Plains, N. Y.

KING RIP, 36,607.—Liver and white ticked pointer dog, by T. E. Roberts, to Geo. T. Lee, Pawling, N. Y.

Answers to Correspondents.

C. E. B., We cannot identify your bird from the description given, though we could do so if we could see it.

W. Scranton, Pa.—Would you kindly state what lure is used in surface trolling for lake trout at opening of season?—Ans.: Minnow, or if that is not, a piece of sucker or chub, for natural bait; for artificial use, artificial minnow.

W. S. B., Auburn, Me.—Which would be considered the most desirable arm for use in the Maine woods for deer, moose and caribou, .38-40, .38-55, or .44-40 calibers?—Ans.: The .38-55 is superior to either the .38-40 or .44-40 in velocity, penetration and striking power. It also has a flatter trajectory than the others, and is considered to be more accurate.

P. H., Bergen Point, N. J.—I have a collection of bird's eggs which I think of giving to the Museum of Natural History, will you give me the address of the person to whom I may write to inquire about such matters?—Ans.: Write to Prof. J. A. Allen, Am. Mus. Nat. History, Eighth avenue and Seventy-seventh street, New York.

SUBSCRIBER.—We have not the record of the largest perch caught out of Lake Minnetonka.

W. S. Germantown, Pa.—Do you think it would be advisable to liberate quail in the vinicity of Rockland, Me., or are the winters too cold?—Ans.: The experiment has been tried, and we believe without success. Perhaps our Rockland correspondent, J. N., will tell us.

RABBIT FARMING.—I have a few rabbits and would like to know something about rabbit farming. I go to the library to read in the Forest and Stream, and some time ago I read about skunk farming and I thought I would like to be a rabbit farmer. You could put it in your paper, and somebody could send pieces about rabbit farming to you, as did some people about skunk farming, and you could put them in the paper and could read them. G.

T. E. N.—Will you kindly give in your "Correspondents'" column of next week's issue the Indian name of the wolf?—Ans.: It is skiriki in Pawnee, makweyi in Blackfoot and ohne in Cheyenne.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth, Sec.

April 15.—PHILADELPHIA, Pa.—All day shoot of the Forest Gun Club at its grounds, 27th and Lehigh avenue; targets. William Morison, Sec., 1913 Ridge avenue, Philadelphia, Pa.

April 15.—BALTIMORE, Md.—All day shoot of the Standard Gun Club at Point Breeze. W. F. Clements Sec'y.

April 15-18.—ATCHISON, Kas.—Twelfth annual tournament of the Atchison Gun Club. Lou Erhardt Sec. and Manager.

April 16-18.—PITTSBURG, Pa.—Tournament of the Interstate Association, at Pittsburg, Pa., under the auspices of the Pittsburg Gun Club, $200 added money.

April 17, 18.—AUBURN, N. Y.—Two days' tournament of the Auburn Gun Club; open to all. C. E. Goodrich, Secretary.

April 17-19.—CANTON, Ill.—Annual spring tournament of the Canton Shooting Club.

April 18.—MAPLEWOOD, N. J.—All day shoot of the Maplewood Gun Club, in connection with the April tournament of the New Jersey Trapshooters' League. O. L. Yeoman, Sec., Orange, N. J.

April 22-27.—KANSAS CITY, Mo.—Eighteenth annual tournament of the Missouri State Game and Fish Protective Association. W. V. Rieger, Sec.

April 23, 24.—BATTLE CREEK, Mich.—Annual tournament of the Michigan State Trap-Shooters' League. Annual meeting and election of officers on the evening of the first day. W. H. Willard Secretary.

April 23-24.—ELIZABETH, N. J.—Third bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds; events open to all. Robt. E. Chetwood, Pres.

April 23-26.—GALESBURG, Ill.—Tournament of the Galesburg Shooting Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club: first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 8-10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O.; $200 added money. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 15-19.—SAN ANTONIO, Texas.—Nineteenth annual meeting and tournament of the Texas Sportsman's Association. Open to the world, $500 in cash and $500 in merchandise added to the purse. O. C. Guessaz, Sec'y.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—EAST MCKEESPORT, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; $500 added money. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith Sec'y.

June 13-15—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee Sec.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

CONTROL OF TRAP-SHOOTING.

The agitation in favor of governing, regulating and purifying the sport of trap shooting, culminated on the evening of April 3 last in the organization on a permanent basis of The American Trap Shooters' League. The adoption of a constitution and by-laws was no small matter, and the care with which each article and section of the constitution was considered, at the above meeting, augurs well for its soundness. The election of a board of 15 governors, and the election by that board of the officers of the League for the ensuing 12 months, together with the naming of the city of Memphis, Tenn., as the city in which the second annual meeting shall be held, completed the business before the meeting.

The powers conferred upon the organization by the terms of the constitution are ample for all the purposes for which the league is formed. With the support of the gun clubs of the country, the sport of trap shooting can be placed upon a far higher plane than would ever have been possible without a central regulating and governing body. It has been thought by many that the movement was directed mainly against the dropper and pooler. This is partly true, the pitch to which such unsportsmanlike tactics (to use a moderate term) had risen, demanded urgent notice. Trap shooting, it was felt, should be a sport, not a business for money making. It was started as a sport, and carried forward as such, and as such it should have remained. The actions, however, of what was, and is, a small minority of the great body of trap shooters, lowered the standard of the sport until it became rather more of a business than a sport participated in for the love of the sport only. The system of dividing purses at present in use is to blame to a large extent for the abuses that have crept in. If the American Trap Shooters' League does no more than bring to the front and adopt some more equitable and more common sense system than that which prevails now, it will at least have done much to benefit the sport. The drawing up and issuing of a set of up-to-date rules governing trapshooting, both at live birds and inanimates, is a natural duty for the league. By stretching forth its hands and putting a stop to "Find, trap and handle" matches, it can do much to take away the reproach which, in the minds of many, necessarily belongs to pigeon shooting. By dealing out penalties, of whatsoever nature it may see fit, to parties proved to have been guilty of dishonest or unsportsmanlike conduct, the league will soon place trap shooting where it belongs. That place is in the foremost ranks of American sports. The furtherance of game protection is an object that very properly belongs to the league. Every gun club is de facto a game protective organization; the associating together of sportsmen at the traps naturally results, it seems to us, in a mutual, though tacit, agreement to keep and respect the game laws.

With all these objects and with all these duties before it, the course to be pursued by the league is all plain sailing. Several clubs and individual members have become units in this organization and have paid the dues required by the constitution. With this nucleus, and under the leadership of its President, Major R. Heber Breintnall, the league starts out in life well-equipped for the work it has in hand.

DRIVERS AND TWISTERS.

Secretaries of clubs, who may have sent in scores to Forest and Stream, and who do not find copies of the same in this issue, will readily grasp the situation. We are compelled to hold over until next week many scores.

The date of the next New Jersey State League tournament, which will be held at Maplewood, N. J., has been changed from April 11 to April 18, exactly one week later than the original date.

The Oil City, Pa., Gun Club has elected the following officers: President, C. H. Duncan; Vice-President, Alfred Smedley; Secretary, H. C. Reeser; Treasurer, L. L. Graham; Directors, F. S. Bates, M. Scheide, and J. L. Abbott. The above named gentlemen will also act as the Executive Committee. The club has experienced quite a boom recently and a great many new names have been added to the list of members. Club shoots will be held every other Saturday. Electric pull traps, with all the modern improvements essential to an up-to-date club, will soon displace the old outfit now in use. A number of new guns will be bought and gun agents are already heading that way.

The opening shoot of the Eureka Gun Club's season of 1895 took place at the club grounds, Seventy-ninth street and Vincennes avenue, Chicago, Ills., on Saturday last, April 6. A notice of this opening shoot, dated March 31, arrived too late for insertion in our last issue.

At the annual meeting of the Red Hook Gun Club, held April 4, the following officers were elected for the ensuing year: President, Geo. H. Cramer; Secretary, Robt. J. Carroll; Treasurer, John W. Bain.

The Central Gun Club, of Duluth, Minn., has elected the following officers for 1895: President, J. W. Nelson; Vice President, Dr. M. R. Metcalf; Secretary, H. L. Heisler; Treasurer, L. A. Gunderson; Captain, Dr. D. H. Day; Lieutenant, H. Owens.

The nineteenth annual meeting and tournament of the Texas Sportsmen's Association will be held at San Antonio, Texas, May 15-19, on the Jockey Club grounds. The shoot is open to all, the club adding $500 in cash and $500 in merchandise.

A typographical error has crept into the columns of fixtures, making it appear as if the Weir City, Kansas, shoot was only a one day affair. As a matter of fact it extends over three days, May 8, 9 and 10.

The following item about the Connecticut State League of Trap Shooters will be of interest: "A meeting of the Connecticut State League of Trap Shooters was held at Hotel Heublein, Hartford, April 6, the Colt, New Haven, Bristol, Hartford and Moodus Gun Clubs were represented. It was decided to continue the same shooting plan as last year, except that teams be three (3) instead of two men. The officers elected were: for President, M. F. Cook, of the Colt Club; the Vice-Presidents chosen were: F. J. Potter, New Haven; H. J. Mills, Bristol; J. McFarlane, Willimantic; U. S. Cook, of Moodus; D. Wadsworth, Hartford Club, Geo. C. Strong, New London, and J. A. Pitkin, of the Colt Club. Allen Willey was elected Secretary, and Treasurer with G. P. Lecrenier as assistant. H. H. Bates was elected Manager. The Governing Committee consistf of C. E. Longdon, H. J. Mills, T. P. Bill, H. L. Edgarton, F. C. Fowler, J. Ames, and C. H. Burbridge. The first shoot will be held on the grounds of the New Haven Club."

John Watson, a man whose address all shooters know, has issued the following special notice: "On and after April 1, 1895, this Park will be open only when notice has been received from parties desiring to shoot. Notice sent to the undersigned by telephone Oakland, 363, or by letter or telegram to Grand Crossing, Ill., not later than the previous day, will receive prompt and careful attention."

Alden Marsh, Secretary of the Galesburg, Ills., Shooting Club, has gotten out a programme for the four days' tournament of his club that should prove attractive. The tournament takes place April 23-26. Any further particulars can be obtained by addressing the secretary.

The programme for the Dupont Tournament at Cincinnati, O., May 7-10, is to hand. Under the circumstances it is impossible to make any further mention this week.

If anybody doubts the quality of the entry list of the Grand American Handicap of 1895, let him carefully scan the list and then say just what he thinks about it.

It must have been a great pleasure to enroll the two candidates for handicap honors from Denver, Col., upon the list of entries. Both Mr. Thomas and Capt. Sedam were worthy representatives of the Silver State, athough Capt. Sedam was out of form on Thursday.

"Roman candles" is the name applied to the 3 1-4 inch shells used by Elliott, Brewer, Class, etc., the 3-4 and 5-8 shells look very small in comparison.

Mr. W. F. De Wolf, Secretary of the Eureka, Chicago, Ills., Gun Club, has issued the following notice to the club members: "We hold our opening shoot Saturday, April 6, at 2 P. M., at the usual place; and every Saturday thereafter at same hour up to November 1. With all the improvements (and others are contemplated) we now have, we should have a very successful season. I understand that some three gun clubs are contemplating challenging us. We have the State cup to defend, and in view of this, early and constant practice is desirable if we are going to maintain our present reputation)."

Southern tournaments are booming; the boys are all talking about Knoxville and Memphis. The latter city will receive several visitors from New England during its tournament week.

EDWARD BANKS.

Meeting of the American Trap-Shooters' League.

On Wednesday evening, April 3, at 8 P. M., in Parlor L, Astor House, New York city, the adjourned meeting of delegates to the convention held in the same place on January 24 last, was called to order by the chairman, Major R. Heber Breintnall, of Newark, N. J.

The following clubs were represented: North Side G. C., Pittsburgh, Pa., Elmer E. Shaner; Herron Hill G. C., Pittsburgh, Pa., by proxy, Elmer E. Shaner; Braddock G. C., Braddock, Pa., by proxy, Elmer E. Shaner; Emerald G. C., New York, Dr. G. V. Hudson; Park City G. C., Bridgeport, Conn., W. M. Thomas; Peekskill G. C., Peekskill, N. Y., B. C. Everinghim; West Newburgh G. and R. Association, Newburgh, N. Y., David Brown; Pittsburgh G. C., Pittsburgh, Pa., J. A. H. Dressel; Brunswick G. C., New Brunswick, N. J., H. H. Stevens; Flemington G. C., Flemington, N. J., J. L. Chamberlin; Essex G. C., Newark, N. J., Major R. Heber Breintnall; New York County G. C., H. P. Fessenden; South Side G. C., Newark N. J., W. R. Hobart; Memphis G. C., Memphis, Tenn., Irby Bennett; Syracuse G. C., Syracuse, N. Y., C. H. Mowry; Green Ridge G. C., Scranton, Pa., H. D. Schwartz; Wilmington R. and G. C., Wilmington, Del., Chas. Fehrenbach; Wilkesbarre G. C., Wilkesbarre, Pa., J. G. Messner; Farmer's G. C., Mahanoy City, Pa., M. M. McMillan; Interstate Association, N. J., by proxy, J. A. H. Dressel.

On motion the reading of the minutes of the meeting on January 24, 1895, was dispensed with, the same having been published in full in the various sportsmen's papers.

Mr. Hobart then moved that the meeting proceed to consider the proposed constitution, reading it by section, adopting it by section, and then adopting it as a whole. The motion was

seconded and carried. The reading of the constitution was then proceeded with.

Article 1, calling the organization "The American Trap-Shooters' League," was adopted, after some discussion, without any alteration in the text of the same, as published in Forest and Stream of March 2. The discussion which took place was regarding the question of rules, the idea being to obtain some information as to the formation of rules for shooting. It was the general opinion of the meeting that membership in the Association would not necessarily pledge any organization to adopt any set of shooting rules that may be drawn up for, and approved by the association. Articles III, IV and V were adopted, the only change being made in Section 3, Article V, where the last seven words, "but shall not exceed $ per annum," were ordered to be stricken out. The words above quoted refer to the fixing of the Secretary-Treasurer's salary. It was thought better to leave the remuneration of this office to the Executive Committee, as provided in this section, without binding the association to any fixed sum, the salary having necessarily to be in proportion to the work required, and there being no means of ascertaining just at that time what amount of work would be required of the Secretary-Treasurer. Article VI was also adopted after the following words, relating to the Secretary-Treasurer's bond had been stricken out, "to an amount not less than $." The clause thus reads: "He shall give a bond for the faithful performance of his duty, in favor of and satisfactory to the chairman of the Executive Committee, before assuming office."

Article VII, Section 1, was amended so as to prescribe the number of members of the Executive Committee. The section now reads, "The Executive Committee shall consist of five members, and shall be selected by the governors from their own body. The term of office of the members of the Executive Committee shall be for one year."

Article VIII was not disposed of until the question of annual dues of clubs had been under discussion and a vote taken. Several delegates were in favor of raising the annual dues to $5 in place of $3, the claim being made that the latter sum was too small to provide the necessary income for running the affairs of the association. The article was finally adopted as presented, the annual dues for clubs being left at $3, individual members, 50 cents, and State associations $5.

Article IX was also adopted as presented, after the following words had been inserted: "Who are members of this association." The amended portion of the article thus reads: "To this board (the tournament board) shall be referred all questions connected with trap shooting in dispute between clubs and individuals who are members of this association." Article X being adopted, Mr. Thomas moved, and Mr. Hobart seconded, that the constitution as amended be adopted as a whole. Motion carried unanimously.

The by-laws, as presented by the committee, and published in the various sportsmen's paper, were adopted without any changes or alterations. On motion, the committee appointed on January 24 for the purpose of drawing up, and presenting for adoption, a constitution and by-laws, were released from their duties, a vote of thanks being accorded them. That committee consisted of: J. A. H. Dressel, Chairman; B. C. Everinghim, L. H. Schortemeier, W. H. Wolstencroft and Edward Banks.

The election of a Board of Governors was the next business. On motion made and carried the chairman appointed Edward Banks, H. P. Fessenden and Elmer Shaner, as a committee to draw up and submit to the association a suggested Board of Governors. After a recess of fifteen minutes, the committee reported the following slate: B. C. Everinghim, C. H. Mowry and L. H. Schortemeier, New York; J. A. H. Dressel, C. M. Hostetter and W. H. Wolstencroft, Pennsylvania; R. H. Breintnall, J. L. Chamberlin and P. A. Jeanneret, New Jersey; Irby Bennett, Tennessee; W. M. Thomas and C. H. Burbridge, Connecticut; Chas. Fehrenbach, Delaware; Col. J. T. Anthony, North Carolina; A. W. Du Bray, Kentucky.

The above slate recommended by the committee was adopted by the meeting, the Secretary being directed to cast a single ballot for their election. In accordance with this direction, the above named gentlemen were declared duly elected as the Board of Governors.

The closing business of the meeting was to choose a city in which to hold the second annual meeting, in 1895. Memphis, Tenn., was nominated as such city and unanimously chosen, Mr. Bennett returning thanks for Memphis in a felicitious manner, promised those delegates who should attend the meeting a cordial welcome from the Memphis Gun Club and a good sample of Southern hospitality.

Meeting then on motion adjourned.

MEETING OF THE BOARD OF GOVERNORS.

Immediately after adjournment of the above meeting, the Board of Governors met in the same room for the purpose of deciding the length of their various terms, and also to elect officers for the association. The following are the terms of the different members of the board: 1 year: Messrs. Bennett, Chamberlin, Everinghim, Fehrenbach and Hostetter; 2 years: Messrs. Anthony, Dressel, Jeanneret, Mowry and Wolstencroft; 3 years; Messrs. Breintnall, Burbridge, Du Bray, Schortemeier and Thomas.

The following is a list of the officers chosen by the board: President, Major R. Heber Breintnall; First Vice-President, Irby Bennett; Second Vice-President, Col. J. T. Anthony; Third Vice-President, C. H. Mowry; Secretary-Treasurer, Edward Banks; Executive Committee, J. A. H. Dressel, Chairman; B. C. Everinghim, Irby Bennett, L. H. Schortemeier and W. M. Thomas.

THE GRAND AMERICAN HANDICAP.

The Grand American Handicap of 1895 is a thing of the past, and its purse of $1,520 is no longer a bone or contention. The entry list contained just 61 names, 7 more than in 1894. When the time of closing the regular entry list arrived, Saturday, March 30, 57 names were enrolled upon the books of Secretary-Treasurer Dressel. That number, together with four post entries, made the total as above—61. Of this number there were three absentees: J. B. Ellison (28), E. D. Toland (28), and Horace White (27), the actual number competing being 58. The purse was made up as follows:

54 entries at $25—	$1,350.00
4 post entries at $35—	140.00
3 forfeits at $10—	30.00
	$1,520.00

This sum of $1,520 was divided between the three high guns in the proportion of 50, 30 and 20 per cent.: $760 to first, $456 to second, and $304 to the third. This is probably the largest sum of money ever divided in an open live bird sweepstake in this country. As a matter of fact the three men with straight scores divided the purse equally, shooting off for position as provided in the rules governing the contest. The interest taken in this event was very great, and it is seldom indeed that so many spectators are seen at a shoot as were present at Willard Park during the days of April 4 and 5, while the shoot was in progress. The ultimate destination of the purse was in doubt up to the time when Elliott killed his 25th bird, an easy left quarterer from No. 2 trap. J. G. Messner, of Pittsburg, Pa., and Frank Class, of Morristown, N. J. had both previously killed all their birds. These three straight scores, therefore, cut out the twenty-fours (of whom there were no less than seven) from all part or lot in the purse. Had there been only two straights, the shoot off for third money would have been a contest well worth watching, the names of the seven men with 24 being: Brewer, Van Dyke, Dickey, Thomas, Ivins, Apgar and Kelsey.

The victory of Messner, who won on the shoot off at 10 birds by the score of 10 to Elliott's 9 and Class' 7, was a great surprise. Prior to that victory, his record as a live bird shot was absolutely nil; his being placed on the 25 yards mark proves that much. As a target shot he is pretty well known around Pittsburg, Pa., which city he makes his home. Both Messner and Elmer Shaner have assured me that the winner has not, previous to the past week, shot at 200 live birds from traps in his life. He entered the Grand American Handicap, so he states, with the idea that he could gain more experience by shooting in such a race than in any other way. A few weeks ago he tried a few live birds at Pittsburg and did very well indeed; the success he then made induced him to try his hand at the Grand American, the result being that to his skill as a gunner; to the perfect control he possesses over his nervous system (if he has any such awkward piece of baggage!), and to his light handicap, may be attributed his success as a live bird shooter at Willard Park. By profession Mr. Messner is a drummer for the wholesale grocery house of Dilworth Bros., his territory being the city of Pittsburg. He is a member of the Pittsburg Gun Club. So much for the previous career of the winner. How the race was shot will be told below.

Without doubt the most interesting portion of Forest and Stream's Grand American Handicap report will be its page of illustrations, giving the actual attitude assumed by each contestant while firing (in the majority of instances) at their ninth birds on the afternoon of the first day—Thursday. The effect of the recoil, or "kick," of the gun is very plainly marked in some cases, notably in that of Frank Class, who, however, was "snapped" just as he had plunked a lightning second barrel into a hoverer from No. 3 trap. In Bartlett's case, the rapidity with which he "pumps" his Burgess was not quick enough to deceive the camera, the shooter being caught just as he was in the act of pumping the second shell into his gun. Messner's photo occupies the extreme left hand corner, the photographs of the contestants running in order from left to right across the sheet, according to their merit. It will also be noticed that there is a great difference in the size of the figures in the different photos. As a matter of fact the larger the figure in the photo, the heavier the handicap was. The size of the figures of Elliott, Class, Brewer, Fulford, and Morfey is very different when compared with that of the figures of Messner, George, Cleave, etc. But then there's a big difference between 33 and 32 yards, as compared with 26 and 25 yards! Perhaps the best picture of all is that of the bushwhackers waiting for missed birds. Some of the films in the camera being defective, certain negatives were spoiled, hence there are a few of the contest ants missing, a misfortune that could not be rectified when it was discovered.

THE BIG EVENT IN DETAIL.

Thursday, April 4, was a very cold day for the time of the year, although the sun shone brightly for the whole of the time from 10 A. M. to 5 P. M., when the 10th round of the main event had been completed and shooting stopped for the day. The order in which the shooters went to the score is given in the accompanying table, which gives the gun, shell and load of each contestant:

The following table gives the guns, etc., of each contestant in the Grand American Handicap:

Name	Gun	Shell	Powder	Shot

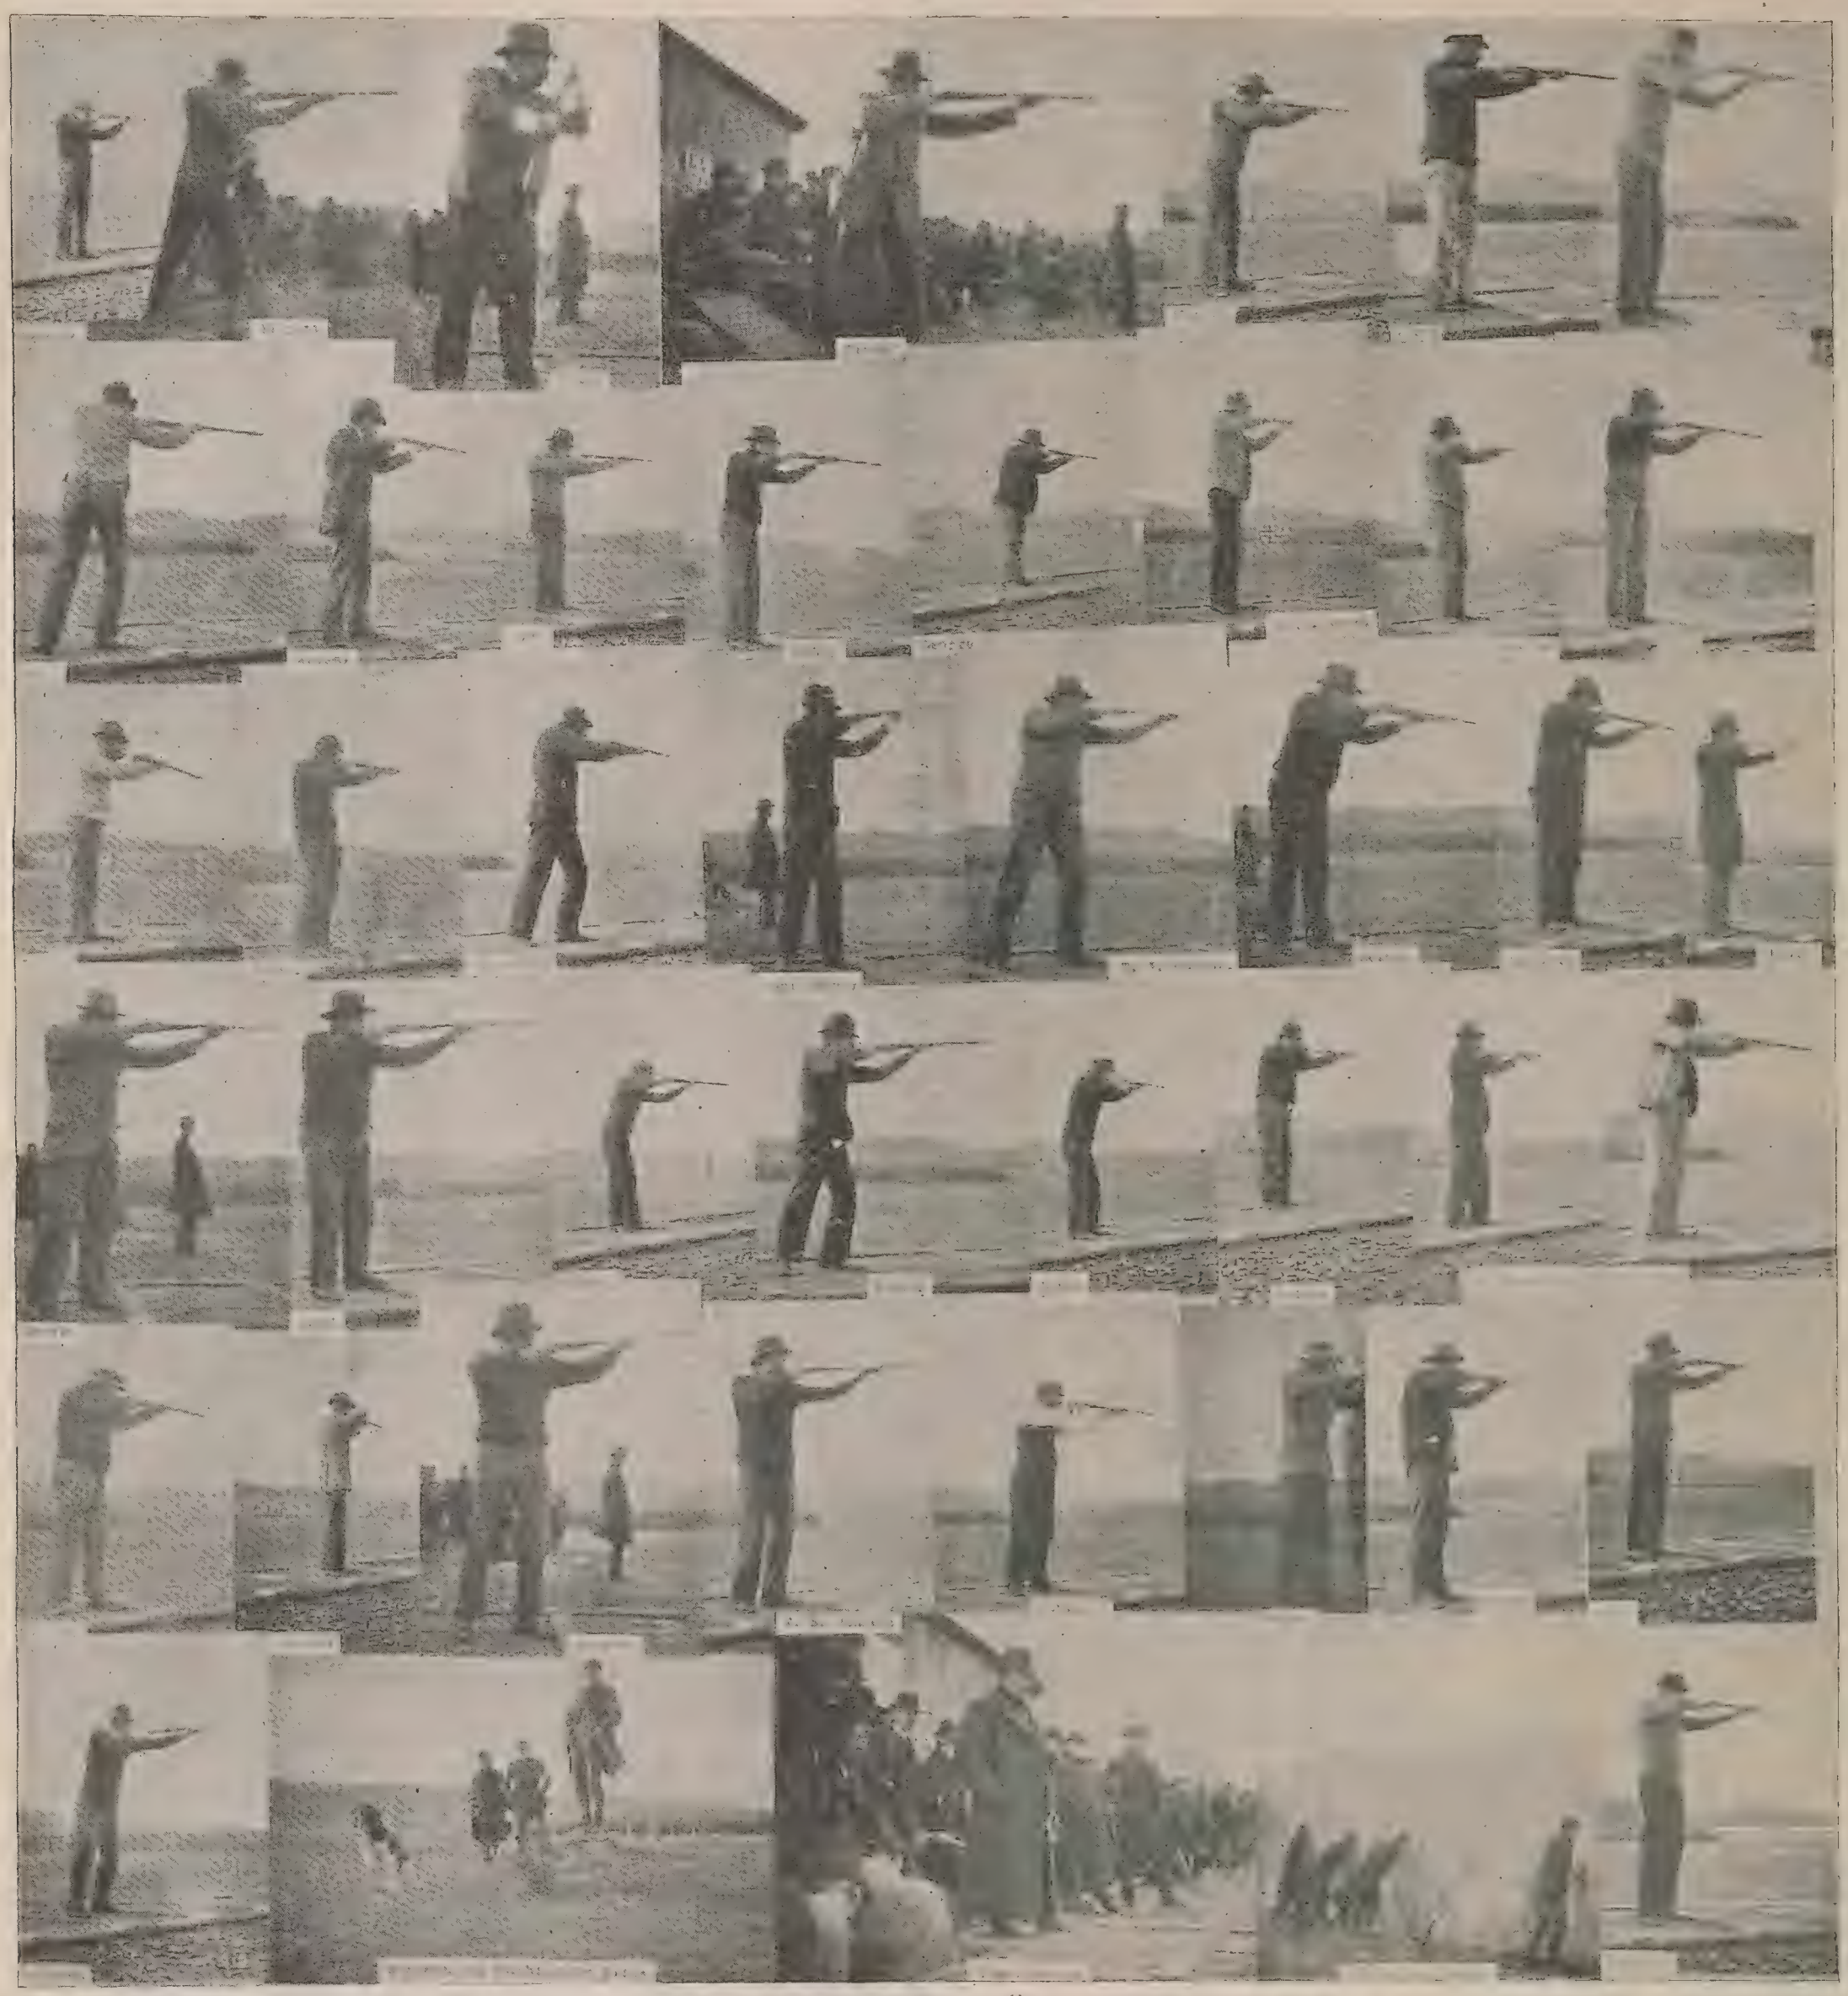
W. S. Edey, a very promising young pigeon shot from the Country Club, Westchester, N. Y., filled the responsible position of No. 1 on the list. When called to the score to open the ball, he drew a fast driver from No. 5 trap, which he brought down in a clever manner. The first to miss was Duston, of Newark, N. J., who made a bad break on an easy right quartering incomer from No. 5. Capt. J. S. Sedam, who had come all the way from Denver, Col., to take part in the shoot, was the first to follow suit to Duston's lead, missing a circling driver from No. 2. Capt. Sedam's miss was altogether unexpected, as he had given a good sample of his capabilities as a wing shot on the previous day, particularly in the Nitro Powder Handicap. Sim Glover, of Rochester, N. Y., No. 25 on the list, two below Capt. Sedam, then missed an easy left quartering incomer; Glover's poor form was undoubtedly due to the gun he was shooting not fitting him; he was shooting E. D. Fulford's hammer Greener. The next two men, Hoffmann and "Burdette," who by the way is W. A. Peck, of Cos Cob, Conn., killed their birds, but J. E. Jones, a Paterson, N. J., shooter, and "Billy" Drake, of South Orange, N. J., Manager of the New Jersey Trapshooter's League, both slipped up on their birds. Melot, on the 29 yards mark, was the next to miss, his bird receiving plenty of attention from the bushwhackers over the lower right hand corner of the fence. Capt. Money, to the surprise of everybody, as well as of himself, missed his first bird. Fred Bennett, a rattling good shot from Boston, Mass., and a man who can handle a pistol well, too, had the hard luck to lose his first bird, dead out of bounds. J. S. Taylor, of Newburg, N. Y., a dangerous man to meet in a match at live birds, was also slightly off on his first bird, shooting behind a fast right driver from No. 3 trap. H. S. Young, one of the post entries, last man but one on the list, most unaccountably missed an easy incomer with his first barrel, only lightly feathering it with his second. F. L. Train, another post entry, did not enter until just as the second round was being finished. When he walked to the 28 yards mark to shoot his first bird, his "get up" was hardly what would have been looked for from a pigeon shooter, but then Mr. Train did not intend to shoot until he reached the grounds. His brown derby hat, and long Prince Albert, however, did not prevent him from killing his birds in good style. The first bird which he missed, his 7th, was one of that kind which nearly everybody misses when they draw them. As detailed above, 10 out of the 58 shooters were credited with cyphers on the first round.

In the next round 11 lost birds were recorded, the unlucky ones being White, Mayhew, Hoffman, Leroy, Fulford and Schwartz, each of whom was credited with their first cypher in this round, while Duston, Glover, Jones, Capt. Money and Young scored their second consecutive misses. Fulford's bird was apparently a sure dead bird, but it just managed to have strength enough to cross the boundary, falling dead out of bounds. In this round Frank Hyde, of Ridgefield, N. J., made a splendid kill of a fast right quartering driver from No. 2 trap. The kills made by Frank Class, Phil Daly, Fred G. Moore and W. W. Bennett, were also roundly applauded.

The third round saw eight more birds escape, Bartlett, Lindsley, Burdette, Moore and Daly spoiling their straights, while A. S. White, Hoffman and F. E. Bennett added a second cypher to their strings. Thus at the end of the third round only 37 out of the 58 starters had killed all their birds. The best kills in this round were made by Noel Money and Frank Class, the latter's second barrel being used most effectively on an extraordinarily fast zig-zagger from No. 4.

The fourth round saw the first man to drop out of the race, Young making his third miss. Moore, Daly and Schwartz each scored their second lost bird, while T. W. Morfey (the Pride of Patterson), Van Dyke, Ingersoll, Lenone and Coulston spoiled their chances of a straight score. Morfey hardly seemed to take his usual care while shooting in the handicap, letting a bird go that it looked "odds on" that he would have killed. Coulston, a member of the crack New Utrecht Gun Club, had the doubtful pleasure of seeing his bird drop dead just over the boundary. Daly lost his bird through his safety bolt going wrong.



Round No. 5 saw eight birds get away as in No. 3. In this round Lenone and Sedam scored their second misses, while Zwirlein, Wright, George Work, Eddie Morgan, Cleave and Eley went to join the ranks of those who had missed one bird. George Work's miss was a poor one, the bird being an easy circling incomer. Cleave drew a good one from No. 2 but failed to centre it with his first barrel, the second barrel doing its work too late to be scored. Leroy's kill of an extremely hard driving bird from No. 5 trap called forth a round of hand clapping that showed that he had an appreciative audience. So fast were the misses coming that at the end of this round there were only 26 men who had killed their five birds!

The sixth round saw Jones and Lenone fall by the wayside and drop out, after missing their sixth birds; Jones's bird was one of those that "everybody misses," a small consolation perhaps, but still something. Nine birds escaped in this round, or rather nine cyphers were scored to as many shooters. These men were: Zwirlein and Morfey (their second misses), Jones and Lenone (third misses), and Du Bray, Sweny, George, Post and Outwater, who made their first misses. Du Bray's bird was a hummer; Post's bird, which also fell dead out of bounds, being another of the same kind. Heikes' second barrel kill of a twister from No. 5 was duly recognized by both shooters and spectators.

Round No. 7 was fatal to A. S. White and Duston, both of whom registered their third misses. Work also lost his bird out of bounds, thus scoring his second miss; realizing that 23 would hardly be likely to bring any money, he accordingly retired, the field being thus reduced to 52 shooters when the 8th round commenced. Du Bray, Ingersoll and Eley both missed their birds, Dickey and Train joining the band of those with a single cypher. E. F. Thomas, who was shooting well, made a really brilliant kill of a right quartering driver from No. 1 trap, the Denver shooter bring his bird down by a superb second barrel stop. Duston's failure may be attributed to his acceding to the request of Elmer Shaner that each shooter would give him two shells for the purpose of being examined if challenged. Duston gave up two and forgot to put one in his second barrel; result, lost bird.

Rounds 8 and 9 saw the roll of shooters still further weeded out. In the 8th round, Hoffman, Daly and Schwartz dropped out, Ingersoll, Sedam and Fred Moore joining them in the ninth round. The 8th round also was responsible for seven other cyphers, Wright, Burdette, Post and Outwater scoring their second misses, and Higginson, Willey and Simpson spoiling their chances of a clean score. Lindsley and Leroy scored their second misses in round 9, while Arnold, who drew a corker from No. 4, missed his bird and spoiled his straight. If it is any consolation to those gentlemen (with the exception of Arnold) who missed in round 9, to know that the photographs given elsewhere were taken while that operation was going on, I gladly make this statement: With the exception of the photographs of Hyde, Zwirlein, N. E Money, Morfey, Bartlett, Drake, Post, Arnold and Simpson, all the negatives were made during the ninth round; the nine above named were made during the shooting of the 10th round. It is interesting to look at the score, learn the trap and the flight of the bird, and then look how the result of each shooter's efforts were achieved. In the ninth round, W. G. Clark, of Altoona, Pa., drew a right quartering driver from No. 5; he hit it hard with both barrels, but it managed to get to the wire netting that marked the boundary, before dropping. Clark elected to gather the bird himself. Thinking he had three minutes to gather the bird he took things leisurely until he was told that he had but 50 seconds left. Then he made for the bird, which luckily for him had a wing broker. An exciting chase resulted in Clark gathering his bird with just four seconds by the referee's watch to spare. I wish that more of his Altoona friends had been present to enjoy that exciting sprint; Clark said, on his return with the bird, when rallied by some of the spectators: "$600 attached to a bird's tail would make almost anybody run, wouldn't it?"

Round 10 brought the day's work of trappers, puller, scorer and referee in the Grand American Handicap to a close. It was after five when the round was completed, and it was decided to quit for the day and to commence shooting again the next day at 11 A. M. In this round 12 cyphers were added to the totals, the largest number in any one round; the next largest number of misses being 11 in round 2 and 10 in rounds 1 and 8. Frank Hyde, Noel Money, Rollo Heikes and Will Bennett, all broke their straight scores in this round, while Morgan, Mayhew, Drake, Sweny, Fulford and Simpson, each scored

Grand American Handicap------Positions at the Score.

Photographed by the Forest and Stream's Camera.

their second misses, commencing on Friday morning on what was termed "the ragged edge"—another miss being fatal. Fulford's dead out of bounds was an extremely hard, as well as a very curious, case. Fred Bennett and Post each dropped a bird also in this round; these being their third misses, they were forced to retire. Mr. Post's picture will be a melancholy souvenir, I'm afraid. Fred Moore's photograph may be classed as a dead out of bounds, the camera unfortunately not having centered him; under the circumstances it was great luck that he was hit at all!

The rapidity with which straight scores had been paralyzed one after another will be readily realized from the following statement of how things stood at the end of the 10th round: Out of the 58 starters, 15 had dropped out altogether; 15 others had lost two birds each, and 17 more had a credit of 9 out of 10; this left only eleven men with straight scores of 10! Considering the quality of the entry, this says a good deal for the birds and traps. Altogether 548 birds, not counting "no birds," were trapped at this set of traps, a good record when the largeness of the entry, the consequent difficulty of getting the shooters to the score promptly, and the tedious waits while Boyle Bros'. Irish setter puppy, Nancy, was chasing herself around the field. When Miss Nancy likes, she makes an excellent retriever, being very rapid and absolutely tireless, but when she doesn't like—then it's tedious to say the least. While on the subject of retrievers it is only fit and proper to mention John Doty's Gordon setter dog, Joe. Although Joe's digestive and secretive organs were out of gear, he did some very good work; there was no necessity of whistling or calling when Joe was retrieving. It also made no matter how many birds there were to bring in; sometimes he would go to the extremity of the boundary, pick up his bird and then bring back one of those which Nancy had dropped as well. Two birds at a time were nothing to him; once he brought back three, two by the wings and the other by the body! The photographs of both Nancy and Joe were, unfortunately, failures; both dogs are worthy of being immortalized in these columns, each for its own eccentricities or excellencies.

THE FINAL ROUNDS.

Promptly at 11 on Friday morning, April 5, the 11th round of the Grand American Handicap was commenced, Edey, of course leading off. He began badly by missing a quick flyer from No. 4 trap. Higginson killed an easy right quartering incomer and then Clark spoiled the looks of his score by losing a good bird from No. 1. Lower down in the list another straight score, Kelsey's, was also spoiled by his losing a right quartering driver from No. 2, dead out of bounds. Thus three of the eleven straight scores from over night were reduced very quickly to 8. Altogether nine cyphers were totalled in this round; Mayhew, Fulford and Eley, dropping out with their third misses, and Arnold, W. W. Bennett and Train each scoring their second goose egg, Arnold retiring from the contest with only two misses. This left 39 shooters to commence the 12th round.

Three lost birds were all that were scored in the 12th round. Du Bray's bird, a low flying driver from No. 3, fell dead out of bounds, the captain withdrawing from the contest as it was his third cypher; George and Bartlett scored the other misses. The 13th round saw Bartlett and Lindsley drop out, Clark and Heikes scoring their second misses. Both Clark's and Bartlett's birds were rattling good ones, while Heikes' pigeon, which fell dead out of bounds, was a strong flyer, that was bored through, but managed to reach the boundary. In the 14th round Wright, Morgan and Burdette fell out, while Melot and Taylor each scored a lost bird. There were four misses scored on the 15th round, one of them very important and a miss that had a good deal to do with the ultimate result of the handicap. The miss referred to was credited to Jack Brewer, who drew a perfect terror of a bird from No. 1 trap, the pigeon getting away with hardly any apparent damage. Cleave scored his second miss in this round, while Drake and Melot both dropped out. This left seven straight scores of 15 out of 31 competitors at the end of the 15th round.

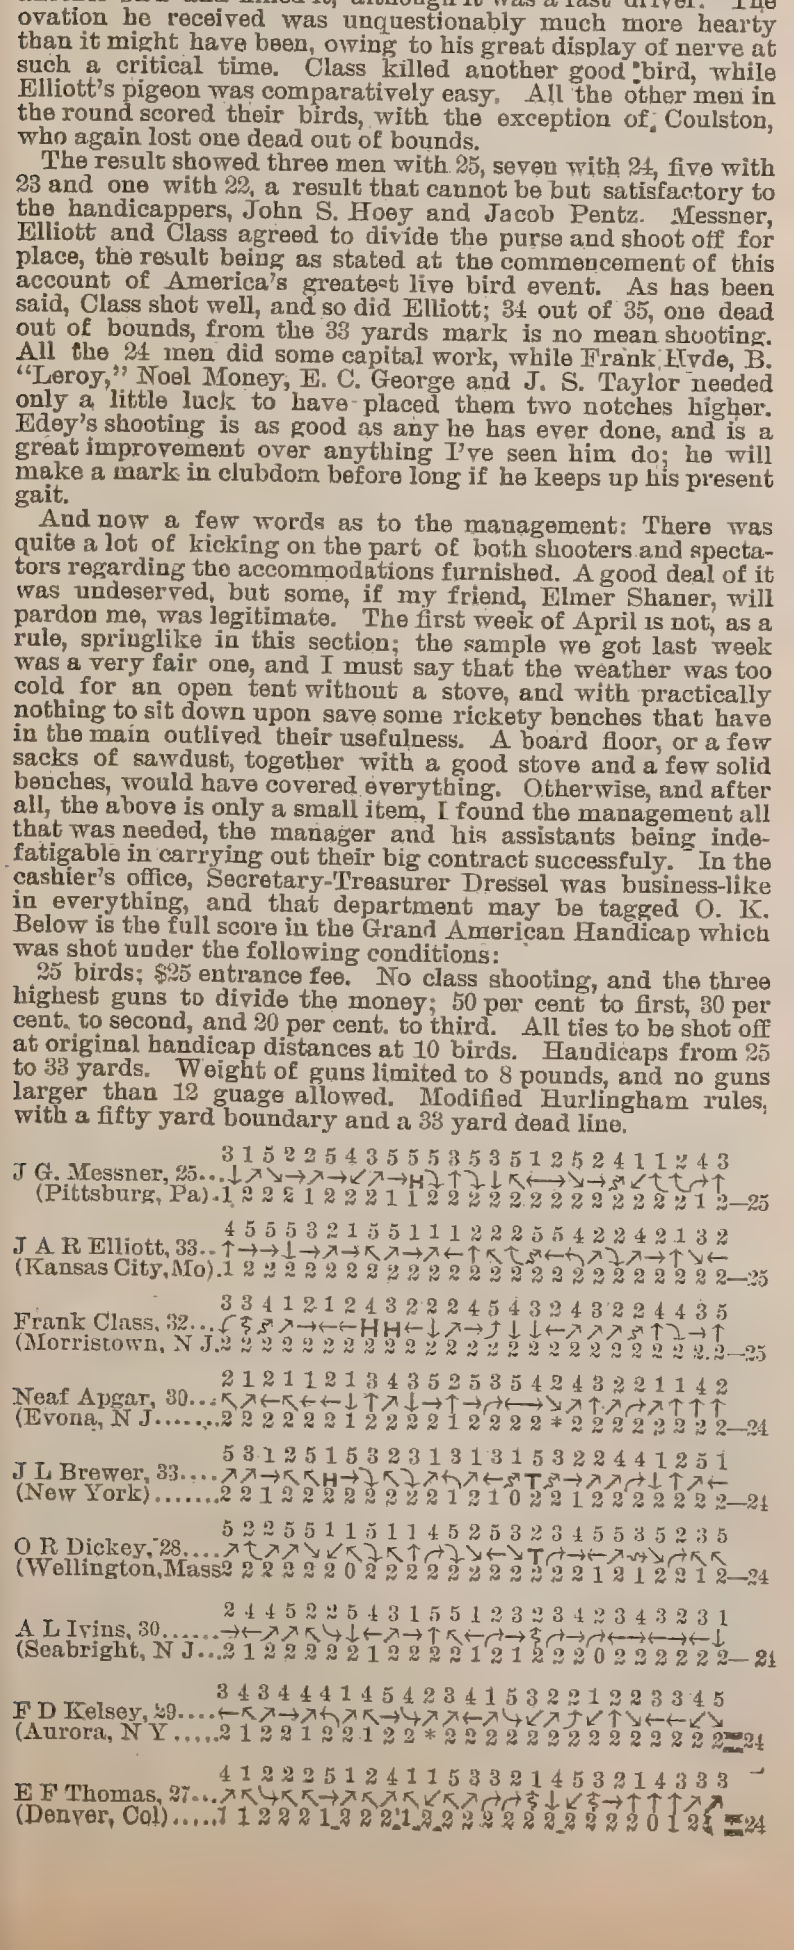
Glover, who had shot well ever since his first two rounds, was the only one to miss in the 16th round; this being his third miss, he joined the 28 other shooters who had withdrawn. Ivins, who had been shooting well right along, and who looked all over a winner, made an excellent kill of his bird in this round. Thomas' stop of his bird was also splendid work with the gun. The 17th round saw eight men lose birds, Clark, Morfey, Cleave and Train dropping out, Higginson and Willey scoring their second misses, and Apgar and "Henry" spoiling their straight scores. Apgar's loss of his bird was a piece of real hard luck. It was a right quarterer from No. 2 which fell to the first barrel; his second shell, fired while the bird was on the ground, did nothing more than wake it up, the bird rising at the discharge and falling dead out of bounds; it looked as if Neaf was too sure of his bird and aimed carelessly or else the charge of shot spread badly. "Henry" (H. L. Gates, of Utica, N Y.) drew a very hard bird which beat him entirely. Jack Brewer's kill of a zig-zagging quartering driver from No. 3 in this round was honestly applauded.

Round 18 saw Simpson drop out and Coulston lose another bird, this time also dead out of bounds. In connection with Coulston's miss, a rather curious coincidence may be chronicled: John S. Hoey had relieved Jacob Pentz, as referee, while the latter went to lunch; Kelsey, not being on hand when his name was called, Mr. Hoey asked Coulston who was ready, and who was the next man to the score, if he would mind expediting matters by shooting what would have been Kelsey's bird. "I'm superstitious, but I'll do it," said Couls

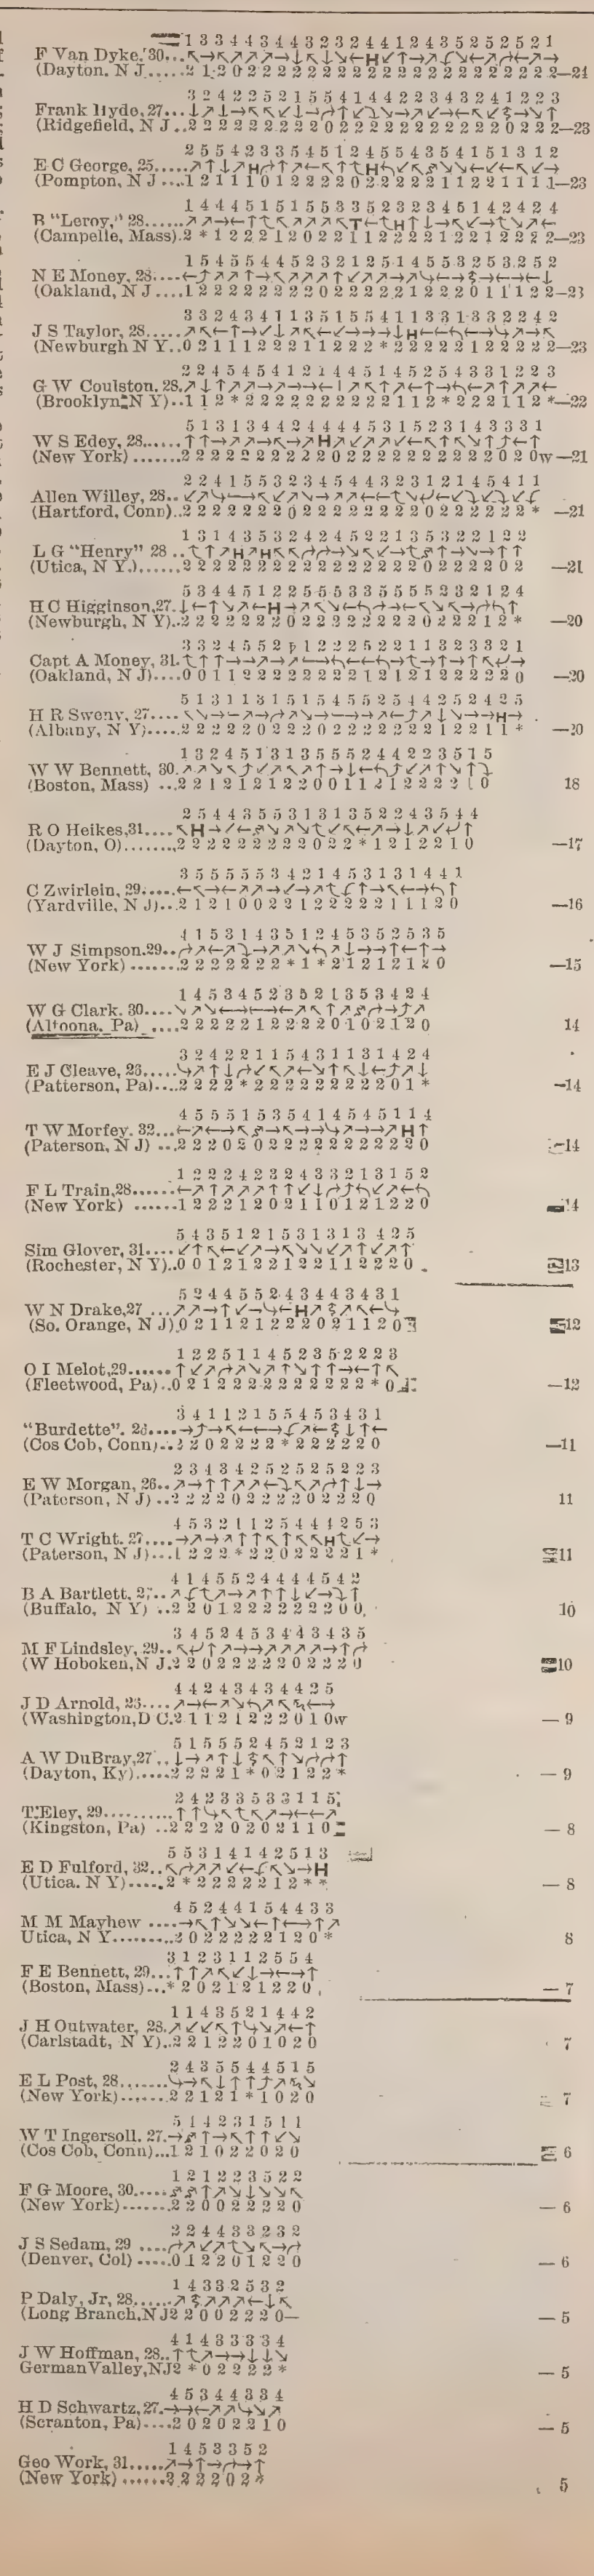
ton. He drew a fast right quarterer from No. 5 that carried his load of lead over the boundary, dropping dead out of bounds. "I told you I was superstitious," said Coulston, laughingly, as he returned from the score. Van Dyke also had an interesting experience: He got a circling bird from No. 3; whether he touched it at all with his first shell is a question; anyway that shell jammed slightly, preventing the usual rapid pumping of his second cartridge. The bird, however, was accommodating enough to circle around, enabling Van to eject the shell and kill his pigeon in good style.

In the 19th round Zwirlein dropped out, missing a driver from No. 1. Ivins lost a circling right quarterer from No. 2, spoiling his straight score just when he looked like killing them all. This left only four men with straight scores: Messner (25), Thomas (28), Class (32) and Elliott (33). In the 20th round Messner drew his first really hard bird, a twister from No. 4 trap; this bird he killed just as easy as his other 19, his work on this pigeon making his stock go up 50 per cent. Noel Money drew a rasper that beat him entirely and Heikes dropped out after missing a driver from No. 4. There were now only five more birds to shoot at, with four men straight, and 19 others still shooting along.

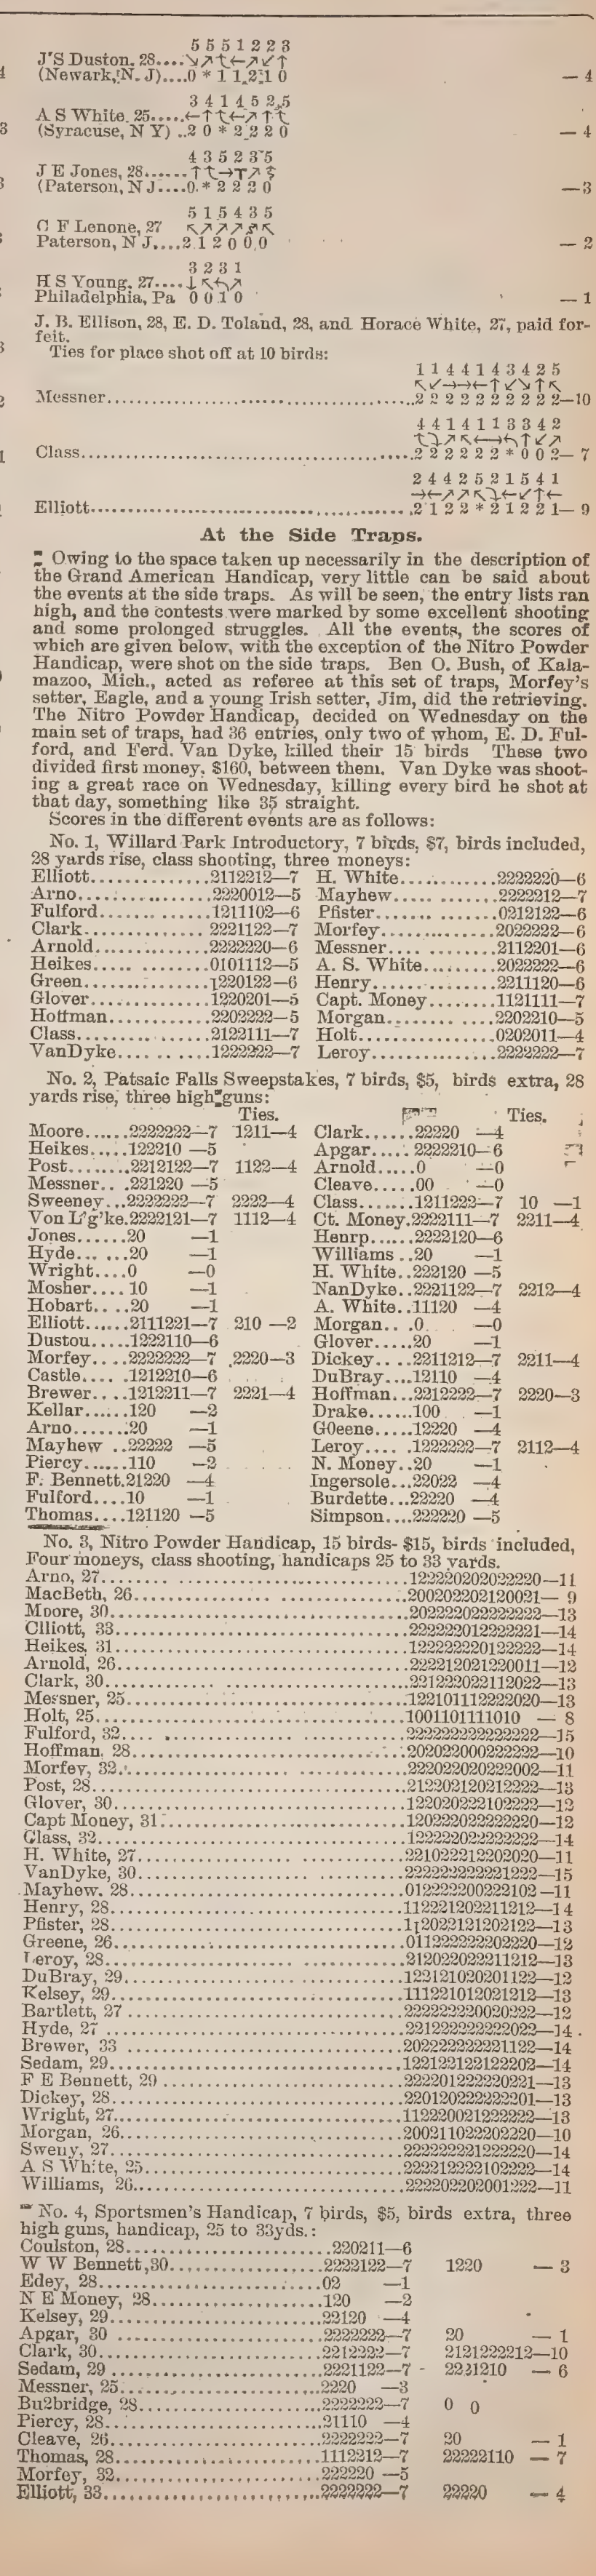
W. W. Bennett was the only one to miss and drop out in the 21st round, the whole round being marked by some excellent kills. Thomas added greatly to the laurels he had already won by making an extraordinary kill with his second barrel on a straight driver from No. 1 trap; the kill was as creditable to the gun as to the shooter who held it. Class also made a good kill of a twisting driver from No. 2 trap. Four lost birds were recorded in the 22d round: Edey started off by missing a circling left quarterer from No. 3 trap, and Hyde drawing a twister from No. 1 that was calculated to get the best of almost anybody. Then Thomas fell from grace; he got a bird from No. 4 that sat on the trap; Thomas waited for him, but lamented it afterwards, as the bird, once started, went fast while the shooter was apparently correspondingly slow, far too slow for such a bird. Henry also lost another bird, his second miss. Thomas' miss left Messner to fight it out with Class and Elliott.



The 23d round was fatal to Higginson, Sweny and Capt. Money, who had just completed an excellent run of 20 straight from the 31 yards mark. Sweny is a young shot from Albany, N. Y., who, by his work in this race gives every promise of being a factor in many a future Grand American Handicap; although practically out of the race after the 10th round, he shot in capital form during the 13 rounds he stood up in on the second day; the bird that beat him was a fast one, that fell dead just up against the big fence. "Henry" withdrew after killing his 23d bird. The 24th round saw Edey and Willey retire, the latter's bird, an easy one, dropping dead behind the score. Willey shot well throughout the race, making some capital kills.



The 25th and last round was watched with intense interest. Messner's coolness, that amounted to absolute indifference to his surroundings, stood him in good stead in this round; he was apparently the coolest man in the field when he stepped to the score. With measured tread as usual, his gait admirably suited for the walk of an undertaker's mute, he stepped to the 25 yards mark, levelled his gun carefully and gave the caution, "Are you ready?" Back came the answer "Ready," and No. 1 trap was pulled at the same instant. It looked as if the puller, W. E. Lott, was the rattled one. A fairly good bird from No. 1 went across the field, but, without lowering his gun, which was pointing over No. 3 trap, Messner turned his head round and said calmy, "I didn't say pull." Of course he got another bird and killed it, although it was a fast driver. The ovation he received was unquestionably much more hearty than it might have been, owing to his great display of nerve at such a critical time. Class killed another good bird, while Elliott's pigeon was comparatively easy. All the other men in the round scored their birds, with the exception of Coulston, who again lost one dead out of bounds.



The result showed three men with 25, seven with 24, five with 23 and one with 22, a result that cannot be but satisfactory to the handicappers, John S. Hoey and Jacob Pentz. Messner, Elliott and Class agreed to divide the purse and shoot off for place, the result being as stated at the commencement of this account of America's greatest live bird event. As has been said, Class shot well, and so did Elliott; 34 out of 35, one dead out of bounds, from the 33 yards mark is no mean shooting. All the 24 men did some capital work, while Frank Hyde, B. "Leroy," Noel Money, E. C. George and J. S. Taylor needed only a little luck to have placed them two notches higher. Edey's shooting is as good as any he has ever done, and is a great improvement over anything I've seen him do; he will make a mark in clubdom before long if he keeps up his present gait.

And now a few words as to the management: There was quite a lot of kicking on the part of both shooters and spectators regarding the accommodations furnished. A good deal of it was undeserved, but some, if my friend, Elmer Shaner, will pardon me, was legitimate. The first week of April is not, as a rule, springlike in this section; the sample we got last week was a very fair one, and I must say that the weather was too cold for an open tent without a stove, and with practically nothing to sit down upon save some rickety benches that have in the main outlived their usefulness. A board floor, or a few sacks of sawdust, together with a good stove and a few solid benches, would have covered everything. Otherwise, and after all, the above is only a small item, I found the management all that was needed, the manager and his assistants being indefatigable in carrying out their big contract successfuly. In the cashier's office, Secretary-Treasurer Dressel was business-like in everything, and that department may be tagged O. K. Below is the full score in the Grand American Handicap which was shot under the following conditions:

25 birds; $25 entrance fee. No class shooting, and the three highest guns to divide the money; 50 per cent to first, 30 per cent. to second, and 20 per cent. to third. All ties to be shot off at original handicap distances at 10 birds. Handicaps from 25 to 33 yards. Weight of guns limited to 8 pounds, and no guns larger than 12 guage allowed. Modified Hurlingham rules, with a fifty yard boundary and a 33 yard dead line.

J. B. Ellison, 28, E. D. Toland, 28, and Horace White, 27, paid forfeit.

Ties for place shot off at 10 birds:

At the Side Traps.

Owing to the space taken up necessarily in the description of the Grand American Handicap, very little can be said about the events at the side traps. As will be seen, the entry lists ran high, and the contests were marked by some excellent shooting and some prolonged struggles. All the events, the scores of which are given below, with the exception of the Nitro Powder Handicap, were shot on the side traps. Ben O. Bush, of Kalamazoo, Mich., acted as referee at this set of traps, Morfey's setter, Eagle, and a young Irish setter, Jim, did the retrieving. The Nitro Powder Handicap, decided on Wednesday on the main set of traps, had 36 entries, only two of whom, E. D. Fulford, and Ferd. Van Dyke, killed their 15 birds These two divided first money, $160, between them. Van Dyke was shooting a great race on Wednesday, killing every bird he shot at that day, something like 35 straight.

Scores in the different events are as follows:

No. 1, Willard Park Introductory, 7 birds, $7, birds included, 28 yards rise, class shooting, three moneys:

Elliott	2112212—7	H. White	2222220—6

Saturday's Scores.

As several shooters wished to keep the shoot going through Saturday, an arrangement was made whereby everything was left just as it was for that day. Although the day was dull, it was not unpleasant, and the shooters who took part in the following miss and outs did not regret their attendance at Willard Park. The following are the scores, each event being $2 entrance, birds extra of course.

No. 1: Henry, Mayhew and Fulford, 4; Morfey and Williams, 3; Du Bray and Cleave, 0.

No. 2 Henry, Mayhew and Du Bray, 4; Fulford and Cleave, 3; Morfey, 2; Williams, 1.

No. 3 Mayhew, Morfey and Du Bray, 9; Henry, 2; Williams, 1; Cleave and Fulford, 0.

No. 4: Fulford, Morfey and Bush, 7; Du Bray, 5; Henry, 4; Williams, 2; Mayhew, 1.

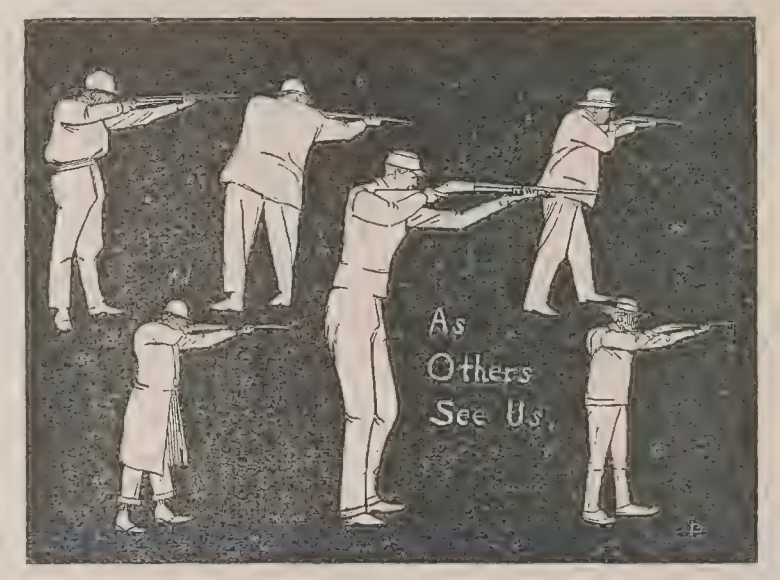
No. 5: Bush, Fulford and Mayhew, 3; Henry, 2; Morfey and Collins, 1; Du Bray and Williams, 0.

No 6: Bush, Fulford and Mayhew, 5; Henry, 4; Morfey, 2; Du Bray and Willams, 0.

No. 7: Bush, Fulford and Kirkover, 8; Williams, 7; Morfey, 3; Henry, and Du Bray, 1; Mayhew, 0.

No. 8: Fulford and Mayhew, 4; Henry and Bush, 3; Kirkover, 0.

From the above it will be seen that Fulford finished with a straight run of 27; Bush killed 26 straight before missing, and Mayhew started in with a run of 18 consecutive kills.



Notes of the Shoot.

A very curious thing happened on Wednesday afternoon, at the main set of traps while the Nitro Powder Handicap was being shot off: Bartlett was at the score; when he called 'Pull,'' No. 2 trap opened and a white bird hopped in a sprightly manner off the trap. It took a few steps toward the shooter, saw who it was, and promptly fell over on its back and remained in that condition until picked up. It was apparently uninjured and absolutely no reason can be assigned for its behavior.

In the same event Fred Bennett knocked down a bird which was only lightly touched; Nancy was sent to retrieve it. Just as the dog reached the bird, the latter rose in the air and started off for the boundary. Not to be denied, Nancy, who was going at her top speed, leaped into the air, caught the bird, turned a somersault on reaching terra firma, but came out right side up, with the bird still in her mouth. It was a great feat.

The gun which Messner won the Grand American Handicap with has a history. It is a Parker hammerless that was built for him by Parker Bros, many years ago. It was, in fact, the first of its kind made by the firm that went into Pittsburg, "Old Hoss" taking the order for it. About a year ago Messner sold the gun for $50 to a friend. A week or so prior to the handicap he borrowed the gun to shoot in a small sweep at Pittsburg; his success, as told elsewhere, led him to come to Willard Park, bringing his old gun along with him.

Clark's Patent live bird traps were used on the first day of the Grand American Handicap, and also for the Nitro Powder Handicap contest. On Friday they were replaced by a set of the King traps; for what reason, I don't know, but understand that a few of the shooters requested the change, as they

thought the birds would start better from a more noisy trap. The record made by Clark's traps on the two days when they were used, speaks well for both traps and birds. On Wednesday out of 36 entries in a 15 bird race only two men killed their 15 birds. On the first day of the handicap, out of 58 entries, at the end of the tenth round there were only 11 straights, 17 nines and 15 eights, while 15 men had dropped out after missing three birds; 548 pigeons were trapped from these traps on this day.

Our illustrations showing the shooters while they were actually firing their first barrels, is something decidedly new and interesting. In many instances the recoil of the gun made the outline of the weapon slightly blurred. By the way, if anybody would like a print or so of his own individual picture, he can get the same by applying to Forest and Stream Publishing Company at the rate of 25 cents per photograph. Of course it will be understood that in our illustration it has been necessary to reduce the size of each photograph to about two-fifths of its original dimensions.

The birds used in the main event were good flyers, but were slow to start as a rule. Once started they were hard to kill; examine the totals. EDWARD BANKS.

San Antonio Gun Club.

San Antonio, Texas, April 6.—As will be seen by the scores given below, the celebrated dog man from Milwaukee, Mr. Richard Merrill, again distinguished himself by breaking 79 out of 81 targets, including 5 pairs. While Dicky was at the traps a flock of canvas backs passed over the shooting grounds, and he didn't do a thing but bring one down amid the plaudits of the crowd. The local paper said that, "Mr. Merrill would have it stuffed as a memento of the occasion"; and he did—that is, he had it stuffed with chestnuts, and the next day the succulent bird was wrestling with Dick's interior anatomy. Scores:

No. 1, 15 singles: A. W. Adams 13, Merrill 15, Chabot 7, H. W. Adams 8, Shields 8, Carpenter 2

No. 2, same: A. W. Adams 11, Merrill 14, Chabot 9, H. W. Adams 10, Carpenter 5, Bennett 7, Ellis 10.

No. 3, medal shoot, 30 singles: A. W. Adams 22, Merrill 29, Ellis 21, Black 24, Epp 20, Shields 24, Chabot 21, H. W. Adams 16, Simpson 15, Bennett 12, Thiele 12, Grossman 14, Carpenter 7.

No. 4, 5 pairs: Merrill 10, A. W. Adams 7, Chabot 6, H. W. Adams 6, Ellis 7, Black 6, Simpson 8, Grossman 5, Shields 7, Thiele 8.

No. 5, 15 singles: A. W. Adams 14, Merrill 15, Black 14, Epp 10, Bennett 8, Ellis 12, Simpson 9, Shields 10.

POWDER HILL GUN CLUB.

The following are the latest scores made by the members of the Powder Hill Gun Club:

No. 1, 15 singles and 5 paris: Critzer 22, Ohnesorge 20, Gloeckner 19, Dyer 21, Texas Field 22, A. Dreiss 18.

No. 2, same: Critzer 21, Ohnesorge 19, Gloeckner 20, Dyer 22, Texas Field 20, A. Dreiss 19.

STATE TOURNAMENT.

The 19th annual tournament of the Texas Association takes place here on May 15, 16, 17, 18 and 19, and will be the greatest meeting the association ever had. The programme, which will be issued next week, will contain very attractive features. $600 in cash will be added and $500 in merchandise will be scattered along the events. TEXAS FIELD.

The Late Dr. Henry B. Wygant.

Mr. Orrin J. Loder, Secretary of the Peekskill, N. Y., Gun Club, has sent us a copy of the resolutions, adopted on April 3 by the members of his club, in memory of their late fellow member, Dr. Henry B. Wygant. Dr. Wygant's death was a sad blow to the Peekskill club, and the resolutions, given below, truthfully record the sentiments of its members:

"At a meeting of the Peekskill Gun Club, held on April 3, the following resolutions were unanimously adopted by a rising vote, ordered to be placed in full on the records of the club, a copy be sent to the family of our deceased friend and to the press: Resolved, That we, the officers and members of the Peekskill Gun Club have learned with profound sorrow of the death of our beloved comrade, Dr. Henry B. Wygant. Most of us have known him intimately for years, and have enjoyed with him many delightful occasions in connection with our organization. We have ever found him of equable temperament and sunny disposition, and shall hold his memory forever green in our hearts. As a surgeon dentist, Dr. Wygant was easily in the front of his profession. As an amateur sportsman, he inherited from his father a love for dog and gun, and when his opportunities for field shooting seemed ended, he became an enthusiastic trap shooter. He might truly be called 'The Father of the Sport' in our vicinity. The club owes very much of its success to his untiring efforts. As a friend his life was gentle, and the elements so mixed in him, that nature might stand up and say to all the world, 'This was a man.' Resolved, That we tender to his widow and family our heartfelt and sincerest sympathy."

A Letter from Dr. Carver.

Dr. W. F. Carver, writing to Forest and Stream from Kansas City, Mo., under date of March 21, says: "I am at a loss to understand why I should be accused of bluffing, etc., and my name held up to ridicule by Mr. Cockburn, of Canada, as I have never had the distinguished honor of meeting Mr. Cockburn. Let me make him this offer: I will give him 25 dead birds in 100 in a 100-bird match for $1,000 a side, and meet him in Chicago any day he may name during this month of April, the shoot to be under American Association rules, 12-bore guns. I will further add that I am ever willing to shoot any man in the world at John Watson's grounds, in Chicago, under American Association rules, for $500 or $1,000, or more at any time. Simply give me one week's notice. It is not necessary for any one to publish his challenge. Let him put his money in his grip, and come along. This is a standing challenge, and open to the world. If any man on earth thinks he is a pigeon-shooter, and wants my money, let him come to Chicago and get it with my blessing.

"DR. W. F. CARVER, Champion Shot of the World."

So much for Dr. Carver's letter, which is very much like many others of a similar nature lately published. It takes a strong and retentive memory to keep track of all the challenges that have appeared recently. Elliott, Brewer, Clars, Cockburn and Carver, have all had their say, but nothing has come of any of their challenges. Brewer has received a letter from Carver, which is understood to convey the meaning that he (Carver) will come East, if he can see any matches for money worth winning in sight. Brewer wishes to assure Carver that if he will come to New York he can choose either of the following alternatives in the way of a starter: 1—200 live birds per man for $5,000 a side; 2—100 live birds per man for $2,500 a side; 3—three separate 100-bird races for $1,500 a side each race. These under A. S. A. rules. If Dr. Carver thinks well of either one of these offers, all he need do is to post a proportionate sum to bind the match, or matches, with this office, and Brewer says the rest will be plain sailing.

As everybody has now had his say, and plenty of it, the time has come to close these columns to any challenge that is not accompanied by a fit sum of money to bind the match, if the challenge is accepted. The public is long suffering, and is always glad to read anything that bears the stamp of genuineness, and which relates to any of the great wing-shots of this greater country, but—the public must be protected from any more blizzards of a like character to that just experienced. In the words of the prophet: "Put up, gentlemen, or——"

Iowa Trap-Shooting.

Ruthven, Iowa, March 22.—The attendance at the three days' tournament, gotten up by D. D. Birch, of this place, was not as large as might reasonably have been expected, owing to the bad weather. The third day was so windy and dusty that many of the targets thrown could not be seen. Among those in attendance were: Chas. M. Grimm, Clear Lake; H. J. Wilson, Emmetsburg; D. V. Palmer, Lake Park; C. H. Lenander, A. Sundstrom, Bancroft; "Dude" Gilbert, H. Van Steenburg, Spirit Lake; J. D. Melton, Humboldt. Frankie, Walker, Birch and Schlosser were the home shooters. The programme stated, "No dropping for place. Contestants found guilty will be handicapped," and during the three days I do not think a target was dropped intentionally. They were shot from five electric traps, walk around; known and unknown traps and known and unknown angles. All ties were divided. The first average was made by C. M. Grimm with E. C. Powder, loaded by the U. M. C. people. Second by Gilbert, third, Birch. The clerical work was in the efficient hands of Fred Giddings, Hendrickson scored, the undersigned acting as referee. WALTER H. LIGHT.

Vernon Gun Club.

Vernon, Texas, March 28.—The Vernon Gun Club held its regular shoot yesterday, with the following result. Out of 30 singles and three pairs:

D. M. Alexander	111000011110110100011101110110010010—20
Geo. M Cooke	011110011111110111100111000011110011—24
G. W. Gales	101110100110000010001100100010011111—17
B. H. Houssels	101101010011010010111001001101010 10—19
J. S. Massie	100101100110011111011111110111110010—24
J. G. Matthews	010100001101010100011101011010101111—19
L. G. Hawkins (31 birds)	110110010001111111011010101000—18

L. G. HAWKINS, Secretary.

Hartford Gun Club.

Hartford, Conn., April 6.—The following scores were made this afternoon by the Hartford Gun Club, the weather being rainy and disagreeable:

"Ford"	111111111111111011111111—24
Green	110110111101101111111111—21
Chapin	110110111011111101111111—21
Williamson	101101001110011110011111—17
Tucker	101101111100110010000101—14
Seyton	010011000111010001111110—14
Smith	000100100101110001111010—1
Wadsworth	111000000101111100001011—1

D. S. WADSWORTH.

Squire vs. Ross.

Elizabeth, N. J. April 6.—George Squire, of the Climax Gun Club, and William Ross, of the Elizabeth Gun Club, shot a match this afternoon at 50 birds for $50 a side, 30 yards rise. The birds were good ones, so the scores are not really as low as they appear. T. H. Keller was referee, Wm. Parker, scorer, and D. Terry trap puller. Score:

George Squire	00221110112221112201112 11—21
	1021021*2111220011200212—18—39
Wm. Ross	00222222122212201202 1*122—20
	1*2221202220202*220202122—18—38

This match was followed by a sweep at 7 birds, $5 entrance, the following being the scores: Apgar, 7; Keller, Ross, Squire and D. Terry, 6; Woodruff, Marsh and Benner, 4; Keller, Ross, Squire and Terry decided to shoot off the tie for second, each man adding $2 to the purse: in the second round Keller and Ross divided, Squire and Terry missing their birds. T. K.

Meadville Gun Club.

Meadville, Pa., April 3.—The Meadville Gun Club held its regular monthly badge shoot this afternoon. This event is at 25 targets, unknown angles; Class B badge was won by H. A. Johnson, Reisinger winning the badge in Class B; the badge for the C men was won by Krueger. Johnson and Reisinger have held the badges in their respective classes to date, but there are other shooters coming up who will be liable to drop them out when the summer season opens. Scores:

Badge shoot, 25 targets, unknown angles:

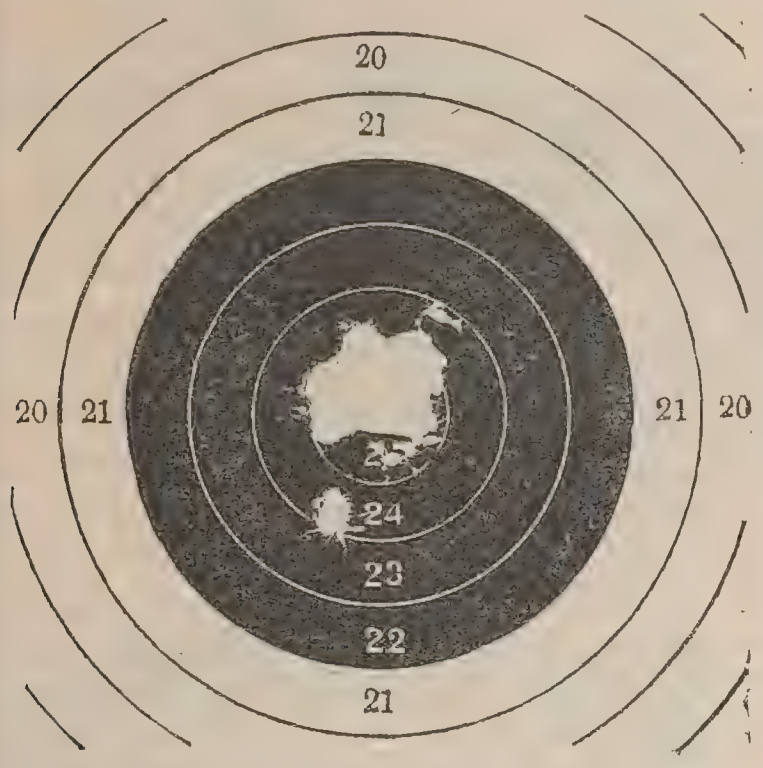
Ehrgott	1011111101111111101011101—20
Belton	0100111101101111111011101—18
Johnson, H. A	1111110111111111101111011—22
Leberman	1010101011000100011101110—13
Krueger	1101001110011110100011000—13
Affantranger, E. L	0000111001101011010 10010—12
Lashells	1110000010100110001111011—13
Reisinger	0011011111111001011111111—19
Affantranger, N	0101110100100100011001000—10
Kelso	0011111100111010100111011—16
Boehm	0000011000100100000001000— 5
Johnson, A	1101000111110001101110000—13
Gundaker	1111001100011111001011 00—14
Hayes	1101010011001111101111000—15
See	0001011011111100111110000—14
Clark	0100101110101111100000111—14

No. 2, 25 targets, 15 at unknown angles, 10 at known angles:-

Lashells, 11; Johnson, A, 13; Affantranger, E. L., 12; Affantranger, N., 15; Boehm, 9; Ehrgott, 19; Belton, 17; Leberman, 12; Clark, 18; Hayes, 14; Johnson, H. A., 19; Reisinger, 17; Kelso, 9; Hotchkiss, 15; Krueger, 13; Adams, 21.

CHOKE BORE.

Rifle Range and Gallery.



New York Rifle Club.

New York, April 3.—This club held its regular shoot to-day at Zettler's. The following scores were made by the members present. Off-hand. German Ring Target. Distance 75ft. Any rifle, sights and trigger-pull. Two best scores counted: R. J. Young, 71, 247, 248; A. H. Isbell, 69, 245, 245; D. Crocker, 61, 244, 245; E. B. Barker, 58, 238, 240; C. E. Gensch, 66.

R. J. YOUNG, Sec. N. Y. R. C.

Dr. Stillman's Marksmanship.

Syracuse, N. Y., March 30.—I send you a fine score made by our crack shot, Dr. A. A. Stillman, of the Indoor Shooting Club, with a 22 cal. rifle, 10 shots, off-hand, 75ft. For a good cluster we think

it would be a hard one to beat. The doctor recently closed a run of 316 consecutive bull's-eyes. Score:

Dr. Stillmann—25, 25, 25, 25, 25, 25, 25, 25, 24, 24—248.

R. ROBOTHAM, Sec.

National Sharpshooters' Union.

The following item will be of interest to sharpshooters in every part of the Union: "The National Sharpshooters' Union tournament, to be held at Glendale, L. I., from June 30 to July 8, is expected to be the largest affair of its kind ever held in this country. Plans for this tournament have been making for two years. A large fund has been guaranteed to defray the expenses of the shoot. All contests will be open to all comers, with the exception of the Honor Target competition."

They Broke the Record.

New York, April 1.—At midnight last Saturday a notable 15-day shooting tournament was concluded at the rifle range of the Manhattan Athletic Club. It will probably go on record as one of the famous events of 1895, for it was a closely contested match from start to finish, and Captain James S. Conlin, under whose supervision it was shot, declares that the winners of the first and second prizes have broken all previous records at the distance, and under similar conditions. The conditions of the match were: Go-as-you-please competition, open to all; ten shots to a target, 3 best targets to win first prize, 3 second best, second prize, 22 caliber rifles with globe and peep sights were used. The distance was 125ft., and the standard decimal targets were proportinately reduced, making it equal to a 200 yard range. In order to fully understand what shooting at this distance means, it is well to state that to make ten points the rifleman must put his shot inside of a circle that a ten-cent piece would cover. To score 90 points, or over, every shot must go within a circle that a fifty-cent piece would cover. The prizes—a gold badge to the first, and a silver one to the second man are both of the same unique design—a target encircled by a wreath, bearing in colors the club emblem on its face. It is pendant from a pair of crossed rifles. The bar which surmounts them bears the words "First prize" and "Second prize," and upon the lower circle of the target the club initials "N. M. A. C." appear. The winner of the gold badge was Herbert R. Limburger, and of the silver one Captain James C. Summers. The six winning targets score as follows: Limburger 94, 95, 97; Summers 90, 91, 92.

J. S. CONLIN.

Petty and Paine.

Messrs. Paine and Petty had a friendly talk with reference to their proposed revolver match April 3, at the Manhattan Athletic Club. Arrangements will probably be made to shoot the match early in May.

Mr. Paine also broached the subject of a team shoot between Boston and New York Marksmen, suggesting five or ten men to a side.

Yachting.

The visit of the English half-rater is now assured, and it only remains for the committee of the Seawanhaka Cor. Y. C. to perfect the details of the races with Mr. Brand, a matter which is likely to be easily settled. The letters which we have received on the subject from all quarters show the widespread interest which this new international race has awakened. Mr. Brand's new boat will be named Spruce IV.; an error was made in reading his first cablegram, the word Minima being interpreted as the name of the new boat instead of the club in whose name the challenge would be made.

On Monday of next week a very important gathering of racing men will take place at the Seawanhaka Cor. Y. C. house in New York, for the purpose of organizing an association of the Long Island Sound clubs. Of the many attempts made in the past for the formation of a union of New York clubs, all but one have been complete failures; and that, in its six years of existence has scored but a moderate success; and has entirely failed in uniting other than a certain class of clubs devoted to the racing of open boats of the old type. The new movement is started with no attempt to pass the natural barrier of Hell Gate and the East River, but to encourage racing among the rapidly-increasing clubs east of the Gate. Thus far the initiatory movement has been well managed and has met with general favor, and the meeting next week is likely to result in a union on such a basis as may lead to permanency.

In establishing a challenge trophy, the yachtsmen of San Francisco have encountered much the same difficulties as beset the special committee of the New York Y. C. in 1889, in drawing up the new deed of gift of the America's cup. The San Francisco men, however, have dealt with the matter in a broad and liberal spirit, calculated to give fair play to both challenger and defender, and the limits which they propose, for size of competing boats and measurement rules to govern the races, will probably result in the avoidance of unseemly disputes in the future, or of the practical nullification of the terms in a few years.

Mr. C. Oliver Iselein has confirmed the report, for sometime current, that the new cup defender will be plated with Parsons' Manganese bronze, the material used by the Cramps for propeller wheels, but beyond this the dimensions are as yet absolutely unknown. It seems probable, however, that when they are known the Boston Herald will be able to claim, as usual, the honor of having first published them. This enterprising journal has already made four different guesses, and there will probably be time for half a dozen more before the boat is afloat, and visible to other than a select few. The Herald's guesses are as follows: Jan. 28, beam 23ft. 6in.; March 16, beam 22ft. ?in.; March 17, beam 27ft.; April 3, beam 23ft. 3in.

From the Herald's latest story, it appears that some wicked persons in the Herreshoff shops set up a couple of angle frames with a "fake" cross spall, showing a breadth of 27ft.; which measurement was in some way obtained by the Herald, and published as authentic. Last week the doors of the shop were opened to admit a boiler for a steam yacht, allowing a Herald man an opportunity to spy under a piece of canvas hung over the bows, and to see, "by marks by which the beam dimensions could be got at," that the boat would be exactly 23ft. 3in. wide. This sounds very much as though the Herald has been allowed once more to fool itself; a very easy matter for people even less shrewd than the Herreshoffs.

YACHT NEWS NOTES.

Willoda, cat, has been sold by W. G. Newman to Mr. Pelham, of New Rochelle.

A regular meeting of the Seawanhaka Cor. Y. C. was held on April 2, with Vice-Com. Rouse in the chair, Com. Benedict being absent on a cruise. On motion of Mr. Wetmore, of the Racing Committee, the special committee on uniform racing rules, appointed at the previous meeting, was requested to report as soon as possible on the desirability of an immediate adoption of a classification by racing length.

A letter was read from the Gas Engine & Power Co., calling attention to the proposed bill calling for licensed officers on naphtha launches, and the following resolution was adopted:

Resolved, That any law requiring the employment of licensed engineers for the management of naphtha or electric launches would be injudicious, unnecessary and oppressive. And be it resolved that a committee of three be appointed by the chair with power to make such representations and take such action in the name of and in behalf of this club as may to them seem advisable and proper to prevent the passage of any act for that purpose.

Messrs. J. Langdon Wood, J. F. Tams and L. F. d'Oremieulx were appointed on the committee. Messrs. Sherman and Wetmore reported that cable messages had been received from Mr. J. A. Brand, stating that he would challenge for the new cup in the name of the Minima Y. C. with a new half-rater, Spruce IV.

Unquowa, steam yacht, has been sold by the estate of the late O. B. Jennings to J. H. Hall, of Hartford, Conn.

The schooner Adrienne, W. A. Gordon, and the sloop Nepenthe, C. P. Richardson, of the Southern Y. C., New Orleans, are now in home waters after a winter cruise to Nassau and Cuba, respectively.

At the regular meeting of the Owasco Y. C. the following officers were elected:

Com., Charles E. Thorne; Vice-Com., Douglas Beardsley; Fleet Capt., Willard E. Case; Meas., Shirley F. Stupp; Sec. and Treas., Clarence U. Chedell.

The appointment of the Regatta Committee was deferred until the return of the commodore, who has the appointing power.

The annual regatta will be sailed on July 4, 1895.

The club is anticipating a very active season with good racing. Its fleet now includes the fin-keels El Chico, Nemadjy and Asp.

At the annual meeting of the Yapewi Aquatic Club, of Bordentown, N. J., the following officers were elected: Pres., Rev. Elvin S. Taylor; Vice-Pres., Robert S. Murphy; Sec., J. B. Reynolds; Purser, Charles E. Burr; Capt., Philip F. H. Brakeley; Mate, Louis W. Wiese; Directors, Fred G. Wiese, Fred W. Taylor, H. H. Brakeley, E. Haas, Jr. and S. W. Beldon. The latch string is always out to visiting yachtsmen and canoeists.

Early next month Harper & Bro. will publish a new hand-book of navigation, by Mr. W. J. Henderson, the well-known writer on yachting and other topics. The book is designed expressly for beginners, and covers the whole subject up to "Sumner's method," in a plain, concise and practical manner; explaining each step in detail. It will be entitled "The Elements of Navigation," and will contain about one hundred and fifty pages, pocket size. Mr. Henderson, who was formerly yachting editor of the New York Times, has devoted much time to the study of navigation, and the result of his labors is likely to prove most valuable to those requiring an elementary but complete hand-book.

A Distinguished Visitor.

There arrived in New York last week, on the Berlin, the one-rater Shrimp, designed and built last season by Sibbick, of Cowes, for Capt. Orr Ewing. Shrimp was not launched until the latter part of August, but in the remaining races of the season she started 15 times, taking 12 firsts and 3 other prizes. Her new owner is Mr. Chas. M. Pratt, of Brooklyn, a member of the Seawanhaka Cor. Y. C., who will race her this season. She is a sister boat to the one-rater, Wave, owned by Mr. Barber, and is about 18ft. 6in. l.w.l., with 320sq. ft. sail area.

An Imitation "Fake."

Those who are familiar with the wonderful and impossible stories set afloat by the Boston Herald, and the extravagant and boastful style which characterizes all of them, will appreciate the following clever skit in which the Boston Globe ridicules the Herald's recent achievements in publishing false dimensions of the cup defender:

The balloon and other light sails of the new Herreshoff cup defender will be of rubber.

This is the latest development of Herreshoff genius in its search for things to beat the wily Englishman or the canny Scot.

Even more extraordinary precautions have been taken to guard the secret at the Bristol rubber works, where the cup defender's sails are being made, than were taken at the company's shops to guard the secret of the design and construction of the boat, yet the Globe is able to penetrate that secret and give its readers the facts about the sails and the real reasons for having a loft outside the shops.

There was a burglar alarm, but the Globe did not tread on the wire, eh, Mr. Herreshoff?

There were watchmen, but they were not "foxy" enough for the Globe man. Mr. Designer, how about that?

The statement by a contemporary that the hiring of the loft at the rubber works did not mean that the sails were to be made of rubber, was evidently a "blind" thrown out by the Herreshoffs, for while it is true that rubber would not be suitable for the sails used in going to windward, because it would stretch too much, yet it is also true that this very quality of stretching would make it most valuable for the sails used in reaching or in running before the wind.

A great idea, and only a few inches out from your view, eh, Mr. Superintendent?

But possibly those few inches may be accounted for by the stretching of the rubber.

All yachtsmen know the value of a big spread of sail in going before the wind, and every one who has seen a race has felt the effect and appreciated the usefulness as well as the beauty of the swelling spinaker reaching from topmast head to tapering end of spinnaker boom, and apparently doubling at once the boat's propelling power.

So, too, has admiration been fixed on the bulging expanse of the balloon jib-topsail on the opposite side, catching the wind which escapes from the spinnaker, and utilizing the last ounce of its force.

How much more, then, would the usefulness and beauty of these splendid sails be enhanced if they could be made of some elastic material, which should allow them to increase in area, and, consequently, in propulsive power, in proportion to the force of the wind.

Rules for sail area measurement could be laughed to scorn. Competitors with old-fashioned sails could be left far behind. A good thing. Push it along!

But what material?

Let us think.

Ah! Rubber! The very thing! Make the sails of gossamer weight, strong, yet light, and very elastic, rope them stoutly along foot, luff and leach, and there would be wings which would stretch to double their ordinary pulling power; which would defy wind or water to destroy; which would ensure successful cup defense unless, indeed, Lord Dunraven should stipulate that all the races be wholly to windward instead of simply starting that way.

Cried the designer, eureka!

Pretty close to your idea, eh, gentlemen of the company? Not more than plus inches out of the way?

But, however! These newspaper fellows must not know.

Let us think again.

Ah! again an idea! Hire a loft in the rubber works. Let it be understood that it was hired because there was no room to make the big sails in our own shops. Make our rubber sails here in secret, and let the newspaper fellows fool themselves with the idea that duck was really the material.

Again, eureka!

A pretty trap into which the esteemed contemporary appears to have fallen in its mention of the foolishness of the report of rubber sails.

But the Globe is too smart to be caught in that way, and now gives its readers, as it promised, the facts in the matter.

And in its turn it can confidently cry, eureka!

If the Herreshoffs have not had these ideas, and are not now making the spinnaker, balloon jib-topsail and an extra club topsail of rubber, then the Globe will patent them as its own.

The top of the morning to you, Mr. Herreshoff, and may your shadow on those rubber sails never grow less.

One enterprising New York paper was misled into printing the above "news" as true.

Isolde.

The German fin-keel, 20-rater, building at the Herreshoff shops for Prince Leopold of Hohenzollern, has been named Isolde. An attempt to launch her was made on March 30, but she stuck on the ways, and the aid of a tug only served to haul her clear of the big doors. She was finally launched next day, and will be tried this week. Her skipper, Capt. Ben Parker, with Tom Diaper, Jr., son of Vigilant's pilot, as mate. Capt. Parker is one of the best skippers of small craft in English waters, having sailed Mr. Hills 20-rater the three Dragons with great success. The yacht will be shipped at once to Kiel, but in August she will visit Cowes, where she will meet the new Gould 20 Niagara, sailed by Capt. John Barr, as well as the British 20-raters, Isolde's dimensions, as given, are: Over all, 65ft.; l.w.l., 46ft.; beam, 12ft.; draft, 11ft.

Vigilant and Colonia.

The Vigilant will sail very soon from Southampton for New York, with Capt. Chas. Barr in command. She will be yawl-rigged, as on the eastward passage, but the centerboard slot has been temporarily blocked. The new centerboard is now ready at Bristol, and will be shipped in the trunk on her arrival at New York. The yacht is now the sole property of Com. George Gould, who has purchased the half-interest of his brother. Mr. E. A. Willard will be in charge of her through the season, and she will be raced steadily.

Capt. Hank Haff has secured twenty-five Americans from the fishermen of Deer Island, Maine, as the nucleus of the crew for the new cup defender, and next week he will take charge of Colonia, fitting her out and sailing her in the early races until the new boat is ready, when the crew will be transferred to her. Capt. James Berry, of Katrina and Wasp, will be first mate on Colonia and the new boat.

A Summer Afloat.

PART IV.

(Concluded from Page 277.)

After dinner we went ashore, leaving our dinghy hauled up on the float at the pier. We took a long walk, turning eastward down the road that runs out to Chauncey's Creek. There are any number of beautiful views of the harbor from this road, and we were impressed with the beauty of the country as well.

It seemed to us, that in time Kittery was destined to be a very popular summer resort. We retraced our footsteps to the post-office, then went on to Fort McClary, and spent an hour or more in this picturesque old place.

The government started to build a magnificent stone fort here, and the work so far as it has gone is very massive. Huge guns lie around on the green grass, and here and there are great piles of solid shot and shell. Some of the temporary buildings put up for the shelter of the men while at work on the fortifications are rapidly falling into ruins.

The octagonal building, which is so prominent a land mark when coming up the bay, was built as a citadel, to which the workmen and garrison could flee if attacked by a land force before the fort proper was completed.

The position of the fort is a commanding one, and it is well worth the climb up to it to get the magnificent view of the harbor, obtainable from the ramparts.

Before going on board again we bought some supplies at the stores, but forgot to get bread. I discovered this oversight almost immediately after reaching the yacht, and went back alone for it, leaving F. on board.

I had rowed about half the distance from the yacht to the shore, when I heard the sailor on the Eda shout, and saw him gesticulating as though calling attention to something in the water beyond them. I turned and pulled quickly in that direction, and learned that a man had just fallen off from a small sail-boat and drowned. It seems he was a lobster man, and had just sold some lobsters up the creek, where he also procured some whisky and proceeded to imbibe it. He was lying on the rail of the little half-decked boat, drifting idly down the harbor with the ebbing tide.

There was scarcely a breath of air stirring, but the swell of a passing steamer gave the boat a sudden lurch and over he rolled, sinking apparently without a struggle.

A number of boats, from vessels in the harbor and from shore soon collected, and watched for any appearance of the body, but all gave it up after a little while, as the tide was running quite swiftly, and there was no chance at all that they could find it.

We had a quiet night, except that the steamers running from Kitterry to Portsmouth ran very close to us and the sharp swells they made were very annoying. We made up our minds that we would anchor more to the eastward, or about half-way between Logy Ledge and Gooseberry Island, if we ever came here again.

We turned out at five o'clock next morning, and by 6.30 were dropping down the harbor on the ebb tide with a very light breeze from south-west, which died out almost entirely as we passed Whaleback Light and the bell buoy. After rounding the bell, we laid our course N. N. E. for York River, passing close to the spindle on Stones Rocks. The haze of the day before continued, and objects on shore were very indistinct.

The sea breeze seemed to be contending with one off from the land, and our sails would draw first on one side and then on the other. In half an hour after turning the bell buoy, where we had the wind aft, we were running close hauled on the same course. The westerly wind finally prevailed, but it was very light till we passed Scales Head, when it began to freshen and we tacked up the river to Rocks Nose, with our lee rail awash.

We dropped our anchor in the cove below Rocks Nose at eleven o'clock, having made but nine miles in four hours and a half.

After making everything snug on board and changing our clothes, we rowed up to the landing near the Marshall House, pulled the dinghy out on to the float, and walked up the river to the old village of York. The sun was very hot, but we enjoyed, nevertheless, the mile tramp along the smooth country road to Coventry Hall, where we had a good home dinner, a very welcome change from our own cooking.

In the afternoon we lounged under the apple trees smoking and chatting, till the lengthening shadows warned us it was time to return to the yacht.

We promised our friends before departing that if the morrow should be fair, we would take them all out for a sail, and would meet them at the landing with the dinghy at 9 A. M.

We walked leisurely back to the river, enjoying every step of

the way, where we found the Cy-Pres swinging peacefully at her anchor in the snug little cove.

As we stretched ourselves out on the cushions we were filled with a sense of complete satisfaction in her cosy and home-like cabin, and regretted that we had reached the end of our trip, and must turn our bows homeward on the morrow.

At nine o'clock next morning the skipper was at the landing with the dinghy, and had stowed away in her, bread, eggs and water enough for two days' supply. In a very few minutes our party arrived, and it taxed the capacity of our little boat to the utmost, as there were five grown people besides the skipper, to be accommodated in an eleven-foot six-inch dinghy. She proved equal to the task, and we dropped down to the yacht easily and rapidly on the strong ebb tide.

AILSA—WINNING AT CANNES, MARCH 7.
From a Photo by West & Sons.

We had already set the mainsail, and put the jibs up in stops, so it took but a moment to get the anchor up, break out the jib, and get off.

As we passed out of the mouth of the river we found a good breeze blowing from the south, and decided to take the party around the light-house on Boon Island, seven miles due east of us, as we would have a reaching wind both out and back.

The thick haze or smoke, that had hung over the water so persistently for several days, shut out the land when we were only two or three miles out, and the girls enjoyed the novelty of sailing in a brisk breeze out of sight of land. It was not long, however, till the tall mysterious shaft of the light-house appeared as a specter in the distance, growing more substantial in form and substance as we approached it. We passed to the north of the island, which is low and rocky, without a spear of grass or green thing on it. It made us shudder to think how dreary the place must be in the cold winter storms, that sweep with such terrific force along this coast.

Quite a fleet of schooners were jogging off and on round the island, and it was hard to believe that they were engaged in their daily toil of catching fish for the market. We could scarcely realize that they were not sailing for fun, just as we were; they were so picturesquely grouped around the great gray tower of the light-house.

The breeze freshened perceptibly all the way out, and on the return stretch we had our lee scuppers under, and some sea began to get up. The yacht was quite lively on the reach back to York; in fact, a little too much so for one of our friends, who paid the penalty demanded by old Neptune, of landsmen or women, who venture out of sight of land in a stiff breeze and jumping sea.

We bowled along at a great pace, and reached our old berth in the mouth of York River by noon.

I landed our party of friends, and returned to the yacht with as little delay as possible, as the wind was freshening and we wished to take advantage of it and make Portsmouth that afternoon.

The breeze was stiff, and almost dead ahead, so that we had a lively thrash to windward, taking long legs in shore and short ones off shore.

There were two fishing schooners beating up from Boon Island, just ahead of us, one about thirty feet long, tacked across our bows about a quarter of a mile ahead of us, she was going in shore and we were standing off. On the next tack we crossed her bows nearly as far to windward of her as she had been of us.

We tacked in the wake of the other schooner, and stood after her on the in-shore leg. We were surprised to find that we could hold nearly a point higher than the schooner, and succeed in screwing the little Cy-Pres out on her weather, so that we held on a straight course for the whistler off Portsmouth Harbor, while she was obliged to take another tack off shore, and went astern of us in doing so.

We would not have thought so much of this performance had the water been smooth and the breeze light, for in such conditions the Cy-Pres is at her best; but to beat two such schooners in a thrash to windward, with all the wind and sea we could stagger through, was indeed a great surprise and pleasure.

As we turned up the harbor we ran through a fleet of yachts coming out, all headed for the bell buoy. They made a very beautiful and lively picture, as they came rushing down upon us, heeled away over under the fresh breeze.

Remembering the annoyance caused by the ferry steamers on our previous visit here, we anchored farther from the steamboat pier, off Kittery, and escaped the nuisance.

After tea, the wind rose and blew hard from the west, coming down on us in sudden, heavy squalls, the whole bay was lashed into a smother of foam, and the sharp, white crested waves flew hissing past us.

We paid out a long scope of chain, hung out our anchor light, and slept the sound sleep that only tired sailors, in a snug harbor, know how to indulge in.

Right ahead of us lay a lovely little "knock about," one of the prettiest of that modern class of boats that we had seen.

The owner went ashore early in the afternoon, and left her there, right in the way of boats coming to anchor, and never hung out a light of any kind till after we were sound asleep.

We could not see how a man that loved his boat could be so careless of her safety.

When we came on deck in the morning we were surprised to find that a thick fog had settled down over us, and we could not see anything of our surroundings.

About seven o'clock a light air sprang up from the north-west, and soon cleared away the mist, by eight o'clock the breeze grew stronger and was more northerly, and as the barometer was steady at 29.90 deg., we decided to weigh anchor and take our departure for Rockport.

The thick smoky appearance of the atmosphere continued, and we soon ran out of sight of land; which we did not see again till we were within a mile or two of Halibut Point on Cape Ann.

We steered south, one-half west from Whaleback Light, and were gratified to find that this course was exactly right, bringing us just a little to the eastward of Halibut Point.

The wind hauled round gradually, more to the northward and then to the eastward, so that during the last few miles we were running nearly close hauled, with the breeze quite fresh.

A small steamer, about forty feet long, overtook us when we were about half-way across. She was a very handsome little vessel, and all hands seemed to be having a delightful time.

We dropped our anchor in the quiet little harbor of Rockport at one o'clock, having made the run across from Portsmouth in just five hours. Soon after reaching here the wind died completely out, and many of the fishermen were obliged to tow their vessels in, and some did not get in till late in the evening.

In rounding up to our anchorage, I allowed the anchor to drag along the bottom to snub her, so she should not shoot too far and foul some of the fishermen; and, fearing that the anchor would get so full of weeds and kelp that it would not hold, I raised it to clear it. In the meantime the yacht drifted astern very close to the end of the piers, where a big three-masted schooner was unloading coal, so we lay to a shorter chain than usual, or that we regarded, on the whole, as safe.

About midnight it began to blow hard from the north, and we were disturbed by the unusual motion. On going on deck we found quite a sea rolling into the little harbor, and the yacht more uneasy than we had ever seen her before in this usually very quiet harbor.

As we could not pay out any more chain, owing to our proximity to the big schooner that lay at the dock, we got out our big spare anchor and carried it well to windward, and rode by it the rest of the night. We turned in again after seeing that everything was snug, but we had become so thoroughly awakened by our work, that it took a long time to get to sleep again.

The wind howled through the rigging, and the halyards slatted a monotonous tattoo on the mast, varied now and then by a louder crack as the jib purchase block was forced against it by a stronger puff.

The wind was still blowing hard when we awakened the next morning, and the sea outside was very heavy. It did not come directly into the harbor, but rolled diagonally across its mouth, causing a peculiar side motion in the yacht, which was very uncomfortable.

Several of the staunch fishing schooners went out for their day's work, and the tossing they got as they passed out of the harbor was something to wonder at.

A big stone sloop, that was lying at one end of the piers, hoisted her top sail, a signal for a tug to come over from Pigeon Cove, and take her into the Granite Company's dock.

We have seen this signal made a number of times, and always with the same results, so feel quite confident that we are correct in assuming that this is what it is done for.

In a few minutes the tug hove in sight, and took the sloop in tow. When they got into the sea the pitching was fine.

The tug was a very large and powerful one, yet when she went down in the trough of the sea she disappeared completely, all except her smoke-stack, and it looked as though the sloop would jump the mast right out of her.

We concluded that we would not venture out till the weather moderated, although the breeze was only a wholesail one, for the large powerful fishing schooners that ply their calling up and down the coast.

The barometer rose three-tenths during the night, and the sky was perfectly clear during the entire blow. The wind began to moderate rapidly about noon, and by four o'clock there was a dead calm.

Several fishermen lay outside of the harbor all the afternoon with not enough wind to move them, while the heavy sea rolled them around, slatting their sails in a way that must have tried the patience of their crews to the utmost.

We spent part of the day on shore, and part of it reading.

Cleaned the yacht from rail to water-line, scrubbing her all over, outside and in, with soap and a stiff scrubbing-brush, brightening the white paint considerably.

The usual quiet of the afternoon was disturbed by a quarrel between the captain of a coal schooner and the pilot who brought her in.

The pilot worked himself up into a towering rage, stamped about the deck of the schooner, swinging his arms and yelling out such a volume of abuse at the captain and his whole line of relations, as it had never been our misfortune to hear before.

After exhausting his physical strength, as well as his vocabulary, he subsided, and the little harbor resumed its quiet, peaceful tone.

In all our experience along the coast, this was the first quarrel we had ever seen.

The fishermen, as a rule, are good natured and very accommodating, coming and going silently at all hours of the day or night.

When we poked our heads out of the cabin at five o'clock next morning, we were very much disappointed to find the whole universe blotted out by a dense fog.

The only sound that reached us was the dismal hooting of the fog-horn on Thatcher's Island, or occasionally the voice of some one moving about on the docks. The little air that was stirring came in from the east, and was cold and penetrating.

After breakfast we kept the stove lighted to warm and cheer the cabin, and busied ourselves writing and reading till eleven o'clock, when a slight shift of wind to the southward lifted the fog a little.

We were on deck at the first indication of a change, and as the fog continued to roll away from the land, we got up our sails and ran out of the harbor.

The water was perfectly still, and the Cy-Pres sneaked along at a lively pace, soon passing Straightsmouth Light, and badly beating a fishing schooner in working to windward.

We kept close in shore, making short tacks, to keep out of the fog-belt, and also to avoid the swift current that makes past Thatcher's Island when the ebb tide is rushing out of Massachusetts Bay.

We passed between Milk Island and the main land, and found plenty of water on the bar, the tide being only half-ebb.

The deepest place is about a cable length from the main land, where the chart gives seven feet at low tide, but we found two fathoms as we went over.

We kept the lead going constantly, and were just beginning to think that the bar had been washed away when the water shoaled rapidly. We were quite close to the shore, and could see the bathers from Turks Head Inn, and hear their voices as they sported in the water, or ran up and down the yellow beach.

After crossing the bar, we steered for Salt Island to explore the cove that lies to the westward of it. We kept the chart spread out on the seat of the cockpit, and referred to it constantly, as this was strange water for us.

As we neared the island, we saw a large trap-net in the water, the tall posts making quite a prominent object. We thought for a long time that it was run out from Salt Island, but as we approached it we spied the line of corks running from the main land out to it; so changed our course and ran outside of everything, but kept close to the trap, as we wished to ask the men who were working at it if there was plenty of water near Salt Island. Finding that there was, we ran in to the northward of the island, and dropped our anchor in a lovely little cove.

As soon as our anchor was down we got into the dinghy, and rowed along the shore of the island to where there were some men mending their lobster pots.

We found that the water grew rapidly shoal as we passed along the west side, and learned from the lobstermen that there was a bar running out from the main land, that at low tide was entirely bare, and already a lot of merry youngsters from the hotel at Bass Rocks, with their breeches tucked up high on their thighs, were wading out toward the island, shouting and splashing along through the rippling water.

We satisfied ourselves that it would not be safe to try to go round the island, unless at the top of the flood tide, and then pulled back to our yacht for dinner.

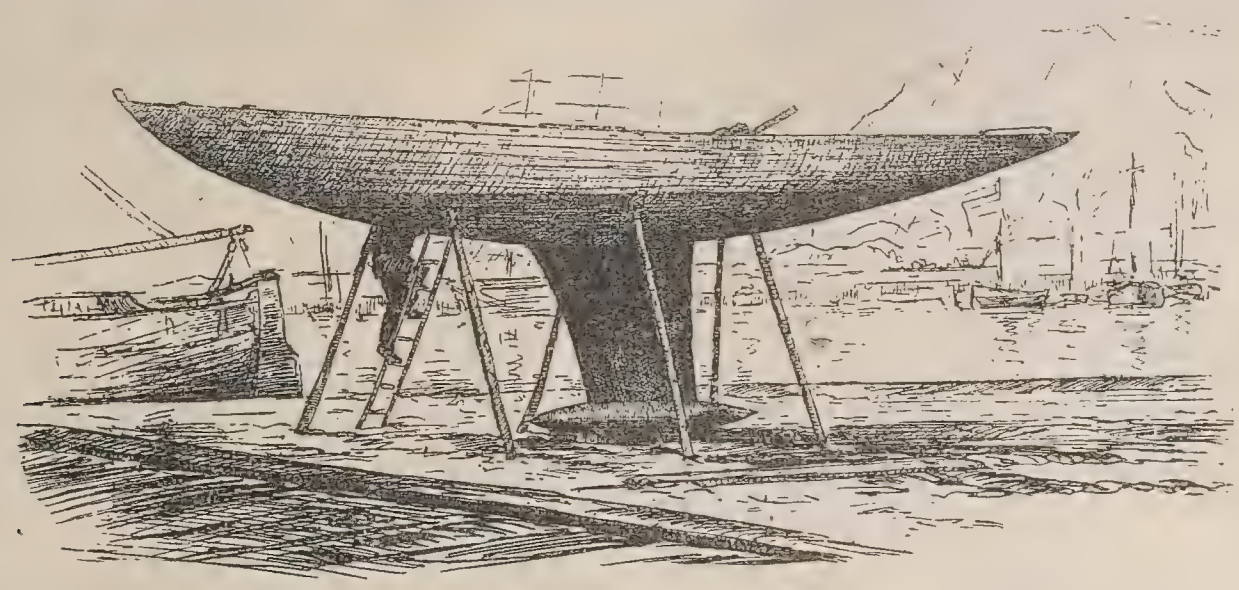
The water was so clear that we could not believe that it was deep enough to float us, until we dropped the lead over the side and found eight feet.

MANCHESTER.

Salt Island lies right in front of a little valley, whose sides rise high and rocky on either hand. In the distance are the spires of Gloucester, and some of the houses that are on high ground stand out sharply against the blue sky.

The view in that direction is peaceful and lovely, and we were very glad that we had added to our list one more snug little anchorage on this coast.

We weighed anchor about half-past one, but the breeze died out almost immediately, and before we realized it we found that the tide was setting us rapidly toward the nets.



I jumped into the dinghy and rowed hard as I could, but could not prevent the yacht from fouling them. By hard rowing, and

pulling on the guy ropes, we managed to get away without doing any damage; but finding a strong current setting us irresistibly toward the nets again, we dropped the anchor, and I climbed back on board completely tired out.

In five minutes a good strong breeze sprang up from the southeast and we got under way again, standing along the coast close hauled on port tack; we passed between Salt Island and Salt Ledge, a dangerous sunken reef, where the swells of the Atlantic were surging and boiling as they rolled over it.

A mile outside of us was a little yawl, about our size, bowling along with her lee rail awash. She had had a spanking breeze, while we lay perfectly idle; but after once getting started we overhauled her rapidly, and at Eastern Point we had crawled to windward of her.

She could not keep the pace we set her, and fell farther and farther astern every mile. The breeze freshened gradually, till we had a good stiff wholesale breeze and flew along, occasionally dipping into a comber and sending the spray flying over our heads as though a calm was a thing that had never existed. We ran into Magnolia, and picked up our mooring, lying there the rest of the season.

GARETH.

Modern Bulb Fins.

The accompanying illustrations, for which we are indebted to Le Yacht, show two of the latest English bulb fin "creations," Gareth, the very successful 2 1-2 rater designed and built by C. E. Nicholson in 1892, but still one of the fastest of the class, and Contest, a newer boat. The peculiar forms of fin, quite different from the first Herreshoff boats, is very clearly shown. The boats were photographed on the quay at Marseilles, after being lifted from the steamers on which they had come out from England.

First Race of the Season.

The Huguenot Y. C. will open the yacht racing season on Long Island Sound on Saturday, April 20. E. Burton Hart, Chairman of the Regatta Committee, has issued a circular which gives the following information: The cruisers race slated for April 20 will be sailed over the square course. Boats will start from an imaginary line off the easterly end of Huckleberry Island, and will then go to Gangway Buoy, old Hen Buoy and the S. W. Red Buoy off Hen and Chicken and then home.

Five minutes before the gun a red flag will be hoisted for Class A. Cabin cats.—A blue flag will be hoisted for open cats.

Five minutes after these preparatory signals have been hoisted a gun will be fired and boats will then be timed as having started.

The one gun start and four-sided course is something entirely new on Long Island Sound, and the baby organizations of those waters deserves great credit for doing something original. The experiments will be watched with interest by yachtmen all over the country.

Southern Y. C.

New Orleans, April 5.—The Southern Y. C. held its annual meeting and election of officers on April 4. There was but one ticket in the field, that headed by the former rear-commodore of the club, Judge Lawrence O'Donnell. O'Donnell and his well-selected ticket was elected by acclamation, in direct contrast to the animated campaign of last season. The officers for '95-'96 are:

Com., Lawrence O'Donnell; Vice-Com., Alexander Brewster; Rear-Com., S. F. Heaslip; Sec., L. D. Sampsell; Treas., James Buckley.

Governing Committee.—C. L. De Fuentes, J. W. Stone, Albert Baldwin, Jr., A. M. Aucoin, and Thomas Sully.

House Committee.—Peter Labouisse, Robt. Lynd, W. W. Crane, J. D. Farrell, and A. M. Cooke.

Fleet Surgeon.—J. B. Elliott, M.D.

Measurer.—A. Fourchy.

The flagships of the season will be Com. O'Donnell's sloop Florence; Vice-Com. Brewster's sloop Mephisto, and Rear-Com. S. F. Heaslip's schooner Viola. C. P. Richardson sloop Nepenthe will be fleet-captain. The newly-elected commodore, one of the most illustrious members of the Southern bar, is one of the most popular members, and, withal, one of the most thorough-going yachtsman in the South. He designed and built the very fast sloop Lady Sarah, now Nyanza, still champion of the 22ft. class. He next designed the present flagship, the 35ft. water-line sloop Florence, the fastest boat of her class, and at the same time a noted cruiser. Florence, though only built two seasons ago, will be remodeled and given a modern spoon bow with an addition of five feet to the water-line length.

The Regatta Committee in their annual report recommended a change from the old system of water-line measurement to a racing length classification. The South is fully alive to the importance of an international year, and, if possible, there will be more sport and enthusiasm here than ever before. A large delegation from the Southern Y. C. will attend the cup races this year, as heretofore. The latest addition to the Southern fleet is the 75ft. steam yacht Oneida, owned by Col. Eugene May, of New Orleans. She was built in Chicago.

The entire fleet is now in commission, except several small sloops to be launched this week. S.

A Challenge Cup on the Pacific Coast.

A San Francisco yachtsman, Mr. Will Brooks, whose name will be familiar to some of the older readers of the Forest and Stream, has lately made a suggestion which has been taken up eagerly by the Corinthian Y. C., of San Francisco, for a challenge cup for inter-club competition on the Pacific Coast, north and south of San Francisco. The scheme was discussed at the annual banquet of the club, on March 3, and under the leadership of Com. Pew a large part of the necessary funds was subscribed in a short time. The design for the cup was made by Mr. Brooks, an urn-shaped loving cup, supported on a capstan as a base, against which rests an anchor, the chain around the barrel of the capstan. The three handles represent the prows of ancient galleys, the spaces between them being filled with a wheel, bearing the arms of San Francisco, a medallion for the inscription, and a second medallion with a yachting scene. The cover has as a handle a golden phoenix, the cup and cover being of solid silver.

The general conditions under which the cup will be established are as follows:

1. The cup shall never, under any circumstances, become the property of any yacht or club; but shall be held as a perpetual challenge cup, to be raced for not more than once in a year.

2. Any yacht belonging at the date of the challenge to an established yacht club, one having officers, constitution, sailing regulations, a flag and more than three yachts on its roll, located on the Pacific Coast or elsewhere, may, upon authorization by her club, challenge for the cup, upon giving her name, owner, club, and sailing length; this last to be calculated according to the Seawanhaka rule, or any rule which may come into general use in its stead, by a majority of the leading yacht clubs of the United States; such yacht to be met by a yacht belonging at the date of challenge to the club holding the cup; which yacht shall not exceed the challenger in sailing length by more than five per cent.; provided that the challenger shall not exceed the largest boat in the fleet of the challenged club by more than five per cent.

3. Time allowance shall be given for any difference in size according to the rule generally in vogue in the United States at the time of the race.

4. The sailing rules of the challenged club to govern, and the race to be sailed over the customary course of that club, unless another course be selected by the committee having the race in charge; this committee to consist of two members of the regatta committees of each of the contesting clubs; provided, that in case of a club having its station so far from the location of the races as to make it inconvenient for its regatta committee to attend, the challenging club may select two other gentlemen to act for it, who shall, whenever possible, be regularly enrolled club members. This committee shall select a referee, not a member of either club, whose decision upon all questions shall be final.

5. Races shall take place not less than 30 nor more than 60 days from the date of the challenge; provided, that in the event of a challenger hailing from a port foreign to that of the club holding the cup, the committee may, at its discretion, extend the time not to exceed sixty days. Provided also that the committee may, at its discretion, postpone the race for not more than two weeks from the date fixed for it to take place.

6. No challenge shall be considered a valid one, which fixes a date which will call for a race to take place during the months that the yachts of the challenged club are not usually in commission.

7. The challenger, if successful, shall give the former custodian a receipt for the cup, in which it shall bind itself to hold it under these rules. Any club holding the cup going out of existence, or failing to nominate and provide a yacht during its yachting season to meet the challenger, shall at once forfeit and relinquish its right to hold the cup, and shall return it to the last previous holder; and the notice of the acceptance of a challenge shall be sent to the challenging club within ten days of its receipt.

8. The competing clubs shall jointly bear all necessary expenses incurred by the race committee.

Atlantic Y. C.

A special meeting of the Atlantic Y. C. was held at the Waldorf on March 31, at which some important business was transacted. The proposed classification by racing length in place of water-line was adopted, as follows, accompanied by a limit of crew:

Schooners.—Class 1—All over 95ft., racing length; Class 2—Not over 95ft. and over 85ft., racing length; Class 3—Not over 85ft. and over 75ft., racing length; Class 4—Not over 75ft. and over 65 ft., racing length; Class 5—Not over 65ft., racing length.

Sloops, Cutters and Yawls.—Class 1—All over 80ft., racing length; Class 2—Not over 80ft. and over 70ft., racing length; Class 3—Not over 70ft. and over 60ft., racing length; Class 4—Not over 60ft. and over 51ft., racing length; Class 5—Not over 51ft. and over 43ft., racing length; Class 6—Not over 43ft. and over 36ft., racing length; Class 7—Not over 36ft. and over 30ft., racing length; Class 8—Not over 30ft. and over 25ft., racing length; Class 9—Not over 25ft., racing length; Class 10—All open sloops.

Cat-Rigged Yachts.—Class 1—Cabin yachts over 25ft., racing length; Class 2—Cabin yachts under 25ft., racing length; Class 3—All open cat-rigged yachts.

Crews to be limited, as follows: Schooners.—Class 1, one man to every two feet; Classes 2 and 3, one man to every three feet; Classes 4 and 5, one man to every four feet. Single-Masted Vessels.—Class 1, three men for every five feet; Class 2, one man for every three feet; Classes 3, 4 and 5, one man for every four feet; Class 6, one man for every five feet. Cat-rigged yachts, one man for every five feet, racing length, not including the helmsman.

Some changes were also made in the club courses on the Bay and outside the Hook. The date originally set for the club cruise, in August, was changed, with the whole scheme of the cruise, arrangements being made for a joint cruise in company with the Larchmont Y. C., the rendezvous being at Larchmont on July 12. In the absence of Com. Gould, Vice-Com. F. T. Adams will be in command of the Atlantic Y. C. fleet, while Com. Gillig will be in command of the Larchmont boats. The runs, for prizes, will be made alternately under the Atlantic and Larchmont flags. Com. Gould appointed as a special committee to confer with the Larchmont Y. C. over details; Vice-Com. Adams and Mr. J. L. Bliss, of the Regatta Committee. The details of the cruise will be settled later, the final arrangements being made at a meeting of captains on the night of July 12.

Resolutions of condolence over the death of Eugene Maxwell were adopted. Mr. Latham A. Fish was elected an honorary member, being one of the oldest active members. An amendment to Art. XIX. of the constitution was passed, by which active members of over 15 years' standing may become life members upon payment of $100; and members of shorter standing upon the payment of $250. A painting of Vigilant defeating Valkyrie in the final race of 1893 was presented to the club by Col. A. P. Ketchum on behalf of some of the members; the artist is Mr. Carleton T. Chapman. The plans for the races for the cups presented by Com. Gould will be changed, in consequence of the alteration of the cruising programme. The club membership is rapidly increasing, and the present season promises to be a most prosperous one in all ways.

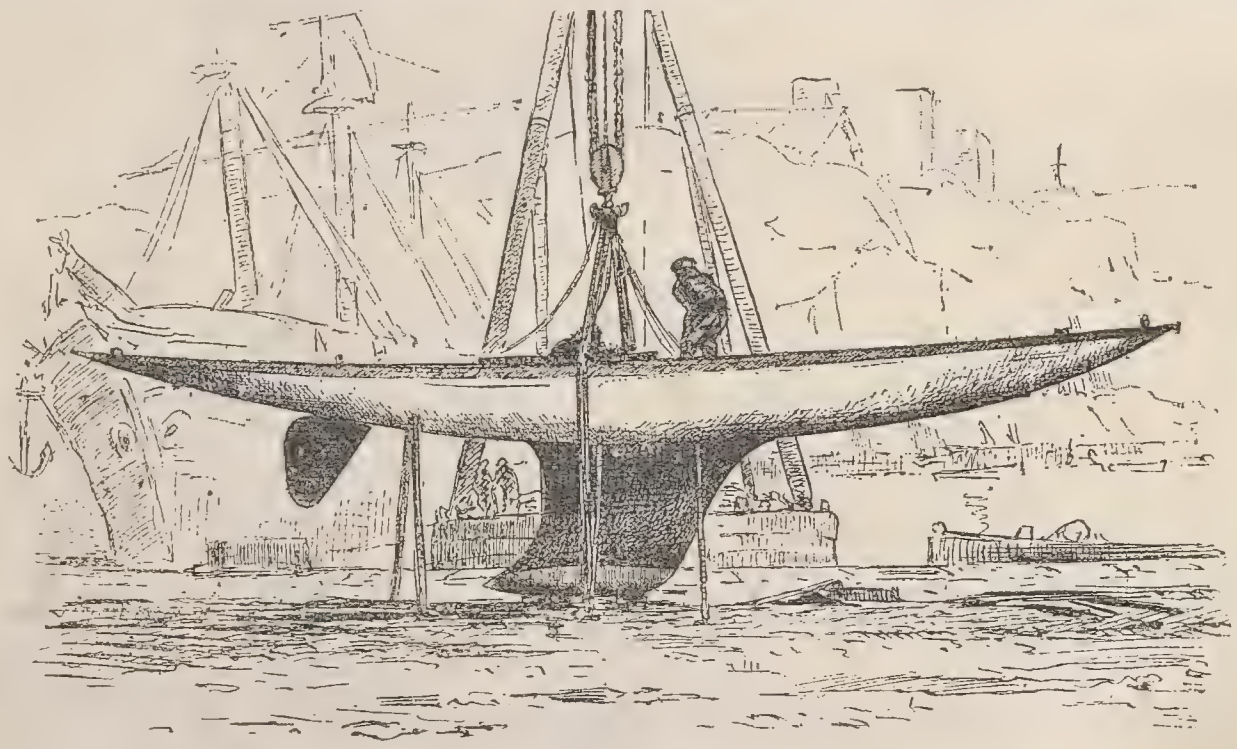
Half-Rating Racers.

The promised visit of an English half-rater this summer has awakened a most unusual degree of interest among American yachtsmen, who, as a rule, have given very little attention to craft smaller than an 18-ft. cat-boat, while in the larger clubs even a 30-footer has been until of late years considered a pretty small craft. In view of the great expense of yachts of 40 to 50ft., and the falling off of building and racing in the once popular classes, it is a matter for rejoicing that the smaller classes are at last receiving some attention, as they are now the only ones within reach of the great majority of racing men; who must build at least every second year, if they would still continue to win prizes.

The half-rater is a very small boat, just a size removed from a canoe, and the man who wishes to yacht at ease, who is too inert to move quickly, or who fears a wetting, has no place in one; at the same time, when the racing is as keen in the class as it has been for some years about the Solent, it offers plenty of good sport at a less outlay than any other class.

We have printed the Y. R. A., or "Rating" rule, so many times within the past eight years that our readers might be expected to know just what "rating" is; but the many inquiries which we have lately received makes another explanation necessary. The rule was proposed by Mr. Dixon Kemp, and adopted by the Yacht Racing Association in 1887, among the first yachts built under it being the cup challenger Thistle. The formula is: $\frac{L. \times S. A.}{6{,}000} =$ rating. The length on water-line is multiplied by the sail area, the product being divided by the constant 6,000, thus, in the 40 rating class, to which Queen Mab belonged, a length of 60ft. and a sail area of 4,000sq. ft., multiplied together and divided by 6,000 would give 40. In the half-rating or (.5) class, a water-line of 18ft. and a sail area of 166.6sq. ft. would give .5 rating, or a water-line of 15ft. with a sail area of 200, would make the same measurement. The proportions of length and sail area may be varied at will in any class by owner or designer; but in practice they are fixed within comparatively narrow limits, outside of which success is not possible, the yacht being too short for the class or underrigged for anything by extreme weather. The official measurements of some of last season's boats are as follows:

	L.W.L. Ft.	S.A. Sq.ft.		L.W.L. Ft.	S.A. Sq.ft.
M.	16.23	181.50	Sagamore	16.88	178.80
Otomie	14.65	201.70	Lady Bird	17.22	173.70
Spruce III	15.52	194 00	Ragamuffin III	15.76	186.50
Pique	17.50	168.50	Coquette	16.28	182.60
Wee Winn	17.04	177.20			



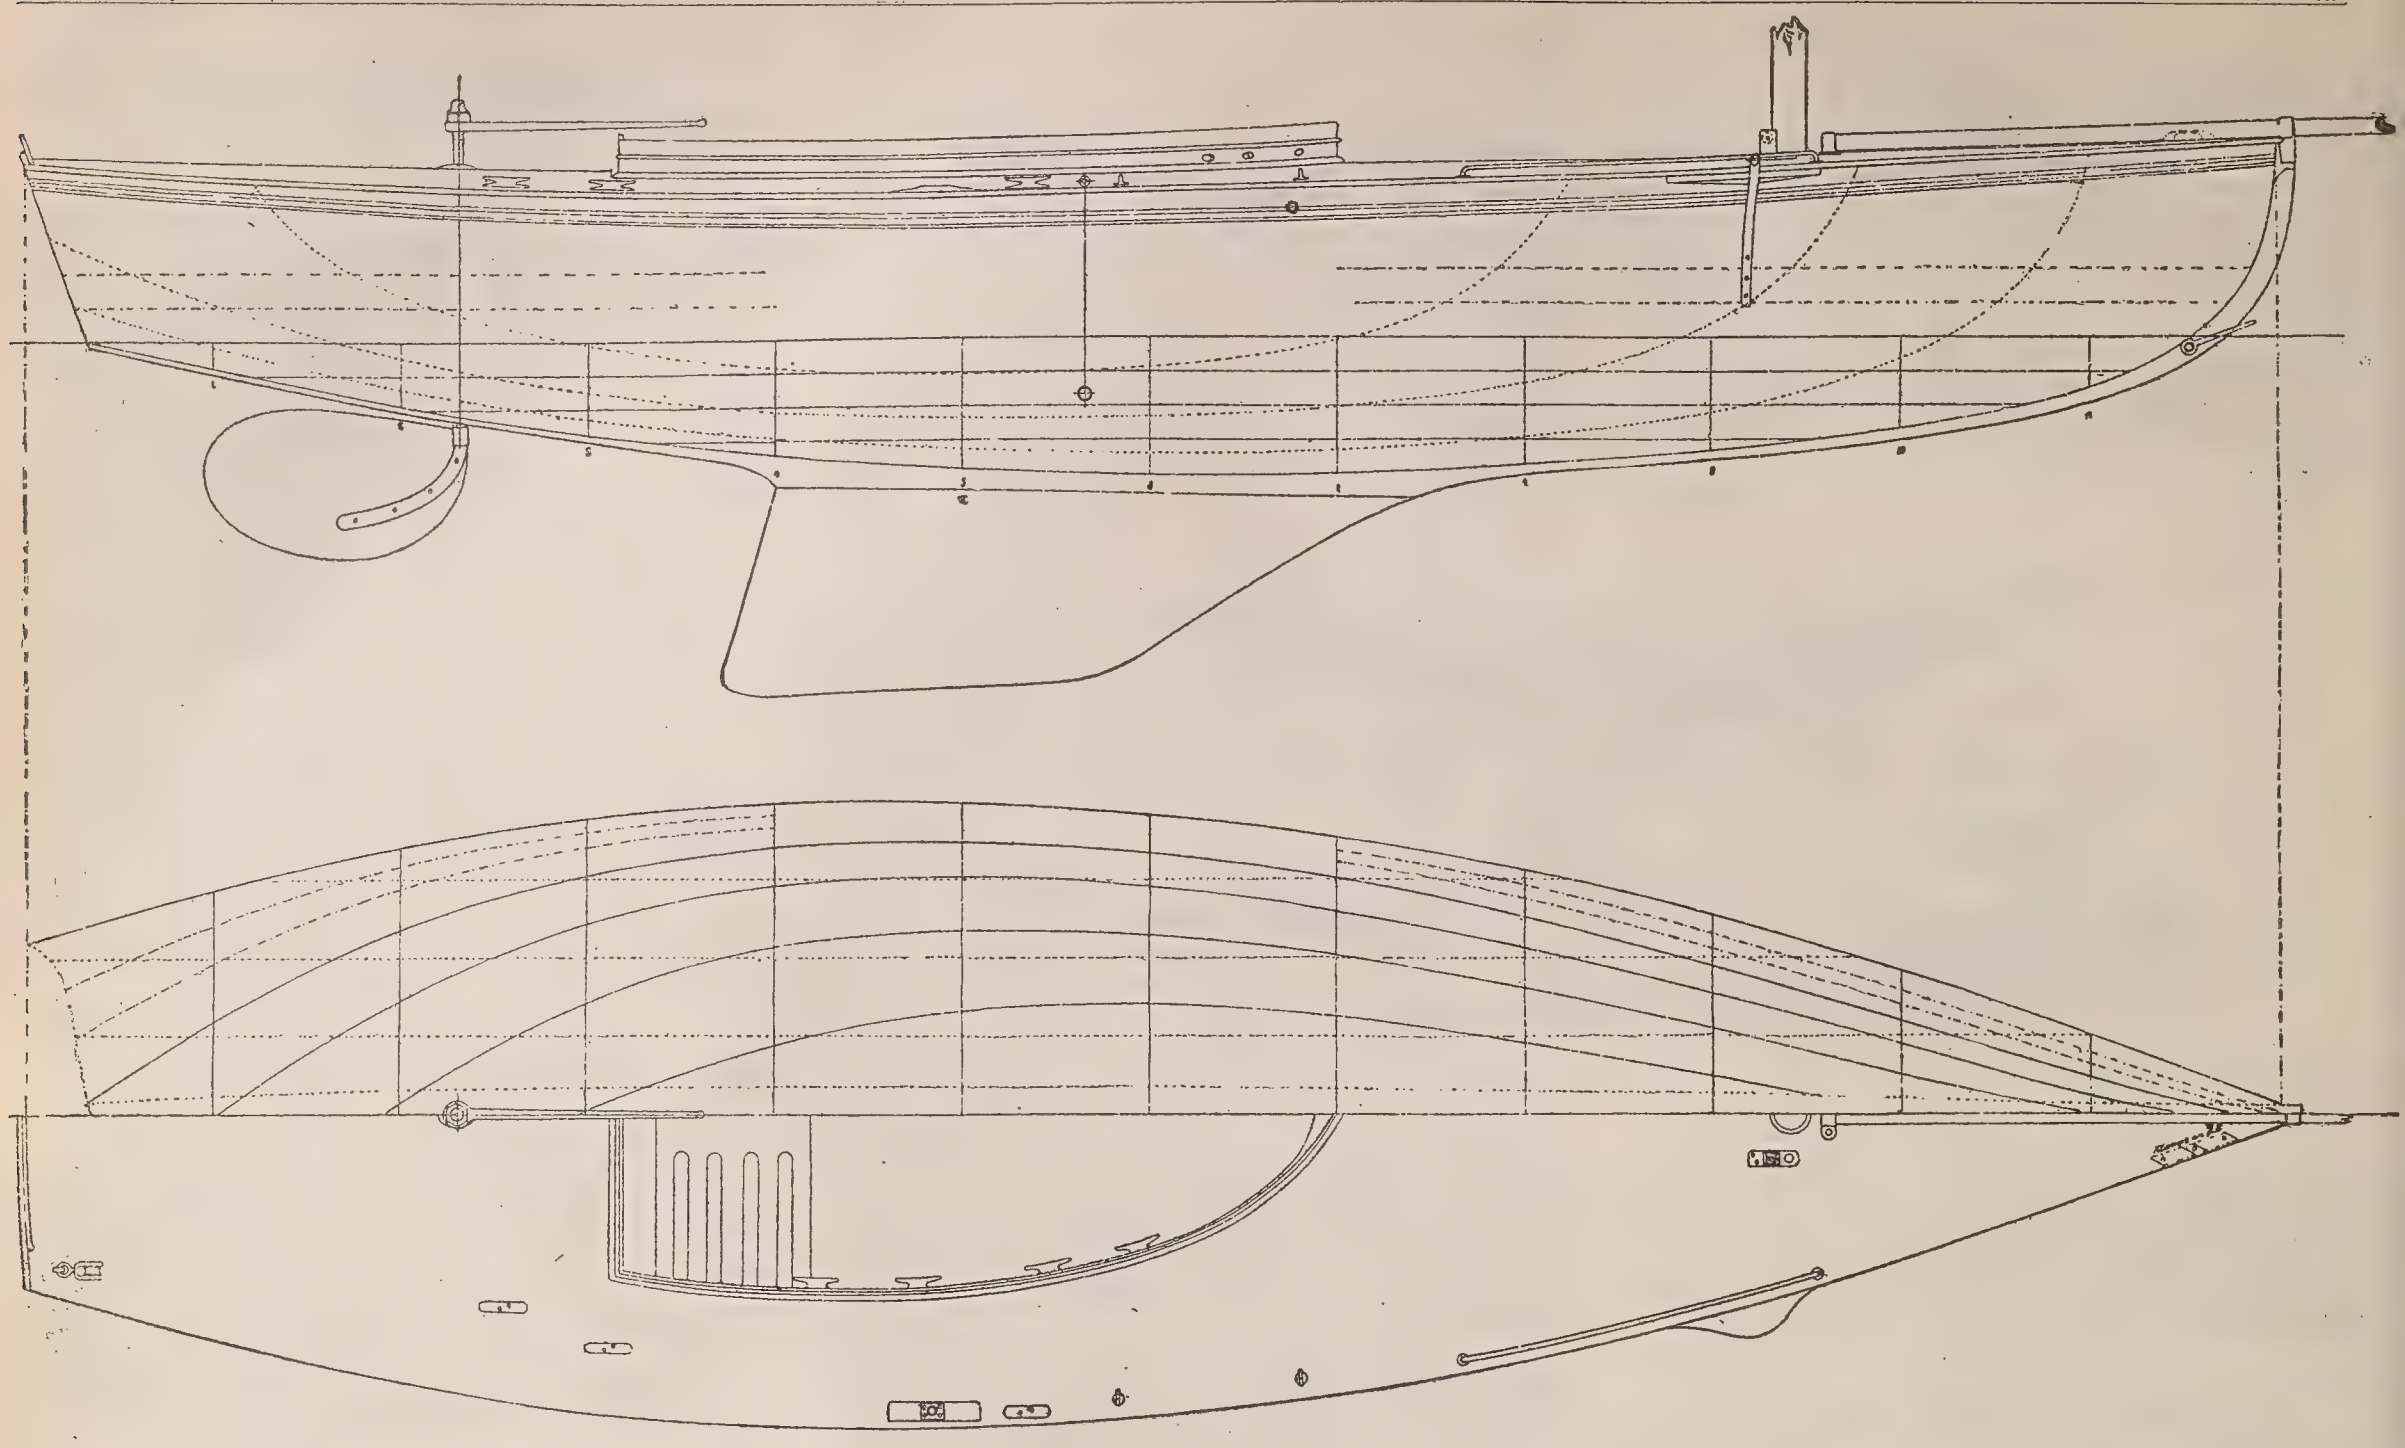
All of these boats, with very few exceptions, are lug rigged, as shown in the accompanying sail plan of Niny, and in that of the Petit Poucet, published in the Forest and Stream of March 9. Under the Y. R. A. rule, the measurements of sail are taken from a certified sail plan, the headsails being measured as one triangle whose base is the distance from the fore side of the mast to the point where the line of luff of the foremost headsail cuts the bowsprit or hull; and whose perpendicular is the distance from the deck at the mast to the point on the mast or topmast, where it is cut by the line of luff of the foremost headsail. If no headsail is carried, as in a cat-boat, the spinaker can only be carried if measured as a headsail, its base being the spinaker boom. The sails other than headsails are each measured separately by triangulation, any excessive round, as in the head of some lug sails or on the leech of a battened sail, being separately measured. Topsails are measured, if carried, contrary to American practice.

The accompanying drawings have already appeared in the Forest and Stream, some three years since, being then reproduced from "Wassersport," but they are of immediate interest just now as illustrating one of the most successful types of half-raters, which immediately preceded the present Solent boats; the first fin-keel, as distinguished from the more extreme plate and lead bulb.

The half-rating class originated in 1891, with the Bembridge Sailing Club, in the Isle of Wight, which, in pursuance of its policy of encouraging small boat racing, went to work deliberately to build a fleet of small yachts of but .5 rating. Most of these boats were designed by Mr. Arthur E. Payne, and built by his firm, Kittiwake, being about the best of the year. In 1892 she was sold to Prince Henry of Prussia, for whom, in the same year, Mr. Payne built Niny, a very similar boat, whose dimensions are: Length over all, 18ft. 7in.; length of l.w.l., 17ft. 6in.; beam extreme, 5ft. 1in.; beam l.w.wl., 4ft. 6in.; draft, 3ft.

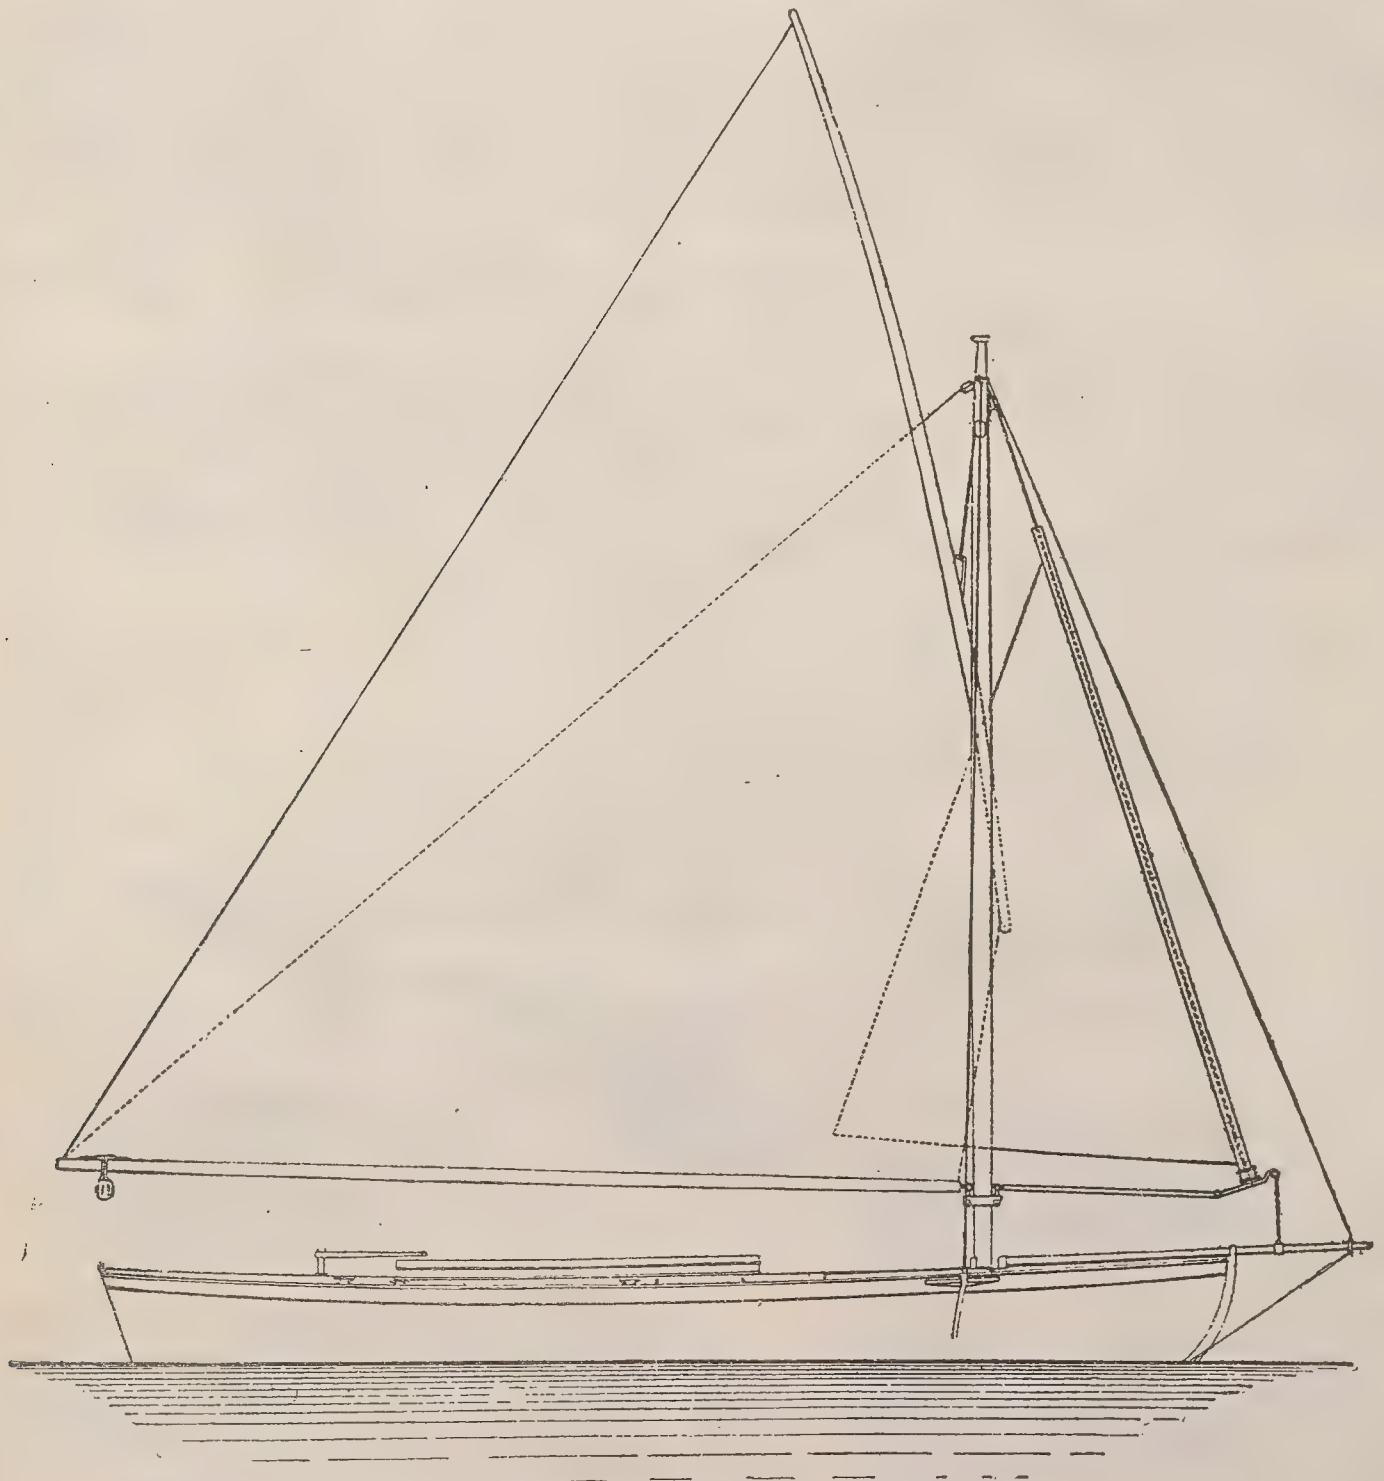
The sail area here shown is slightly larger than allowed for a half-rater in England.

The latter part of 1892, the second season of the class, saw a little American added to the fleet, Wee Winn, designed and built by the Herreshoffs for Miss W. Sutton. This boat was a diminutive El Chico, a bulb-fin craft with long ends, but with a neatly carried out counter, unlike the sawed off termination of El Chico and Wenonah. She made a notable record, coming out far ahead of the home boats, among the least successful of the latter being a pretty little bulb-fin boat by Mr. Payne, Pique by name, built for Miss Maud Sutton. She had a very moderate fore overhang, a square transom slightly raked, with rudder hung in yawl boat fashion outside the transom, a canoe form and plate, fin and bulb. Wee Winn, unlike the Solent boats, was rigged with a boom and gaff mainsail, with a small jib. The success of Wee Winn continued through the following season, the record being as follows for 1893:



CONTEST.

	Starts.	1st Prizes.	Other Prizes.	Total.	Amount.
Wee Winn	16	12	3	15	£ 30
Dancing Girl	17	9	3	12	17
Pique	17	4	7	11	12
Coquette	65	41	14	55	115
Isomer	15	4	4	8	
Musquito	61	12	18	30	32
Ladybird	39	8	8	16	21
Ragamuffin I.	13	3	4	7	
Ragamuffin II.	23	10	9	19	23



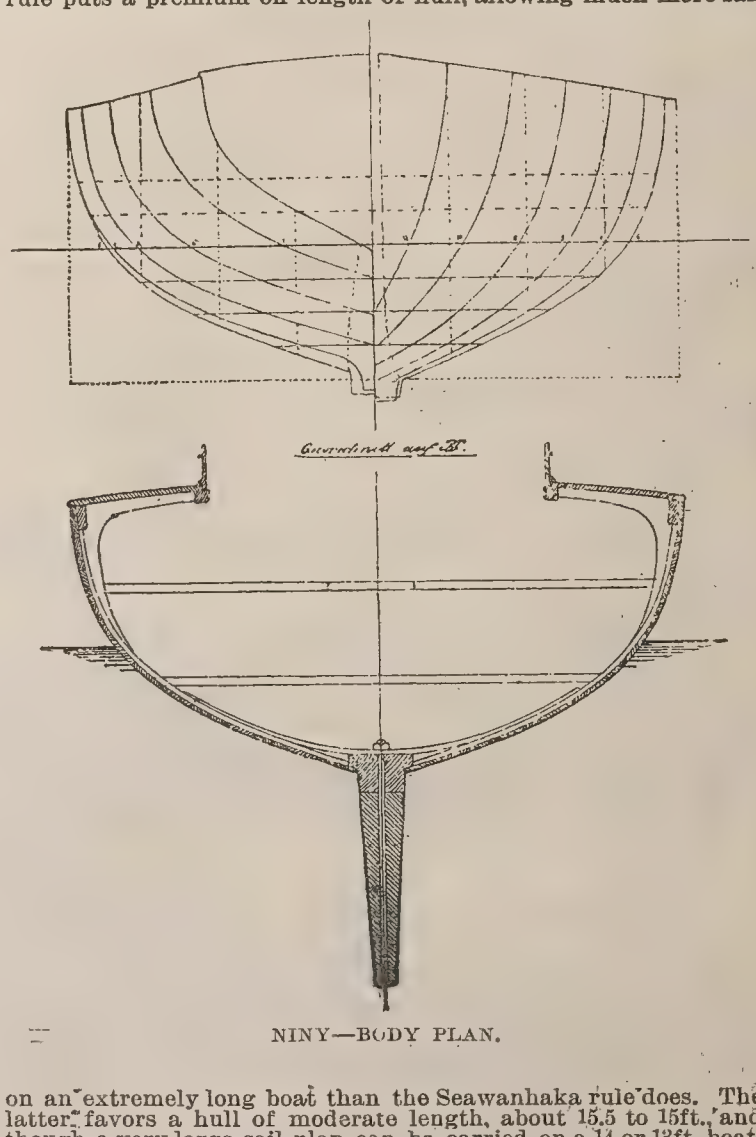
The record for the past season stands;

Wee Winn	36	23	8	21	
Pique	28	20	1	21	
Spruce III.	63	18	33	51	
Ragamuffin III.	33	13	15	28	
Coquette	61	15	15	30	
M.	23	4	7	11	

The most remarkable thing in the above table is the record of Pique, a comparative failure in 1892, but showing the highest percentage of wins to starts in the fleet in 1894, in her third season.

NINY—HALF-RATER—DESIGNED BY ARTHUR E. PAYNE, 1892.—SCALE 1½ INCH.

NINY—SAIL PLAN WITH ROLLER JIB—SCALE ¼ INCH.



The boat was under a new owner in her second and third seasons, but practically unaltered in hull and rig. The "figure of merit," as computed by "Thalassa" for last season, shows as follows: Pique, 56.67; Wee Winn, 47.11; Ragamuffin, 30.26; Tickle, 18.47; Coquette, 16.63; Cuchara, 14.85; Spruce III., 12.09. This latter table only covers the Solent races, and much of Spruce's racing was done on other waters.

The half-rater class includes several very different types, the extreme bulb-fin and canoe-hull like Wee Winn and Pique, the rather larger and stauncher fin yacht like Niny, and then down to shoaler centerboard craft, some carrying very heavy metal boards, the extreme being reached in the Oxford boats, such as the various Spruces and Ragamuffins, of shoal body, small displacement, and carrying little or no ballast. Owing to the confusion resulting from the practice of giving the same name to a number of different boats, and to the fact that Lloyd's Yacht Register omits most of these small craft, it is impossible to keep posted on all the points of difference.

The general type of unballasted Oxford canoe yawl, such as the first Spruce, has been illustrated in our columns, double-end boats with almost flat floors, built of plank-like a skipjack and fitted with one big balance lug and a long counterplate. Just how the last Spruce differs from the earlier boats in underwater body we cannot say, but from her picture under sail she is evidently more like Scarecrow, with much the same length of overhang at each end, but probably a wider and shoaler section. What the new Spruce will be is purely a matter of conjecture; it seems probable that Mr. Brand will still adhere to the old type, but it is not impossible that his experience on the Solent may lead him to follow more closely the bulb-fin.

Under the Y. R. A. rule, but two men are allowed in a half-rater, and three in a one-rater. The water-line must be marked at each end by the owner, the length between the marks being ascertained by the measurer; and when the boat is afloat in smooth water with crew aboard, both marks must be clear of the water. The conditions for the Seawanhaka races are not yet settled with Mr. Brand, but it is proposed that the water-line shall be measured with a deadweight of 300lbs. aboard, to be considered as crew; to avoid the possibility of a boat presenting herself for measurement with two men aboard, and then shipping two heavy weights for her racing crew. Some provision will also be made for measuring as nearly as possible the exact area of each sail.

The rating rule being unknown in America, the Seawanhaka C. Y. C. has suggested to Mr. Brand that the limit for the class be made 15ft. sailing length by Seawanhaka rule. The operation of the two rules is somewhat different, but not in a way that will act to the disadvantage of either side, especially as Mr. Brand will build a new boat for the American races. The following table shows the varying proportions of length and sail possible under the Seawanhaka rule in a 15ft. racing length class, the fourth column showing the amount of sail allowed for each length under the Y. R. A. rule. It will appear from the table that the latter rule puts a premium on length of hull, allowing much more sail

NINY—BODY PLAN.

on an extremely long boat than the Seawanhaka rule does. The latter favors a hull of moderate length, about 15.5 to 15ft., and though a very large sail plan can be carried on a 14 or 13ft. boat, considerably more than under the Y. R. A. rule, it is very doubtful whether this extreme would be successful in a series of races, even in summer.

Comparison of 15ft. R. L. and .5 Rating Classes.

		Sail area allowed.	
L. W. L.	$\sqrt{S. A.}$	Sea. Rule.	Y. R. A. Rule.
13ft.	17ft.	289sq. ft.	230sq
13.5	16.5	272	222
14	16	256	214
14.5	15.5	240	207
15	15	225	200
15.5	14.5	210	193
16	14	196	188
16.5	13.5	182	181
17	13	169	176
17.5	12.5	156	171

PROFESSOR DANA.

At his home in New Haven, Conn., Professor James Dwight Dana, died last Sunday, aged 82 years.

By his death Yale University loses its most illustrious professor, America its most eminent scientific man and the world its first geologist. His death marks the end of a career which has few parallels for brilliant continuous scientific work, extended over a long period of time. It closes a ripe life, full of good done to his fellow men—a life appreciated by the world and fitly crowned with highest honors. The active brain has stopped its work, the pen wielded almost without ceasing during sixty years of scientific toil is forever laid aside.

Professor Dana is the last of that group of men who were eminent in American science during the latter half of the century, among whom were the elder Agassiz, Guyot, Baird, Asa Gray and Loomis. He was born Feb. 12, 1813, and entered Yale College at the age of sixteen, having been attracted to that institution by the fame of Professor Silliman. In college he showed a marked fondness for scientific pursuits, and also took high rank in mathematics.

Professor Dana graduated in 1833, and was almost at once appointed instructor in mathematics in theNavy, and in that capacity sailed on United States men of war to various points in Europe and the Mediterranean. On his return from one of these cruises in 1835 he was appointed assistant to Prof. Silliman at Yale, and soon began the preparation of his "System of Mineralogy," which was published two years later in 1837, when the author was but twenty-four years of age. This work has been revised from time to time, and is still the standard authority on its subject.

In the year 1838 young Dana was appointed mineralogist and geologist to the United States exploring expedition to the Pacific Ocean, which was then about to sail under the command of Captain Wilkes. During the voyage, which lasted four years, he visited Terra del Fuego, many of the South Sea islands and other points in the Pacific which were then wholly unknown. At the mouth of the Columbia River in 1841 his vessel was wrecked and he escaped, saving nothing but his manuscript notes. The expedition returned in 1842, and the next thirteen years were occupied in working up the material collected, for not only the geology of the expedition, but the zoology as well had fallen under his charge. For two years he resided in Washington, but in 1844 he moved to New Haven, and the same year married the daughter of Professor Silliman. In 1850 he wa elected Professor of Natural History and Geology in Yale College, but did not assume the chair until 1855. Since that time he has resided continuously in New Haven engaged in his college duties and in scientific work. In 1893 he resigned his professorship, but at the request of the corporation continued his lectures until January, 1894. Two years ago, at the age of eighty, he began the revision of his Manual of Geology, which he entirely rewrote—over 1,000 printed pages—and which was published only a few months ago.

Professor Dana's most important works are his "System of Mineralogy," his reports of the Wilkes Expedition on "The Geology of the Pacific" on "Zoophytes," and on "Crustacea," illustrated by superb plates from drawings made by the author; his "Coral Reefs and Islands," "Manual of Geology," "Text Book of Geology," and "The Geological Story Briefly Told." He edited the American Journal of Science, and contributed largely to this and to the other periodical literatures of science.

The importance and value of his contributions to knowledge have been recognized the whole world over. He has received honorary degrees from universities at home and abroad, and scientific societies everywhere have honored themselves by electing him to membership. In 1872 he received the Wollaston Medal from the Geological Society of London, and in 1877 the Copley gold medal from the Royal Society of London.

Professor Dana's contributions to science are sufficiently well known. Not so widely known perhaps, but not less worthy of record and remark was the winning personality of the man—a personality which for nearly forty years has made its impress on a hundred or more young men every year. He made science attractive to them by the stimulus of his own freshness and enthusiasm, his clear insight into the secrets of nature, his industry and earnestness of purpose. The number and importance of his achievements in science will overshadow in public recognition this unrecorded personal work yet the value of such influences can surely not be overestimated.

Professor Dana's personal acquaintance with the students who were brought in contact with him was close, and his popularity very great. Up to within a few years it was his practice each spring and summer to take his class in geology off with him on long tramps into the country, and to show them in the rocks the problems about which they recited in the class room. His explanations were simple and clear, and awakened in the minds of those who listened to them an interest in the subject that could never have been had from mere books. His lectures were the one college exercise that no one wished to escape; they were looked forward to with pleasure by all.

In all relations of life, Professor Dana was most simple and kindly. Although by his achievements and his honors he stood so high, yet he was accessible to every one. His ready kindness at once put the student at his ease while his lucid explanations made plain things that had been dark and difficult. Thus, much of his life was devoted to pointing the way to thousands of young men, and all over the land those who received such aid from him will feel keen a sense of personal bereavement at the news of his death.

THE YACHT RACING UNION.

The idea of a union of the coast yacht clubs of a greater or less extent, either embracing all the large clubs, all clubs large and small, or the clubs of some special locality, as Boston or New York, is one long familiar to yachtsmen. What is equally familiar is the fact that all the attempts in the past have failed, the New England Y. R. A. has been for some years a thing of the past, and though one organization has existed for some six years about New York, it has of its own volition restricted itself to so narrow a field that its influence is hardly felt in New York yachting. The present season has witnessed two new attempts at the organization of local unions, one about Boston and the other to the eastward of New York, on that magnificent yachting playground, Long Island Sound. The opportunities about Boston far exceed those in any other part of the country, there being a very large contingent of active yachtsmen, while the various stations about Massachusetts Bay are within convenient reach of each other, or at least the extremes can readily reach some common racing ground about Marblehead or Nahant. With more able management and a stronger community of interests than the eastern yachtsmen have yet shown, they may build up a magnificent system of yacht racing in the classes up to forty feet.

About New York the situation is complicated by the nature of the waters, Hell Gate and the East River forming a serious barrier between the clubs of the bay and river and those of the south. As long as the bay and river interests predominated in local yachting, no attempts at a union were possible; the very large clubs, with a racing fleet of schooners, had nothing in common with the very small clubs that raced the old sawn-off boats with sandbags; each of the clubs was wedded to some ancient rule, which it had believed in for years, and the bay was at best a poor place for racing.

The movement to the Sound, begun by the organization of the Larchmont Y. C. in 1880, has wrought great changes in yachting. While the bay has been virtually abandoned by nearly all the larger clubs, the shores of the Sound have been closely dotted with flourishing clubs from Hell Gate to New Haven. The majority of these clubs,being of recent origin,have had to deal with yachts of comparatively modern type, and as they organized, they have one by one adopted the one rule used by the large clubs. In this way there has come about quietly and insensibly, a community of interests and an absence of conflicting rules, directly opposite to the conditions which have defeated the earlier attempts at union about New York Bay. The class of yachts, too, that form the fleets of the Sound clubs, are different from the old-time fleets; they are mainly cabin boats of from twenty-five to forty-five feet hull, boats which can and do go regularly from port to port for the various races. While there are still the schooners and the larger single-stickers, with the open boats, the great body of the racing fleet will be included between the limits indicated.

The new organization is likely to meet with many difficulties, but it has a good field to work in among the many clubs between New York and New London, and it may be certain of the support of many able, enthusiastic and intelligent yachtsmen. We wish it that success which it merits, and we hope that it may be able to show very important results within the next five years.

WABBLY UNDERPINNINGS.

The plea of drunkenness is often urged in extenuation of an offense, but is not commonly accepted as a wholly sufficient excuse for omission or commission. To have put a gross affront upon a friend when one is drunk is considered less heinous than for one to have done so deliberately when sober. The wife beater, who pleads intoxication in mitigation of his crime, is classed as a brute one degree less degraded at least than the wife-beater who mauls and pummels and kicks when sober. Only in extremely infrequent instances, however, do judge, attorneys and court spectators listen to the plea of "drunk and didn't know it," with unalloyed satisfaction. Such a reception may well enough have been given the other day to a pleading of this character in a Newburgh, N. Y., court, when a duck-shooting case was tried before Judge Cullen.

The defendant was William C. DeGraw, a foolish hotel proprietor of Greenwood Lake. We take the liberty of calling Mr. DeGraw foolish because, while as a hotel proprietor, he depends for patronage largely upon sportsmen, he yet makes war on game and fish out of season or by illicit means. If he and other hotel proprietors at such a resort had the faintest glimmer of common sense, they would be first among those who give cheerful obedience to the game laws, to the end that game and fish might abound, visiting sportsmen wax in multitude, and the hotel till be distended thereby. Another consideration, which might well enough put sense into an empty noddle, even though the thought be not a high and ennobling one, is this, that in the game district set apart and given over to the watch and ward of Protector Willett Kidd, the silly wight who breaks the game laws will nine times out of ten find himself in trouble, if not in jail. If men like DeGraw just naturally have no sense, Schoolmaster Kidd feels called upon to give them some. When DeGraw shot the Greenwood Lake ducks from a launch, that mode of duck hunting being forbidden by the game law, Dr. Kidd promptly set about his reproof, correction and chastisement. The case came up for trial last week.

It must not be inferred from anything that we have said that DeGraw is not full of resources when occasion demands. He is nobody's fool; and had prepared for himself what was thought to be a most excellent defense.

With him in the boat at the time of the shooting were, besides certain of his employees, two men from New York and Brooklyn, Messrs. Craig Pennington and Arthur Bellows. These two bobbed up at the Newburgh trial; and Prosecuting Attorney Headley was advised that they were on hand to extricate DeGraw from his predicament. The plan was that they should go on the stand for the defense, and testify that they themselves and not DeGraw had fired the shots at the ducks. Apprised of this scheme, Protector Kidd had the necessary papers prepared so that immediately after giving their incriminating evidence these smart witnesses should themselves be prosecuted for the penalty. When Messrs. Pennington and Bellows became cognizant of Protector Kidd's trap so nicely laid for them, they resolved to save themselves even at the expense of the confiding DeGraw. Called to the stand to tell his little story—how he himself had done the shooting—Mr. Bellows astonished the counsel for the defense by testifying that on the occasion of the shooting he had been so drunk that he really had not known what was going on. When Mr. Pennington took the stand and was asked by the attorney, "And your condition? Was it like that of the last witness?" he made the laconic response, "Worse." Thus at one full swoop were the nicely adjusted props knocked out from under the defense so ingeniously constructed for the luckless DeGraw, and the jury promptly found him in $50 for the two dead docks. The incident deserves to go on record as one case where the plea of "drunk and didn't know" actually served the ends of justice.

DeGraw, by the way, was the boatman on the occasion, when Judge Dixon and others of New Jersey were charged with unlawful duck shooting on Greenwood Lake. The Justices, it will be remembered, have carried their case up on a legal technicality, to be decided in June.

The Sportsman Tourist.

THE STORY OF A CAMP.

The papers told of snow in the Northwest, of a white mantle on the Vermont pines, of the Catskills clothed in glistening white, while northern correspondents said to us, that while we might glowingly describe the beautiful flowers that flourished in the ample beds about our residence, we were denied the delightful sleigh rides and the merry bells, the exhilarating New England air, and the glowing cheeks and eyes that there abounded. We were not envious. In our beautiful home on the South Carolina coast, with the thermometer between forty and seventy degrees, with vegetables and flowers growing in the open air, where the children played out of doors all the day in the balmy sunshine, it seemed as if all troubles were afar, and that nature had settled all vexatious questions in the right way. The tariff seemed about right. Marriage was by no means a failure. Democrats might die and Republicans abound rejoicing. The mere joy of abiding made bright eyes and laughing faces, and quarrels and misadventure were as it they existed not.

The confines of the Naval Station at Port Royal were small as one looked at the land, but God's out-of-doors seemed illimitable, and we all felt as though we could sing "Oh! that I had wings like a dove." In fact we felt so good that we wanted to "soar," and so we soared, and I will try to tell you the story of how we did it.

The historical Sea Islands, which border the coast of the country where is grown the finest cotton in the world, are intersected and divided by many inlets and creeks, which in some cases lead to the open sea, and in others form inland water courses, by which one may navigate many hundreds of miles from Northeast to the Southwest, or vice-versa, touching in the route all the large navigable rivers. All these islands have game upon them, and those nearest the sea abound with deer, wild hogs, an occasional bear, ducks and geese, and other quadrupeds and bipeds, feathered and otherwise. "We will go deer hunting," said the sportsmen of the party, and the ladies all said in chorus, "Can we go too?" Indeed, they insisted in full cry that they were going anyhow. Now any one can go out with a blanket, gun and ammunition, sleep under a tree and accumulate rheumatism, pneumonia, cramps, hunger, malaria, chills and fever, and a few more things, and limpingly declare that he has had a good time, but to go in royal style, with an intense purpose of having all the comfort possible, regardless of getting game or anything else, except a glorious outing in the woods, with the gentle murmur of the sea to sing one to sleep, and the glow of a great campfire to induce the dreamy reveries connected with a sensuous, healthful comfort—this is given to but few, but we had it all. The beautiful days in November, after the middle, days cloudless and inspiring, with the gentle northwest wind making the heart leap with joy, bracing and invigorating the nervous system, when even the lazy became alert, and the listless lively, were upon us. To plan the expedition so that it should be perfect, required thought, but the thought, backed by considerable experience, was there, and so it was planned as I will now relate.

The personnel of the party was as follows: The Skipper—avoirdupois great but soul ardent; the Architect—great on an outing; Mrs. Architect—the matron; the Widow (Skipper's daughter) assistant matron; Miss Skipper—culinary chef-ess; the Rabbi—always hungry; the Surgeon—ardent and intense, a great snorer; Miss Surgeon—(Surgeon's sister) lovely and sweet; the Counselor—champion light-weight athlete; the Brother—sound on all questions; the Ramrod—a mighty hunter.

The outfit and colored contingent were as follows: Little steamer, sail-boat, dinghy; Grayson—captain; Lawrence—mate; Peter Brown—engineer; Fred—cook, steward, butler, waiter, dishwasher, and everything else; Willie Freeman—assistant to Fred; Dennis Freeman—pilot; Jo Danner—driver; Primus Scott—hunter, and six cur dogs in various stages of decay, devoted to searching for coons with mad delight, and utterly indifferent to deer.

The organization and detail of this great force was like this:

Commander-in-Chief—the Skipper.
Caterers—Mrs. Architect and Miss Skipper.
Master of the Hunt—the Surgeon.
Professional Beauties—the Widow and Miss Surgeon.
Mighty hunters—the Counselor, the Brother, the Architect and the Ramrod.
Professional eater—always hungry—the Rabbi.

In the various details and duties of organizing, provisioning and equipping this force, the members of the party showed great minds. The best proof of this statement is found in the fact that nothing seemed to be wanting during the whole expedition, except about four more corkscrews. It is an old maxim that no American hunter should ever be found without a corkscrew. It is believed now that at least four members of the party came away from home without them, but in every sudden emergency at least eight could be certainly counted on.

Five tents, about fourteen by sixteen feet in size, comfortably housed the party, and the vast supplies of food and drink that the lovely caterers supplied. These tents were carpeted with painted tarpaulins, and were very comfortable. Each member of the party was provided with a folding spring cot and a camp chair. Planks were taken for a table. Two forked sticks driven into the ground at each end, with a stick laid across in the forks, supported these planks, which, covered with a snowy cloth, and gleaming with silver and china, made a pretty sight, while the abundant food furnished by the fair hostesses in their noble dining room, where the ceiling was the blue vault of the heavens above, the gentle music was the humming of the waves on the sandy shore, and the murmur of the breeze in the pines and palms, was more to us than the sybaritic feasts of many Delmonicos, amid the lurid frescoings of gorgeous halls.

The expedition embarked soon after midday, the little steamer carrying the party, and towing the other boats with the impedimenta. Down the river with the last of the ebb tide towards the noble bay where on November 7, 1861, the great fleet of the Union circled between Bay Point and Hilton Head, and fire and smoke and shot and shell made the beautiful day seem lurid like that great and final one "when Heaven and Earth shall pass away." Down to the mouth of Station creek, and winding through the marshes where the quick-winged duck rose fluttering with alarm, while the ready guns from the bows of the boat either cut them down or accelerated their flight on through the winding waters, past ancient historic, but deserted plantations, with their old mansions in ruins, tenanted only by the buzzard and the crow—so thankful heart to lift itself to the Great Architect of the Universe for life, for health, for the grandeur of this out-of-door life which dwarfed the close confines of inhabited spaces, and expanded every noble feeling of which humanity is capable. And then the genial flow of wit and humor, refined and made delicate by the fair and gentle presence there assembled, who contributed no little part in song and tale and recitation to make the rest happy, as their loving sex has done in all the ages past. Who can forget how the bearded Rabbi recited scraps from "The Lady of the Lake," and careful instructions to the members of a rustic fire company, about to be organized, the refrain of which was "don't forget to yell." So encouraged was this venerable man by the applause which greeted his efforts, that he spouted like an artesian well, until we had to take his advice, not to forget to yell, and yell him down, lest he go on forever like an inexhaustible human artesian well indeed. And then with what pathos "Clementyne" was given by the Skipper, all the party being "awful sorry" when the lateness of the hour showed that we must retire. After many kind good-nights we went to the several tents, but how could we sleep when all were intoxicated with the ozone and the beauty and novelty of the scene, so frequent bursts of merry laughter from the ladies' tent and shouts from the others told of witty tales and lively pranks, while the nasal thunder from the Rabbi's natural trombone told that he alone of all the party had joined the tribes in dreamland—and colored Fred held forth in a religious discourse to his brethren about the campfire, which knew neither period, semi-colon nor comma for four mortal hours. The Skipper delivered instructive maxims and tales to the young men in his tent, who would so howl with delight at frequent intervals that briefly clothed mortals would hover about the entrance that they also might join in the general joy and catch the point of tales that were never "twice told." It is currently believed that all the party went to sleep laughing, although there is evidence that the Surgeon's smile finally merged into a dismal roar, a species of snoring of fearful and wonderful nature.

The Rabbi was a restless mortal in the early morning, and after making night hideous with his discordant bellowings, while all the rest were enjoying themselves, he wandered about while yet the morning stars were shining, howling for food. He strode about devouring his private stock of oranges and the public supply of apples, which

A PART OF THE CAMP.

THE DINING ROOM.

into Trenchard's Inlet, and to another view of the sea, and where the rippling waves made music on the beach near the southeastern end of St. Philip's Island, our party landed as the sun was near his point of disappearance over the western trees. The hunters who had preceded us had pitched their tent and kindled a noble camp-fire, and all the party with willing hands landed the cargoes of the boats, and the tents were soon erected and the camp established.

I should hesitate to attempt to tell you what stores of food those careful ladies had provided. As I remember some parts of the list, it runs as follows: Bread, roast turkey; canned meats, roast turkey; ice, roast turkey; apollinaris water, roast turkey; ginger ale, roast turkey; lots of other things, roast turkey; water, roast turkey; and after that to wind up the list, roast turkey, and some more roast turkey. I may mention that when we returned home we were greeted with roast turkey, and it seemed as if we must all "gobble."

The ladies bustled to get supper. By the flickering light of the campfire and two lanterns hung on a string over the table, with appetites enhanced by the unaccustomed labor, and the clear sharpness of the evening air, we partook of a delightful repast, and were thankful to be alive and there. The busy helpers replenished the campfire, which sent up clouds of sparks into the darkening air, and diffused a pleasant heat. The fire was arranged in a thicket which had been trimmed away to a diameter of some thirty feet. The bushes on the outside were higher than our heads and made a perfect wind guard. Darkness was settled over land and sea, and the brilliant stars overhead seemed to glisten and smile at us as the male contingent puffed their pipes, and the waving firelight showed dreamy smiles of content on the faces of the ladies as they saw fairy shapes in the ruddy coals, and dancing forms in the leaping flames. The air was calm and pure, with just a spice of salt in it from the neighboring sea, and a sufficient chill to make wraps comfortable. Arranged in a circle about the campfire, the scene was one of great beauty, calculated to cause the only seemed to increase his anguish and to make his appetite more voracious. At last he prowled about the ladies' tent, where the fair damsels were still enjoying their beauty sleep, yelling for some one to get up and provide for him. "Anathema Maranatha" was hurled at him in many different tones, and he retired to the thicket and nursed his famished soul until breakfast time.

The party was early astir, for this was to be the great hunting day, and after a hurried but abundant breakfast, the hunters armed themselves to go for vast supplies of venison, so that we might return covered with glory, and be able to exhibit many antlers to admiring friends. I will now describe how each of the hunters endeavored to capture or slay the fleet-footed beauties of the forest, and the success that attended their efforts.

The higher part of the island is about eight miles in circumference, and the strategy of the hunt consisted in the dogs and hunters circling about the outer part of the wooded country, driving the prey inward toward the various stands where the shooters lay concealed, ready to shoot them as they ran. Skipper could not and would not tramp, so to him was allotted the stand nearest the camp, to which he proceeded with gun and much ammunition, a camp stool, bottle of water, an ample lunch, cigars, pipe and tobacco, and a supply of chewing gum. Being placed in position near the head of a pond, where ducks kept calling him "quack" all the day, he cleared an ample spot of the undergrowth, fixed the camp chair solidly on the ground, lighted a cigar, seated himself and prepared for slaughter.

The Counselor, the Brother, the Ramrod and the Surgeon, with the colored contingent and the dogs, proceeded about the edge of the woods. The Architect was posted about a mile further, in a good spot, while the Rabbi, with an old gun borrowed for the occasion, was still further advanced, and the hunters began their melodious shouts, and the curs their expressions of hope for coons. The morning was calm and beautiful. The Skipper musingly watched for deer, and was solemnly impressed with the necessity of shooting at nothing else.

The vast woods, the distant murmur of the sea, the sylvan sounds of small life all about, the rhythmic forest whisperings, the fragrant air, all conduced to a gentle retrospective mood, a loving sympathy with nature which exalted the soul, and put all abasement away. He mused and the scene in front faded from view, and the picture unrolled itself of thirty-three years before, less than five miles from where he sat, the majestic fleet of the Union, led by the gallant "Wabash" came to the bar, where all the buoys had been removed. Captain Boutelle, who knew the approach of the great bay, as the farmer knows his farm, quickly replaced them, and the grand ships came up the channel to force an entrance where the Stars and Bars held sway. Silently they came, serene but terrible. The Skipper saw the whole scene before him, and he held his breath for the first shot, and saw no deer—no deer, but he saw in his mind the quick shots from St. Phillip's, the curling smoke, the sharp reports, and still the stately "Wabash" coming steadily on, until at last, a little touch of the starboard helm, and then it seemed as if the earth opened, and that hell was visible. That terrible broadside from the great ship, and all the world seemed ablaze. Ha! how the Skipper's heart burned within him, and with a long quivering sigh, life and sight and peace returned, and not a deer anywhere to make the bushes rustle. The days of terrible civil war were relegated to the past, and the balmy scene prevailed.

The Skipper glanced warily about for any signs of game and listened to the distant and harmonious shouts of the drivers, and the baying of the dogs. Nothing was moving. He smoked and dreamily pondered of other scenes.

Ah! that beautiful widow far away in the North! What a pleased smile illumined the Skipper's face as he thought of her. How pleasant would it be could she be here sitting on another camp stool. How her gentle tones would harmonize with the place and the time and all surroundings. Ah! Oh! Well, "It might have been," perhaps it will be, why not? She is nice, thought the Skipper. Life is very lonesome—only a few more years anyhow—she can pay her own mess-bill. Yes, sure, she is certainly very nice and agreeable. Ah! (with a frown) those three muscular daughters, they would certainly raise the mischief, anyhow. Have to think it over—hardly possible just now—have to wait awhile. Ha! no deer, no deer. Oh, well! Marriage way be a failure—whiz! squawk! and a lot of Canada geese flying low came within easy shot, but the party was out for deer, and no gun must speak except for the nobler game. Well, thought the Skipper, suppose an innocent little deer should come up within shot, would it be a pleasant or manly act to shoot it to death, to see its plaintive eyes glaze in agony, to see the life blood running over its glossy hide, to see the tremor of the delicate limbs? No, it would be an inhuman act in this delightful scenery and pleasant air to do such dastardly slaughter, so the Skipper leaned his gun up against a bush and proceeded to eat his lunch, and if a deer had come along then I think he would have offered it a share.

The Architect in his lonely lair waited and watched and smoked his pipe. The calmness of the air and the gentle music of out-of-doors, soothed his spirit, and made him feel very peaceful. The tobacco was good, and the pipe had a clear draught, and in a contemplative mood he thought of the time when the great dry dock should be completed. He saw, as in a vision, the gathering of many people from the country round about to see the spectacle of a majestic warship floated in from the river. He saw the great caisson swung into its place, and landed in its seat. He seemed to hear the throbbing of the powerful pumps as they threw the water out, and it seemed to his architectural brain as if everything worked right and fitted with exactness, and nothing went wrong, and in a peaceful, hazy foreshadowing he saw his hospitable mansion filled with congratulatory friends, who figuratively patted him on the back in honor of the completion of a great national work. He saw himself making a small speech to the assembled people, thanking them for their kindly words—when he awoke to grasp his gun at a rustling of the bushes near him, and found one of the curs who had deserted the pack, sneakingly wagging his tail, and mutely asking if he had seen any coons thereabouts. The Architect had been asleep, and during his slumbers, no man knoweth how many gentle deer of the forest had inspected him with pitying glances, and had murmured to each other, in the deer language, "This old chap is tired, there is no harm in him," and had passed softly on, leaving him in peace.

The Rabbi was towed to a secure and distant spot, and carefully moored in a dock where his scarred hulk could peacefully rest secure. He took his great overcoat with him, and had a darkey to carry it for him. The pockets were loaded with crackers to sustain his sinking spirits, and thus provided, he awaited the coming of the deer with considerable fortitude. His mind was occupied with the details of docking a ship. Capstans, ropes, cleats tools of all kinds, and all the paraphernalia of such work, materialized in his thoughts, and seemed to arrange themselves in a tabulated form for ready reference. There was scarcely a movement in all the range of his vision. Spurshores and leading-blocks seemed arranged in orderly array about him. They radiated from his central position to a shadowy circumference, and they appeared to take on a slow and wavy motion, soothing and alluring. A regular and monotonous sound began to make itself heard, gradually increasing in force, and is suing from the Rabbinical nostrils. Before long, a sepulchral and awful snorting advertised to everything having ears, within two miles, that the venerable man slumbered. The deer in all that part must have chuckled and remarked "This is a great day for us. We have company, but they are not troublesome."

How long the good man slumbered is not in evidence, but he awoke hungry, and began to make preparations for his frugal and unexciting lunch of crackers. He drew his great coat to him, and, with an expectant smile, plunged his hand into one of the pockets. The smile froze almost in its inception. The pocket was empty. He hurriedly tried another, it also was empty. He searched the ground round about. He wildly gazed into the bushes, searched the trees, pinched himself to see if this awful situation were real, or only an agonizing dream. Sad to relate, it was very true. The language used by this good man at this time has not been recorded—must not be here. Afterward it was found that the bearer of the great coat carried it upside down, leaving a trail of crackers on the ground sufficient to guide an army. When the Rabbi recovered from his amazement, he hastily broke for camp, where he arrived later, almost bereft of breath, but demanding food with what he had left.

The Surgeon, who was the director of the hunt, ensconced himself in a favorable position, whence he might supervise the drivers, and gather in great stores of venison. He tried hard—how hard no one knows yet. He heard the dogs madly barking, and the hunters shouting, but there was no sharp report of guns, no winding of the horns to tell of game found, no appeals for help to pack venison to the distant camp. It is not known that he slumbered, for he is too young to stifle conscience as some of the older ones could, and having conducted the expedition to these hunting grounds, he felt bound in honor to find and secure game. It was believed, for a time, that he was really anxious to do so, but for all he found and brought in, he might better have stacked his new and beautiful gun by some lofty pine and allowed the memory of his numerous flirtations to occupy his mind and soothe his anxiety.

The other hunters dragged their way through the tangled underbrush, with much labor and no success. They had managed to lose the drivers and the dogs, but they hunted religiously all day. After five hours of patient soliloquy, the Skipper gave it up, and loading up with his plunder, returned to camp, finding the Rabbi slowly digesting his prey, with which he was engorged, from the ample stores in the provision tent. The others came in one by one, tired, but smiling, and just as the curtain of night enveloped the camp, the darkies arrived with eight coons, and faces glistening with delight.

While the male members of the party had thus been seeking venison, the ladies had bathed, slept, and cleared

THE COUNSELOR AND THE EAGLE.

up the camp until every tent was a miracle of order and comfort, and with smiling faces and ribbons flying in the gentle sea breeze that had come up, they greeted us with such a royal dinner that the memory of it will stay with us all for many a day. And then, as the sun went down, the party scattered about the camp, smoking the pipes of peace, while the gay smiles and chatter of the fair ones made it seem a hunters' paradise indeed.

The evening grew upon the party, and the gathering about the campfire broke up early, for the hunters were tired, and sleep and rest were very welcome. At a comparatively early hour quiet prevailed in the camp, for the fatigues of the day had brought the usual result, and long faithfulness in watching and waiting had knocked all the theology out of Fred, and cut his interminable allegory short. In the morning of the third day, a dreamy content pervaded the camp, and the sleepers were slow to rise, except the venerable Rabbi, whose cravings smote him early and made him active. The Skipper roused himself at a reasonably early hour, and as the fair hostesses were slow to appear, took upon himself to prepare breakfast, which was ready as soon as all the campers were assembled. A few sea dishes made a meal which was pronounced a success as well as a novelty, as the inevitable roast turkey was not in it, and a freedom from gobbling was apparent. Over the postprandial pipes some few ventured to ask about the route for the day's hunting, but the responses were slow and languid, and there seemed to be much more disposition to seek shady nooks and recline upon the grass, than to encounter more fatigues in pushing through the tangled underbrush in search of deer that refused to be found, assisted by incompetent cur dogs committed to a coon policy. Considerable mild flirting supervened, spoony corners were in demand, and the dolce far niente of the lovely air conquered nearly all the members of the expedition. The Counselor indeed took his gun and stole away up the beach to a place where a great eagle's nest was visible in the top of a giant pine, and shortly returned with a magnificent bald-headed king of the feathered tribe, measuring over six feet from tip to tip of the distended wings, and two feet, four inches from bill to the end of his tail feathers. The Counselor was an accomplished taxidermist, so his work was before him to prepare the splendid bird for preservation, in which he was assisted by the Ramrod and an admiring circle of spectators. The Architect and the Brother made certain trips to the pond near by for ducks, but were unsuccessful, and eventually joined the comfort-seeking party in the camp. The colored contingent departed early for the woods with all the dogs for more coons, and returned at nightfall full of delight at their success, which had been fully commensurate with their desires.

The genial Rabbi produced his camera and proceeded to take many views of the camp and its surroundings. The advent of the Counselor with his great eagle excited in the ardent soul of the artist a desire to capture the mate of this bird, and so he had his old gun laid ready to his hand, and was several times sent charging through the bushes by some evil-minded youngsters of the party, after soaring buzzards, which looked to the eye very like eagles. He did not get a shot, but his genial soul was not disappointed, hoping for better luck some other time. And so while reclining in various positions on the grass, smoking and conversing and telling many tales of interest, a great roaring noise was heard, and all started up to find the grass on fire, and one of the tents in flames. In an instant all hands were at work tearing down the tent and beating the burning grass and bushes, saving everything, with a little scorching and a few slight burns. The ladies showed no less bravery than the men, and rushed around and chattered so vigorously that some had to be forcibly dragged from the burning grass, lest their flowing drapery should be ignited, and so much sweetness dissolve in smoke. As there were many loaded cartridges in the midst of the flames, all were anxious for fear they might explode, but no such thing took place, although the danger was imminent. Such ardent work required refreshment, binding up of wounds, and then we let the girls chatter and rehearse the scene in all its bearings, but having no phonograph, I cannot give all the destruction of language here. It was terrible, and when one would suppose that it was all finished, it would suddenly break out again with increased virulence and fill all the air like the conversation of magpies. They are dear, they are lovely, they are charming, but for excited conversation they have powers that put the sterner sex into the shade. God bless them all, how they can talk.

All things good and bad come to an end sometime, and so this last day in camp closed with a delightful twilight, and a gathering about the camp fire that can never be forgotten. As the night fell over the camp, and the brilliant stars sprang into view, the fire was replenished with great logs, and a fresh northerly wind arose, making the sparks fly and the flames dance about. Wraps were donned, seats brought into the radius of the firelight, and as the breeze whistled through the pines above our heads, and the darkies reclined in the bushes on the outer rim of the space, songs, stories, puns, flew about the circle with merry laughter and cheerful chorus. The scene would not be complete if the wit and songs of the merry colored people were not evoked to fill out the picture, so honest Fred, with many bashful colored smiles, and after much coaxing, raised up his voice in a shrill falsetto, with many funny thrills, and gave us a part of his repertoire with great success. I cannot give the inimitable style of this colored nightingale, but assisted by the deep bass of the other brethren, he sang:

" I pitch my tent on dis camp groun',
No man look likes me;
I come 'cross de riber an' I mos' git drown,
No man look like me.
Chorus—King, oh! King, died for me.
Jesus died for de fus an' de las',
No man look like me.

" Paul an' Silas boun' in prison,
No man look like me,
'Cause he would tek a t'ing dat was not his'n,
No man look like me.
Chorus—King, oh! King etc.

" I been to de riber way John baptize,
No man look like me,
De riber smood, an' smood as a tide,
No man look like me.
Chorus—King, oh! King, etc.

" Ef religion wa' a t'ing dat money could buy,
No man look like me.
De rich would lib, an' de poor would die,
No man look like me.
Chorus—King, oh! King, etc.

" Sinner, mind how you walk on de cross,
No man look like me,
Your foot don't slip an' your soul git los',
No man look like me.
Chorus—King, oh! King, etc.

The impression of this scene, with the guileless Fred standing in the firelight, holding hard to the back of a chair with both hands and his face turned up to the sky, while his ample mouth seemed to travel all over his face as he chanted, as the deep bass of the other colored brethren came from the bushes, chiming with great melody, was very vivid. The sincere applause that greeted the close of his efforts encouraged and inspired Mr. Fred to renewed attempts, which added greatly to the charm and vivacity of the occasion. With a lively but wierd refrain, he sang:

" Raccoon tail ring roun' an' roun,'
Possum tail am bare,
Rabbit ain't got no tail at all,
Little bit er bunch er hair.

" Squirrel am a mighty man,
Carry a bushy tail;
Come an' steal my massa's corn,
Eat him on a rail."

And so ad infinitem. Breaking into narrative, he related how the bear lost his tail, thus: "Bear see Bre'r fox eatin' fish, say whar you git dat fish brer Fox? Bre'r Fox he say, 'cotch um.' Bear say, 'how you cotch um?' Bre'r Fox he say, 'go on de ice, put de tail in de hole,

bime by fish cotch hold, you pull him out.' 'Bear he try dat an de ice froze bear tail, an' it come off, an' bear have short tail ever since dat time. Bear 'member Bre'r Fox fur dat t'ing, an' one day bear eatin' honey an' Bre'r Fox he wanter know whar Bear git dat honey, an' Bear tole him 'in de holler tree," an Bre'r Fox he put his head in de tree to git honey, an' de bee sting him, an' ever sence dat time Bre'r Fox he bin berry shy."

The rest of the colored contingent added maxims and apothegms to the general fund of knowledge—thus old Joe Danner: "Ef you got a chile what has red ha'r an' you put coon fat on dat chile's ha'r, it turn it black." "De deer only ask God to take care ob him when he sleep, he take care ob himself when he 'wake." "De fish-hawk git a fish, an' de eagle come arter him, an' de fish-hawk he say 't'ief, t'ief, t'ief,' but de eagle he keep on comin', an' bimeby de fish-hawk he git a blow an' drop de fish, an' de eagle he take it, an' de fish-hawk he keep on singin' out 't'ief, t'ief, t'ief,' but de eagle he git de fish, an' de fish-hawk he ain't got none, an' de eagle he git fat, an' de fish-hawk he lean."

Then one enthusiastic member sang with great feeling:

"Ham-bone am fat, chicken am good,
Possum meat am berry, berry fine.
Give me, oh! give me, oh! how I wish you would
Dat water-million smilin' on de vine."

And so the party sat up late and had a fine time, while the wind whistled through the pines, and the stars sparkled in the clear, cold air, until the Skipper, with hot water, lemons, sugar and other ingredients brewed a nightcap worth remembering, which sent them all off to bed to sleep the sleep of innocence and peace.

And in the morning early to break camp and catch the tide for home, all arose and packed and lashed and stowed everything in the boats, and were off by eight o'clock. And so up Trenchard's inlet, and through Station creek to the river, feasting and singing, with merry talk and happy faces, bronzed by the sun and wind, sparkling eyes and a new stock of health, we came home again, with no deer, but a settled purpose to go again some day, if haply we may have so good a time repeated.

C. H. ROCKWELL,
Commander U. S. Navy.

ADIRONDACK SPRING NOTES.

Editor Forest and Stream:

It looks now as if spring had at last arrived. Blackirds just came within a few days, robins have been here two weeks, and the song chips are along the creek banks. Snow covers only small patches of ground in the clearings, but in the woods it is still some inches in depth. The creek is open, and fishing will begin on the date set by law.

To-day I saw a woodcock down on the flats. It was under a bank between two heaps of snow beside some low bushes, and rose with a merry whistle on being waked up. It was the first I had seen or heard of this spring.

Partridges wintered well. I saw a male and female together to-day not ten rods from the woodcock. Two robins fought in the trees of the back lot this morning. A pretty Miss Robin was an interested spectator. Only a few of the birds have arrived as yet, and the buds are backward, the pussy willows having only just commenced to fur.

A good many foxes were killed during the winter, and their foot prints were notably scarce in the latter part of deep snow, and so ground-resting birds will fare better than usual. Minks, skunks and martens were scarce, but weasels and ermines hold their own. Blue jays and crows are numerous, and hawks have begun to arrive. From them the birds have much to fear. Owls were never very plenty.

How the deer fared is a question. They were far back in the woods in mid-winter and difficult to reach. Whether many were reached or not cannot be told, but probably not so many were killed as usual, although one cannot tell what was going on about the lumber camps in the Moose River and West Canada regions. The Forest and Stream told of two men who were arrested for killing deer out of season in the Canada Creek region. Large numbers were killed, but what became of them? Were they killed for their hides, or were they sold to lumber camps for food? Who is responsible, the consumer or the creators of the demand?

The dogs did not kill many deer, except in conjunction with men this winter. They would rather run near-by rabbits than go miles into the woods after unknown quantities. Dogs are sometimes as confused as men in unknown districts, hence so many dogs stray. They are only fit to go after cows anyhow, and when they are seen to get after sheep or deer they should be treated with lead, at least in the Adirondack region. It is curious that people cannot be made to understand the fact that deer are steadily decreasing up here.

I am glad that they will try to stop doe killing, but would be a good deal happier if they would stop buck killing too for five or ten years. Deer would get to be so plenty then that men could kill their two without fearing it would be their last. Deer hunting next fall will be poorer than ever, judging from present indications in Herkimer County. What can be said of the other counties in the forest preserve?

The logs have begun to come down the creek. They will be fed to the mill at Hinckley at the rate of 1,800 a day next summer, probably faster. Fortunately there will be a little waste, for a pulp mill is standing by ready to take the edgings and sawdust.

Some one introduced black bass into the West Canada, for numbers of them were caught here last summer. Good-bye trout fishing! Pickerel would have been better, because more sudden. Still bass fight well even if they are not pretty. Years ago a man could take a string, a penny fish-hook, a ten-foot birch, and in an hour snake out a dish pan full of trout. One, two, and even three-pound ones, but that day is past, and alas, never to return.

W. T. Finch built himself a fish pond last summer, and in the fall put in several thousand trout—six or seven-inch ones. Whether they will survive in this pond is a matter of conjecture among the woodsmen, as the bottom is not sandy or gravelly, but rather mucky, nor is the water plenty. It is to be hoped that the fish will prosper.

Northwood, N. Y., April 9, '95. RAYMOND S. SPEARS.

THE SUNNY SOUTH.—IX.

COL. BILL PEABODY'S VACATION

CHICAGO, March 30.—Mr. W. W. Peabody, Jr., or Col. Bill Peabody, as he may hereafter be termed in these columns, is a young man somewhere between twenty and fifty years old, I should say. For some time he has been assistant manager of the B. & O. S. W. R. R., whose offices are located at Cincinnati. Early last summer he was summoned to appear in the presence of the president of the road, and thither he went, expecting to be fired, perhaps, or suffer other personal injury. On the contrary, it seems that the president had no such intentions against Col. Bill Peabody. All he wanted to do was to raise his salary about a thousand dollars a year, or a thousand dollars a month, I forget which, tell him to take a vacation of a few weeks, and put at his disposal one of the best-equipped private cars that run out of Cincinnati. At meeting his sudden reverse in fortune, Col. Bill Peabody staggered, placed his hands on his heart and said.

"Thanks, noble sir; I have got you." Then he looked around for some good people to go with him on his hunting trip. These he found in the persons of his friends Mr. Wilbur Dubois, of the Executive Division of the Cincinnati post office, the quietest and nicest man on earth, and Mr. R. M. Burton, also of Cincinnati, as jolly a soul as ever pulled a trigger. To these were added Mr. Richard Merrill, the celebrated dog man of Milwaukee, and the writer, the two latter having had some experience in Texas, which region had been chosen as the scene of hostilities by Col. Bill Peabody, after long consultation with all concerned.

All the members of the above party excepting myself rolled into New Orleans on the private car on the morning of November 24, and I having on the same morning arrived from Memphis, we effected a junction of forces early in the day. There we met once more Mr. Randolph Foster, whom I have mentioned as one of our hosts in our camp at the mouth of the Mississippi, together with other friends of the Cincinnati party. I had never met Mr. Peabody or Mr. Burton until that morning, but it did not take long to learn that they were fit parts of a jolly party, bound to have as nice a little vacation trip as anyone ever did have. We put in a pleasant day in the quaint old city of New Orleans, and just before sundown pulled out for the setting sun over the iron trail, well called the Sunset route, bound for a far distant portion of this magnificent and varied country of America, of which it has been my fortune this winter to see so many different parts in this section known as the South. I imagine that few happier or more care-free parties ever sat down to an evening meal than was ours as we gathered about the table prepared by Mitchell, the colored cook. We all felt very young and happy.

We traveled all night, and we traveled all the next morning, and we kept on traveling, but still we did not begin to cross the vast empire of the great and unknown State of Texas. I say unknown, because the greater part of the Union, outside of Texas, does not know what Texas is, and what Texas has done; and what Texas may do or be in the future is something which no man is wise enougth or daring enough to guess. From the back platform of our palatial car, Texas appeared a vast gray, boundless sea, with hills and plains, with low gray forests, draped with the Spanish moss, with now and then a water course, and once in a while a town. All this was new to most of our party. Willbur Dubois put his chair out on the observatory platform and looked out on the shifting panorama of brown and gray for five hours, during which time he never said a word, but was apparently completely happy in the warmth of the generous Southern sun. In the North we had left severe weather, but here there was a cloudless sky, and a climate so warm that we were obliged to lay off our coats in order to be comfortable. Evidently we were in the winter country of the migratory game. Often from the car we saw flocks of plover, and once along a little water course we saw some jack-snipe pitching in. All the birds seemed to be very joyous and comfortable and contented, and in good sooth, we who observed them were not less so than they.

THE PARTY IS AUGMENTED.

It was between 2 and 3 o'clock in the afternoon when we pulled into Kennedy Junction, the point where the San Antonio & Aransas Pass R. R. crosses the Southern Pacific with its line between San Antonio and Rockport, the latter being our objective point. Here our car was cut off and transferred, nicely handled as usual by the Southern railroad people, and here upon the platform waiting for us, as per our telegram of the day before, was a certain burly figure about as big around as a tree, namely, Oscar Guessaz, of San Antonio, the "Texas Field" of Texas and the Southwest in Forest and Stream. This was the one thing needful to make our happiness complete, and the one man needful to make our party perfect, at least in our eyes. At once we fell upon the burly Texan and dragged him, his baggage, and his dog Flirt upon our car, where soon everybody, including the dogs, had become better acquainted and less hungry. And then through the live oak country of Southern Texas we rolled on down to the gulf coast at Rockport, which point we reached about 9 o'clock in the evening. Here we met Mr. James Fulton, who had entertained Mr. Merrill and myself so nicely the winter before. At once we were scattered all over the little village of Rockport, the cognoscenti showing to the strangers all the features of the place, the post office, the hotel the streets paved with sea-shells, and the fish houses, where could be obtained the largest and most edible fish, oysters and other products of the sea.

JOHNNIE'S BABY.

We had already arranged with the Bludworth boys for the yacht Novice, in which Dick Merrill and I had made our explorations the winter previous, and the boys were at the depot waiting for us when we got in. Jimmie and Jed were to take out the boat, it seemed, Johnnie being kept at home by reason of his solicitude over a certain young sailoress, recently arrived at his house, about three or four weeks old perhaps. This youngster we considered it our duty to call upon, and I made a personal inspection of same in order to see what made Johnnie take such a notion to it. It was very pink in color, and could not be called large, and had evidently been born without any teeth, which I should call a defect in a human being, but Johnnie insisted it was different and better than any other baby, and he having had better opportunity to study its habits than the rest of us, we concluded he was perhaps right about the matter. So we left Johnnie at home and sailed next morning without him, after laying in good stock of provisions and ice. A fair breeze sprung up just before noon, and as we left the village of Rockport and headed out for Copano Bay, the good ship Novice lay over in elegant style, and we tore through the green water at a rattling gait. We were all still very keen and fresh and full of excitement, incident to a complete change of scene, so that we wandered all over the little boat and investigated every rope and block with all the zest of discovery. The salt air made us hungry and exuberant, and I fear we were very undignified, but certainly we were all happy, and we all agreed that even if we never saw a duck, the sail was recompense enough itself. But Jimmie the skipper smiled and said we should see some ducks.

AMONG THE FOWL.

We crossed the head of Puerto Bay and swung into Copano Bay well on in the afternoon, after a fast passage over. This bay, like all of the duck waters of the region, proved to be very shallow, so we had to drop anchor before we got very close to the head of it; but we were gratified to see a few banks of birds and some scattered symptoms of a flight, though there was no great body working in the bay. Much to our surprise and pleasure, however, we saw quite a flight of geese across the bay, and after a little observation could determine one of their lines of flight, which was directly over the top of a certain cut-bank bluff on the west side of the bay.

We at once got into our shooting clothes after we had eaten lunch, and started out on our several voyages of discovery. I took Mr. Dubois out in one of the skiffs, towing a sneak box for a blind, and left him on what we thought might prove to be a good bar later in the evening, as we put up some birds from it going out. Others went still further down the bay than this. Guessaz and I then met at the yacht and joined forces for a cruise over a certain flat at the head of the bay which seemed to be infested to a certain extent with fowl. Rob Burton came over also, and later Dick Merrill, with the brand new sink box he had had Johnnie make for him. Dick made quite a nice little bag of mallard and pintails, which began to come in toward evening in something like a flight. We discovered at the head of the bay there was a deep channel making inland, and spreading out into a connecting series of arms and ponds of shallow water, running back two or three miles inland. It did not take long to see that this was the place to make our hunt, for as dusk approached the ducks began to draw over this land-locked pond system, and we could see it was a favorite roosting ground. We had no decoys out, but took such shooting as we could get at birds passing along the edge of the connecting channel, and though we had no great shooting, we each of us picked down a few ducks, mostly at good, clean flight shooting, which is the most difficult style of wild-fowling.

AH—OOK!

We saw very soon that there was something bigger than ducks to be had on that strip of country. Just before sunset the geese began to come back to their roosting grounds. It transpired that we had come into the bay too late to see them go out that afternoon, but we learned that as usual for them on establishing feeding grounds, they had two flights a day, out in the early day, back before noon, out again at 2 or 3 o'clock, and back again at night fall. We were busy that first evening trying to locate the line of flight correctly, and Guessaz and I concluded, after following up the shallow bay for a distance, that the main line of flight was over the high bluff where we first saw some of the geese go out earlier in the day. They crossed the strip of land between the bay and the inland ponds by flying directly over the highest ground there was, a bare ridge which offered little chance for concealment. Then their line lay right over a second high knoll beyond the pond, and thence they swung at an angle and followed the highest and barest ground there was, clear out into the country where they fed or went for fresh water. The Canada goose is a mighty smart bird, and we complimented the old head engineer of their forces who laid out this route for them. It was the very one along which there was the least cover for a hunter. The grass was not high enough to cover a man, and the geese were giving any chance cactus bush or mesquite clump a good wide birth as the shadows shut down. Over the low and grassy flat, where we were having our duck shooting these greater and more wary birds did not deign to fly, except in an occasional much frightened and loud-honking bunch apparently out of their reckoning. As dusk deepened into dark, we could hear them coming over in a long melodious procession, whose music was very stirring and very promising. We had a lively bit of fun just before dusk in trying to get down a goose out of some of the flocks that passed nearest, but though we could hear the duck shot zip against their coverts, we could do little with them. Guessaz got down a snow goose out of the bunch, but we were by no means contented with that, and returned to the boat much excited with plans for the morrow's crusade against the honkers. Those who had gone down along the edge of the open bay had not had much fun, though Mr. Peabody came back much excited over a certain goose as large as a haystack, to which he had administered violent bodily injury, to the extent of knocking it down in the rushes back of his blind. He reported a good shooting point at a spit of land which ran out into the bay, over which he thought the geese would fly well in the morning. Mr. Dubois had had no sport at all. We were on the whole not discouraged by the developments of the first evening, and after supper lay down to sleep, impatient for the morning. We now had eight in our party, almost too many for the Novice's accommodations, so that Guessaz and I bunked on the deck (which we found was made of hard boards) the others having more sheltered but more crowded quarters below on the bunks or on the floor boards. We did not sleep very soundly, and oft in the stilly night I could hear a grunt of unrest from below, and see some unfortunate sitting up a while to rest his ribs.

THE TWENTY-GUAGE DUCK GUN.

I learned something that evening about shooting, in re-

gard to which I should have remained very skeptical if I hadn't seen it. No doubt many Forest and Stream readers have read much about the small bore gun clubs of San Antonio, and have noticed the great scores made at the trap by such men as Joe George, Gus Critzer or Oscar Guessaz. Probably a good many have thought that to use so small an arm as the 20-guage was carrying fashion to an extreme, and that at best such an arm would be worthless in the field. I don't know but I had a sniff or so about me for such extremely small guns, though I long ago laid aside the ten-bore for any sort of shooting whatever, as a great many others are doing of late years. I supposed a man might be able to kill a bird once in a while with that sort of a toy gun, but it seems to me that it could never be a really practical weapon, or one with which one could do anything like regular work. When Guessaz took out his little 20-guage, weighing less than six pounds, with all its European bravery of gold inlaying, ornamented check-piece, gilt buckles for shoulder strap, and all that sort of thing, I was disposed to guy him about his fire-cracker gun, and to intimate that, in my opinion, he couldn't kill a meadow lark with such baby shells (he only used 2 1-2 drams of American Wood powder, and less than three-quarters of an ounce of shot.) But Oscar was plenty calm, and allowed he had seen other people who had been of the same opinion as the rest of us were. In deference to his feelings we did not make it a personal matter, but kindly told him maybe he could worry down a duck once in a while, if it was a small duck. He went ahead just the same, and put a hundred shells in his vest pocket and tucked his baby gun under his arm. (I expect next to see him with a gun over his ear, like a pen-holder.) We had gone only a little way out into the flat that evening when we saw a mallard coming in, and dropped in the grass for the shot. It came to Guessaz, and at the crack of his gun—which sounded faint and dry like the snap of a whip—the bird folded up quite dead, at a good tidy distance for any sort of gun. All through the evening the same sort of thing kept up, Guessaz killing birds just as far as any of us, and doing it very much more regularly than I could with the excellent 12-guage I was using, for Guessaz is a very fine duck shot. It also came to my mind that he killed that white goose out of a flock into which I fired twice without effect. It was very evident in a short time that one had entirely underestimated the efficacy of the 20-guage gun as a weapon. With the load of No. 5 shot, which it handled so nicely, it was a hard-hitting and practical arm, and one capable of doing all one could ask of it. Guessaz shot right out of the same blinds with all of us, and I could not say that any of us had much the better of him at any sort of shooting. This was one of the continual surprises to me on the trip. No doubt a great many who read this will continue to think as I once did about the little gun, and say it is not fit to take on a duck pass; but if these should see what such an arm can do in actual results, I think they would change their minds, though still they would remain surprised. To speak of a 10-bore in San Antonio is to lose caste, and they even consider a 12-guage as too large for a really sportsmanlike gun. They import these small guns from Germany. They are neatly made and are good in balance and proportion, though the engraving and finishing are in a taste not altogether approved by our notions. The guns are bored perfectly for nitro powder, and they are shooters as sure as you are born. After we had learned this, we all apologized to Oscar Guessaz, and told him he was a perfect gentleman, and an artist of high grace in the seemly craft of wild fowling.

AFTER THE HONKERS.

But all this by the way. The morning was to come, with its great flight of geese across the bay, and it may well be supposed that the continuous melodious honking set us all afield early. Dick took his turtle-back to the mouth of the little creek, and Bob Burton took stand further along the creek. Messrs. Dubois and Peabody went to the foot of the bay, and Guessaz and myself went out exploring again along the high ridge over which the geese were passing. We found the wary old honkers hard to fool as usual, but at last we made a stop at some clumps of mesquite and were rewarded by seeing a bunch of the great birds coming directly toward us, Guessaz at that time being about fifty yards from me. At the faint crack of his little gun, one great gander fell dead almost on top of him, and another fluttered down into the water on the pond beyond. The skein swung toward me, and though I had a longer shot than he, I did manage to get a wing off one goose, despatching him later at the edge of the pond. Then we had a long walk up to the head of the pond and found country where fine stands could be made with decoys and boats, though that would take a pull of two miles over mud and water—hard enough, as Guessaz found it when he took Dick's turtle-back around to retrieve the two geese we had dead on the water. (The mud was bottomless, and we dared not step beyond the bank.) All along the inland ponds we saw numbers of pelicans, and a few of the great white bugling cranes, whose wild music could be heard at great distances, and one might say at nothing less than great distances, for we found these birds the wariest of any on the coast, and far harder to kill than geese. There did not seem to be as many ducks as geese in this section, though there were large numbers of the sickle-bill curlews, willets and other salt-marsh birds. The water in the ponds was of course all salty. I am inclined to think that the chief flight of the fowl was inland to some fresh water tank, as all the coast fowl are said to go to fresh water at least once a day. The main roost of these geese was evidently at some point further east along the coast, they following their route for reasons of safety.

When we rounded up at the schooner for lunch, we had each killed a goose or more, to say nothing of ducks, excepting Bob Burton, who still remained gooseless. After lunch, Guessaz and I took him with us, telling him he would certainly get that goose unless something very singular prevented, for we had located the flight very closely as we thought. But here again the wariness of the goose bird was to be figured on a little. The old fellows had noticed us on the ridge when they came in at noon. When they went out that evening they did not come over that ridge any more, but swung away out over a second ridge. We could hear Peabody and Dubois pounding away, a mile from us on the point, but for a time we got nothing to do. Along toward dusk Dick joined us on the edge of the bluff, where we were lying in wait for Bob's goose, and we spread out in skirmish line about 200 yards. At last some few straggling bunches took a notion to come our way, and with the usual percentage of failures to kill birds, which seemed big as flour barrels, and near enough to take hold of, but which were really long gunshot away, we did get down some few of them, three out of one flock, I believe. That is to say, everybody got his goose but Bob, while he was the very one we wanted to get one. The birds favored everyone of us but him, and the only good chance he had he did not see until it was too late. A fine flock of honkers came right over Guessaz and me where we lay, and seeing they were headed right over Bob, we did not fire at them. They went almost over him, but he did not notice them till they got past too far to score upon. So after all he went to bed that night gooseless. The rest of us were very much elated over our success, and our ice box began to show a very comfortable look. Col. Bill Peabody was riotously happy, and Wilbur Dubois, the quiet man, fairly beamed with calm content. These two had a nice story of a plesaant day together in a comfortable blind, and a good bit of sport, including a swim in the bay, which seemed to them an epoch of note. Down in the cosy cabin of the trig ship Novice, we were a very cheerful and I fear a rather noisy crowd, and we voted the trip a success, though Guessaz continually turned up his nose at the shooting, and told us we must pull up and go with him to some place where the duck shooting was "something like shooting," as he expressed it.

STILL MORE GEESE.

On the morning following we concluded to have one more go at the geese before we left for Rockport again, and a very pleasant time we had of it too. It was just cool and windy enough to make it pleasant walking in the early morning, though on nearly any day in that climate unless there is a norther on, one is obliged to lay aside his coat in the middle of the day. The skipper of our craft said we were very apt to have a norther that day, and as it transpired we did have, but not till afternoon.

This time, in order that Bob Burton could be sure of getting his goose, it was arranged that he should go with Mr. Dubois to the blind out on the point at the lower end of the bay, that having been found a fine fly-way. Col. Bill Peabody cast in his lot with Guessaz and myself in turn, while Dick stuck to the mallards for a time on the creek. It came out this time that Burton had again made a mistake, for at noon he came back without a goose, while Col. Bill, who went with us, had experienced difficulty in defending himself against the geese which had tried to fly into him. We three certainly did have a most enjoyably morning with the honkers, and one in which it was fair play and a hard game on both sides. We had no decoys, and it was all flyway shooting. The geese had learned what we were doing in that neck of woods, and used their utmost cunning to circumvent us. Some of them kept to the shore line of the bay and crossed in behind us. Others now reversed their flight of the evening previous and came in back of us along the ridge we had left. All those who came over the high grounds rose a little higher in the air, and kept so sharp a lookout that we found it hard to get a shot at decent range. We could hear the great streaming flocks honking as they crossed the bay, two miles from us, and at a distance of a mile, I am confident, they could see the slightest movement made by any of us along the bluff where we were hiding and looking over. The bluff was the natural bank of the series of pond-holes I have mentioned, and at points was fifteen feet high, broken at places by small draws and ravines, which made up the level of the plateau, over which the geese were crossing. There were such numbers of them that it seemed sure some must come over us, yet so closely did the wise fowl watch every suspicious movement, and so far did they swing from any bush or tuft, or grass big enough to offer cover, that we put in nearly an hour without a successful shot. Evidently the Canadenses knew their business.

A SHALLOW BLIND.

In the course of our investigations of the bluff side, I found a little break where the water had washed down the face of the bank. The cows had taken advantage of this to lay out a path down to the flat at that point, and the water had in turn washed out the cowpath into a series of narrow gullies. At that point where the path touches the grade of the plateau it was about a foot deep and just wide enough to contain a man who was willing to make himself small. Along this path I walked till it became too shallow to offer any concealment, and then lay down in it flat on my back. Peabody and Guessaz were just back of me along the bluff side. I had hardly gotten down before I heard the honking, gabbling and screaming of a great flight of geese coming, at first faint, then loud, then apparently almost deafening. They were headed straight for me as far as I could tell, but did not dare lift my head, though I did think I would have given about a thousand dollars to have just one little peek at them as they came in. It seemed to me I could hear them coming for an hour, before they got over me, and the last moments were a time of agony, so that I only held myself down by a supreme effort of the will. At last I could see the advance guard, but though they looked close, I knew they weren't, and so held my fire. Though I remained perfectly still, the first goose over the ridge knew what I was at once he saw me, and then began an awful squeaking and calling out of scared geese, and a confused climbing and hurrying to get out of the way. It was too late, for a detached bunch further back and close in to me came within forty yards (I thought), and sitting up swiftly and with great sense of relief, I cut out one great gander, which fell with a most soul-stirring thump on the hard ground. The second barrel did not count, and I was not surprised at it when I found my goose was killed at fifty-three paces. We had nothing larger than No. 4's with us, and so long a shot was rarely successful. If we had been prepared with larger shot we might have killed more geese. It takes pretty hard shooting to kill Canada geese at over fifty yards, and it is very rarely one is actually within that range on an open flyway.

As I ran out to pick up my goose, I looked back of me, and behold, there were my two friends lugging up not only one, but three geese, very much to my surprise, for I had not heard them shoot. It seemed that part of the great flight had swung over them just as I fired at my birds. With his little pop-gun, Guessaz killed two dead at the first shot, though he missed counting with the second. Peabody got down one. We were all feeling pretty good by that time, it may well be supposed.

COULDN'T SEE THE CHANCE.

Up till about noon the geese continues to pass over our strip of land in vast numbers, and I am free to say I never saw such a flight in all my life in any country. We added a few to our score by hard shooting and close crouching, but the great fellows for the most part proved as usual quite able to take care of themselves. One most amusing circumstance occurred, which served to give us all a good laugh at Peabody's expense. A large string of honkers were heading for us, and Peabody and I were in good line for them, he well concealed in a deep, round washout in the draw, and I lying flat down, though in full sight in a wider and shallow part of the draw from which I did not dare to move for fear of being seen by the birds before I could get under cover. We had no goose-call with us, but being able to do a little bit of honking without one, I was calling away as loudly as I could to the approaching flock, getting a good answer now and then. Both Peabody and myself were gazing fixedly over in the direction of the incoming flock, when all at once I saw a part of the main body which was on ahead and swinging wide of us, turn square up wind when they heard the call, and make directly toward me.

They turned just at the place where the draw came out level with the plateau, and came right straight down the draw, flying not more than twenty feet above the ground, and not saying a single word as they came, evidently bound to see about that calling. As I lay on my back I could see them coming right at me, and knew they would pass directly over my companion, but I could also see that he did not know they were coming, for his eyes were set in a wild glare on the honking legions out over the flats which were still coming on, but apparently about to pass too wide for a shot. I did not dare to move a muscle, and I could not make a sound to let him know. All I could do was to give a honk once in a while, soft and low, at which he only crouched the lower and glared the harder right ahead, while the birds were coming down at right angles to that direction. They came almost over him, and then I called out to him, "See, shoot! Right over your head!" Startled and at a loss to know what I meant, he sprung up with gun at a "ready," and looked wildly every way in the world but the right one. I wanted him to have a shot, and he must surely have killed at least two, for they were not twenty yards from him, but of course it was all over in an instant, for the birds veered and swung out as soon as I rose. I waited till the last instant and then fired over Peabody's head and beyond him, killing one fine big goose at nearly fifty yards; Peabody being about thirty yards from me I should think. It was then too late for him to get a bird down, and he lost the best shot any of us had on the trip. But as it was, we had a fine string of grand birds to carry in with us, six or seven I think it was, or maybe more, for I made no note of it. We had a most delightful morning on that high wind-swept plateau, and a finer sight of geese one could not ask. We killed only the big honker, or Canada goose, but there were all sorts in the vast clouds and strings that crossed over. It was keen sport to lie flat in the short grass and watch them coming, wondering whether one was to get a shot or not. I had no better fun to my notion on the whole trip South than on that morning.

A CHANGE OF SCENE.

When we came to count up our spoils we found that we had done no irreparable damage to the wildfowl, for at noon our ice-box only showed fourteen geese and a couple of dozen or so of ducks. On a three days' hunt this same fall, on ground a little further to the east, along the coast, Judd Bludworth and another shooter, both shooting for the market, killed 164 geese. We did not want to make any such killing as that, but still, having a good notion of some goose shooting, we were willing to listen to the importunities of Oscar Guessaz and pull out for better ducking grounds. Meantime our promised norther began to materialize, and as this would give us a fair wind home, we ate a hurried lunch—most of us in wet clothes, for it came on to rain suddenly as we were coming in—and hoisting anchor, tore out of the bay under a ripping wind which made the skipper reef everything close down. Our passage in to Rockport was a little wet, but very fast, and at 6 in the evening we made the pier. Mitchell, the cook, was then very soon working over such a dinner as only the Texas coast can produce—duck, oysters, pompano, trout, etc.

Thus ended the first chapter of the vacation of Col. Bill Peabody and his friends, and everybody was pleased but the man from San Antonio. "Get this car out of here," he said, "and let's get over to Corpus. I'll show you some shooting." And he being constituted high captain of the chase and minister plenipotentiary, we told him to let her go. So one bright warm winter morning we found ourselves about forty miles further west on the obliging Aransas Pass Railroad, side-tracked in Corpus Christi, and ready for a closer acquaintance with some grounds of which we had heard great accounts. Further deponent saith not till next week.

Spring in the Northwest.

SEATTLE, Wash., March 29.—Spring is here with us. Ducks have gone north, flowers are beginning to bloom, humming birds have arrived, grouse are hooting, and sixty-six big black bass have connected with the business end of my fishing outfit so far this spring; biggest one weighed four and a half pounds. General run of them weigh two pounds each. Minnows for bait; not taking a spoon yet. Some spearing done, and it should be stopped square off. Trout season opens next Monday, and they are rising to natural flies in the lake now. Bass were planted in Lake Union six years ago, and are plenty to afford good fishing now; of these, more anon. I keep finding a new Forest and Stream man once in a while, and always find them "the best people on earth."

E. C. COMANCHO.

The use of Palmer's Set Line Snaps, gives satisfaction and does away with the annoyance attending the old methods of set line fishing.—Adv.

Natural History.

THE SILENT ENERGY OF TREES.

One does not realize when in the forest in early summer, that all around there is a silent, ceaseless mysterious force at work, greater in its aggregate hydraulic power than any engine ever constructed by man. It is the mechanical circulation of the life element of the tree, one of the marvelous things of nature.

This life giving substance, this silent force, is largely water, and contains in solution the elements needed for the nourishment of the tree. It is gathered by the roots that reach out in all directions, like the arms of a giant cuttle-fish, and thence taken up the tree through the cells, or veins, throughout the tree, even to the tips of the tiny twigs, and thence enters the leaves.

The outer woody portion of the tree, or that which lies next to the bark, is commonly known as sap wood, and varies in thickness in trees of different species, as well as in trees of the same species, age and size. It is influenced in its growth by location, soil, exposure and other physical conditions. In trees of considerable size the sap wood is often not more than one inch in thickness, while in trees of small size, it may be seen several inches thick. The porous and yielding character of sap wood and its cellular structure, afford a convenient medium for the passage of the sap, or life element, for distribution throughout the tree.

The leaves are wonderfully constructed, and perform singular duty. They are the catch basin and escape valves of the circulating element. In the back of the leaf are numerous breathing organs, or lungs, which partly absorb the circulating element gathered by the roots and also assist in throwing off the moisture.

When the life element, which the roots have gathered, reaches the leaves, a process takes place which separates by chemical action most of the water, and throws off the surplus as vapor into the air.

There is, however, enough water retained to act as a circulating element, a portion returning to the roots, during which time the digesting process goes on in its assimilation with the food substance. The number of lungs in a single leaf seem almost incredible. As many as 160,000 have been ascertained to occupy one square inch of surface.

Dr. Parker says that "an evaporation from the leaves of a single tree would be equal to two and a half gallons daily." Another has estimated that it would equal two hundred and twelve inches of rain fall, or one foot of water from a surface equal to fifteen feet square.

For evidence of the wonderful working power of tree sap, strike an axe into a young and thrifty tree of deciduous species during May or June. Upon withdrawing the axe, a stream will trickle down like blood from the newly made gash of an animal. If girdled at such time the cells or arteries having become severed, the tree will soon begin to wither and then die.

A striking instance of the silent energy of trees came to my notice many years ago, while exploring the then vast forest wilderness of the upper peninsula of Michigan. One day during the early part of May, with two Indian packers, or carriers, we had reached the divide that separates the waters of Lakes Superior and Michigan. Fires a few years before had denuded most of the original forest growth, and for miles we traveled over sandy plains, in places partly covered with a growth of jack pine. The sun's rays seemed scorchingly hot. We suffered much from thirst, for not a drop of water could we find. About sunset I noticed in the distance a clump of heavy timber, and pushing forward to reach it before dark, found it to consist mostly of sugar maple and red birch. This timbered spot was in a depression of the surrounding surface, and covered an area of two or three hundred acres. I instructed the Indians to quickly unsling their packs and hasten in search of water before darkness set in. They hurried off in opposite directions, while I prepared to camp. The evening had grown quite cool, and I looked around to find suitable wood for fuel during the night. Often when camping I had used the red birch, and found that it burned freely while green, and gave cheerful flame without crackling sparks, like some other kinds of wood, but burned down into quiet, glowing coals, which lasted through the long nights.

Finding a young and thrifty birch near where I had made camp, I took an axe and struck a vigorous blow into the tree. Upon withdrawing the axe, I was astonished to see a stream of sap gush forth and trickle down upon the leaves at the roots of the tree. I then cut a V shaped groove around a portion of the tree, hollowed out a piece of wood for a spout, struck a deep blow into the tree at the base of the groove and drove the spout into it. Quickly unloosening one of the packs, I took from it a half-gallon vessel, and placing it under the spout, in a few minutes there was enough cool, delicious sap in the vessel to satisfy my longing thirst. When the Indians returned—who reported that they had found no water—the vessel was running over with sap, and they were not slow in emptying it. That evening and the next morning, having no water, we made coffee from this sap, and it was as fragrant and refreshing as the Mocha sipped in far distant lands.

Guttard demonstrated the sweating operation of trees, by an experiment in which he enclosed the branch of a tree in a glass tube containing a neck, which was inserted in a flask and the whole hermetically sealed to prevent evaporation. The moisture oozing from the branch gathered in drops upon the sides of the tube, and trickled down into the flask below. After remaining in the flask twenty-four hours, when opened, it was shown upon weighing that the fluid exuded from the branch was an ounce and three drams, while the branch weighed only five drams and a half.

The physical energy of the sap of trees has been estimated as fourteen times greater than that of the blood in man.

Hales, while experimenting in this direction, fitted a long tube to the stem of a young vine, and ascertained that the fluid from the vine rose to the height of forty-four feet. Scientific experiments along various lines in this interesting field have been many, and from these we are led to believe that forests exert influences that are in many ways beneficial to man. In carrying out the plan of creative design, the silent energy of trees no doubt perform an important part of this work. There is much yet to learn, for as an eminent scientist has said, "there is a vast residium of unexplained phenomena."

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18. Madison Square Garden, New York.—First annual Sportsmen's Exposition.

ANOTHER TRIP TO CEDAR POINT.

"Breathes there the man with soul so dead,
Who never to himself hath said,
This is my own, my native land."

And every true and loyal son of old Maryland should hold in affectionate remembrance the gentle old bard for striking that one golden chord on his "harp of a thousand strings." Especially do we, sons of old Kent, as we drive down through Maryland's garden on the eastern shore, and note its broad, fertile acres, hemmed in with fine orchards of peach and bits of woodland primeval, while the old colonial mansions crown the numerous rivers and creeks that belt her around like some sylvan queen of old. It is a land of milk and honey, and though the ducats may be scarce, her horn of plenty is never empty. To the sportsman-epicure it is Elysium, for here, when he drops the canvas back or red head (wild celery fattened) the chances are that the bird will strike the water directly over a diamond back terrapin, which in turn will be over or in sight of an oyster as large as a saddle rock. Humor, wit and hospitality are the traits of her sons (and though the writer is a non-resident of twenty years) he, like every one else, finds the latch string on the outside.

The club is composed of gentlemen of the county who, during the season, take every advantage of its fine shooting of ducks, geese and swan. What red-letter days of our lives are those spent at the old club house, nestling beneath the giant cedar tree, out on the point, with the broad waters of the Chester River all around us, and of the Chesapeake only a mile or so back of the house. There a man is only as old as he feels, and the abandon of youth is common to all.

On reaching the club house with my kind host Wm. S. Walker, Esq., as true a sportsman in every sense of the word as ever glanced down a gun barrel, we find several jolly members already there, including Mr. H., of Washington, and Walton, with the swan-like voice. We stow our traps away for the next five days, amid a chorus of welcomes, and set about preparing luncheon. It being about Thanksgiving time, out come the fresh spare-ribs and hominy. "Hog and hominy!" do I hear some one slightingly remark. Go slow, brother. Possibly your acquaintance with the hidden gustatory secrets of the Southern frying pan is as slight as the aforesaid pig's was of Greek. When the club's chef, Mr. Walker, grasps his old shot bag fender and brings the hissing skillet to view, if his critical eye pronounces the rich brown of the meat. "just right," its dollars to cents you would have eaten the whole spare rib, just as I did.

Slinging shell bags over shoulders, we are followed by Toler, one of the best duck dogs that ever plunged into water, and make for the landing to take the batteau on our way out to the island. This island, off shore about a quarter of a mile, is a hundred yards long by twenty wide, with a blind at each end. Here the club shoots on the days they forbid shooting in the creek blinds, which are on the other side of the point. Reaching the island, we put out nearly a hundred or so decoys, and take positions in the blind ready for them. Presently we see in the distance a dark line just skimming the water on their way up the river in our direction. How you rivet your eyes on them, until it seems as if your fascinated gaze must in some way or other help them to see the decoys. This bunch of redheads do see them anyway, whether hypnotized or not, and as they come off abreast of us they make that sudden and graceful sweep in, still in flock formation, to join their new found friends. What a pretty picture it is, and where is the man to whom it will ever grow old, as he sees them set their wings and sail in to the decoys, until within a few yards of the outer ones, when they throw their whole body up against the wind, and with necks outstretched to balance their dropping feet as it were, slowly settle down to light. Just as those two feet are beginning to drop is the time to see that your gun sight is bearing exactly between them, and if so, pull the trigger—which we do. As the smoke rolls off, five or six nice fat ducks float in the water before you, and what a pleasing sensation fills you as you note the particular one you remember having "had it on" float off on his back, kicking his paddles in the air to show he requires no shooting over. Toler brings them in, and we place them on their breasts to let the meat drop, the only way to lay down a freshly killed duck. This is a good beginning we think, so out come our pipes as additional consolation, and Mr. Walker resumes his man-of-war tread in his end of the blind to ward off cold feet.

Here come three "buckets," as the coot is known and termed in these waters, and with their cootish characteristics they decoy up nicely, as you think, only to try and dart across the decoys, but we are on to them, and as they make us a nice left driving shot, the shells explode the exact instant the guns find a straight line between the tip end of their wings and their bills, resulting in Toler having three more jobs on hand. 'Tis thus the pleasant hours pass away, until taking up time comes, when we pay the piper well for our fun, as the taking up of a hundred decoys with ice making on your hands as you wind the strings around them, is no joke on the fellow doing it.

Supper over we settle down to solid comfort beside the roaring wood fire, and joke and story follow in quick succession—one on my excellent host is too good to let pass. His reputation as a shot is second to none. A former factotum of the club, known as Sammy George, now gathered to his fathers, possessed a droll humor: "I was crawling down on a flock of forty black ducks the other day," he used to say, "and when I was within two gunshots of them the old drake stuck his head up and took a look. 'Mr. Walker!' he said, and went on feeding Then an old hen stuck her head up. 'Mr. Walker!' she said, and went on feeding. Still another 'Mr. Walker!' and another 'Mr. Walker!' and they all went on quietly feeding. Presently I got within gunshot of them and blazed away, killing half the flock. Lordy, how they got out of that, saying 'Another gunner! Another gunner! Another gunner!'"

The following day was a creek shooting one, and the dawn found us in the muddy blind. An oystering pungy had anchored in the north of the creek over night, and we were afraid it would interfere with ducks coming in the creek. But no. "Mark! around Cedar Point," and the ball is opened by a fine flock of bay blackheads swinging in the creek. It is a large bunch, and we know that in consequence they will be chary in tolling. Spying our decoys, they draw in, and we think everything fine, and they are our meat; until suddenly they flirt off about seventy yards out. "Here goes, anyhow," says Mr. Walker, springing up and levelling on them; and as he is always "loaded for b'ar," his single B's drop two dead as Hector. They didn't think our invitation with 4's was urgent enough, and kept on up the creek in the way our fathers say an election in Maine went for Gov. Kent.

"Now gentlemen, in case any single ducks are flying, it's turn and turn about, and L., you lead off," says Mr. Walker. The sun had just thrown his first glance above the horizon, when, looking over towards Hail Point. I saw a duck swing into the creek from his flight down the river. My low call of "Mark" was instantly followed by that duck being able to see nothing about that blind, save possibly the crowns of our dead grass colored caps, but he did see the redhead decoys as he came nearer. How prettily he sweeps in to join them, being only eight or ten feet high, and sets his wings to sail in for his light, which he does until nearly up to the decoys, when he resumes them suddenly and continues his flight right over the decoys and on toward us in the blind, rising as he comes and describing a half circle as he draws off. "By George, he's a big one," I say as I rise in turn for my aim. He saw me and made extra efforts to get out of it, now that his worst suspicions were confirmed; but too late, my boy, I hope, as I feverishly seek his bill over my gun barrel, and see him "shoved up" in the air as the charge of shot hit him, and pretty well ragged up, my first canvas back smacks the water 'neatly bagged" as my companion said.

About 10 o'clock the wind swung around to the east, and it rapidly grew overcast, beginning to rain in a short time. My companions left for the house, only a hundred yards or so distant, for their oil skins, leaving me on guard. And now happened one of those incidents regarding the peculiarities of ducks that are paradoxical. We all knew the extreme shyness of wild ducks, their suspicion, and how at times it seems that they can almost hear you think. Well, my companions evidently found the clubhouse attractive, for they were in no hurry about returning. At length I became cramped from sitting in one position in the boat, which the rising tide had caused us to haul up into the blind, and stood up in it to restore my circulation with my back to the decoys, the whole of my body showing above the blind. As nothing had been flying, I relaxed my vigilance and stood up, looking towards the house for my companions. Presently I heard them coming through the path of rushes, and as the head man came in sight I saw him stop suddenly, and burst out laughing, exclaiming "Will, you are a dandy duck-shooter, just look at the blackhead I scared up right out of the middle of your decoys." Yes, it was a bad one on me, that duck had actually decoyed and lit in the midst of them, and my whole body was in plain view. I can only account for it by the cardinal rule of ducking—keep still, which I happened to do. The rain set in heavily and spoiled the shooting for the rest of the day.

The first gray streaks of dawn the next day found us out on the island, and the inner blind contained Walter and myself. We had out, besides forty or fifty decoys, three swan ones also off on Walter's right, I sitting on his left. The morning gave no signs of promise, as the sun rose on a gentle southerly breeze, which caused all the fine ducks to remain bedded off in Sandy Hollow, and nothing flew but a few trash ducks, such as sou'-southerlies and buckets, several of which we caused to miss appointments elsewhere they seemed in a hurry to keep. We had just lighted our pipes and were sitting quietly enjoying them, when W. suddenly touched me on the knee and whispered "don't move, don't turn your head, keep quiet as death, here come three swan right in to the decoys." "All right," I said, "let them draw in well, and save me the head swan." "Yes, I'll do it, but see that you kill him." In spite of his injunction my head slowly gets around somehow and there, sure enough, were the three grand birds, coming right on to us only a hundred yards off and twenty high. What in the world has suddenly got the matter with my heart? does the old thing want to crack a rib, or jump out of my mouth, which! Steadily they bear down on us, and are so close W. thinks it best not to call. When they nearly reach the decoys, their quick eyes undeceive them, and they veer off, but too late, as they are now within fine gunshot. "Now let them have it," cries out W., as the leading bird draws out opposite me, and he springs up with old reliable eight-guage muzzle-loader in hand. Its boom is followed by the middle swan's neck curling up in its tumble, and it displaces nearly a hogshead of water as it strikes the river, as dead as Adam's grandmother. What became of my head bird? Let's draw a curtain o'er the scene. I wasn't after swan, anyhow. Ducks are more my size. But there is one thing you can bet your last penny on, and that is I shot—but where—I have not found out yet. The only satisfaction I got out of that old head swan was seeing Walter touch him up with his second barrel when a hundred yards off so that we thought he would throw his tail feathers out of joint, and we had no doubt that some oysterman over on the bay would enjoy roast swan as the result of that shot. The ubiquitous Toler quickly brought us the dead swan, which proved to be in fine condition, and I would have given my little finger to be able to say "I killed it."

The morning passed with a few more shots at ducks trading around, though with indifferent success. During the early afternoon, while nothing was flying, all assembled in the blind talking of various when the question arose as to the merits of ducks for the table. Mr. Walker remarked

opinion ducks are like the Irishman's whiskey, none are bad, but some are better than others; it greatly depended upon their stay in the oven." To this, Mr. H., of Washington, volunteers the information that he could tell almost every duck by its flavor, especially redheads and canvas backs. That was enough. Instantly the wink went around. Next morning Mr. W. informed us that the provisions were running low, and some of us would have to contribute ducks toward supper that night. "I'll give a pair of redheads,' "I'll give a pair of blackheads," and so on until more than enough were secured. Mr. Beck was detailed to superintend the picking. Now of all the ducks on the Chesapeake, the coot, or bucket, is held in the lowest esteem; but, of course, he saw that a bucket was dressed. That evening when we were all drawn up around the table, with appetites a yard long, one chose this and one that duck, and got it. "Which will you have, Mr. H., redhead or blackhead?" says the obliging Mr. B. 'Redhead, thank you," and the first half of the breast of the bucket was handed over to him. My, how we all did enjoy that supper (and I must say, the ducks too.) "How's your duck, Mr. H?" says Mr. B. "Perfectly delicious, splendid, thank you; I never enjoyed a duck more." "Have the other half of this redhead, wont you? I've saved for you?" "Thank you very much, I believe I will,' says Mr. H. The breast of the bucket is handed over to him, and in less than ten minutes the whole of that old bucket is safely stowed away beneath his capacious vest. They were a gentlemanly lot, those good fellows. They knew when to lay down a hand. And I have no doubt that when Mr. H. reads his Forest and Stream of this issue, as all good sportsmen do, he will know for the first time of the manner in which the Cedar Point men judge of a man's taste for wild duck.

The next day, while in the middle blind on the creek, an old sou'-southerly floated in to the decoys, and then settled down across the water two hundred yards off and went about her business of filling her craw full of small fish from the river's bottom. Nothing flying, Mr. Walker said, "L., try her with that rifle and see how close you can come to her." It was a Winchester 32.40 which a guest had been using on deer in the Adirondacks in September. I took a careful sight and let go, the smoke blowing back in my face. 'By George, you've killed it," they exclaimed, but I saw nothing in the water.' Presently the old southerly came up forty yards off, twisting her head around and looking generally as if thinking "what in thunder was that?" "Well, you hit exactly where she was anyhow—try her again, and rest your elbow on the edge of the blind." With a feeling that I had better let well enough alone, I at length consented, and took a careful aim at her side. "You got her this time," they cried, and sure enough, I had—so you see the difference of shooting at ducks even with a rifle; and at swan with fifty more chances, a matter of nerve. Walter duplicated the shot by cutting off the neck of a water-witch. Walter also saw me shoot the tail feathers out of a goose on the wing with the same rifle, and yet I couldn't kill a swan at forty yards. The memory of that old swan galled me.

And thus it was, gentle reader, if your patience has followed me this long, that we Marylanders spend our days at old Cedar Point, the mecca of our shooting hopes. And as we take up the decoys for the last time on every Saturday morning, we begin to count the hours again until we shall throw them into the water the following Tuesday. J. L. B.

A QUAIL HUNT ON HORSEBACK.

Probably very few sportsmen of the New England States have experienced anything half as delightful as a quail hunt on horseback. Taking together the pleasure from the saddle, the gentle, cooling breeze wafted through the resinous pines, the beautiful Southern sky, and above all, to watch the motions of a good dog as it moves about eager to catch the scent so pleasing to its nostrils, makes a trip of this kind the beau ideal of a sportsman's life.

The country of Southern Florida is well adapted for horseback riding, being flat and free from underbrush, and scattered over it is a growth of the stately Georgia pine, growing forty or fifty to the acre. The short, thick growing grass or "rough," as it is here called, covering the earth like a soft carpet, affords a hiding place for innumerable quail.

Rising with the sun one morning, Cousin John and I took plenty of shells and after eating our breakfast, mounted our steeds and rode through the woods, accompanied by our setter dog Fanny, in search of Bob White. Our dog soon came to appoint, and we dismounted, throwing the bridle reins over the horses' heads, and leaving them to feed, while we went forward with guns ready, waiting for the flush of the birds. As they rose, we each dropped one bird, and marked down the covey in a thick bunch of palmettos, which grew about to one's knee. Having secured the dead birds, we started after the scattered flock. The dog soon found them, and two rose; one of them to fall a victim of the gun, the other getting away safely, but as I fired, two deer, which had been lying in the palmettos, almost under my feet, rose and jumped away as if there was no need of particular hurry, and indeed there was not, as it was close season for them and we were loaded for quail. They made a picture not easily forgotten, as they jumped away almost without muscular effort. We got one more bird out of that covey and left them, as they had now gotten into the thicket of the palmettos, where it was hard to flush them.

As we were passing an orange grove some distance on, our dog pointed in one corner of it. As we dismounted we saw a notice "no trespassing," but as no good sportsman would call off his dog on such a gamey point as Fan had, we determined to risk the wrath of the owner by chancing a shot. We went in and the dog started forward, roading them first out of the grove, and we were in hopes of being on safe ground in a moment, but soon she turned and went into the grove again, almost crawling along the ground, and we knew the birds were near. They rose with a flurry of wings, about twenty of them, and we dropped four out of the bunch. We got two more before they flew into a thicket of bay bushes, which made it impossible to follow them. These bay bushes grow at intervals throughout the pine forest, and make a safe hiding place for the flushed coveys. Many flocks of quail might be entirely killed by ruthless hunters if it were not for these harbors of refuge for the frightened little fellows. No man or dog can drive them out, once they seek safety there. We were not disturbed by the owner of the grove, and soon left his premises. It is not often one finds such signs in this part of the country, and most of them are posted to warn off the ever gay and festive tramp, who is always found where fruit is plenty and work scarce. I do not mean that a deserving man cannot find work in this country, but none of these rough and "reddy" individuals ever lost his eyesight looking for it.

We continued on the trip, and soon our dog showed signs that told us that more quail were near. We left the horses and hastened to where she was pointing. She then moved about in nearly a circle, and came up to the windward of the birds. We knew that they lay between the logs and ourselves, somewhere near the base of a large tree, and as we moved forward again, the birds rose. We were lucky enough to drop four on the rise, and following up the flock succeeded in getting three more birds.

It was near noon-time, so we concluded to eat our lunch, feed our horses, and then ride home. We saddled up again after eating and resting awhile under the shady tree and started homeward, well satisfied with our forenoon's hunt.

On our way home we saw some wild pigeons feeding in a field, and John sat down at the edge next to the woods to "knock" them, while I went around the field to drive them over him. I flushed the pigeons, but John must have been meditating, for he allowed the flock to pass, and pilled only the last one that flew over.

We had bagged that day seventeen quail, one fox and a wild pigeon, which was sport enough for one day. Taking into consideration that we had to eat all the quail we killed, we thought we got that day sufficient, as we had no desire to challenge any Massachusetts champion quail eater.

This is only a sample of the many happy days I have spent in the South, and I hope it will not be many years before I can again sit in the saddle and follow the dog after quail on horseback. WEB WORCESTER.

NEBRASKA SHOOTING.

HASTINGS, Neb., April 7.—The Nebraska Legislature has adjourned without passing the much needed game laws, and—if the daily papers are to be believed—without passing anything save vicious and boodle-laden measures.

The bill, as framed by the Nebraska sportsmen, was in the main a good one, though it had some objectionable features to my way of thinking, chief of which was the clause compelling non-residents to pay a license of $50. The arguments used by those in favor of it were that it kept out market hunters and gangs of so-called sportsmen who came in private cars, killed game by the wholesale and left it to rot beside the track. While its supporters were honest and sincere, it always looked to me as one-sided and selfish in the extreme. In the first place, the majority of the market hunters are residents of the State and it would not affect them. In the second place, a fee of $50 would not keep out the market hunter. If compelled to pay it, he could make several hundred dollars by shooting for market; and again, as this class of men hunt mostly in a thinly settled, and often entirely uninhabited part of the State, where they would not likely be interrupted, it would be hard to collect it. If found by a game warden, they would claim to be residents of the State, a thing hard and expensive to disprove.

The game butchers, on the other hand, that come in private cars are men of wealth, or they could not afford the luxuries and expenses incident to traveling and living on Pullmans, and a license of $50 or even more would not materially increase their expenses, or if it did it would cut no figure with such men.

The real prompter of this clause was the infamous Blow bill, of Illinois; this clause, like the similar one passed by North Dakota, was but an echo of the recent agitation in Illinois.

The best feature of our proposed bill was promptly killed in committee; that was the provision for a game warden and deputies. Without such officers, and good ones at that, the State might just as well wipe all game laws off the statute books, for all the good they do. Illegal and wanton destruction of game and fish go merrily on from Jan. 1 to Dec. 31, and if there have been ever an arrest and conviction I never heard of it. Market shooters and fishermen carry on their trade openly and above board all the time, and game is shipped out of the State with no more attempt at concealment that if it were so much hogs and cattle.

The "Sand Hills," the northwestern quarter of the State, is about the only place left in which prairie chickens and grouse can now be found, and even there the supply is being decimated at such a rate that before another Legislature meets it will not be worth one's while to go there; in that section the market hunter and game hog reign supreme. They shoot hens while laying eggs and young chicks not able to fly, and indulge in all sorts of like pleasantries. Not six weeks ago, while in Shelton, Neb., I heard of a gang of market hunters that were still in the "Hills" shooting for market; one of them was in town at the time (the whole gang live in or near Shelton), and stated that he had just received $80 for a lot of chickens shipped to Omaha dealers. He came in for supplies, and was going back to join his party on the head waters of the Dismal River to get more chickens. He also stated that several other parties were shooting for market in that section. Is it any wonder game is getting scarce? As for fish, why seines and purse nets are more plentiful than fishing rods in Nebraska. The average resident of the smaller towns and large towns as well, scorns any method of taking fish that is slower than a good sized seine.

I read Sandy Griswold's account in Forest and Stream of the scarcity of ducks and geese this spring, and can vouch for the accuracy of his statements from painful experience, for I very recently spent a week on the Platte. It is no wonder they are scarce, with no feed or water to keep them here, and no peace or rest if the small remainder of the once countless flocks should come. I have watched the fast diminishing flocks for a good many years, and am only surprised that a single goose remains alive to-day, for the constant and never ending slaughter has gone on from the first day the white man discovered this famous goose ground. Such wanton destruction would long since have annihilated anything less wary than a goose, and even their once countless flock has dwindled down to a corporal's guard. For every goose now seen in the river, there were a thousand twelve or fifteen years ago. The average man explains this by stating that the main flight now passes much further west; while this is true, it is only so in a measure. Years of observation on the river, from Plattsmouth to the Colorado and Wyoming line, has convinced me that this grand game bird is fast following the buffalo. So come on, you fellows, and let's kill them all off and be done with it. If you don't hurry up they will all be gone. Come early and bring lots of shells and kill all you can or the other fellows will get them all.

On my recent trip I first stopped at Clark's, one of the best points on the eastern end of the river, and thought surely I would get a few birds, as I have always been fortunate enough to do in the past. But on reaching the river, I soon came to the conclusion that I had lost no geese in that neighborhood. Up and down the river for miles there was a man with his gun ready every ten feet. Every sand bar had one or more blinds, all there was room for, and every blind, as far as I could learn, contained in addition to several men, a good sized jug of "snake medicine." It was as hilarious a crowd as I ever ran across, and its members were more dangerous to themselves than to the geese. The reckless way in which guns were pointed made a man with a light life insurance do a lot of hard thinking. I didn't stay there long, and did not even take my gun out of the case. If a flock of geese did come in sight, they didn't stay long, and were followed by a general bombardment all along the line. It mattered not if they were half a mile high, these gentlemen had a contract to use up a certain number of shells, and were bound to keep it. How they avoided several serious accidents, to me is a conundrum. From where I stood behind a tree I could see that several of them could not stand up without reeling.

From Clark's I went to several favorite points of mine, and found things very little better; there were fewer men and not so much drunkenness, but very few geese anywhere. The result of my week's shoot was just eleven, and over half of these were brant. One box of twenty-five shells was more than sufficient for a week's hunt. On comparing notes with friends and acquaintances, I found that everyone had had the same experience.

Quail are reported as having fared very badly this winter; farmers all report having found whole bevies frozen to death. A recent clause to the proposed game laws was to make a close season for three years on quail, but this, with the rest of the game bill, went to sleep in the committee room. W. R. H.

TEXAS AND THE SOUTHWEST.

As the generous spring sheds its beneficent glow over the sunny Southland, the writer tourist and sportsman, following in the waye of the swift-winged bird of passage, turns his face northward and prepares his nose for the grindstone of business—that is if they have any business.

It is with deep regret that the Southwest Texas end of Forest and Stream announces the departure of Richard Merrill, of Milwaukee, and A. W. Adams, of Chicago, and while regetting the Northwest migration of these gentlemen, it might also be whispered to the sportsmens' world that their absence will be felt until their return. They both have ingratiated themselves in the good graces of our people, both in the field and at the trap, and in doffing its sombrero as a parting salute, Texas Field fondly wishes au revoir.

Speaking of Northern and Southern sportsmen, reminds me that some individual who was evidently long on abuse, but intensely short on facts and truth, caused to be printed in one of the Northern sportsmens' journals that when a shooter crossed the eighty per cent. line and had won a pair of fifteen-cent spurs at that magnificent gait, that he was henceforth immediately barred from anticipating in the tournaments in Texas. Desiring at one fell swoop to give that individual his newspaporial quietus, and at the same time doing my full duty as a correspondent to present the facts, and thereby undeceiving the trap shooters of the North, I cheerfully point to the fact that the annual tournament of the Texas Sportsmen's Association, to be held at San Antonio May 15, 16, 17, 18 and 19 is open to the world, and that it means that our old friends Rolla Heikes. Charlie Budd, DuBray, Money, McMurchy, Dr. Carver, Elliott, Brewer, Fulford, and all the Northern cracks are cordially invited to come down here and take a place in the squads composed of eighty per cent. men. It means that the $500 in cash and the $500 in merchandise are as open to them as to any one who is proud to claim the Lone Star State as his permanent home, provided, however, that these gentlemen hold the gun straight. One Texas enthusiast, Mr. M. F. Hope, of Farmersville, writes to-day: "Good! Let 'em all come!"

The game procession has almost passed northward, and we are now in the midst of a large flight of plover of all kinds; the golden bird is here, so is the upland and our Southwest Texas prairies are covered with curlews and other birds of that ilk. TEXAS FIELD.

CHICAGO AND THE WEST.

MUSK OX AND BUFFALO.

CHICAGO, Ill., April 12.—The Free Press, of Winnipeg, Man., prints in its issue of April 10 a very interesting interview with Mr. Harry Munn, an intrepid traveler just back from the far North, where he had considerable experience with the great game of a practically untraveled country. The interview is so well done and gives so much news that I scarce know how to shorten it. It will be news, for instance, to learn that the musk ox, an animal supposed to be seen only upon the rarest occasions, let alone pursued extensively, has become the subject of protective laws. If this be so, what shall we say or do for the game of our own worn-out covers? Much

in the way of news, too, is the information in regard to the buffalo of the remote region described.

It seems that Mr. Munn left from Edmonton, taking the Hudson Bay route to Athabasca Lake and the Slave River, to Ft. Resolution, going thence to Fon du Lac for caribou shooting, failing to find any musk ox en route along Artillery Lake. The caribou were so abundant near Fon du Lac that it was no sport to shoot them, so Mr. Munn arranged with a party of twelve Indians and nine dog trains to go out after ox. Of this trip he says:

"We started with enough food to last us four days, expecting to be away a month. It is necessary to kill food as you go along up there, because the dogs could not carry the weight of much provisions. The dogs began to starve about the fifth day out, but on that day I shot three caribou. We went to Lockhart's River and found the snow getting deeper the further north we struck. Going due north for three days brought us upon the only herd of musk ox we saw. There were twenty-two, and we shot nine, turning the dogs loose and herding the musk ox like cattle. After that we were delayed by a blizzard for two days, with the thermometer from fifteen to twenty below. It was not pleasant weather to sit still in; we had just enough wood with us to boil meat twice a day, but not enough to boil the kettle for tea, and as the only food we had was caribou meat and tea, our meals were not of an inviting nature.

"When the blizzard was over we split up into two parties, one going east and west, and the other, the one I went with, going north. We travelled for three days and saw no more musk ox, and then the Indians said they would go home. It had got pretty cold by this time, we turned and came back by a different route, taking Great Fish River, about twenty miles from the north end of Aylmer Lake. There were a few Arctic hares, and wandering bands of caribou to be seen, but except for the big bands of black wolves, there was very little life stirring in those regions at that time. These wolves, by the way, are a distinct breed from the Arctic wolf, which is white, and are unlike the usual timber wolf. They live on the straggling caribou, and seem to inspire the Indians with some fear. One of our party was out late one night, and the rest got very nervous about his safety.

"We turned back, however, and on the return journey we practically starved the whole way. We ran out of caribou meat, and couldn't get at anything to shoot. We opened the hides of the animals we had shot and scraped off the fat, but it was one long starvation till we got back to where the squaws had been left. About there we killed three caribou and fed the dogs and ourselves. We had lost ten dogs out of twenty on the return trip—died of starvation.

"Here I had the first row with the Indians. They wanted to go after the squaws who had left for Slave Lake, and I wanted to go back half a day to where the caribou were. I said I had starved as much as I wanted to for some time, and I was going to kill some meat. Indians get frightfully homesick; they can't stand a long trip away from their people at all, and they turned very sulky. I spoke in French to the half-breed, and he translated to the Indians, and we finally parted in dudgeon. I went back with two Indians, the half-breed and dog trains, and the rest went south. We killed caribou and returned, catching up with the rest of the party at Fon du Lac, where the women had collected. They were rather glad to see us, as they were just out of food again, and we had killed another caribou before joining them.

"I spent Christmas at Fort Resolution, with a few white missionaries, and then went up to Fort Smith to hunt Buffalo. Whitney, the man who was sent up by Harper's Magazine came with me on this hunt, but we didn't get anything. The second time I went out I spent sixteen days hunting the animals, and we got one shot at a bull, but he was too far off, and a warm spell setting in about that time with a good deal of rain, broke up the dog sleighing and we couldn't travel any further. I should think there are about 300 buffalo in that country. There is no earthly danger of their being exterminated, because they go like the wind as soon as a shot is fired, and take to the timber, where a horse could not follow them. They will travel for about five days on a stretch whenever they are disturbed.

"A law has been passed at Ottawa lately, affecting the hunting of musk ox, which will certainly make trouble among the Indians if it is enforced. Of course, it doesn't follow that it will be, but the law is that the close season for musk ox shall begin on March 1. There used to be no closed season for musk ox at all up there, and as the Indians don't begin their spring hunt until March 20, it is evident that they will have a strong ground for complaint, and will practically get no musk ox hunting at all. There can be no reason for the passing of such a law for the preservation of the animal, because as a matter of fact the Indians never get into the musk ox country proper; they are only on the edge of it.

"We made good time returning home, and did 520 miles of road in thirteen days. I was not sorry to get back to civilization."

HE IS DISCOVERED.

Maj. H. S. Kilbourne, rostered as Major and Surgeon, U. S. A., Ft. Clark, Tex., whom the Forest and Stream friends of the U. S. Post Offices at Boston and New York have for the past two weeks been helping me to trace, has been discovered personally and very pleasantly so. He writes from Ft. Clark this week, saying in part: "In the meantime, through the kind offices of Capt. Anderson, I have procured some of the photographs, which I find to be the very best pictures of live game that I have ever seen. Indeed, the work of your excursion seems to have been something unique and notable. All this is no doubt an old story now for you. The pictures of buffalo are of special interest, and as far as I know, they are the only ones extant. The immense herds which formerly roamed over the great plains of the West have left pictures only in the memory. I have some notes for a couple of sketches of the buffalo hunting of the Comanches, which, at leisure, I may offer for publication."

THE PRINCE BROKE THE LAW.

In an earlier issue of Forest and Stream I showed, per comic opera, that the nobility of England are market-shooters, much as I regretted to do that. It pains me now to show that, beyond any kind of doubt, the Prince of Wales is, or was, a violater of the law and a Sunday breaker. I have no doubt that I will presently be able to prove that Queen Victoria goes fishing ahead of the season, much as that will grieve me. The Tribune of this city affords the record in regard to the Prince of Wales, in a recent story from the town of Dwight, of this State. It may be remembered that the Prince of Wales (incognito as "Lord Renfrew") some thirty-years ago made a visit to this section of the world on a hunting trip. With him, and composing the retinue, were the Duke of Newcastle, Capt. Retallack, Gen. Bruce, Mr. Leduc, Maj. Teesdale, Capt. Gray, Mr. Elliott, who was a son of Lord St. Germains, Lord Hinchinbrooke and Francis Wilkins.

The Tribune goes on to say:

"A good man living in Dwight went to church on the morning following the Prince's arrival, and there to his delight he found the royal party. He was moved to sit down as soon as service was ended and write to a Chicago paper: 'The distinguished visitors set a good example that does credit and is well worth following, though often neglected, in their Christian observance of the Sabbath. The royal party attended religious service at the old school Presbyterian Church and listened to an excellent sermon by Dr. Young from the text: 'For I am not ashamed of the gospel of Christ.'

"I am happy to state that the royal party were deeply impressed with the power and appropriatness to the occasion with which our worthy minister presented the impressive text to their minds. I am also gratified beyond measure to say that, it being the Sabbath day, the Prince refused an invitation to take a pleasure drive.

"Four hours after the worthy Dwight resident had penned these words of approbation of the Prince's observance of the holy day, the whole royal party, from the heir apparent down to the pointer dog Pat, were arrested for violating the law by shooting on Sunday. A fat fine was lodged against each name and was paid expeditiously. This is the happening about which the Dwight people now considerately say little.

"The visitors managed to get in a good uninterrupted day's shoot Monday. They divided into two parties and killed altogether 195 birds. The Prince procured more to his gun than anyone else did, a fact which would not be hard to account for under any circumstances, but which the country correspondent of the day lays to the circumstance that the Prince had a Lancaster gun which loaded at the breech."

It seems that the best way to do is not to violate the laws of one's own or another country, for it may all come up again, 30 or 40 years after it happened, and spoil one's chance of getting to be King. Awfully sorry to have to say anything about this, but I 'ope, Prince, as 'ow you aren't goin' to let it interfere with our friendship.

ARRESTER ARRESTED.

Last December A. W. Friese, of Milwaukee, had Joseph Duke arrested for selling illegal quail, as stated in these columns at that time. The case fell through, owing to a blunder of the prosecuting attorney. And now comes Mr. Duke, and sues Mr. Friese for $5,000 for false arrest. Duke will never lay up any money at that, and ought to be wiser than to make so foolish a move, as now his case can be opened up again, and properly handled. Duke will get convicted this time. Mr. Friese says that illegal venison in tons passes unchecked through Milwaukee to Chicago and New York, there being no deputy warden for that district, and little action of any kind against violaters of the law, except such as that taken at their own risk and expense by individuals, as in his own case. He thinks the Nat. Ass'n should help him in his fight.

NIPPERSINK CLUB.

Members of the Nippersink Club, an organization of sportsmen who go to Fox Lake, met at the Sherman House last night to select officers for the coming year. The following were selected: President, C. D. Gastfield; Directors, L. E. Weick, P. O'Malley, F. C. Mueller, W. N. Eckardt, G. D. Eddy, C. E. Rehm, Theodore Wilken, and T. J. Webb.

BACK FROM YUCATAN.

Last December Mr. A. V. Armour, of Chicago, organized a scientific and exploring expedition to go to Yucatan. To-day New York dispatches say that their yacht, the Itunia, is expected there in a few days. The party consisted of Prof. Allan Marquand, of Princeton; W. H. Holmes, professor of Anthropology of the Field Columbian Museum of Chicago; Prof. C. F. Millspaugh, of the Field Museum, S. C.; Peck, Marshall Miller, Norman Williams and William Armour. Portions of Eastern Yucatan, which, it is claimed, were never before visited by scientists or travelers, were visited. They ascended the River Usamacinta fifty miles in their steam launches to the city of Jobasco. With canoes they went up the river higher, and finally took horses to the base of great mountains on the borders of Mexico. Near Palanque the explorers found a great ruined city, estimated to be over a thousand years old.

SCATTERED ITEMS.

In Wisconsin the ice this week remains very solid all over the muscallunge lakes, but there is still prospect of its going out early this season.

In Washington they are using dynamite to kill squirrels, which latter are eating up the country. They burn the dynamite in the holes, and the fumes do the work.

In New Mexico the Mescalero Apaches are said to have left their reservation this week. If they would go away and stay it would be a good thing for sportsmen, for the reservation is a great sporting country, especially for trout fishing. I have swiped many a trout off that preserve of the noble red men, and there are few better streams than the Ruidoso was in those times, though the Apaches in those days were rather an uncertain factor.

GOOD BAGS OF DUCKS.

On two days of the past week Messrs. Edward Morton, Frank E. Jarvis and I. F. Hogan, all of Chicago, bagged 167 ducks (bluebills, red heads and butter balls) at Billy Tuohy's place on Eagle Lake, Wisconsin (in Waukesha county). These gentlemen are very enthusiastic over their trip to Eagle, and write: "The shooting was the finest of the season. Eagle Lake is showing up the best shooting in this section of Wisconsin. The hotel is more than comfortable, and a royal good time and good shooting are sure to be found."

IN LOVELY WAUKESHA.

With all the gentlemen say above as to comfort and good sport at Billy's place, and with all the good things they could say about Billy himself, I am disposed to agree heartily. I have often written of this region of Waukesha county, and have camped there four years, and trying each year to find a better place for sport and comfort. I doubt if the beautiful State of Wisconsin holds a lovlier section than the lake region of Waukesha and Walworth counties.

The other day Mr. H. L. Stanton, Western manager of the Natchaug Silk Co., wanted to "go somewhere out of the city" for "almost any kind of fun," so we ran up to Mukwonago and walked over to Eagle from there, about six miles or so, carrying our duffle for the sake of the exercise. We loafed around Billy's place for a little while, and then Billy took us out to see the country. I found that I had not yet explored it half so much as I thought I had. We found a beautiful lake, with bass and big pickerel in it, and a spring at the edge of a fine camp site on the top of a big bluff—so charming a place that I fear this summer our grounds at Phantom Lake will lose us, since they are becoming much subject to resorters. We found a lake said to have been stocked with lake trout eight years ago. We found three pickerel lakes I had never heard of, and a stream where one can catch chubs for bait, and a pond where bull frogs grow large and numerous. We found a dozen new springs of clear water and some new woods and plenty of clean green grass just coming up, and some willows turning yellow and some poplars about to bud, and a lot of things which seemed very good to us. We found a stream or so bearing vague rumors of strange speckled fish; and last of all we found a trout water—a preserve, or private pond, it is true, but none the less showing to us, near, though yet so far, the glorious creatures in all sizes from an inch up to four pounds.

This private pond is the property of Senator J. A. Linz, of Eagle, Wis., and makes one of the features of his country place. It is about 200 yards by forty yards in size, or perhaps larger, and runs from two to twelve feet deep, the water being absolutely clear, with the blue clearness peculiar to spring water in this region. The pool lies just below a great spring which gushes out of the foot of a high bluff. Linz stocked this pool some ten years ago, and it now has thousands of trout in it, some as heavy as six pounds he thinks. The whole stream below this point has been gradually supplied with trout which have gone over the falls at the foot of the pool. The proprietor of this attraction does not allow any fishing, and does not sell any of his trout, so they have increased wonderfully, depleted only by such small numbers as he once in a while gives to his friends near by for a trout dinner. At the time of our visit the trout were leaping in numbers all over the pool, in some mysterious game of their own, and it afforded a goodly, albeit somewhat trying spectacle. The fish seemed to be of a very brilliant coloration, and in short were beautiful, as only leaping trout can be. Sen. Linz is surely to be congratulated upon so rare a feature of interest for his farm, though I don't see how he manages to keep from catching all the trout out of there himself.

THE NORTHWEST VIA "NORTHWESTERN."

The Chicago sportsmen, Messrs. W. B. Leffingwell and W. L. Wells, have together produced the most artistic book yet at hand in these days of elaborate railroad literature, the former doing the writing and the latter the illustrating, with a happiness which might have been predicted. Mr. W. B. Kniskern, the general passenger agent of the Chicago and Northwestern Railway, is to be congratulated on the result, a tidy and irreproachable little booklet of a hundred pages, (with a fine map) entitled "Hunting and Fishing Along the Northwestern Line." The desirable points are described succinctly, and it is promised, with accuracy, for the use of the tourist public, who have now few questions to ask which can not be easily answered by print.

One wonders, perhaps, what can be meant by the following fish: "There is in Lake Superior a species of fish called rock trout, which are similar in appearance to brook trout, but grow to a much larger size. The smaller ones are often shipped and are passed off to the uninitiated for brook trout, especially in cities where one's confidence in the fishmonger is so often misplaced."

There are a great many real brook trout netted in Lake Superior and sold, that fish attaining greater size in the lakes than in the streams, though it visits the streams late in summer to spawn. I have never before heard of any "rock trout," though the brook trout is usually taken near the rocks and reefs. This, however, not in criticism. Serious criticism does not lie against the book itself, though with the English of it one can not always agree—as for instance in the un-English barbarities of such plurals as "fishes," "elks," "snipes," etc., with which it is a pity to mar so finished and artistic a conception. As it stands, the book is the last word in modern railroad literature, and it is good and wholesome reading.

THE PEN AND THE GUN.

Capt. A. W. Du Bray, of the Parker Gun, very well known over the shooting world, has this week extended his field of activity and gone into the newspaper business, having arranged to take charge of the trap department of our young Southern contemporary, the Rod, Gun and Kennel, of Louisville, Ky. Everybody knows that the pen is mightier than the sword, but I imagine that it will be cause of satisfaction to Capt. Du Bray not to be forced to choose between the pen and the gun, either of which he handles so well.

WHERE THE PARROTS COME FROM.

Mr. G. W. McClellan, of Minneapolis, Minn., has just returned from a long sojourn in Mexico and Central America, passing through Chicago to-day on his way home to Minneapolis, whence he returns later to the far south country. Mr. McClellan speaks in glowing terms of the sporting resources of the region he has been visiting, and says no Northern man can have any idea of the shooting and fishing to be had there. He was away down where the parrots come from. He may write of it for Forest and Stream.

THE ONLY SUMMER FOWL.

Mr. J. DeLong, of Brooklyn, N. Y., writes to his friend Pop Hirth, the historic character who takes care of A. G. Spalding & Bros.' fishing tackle department, asking about a muscallonge trip up in Wisconsin in June, and wishing to know if there was any shooting at that time, and if so, at what?

"I have told Mr. DeLong," said Mr. Hirth to me, with

one of his blandest smiles, "that the only game in season at that time was jack-snipe."

"Jack-snipe?" I said, "what do you mean?"

"Those little birds with long snoots, you know," said Papa.

"Why, there are no jack-snipe in the pine woods, man," I said, "and beside, they've all gone North."

"No they haven't," said Papa, firmly, "that's right where you're mistaken. They change their habits in June. I myself have often seen them in the pine woods, running up and down a dead tree, hunting for worms. You know the books say they live on worms. I read it just a little while ago. No, sir, there's plenty of jack-snipe up there!" You don't mean woodpecker? I asked.

I don't know what you may take a notion to call them," said Pop, calmly, and without moving a muscle of his face, "but I expect I know about jack-snipe, for I been studying up on 'em. They're birds with long bills, and they feed on worms. You may never have seen them running up and down on trees, but I have. Yes, sir, them's jack-snipe. Anyhow, they're good enough for Joe De Long." With which he calmly turned away to sell a man a copy of the Game Laws in Brief. I don't know exactly what to make of Papa sometimes. He gets me sort of mixed. Still I am inclined to think he is probably wrong about the habits of the jack-snipe.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Sea and River Fishing.

FISH AT NIGHT.

Allow me to contribute my mite to the discussion of the questions now being agitated as to the nocturnal and other feeding habits of bass and other game fish. That game fish commonly take the fly at night is, I take it, conceded. I personally know it to be a fact. I have taken with various flies both trout and bass at night on many different occasions, when too dark for me to see the fly strike the water thirty feet distant. I have also known mountaineers to catch trout on trot lines laid for turtles at night. It is true, on the other hand, that I have, when a boy, often fished at night for catfish and eels with bait, and caught hundreds of them, fishing, of course, on or near the bottom, and never caught, or knew to be caught, a scale fish in that way at night. I think the bass and trout, when feeding at night, not only keep in shoal water, but swim at or near the surface. As long as there is any light, no doubt they see the fly, and when too dark for that, they see and probably hear the fly strike the water. After sunset, it is my experience, that bass take the fly on the surface as gamely as trout.

The last time I cast a fly was in the closing week of last September. I reached a riffle half an hour after sunset, and caught eighteen bass, standing in one spot, taking the last eight or ten after it was entirely dark, and so dark we could not see the road and had to drive home by guess work. Several times the rising bass appeared to miss the fly and leaped clear out of the water when it was almost too dark to see them. And so instantaneously did they strike as the fly touched the water I concluded that they must have been at the surface, and within a foot of the spot at the instant the fly touched the water; so that if they could not see the fly itself, they could, like the muskrat shooter, see its wake on the water; hear, and perhaps feel it splash. That catfish and eels take bait on the bottom of deep water and very muddy water, when it is impossible to believe they can see it, is a matter which has happened within my experience hundreds of times.

The feeding habit of these fish is unquestionably distinctly nocturnal; they scarcely bite in the mountain streams in the daytime if the water is clear, but freely enough if it is muddy. On the contrary, the scale fish are never taken in muddy water nor at night when still fishing with bait for cats and eels. That fish use the sense of smell in securing food as well as that of sight, and probably also of touch, seems clear. In salt water I have watched eels feeding in the daytime, and they often bury their heads beneath the mud in search of food, which they can certainly only discover beneath mud by the sense of touch or smell. But the effect of assafoetida on the biting of fish, which is astonishing, seems to assure us that the sense of smell is that which attracts them, for if the drug be enclosed in the sinker it is equally attractive as when applied to the bait. I have personally tested and verified this thing many times. So far as I know, the drug is attractive to all kinds of fish. The infinitesimal amount actually dissolved in the water could not impart to it a taste. The attraction of this horribly disgusting odor for fish has often appeared a very strange thing to me. It can not be an acquired taste. Nor can I conceive why it should be a natural taste, seeing there is nothing like it in the water nor anywhere else under heaven. Equally strange it may be that cats which hate nothing as they do water, should so dearly love everything that comes out of the water, whether fish, crabs, oysters, shrimp or lobsters. Certain it is that the sense of smell can have nothing to do with fish rising to fly or spoon. In this case it appears to be evident that they see what they take for fish food, although I have fancied that they sometimes rise in a spirit of wantonness, similar to that of a kitten which will seize a "fly-hook" dangled before it as readily as a fish will do it.

Fish are creatures of a low grade of intelligence, and the cause of their actions difficult to determine. I do not believe that fish are specially attracted by particular colors in artificial lures. The essential qualities of a killing fly seem to me to be that it is easily seen in the water, or rather up through the water, and not gaudy and unnatural looking enough to frighten the fish. The fish is looking from a darker into a lighter medium, and things appear to its eyes different from what they do to ours accordingly.

Before I finish, allow me just to touch upon one other matter; that is the leaping into the air of bass and other fish when struck by the hook. I believe it is simply caused by fright, and nothing more. That the fish deliberately plans to leap high in air and plunge headlong down across the slack line and so snatch the hook out of his jaw, is too much for my credulity. I do not believe anybody ever saw a fish leap into the air "with its mouth wide open and shake its head savagely to shake out the hook." Men believe they have so seen, but I suspect they are mistaken. In angling, when the fish leaps, I let him leap.

M. G. ELLERY, M. D.

NEW ENGLAND WATERS.

BOSTON, April 13.—The rain of a week ago has changed the aspect of the lakes and streams in New England, and some progress has been made toward spring fishing, though up to the time of this writing the weather has continued unusually cold. Water was very low indeed in all of the Maine lakes and rivers, up to the coming of this rain, while the rivers were yet locked in ice. From some of the more rapid rivers the ice has gone out with a great rush, and in a few days there will be a chance for trout, though in Maine the open season does not begin till May 1. In Massachusetts some fishing in the streams has already been done, the rain having cleared the ice and snow. Claude E. Tarbox, of Byfield, who always tries the brooks as soon as there is the least chance, has taken a day on the streams in this vicinity. He says that the Colonel come up the day after the rain and allowed that they must try "the brook." With Charlie Bailey they "fished the brook" the next day for a few hours, with the result of seventeen fine trout. Three of them Claude brought in to to show his friends at the Boston Chamber of Commerce the next day. One trout was a very fine one, for a brook trout from a Massachusetts stream, evidently a four-year-old.

Mr. W. H. Haley, a senior in the Boston iron trade, lives in Wilmington. He has always taken great interest in pickerel fishing, though abhoring set lines and spears. He was one of the first to use a glass ball as a float on the ponds in his town. He has two sons in North Dakota, one at Towner, and the other some thirty-seven miles further up, on a cattle ranche. The boys love to fish as well as their father, and the accounts they write have made Mr. Haley about determine to pack up his rods at the first opportunity. The other day he received a beautiful specimen of the great northern pickerel, weighing thirteen pounds, as a sample of what may be done at the North Dakota lakes and streams.
